WARNING

Every effort has been made to ensure that the information contained in this *Guide* is correct. However, it will be clearly understood that this publication is intended as a *GUIDE ONLY*, that the information cannot be *Guaranteed* correct and that the final responsibility must (as always) rest with the Shipmaster.

At certain ports, items of navigational routeings and aids have been included as a means of general guidance only. Shipmasters should have in mind that full and due reference MUST ALWAYS be made to corrected charts of the area, to the appropriate Notices to Mariners, and all or any other navigational notices, warnings or amendments issued by proper Authorities and/or Navigational Aid Services.

The sketch maps are for general assistance and must not be used for navigational purposes. In particular, the shapes of buoys should be disregarded since these are indicated by varying symbols which may be consequent upon local usage and without resemblance to internationally applied symbols.

PLANS

All plans, unless otherwise stated, are reproduced by kind permission of the Port Authority.

IMPORTANT NOTICE

Users of previous editions of the guide are advised that some older Shipmaster's Reports and navigational information mentioned in other publications and pilots has been withdrawn from this edition of the guide. They may therefore wish to retain copies of previous editions for future reference.

All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise without the prior permission of the publishers.

FOREWORD

Shipmasters, Shipowners or Managers, Port Authorities, Administrators and Agents, are earnestly requested to assist our work in up-dating the Guide *by providing written comment, information, amendments or corrections and additional details of any ports or terminals, to the following address:*

SHIPPING GUIDES LIMITED,
SHIPPING GUIDES HOUSE,
75 BELL STREET,
REIGATE,
SURREY,
RH2 7AN,
ENGLAND

All communications will be acknowledged and will be most useful, since it is only by this means that the *Guide* will remain of great value to the user and will be up to date and thoroughly professional in content.

For assistance and guidance in the submission of information, a reprint of the items presently covered by the *Guide* is placed hereunder. Additional items will also be most welcome.

N.B. PLANS, DIAGRAMS, DRAWINGS AND SKETCHES: As you will note, this 1997/98 edition of "Guide to Port Entry" contains over three thousand seven hundred plans and mooring diagrams that have been reproduced from plans and drawings very kindly sent to us by numerous Port Authorities, Agents and shipboard personnel. We hope that the special plan section will prove interesting and useful.

Presently however, the special plan section is to an extent incomplete, since there are many ports and mooring facilities for which we have not yet received the necessary plans for reproduction purposes. We are anxious to secure plans, diagrams, drawings or sketches of ports and facilities not presently shown in our special plan section, and therefore request that Port Authorities and/or Agents at the places concerned be kind enough to pass us this data together with the necessary permission for reproduction. We would also be very grateful if ship's officers calling at ports not already covered in our special plan section, could find it possible to provide us with diagrams or sketches of the facilities which would be suitable for reproduction in our later editions and/or which might be re-drawn as required by our own art department prior to reproduction.

PORT INFORMATION KINDLY REQUESTED

PORT LIMITS: The seaward boundaries of the port within which a vessel is considered to be an "arrived ship" and (subject to Charter-Party Terms) laytime will commence.

DOCUMENTS: The matter of documentation is one of the most important items to be included in the *Guide*, and we would like to be sure that ALL requirements are included in order that Masters will be in a position to prepare all necessary documentation before arrival and thus ensure speedy clearance. (E.g. Number of Crew Lists, Passenger Lists, Customs Documents, Health Documents, Manifests, Bills of Lading, Ship's Papers, Ship's Certificates, etc.).

PILOTAGE: Manner in which vessel approaching the port applies for a Pilot. That is, telegraphic address, telephone number, facsimile number or telex number of Pilot Station, amount of advance notice of ETA required, and VHF channel or frequency to be used when contacting Pilot Boat or Pilot Station. If possible, a description of Pilot Boat; particular light or sound signals to be made by vessels requiring a Pilot; the *exact* area where the Pilot Boat is located or where the Pilot has to be taken on board and also any alternative area in the event of bad weather and when Pilot Boat not on usual station; details of any specific requirements on the part of Pilots with respect to boarding and safety measures; location of anchorage for vessel awaiting a Pilot.

ANCHORAGES: Boundaries, areas and depths of safe anchorages.

RESTRICTIONS: Details of any restrictions imposed upon entry, for example at night time, or in accordance with state of tide and draft restriction.

MAX. SIZE: Maximum permissible length, breadth, and draft for any vessel entering the port or for oil-carriers proceeding to installations outside the main port area, also state of tide governing these dimensions.

HEALTH: Pratique procedure and action necessary to obtain Pratique. Also action necessary in the event of any suspected disease or fever on board. Also when Pratique is automatic, for example vessels entering after calling at another port in the same country.

RADIO: Name and call sign of radio station through which it is best for a vessel to route ETA cables to Agent, Receivers, etc. Availability of telex communication with vessels equipped with telex.

VHF: Fullest possible data concerning VHF Radio communication facilities in operation at the port including advices required from vessels approaching the port, arriving at the port, when manoeuvring within the port area, and when sailing. Details of standard communication procedures and numbers of Channels used in calling, further communication and safety, as may be applicable with respect to Pilotage, Tugs, Port Authority, Quarantine or other craft or shore-stations.

RADAR: Details of existing Port Radar Service, also if the Master may contact the Radar Service by means of ship's radio or by VHF, and the frequency or Channel number to be used. Details of Vessel Traffic Management Service (V.T.S.).

TUGS: Number and capacity of tugs available. Minimum number of tugs required for berthing and unberthing. Position where tugs normally join the vessel. Also whether usual for ship's lines or tug's lines to be used, and if optional, the usual charge for use of tug's lines.

BERTHING: Details of available berths, including length of quay, depth alongside, maximum permissible ship-draft at Low Water (indicating whether Salt or Fresh Water), whether load/discharge is by shore equipment or by ship's own gear, and other relevant data, together with advice of cargoes handled at respective berths.

CRANES: Fullest possible information concerning type, safe working loads and numbers of shore cranes available at respective berths for cargo handling. Details of heavy-lift cranes ashore or afloat, with lifting capacities. It is also helpful to know at which ports, or berths within a port, that cranes are not available and a vessel is required to use her own gear.

BULK CARGO FACILITIES: Details of berths and cargoes handled, length of quay, depth alongside, maximum permissible draft (indicating Salt or Fresh) at Low Water, berth equipment, maximum height of discharging gear above High Water Level, and maximum Loading/Discharge rates. Cargoes intended to be covered by this heading are Grain, Ores, Coal, Fertilisers, Sulphurs, Copra, etc.

SPECIALISED CARGO-HANDLING FACILITIES: Details of berths, specially equipped for handling containers or Roll-on/Roll-off traffic; berths handling liquid chemicals or LPG carriers. Please note that it is also useful to know if the port does not have any of these facilities.

BRIDGES: Details of any particular arrival times required in order to pass through particular bridges, and maximum clearances, that is height of bridge to waterline.

STEVEDORES: Any particular ETA advices required in order to arrange gangs. Details of main commodities and average load or discharge rates. Normal working hours for general and bulk cargoes, also hours that overtime is possible.

MEDICAL: Whether necessary for Agents to receive advance notice of required medical attention and the amount of notice required; also if hospital and dental facilities are available; also any other relevant medical information such as particular inoculations required, vaccination/fever certificates, etc., and if inoculations and vaccinations can be carried out.

TANKERS: Diameter of load/discharge lines in order that Masters may know whether or not it is necessary to fit reducing pieces before arrival; slop (residue) discharge facilities, capacities, and maximum receiving rate; S.G., A.P.I. and temperatures of local types of oil (loading ports only). Number of tanker berths, depth alongside and maximum permitted drafts at these berths, average load/discharge rates. Prevailing wind on berth. If special moorings required. Are shore gangways available? Are facilities available to combat oil spills, if so, what equipment available? Availability of shore steam. Ship-to-ship transfer facilities.

DENSITY: (SALINITY):Average salinity of water in the port.

FRESH WATER: Availability, method of delivery, rate of delivery and approximate cost per ton.

FUEL: Grades (viscosities) available, amount of advance notice required, and method of delivery. If bunkers supplied by vessel/barge, minimum/maximum quantity to be ordered.

FIRE PRECAUTIONS: Any specific precautions particularly respecting tankers (that is, other than usual non-smoking precautions, etc.).

CONSULS: Names of countries having Consuls at the port.

REPAIRS: Whether all types of deck and engine repairs are possible, and if not, then what types of repairs are able to be carried out.

DRY DOCKS: Dimensions of largest dry dock and also the number of smaller docks.

SURVEYORS:

(1) Availability of Cargo Inspectors, such as Saybolt, Caleb Brett, Superintendents, etc.

(2) Availability of Surveyors, such as Lloyd's Register, American Bureau, Bureau Veritas, etc., also Salvage Association or U.S. Salvage.

GANGWAY/DECK WATCHMEN: Whether service of watchmen is necessary or to be recommended and if so, the cost of watchmen.

HATCHES: Whether opening/closing is normally carried out by crew or stevedores.

CUSTOMS ALLOWANCES: (Tobacco/Wine, Spirits). Quantity permitted for each crew member to be held out of Bond.

CARGO GEAR: Whether load/discharge effected by shore gear or by ship's gear, and details of any special cargo equipment, e.g. heavy lift cranes, etc.

REPATRIATION: If facilities exist for effecting crew changes and arranging any necessary repatriation.

AIRPORT: Distance from airport and whether airport is served by regular airlines; otherwise number of flights per day or week and destinations.

TIME: Local time in relation to GMT and dates/details of any alterations made to clocks during the year (Summertime).

HOLIDAYS: Dates and details of official and local holidays and advice whether or not cargo work can be arranged on those days.

POLICE/AMBULANCE/FIRE: Telephone numbers of these three services, that is, the nearest departments.

EMERGENCY CO-ORDINATION CENTRE: Nearest Emergency Co-ordination Centre and details of telephone and telex numbers (e.g. U.S. Coast Guard, U.K. Coast Guard, S.A.R. etc.). This information is necessary because local Port Agents may not be suited to emergency matters and may not be contactable.

TELEPHONES: Whether arrangements exist for placing telephones on board and if so the approximate cost for this connection.

SERVICES: Details of any special services available, e.g. tank-cleaning equipment, facilities for discharge of tank-washings, compass adjusting, radio and radar repairs, supply of charts, nautical publications, sounding paper, course recorder paper, availability of Notice to Mariners, availability of safety equipment, possibility of extension of certificates.

BANKS: Name, address, telephone, fax and telex numbers of any banks in the area.

STORING:

(1) Can vessel be stored by barge or truck?
(2) Regulations concerning barge storing, such as, can vessel store from barges during loading or discharging? If not, what are the regulations concerning storing?
(3) Can trucks proceed alongside at the berth? If not, what is the approximate distance the truck is to remain from the ship?
(4) Can fork lift trucks be used on the jetty to handle stores?
(5) Customs Regulations in force regarding storing.
(6) Can local Riggers be employed to assist with storing?

SHIP SUPPLY SERVICE: Name, address, telephone, fax and telex numbers, etc., of ship supply service operators who are able to supply craft or helicopters for transfer of stores, crew and sick personnel. Also range, capacity and rendezvous points of supply craft and helicopters.

SHORE LEAVE: Whether crew members are allowed ashore or not.

IDENTIFICATION CARDS: Whether shore passes issued or whether Seaman's Book is sufficient.

GARBAGE DISPOSAL: Please advise if a collection service is available and if drums or skips are provided on board or alongside, telephone number of garbage services, charges and collection time.

WASTE OIL DISPOSAL: Please advise if a collection service is available and capacity of shore tanks, barges and tanker trucks, location of any special berth for this service, Name, address, telephone, fax and telex numbers of companies operating this service, charges and any other relevant information.

CURRENCY: Name of currency of the country and approximate exchange rate in relation to the U.S. Dollar. Also if there are any currency restrictions placed on seafarers.

SEAMAN'S CLUBS: Names of Seaman's Clubs operating at the port, address and telephone number. Facilities available, e.g. shop, international telephone service for seafarers, church services, football matches arranged, dances, mini-bus collection, postage facilities, games available at the Clubs and any other service available. The Seaman's Club brochure/leaflet would be of great assistance.

REGULATIONS: Any particular or unusual regulations for the port.

DELAYS: What delays in berthing, loading, discharging or bunkering can normally be expected.

DEVELOPMENTS: Details of expected draft increases, new installations, berths, etc., expected in the foreseeable future together with expected dates of completion.

SHIPMASTER'S/SHIP'S OFFICERS REPORTS: Information is earnestly sought from Shipmasters and other serving officers giving corrections, amendments and additions to existing information, together with their professional advices or comment upon recommended or required procedures for entering or sailing port, including advice of their experience of the port, either generally or specifically. Useful items of experience and suggestions of other Shipmasters are of great value, and will be printed under a special heading.

GENERAL: Any other information that you feel may be of value to the Shipmaster that is not already covered by the previous questions.

AUTHORITY: Name, address, telephone, fax and telex numbers, and other details of local Port Authority.

AGENT: At the foot of many of the ports in this *Guide* we have an additional heading entitled "Agent". The purpose of including this item has been to provide Shipowners, Managers, and Operators with prompt access to the Name, address, telephone, fax and telex numbers, etc., of an experienced Agent at the port concerned.

Of course, it will be understood that the Agents named in the *Guide* are not necessarily the only Agent at that port; however, demands on available space preclude the inclusion of other reputable Agency companies and we trust that other such companies will understand and appreciate the position. We have been obliged therefore to include details of one Agency company only, but by so doing we hope to have provided a further service to the user of the *Guide*.

FEARGAL HOGAN
Director, Information Systems.

EDITOR'S NOTE

GUIDE TO PORT ENTRY– 1997/98 EDITION

The year 1997 sees the 30th anniversary of the formation of Shipping Guides Ltd by the late Colin Pielow and publication of this, the 14th Edition of the "Guide".

When first produced in 1971 the "Guide" contained less than 600 pages. It now extends to 2,650 pages of port information and over 1,900 pages of plans (over 3,700 plans). This has been achieved with the assistance of Port Authorities, Shipowners, Ship Operators, Shipmasters and many others in the marine industry We thank all of them for their contribution in making Shipping Guides Ltd the recognised market leader in supplying port information.

This new edition of the "Guide" contains over 100 new or additional ports and terminals and has been comprehensively updated by checking and double-checking with the Port Authorities.

Long time supporters will note that we have reverted to a hard-back cover which we last used in 1975. The reason for this change is that we wish to remain in two volumes, thereby lowering our costs, and of course, minimising the increase in the price of the "Guide". We believe the "Guide" to be "value-for-money" as there is very little duplication and no block advertisements — Guide to Port Entry contains only relevant information.

Finally, I would like to thank all the staff at Shipping Guides Ltd for their support, hard work and dedication to their various duties over the last year, which has enabled us to bring the "Guide" out yet again on schedule.

GUIDE ON CD: The Spring of 1997 will see Shipping Guides respond to customers' requests and enter the world of electronic publishing. Initially this will be with the launch of our "Guide on CD". Subscribers to the fourteenth edition of Guide to Port Entry will receive very generous discounts on this exciting new product.

THE SHIPS ATLAS: This publication continues to be in increasing demand throughout the world with the Sixth Edition being published in January 1996. Many companies have selected this Marine Atlas as a suitable presentation to publicise their activities, by purchasing in bulk numbers and having their company name gold-blocked upon the cover of the Atlas. Enquiries concerning this form of presentation should be addressed to ourselves.

THE SHIPPING WORLDS MAP: The Second Edition of our World Map was published in December 1996. Please contact us if you require copies or more information on this or any of our products.

ROBERT PEDLOW
Managing Director
Reigate 1997

POLICE/AMBULANCE/FIRE: Telephone numbers of these three services, that is, the nearest departments.

EMERGENCY CO-ORDINATION CENTRE: Nearest Emergency Co-ordination Centre and details of telephone and telex numbers (e.g. U.S. Coast Guard, U.K. Coast Guard, S.A.R. etc.). This information is necessary because local Port Agents may not be suited to emergency matters and may not be contactable.

TELEPHONES: Whether arrangements exist for placing telephones on board and [illegible] for this connection.

SERVICES: Details of any special services available, e.g. tank-cleaning equipment, facilities for discharge of tank washings, compass adjusting, radio and radar repairs, supply of charts, nautical publications, sounding paper, course recorder paper, availability of Notice to Mariners, availability of safety equipment, possibility of extension of certificates.

BANKS: Name, address, telephone, fax and telex numbers of any banks in the area.

STORING:
(1) Can vessel be stored by barge or truck?
(2) Regarding [illegible] loading or discharging? If not, what are the regulations [illegible]
(3) Can trucks proceed alongside at the berth? If not, what is the approximate distance the truck is to remain from the vessel?
(4) Can [illegible] on the jetty to handle [illegible]?
(5) Customs regulations [illegible] time [illegible]
(6) Can [illegible]

SHIP SUPPLY SERVICES: Name, address, telephone [illegible] of ship supply service operators who are [illegible] and rendezvous points of supply craft and helicopters.

SHORE LEAVE: Whether crew members are allowed ashore or not.

IDENTITY CARDS: Whether [illegible] sufficient.

GARBAGE DISPOSAL: Please advise if a garbage service is available and if drums or skips are provided on board or alongside, telephone number of garbage [illegible] and collection time.

WASTE DISPOSAL: [illegible] shore tanks, barges and tanker trucks [illegible] numbers of companies [illegible]

CURRENCY: [illegible] Also if there are any currency restrictions [illegible]

SEAMAN'S CLUBS: Names of Seamen's Clubs operating at the port, address and telephone number, facilities available, [illegible] dances, mini-bus [illegible] Seaman's Club brochure/leaflet would be of great assistance.

REGULATIONS: Any particular or unusual regulations for the port.

DELAYS: What delays in berthing, loading, discharging or bunkering can normally be expected.

DEVELOPMENTS: Details of expected draft increases, new installations, berths, etc. expected in the foreseeable future together with expected dates of completion.

SHIPMASTER'S [illegible] Shipmasters and other seagoing officers [illegible] or comment upon recommended or required [illegible] of the port, either generally or specifically. Useful items of experience and suggestions of other Shipmasters are of great value, and will be printed under a special heading.

GENERAL: Any other information that you feel may be of value [illegible] that is not already covered by the previous questions.

AUTHORITY: Name, address, telephone, fax and telex numbers, and other details of local Port Authority.

AGENT: At the foot of many of the ports in this Guide we have an [illegible] heading entitled [illegible]. The purpose of including this item has been to provide Shipowners, Managers, and Operators with prompt access to the Name, address, telephone, fax and telex numbers, etc., of an experienced Agent at the port concerned.

Of course, it will be understood that the Agents named in the Guide are not necessarily the only Agent at that port; however, demands on [illegible] such companies [illegible] Agency company only, but by so doing we hope to have provided a further service to the user of the Guide.

FEARGAL HOGAN
Director, Information Systems

Albania

DURRES: 41.19 N. 19.28 E.

DOCUMENTS: Completed on arrival.
PILOTAGE: Compulsory. Arriving vessels should anchor and await Pilot in position Lat. 41° 15' 08" N., Long. 19° 26' E. Pilot available in daylight hours only.
RESTRICTIONS: Vessels arriving from ports in Yugoslavia, Italy and Greece must give Notice of Arrival 48 hours in advance. Vessels arriving from ports in other countries must give Notice of Arrival 5 days in advance. Notice of Arrival is sent by radio to "Adetare Durres" with following information: Vessel's name and flag; name of last port; draft on arrival; cargo description and distribution; particulars of vessel's tonnage and length.

Entrance is through buoyed channel, depth 27 ft.
MAX. SIZE: Controlled by berth depth. Max. draft 28 ft. 6 in.

Also see "Shipmaster's Report".
HEALTH: Free Pratique given when Pilot boards provided vessel's Health Declaration is satisfactory.
RADIO: Vessels should maintain regular contact with Durres Radio up until time of entry into Albanian territorial waters, which extend 10 miles off shore.
TUGS: Port Authority supplies tugs for mooring and unmooring on Pilot's recommendations.
BERTHING: General cargo wharf No. 5, depth 26 ft. All other berths, depth 21 ft.
MEDICAL: Doctor and hospital facilities available.
TANKERS: One oil berth, at the East Mole, depth 23 ft. Tank cleaning facilities available.
FRESH WATER: Available ex-wharf at all berths.
FUEL: Limited quantity available for emergency only.
REPAIRS: State shipyard can effect limited hull and engine repairs.
SURVEYORS: Regjistri Detar Shqiptar, Durres. Tel: (052) 22797. Fax: (052) 22438. Telex: 4169 DRFLOT AB.
OPENING/CLOSING HATCHES: Carried out by stevedores.
AIRPORT: Rinas Airport, distance 35 km.
TIME: GMT plus 1 hour.
HOLIDAYS: New Year (January 1st and 2nd); Proclamation of the Republic (January 11th); Labour Day (May 1st); October Revolution (November 7th); Independence Day (November 28th); Liberation Day (November 29th). No work performed on Sundays and holidays.
SHORE LEAVE: Crew may use Seamen's Club in port area.
IDENTIFICATION CARDS: Shore passes issued by local police.

SHIPMASTER'S REPORT: 1979
Navigation: Incoming vessels are to anchor in position Lat. 41° 15' N., Long. 19° 27' E. (2.5 miles from breakwater) and await orders. The Danger Area shown on B.A. Chart No. 2701 is reportedly non-existent.
Communications: The local radio station call sign ZAD is to be contacted on anchoring. The radio transmitter is sealed on berthing. The Agents have a telex machine which works intermittently. Telephone calls to Northern Europe possible but subject to delay.
Pilot: Equipped with VHF Channel 16, boards at anchorage.
Tugs: Two medium size tugs available for docking. One salvage tug stationed in port.
Draft: Pilots advised 27 ft. 6 in. max. draft alongside and in approaches.
Cargo Facilities: Loaded 14,000 tonnes of cement in 50 kg. bags from rail and road trucks. 3 shift system. Used both shore cranes and ship's derricks. As cargo comes from cement factory in interior by rail, presentation is very intermittent, and vessel rarely informed of working prospects more than a few hours in advance. Sundays are normally holidays. Loading rate averaged 1,000 tons approx. per working day but ranged from 200 tons to 1,700 tons, depending on labour and cargo availability.
Formalities: ETA's required 5 days and 2 days in advance, also include length, tonnage, flag, state of health, etc.

Documents required: 6 Crew Lists, 2 Lists of Foreign Currency, 2 Personal Effects Lists, 1 Health Declaration, 3 Stores Lists. Bond is sealed but Customs will open on request.
Repair Facilities: Small shipyard for minor repairs available.
Surveys: Agents advise that Government Surveyor available for radio surveys, etc. No Classification Society Surveyor available.
Cash: Lek is currency – 1 Lek = approx. 14 US cents (7 Leks = $1). Foreign currency may be exchanged (approx. 5 days notice).
Provisions: Government ship chandler. Fresh vegetables good, fish available at moderate prices, meat not recommended.
Laundry: Available. Reasonable price, average standard.
Crew: Repatriation is reportedly possible, however it takes 3 days to get an exit visa.

Shore leave is permitted to Seaman's Club only until 2300 hrs. A special pass has to be obtained to visit the town (1500 hrs. to 1900 hrs. only). Tours to Tirana can be arranged by car, if one day's notice is given. Casual dress (jeans) also long hair prohibited outside dock gates.

Gangway guards in attendance throughout stay.

Considerable difficulty experienced in arranging tour for Chinese ratings.
Port Facilities: Berthing facilities for 10 ocean-going vessels. Sufficient 5 ton shore cranes available. Railway tracks to most quays. Main imports coal/coke. Exports, low grade chrome ore. Priority for Albanian vessels. One floating crane. Lack of mechanisation reduces work rate. No fork lifts or proper palletisation observed.
Agency: Adtare (Government Agency) in port area. The Agents visit vessel twice daily and speak adequate English and are reasonably helpful.
Fresh Water: Available from barge at $1.50 per ton approx.
Fuel Oil: Heavy oil and diesel oil delivered by road tankers (limited amounts).
Local Regulations: Permission to immobilise engines must be obtained. Garbage is collected daily (compulsorily) in plastic sacks. Permission required prior to de-ballasting.
Watchmen: Not required as gangway guards provided.

AUTHORITY: Drejtorija e Portit Durres.

SARANDE: 39.52 N. 20.02 E.

DOCUMENTS: See "Durres".
RESTRICTIONS: See "Durres".
PILOTAGE: Compulsory. On arrival vessels should anchor and wait for Pilot in position Lat. 39° 51' 50" N., Long. 20° 10' 10" E. Pilot available only during daylight hours.
HEALTH: Free Pratique given when Pilot boards provided vessel's Health Declaration is satisfactory.
RADIO: Durres Radio.
BERTHING: Larger vessels work cargo at anchor only. Ship's gear used.
FRESH WATER: Not available.
FUEL: Not available.
GENERAL: See "Durres" for General Information.
AUTHORITY: See "Durres".

SHENGJIN: 41.49 N. 19.35 E.

DOCUMENTS: See "Durres".
RESTRICTIONS: See "Durres".
PILOTAGE: Compulsory. On arrival vessels should anchor and await Pilot in position Lat. 41° 48' N., Long. 19° 35' E. Pilot available only during daylight hours.
MAX. SIZE: Draft 18 ft.
HEALTH: Free Pratique given when Pilot boards provided vessel's Health Declaration is satisfactory.
RADIO: Durres Radio.
TUGS: One small tug available.
BERTHING: Two piers in harbour, one of which is used for larger vessels.
FRESH WATER: Limited supply by barge.
FUEL: Not available.
GENERAL: See "Durres" for general information.
AUTHORITY: See "Durres".

Algeria

GENERAL:

DOCUMENTS: Report: September 1995.
Currency Declaration: The Master of a tanker calling at the port of Arzew forgot to declare official ship's funds of about U.S.$ 12,000 in the ship's safe. When asked if he had any funds, the Master readily admitted that as Master, he of course had official funds in his safe. Nevertheless, the omission resulted in confiscation of those funds, a fine of about U.S.$ 24,000, legal fees of about U.S.$ 1,200 and off-hire time amounting to about U.S.$ 33,000.

Operators are advised to remind their Masters to be aware of the necessity to be very careful with declarations in the ports of Algeria.

ALGIERS (El Djazair): 36.50 N. 03.00 E. (See Plan)

DOCUMENTS:
1 Cargo Manifest required for all cargo including that in transit for non-Algerian ports.
8 Crew Lists.
2 Crew and Passenger Personal Effects Lists.
1 Stores List, including Bonded Stores.
1 Currency Manifest.
2 Lists of arms, ammunitions or Military Stores (or "Nil" Declaration).
1 Private Bond and Beer List.
1 Declaration of Health.
1 Vaccination List.

Immigration officials may require to inspect all discharge books or passports. Customs regulations are strictly interpreted. Care should be taken to ensure that all ships' papers are perfectly in order. Vessels arriving with incomplete or inaccurate documentation have been subjected to severe delays and penalties.
PILOTAGE: Compulsory. Available day or night. Pilot boards vessel about 0.5 miles from end of Wattier Jetty. Pilot boat is black with insignia of 2 white anchors.
ANCHORAGE: Algiers Bay is crescent-shaped with Cape Caxine on the West and Cape Matifon on the East. Depth 25 m. – 30 m. Bottom is good holding ground, and vessels are sheltered from West and Northwest.
RESTRICTIONS: None if Port Authority is advised by Radio Algiers or by Agent.
MAX. SIZE: Vessels of 25,000 tons proceed normally. Length not restricted; maximum draft 38 ft.
HEALTH: Health Officer boards vessel on arrival.
RADIO: Algiers Radio, operates continuously.
VHF: Harbour Master on Channels 16 and 12.
TUGS: Three available of 600 to 800 h.p. and also one of 1,000 h.p. for towing in harbour; 2 larger available for open sea, 1,500 - 1,300 h.p.
BERTHING: 54 berths available, total length of 9,519 m. plus 2 berths of 250 m. each for tankers. All general cargo berths have cranes with lift of 3 tons - 6 tons.

Iron cargoes only handled at Berths No. 33/1, 2 and 3. Vessels handling general cargo will have to shift to one of these berths if they have iron amongst the general cargo.
STEVEDORES: Available.
MEDICAL: All assistance available.
TANKERS: Quay de Lorient: 2 berths, with depth alongside 11.50 m. Deballasting facilities available.

"LPG vessels" – See "Shipmaster's Report".
DENSITY: Salt water.
FRESH WATER: Delivered by pipe-line to quay, or by water barges.
FUEL: Deliveries by pipe-line on most quays or by barge. Large vessels are supplied by barge in the roads.
FIRE PRECAUTIONS: A special notice with instructions is delivered to tankers. Fire station established within port area.
CONSULS: All principal countries are represented in Algeria.
REPAIRS: All repairs available.
DRY DOCKS: Two: one of 136 m. long, 18.50 m. width, and 8 m. depth. The second of 74.30 m. long, 15.50 m. width and 5 m. depth.
SURVEYORS: M.Hamaid, c/o Expertises Maritimes, 10 Rue Duc Descars (Yo ghouta), P.O.Box 119, Algiers. Tel: (02) 615259. Fax: (02) 615590.
GANGWAY/DECK WATCHMEN: Service by three experienced companies arranged by Agent.
OPENING/CLOSING HATCHES: Normally opened by crew, or by port workers.
REPATRIATION: Frequent departures for Europe by ship or plane.
AIRPORT: Dar-el-Beida at a distance of 20 km. from Algiers; several flights daily.
TIME: GMT plus 1 hour.
HOLIDAYS: 1st January; 5th July; 1st November; Labour Day; Proclamation Day; plus religious holidays – Aid Seghir; Aid Kebir; New Year's Day (Egira); Achoura, and Mouloud. Friday is now considered as the weekly rest day in Algeria.
POLICE/AMBULANCE/FIRE: Police 63.01.61; Fire Service 63.71.22.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
DEVELOPMENTS: The port is to be extended to the East to provide 700 m. of container berths with a depth of 19 m.

SHIPMASTER'S REPORT: January 1981.
Approaches: B.A. Chart Nos. 855 and 2555.

Prominent land features clearly visible both visually and by radar. At night-time, anchored or underway, vessels are very difficult to identify due to background of shore lights.

No. 2 Buoy marking Western extremity of prohibited anchorage area (Lat. 36° 49.3′ N., Long. 03° 07.2′ E.) unlit at time of visit.
Anchorage: Anchorage prohibited East of line drawn from No. 2 Buoy to East of beacon on coastline at 03° 10′ E. Reasonable anchorage obtained two miles N.E. of Qk.Fl. light at end of Northern breakwater in approximately 40 fathoms. No separate tanker or small vessel anchorages although small vessels generally appeared to anchor either between main breakwaters immediately East of Jettee de L'Est or close offshore with little regard to Eastern harbour entrance. Anchorage completely exposed to prevailing winds from N.E. and swells that accompany wind.
Wind: Prevailing wind is from North to N.E. and is strongest during Winter months. Swell builds up quickly and causes harbour to be virtually untenable with many ships breaking loose from berths. Authorities close port and all ships leave berths generally when weather conditions have started to abate. Forecasts difficult to obtain.
VHF: Call "Algiers Harbourmaster" Channel 16, working on Channel 12. Range limited to about 6 miles. On arrival, vessel's information required and details of cargo to be loaded or discharged. French speaking is an advantage in which case call "Capitainerie du Port". Very little warning of berthing instructions given. Agents can, apparently, be contacted through Harbour Master.
Berthing: Berthing and unberthing only during the hours of daylight unless in extreme emergency.
Pilot: Upon receipt of berthing instructions, vessel proceeds to a position approximately half mile East of Southern breakwater entrance. Pilot boards by pilot ladder, side appropriate to weather conditions but generally on port side, from pilot launch. Pilot ladder about 1 m. above water.

Pilot also boards by launch when unberthing.
Tugs: Two used for berthing and 3 for unberthing (bad weather). Two good ship's ropes to each tug. For berthing, forward tug taken on port bow and aft tug on starboard quarter, similar arrangement for unberthing. These positions to enable vessel to swing short round to port immediately after entering breakwater.
Berth: Berth 37: Port side alongside "Brise lames Est" jetty in Area 9. Depth alongside 10.0 m. forward and 10.5 m. aft. Little or no tidal effect. Straight jetty with protruding dolphins of concrete construction and fendered by tyres mounted on timber and suspended from quayside by chains.

Berth affected by swell from North/N.E. and vessels can surge up and down the quayside alarmingly. It is essential to have out as many moorings as possible and in particular good stern lines and forward back-springs. On this visit, 5 moorings parted and eventually necessary to have mooring winches manned continuously to counteract vessel's surging. This vessel (31,296 cu.m.) was largest gas vessel to have entered Algiers.

Port gangway initially used but later replaced by "Board of Trade" gangway. It is advisable not to rig gangway before berthing due to quayside obstructions.
Density: Density alongside 1026.
Cargo: Butane discharge. Receiver's Sonatrach cannot accept cargo below +5°C, therefore heater required. Booster pump not required after initial problems resolved. Shore tank capacity is small and adjacent to gas-bottling/distribution plant. At first, Receivers were asking for maximum rate of discharge and then stopping cargo every two/three hours. After contacting Commercial Manager of Sonatrach, arrangement was made whereby shore plant emptied tanks before resumption of discharge and then discharge maintained at slow rate for several hours. Cargo discharged = 4,000 tonnes in 5 days.
Contacts: Sonatrach Manager LPG Operations, Marketing Division – Gas Exports, 46 Boulevard Mohamed V, Algiers. *Tel:* 61-12-24.

This person is responsible for all gas import/export contracts, works closely with Trammogas.

Sonatrach Commercial Manager, Commercial Division, 46 Boulevard Mohamed V, Algiers. *Tel:* 61-12-24.

Commercial Manager works closely with the Manager LPG Operations.
Authorities: Algerian requirements are now well established and particularly applicable to this port. All items contained within the Bond are carefully checked and counted and any single discrepancy can result in large fine. All money (all currencies) collected in, declared on Currency Declaration and locked in safe. Customs did not rummage on this visit because all paper-work exactly to their requirements.

No cargo documentation was in the vessel's possession for berthing. Customs satisfied with Master's Declaration that cargo papers were in transit between U.K. and Algeria.
Agent: Compagnie Nationale Algerienne de Navigation (C.N.A.N.). Cable Address: CNAN, Algiers. Tel: 62–64–00 and 62–88–00.
Chandler: Provided excellent quality fresh provisions at short notice and at reasonable price. Method of payment is by Cash Requisition through Agent.
Fresh Water: Good quality and available on quayside. Shore meter inoperative.
Bunkers: Available by barge.
General: Repatriation can be easily arranged through Agents. Airport about 10 km. away with 5 daily flights to Paris and one to London. Disembarking personnel hand in Discharge Book plus 2 photographs to Agent a few hours before disembarking to clear Immigration formalities.

Reasonable communication links with the U.K. and people most helpful.

Shore leave unrestricted – personnel to carry Identity Cards.

SHIPMASTER'S REPORT: September 1988.
Documents: Vaccination List only required if vessel arriving from an infected area.

All money must be declared, but need not be locked up.
Restrictions: Entry possible day and night.
Officials: As soon as vessel is anchored, Customs and Coast Guard board the vessel.

Beer and wine are not sealed.

Coast Guard inspects Load Line Certificate, Safety Construction Certificate, Safety Radio Certificate and Safety Equipment Certificate (including Liferaft Certificates).
Fresh Water: Fresh water available at anchorage at short notice by barge of 80 tonnes capacity.

SHIPMASTER'S REPORT: February 1989.

There are no buoys marking the Northern limits of the anchorages. Ships anchor as they please, regardless of size of vessel.

Pilotage is available around the clock.

The Unknown Soldier Monument is very conspicuous and is a good landmark for finding the head of the South Entrance Breakwater if, by any chance, it is impossible to distinguish it, due to congestion at the anchorage.

AUTHORITY: Direction Generale de Port d'Alger, B.P. 708, Algiers, Algeria. *Tel:* 579557. *Telex:* 61275. *Contact:* The Commercial Director.

ANNABA: 36.58 N. 07.47 E.

DOCUMENTS: Refer to "Algiers".
PILOTAGE: Compulsory when entering, leaving or shifting in harbour, vessels arriving during night and wishing to enter the basin must anchor at 2 nautical miles to East of Southern Lighthouse at main entrance (red occulting light) on steady sand bottom of 65 ft. to 100 ft. depth.
ANCHORAGE: Quite good anchorage well protected against West or North winds at about 3 nautical miles to North of harbour with depths of 40 ft. to 60 ft. on rocky and sandy steady bottom.
MAX. SIZE: Length 656 ft. draft 33 ft., breadth no restriction. Tankers Max. draft 39 ft.
RADIO: Cable Agents giving ETA or to Harbour Master by cable or radio telephone via Annaba Radio Station which is permanently watching on 2182 kHz.
VHF: Harbour Master's Office can be contacted on Channels 16 and 14.
TUGS: Two tugs available each of 700 h.p., both fitted with radio telephone and two fire appliances.
BERTHING: Harbour is open to merchant navigation every day from 0500 hrs. to 2200 hrs. In case of necessity vessel will be handled at any time.

21 general cargo berths with depths 6.2 m. to 10.0 m.
CRANES: 18 electric or diesel shore cranes with lifting capacities from 3 to 6 tons; 1 electric shore sheers of 110 tons and 1 diesel-electric sheers hulk of 80 tons.
BRIDGES: No bridges or power cables crossing port area.
STEVEDORES: Available. Working hours (whole days), normal hours: 0700 – 1020/1400 – 1720. Shifts: 0630 – 1230/1300 – 1900/2000 – 0200. Working night and holidays, overtime 50%.
TANKERS: Two tanker berths in outer port, entrance 43 ft. The first is at Lyon's Jetty consists of 2 dolphins 180 ft. apart, depth 33 ft. Second at South Jetty consists of 2 dolphins 180 ft. apart, depth 43 ft. Pipelines of 8 in. and 10 in. supply the oil installations.
FRESH WATER: Plentiful supply of water alongside wharves at a rate of 8 t.p.h. to 14 t.p.h. By barge at the tanker berths.
FUEL: Bunkers available.
REPAIRS: One graving dock fitted with 2 rolling cradles on slipways, lifting capacity 100 tons and 200 tons. Divers and frogmen available.
GANGWAY/DECK WATCHMEN: Performed by ship's crew.
OPENING/CLOSING HATCHES: Performed by stevedores.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
GENERAL: Prevailing winds generally of N.W. and West. Storms from these directions are blocked by mountains which lie behind harbour. Harbour is only exposed to storms from East and N.E. which are very rare. There is practically no swell or surf into harbour. Tidal variation about 1 ft. and water level ranges about 31 in. dependent on season. Low waters from February to June and high waters from June to February.

SHIPMASTER'S REPORT: September 1982.
Position: 36° 54′ N., 07° 46′ E.
Name: Formally named Bone, in most of the charts is mentioned as Bone.
Radio: Annaba Radio keeps watch also on VHF Channel 16 and working Channels 24, 25, 26, 27.
Gangway/Deck Watchmen: Shore watchman is compulsory by Port Authorities.
Opening/Closing Hatches: Performed by crew.
Identification Cards: Shore passes are issued by Immigration Office and shore leave is allowed on presentation of the issued pass and Passport or Seaman's Book.
Restrictions at Port: As soon as vessel anchors in Annaba Roads, Coast Guard comes on board and collects all documents and seals all Bonded Stores. Attention is to be paid on the correct counting of Bonded Stores, such as cigarettes, spirits, etc. Beer is not sealed and crew allowed 200 cigarettes plus one bottle of spirits each.

(a) It is strictly forbidden for ships to use their whistles or sirens in the harbour, exceptions when vessel being under way for preventing collisions. Strictly forbidden to call Pilot by means of whistle between 2000 hrs. and 0600 hrs.

(b) All ships must keep on board sufficient crew in order to carry out all ship's handling, especially shiftings of vessel. Normally Master is informed by Port Authority and signs notice, but many times happened to inform vessel at any time to shift immediately.

(c) It is strictly forbidden to carry out deballasting operations in the harbour waters, except after a systematic control has been made by the Master, the Dock Master or a Surveyor appointed by them, to prove that ballast water is clean.

(d) Any repairs being made to the hull of the vessel, scraping, painting, painting of Load Line marks must be authorised by the Captaincy.

(e) Trials of the engines can only be done with an authorisation from Port Captain.

Maximum Draft Allowed: 31 ft. for the berth of minerals – "Iron and Coke".

AUTHORITY: Directeur du Port.

ARZEW (including Arzew El Djedid): 35.50 N. 00.08 W. (See Plan)

LOCATION: The Port of Arzew extends between Lat. 35° 50′ N. and 35° 52′ N. and Long. 0° 08′ W. and 0° 17′ W., at the N.W. end of the Gulf of Arzew.

The Port of Arzew El Djedid is located in position Lat. 35° 48′ 06″ N., Long. 00° 12′ 30″ W.
DOCUMENTS:
3 copies Manifest.
4 copies Crew List.
2 copies Vaccination List.
2 copies Arms & Ammunition List.
All Log Books, Certificates and Registers will be inspected.
Sailing: The Sailing Declaration must be made 2 hours at least prior to sailing time.
APPROACHES: *Landfall:* By day recognition of Arzew is made easy by the high ground of Cape Ferrat. On entering the Gulf the lighthouse of the Island of Arzew is seen and in clear weather it is possible to distinguish to the East, the town of Mostaganem. The Arzew Mountain (225 m.) dominates the Bay of Arzew and the port.

The storage tanks for hydrocarbons are visible from a long way offshore. At night, vessels see firstly the oil flares of the different units in the industrial zone. These flares are visible in good weather for a distance of 25 miles.

LNG Flare "4Z"	Lat. 35° 50′ 31″ N.	Long. 0° 18′ 42″ W.
Refinery Flare	Lat. 35° 49′ 40″ N.	Long. 0° 19′ 15″ W.
L.P.G. Flare	Lat. 35° 49′ 58″ N.	Long. 0° 18′ 12″ W.
LNG Flare "1Z"	Lat. 35° 49′ 07″ N.	Long. 0° 16′ 20″ W.
	Lat. 35° 49′ 04″ N.	Long. 0° 16′ 26″ W.
LNG Flare "2Z"	Lat. 35° 48′ 32″ N.	Long. 0° 15′ 23″ W.
	Lat. 35° 48′ 47″ N.	Long. 0° 15′ 21″ W.

Port Lights: Lighthouse on Arzew Island: Lat. 35° 52′ 34″ N., Long. 0° 17′ 20″ W.
Buoys: Junction Buoy (vertical red and white stripes), white light, position: Lat. 35° 50′ 29″ N., Long. 0° 16′ 03″ W.

Madrague Buoy, East cardinal mark ("A" System), white light, position: Lat. 35° 51′ 40″ N., Long. 0° 16′ 20″ W.

Sea Water Intake Buoy (CEAZ complex): North cardinal mark ("A" System), white light, position: Lat. 35° 50′ 06″ N., Long. 0° 16′ 55″ W.

Working Buoy on Offshore Jetty: Black (starboard characteristics) with fixed green light, position: Lat. 35° 50′ 51″ N., Long. 0° 17′ 16″ W.
Lights of the Port of Arzew: Breakwater: Green light, position: Lat. 35° 51′ 06″ N., Long. 0° 17′ 04″ W.

Head of Offshore Jetty: White light, position: Lat. 35° 50′ 27″ N., Long. 0° 17′ 22″ W.

Secondary Jetty: Red light, flash every 3 secs., position: Lat. 35° 50′ 59″ N., Long. 0° 17′ 45″ W.

South Jetty: Red light, position: Lat. 35° 51′ 17″ N., Long. 0° 17′ 55″ W.

Mole IV: Fixed green light (S.W.), position: Lat. 35° 51′ 28″ N., Long. 0° 17′ 44″ W.

Mole III: Fixed red light (S.E.), position: Lat. 35° 51′ 32″ N., Long. 0° 17′ 57″ W.
Lights of the Port of Arzew El Djedid:

West Jetty: Green light, position: Lat. 35° 49′ 26″ N., Long. 0° 15′ 22″ W.

East Jetty: Red light, position: Lat. 35° 49′ 05″ N., Long. 0° 14′ 32″ W.
PILOTAGE: Pilotage is compulsory. The limit of the pilotage zone out to sea is the parallel of the lighthouse on Arzew Island.

Pilots may ensure that anchoring is carried out in the roads for large vessels. The Pilot embarks in the waiting zone. The pilot ladder must be rigged on the lee side at a height of 1 m. above the water. For large vessels in ballast, the pilot ladder must give access to an accommodation ladder rigged at a height of 5 m. (approx.) above the water.

Communications from tankers will be via the international radio station at St. Lys, which is in telex communication with the Arzew Terminal. Contact with the Arzew Terminal can be made on VHF Channel 16. Vessel will then be informed by the control room of the frequency to use, either Channel 12 or 14 for mooring purposes.
ANCHORAGE: Vessels requiring to anchor on arrival normally use services of the Pilot. Anchorage fees are charged whether the Pilot is used or not. Sea bottom of rocks, sand and mud.

The operations in the roads and the safeguard of accesses have brought about the reserved zones, forbidden areas, waiting and anchoring zones.

The position of these zones is shown on the chart.

(a) The forbidden zone corresponds to the S.W. sector included between the parallel of Arzew Island (Lat. 35° 52' 28" N.) and a straight line running at 45° from the land and passing through the following geographical point: Lat. 35° 50' 27" N., Long. 0° 15' 55" W.

(b) The waiting zone corresponds to the N.E. sector included between the North of the breakwater of the New Port and a straight line running at 45° to the West from the land, passing through the above geographical point.

Vessels which have to anchor on arrival can request the services of a Pilot.

The bottom is firm, constituted by sand, pebbles, and muddy shale.

Use of Anchors for Manoeuvring: This is forbidden in the port except under conditions of force majeure. It is strictly prohibited in the passages and fairways, and in the vicinity of the pipelines.

RESTRICTIONS: Vessels may enter or sail by day or night, weather conditions permitting. Tankers berthing on the sea-line berths may be restricted by bad weather, heavy wind or swell.

Vessels sailing have priority over vessels entering.

Port Closure: In case of accident or unfavourable weather conditions the port may be closed for entry, for leaving or in both directions at the same time. Notice of closure is broadcast on VHF Channel 16.

In general, the Port of Arzew may be closed for entry if:
1. The swell is greater than 2 m.
2. Winds are Force 6 (Beaufort) or greater.

The Port of Arzew El Djedid may be closed for entry if:
1. The swell is greater than 2 m.
2. Winds are Force 5 (Beaufort) or greater.

State of Vessel: Prior to entry into port, Masters must sign a declaration in which they state that the navigability of their vessel is perfect and that they are in possession of all certificates and documents required.

Vessels which are required to operate at the sea-line must arrange their loading derricks prior to the manoeuvre. The strength of these loading derricks must be equal to or greater than 5 tonnes, their Safety Certificate is required on arrival.

MAX. SIZE: See "Berths".

HEALTH: Free Pratique is not granted by radio. For tankers berthing at the sea line, Pratique may be granted by a visiting sanitary officer or by the Pilot when he boards, providing the Health Declaration is satisfactory. For vessels berthing inside the harbour, the Health Officer will board on arrival.

Vessels calling at Arzew must advise their ETA 48 hours and 24 hours prior to arrival, naming the ports called within the last 10 days.

Crew must be vaccinated against cholera. Vaccination books must be valid and a check is made before Free Pratique is granted.

RADIO: Oran Radio and Algiers Radio both listen on international frequencies. Tankers normally use St. Lys Radio.

Notice of Arrival: Vessels destined for Arzew must send to the Port Captaincy a message at least 48 hours in advance through a coastal station stating, date and time in GMT of their arrival in the port roads.

The Notice of Arrival is to be confirmed 12 hours prior to arrival of the vessel in the port roads.

VHF: *Port Radio Service:*

Call-up Frequency:
156.8 MHz., Channel 16, listening-out frequency.

Working Frequencies:
156.7 MHz., Channel 14, Arzew Port Captaincy.
156.5 MHz., Channel 12, Arzew El Djedid Captaincy.
156.65 MHz., Channel 13, Pilotage Station.
156.6 MHz. Channel 10, Tug Station.
156.55 MHz., Channel 11, Sea-Line.
156.7 MHz., Channel 14, Tug Station.

Vessels arriving at Arzew, and waiting in the roads, must listen out continuously on Channel 16.

Vessels with their Pilot aboard must listen out on Channels 14 (Arzew), 12 (Arzew El Djedid), 11 (sea-line):
(a) From the time the Pilot comes on board until arrival at the quay.
(b) From the departure from the quay until the Pilot disembarks.
(c) During the whole time the vessel is at the sea-line.

TUGS: Tug service is compulsory for vessels of more than 1,500 g.r.t. 8 tugs are operational with power ranging from 2,000 h.p. to 3,500 h.p.

It is compulsory for tankers of up to or larger than 50,000 metric tonnes (d.w.t.) to use at least 3 tugs on entry.

The tow lines, supplied by the ship, must be in perfect condition and appropriate for the manoeuvre.

The route programme is drawn up by the Pilot, in agreement with the ship's Master.

BERTHS: Arzew:

Mole III: 258 m. long and 100 m. wide, with 5 berths for various cargoes with depths of water varying from 5 m. to 8 m.

Berth (Name/No.)	*Depth (m.)*	*Max. d.w.t.*	*Products Handled*	*Loading Arms (Diameter)*
Methane Terminal:				
North Berth	9.80	40,000 cu.m.	methane methanol	12 in. 8 in.
South Berth	9.80	40,000 cu.m.	methane	12 in.
Jetee Secondaire:				
"S1" (Inner West)	10.0	30,000 15,000 cu.m.	ammonia refined products LPG residue and deballasting facilities	3×10 in. 3×8 in. 3×12 in.
"S2" (Outer East)	11.0	60,000 25,000 cu.m.	refined products LPG bitumen deballasting facilities	3×12 in. 3×12 in. 3×12 in.
Jetty Large:				
P1 (Middle Berth)	13.50	50,000	crude, gas oil, fuel oil, condensate	12 in.
P2 (Seaward/ Outer Berth)	15.50	100,000	crude, gas oil, fuel oil,	12 in.
P0 (Inner Berth)	10.0	30,000	LPG, fuel oil, gas oil	8 in.
Sea-line	26.0	100,000	crude, condensate	28 in. hoses

Arzew El Djedid:

Berth	*Depth (m.)*	*Max. Size*	*Products Handled*
M1	13.5	125,000 to 200,000 cu.m.	LNG
M2, M3 (2 berths)	13.5	125,000 to 200,000 cu.m.	LNG
M4, M5 (2 berths)	13.5	125,000 cu.m.	LNG
M6	13.5	125,000 to 200,000 cu.m.	LNG
B1	23.5	25,000 to 100,000 cu.m.	crude, condensate
B2	23.5	50,000 to 150,000 tons	crude, condensate
B3	26.5	100,000 to 250,000 tons	crude, condensate
D1	13.0	35,000 to 70,000 cu.m.	LPG

(See "Shipmaster's Report" dated March 1984)

Berths M2/M3 and M4/M5 are operational, a hydraulic gangway with a crane (3 tonnes) is available on the service platform of these berths.

The berths are equipped with a battery of 5 loading arms for LNG of 16 in. × 66 in. of which one is for vapour return. Pumping rate is 2,500 cu.m.p.h. A bunker arm of 8 in. × 66 in. is provided.

Nitrogen: Supply of nitrogen on M2/M3 is by tanker lorry.

BERTHING:

Coming Alongside and Mooring: Except in exceptional cases, vessels must be berthed bow facing out to sea. Each vessel is moored with its own lines.

The number lines per vessel must in no event be less than 14, i.e. 7 forward and 7 aft: 3 head lines (stern lines), 2 breast lines, 2 springs.

Mooring lines of rope should be used preferably unless abnormal conditions prevail.

Lines of steel wire, if used, must not be secured on tanker working decks, except if they are on constant tension winches, and pass through roller leads.

It is recommended that mixed moorings be avoided. In particular, springs must be lines of the same material.

The moorings must be suitably tightened, be inspected constantly, and adjusted every time it is necessary.

Fire Wires: Towlines of steel wire, the so-called "fire wires" must be positioned on the seaward side on the forecastle and the poop, with the eye of the wires being maintained 1.50 m. above water level by a watchman. On each fire wire a length of wire of 10.0 m. must be arranged on deck between the bollards and the lead.

Gangways, Gangway Ladders, Pilot Ladders: The gangway or gangway ladder must be easily accessible under all circumstances and provided with a safety net, being well lit at night.

At the Port of Arzew El Djedid, at Berths M2/M3 and M4/M5, vessels are connected to shore by automatic gangways.

The positioning of the pilot ladder or the gangway ladder on the opposite side to the quay is forbidden.

Vessel's stay at Berth: Any stay at a berth outside that of commercial operations must be authorised by the Port Captain.

All vessels must only stay in port for the minimum time required.

In the event of commercial operations not commencing immediately, or are stopped for any reason, the Port Captaincy may decide to call for the vessel to go out to the roads.

Departure formalities may be required to be carried out in the roads. Masters must report any machinery damage which reduces their capability. Repair works of any kind are forbidden except where specially permitted by the Port Captain.

Sealine: Use of ship's anchors will not be permitted when manoeuvring into berth. Two tugs are available to assist in berthing. On arrival vessels should have ready 8 mooring lines, 4 forward and 4 aft and a tow rope at each end as it will be necessary to position the vessel with her own gear before securing to the heavy wires. Good rope messengers should be ready at each end of the vessel to pick up these wires.

There are 3 mooring buoys at the bow and 3 at the stern. All buoys are fitted with 5 in. wire ropes. Ships of moderate tonnage may be moored using 2 bow buoys and 2 quarter buoys only. Hoses will be lifted from both sides of the vessel using ship's gear and crew.

The port and starboard derricks must be ready for use before berthing. The safe working-load must be at least 5 tons. The Loading Master can refuse to berth a tanker whose lifting tackle is not correctly rigged or in good working condition.

Three 12 in. hoses are connected for loading, 2 on one side and 1 on the other. Loading rates up to 5,500 t.p.h.

STEVEDORES: Vessels must cable their ETA at least 24 hours before arrival and confirm before 1700 hrs. on day prior to arrival or before 1000 hrs. if vessel will arrive in the afternoon of the same day. Gangs are ordered before 0700 hrs. for mornings and at 1030 hrs. for afternoons. Shifts are from 0730 – 1050 hrs. and 1530 – 1650 hrs. Extra shifts from 0730 – 1330 hrs. and from 1330 – 1930 hrs.

MEDICAL: All treatment of ship's crew is arranged by private doctors through ship's Agent. No hospital facilities at Arzew. Seriously injured crew are taken to Oran, 45 km. away, for hospitalisation. Vessels arriving with sick crew on board should notify Agents well in advance to make arrangements for hospitalisation on arrival. No patient is to be disembarked without notification to the Health Officer for his agreement.

TANKERS: See "Berths" and "Berthing".

BALLAST: Pilots are empowered to refuse to berth a vessel if in their opinion the vessel has insufficient ballast, or her trim is such that it would prevent safe loading.

DENSITY: 1030.

FRESH WATER: Provided by fresh water hydrants on M2/M3 (El Djedid), Moles III and IV. Elsewhere fresh water can be supplied by a tug.

FUEL: Two barges of 2,000 tons each are available. They deliver at a rate of 350 cu.m.p.h. These barges are intended for bunkering vessels with fuel oil (1000 sec. Redwood, 0.924), Bunker "C" (3000 sec. Redwood, 0.960), gas oil and diesel oil (40 sec. Redwood, 0.810 to 0.840) and lubricants, both in the roads and at the quays.

Spain (Consul-General), Tel: 33.21.65.
U.S.A. (Consul), Tel: 35.26.65.
The Netherlands are also represented.

WATCHMEN: Shore watchmen are compulsory for vessels loading fertiliser or discharging LPG or refined crude in the harbour area. For tankers loading at the sea line berth, watchmen are at Master's discretion.

CUSTOMS ALLOWANCES: 200 cigarettes and an opened bottle of spirits per man.

AIRPORT: International Airport at Es-Senia (Oran), distance 50 km.

TIME: GMT plus 1 hour all year.

TELEPHONES: Available only at methane berths. At the sea line berths tankers may communicate using VHF Channel 16 to Arzew Terminal.

IDENTITY CARDS: On arrival, the Immigration Control inspect all passports or Seamen's Books. Shore passes are given at the harbour gate in exchange for passports, Seaman's Book, or in the case of French seamen, their identity cards.

SERVICES: *Launch Service:* Available for ship's crew for transportation to the roads.

GENERAL: *Measures to be taken in the event of deterioration in weather conditions:* In the event of a warning of high winds and bad weather, the Master must be prepared to stop loading and to make arrangements for suitable *ballasting*.

In the event of high wind or the threat of it, particularly from the North to the East, the following measures should be considered:

Reinforcement of moorings.
Ballasting.
Taking a Pilot on board.
Requesting aid of tugs.
Stop loading – disconnection of arms.
Sailing of the vessel.

Light and Flag Signals: From their arrival in the Roads until they leave, all tankers not degassed or vessels carrying hazardous goods must exhibit the following signals:

By day: A red flag.

By night: A fixed red light visible all around the horizon, apart from regulation navigation lights.

Wind: In Winter winds predominantly from the West.

In Summer the main winds are those from the East to North sectors.

Seasonal variations define two periods: the one of a windy Winter (October to April) and the other, the Summer, more calm (May to September). The average frequency of winds in excess of 10 m./sec. from the N.E. quadrant varies from 3.5% during the Winter to 2% during Summer, whilst that of winds from the S.W. quadrant varies from 5.1% to 1.3% between the same periods.

Tide: The variation in water level arise from the superimposition of a half-daily lunar tide of low amplitude (15 cm. – 30 cm.), fluctuations in general level during the year and long period oscillations (tidal waves).

Swell: Swell from North to East direction is preponderant, whilst that from other directions is negligible.

79% of the time the amplitude is less than 1 m.

3% of the time the amplitude is greater than 3 m.

The bad weather period is from December to April, with the maximum risk in December.

Currents: General Currents: Centre of current from East to West, −0.25%.

Surface Currents: With N.E. wind between 30 km./h. and 35 km./h. currents in the same direction (0.8 km./h.) as far as the Madrague area where they turn to the South and even S.E. (0.3 km./h.). With S.W. wind at 25 km./h., the currents have the same direction as the wind and can reach speeds of the order of 1.2 km./h.

Bottom Currents: There is a bottom current coming from Mostaganem (0.35 km./h.) which follows the coast.

Accident on Board or in Port – Principal Steps to be Taken:

In the event of accident, all fire-fighting means installed permanently on the moles, quays and in the port area are immediately placed at the disposal of Masters.

If there is fire on board the vessel, the Master must, as soon as the source of the fire has been established, take every measure to extinguish it.

If the Master considers that he cannot achieve this, he draws the attention of the port services by making a series of long blasts on his vessel's whistle, and requests that all possible available means be put at his disposal. At the same time he must:

(1) Stop commercial operations.
(2) Disconnect loading arms and hoses.
(3) Close all openings leading to the tanks, pump room, bunkers, etc.
(4) Place his vessel immediately in a position to sail so as to get away from the berth should the Port Authorities so request.

Other vessels, as soon as they hear the siren of the vessel in trouble, must:

(1) Stop commercial operations.
(2) Disconnect loading arms and hoses.
(3) Close all openings leading to the tanks, pump room, bunkers, etc.
(4) Place the vessel immediately in a position to sail.
(5) Prepare all means for fire-fighting.

Fire-fighting means:

These comprise:

First strike means (foam, powder) installed at the loading points
Fire-fighting network.
A pump vessel equipped for fighting hydrocarbon fires.
Tugs fitted for fighting fires of all kinds.

SHIPMASTER'S REPORT: March 1984.

Arzew el Jadid – Bethioua: LPG Berth No. D1.

Berthing: Two tugs make fast close to East Entrance to the port – at the time of berthing the wind was from the N.N.E. at 20 knots gusting to 25 knots and the tugs were secured with great difficulty with the vessel positioned virtually in the entrance.

Whilst berthing a third tug pushes amidships to hold the ship on the berth.

Two tugs are used for unberthing.

Tugs are secured using two lines (ship's lines).

Manoeuvring area inside the breakwater is tight and I would not recommend berthing or unberthing operations in wind speeds exceeding 15 knots.

The max. length of vessel permitted on Berth D1 is 220 m. and the max. permitted draft is 12 m., – understand the first ship to use the jetty touched the bottom during berthing (35,000 tonnes shipment) no record of draft available.

Moorings: Three head/stern lines, two breast lines and two back springs.

Gangway: No shore gangway.

Chicksans: 3×12 in. liquid loading arms, 1×12 in. vapour return line, 1×8 in. bunker loading arm. Quick release clamps are fitted on Chicksan arms. Disposition from West to East is; Bunker loading arm; Liquid loading arm; Liquid loading arm; Vapour return arm; Liquid loading arm.

There is a facility for purging loading arms with nitrogen prior to disconnecting which was unproven during our call due to low nitrogen pressure.

Cargo Pumps: 1×500 cu.m. circulating pump. 3×1,650 cu.m. loading pumps.

Vapour Return: Capacity unknown.

SHIPMASTER'S REPORT: November 1986.

Note: Forms below are for the Port of Arzew. There may be different requirements at other Algerian ports, but this should serve as a guide.

Agent:

Inwards Declaration. } Both filled out at the same time,
Outwards Declaration } Agent supplies forms.
1 Narcotics List.
1 Declaration of Arms and Ammunition or 'Nil'.
2 Crew Lists.

Immigration:

2 Crew Lists.
1 Narcotics List.
1 Ship's Particulars (Form supplied).

Port Health:

1 Crew List.
1 Health Declaration. (IMO Form).

Customs:

1 List of Crew Effects. (Crew Manifest).
1 Bonded Stores List.
1 Slop Chest/Shop Store List.
1 List of Ship's Currency.
1 List of Currency held by crew.
1 Declaration of Arms and Ammunition or 'Nil'.
1 Narcotics List.

N.B.: Customs are very strict, make sure everything well in order for all their forms. (I was informed by Agent that a Shipmaster had recently been fined U.S.$9,000.00 due to the fact that he forgot to declare U.S.$ 2,500 of the Chief Engineer's money, which he had been holding in the ship's safe).

AUTHORITY: Entreprise Portuaire D'Arzew, 45 Rue Aissat Idir, B.P. 46, Arzew, Algeria. *Tel:* 377527, 377491, 377970. *Telex:* 12819, 12990, 12982.

BEJAIA (Bougie): 36.45 N. 05.05 E. (See Plan)

DOCUMENTS: Refer to Algiers.

PILOTAGE: Compulsory within pilotage zone between Cap Carbon to the West and Ras Attia to the East. Contact Pilot Station by VHF Channel 16 or Telex 83940. Tel. 92.35.03 (night). International code signals used to call Pilot who boards at the limit of pilotage zone. Pilot ladder should always be placed on port side.

ANCHORAGE: Suitable anchorage in all weathers will be indicated by the Pilot.

RESTRICTIONS: No night movements for tankers with LPG or refined petroleum cargoes.

MAX. SIZE: Tankers: Length 260 m. Draft up to 13 m. Waiting zone for vessels in ballast; depth 10 m.

Commercial Port: Draft between 7 m. to 9 m.

HEALTH: Free Pratique given by Brigade Maritime on arrival, unless suspected disease on board when Port Doctor will visit the ship. Pratique is automatic after calling at another Algerian Port.

RADIO: Alger Radio.

TUGS: Available under direction of Pilot by VHF contact. Ship's lines always used. 2 tugs required for berthing and unberthing.

BERTHING: 23 berths with depths 5.5 m. to 10.0 m.

TANKERS: *Sonatrach Oil Terminal:* 3 loading piers for crude oil.
Pier No. 1 for vessels up to 11.50 m. draft. 4×10 in. hoses.
Pier No. 2 for vessels up to 12.50 m. draft. 4×12 in. hoses.
Pier No. 3 for vessels up to 13.00 m. draft. 4×12 in. hoses.
Maximum pressure allowed 3 kgs.
Loading rates up to 4,000 t.p.h.

BALLAST: All dirty ballast to be discharged ashore; 2 hoses available at each berth, can receive ballast up to 2,000 t.p.h.

Vessels berthed at Piers No. 2 and 3 cannot discharge ballast simultaneously.

Clean ballast may be discharged to sea, only if vessel is in gas-free condition.

Thick slop residues may only be accepted subject to terminal operator's approval, but only in quantities of less than 100 tons.

DENSITY: 1025.

FRESH WATER: Available at Berths No. 2 and 3 only, subject to 24 hours' notice. Loading rate about 15 t.p.h.

FUEL: Available at all Sonatrach berths, subject prior arrangements. No barges.

FIRE PRECAUTIONS: Anchors must be hove-up while vessel is moored in berth. A fire wire must be provided fore and aft for tug's use if necessary.

Tanker's fire-fighting equipment must be ready for use on fore and main deck.

3 tugs are equipped with fire-fighting apparatus.

CONSULS: France.

REPAIRS: Very limited facilities. No dry docks. No possibility for radio/radar repairs.

No repairs may be carried out on board a tanker without first obtaining the Harbour Master's permission.

WATCHMEN: Not compulsory but recommended. The Port Commandant may impose a guard on vessels carrying certain cargoes.

CUSTOMS ALLOWANCES: 3 packets cigarettes and 1 bottle of wine or alcohol per man per day.

REPATRIATIONS: Can be arranged via Algiers.

AIRPORT: Dar-el-Beida International Airport at Algiers, 240 km. from Bejaia.

POLICE/FIRE/AMBULANCE: Police, tel. 92.04.22. Ambulance/Fire, tel. 92.00.02 or 14.

TELEPHONES: None on board, but telephone exists at each tanker berth.

SHORE LEAVE: Allowed, provided seamen carry identity cards or shore passes.

DEVELOPMENTS: Port to be expanded to accept vessels of 30,000 d.w.t.

SHIPMASTER'S REPORT: January 1987.

While anchored at Bejaia waiting to berth, the vessel was boarded by the Algerian Coast Guard.

All ship's papers were correctly presented.
All trading certificates were valid.
No discrepancy between contents of bonded store and Stores List.
No discrepancy between contents of general stores and Stores List.
No discrepancy on Crew Declaration Form.

The vessel was considered to have violated the Algerian port regulations by failing to dip the ensign as a courtesy to the Algerian Coast Guard cutter. This was the vessel's first visit to the port and not having a copy of Algerian Port Regulations was not accepted as an excuse.

In order to avoid a "stiff" penalty (U.S.$ 1,000.00) and delay to the vessel, a large quantity of stores were removed by the Coast Guard. They consisted of 12 bottles whisky, 12 cartons cigarettes, 4 bottles rum, 2 cases beer, tins of sardines, luncheon meat, corned beef, herrings and mandarine oranges, jars of mixed fruit jam, jars of marmalade, tins of mixed fruit, butter, biscuits, apples and 3 legs of mutton.

A signed statement "for the use of Bejaia Customs" was written on the reverse side of the Stores List stating that 9.5 litres spirits and 10,600 cigarettes and various souvenirs had been removed from the vessel.

All crew accommodation was searched and all soap in excess of one tablet per cabin was confiscated.

SHIPMASTER'S REPORT: February 1989.
Vessel: 90,000 d.w.t.
Anchoring: Vessel anchored without a Pilot after contacting Port Control.
VHF: Pilot on Channel 8.
Tugs: For berthing vessel used one tug on the starboard bow with 2 ship's lines and one tug on the starboard quarter with 2 ship's lines. A third tug was used for pushing alongside.
Moorings: Vessel berthed port side alongside with 3 head lines, 2 breast lines and 2 springs, forward and aft. The head lines and stern lines are the first lines sent to the shore.
Shore Passes: Immigration issue shore passes in exchange for passports which are taken ashore.

SHIPMASTER'S REPORT: September 1989.
Fresh Water: When berthed at the oil jetty, fresh water is available between 0400 hrs. and 1100 hrs.
Officials: The following personnel boarded the vessel on arrival: The Agent, Shipper, Loading Master, Surveyor, 3 Customs Officers, 3 Immigration Officers, Doctor and 2 Port Control Officers.
Cargo Documents: The Cargo Documents are delivered on board after completion of loading. This can be from 10 minutes after completion to as long as 3 hours after completion.
Shore Passes: On our last visit to the port, shore passes were in short supply so we made extra copies. On this visit we used some of the copies we made and the Immigration officials asked us to hand over any blank copies we still had remaining.

SHIPMASTER'S REPORT: March 1994.
Vessel: 96,000 d.w.t. combination carrier operating in tanker mode.

Tugs available are of very low power and there is a very small Turning Basin inside the breakwater and close to the berth (S.W. of Berth No. 3 and S.E. of Berth No. 2). Due to above reasons, berthing in adverse conditions of wind and swell is very difficult and risky (All vessels have to be swung 180° in the Basin as, on Berth No. 3 always port side alongside and on Berth No. 2 always starboard side alongside).

Large ships always berth on Berth No. 3.

Cargo operations can be suspended and vessel can be shifted to roads with wind force going up to Force 4 or 5.

Any stores, charts, etc., sent to Bejaia can take as long as 7 days to clear Customs.

Shore leave not advisable at time of our visit.

AUTHORITY: Office National des Ports, Mole Casbah, B.P.94, Bejaia. *Tel:* 92.18.04/05, 92.35.03. *Telex:* 83055, 83940.

DELLYS: 36.55 N. 03.55 E. (See Plan)

DOCUMENTS: Documents which the Master of the vessel must prepare prior to arrival for necessary port formalities.

(a) for the Agent of Societe Nationale des Transports Maritimes or Compagnie Nationale Algerienne de Navigation (The two Algerian National Shipping companies):
  2 Crew Lists.
  2 Stores Lists, including bonded material.
  2 Foreign Currency Lists.
  5 Cargo Manifests.
  2 Stowage Plans.
  4 Notices of Readiness.
  2 Original Bills of Lading.
  2 Crew and Passenger Personal Effects Lists.
(b) *For Customs:*
  1 Cargo Manifest.
  1 Crew List.
  1 Foreign Currency List.
  1 Stores List.
(c) *For the Police (Immigration):*
  1 Crew List.
  1 Cargo Manifest.
  1 Narcotics List.
  1 List of Arms and Ammunition.

PILOTAGE: Compulsory when entering and leaving and for all movements (shifting). Pilotage operations only take place during the daytime. To request the Pilot, call the Port Captaincy by VHF Channel 16, or by using signals laid down in the International Signalling Code.

The Pilot boards the vessel within the confines of the anchorage zone. The pilot ladder must be positioned on the starboard side.

ANCHORAGE: The Bay of Dellys, being open from the North to the East, offers a very good anchorage against winds from the West of N.W.

The anchorage zone is within an area defined by a line joining the points of Dellys and Garrouba.

Depths vary between 13 m. and 24 m., and the bottom is rocky.

RESTRICTIONS: Movements of vessels (entering and sailing) are not permitted at night.

MAX. SIZE: The maximum authorised draft is 18 ft.

Overall length is limited to 100 m. for conventional vessels, and to 105 m. for Ro/Ro vessels.

HEALTH: No procedure is stipulated in order to obtain Free Pratique. Nevertheless, and in the event of illness or infection being suspected on board, advise the Port Captaincy by VHF Channel 16 or by telex prior to arrival in the roads.

RADIO: Algiers Radio is operative 24 hours a day, receiving on 500 kHz and 2182 kHz and transmitting on 1792 kHz.

VHF: The Port Captaincy operates on Channel 16.

TUGS: None available.

BERTHING: The port has 2 quays (Quay No. 1 and No. 4), which are used by commercial vessels. Berthing at these berths is subject to the dimensions of the vessel.

STEVEDORES: The stevedoring service operates from 0700 hrs. – 1900 hrs. in 2 shifts, viz. 0700 hrs. – 1300 hrs. and 1300 hrs. – 1900 hrs.

The gangs are ordered through the Port Captaincy by the SNTM/CNAN Agent for general cargo, and by the receiver where bulk cargo is involved. The vessel must notify its ETA to the SNTM/CNAN Agent at least 24 hours in advance of arrival.

As the port has no cranes, operations are effected by ship's equipment (cranes, derricks, etc.).

The average rates of discharge are in the order of 23 t.p.h. per gang for bulk cargo and 40 t.p.h. per gang for general cargo.

MEDICAL: There is a hospital at Dellys for all medical treatment required.

The SNTM/CNAN Agent must be advised prior to the arrival of the vessel so that they may make the necessary arrangements.

DENSITY: 1025.

FRESH WATER: Drinking water only available at Quay No. 4.

FUEL: Not available. Vessels can bunker at Algiers port (55 miles) or at Bejaia (approx. 65 miles).

CONSULS: None.

REPAIRS: Not possible.

GANGWAY/DECK WATCHMEN: Not compulsory, but recommended. The SNTM/CNAN Agent is instructed to provide vessels with watchmen.

OPENING/CLOSING HATCHES: These operations are to be carried out by the ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle of spirits per crew member per week.

REPATRIATION: This can be carried out via Algiers with frequent departures to Europe by air and by car ferry.
AIRPORT: "Houari Boumediene" International Airport at Algiers, 80 km. from Dellys.
TIME: GMT plus 1 hour.
POLICE/AMBULANCE/FIRE: Police: Tel: 42.95.27. Fire Brigade/ Ambulance: Tel: 42.90.50. These services are located within the port area.
SHORE LEAVE: Crew members must carry a passport or Seamen's Book, and report to the Port Police where a shore pass will be issued.
GENERAL: The predominant winds in the Port of Dellys are from the West and N.W.

Ro/Ro vessels destinated for the Port of Dellys must be equipped with bow thrusters.
AUTHORITY: Direction du Port de Dellys, Entreprise Portuaire d'Alger, Dellys, Algeria. *Contact:* Mr. N. Hasseni, Port Director. *Tel:* 42.98.48/ 42.93.77. *Telex:* 76089 Porde Dz; Mr. A. Chaouadi, Port Officer. Tel: 42.91.79.

DJEN-DJEN: 36.50 N. 05.54 E. **(See Plan)**

DOCUMENTS: See "Algiers".
PILOTAGE: Compulsory. On arrival, call Pilot on VHF Channel 16. Pilots communicate with vessel on VHF Channel 12 on boarding.
ANCHORAGES: Anchorage bounded by 4 points:
(a) Lat. 36° 49′ N., Long. 05° 47′ 06″ E.
(b) Lat. 36° 50′ N., Long. 05° 47′ 06″ E.
(c) Lat. 36° 50′ N., Long. 05° 51′ 02″ E.
(d) Lat. 36° 49′ N., Long. 05° 51′ 02″ E.
RESTRICTIONS: No night navigation service.

Access channel and turning circle have a depth of 23 m.
MAX. SIZE: Vessels up to LOA 189 m. and draft 32 ft. have used the general cargo berth.
HEALTH: Declaration to be completed on arrival, if no suspected disease or fever on board.
RADIO: Call "Bejaia Radio" on VHF Channel 16.
VHF: Harbour Master's Office on Channels 16 and 12.

Also see "General".
TUGS: 1×1,700 h.p. tug available. 2 additional tugs are under construction and are expected to be ready in 1997.
BERTHING: General Cargo Quay: Length 750 m., depth 11.0 m. Bulk carriers (grain) discharge at the quay.
Container Quay: Length 250 m., width 300 m. and depth 11.0 m. Paved surface area 7.5 ha.
CRANES: No fixed shore cranes available. 1×90 ton mobile crane.
BULK CARGO FACILITIES: Steel Quay: Length 1,060 m., width 300 m. and depth 10.5 m. – 18.2 m. The quay can handle 4,200,000 tons (mainly discharging ore) annually, but quay not yet in operation.
SPECIALISED CARGO HANDLING FACILITIES: Ro-Ro: 3 berths, depth 11.0 m. Berths handle approximately 360,000 tons annually. Paved surface area 9 ha.
BRIDGES: None.
STEVEDORES: 2 shifts: 0700 hrs. – 1300 hrs. and 1300 hrs. – 1900 hrs. Fridays and holidays not worked.
MEDICAL: Taher Hospital 4 km. and Jijel Hospital 10 km.
TANKERS: No facilities.
DENSITY: 1025.
FRESH WATER: Available at berths, arranged by Agent.
FUEL: Supplied by truck.
CONSULS: In Algiers.
REPAIRS: No facilities.
DRY DOCKS: None.
SURVEYORS: Only cargo inspectors available.
HATCHES: Normally opened and closed by crew.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle of spirits.
REPATRIATION: Arranged by Agent.
AIRPORT: Nearest airport 2 km., domestic flights only.
TIME: GMT plus 1 hour.
HOLIDAYS: January 1st; May 1st; June 19th; July 5th (Independence); November 1st (Revolution) and all Muslim holidays.
TELEPHONES: Connection possible.
BANKS: Only national banks.
STORING: See "Prelims".
(1) Vessel can be stored by truck.
(2) –
(3) Yes.
(4) –
(5) –
(6) No.
SHORE LEAVE: Crew members not allowed ashore.
GARBAGE DISPOSAL: Collection arranged by ship's Agent.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Algerian Dinar (DA). U.S.$1.00 = 53 DA.
GENERAL: *Notice:* Issued by Djen-Djen Port Authority.

Special Rules relative to the Navigation
in the Port of Djen-Djen

Masters are kindly requested to comply with the provisions of the general rules relative to navigation.

Sea-going ships of 100 g.r.t. or over shall inform the Harbour Master's Office of any movement they are about to commence, such as entering, shifting, sailing, etc.

VHF is the normal way of communication, calling on Channel 16, working on Channels 12 or 14.

All other means can be used.

Messages shall be restricted to the ship's movements and expressed in the most concise form.

Harbour Master's Office keeps a continuous watch, and gives to mariners, on their request, information in relation to the movements into the harbour area. Such communications are effected according to the process stated here above.

The present rules aim at improving security and efficiency.

Any vessel not complying with them takes the risk of being delayed and besides, her Master becomes liable to prosecution, according to the regulations in force.

Safety Regulations

In case of emergency, any Master, Officer on duty or watchman should give the alarm:

If he has a telephone on board, dial 14 for Fireman (fire, flooding, injured persons).

Dial 17 to get the assistance of the Police (disturbance).

Or call the Central Watch Tower by VHF Channel 16.

Or draw attention by repeated siren or whistle calls, the burning of a red flare, or any other authorised distress signal.

Sufficient crew must always be on board to carry out shifting orders without delay.
DEVELOPMENTS: Planned infrastructures: Grain Terminal: Length 800 m., depth 11 m. – 16 m. Silo capacity 80,000 tons.
Tanker Berth: For vessels up to 23,000 d.w.t.
AUTHORITY: Enterprise Portuaire de Djen-Djen, B.P. 87, Jijel 18000, Algeria. *Tel:* (05) 459463. *Telex:* 84060, 84091. *FAX:* (05) 459072. *Contact:* M. Atmane, General Manager. S. Grine, Harbour Master.

GHAZAOUET (Nemours): 35.06 N. 01.52 W. **(See Plan)**

APPROACHES: From seaward and during daytime the best landfalls for the roads is Tadjera mountain (861 m.) or the square mountain of Trara 18 km. to the East of Ghazaouet and the summit of the mountain chain of Djebel Fillaouc e visible at over a distance of more than 20 miles offshore in clear weather.

The outer channel is 225 m. wide and 12 m. – 20 m. deep and the inner channel 166 m. wide and 11 m. – 12 m. deep. There are 5 lights; 1 at the Two Brothers' Rock (Les Deux Freres), one at the end of the West jetty, one at the head of the old West jetty, one at the West end of the North jetty and one on the pier of the North jetty.
PILOTAGE: Pilotage is compulsory and is provided day and night, unless the port is closed. Whilst awaiting the Pilot the vessel must keep watch on Channel 12 or 16 VHF.
Pilotage Area: To the East: meridian passing through the Touent Coastguard Station. To the West: the meridian passing through the village of El Amadra.
ANCHORAGE: Limit of the anchorage area: To the East meridian 01° 51′ 00″ Long. West as far as its intersection with parallel 35° 07′ 22″ Lat. North.

To the North: Parallel 35° 07′ 22″ between its intersections with meridians 01° 51′ 00″ and 01° 52′ 42″.

To the West: Meridian 01° 52′ 42″ of Long. West to half a mile to the West of the head of the North Jetty as far as its intersection with parallel 35° 08′ 22″.

The Port of Ghazaouet offers roads with good holding ground, but by virtue of its position, vessels are exposed to all weather.
MAX. SIZE: Max. length 180 m. Max. draft 28 ft.
RADIO/VHF: A port radio station, call sign "Ghazaouet Radio", has been installed near the lighthouse. The VHF operating channels are 16, 24, 25, 26, 27 and 28.
TUGS: One tug of 1,700 h.p. available and compulsory.
BERTHING:

Quay No.	*Basin*	*Berth* No.	*Length* (m.)	*Depth* (m.)
1	Skikda	1–2–3	300	7.0
2	Skikda	4–5	160	7.2
3	Skikda	6	123	7.0
4	Skikda	7	94	7.0
5	D'Oran	8	108	7.2
6	D'Oran	9	125	7.0
7	D'Oran	10	103	7.0
8	D'Oran	11–12–13	300	7.3
9	Machrek	14	120	8.5
10	Machrek	15–16–17	289	8.5

SPECIAL CARGO HANDLING FACILITIES: Quay No. 1 is used for discharging oil and tallow by pipeline (max. LOA 120 m., max. draft 6.5 m.). Quay No. 9 is used for handling acid if the length of the vessel is less than 100 m. If vessel over 100 m., loading of acid takes place at Quay No. 10 (Berth No. 15).

There is a grain silo at Mole Tlemcen (Quay No. 10; Berths No. 16 and 17). Capacity of silo 30,000 tonnes. Rate 700 t.p.h.
PORT EQUIPMENT:

Quay Cranes:
2 × 10 tonnes (Stothert)
Mobile Cranes:
1 × 40 tonnes (Kato)
1 × 27 tonnes (Petitbone)
1 × 2 tonnes (Rapier)
4 × 20 tonnes (Kato)

Forklifts:
12 × 3 tonnes (Steimbok)
5 × 3 tonnes (Komatsu)
6 × 5 tonnes (Toyota)
1 × 5 tonnes (Manitou)
5 × 8 tonnes (Toyota)
3 × 10 tonnes (Toyota)
1 × 28 tonnes (Hyster)
10 × 6 tonnes (Komatsu)
2 × 18 tonnes (Kalmar)
1 × 25 tonnes (Kalmar)

Other Equipment:
1 tractor (Sisu) for Ro–Ro traffic
2 grain suctors (DK100)
1 grain suctor (Vigan)

STEVEDORES: Carried out by Port Monopoly – EPG. Work carried out in two shifts and from time to time a night gang is available. Working hours from 0700–1900. Port Director can extend working hours beyond 1900 hrs. for vessels to complete operations and sail. 160 stevedores available.

TANKERS: See "Special Cargo Handling Facilities".

FRESH WATER: Available from hydrants at quays and by tug.

FUEL: This is not provided on a regular basis, however, small quantities are sometimes supplied by road tankers.

POLICE/AMBULANCE/FIRE: Police tel. 32.10.26, Fire Brigade tel. 32.10.14. Ambulance tel. 32.11.24.

SERVICES: No deballasting facilities available. Stores available through General Maritime (GE.ME).

BANKS: B.E.A., Bd. Du 1er Novembre, Ghazaouet. Tel: 32.11.68, 32.13.50.

C.P.A., Rue de la Republique, Ghazaouet. Tel: 32.10.51.

B.N.A., Rue de la Republique, Ghazaouet. Tel: 32.12.80, 32.12.68.

GARBAGE DISPOSAL: Collection service available. Contact Port Authority for supply and collection of drums.

WASTE OIL DISPOSAL: Service not available.

SEAMAN'S CLUBS: None.

WEATHER: The strongest and most frequent winds are from the N.W. and with the entrance channel aligned East-West passage is dangerous since the currents generally follow the direction of the winds.

GENERAL: *Lights:*

Ghazaouet Lighthouse: Lat. 35° 05′ 09″ N., Long. 01° 52′ 03″ W.

Passage Lights: Light on the Two Brothers (02), light on end of the West jetty, light on the West Jetty head, light at the West end of the North jetty and a light on the mole of the North jetty.

Max. Tide: 40 cm.

Dominant Winds: Northeasterly and Northwesterly.

Visibility: Excellent.

DEVELOPMENTS: The following works are planned: the moles are to be re-surfaced and the fendering to be improved, a Ro/Ro ramp is to be built at Quay No. 6. Dredging work to take place.

A maritime station for passenger vessels is to be constructed.

Two cargo sheds have been built. First shed is at Mole Constantine (1,160 sq.m.) and the second at Mole Djanet (2,320 sq.m.).

SHIPMASTER'S REPORT: 1982 (Updated 1994).

Name: Ghazaouet (ex-Nemours), Lat. 35° 06′ N., Long. 01° 52′ 21″ W.

Port Limits: As anchorage, a suitable one is within 1 mile of the port. The limits are observed around that area.

Documents: Same as for Algiers. Also every vessel must have copies of Manifest and Bills of Lading, minimum 3 copies of each.

Pilotage: Pilotage is compulsory for all vessels except those who comply with Article 178 of Maritime Code. Agents arrange for Pilot, who can be contacted on VHF Channels 16 and 14. On calling Channel 16 call "Ghazaouet Port Control". Pilot boards in fair weather at anchorage or 2 to 3 cables from the entrance. Pilot boat has a black hull. Pilot station is located at Quay "D".

Anchorages: No anchorage boundaries described. However anchorage in fair weather can be obtained in 15 to 20 fathoms of water which is about 3 to 5 cables North of Northern breakwater. Bottom is sand. Anchorage is not protected, it is mostly open and dangerous to winds from Northern semi-circle.

Restrictions: Vessels can berth or sail any time of day or night.

Max. Size: It was not stated clearly. This vessel's LOA is 147.5 m., and max. breadth of 21.5 m. Berthing and unberthing was quite safe. Max. permissible draft as stated by Port Control is 10 m., but alongside this ship depth in places was 32 ft. Max. length stated which is possible for berthing is 180 m. and max. draft 28 ft.

Health: Pratique is granted after berthing. Two crew vaccination lists are to be submitted along with Maritime Declaration of Health (Algerian Form).

Radio: Ghazaouet Radio, call sign "7TE", VHF Channel 16.

VHF: At Port Control VHF watch is kept 24 hours. Calling Channel 16, working Channel 12.

Radar: No radar facilities available.

Tugs: There is 1 tug at present. Ship's lines are used. Tug joins the vessel outside the breakwater during fair weather.

Berthing: There are 5 moles in Ghazaouet, details as follows:

Mole Alger (A) – Quay No. 1. Depth alongside 7.5 m. to 8 m.
Mole De Batna (B) – Quay Nos. 2 and 3. Depth alongside 7 m. to 8 m.
Mole Constantine (C) – Quay Nos. 4, 5, 6 and 7. Depth alongside 8 m. to 9 m.
Mole Djanet (D) – Quay No. 8. Depth alongside 8 m. to 9 m.
Mole Tlemcen (E) – Quay Nos. 9 and 10. Depth alongside 9 m. to 10 m.

Specialities:

Quay No. 1 – Dangerous Cargo, Oil and Tallow.
Quay No. 8 – Cereals.
Quay No. 9 – Loading Acids.
Quay No. 10 – Minerals and Cereals (Silo capacity 30,000 tons).

Cranes: As per available data. There are 2 cranes of SWL 10 tonnes, 1 of 12 tonnes and 1 of 14 tonnes. Also there are 4 mobile cranes available, capacities are 2×2.5 tonnes, 1×5 tonnes and 1×24 tonnes.

Bulk Cargo Facilities: The vessel carried corn in bulk. The cargo was discharged either into rail wagons or into trucks. Rate of discharge variable. If sufficient trucks or wagons available rate can reach up to 600 tonnes per shift (approx).

Stevedores: Stevedores are arranged either by Agents or Receivers. No separate notice necessary by vessel.

Medical: Doctors and hospital available at Ghazaouet. Agents to be informed in writing prior to anybody seeing the doctor.

Density: Density was observed to be 1028.

Fuel: None available. Gas oil may be supplied in barrels if sufficient notice given.

Fresh Water: Available alongside each pier. Rate of delivery about 7 to 10 tonnes per hour. Also available by tug.

Consuls: None.

Surveyors: None.

Gangway/Deck Watchmen: Agents arrange for same. As long as vessel is in port she must have shore watchman. Usual recommendation given in port is to lift gangway at night, if vessel not working cargo, at about 2300 hrs.

Customs Allowances: 200 cigarettes per man per week, 1 bottle of alcohol per man per week.

Time: GMT plus 1 hour.

Telephone: Telephones are not available on board.

Agents: Compagnie Nationale Algerienne de Navigation (CNAN).

Telephone Numbers: The following important telephone numbers were obtained:

Fire Brigade 32.10.14, Police 32.10.26, Pilots 32.13.45, Port Director 32.12.20.

AUTHORITY: Entreprise Portuaire de Ghazaouet, B.P.217, 13400 Ghazaouet, Algeria. *Tel:* 32.12.20, 32.12.55, 32.13.45. *Telex:* 18086, 18937, 18836. *FAX:* (07) 32.12.55. *Contact:* Med Maharar, Port Director/General Manager.

Harbour Office: Mole de Constantine. *Tel:* 32.14.05, 32.12.32 and 32.13.45. *Telex:* 18937, 18836. *FAX:* 32.12.55. *Contact:* K. Mehabi, Harbour Master/Port Captain.

JIJEL: 36.50 N. 05.47 E.

DOCUMENTS: Same as "Algiers".

PILOTAGE: Pilot boards vessel off the breakwaters. Pilot working daytime only. Call Pilot on VHF Channel 16.

ANCHORAGE: Off the breakwaters at a distance of 0.5 miles – 1 mile, depths from 12 fathoms to 20 fathoms. Anchorage not sheltered.

TUGS: One tug available.

BERTHS: There are six berths, one of which is a Ro-Ro berth. The South Quay 200 m. long and the North Quay 400 m. long. Max. draft 10 m.

CRANES: At the North Quay two cranes are available. All other equipment available.

STEVEDORES: Work in two shifts from 0700 hrs. to 1300 hrs. and 1300 hrs. to 1900 hrs. Fridays and holidays not worked.

FRESH WATER: Available at Quays No. 1, 2, 4, 5 and 6.

SHORE WATCHMEN: At Master's discretion.

CUSTOMS ALLOWANCES: 200 cigarettes and an opened bottle of spirits. Customs are very strict.

CARGO GEAR: Stevedores use ship's cargo gear.

REPATRIATION: Can be arranged via Agent.

TIME: GMT plus 1 hour.

IDENTIFICATION CARDS: On arrival Immigration Control inspect all passports and Seamen's Books. Shore passes are given at the harbour gate in exchange for Passports, Seamen's Books.

AUTHORITY: Enterprise Portuaire de Jijel, Quai Sud, B.P. No. 87, Jijel 18.000, Algeria. *Tel:* (05) 465334. *Contact:* A. Mohamed, Chairman and General Manager. Captain B. Ahmed, Harbour Master.

MOSTAGANEM (Mestaghanem): 35.56 N. 00.04 E.

(See Plan)

DOCUMENTS:

7 Crew Lists.
1 Passenger List.
1 Health Declaration.
2 Store Lists, including Bonded Stores.
2 Crew Personal Effects Lists.
Lists of Arms and Ammunitions.
1 List of Currencies.

Coastguards & Customs: Visit by the Coastguards in the Roads.

Visit by the Customs Officials at the quay. Manifests must be accurate.

PILOTAGE: Compulsory. There are 3 Algerian Pilots; 24 hour service. Pilot boat is black with a white stripe. Vessels arriving after sunset, if no cargo work at night, will remain in the Roads until 0600 hrs. next morning. Vessels sail at any time during the night.

ANCHORAGE: Vessels anchor about 0.5 miles from the Sea Jetty, recognisable by a lighthouse with a white light at its top (3 flashes, 1 pause, 3 flashes, 1 pause).

MAX. SIZE: Max. LOA 180 m. Max. depth of water 27 ft.

HEALTH: Free Pratique is granted upon berthing and producing Health Declaration and Vaccination List. If any Vaccination Certificates have expired, Free Pratique will be granted and Health Authorities will arrange the vaccinations on request.

RADIO: Alger Radio, receiving on 2182 kHz., and working on 1792 kHz., on 24 hours basis. Also Oran Radio, listening on 2182 kHz., and working on 1735 kHz., on 24 hours service. Advisable to use the latter.

VHF: At the Harbour Master's Office, working on Channel 16, officially 24 hour service, English, French and Arabic spoken.

TUGS: One tug available, request to be made to Pilot. 24 hour service. If necessary, the port will request a second tug from Arzew Port Control.

BERTHING: Eight berths available. Total length of quays, 1,100 m.

Berth No.	Length (m.)	Depth (ft.)
NP1,NP2,NP3	217	13.3-22.6
0	115	23
1	140	25
2	140	25
3	132	25
4	135	25
5	135	25
6	140	23
7	140	27
X, Y	Service Quays	

CRANES: 2×6 tons and 3×15 tons. Also 5 additional cranes.
STEVEDORES: Supplied by Port Authority. 3 shifts of 6 hours each from 0700 hrs. – 0100 hrs. Ship's gear to be used if cranes not available.
MEDICAL: All facilities available.
DENSITY: 1025.
FRESH WATER: Available at certain quays, otherwise by tug.
FUEL: No facilities. Vessels must proceed to Oran or Arzew for bunkering.
CONSULS: None.
REPAIRS: Only minor repairs can be carried out by workshop. Repairs on board with Port Captain's permission.
GANGWAY/DECK WATCHMEN: Not compulsory, but strongly recommended by Port Authorities and Agent.
OPENING/CLOSING HATCHES: Can be performed by ship's crew or by stevedores.
CERTIFICATES: All certificates are required in the case of an inspection from the Maritime Authorities or in the case of arrest.
CUSTOMS ALLOWANCES: 1 bottle of spirits and 1 carton of cigarettes are allowed for every Crew member. Anything in excess of this amount will be sealed.
REPATRIATION: It is possible and easily arranged by Agent.
AIRPORT: At Oran, La Senia Airport, 80 km. distance, with 3 daily domestic flights to Algiers.
TIME: GMT plus 1 hour.
HOLIDAYS: See "Algiers".
SHORE LEAVE: No restrictions, except for some nationals.
IDENTIFICATION CARDS: On leaving the vessel, Crew members to carry their passports, which will be kept at the harbour gate, whilst ashore.
PORT REGULATIONS: No repairs to main engine, no lifeboat practices, no work on hull and anchors without prior permission from Port Captain. Offenders will be heavily fined.
DEVELOPMENTS: A Ro/Ro berth and a general cargo berth under construction. Depth of water 30 ft.
AUTHORITY: Entreprise Portuaire de Mostaganem, P.O.Box 131, Quai du Maghreb, Mostaganem, Algeria. *Tel:* (06) 21.76.27, 21.14.11. *Telex:* 14086, 14097. *FAX:* (06) 21.78.05. *Contact:* M. Lakehal, Director General (Tel: 21.14.11). M.Bouabida, Harbour Master (Tel: 21.38.81). M. Cherif, Director-Stevedores (Tel: 21.69.43).

ORAN (Wahran): 35.43 N. 00.39 W.

DOCUMENTS:

Inward Declaration to be completed and handed to the pilot.
Crew List.
Manifest of Arms on board.
Cargo Manifest.
Stowage Plan.
Passenger Manifest.
Seamen's Books.
Health Declaration.
Crew Declaration for Customs.
Ship's Stores Declaration.

APPROACHES: The approaches to the port are indicated by:

The lighthouse 11.5 miles to the East, with the addition of a radio beacon, in position Lat. 35° 51′ 40″ N., Long. 00° 29′ 19″ W.

Cap Falcon Lighthouse 9.5 miles to the West, in position Lat. 35° 46′ 08″ N., Long. 00° 47′ 09″ W.

Access to the port: An access channel 150 m. wide and 24 m. deep is indicated by a rotating white light in position Lat. 35° 43′ N., Long. 00° 37′ W.

Vessels entering or leaving the port must obligatorily use the navigation channels defined below:

West Channel:

A separation zone one mile wide is established, the axis of which connects the following geographical points:

1. Lat. 35° 52′ 12″ N. Long. 01° 12′ 06″ W.
2. Lat. 35° 48′ 36″ N. Long. 00° 39′ 30″ W.

The external W.S.W. limit of the channel is fixed by the line joining the following geographical points:

1. Lat. 35° 52′ 12″ N. Long. 00° 12′ 06″ W.
2. Lat. 35° 48′ 36″ N. Long. 00° 39′ 30″ W.

On both sides of this separation zone, a safety zone is instituted which is 1.5 miles wide.

The main traffic lane is orientated 090° – 270°.

East Channel:

A separation zone one mile wide is established, the axis of which joins the following geographical points:

1. Lat. 35° 02′ 30″ N. Long. 00° 26′ 44″ W.
2. Lat. 35° 52′ 00″ N. Long. 00° 34′ 44″ W.

The external Eastern limit of the channel is fixed by the line joining the following geographical points:

1. Lat. 36° 01′ 24″ N. Long. 00° 24′ 24″ W.
2. Lat. 35° 51′ 00″ N. Long. 00° 32′ 24″ W.

On both sides of this separation zone, a safety zone is established which is 1.5 miles wide.

The principal traffic lane is orientated 032° – 212°.

PILOTAGE: Compulsory. Arranged by Agents' basis vessels ETA. International Code signals used. Pilot boards at port entrance.
ANCHORAGE: Anchorage is along the meridian of 00° 39′ West and the latitude of the 612 m. mark of Djebel-Khar.

Large vessels anchor with the assistance of a port pilot.

RESTRICTIONS: The port is open to navigation throughout 24 hours.
MAX. SIZE: Length 800 ft. Draft 38 ft.
HEALTH: Free Pratique is granted by the Maritime Health Brigade on arrival, provided no anomalies or illness have been discovered on board.

Pratique is automatic for vessels coming from other Algerian ports.

RADIO: Oran Radio, Arzew Radio and Boufarik Radio.
TUGS: 1 × 1,200 h.p., 1 × 1,500 h.p and 1 × 1,700 h.p.
BERTHING: Mole 1: Tankers, depth alongside 39 ft. Mole 2: Tankers, depth alongside 33 ft. Cargo vessels: Twenty berths at quays with depths from 20 ft. to 33 ft. alongside.
MEDICAL: Doctors and ambulances are available to give help to sick seamen. Visits are arranged by the ship's agent.
FRESH WATER: Available on the quay. Employees of the Port Undertaking attend to connection and disconnection of hoses.
FUEL: Bunkers can be delivered by barge belonging to NAFTAL, at a rate of 50 cu.m.p.h. – 150 cu.m.p.h.

Lubricants are supplied by NAFTAL, by arrangement through the ship's agent.

REPAIRS: Only minor repairs can be effected.
WATCHMEN: Not compulsory but recommended. The Port Commandant may impose a guard on vessels carrying certain categories of hazardous cargoes.

The accommodation ladder is to be raised at night.

CUSTOMS ALLOWANCES: Three packets cigarettes and one bottle of wine or alcohol per man per day.
AIRPORT: La Senia, 7 km. away.
HOLIDAYS: 1st January, 1st May, 19th June, 5th July, 1st November. First Mouharem (Hegira Year), Aid-el-Fitr, Aid-el-Adha.
AUTHORITY: Entreprise Portuaire d'Oran, Direction Generale, 6 Avenue Mimouni Lahcene, B.P. 106, Oran, Algeria. *Tel:* 39.56.10, 39.57.82, 39.37.82. *Telex:* 22422. *Contact:* The Director General.

Capitainerie du Port, Mole Ibn-Batouta, Oran. *Tel:* 39.43.63, 39.23.37. *Telex:* 22308. *Contact:* Port Captain.

SKIKDA: 36.53 N. 6.54 E. (See Plan)

PORT LIMITS: South of a line joining Ras Filfila and Sirigina Island (096°-276°). Charter Party laytime starts at this line.
DOCUMENTS:

Harbour Master's Office:

Ballast Declaration (for tankers).
Certificate of Registry.
Safety Construction Certificate.
Safety Equipment Certificate.
Load Line Certificate.
Radio Telephony and Telegraphy Certificates.
Fire Extinguisher Certificate.
Cargo Gear Certificate.
IOPP Certificate.

Quarantine:

Completed Declaration of Health.
Valid Derat Certificate.
International Vaccination Certificates.

Customs:

2 Crew Declarations.
1 Ship's Stores Declaration.
1 Crew Effects Declaration.
1 Currency List.
1 Narcotics List.
1 Arms Declaration.

Immigration Office:

2 Crew Lists.
1 Arms Declaration.
Complete 4 Declarations given by the Immigration Agent.

Agency:

2 Crew Lists.
Clearance from last port.
1 Ship's Stores Declaration.
1 Crew Effects Declaration.
1 Currency Declaration.
1 Narcotics Declaration.

PILOTAGE: Compulsory for vessels of 500 g.r.t. and over. Pilotage arranged by calling Harbour Office on VHF Channel 16, working on Channel 14.

There are 7 Pilots available at the port.

ANCHORAGE: Safe anchorage in the authorised areas in the Roads. See chart for location.
RESTRICTIONS: No berthing at night for tankers, LNG and LPG vessels. Unberthing possible day and night.
Old Port Turning Basin: Diameter 360 m. Depth 11.0 m.
New Port Turning Basin: Diameter 550 m. Depth 14.0 m.
Wind Limits in Port: Old Port: Force 7-8 (Beaufort Scale).

New Port: Force 5-6 (Beaufort Scale).

MAX. SIZE: *New Port:* Berth No. 3: Max. LOA 260 m. Depth 16.0 m. Max. draft 14.80 m.
RADIO/VHF: Skikda Radio and Annaba Radio on VHF Channel 16. Boufarik Radio on 2182 kHz. Also see "Pilotage".
ETA: 24 hours Notice of Arrival required by telex or radio through a coastal radio station. ETA to include: LOA, draft, nature of cargo and tonnage.
TUGS: 6 tugs, 1,500 h.p.–3,400 h.p. Tugs compulsory for vessels over 1,500 g.r.t.
BERTHING:
Old Port:

Quay	*Berth*	*No. of Berths*	*LOA (m.)*	*Max. Draft (m.)*	*Remarks*

CRANES: 3×15 ton mobile quay cranes; 3×40 ton and 1×120 ton mobile cranes; 7×5 ton and 5×6-10 ton electric cranes and 1×60 ton floating crane.
STEVEDORES: First shift: 0600 hrs. to 1220 hrs.
Second shift: 1300 hrs. to 1900 hrs.
Third shift: 2000 hrs. to 0200 hrs.
Stevedores can be contacted by Tel: (08) 75-61-44 or by VHF Channel 8.
MEDICAL: Hospital and medical services are available.
TANKERS: Loading and unloading operations by FMC Arms of 12 in., 14 in. and 16 in. Also see "Berthing".
DENSITY: 1023.
FRESH WATER: Limited supply available at piers.
FUEL: Available by barge, arranged by Agent.
CONSULS: None.
REPAIRS: Arranged by Agent. Permission of Harbour Master's Office required before any maintenance or repairs undertaken.
DRY DOCKS: None.
SURVEYORS: None.
GANGWAY/DECK WATCHMEN: Usually ship's crew and ship's gangway.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: 200 cigarettes per man per week.
REPATRIATION: Possible. A Declaration is to be made to the Immigration Office 24 hours in advance of any crew departures.
AIRPORT: Constantine (Ain el-Bey) 100 km. from Skikda, Annaba (Saline) 130 km. from Skikda.
TIME: GMT plus 1 hour.
EMERGENCY COORDINATION CENTRE: Contact Port Captaincy, on VHF Channels 16 and 14. Tel: (08) 75.51.48/75.25.53. Fax: (08) 75.29.70.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Shore passes supplied by Immigration Office.
GENERAL: *Supplies:* Agent requires 48 hours notice.
Regulations: All tankers are inspected by a Port Officer and Check List is completed before start of loading.

SHIPMASTER'S REPORT: May 1984 (Updated 1994).
New Port, Berth No. 3.
Pilotage: 7 Pilots available and 3 Pilots are on duty at any time (one Pilot for old port, one Pilot for new port and one Pilot on stand-by).
Documents:
5 Crew Lists (indicate Nationality and Seaman's Book Number).
1 Health Declaration.
4 Stores Lists.
3 Personnel Effects Declarations.
3 Arms and Ammunition Lists.
3 Narcotics Lists.
3 Foreign Currency Lists (including Crew's personal currency).

Restrictions: Vessels are able to berth between 0600 hrs. and 2100 hrs. and unberth up until midnight.

Vessels to have propeller immersed and be trimmed less than 3.0 m. by the stern.

Entrance Channel: 1 Green buoy at the entrance, with plenty water on both sides. Channel dredged to 18 m. There is a sandbank on the port side of the inner entrance with less than 8 m. depth. Care is needed when leaving berth without Pilot (which seems normal practice here in Winter time.).
Tugs: 4 tugs from 2,500 h.p. – 3,500 h.p. (2 tugs forward and 2 tugs aft). Ship's ropes used.
Berthing: Vessel berthed at No. 3 "Jetee du Large", port side to. Depth of water 16.0 m. 4×16 in. loading arms, but only one available, rate 2,200 cu.m.p.h. 1×12 in. arm for bunkers.

The use of wire ropes for mooring is very difficult, some Pilots require rope moorings.
VHF: Channels 16 and 14.
Time: UTC plus 1 hour. From June 15th until end of December, UTC plus 2 hours.

SHIPMASTER'S REPORT: June 1987.
Documents:
8 copies Crew List.
3 copies Crew Declaration.
3 copies Manifest (Ship's Stores, Currency (including Safes, etc.).
1 copy Health Declaration.
2 copies Currency List.
6 copies Cargo Manifest.

The Authorities are very strict, especially over currency (including Master's safe) and alcohol. A Ship's Fixture List is required which is to include radios, computers, photocopiers, etc.
Pilotage: Pilot boarded at entrance to breakwater. Pilot may be contacted on VHF Channel 14.
Anchorage: In depth of 20.0 m. with breakwater light bearing 108° T at a distance of 0.8 miles.
Restrictions: Berthing times are flexible. The following are approximate times only.

Summer Berthing	0600 hrs. – 2000 hrs.
Winter Berthing	0900 hrs. – 1800 hrs.
Summer Unberthing	0900 hrs. – 2000 hrs.
Winter unberthing	0900 hrs. – 1800 hrs.

VHF: Port Control operate 24 hours on Channels 16 and 12.
Berthing: Vessel berthed at Berth No. A1 in Port Methanier to load ethylene.

Vessel berthed starboard side to, inner berth on the inner breakwater. The port anchor is to be kept ready. A tug from the general cargo port pushes vessels alongside. A launch runs the moorings, 2 lines and 2 springs forward and aft. The fendering is good. Ship's gangway used.
Loading: Ethylene loaded at 200 tonnes p.h. Liquid and vapour arms are 8 in. 150 ASA.
Vapour return to flare by way of shore compressor.
The surveyors were helpful and documentation carried out quickly.
Vessel stays alongside to cool to –100° C.
Loading temperature – 99° C.
Medical: Doctor and dentist available. Only emergencies handled on Tuesdays and Fridays.
Fresh Water: Not available at berth or from barge. Limited quantities available by tug.
Fuel: All grades available in harbour by barge. Also available at anchorage in good weather.
Repatriation: There are direct flights to Paris and Marseilles from Constantine 100 km. away.

Outward flights from Algiers, it takes 3 days to arrange clearance, tickets, etc.
Holidays: Moslem holidays are Tuesday and Friday.
Stores: Choice is limited and prices are high. Agent requires prior notice of vessel's requirements.
Approximate costs (per kilo): Frozen Meat U.S.$ 32.0, Potatoes U.S.$ 2.0, Tomatoes U.S.$ 3.0, Apples (eating) U.S.$ 7.0
Developments: In the near future the deep channel between the 20 m. contour and Berth No. P2 is to be dredged to 18.0 m. C.D.

Buoy No. 6 has been moved to a new position of Lat. 36° 53.45′ N., Long. 06° 56.9′ E. No. 1 Buoy has been withdrawn.

There is a new outfall for the chemical works just East of the inner breakwater, adjacent to Berth No. A1.

AGENCY: *General cargo ships:* CATM, Port of Skikda. Tel: (08) 95.57.51/52. Telex: 87.815/87.948/87.077.

American Samoa

PAGO PAGO: 14.17 S. 170.41 W.

DOCUMENTS:
4 copies Manifest.
4 copies Freight List.
4 copies Crew List.
4 copies Passenger List.
4 copies Stores List.
Clearance from Last Port.

APPROACHES: Depth at entrance 55 m. to 73 m.; fine basin with 55 m. to 73 m. but very exposed to heavy swell, making outer part of harbour unsuitable as anchorage. Harbour is small with numerous banks in its approach. Around the harbour is a fringe of coral reef 91.43 m. to 457.18 m. offshore, and beyond this reef there is deep water where the largest vessels can lie. Good anchorage anywhere in inner harbour with depth 11 m. to 45.8 m. Best anchorage for large vessels in 36.6 m. off Fagatogo village, West of former Naval Station. Anchorage also in outer harbour in good weather.

PILOTAGE: Not compulsory. Two pilots available. Vessels must make arrangements 72 hours prior to ETA and communicate by VHF Channel 16 on arrival.

Requesting Pilot: Request for pilot may only be made by the Agent or the owner's representatives at the Harbour Master's Office.

Pilot Station: Pilot will board vessels at Pilot Station (Buoy No. 2) or Whale Rock Buoy, and off Tower Rock in extreme calm weather conditions.

ANCHORAGE: See "Approaches".

RESTRICTIONS: Entering and berthing up to 2200 hrs., weather permitting.

MAX. SIZE: *Largest vessel:* 43,000 tons. Max. draft 11.4 m.

TUGS: 3 Tugs. 1 × 1,750 h.p., 1 × 1,530 h.p. and 1 × 300 h.p.

BERTHING: The average depth of harbour is about 45.8 m., at Main Wharf 9.97 m. Station Main Dock, for handling general cargo is 123.42 m. long, 18.29 m. wide and 9.74 m. depth alongside. Fuel Dock, for fuelling only, is 123.91 m. long, 13.71 m. wide and 10.08 m. depth alongside. Customs Dock, for handling general cargo, is 121.91 m. long, 6.10 m. wide and 2.74 m. depth alongside. Between the Station Main Dock and the Fuel Dock is a new extension to the Main Dock of 352.23 m. long, 20.73 m. wide where vessels with drafts up to 6.3 m. are allowed to berth alongside. Plans for dredging depth alongside up to 10.15 m. are underway, also for completion of the new dock.

Private Wharves: Two cannery wharves on North side of harbour, each extending to 121.91 m. with 7.01 m. alongside at L.W. Another wharf belonging to Southwest Marine Co. at North side of harbour is 152.44 m. long, 15.24 m. wide and 7.01 m. depth alongside. This wharf is parallel with cannery docks.

CRANES: 1 Mobile crane of 90 tons capacity and 1 mobile crane of 60 tons capacity. Two floating cranes, one with a capacity of 25 tons and another with a capacity of 65 tons. Cranes of 2.5 tons to 35 tons capacity available.

SPECIALISED CARGO HANDLING FACILITIES: *Containers and Ro/Ro:* Container ships up to 249.93 m. LOA with a maximum draft of 9.97 m. berth at the Main Dock. Six mobile container forklifts available for 6.19 m. containers.

STEVEDORES: *Working Hours:* 0730 hrs. – 1600 hrs., Monday to Friday. Rate for general cargo 32 tons – 40 tons per hour.

MEDICAL: Government owned Lyndon B. Johnson Tropical Medical Center at Faga'alu, Pago Pago, American Samoa 96799.

TANKERS: Facilities for vessels up to 195.06 m. length and 10.1 m. maximum draft. Tanker discharge facilities include 1 × 12 in. pipeline for fuel oil, 1 × 6 in. pipeline for diesel oil, 1 × 6 in. pipeline for gasoline and 1 × 4 in. pipeline for kerosene. Rate of discharge unlimited.

FRESH WATER: Available in unlimited quantities except during the three months commencing June 15th.

FUEL: Diesel, gasoline and lube oil available.

REPAIRS: Available through Southwest Marine of Samoa Inc. in Pago Pago. Tel: 644-4123, 633-2883. Telex: 525 SWM SB.

AIRPORT: Tafuna International Airport is 11.2 km. from the port.

HOLIDAYS: *Local Holidays:* New Year, President's Day, Good Friday, April 17th, Memorial Day, July 4th, Labour Day, Veteran's Day, Columbus Day, Thanksgiving Day, Christmas Day.

POLICE/AMBULANCE/FIRE: Tel: 911, 633-1111, 633-1222.

GENERAL: *Floating Equipment:* 240 ton barge and several other small craft. Stevedoring handled by 2 local stevedoring companies.
Kneubuhl Maritime Services Corporation. Telex: 705.
G.H.C. Reid Shipping & Stevedoring Co. Telex: 782514.

Provisions: Fresh provisions and fruits, tinned foods in large quantities and meat available. Pork and poultry also available. Ice is available.

Offshore Facilities: Four mooring buoys in inner harbour.

Tides: Average rise and fall 1.2 m.

DEVELOPMENTS: Enlargement of existing container yard.

AUTHORITY: Department of Port Administration, Government of American Samoa, Pago Pago, American Samoa 96799. *Tel:* 633-4251, 633-4449. *FAX:* (684) 633-5281. *Contact:* Mr. Leroy Ledoux, Port Director (Tel: (684) 633-4251). Silila F.Patane, Harbour Master (Tel: (684) 633-4251).

NOTES

Please also advise Shipping Guides Ltd.

Angola

CABINDA: 05.32 S. 12.11 E. (See Plan)

DOCUMENTS:

7 Manifests for each port of origin of cargo for Cabinda, plus 1 copy of each Bill of Lading.
8 Passenger Lists (Disembarking/in transit) even if "nil".
7 Crew Lists.
8 Lists of ports previously visited.
2 Lists of Crew vaccinations.
3 Lists of Ships Stores.
3 Personal Effects Lists.
5 Firearms and Ammunition Lists (even if "nil").
5 Lists of Animals and Birds.

Other forms intended for Customs, Health, etc., can be filled in on arrival.

PILOTAGE: Government Pilots' service is obligatory. Radiograms giving ETA to be sent to Agents via Luanda Radio (or by telegram from previous port), and anchorage to be used which is the closest to Cabinda, provided locations permit. The vessel is visited by port authorities, and, if necessary, the vessel may shift to another anchorage.

When the cargo is for the account of Cabinda Gulf Oil Limited, the vessel must be moved closer to Malongo where the oil companies have their own berth for discharge of various cargo into barges.

Tankers: The Mooring Master boards the vessel at the anchorage area.

All manoeuvring of vessels within the Cabinda Terminals mooring areas is to be done only in accordance with the advice of the CABGOC Mooring Master, subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvered shall remain solely responsible on behalf of his vessel and the vessel's Owners for the safety and proper manoeuvring of the vessel.

CABGOC Mooring Master will remain on board throughout the export vessel's stay on the berth to coordinate transfer operations. Therefore, suitable officer standard accommodation shall be provided for him on board the export vessel.

The service of a Mooring Master is provided upon the express understanding and condition that when a Mooring Master furnished by CABGOC goes aboard an export vessel for the purpose of assisting such vessel, he becomes for such purpose the servant of the Owners of the export vessel, and CABGOC shall not be liable for any damage, loss or injury which may result from the advice or assistance given or made by such Mooring Master while aboard or in the vicinity of such vessel.

ANCHORAGE/APPROACHES: *Approach to the Anchorage/Pilot Boarding Area:* Normally all communications will be with the Malongo Shore Terminal. When within VHF communication range, the Master of the export tanker should ascertain berthing prospects from Malongo Shore Terminal for the oil vessel and LPG terminals. Should it be necessary to anchor, then the vessel should proceed to the recommended tanker anchorage, which is Lat. 05° 28.5′ S., Long. 11° 59.0′ E.

Anchorage for any vessel in any other area within the terminal limit is prohibited unless special clearance is received from Malongo Terminal.

Arrival at Pilot Station/Anchorage Area: Means of access to vessel by the CABGOC Mooring Master shall be provided in accordance with the requirements of SOLAS, and early advice will be given by CABGOC Mooring Master regarding the side of the vessel where access should be provided. At night, the access area shall be adequately illuminated to provide for the approach and boarding of the Mooring Master, Government Officials and for CABGOC representatives.

The Conditions of Entry into and Use of Cabinda Terminal and Agreement for Hiring of Tugs will be presented to the Master of the export vessel and shall be signed by him on behalf of himself, the vessel and her Owners prior to the departure from the Pilot Station and commencement of berthing operation.

The Notice of Readiness will be accepted on arrival for the Malongo SPM Oil Terminals, but only between the hours of 0600 and 1800 and between 0600 and 1600 for Malongo LPG Terminal, provided that the CABGOC representative is satisfied that the export vessel is apparently in all respects ready to moor and load. In the case of LPG vessels, such N.O.R. shall include adequate cool-down of and no contamination on cargo tanks and connection and appropriate purging of cargo vapour hoses.

Notice of Readiness will not be accepted during a period when berthing is suspended on account of adverse weather, or when an export vessel arrives prior to the date upon which it is nominated to load.

The foregoing paragraph notwithstanding, in no event shall a Notice of Readiness, whether previously accepted or not, be valid or binding on the Terminal, unless and until such time as the export vessel, her tanks and equipment, are in fact in every respect in the proper condition and operation to receive the cargo.

MAX. SIZE: Cargo vessels, in the anchorage, with 32 ft. draft, may work at will. Vessels with greater draft can be accommodated further seaward but there is always the risk of swell hampering operations.

Also see "Single Buoy Moorings".

CLEARANCE: Official authorities will board the vessel for clearance, normally after berthing/anchoring.

In the event of arrival during the night, clearance will not be made before 0600 hrs.

RADIO/VHF: Vessels bound for the Cabinda Terminals are required to advise their ETA:

(a) Via telex or radiogram to the office of the vessel's Agent in Cabinda, who will pass the information to Cabinda Gulf Oil Company (CABGOC) at Malongo.
(b) Export vessels can also communicate via the "Berge Troll" by satellite 871/581 1312131/LAGO.

All Vessels: ETA messages are to be sent 72 hours, 48 hours and 24 hours for oil tankers and 7 days, 48 hours and 24 hours for LPG vessels before arrival at the Terminal, and should contain the following information:

(a) Name of vessel.
(b) ETA in GMT (Angola time is GMT plus 1 hour).
(c) Name of Master.
(d) Estimated arrival draft, fore and aft, and displacement.
(e) Time for discharging clean ballast, if any, also quantity of segregated ballast on board.
(f) If vessel proceeding to any port(s) prior to Malongo, and if so, any delays anticipated.
(g) Quantity of cargo required and any special requirements.

Export vessels with telex facilities can contact:

Telex No. 3160 Malongo AN or No. 3948 Malongo AN, or communicate via "Berge Troll" by satellite 761/581 1312131/LAGO.

Additional for LPG Vessels:

(a) Quantity of cargo to be loaded and bulk loading rate requested without use of vapour return line.
(b) Number and size of vapour and liquid manifold connections.
(c) Temperature and pressure of each tank and set point of safety relief valves on arrival.
(d) Any defects in vessel or equipment affecting cargo, performance or manoeuverability.
(e) Details of previous 3 cargoes carried.

VHF and SSB Facilities: For short range communications, a VHF system is available covering Channels 1 to 78. Channels 16 (156.8 MHz) and 12 (156.6 MHz) are monitored continuously. The VHF radio call sign is "Malongo Terminal".

A high frequency (SSB) radiotelephone system is installed at the Malongo Terminal and uses the call sign "Malongo Terminal". 24 hour watch is maintained on the International Calling and Distress frequency of 2,182 kHz. After making the initial contact on 2,182 kHz, agreement must be reached between the vessel and Malongo to move to any of the following frequencies: 2,738, 2,638, 2,056, 2,049 kHz. This facility is for medium range communications and should reach, under normal conditions, 600 miles by day and about double this distance at night.

Export Vessel/LPG Storage Vessel/Shore Terminal Communications: When the export vessel is at the anchorage, communication between the export vessel and the LPG storage vessel or Malongo Shore Temrinal will be established on VHF Channel 16, and then transferred to a mutually agreed VHF channel.

For vessel moored at the Cabinda Terminals, communication with the shore terminal or "Berge Troll" will be maintained by VHF radio equipment provided by Mooring Master.

SINGLE BUOY MOORINGS:

Malonga Oil Terminal – Export Berth No. 1:

Location: Malongo Oil Terminal Export Berth No. 1 is a crude oil export facility operated by Cabinda Gulf Oil Company. Crude oil from the Malongo Field onshore tank farm is transferred to export vessels via the Malongo SPM. The SPM is located in 75 ft. of water in position Lat. 05° 26.2′ S., Long. 12° 04.7′ E.

Capacity:

Max. draft 55 ft. even keel.

Vessel Terminal Factor (VTF): 290,000 cu.m.

Vessel must have the ability to maintain minimum 30% of the Summer deadweight at all times either loading cargo and deballasting simultaneously, or loading part cargo first, discharge ballast and load balance of cargo.

SPM chain stoppers as per OCIMF recommendations are required.

Vessel of over 140,000 tons scantling deadweight will only be berthed in good weather. Any delay due to unfavourable weather conditions will be for the account of the party nominating such vessel.

Vessel Terminal Factor is obtained by using the following formula:

Vessel LBP × Beam × Depth, all expressed in meters.

Navigation: The buoy is fitted with a navigation light flashing morse code "B" every 20 seconds with a range of 5 miles and also a foghorn sounding one long blast every 30 seconds.

There are numerous oil well platforms in the vicinity of this Terminal in the following positions:

Platform	*Latitude*	*Longitude*	*Light*
83-4	5° 25.7′ S.	11° 59.6′ E.	White
83-6	5° 25.1′ S.	11° 59.2′ E.	White
84-8	5° 26.1′ S.	12° 03.2′ E.	Red strobe
84-12	5° 29.2′ S.	12° 04.0′ E.	White
84-16	5° 28.4′ S.	12° 03.5′ E.	Green strobe
84-22	5° 26.6′ S.	12° 00.1′ E.	Red strobe
95-3	5° 33.8′ S.	12° 59.1′ E.	White
96-1	5° 30.3′ S.	12° 03.8′ E.	White
84-31	5° 28.3′ S.	12° 00.1′ E.	Green strobe

These navigational aids flash morse code "U" every 15 seconds in the colour indicated. The above platforms are each fitted with fog signals sounding one blast every 20 seconds with a range of 1.5 miles.

Gathering Station GSJ (Juliet) is located in position Lat. 05° 24.8′ S., Long. 11° 59.5′ E., and is fitted with a navigation light with characteristics of Gp.Fl (3) every 30 seconds.

A Racon beacon is also installed on this platform. The characteristics of this beacon are morse code "G" on a 360° azimuth, range 22 miles.

Malongo Oil Terminal – Export Berth No. 2:

Location: Malongo Export Berth No. 2 is a crude oil export facility operated by Cabinda Gulf Oil Company (CABGOC). The SPM Export Buoy is located in 105 ft. of water in position Lat. 05° 27.6′ S., Long. 12° 01.8′ E.

Capacity: Export vessels up to 325,000 d.w.t. and max. LOA 1,150 ft. are accepted.

Vessel must have the ability to maintain minimum 30% of the Summer deadweight at all times, either loading cargo and deballasting simultaneously, or loading part cargo first, discharge ballast and load balance of cargo.

SPM chain stoppers as per OCIMF recommendations are required.

Navigation Aids: The buoy is fitted with a navigation light flashing morse code "G" every 20 seconds with a range of 5 miles and a foghorn sounding morse code "U" every 20 seconds.

Malongo LPG Terminal:

Location: Malongo LPG Terminal is an LPG export facility operated by Cabinda Gulf Oil Company. LPG is stored in the storage tanker "Berge Troll' (maximum capacity 71,300 cu.m./42,920 metric tons) and is transferred to the export vessel in a ship-to-ship alongside operation. The SPM is located in about 100 ft. of water in position Lat. 05° 24.9 ' S., Long. 12° 01.3' E.

Capacity: Export vessels up to 40,000 metric tonnes.

Navigational Aids: The "Berge Troll" SPM is fitted with a navigation light flashing morse code letter "C" every 20 seconds, range 5 miles.

MOORING/UNMOORING: *Malongo SPM Operation:*

(a) Mooring operation will normally be undertaken during daylight hours (0600 – 1800) under normal weather conditions and with the CABGOC Mooring Master's agreement. Unmooring operations will usually be undertaken at any time.

(b) Before arrival at the boarding area, it will be necessary to ensure that the following minimum moorings are ready for use on the forecastle of the export vessel on arrival at the SPM berth:

Four mooring ropes, minimum length 220 m. and size 10 in. circumference. These lines should be buoyant and in good condition.

(c) When the vessel is within reasonable distance of the buoy, the 2 ship's lines will be picked-up by the mooring launch and made fast to the floating SPM pick-up lines. The ship's lines, used as messengers, will then be used to heave the pick-up lines on board the export vessel. As the pick-up lines come clear of the water, they will be followed by the chafing chains which are attached to them. These chafing chains must then be secured to the chain stoppers in such a manner that the 2 nylon hawsers are outside and clear of the ship's fairleads. The chains will then absorb any chafing in the mooring system. The buoy hawsers are each 180 ft. long and 15 in. circumference at Berth No. 1, and 220 ft. long and 18 in. circumference at Berth No. 2.

(d) Power is required to be available at all times on all deck winches and windlass while the export vessel is in the berth.

(e) Two mooring lines shall be available aft, secured to the bitts and of sufficient length to enable a tug to pick-up the eyes and tow on it to realign the vessel if necessary. Buoyant lines are requested.

Malongo LPG Operation: The export vessel will be moored during daylight hours only, according to a mooring plan to be agreed between the CABGOC Mooring Master, the Master of export vessel and the Master of the "Berge Toll".

At Malongo LPG Terminal, fendering between the two vessels for the alongside operation consists of 4 large fenders, 10 in. diameter × 16 ft. length at waterline level, and 5 secondary fenders strategically positioned close to the tank deck level.

HOSES: *Malongo Oil Terminals:* After the vessel has been securely moored, 2×16 in. floating hoses will be connected to the export vessel's port side manifold. The floating cargo hoses are fitted with Camlock type couplings to fit 150 ASA for 16 in. flanges. A hose gang will remain on board to attend to all hose operations, but the export vessel's crew shall provide assistance as and when necessary on the advice of the CABGOC Mooring Master. At such times, an export vessel's deck officer shall be in attendance.

The export vessel will be required to have ready a hose handling derrick at the port manifold with a SWL of not less than 15 tons for the lifting and connection of the hoses. Where possible, it is requested that the derrick runner is on one winch and the topping lift on another, as this will make the hose handling and launch operation much smoother and faster.

The export vessel's crew will be responsible for handling the hoses and required to operate winch or winches.

Every care should be taken during the hose handling operations to avoid serious damage to the hose, the plastic floats and buoys by contact with plate edge, rails, etc.

Special equipment, e.g. quick release fittings, etc., will be supplied from the line-boat when the CABGOC Mooring Master boards.

To avoid undue delays, a rope messenger shall be ready for use at the boarding position. Before hose handling operations begin, manifold oil containment facilities shall be ready for use and adequate quantities of absorbants available for rapid deployment in the event of spillage.

Export LPG: The "Berge Troll" will present 2×8 in. hoses to the manifold of the exporting vessel for loading of LPG. It will be the responsibility of the export vessel to cooperate with CABGOC personnel in making the connection of the 2 hoses to the manifold. The vessel should present 8 in. (150 ASA) flanges at her manifolds.

The "Berge Troll" is equipped on her starboard side with 2 hydraulic telescopic hose handling cranes.

Each hose will have a maximum flow rate of 800 tonnes/hr.

The export vessel shall be responsible for the safe handling of vapours generated during loading. Controlled venting to atmosphere is only to take place in agreement with CABGOC, and only for preventing cargo tanks safety valves to open/release to riser.

Luanda LPG Export: Product will be transferred via 1×6 in. flexible hose. A total length of 3×25 ft. hoses will be used, permitting 20 ft. of the transferring hose to rest on the export tanker to absorb all abnormal movement between the vessels. A ball valve will be arranged on the export vessel end of the hose to allow liquid to boil-off. Blowing/purging will therefore not be necessary. Vapour return is not available.

Cargo will be delivered at requested temperature by using a cargo heater on the "Berge Troll". Rate is normally expected to be around 200 tonnes/hr. Export tanker should be able to meet a 6 in. hose (150 or 300 ASA).

A 1 ton crane is located 130 ft. aft of the manifold for the purpose of transferring personnel between the ships and hose handling.

Small "Luanda LPG" tankers will berth on the "Berge Troll's" port side, always using their starboard side alongside. Five primary fenders 6 ft. × 12 ft. size are positioned on the "Berge Troll's" port side.

Larger "Luanda LPG" tankers with sufficient freeboard, and able to use the primary fenders on "Berge Troll's" starboard side, may berth on this side. All procedures will in such cases be similar to those in force for export LPG.

LOADING/DEBALLASTING: *Deballasting Operations – Oil Terminals:* Export vessels are required to arrive with sufficient ballast or cargo and adequately trimmed for safe manoeuvring, with the propeller submerged and in no case less than 30% S.d.w.t.

Cabinda Terminals have no ballast reception or slop disposal facilities, and therefore, export vessels are required to arrive with sufficient clean ballast suitable for pumping directly to the sea. Export vessels arriving with ballast unsuitable for pumping to the sea may be rejected for loading, or will be required to keep that portion of their contaminated ballast on board.

CABGOC will not accept any claims for vessels unable to meet such requirement.

It is strictly against the law to pollute the water of the People's Republic of Angola. Any Master, his vessel and Owners, may be subject to prosecution by the Angolan Authorities, if such pollution does occur.

Transfer Operations – Oil Terminal: The CABGOC Mooring Master will remain on the export tanker throughout the transfer operation, and will coordinate all activities on board the export tanker with the shore terminal.

The maximum loading rate available for the transfer operation will be 40,000 barrels per hour, but in no circumstances will the export vessel be requested to load at a rate faster than that required by her Master.

At all times during the transfer operation a responsible deck officer shall be in charge of operations. A deck watch in contact with the control room is required to continuously patrol the cargo deck and monitor the export vessel manifold area and the mooring hawsers.

When the responsible officer has declared the export vessel ready to load with all necessary valves open, the CABGOC Mooring Master will give instructions to commence the transfer at a slow rate. As soon as flow is confirmed and the integrity of the transfer hose connection is established, the export vessel may request an increase to the previously agreed loading rate. At any time during the transfer operation, the rate can be reduced as requested by the Master or responsible officer of the export vessel. At no time should vessel shut down against the flow. At least 2 cargo tank valves should be open at all times.

The CABGOC Mooring Master should be given advance notice by the Master or responsible officer of the export vessel when a reduction of loading rate is required.

After completion of loading, various documents, including Bill of Lading, Cargo Manifest, Ullage Report, Certificate of Quality, Certificate of Quantity, Certificate of Origin and Port Time Log, will be completed, and all such documents will be signed by the Master of the export vessel prior to departure. If required or requested by the Master, the Agent for the export vessel may sign the cargo documents on behalf of the export vessel's Master.

The official quality and quantity of the crude oil delivered to the export vessel shall be determined by her Owners and/or Charterers.

Simultaneous Deballasting and Loading of Cargo Tanks – Oil Terminals: This practice is required at Cabinda Terminals. Vessels must have the ability to load and deballast simultaneously or load cargo, stop operation of loading and deballast, and then finish loading cargo to maintain 30% of Summer deadweight.

These operations shall be done at the sole responsibility of the export vessel, its Master and Owners. The most stringent care and attention shall be taken by the export vessel throughout, whose Owners shall remain fully responsible for, and indemnify and hold CABGOC, its parent companies, subsidiaries and affiliates for any cost fine, and expenses, of every kind whatsoever, arising out of, on account of, or in any way connected with the simultaneous deballasting and loading of the export vessel.

Those vessels with only segregated ballast will be permitted to commence deballasting during loading at a stage of the operation convenient to both the Master and the CABGOC Mooring Master.

Loading Procedures – Export LPG Tankers: Notice of Readiness will normally be accepted at time of arrival when cargo hoses are connected and purged and when the vessel is declared, in all respects, ready to load.

The Master of the export vessel is required to have the blank flanges removed from the vessel's port side loading manifold before mooring, in order to expedite the connection of hoses.

Notice of Readiness will not be accepted during a period when berthing is suspended on account of adverse weather, or when an export tanker arrives prior to the date upon which it is nominated to load.

The foregoing paragraph notwithstanding, in no event shall a N.O.R., whether previously accepted or not, be valid or binding on the Terminal unless and until such time as the export vessel, her tanks and equipment, are in fact, in every respect in the proper condition and operation to receive the cargo.

Contract conditions for export of LPG may change from year to year, and demurrage/dispatch will be settled based on information on time sheet mutually agreed.

While the vessel is being cleared, the CABGOC representatives will give the Master of the export vessel written specifications concerning the anticipated loading conditions, i.e. gravity, temperature, loading rates, etc. The discharge of ballast and cargo transfer program will be fully agreed between CABGOC, Master of "Berge Troll' and the Master of the export tanker before any operation is allowed to commence.

There are no facilities available to discharge excess cargo, should the vessel overload. It is, therefore, imperative that the export vessel's Master declares the tonnage he requires prior to loading.

Cargo loading is by "Berge Troll" deep well pumps at a rate of approximately 12,000 bbls. (1,000 metric tons) per hour for Export LPG, and approximately 2,400 bbls. (200 metric tons) per hour for Luanda LPG.

Spotlights should be rigged on both wings of the bridge and on the forecastle of the export tanker to supplement the "Berge Troll's" deck lighting during transfer operations.

About 30 minutes before the cargo loading is expected to be completed, the CABGOC representative should be advised in order to coordinate the shut-down between the vessel and the "Berge Troll".

When the export vessel has completed loading the cargo, the discharging line valves on the "Berge Troll" will be closed. The 2 liquid hoses and the vessel's loading piping system in use will be cleared of liquid by blowing with warm vapour at an approximate pressure of 4 kg./sq.cm. from the "Berge Troll". This operation is carried out and supervised by CABGOC personnel. *Only when the CABGOC representative has advised that the line clearing operation is completed, may the export vessel's manifold be closed.* (In an emergency however, the export vessel may shut down against flow with immediate notification to "Berge Troll").

After completion of loading operations, various documents, including Bill of Lading, Cargo Manifest, Ullage Report, Certificate of Quantity, Certificate of Quality, Certificate of Origin and Port Time Log, will be completed, and all such documents shall be signed by the Master of the export vessel prior to that vessel's departure. The official quantity and quality of the LPG delivered to the export vessel shall be determined by independent surveyor on the basis of meters and equipment on the "Berge Troll", and shall be final and binding on the export vessel and Owners and Charterers.

The number and size of LPG samples taken will be determined by CABGOC.

Conditions of Acceptance: Cabgoc as operator accepts vessels on the understanding that transfer operations will be conducted safely and expeditiously, and that the berth will be vacated as soon as practicable after loading operations are completed.

CABGOC reserves the right to refuse to accept a vessel which fails to arrive with tanks cooled to the temperature appropriate to the grade of LPG to be loaded and with cargo free of any contamination.

Furthermore, CABGOC reserves the right to suspend operations and require the removal of any vessel from the berth for, but not limited to, the following:

(a) Flagrant or continuous disregard of the Cabinda Terminals Safety Regulations and Procedures.
(b) Defects in vessel, equipment, manning or operations, which in the reasonable opinion of CABGOC presents a hazard to the Terminal, personnel or the environment.
(c) Operational performance that fails to utilise satisfactorily the available Terminal facilities, and thereby in the reasonable opinion CABGOC constitutes an unacceptable constraint on transfer operations.

CABGOC shall not be liable for any costs incurred by a vessel, its Owners, Charterers, or Agents as a result of a refusal to load all or part of a nominated shipment, delay to or suspension of loading, or a requirement to vacate the berth arising from this regulation or from the safety regulations.

LPG Vessels Safety Inspection: As soon as possible after arrival, a CABGOC/"Berge Troll" representative will board the vessel in order to carry out a Safety Check and draw liquid samples from all cargo tanks.

Analysis results will be available after approximately 2.5 hours.

A further Safety Check will be carried out on completion of berthing, prior to commencement of loading.

Inert Gas System:

(a) All crude tankers scheduled to load at Malongo Terminals are required to have the I.G.S. plant fully operative and the tanks inerted throughout the lifting.

The oxygen content of all cargo tanks should be maintained below 8% by volume. The CABGOC Mooring Master will check random tanks upon boarding.

Failure to comply with this requirement will result in the vessel being delayed or rejected.

Should the I.G.S. break down during loading, *all cargo operations will be stopped, and the vessel may be ordered to vacate the berth.* The cost of any such delays will be for the vessel's account.

(b) Tanks Inspection, Gauging, Sampling, Water Dips and Temperature: Should it be necessary for tanks to be inspected, then it should only be done on a tank-by-tank basis. The system shall be maintained at about 200 mm. water gauge, except for the individual tank to be opened which, if possible, is to be isolated from the system and the sighting port opened with care. On completion of inspection, the tank shall be secured and re-pressurised. The next tank is not to be isolated and opened until the preceeding tank is secured and open to the I.G. system.

All gauging, sampling, water dips and temperatures will be taken either through special fittings provided or, if it is necessary, to open up tanks for this purpose, then this will be done one tank at a time as described above.

CARGO INFORMATION: *Malongo Crude:* Oil loaded at the Malongo Terminals will have varying API gravities in the range 26.3 to 34.6, depending on receivers requirements. Cargoes loaded at Malongo Oil Terminals may contain quantities of hydrogen sulphide.

Cabinda LPG: Cabinda LPG will have varying specific gravities ranging from 0.505 to 0.595, and be transferred at −35°C to −37°C. Advice on gravities and loading temperature will be provided to export vessels prior to the commencement of loading. Furthermore, in the case of LPG vessels, the final and official gravity will be available as soon as practicable, and usually 2 to 3 hours prior to anticipated completion of loading.

MEDICAL: In an emergency only. There are hospital facilities. Serious cases are sent to Luanda. Crew must have certificates of inoculation against yellow fever and cholera.

DENSITY: 1025. Influence of the current of the River Zaire varies according to the time of the year.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: None.

REPAIRS: Repairs will not be permitted when the export vessel is in the loading berth. Repair facilities are not readily available.

WATCHMEN: Not necessary. The authorities place a port policeman on board.

OPENING/CLOSING HATCHES: By the crew or stevedores.

CERTIFICATES: Ship's Register, certificates of deratting (valid) and certificate of life saving equipment.

CUSTOMS ALLOWANCES: Customs normally place no restrictions on the consumption of alcoholic drinks on board, but under no circumstances may alcohol be taken ashore.

REPATRIATION: Crew changes are only permitted in emergency situations, and then only when personnel involved hold all necessary valid certificates and documents.

AIRPORT: Small airport about 4 miles from the town served by the internal airline with only 1 flight per day to and from Luanda.

TIME: GMT plus 1 hour.

HOLIDAYS: 1st January, 4th February, 27th March, 1st May, 2nd November, 11th November, 10th December, 25th December.

Oil terminal works throughout.

POLICE/AMBULANCE/FIRE: Police Tel. 22456; Ambulance Tel. 22405; Fire Tel. Port Captain 22160/22159.

SERVICES: None available.

SHORE LEAVE: No shore leave for tanker personnel.

IDENTIFICATION CARDS: Supplied by the Agents and stamped by the Immigration police before any person comes ashore.

GARBAGE DISPOSAL: No service available.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: None. No shore leave.

CURRENCY: Kwanza.

DELAYS: Tankers are not normally delayed, but dry cargo vessels may be delayed if two or more vessels arrive simultaneously, due to a lack of sufficient barges. Also, delay in loading and unloading may be caused by rough seas.

The ship's Agent is responsible for making any arrangements and providing any information concerning the above.

GENERAL: Vessels loading at the Cabinda Terminals must comply with the latest SOLAS and MARPOL Conventions and Protocols. Vessels which are found to be seriously deficient in any way will be refused permission to berth or load.

All vessels are warned to approach the Cabinda Terminals with extreme caution, as drilling and survey work are proceeding on a continuous basis.

The national flag of the People's Republic of Angola shall be permanently displayed by vessels at the Cabinda Terminals, both by day and night.

Environmental Conditions: The rainy season begins in the middle of October and extends to the end of April. During this season and particularly between December and April, local thunderstorms can be experienced, accompanied by heavy rain for periods of 3 to 4 hours. Sudden squalls with wind gusts of 75 knots can be experienced. Waves of 10 ft. – 15 ft. can be expected during these periods. Wind speeds are generally not significant (less than 20 knots). Strongest winds can be expected from the S.W. quadrant.

During the dry season (locally called "Cacimbo"), generally May to September, a Southwesterly swell affects the area. The long swell sometimes exceeds 10 ft. – 15 ft. in height.

The prevailing current sets N.W. to N.N.W., and at times exceeds 3 knots. Current in the Cabinda area is affected by Zaire River tidal flow, as well as heavy rain over the surrounding land area. Thus, particularly during the dry season, current setting to the S.S.W. can be experienced.

In view of the foregoing, Masters of vessels calling at the Cabinda Terminals are advised that, under no circumstances, are engine repairs or the immobilisation of main engines permitted within the limits of the Terminals.

Agency: CABGOC does not perform any vessel agency functions. Vessels calling at the Cabinda Terminals are required to arrange their own agency representation from an agency operator in Cabinda.

Ship Requirements: All requirements of an export vessel will be handled by the vessel's Agent. No stores of any kind are available.

AUTHORITY: Inspector of Operations for Northern Ports, Cabinda.

Cabinda Gulf Oil Company, C.P. 40, Cabinda, People's Republic of Angola. *Tel:* Cabinda 391141, 391191. Malonga 22256/7/8/9. *Cables:* CABGOC, Cabinda. *Telex:* 3160 Malonga, An. *Contact:* R.K. Connon, Director General. Captain C. Fraboni/Captain S. Redivo, Marine Operations Superintendents.

Capitania do Porto de Cabinda. *Tel:* 22160.

ESSUNGO: 06.20 S. 12.10 E.

LOCATION: Essungo Terminal, part of the Lombo Terminal Complex to which please refer, is situated some 35 miles North of Lombo Terminal and 15 miles South of the entrance to the Zaire (Congo) River.

The loading point is situated in about 120 ft. of water, in position Lat. 06° 20′ 18″ S., Long. 12° 09′ 18″ E.

The IMODCO type Single Point Mooring is equipped with 2 mooring hawsers and is capable of accepting tankers up to 200,000 tonnes d.w.t.

A 16 in. sea line connects Essungo and Lombo Production Platforms and a 16 in. spur line is taken from this main line to the SPM buoy.

A floating 16 in. hose, with a 16 in. Camlock connection, connects the SPM buoy to the export tanker.

An old and disused mooring tower (R.M.D. Tower) is situated some 4 miles almost due East of the SPM.

The SPM buoy is equipped with a navigation light. Light: Flash "A" 15 sec., 5 nautical miles.

This Terminal is only used in the event of an emergency or failure of the Lombo Terminal loading facility.

VESSEL ACCEPTANCE: See "Lombo".

DOCUMENTS: See "Lombo".

APPROACHES: Facilities in Essungo Field are clearly marked on B.A. Charts, and all vessels calling at Essungo Terminal shall have on board B.A. Charts No. 3206 and 604.

Masters are advised that extensive drilling activities are underway in the Bagre Field, some 13 miles to the South (July 1996), and vessels should navigate with particular caution, as new uncharted platforms and drilling rigs may be encountered in the area.

Good radar targets are Essungo Platform and Bagre Platform, both of which flare continuously.

PILOTAGE: Pilotage is compulsory. The pilotage boarding area is 3 miles N.W. of the SPM buoy. The Pilot will give the arriving vessel any berthing instructions and/or confirm the anchorage position.

All other requirements/instructions as per Lombo Terminal.

ANCHORAGES: Vessels waiting to berth are requested to anchor 3 miles N.W. of the SPM buoy, contacting Essungo Platform on VHF Channel 6 upon arrival. The Pilot will then be advised and will call on VHF Channel 11. Vessels should listen throughout on VHF Channel 11.

Due to the proximity of many sub-sea pipelines, great care should be taken when anchoring. The sea bottom area is mainly sand and mud.

RESTRICTIONS: See "Lombo".

MAX. SIZE: Maximum displacement 250,000 tonnes.

Fitted with two AKD, OCIMF tongue type bow chain stoppers, SWL 200 tons.

For other instructions/requirements, see "Lombo".

RADIO: See "Lombo".

VHF:

Essungo Platform: Channels 6 and 72.
Lombo Pilot: Channel 11.
Lombo Marine: Channel 11.

MOORING: All mooring and unmooring operations are done by the ship's crew as instructed by the Pilot.

Upon arrival at pilot station, vessel shall have the port crane/derrick rigged and ready for use. The SWL shall be not less than 15 tons.

A line boat and a crew boat will assist the vessel to moor and unmoor.

The Pilot/Loading Master will normally only accept the Notice of Readiness between 0600 hrs. and 1700 hrs., providing the vessel is in all respects ready to receive cargo.

The time of N.O.R. accepted will always be the time of hose connection.

All mooring equipment, i.e. Panama leads, chain stoppers, etc., shall comply with relevant OCIMF recommendations. Smit Brackets are no longer accepted.

The Terminal line boat will bring the mooring equipment box alongside, which is picked up using the ship's port crane/derrick.

One messenger line of at least 400 ft. length and 2 good heaving lines shall be ready for use, both on the forecastle and on the poop deck aft. There should also be a large hammer and a large crow bar available on the forecastle head during mooring.

The line boat brings in a 10 in. circumference pick-up line alongside the bow when the vessel is within a reasonable distance of the SPM. The messenger line is passed by ship's heaving line, to the line boat and connected to the pick-up line. The pick-up line is retrieved until the chafe chain passes through the fairlead and is secured to the chain stopper. The whole process is repeated for the second hawser.

Once the vessel is safely moored, the Terminal tug is secured aft using ship's lines. The tug will remain secured to the stern of the loading tanker throughout its stay. The ship should have ready aft, shackled together, two full length (i.e. each 200 m. long) polypropylene mooring ropes of minimum diameter 80 mm. (10 in. circumference).

Once the tug is fast, the single 16 in. hose with Camlock connections is brought on board and connected by ship's crew.

The bow to manifold distance shall not exceed 150 m. and the manifold to ship's rail distance should not be less than 4.6 m.

A pressure recorder will be installed at the ship's manifold.

MEDICAL: Available only in emergency.

BALLAST: Vessel shall arrive with clean ballast only. No dirty ballast facilities available.

LOADING: The loading rate is approximately 100,000 barrels per day.

Soyo Blend Crude Oil has an API of approximately 40.0. The temperature ranges between 80°F to 90°F.

The loading is direct from the production platforms, with no storage facilities being available.

Particular attention is drawn to the need to operate cargo system valves with care, in order not to cause a shut-down of the production system.

FRESH WATER: Not available.

FUEL: Not available.

REPATRIATION: Crew changes can be arranged through shipping agencies on emergency basis, although not recommended.

TIME: GMT plus 1 hour.

SERVICES: The following services are not available: Stores, fresh provisions, cash, laundry, national flags, repairs, etc.

British Admiralty Charts are not available. Vessels shall have on board B.A. Charts No. 3206 and 604.

Mail: Mail sent to or from Europe usually takes 3 weeks.

SHORE LEAVE: Not possible.

GARBAGE DISPOSAL: No garbage disposal available.

WASTE OIL DISPOSAL: Not waste oil disposal available.

WEATHER: See "Lombo".

NOTICES: *Safety of the Vessel:* The Master is responsible for the safety of the vessel while moored to the loading point. He must, therefore, strictly adhere to all safety requirements generally requested by the Company and the Port Authorities and accepted by the oil tanker industry.

Port Authorities can, at any time, prescribe special safety measures to be complied with by the vessel.

Only approved safety material may be used (radios, flashlights, etc.).

The Pilot/Loading Master will hand to the ship's Master a Safety Check List when boarding the vessel.

The Pilot/Loading Master will remain onboard during the whole period of loading, and in case of any infringement of the safety regulations, will take any measure he deems appropriate, including stopping or not starting the loading operations. The time so lost will be debited to the vessel.

The following Safety Precautions must be taken by all vessels loading at the Terminal:

Repairs to main engine and steering gear are prohibited.
Vessel's anchors must be secured by stoppers before manoeuvring near pipelines and structures.
Continuous deck and cargo watches must be kept by a responsible Senior Deck Officer.
Power must remain on deck machinery at all times.
Main deck and forecastle areas must be adequately illuminated.
Pilot/Loading Master must be informed of any electrical storms or squalls that may approach vessel during loading.
The Ship/Shore Safety Check List and Prior to Berth Check List must be strictly observed by all vessels loading at the Terminal.

Hydrogen Sulphide: The cargo to be loaded contains high concentrations of Hydrogen Sulphide (H_2S).

Special precautions should be taken, as H_2S gas, when vented to atmosphere during loading, or when ballasting after discharge of cargo, is extremely dangerous to personnel. Because of this extreme danger, each and every person working in an area where H_2S gas may be present, should be aware of the potential dangers, and know how to protect themselves from the toxic effects of H_2S gas.

Closed loading of this cargo is compulsory. A Safety Team will board the vessel with the Pilot/Loading Master, and remain on board throughout the loading. The Safety Team will strictly control the safety measures necessary for the handling of this cargo, i.e. instructions to shipboard personnel, monitoring and measurement of gas levels, management and control of H_2S gas in the cargo tanks, on the decks, in the living quarters, and when vented to the atmosphere.

The Safety Team will provide emergency equipment, such as breathing apparatus, H_2S and combustible gas monitoring and measuring equipment.

During cargo tank venting, only crew members authorised by the Safety Team will be allowed on the open deck areas. All accommodation access doors must be closed and sealed during loading except one, and all shipboard personnel will be instructed to use only that assigned access, except in an emergency. Ship's air-conditioning plant must be on internal recirculation. Fire line and pumps must be capable of sustaining a sea water pressure of at least 150 psi. at one or more deck monitors. Gas reading values will be recorded every 2 hours, together with the vessel heading, wind direction and speed, the latter being plotted on forms provided by the Safety Team.

Recommendations and Regulations as per IMO "Dangerous Hydrocarbon Cargo Handling" and ISGOTT "International Safety Guide for Oil Tankers and Terminals" must be followed at all times.

Pollution: The Master is responsible for ensuring that no petroleum is discharged or spilled from his ship into the water of the Terminal. Drip pans shall be in place at all times under all manifolds and all overside scuppers, pipes, or openings on the loading and/or transfer decks shall be securely closed and oil tight.

In the event of any spillage of petroleum, petroleum waste, contaminated water or residue on the deck of the ship, the same shall be cleaned up immediately, and under no circumstances shall be permitted to be swept or washed overboard. Adequate supplies of sawdust or other material, approved by Company, shall be available on the ship for immediate use. Any vessel causing pollution of the water of the Terminal or sighting such pollution, shall immediately inform the Pilot/Loading Master. In the event that any ship should discharge or spill any dirty ballast, petroleum contaminated water, bilge water or petroleum waste into the water at or in the vicinity of the Terminal, the Company shall have the right (but without prejudice to any other rights it may have) to take any action which, in its opinion, is necessary to clean up or remove any contamination or pollution resulting from such discharge or spill (whether contamination or pollution of the sea, the shore or any structure or property).

The Company shall have the further right (but not obligation) to settle any claims of third parties arising from such contamination or pollution.

All payments, costs, and expenses properly made or incurred by the Company in cleaning up or removing any such contamination or pollution, and in settling any claims of third parties shall be the liability of the vessel, its Owners and its managers, and the Company shall be entitled to claim reimbursement accordingly.

The above refers mainly to petroleum pollution, but we would draw your attention to the fact that all pollution is covered by above, e.g. carbon deposits from the boilers.

The Company will take every precaution to prevent pollution occurring but, should it occur, speed is essential to control it, and the Company will, if necessary, "clean up first and discuss liability afterwards", rather than lose valuable time.

The vessel, if at fault, will be charged for use of boats, detergents, dispersants, labour (including overtime), transporation, use of equipment, etc., as well as the more obvious charge for the lost time whilst cargo operations are stopped.

Vessels carrying detergent are requested to have it available (not necessarily on deck) with a means of applying it, should the Company request such an action.

Special requirements: During the whole period that the vessel will be moored at the Terminal, a forecastle watchman will be required. He must be in continuous contact with the Duty Officer and Pilot/Loading Master.

He shall keep the Duty Officer and the Pilot/Loading Master informed about the vessel position and distance from SPM.

The vessel will be held responsible for all damages to the installations.

Vessels are requested to provide food and accommodation for the Loading Master and two Safety Inspectors throughout the loading operations. The accommodation should be equivalent to the minimum standard required for a Senior Officer. Accommodation may be required for visiting Port Authorities/Officers.

Ship's crew are required for mooring/unmooring operations and connection/disconnection of the hose. A 24 hour radio watch is required on VHF Channel 11.

Conditions of Use of the Terminal Facilities: All services and assistance provided by or on behalf of the Company (Texaco Panama Inc., Angola), at or in connection with the Terminal, are subject to any applicable Bye-Laws and Harbour Regulations, Safety Regulations and Towage Conditions for the time being in force and to the following further conditions.

Neither the Company nor its servants, Agents or contractors (in whatever capacity they may be acting) shall be responsible for any loss, damage or delay from whatsoever cause arising in consequence of any assistance, advice or instruction whatsoever given or tendered in respect to any vessel, whether by way of tugs, pilotage, or berthing services, the provisions of navigational facilities, including buoys or other channel markings or otherwise whosoever.

In all circumstances, the Master of any vessel shall remain solely responsible on behalf of his Owners for the safety and proper navigation of his vessel.

Although the Company exercises due diligence to ensure that the berths, premises, facilities, property, gear, craft and equipment are safe and suitable for vessels permitted or invited to use them, no guarantee of such safety or suitability is given, and the Company, its servants, Agents or contractors shall not be responsible for any loss, damage or delay of any sort that may be sustained by, or occur to any vessel, her Owners, her cargo or any part thereof (whether such cargo is onboard or in course of loading or discharging) by whomsoever and by whatsoever cause such loss, damage or delay is occasioned.

The Company will not be responsible for any loss, damage, or delay directly or indirectly caused by or arising from strikes, lock-outs or labour disputes or disputes or disturbance whether the Company or its servants are parties thereto or not.

If the use by any vessel of any berth, premises, any gear or equipment, any craft, or other facility or property, of any sort whatsoever, whether belonging to or provided by or on behalf of the Company, result in any damage to any such berths, premises, gear and equipment, craft or other facility or property, from whatsoever cause such damage may arise, and irrespective of whether or not such damage has been contributed to by the negligence of the Company or of its Agents, servants, or contractors and irrespective of whether there has been any neglect or default on the part of the vessel or Owners, in any such event the vessel and the Owner shall pay for or hold the Company harmless from and indemnified, all such damage and against all loss sustained by the Company consequent thereon.

Further, the vessel and her Owners shall hold the Company harmless and indemnified against all and any claims, costs and expenses arising out of any loss, damage or delay caused to any third party by the vessel or by its Master or crew, or by any other servant or Agent of the Owners.

OPERATOR: Texaco Panama Inc., P.O.Box 5897, Luanda, Angola. *Tel:* 244-2-322606. *Telex:* 2619 Texpan An. *FAX:* 244-2-321703. *Contact:* Marine Superintendent (Tel: 871-1515147. Fax: 871-1515150).

FUTILA: 05.27 S. 12.11 E. (See Plan)

LOCATION: Futila Terminal is a products import/export facility, owned by Sociedade Nacional de Combustiveis de Angola (SONANGOL). Products are transferred via the Futila Conventional Berth Mooring (CBM), located in 22 ft. of water in position Lat. 05° 27.0′ S., Long. 12° 11.0′ E.

APPROACHES: The Futila CBM area is delineated by 4 light buoys in following locations:

(1) Green Buoy: Lat. 05° 30′ 09.6″ S., Long. 12° 10′ 08.9″ E.
Green light, flashing 1 every 5 seconds, range 6 nautical miles.
(2) Red Buoy: Lat. 05° 29′ 24.1″ S., Long. 12° 09′ 58.5″ E.
Red light, flashing 1 every 5 seconds, range 6 nautical miles.
(3) Yellow Buoy: Lat. 05° 27′ 52.4″ S., Long. 12° 09′ 47.4″ E.
Yellow light, flashing 2 every 10 seconds, range 6 nautical miles.
(4) Yellow Buoy: Lat. 05° 26′ 55.2″ S., Long. 12° 10′ 13.9″ E.
Yellow light, flashing 4 every 20 seconds, range 6 nautical miles.

Vessels will enter the area from West passing between green and red buoys. The West (yellow) buoy marks the limit of a reef area and the North (yellow) buoy the Kokongo pipeline. A red can buoy, intended as stand-by buoy for the mooring launch, and fitted with a white quick flash light, is located in Lat. 05° 27′ 20.0″ S., Long. 12° 10′ 48.5″ E.

There are numerous oil well platforms in the vicinity of this Terminal, and each one is fitted with navigational aids flashing morse code "U" and fog signals sounding one blast every 20 seconds with a range of 1.5 miles.

Gathering Station GSJ (Juliet) is located in position Lat. 05° 24.8′ S., Long. 11° 59.5′ E., and is fitted with a navigational light with characteristics of Gp.Fl.(3) every 30 seconds. A Racon beacon is also installed on this platform. The characteristics of this beacon are morse code "G" with a 360° azimuth, range 22 miles.

PILOTAGE: The Mooring Master will board the vessel at the anchorage area.

All manoeuvring of vessels within the Futila Terminal mooring area is to be done only in accordance with the advice of the Company Mooring Master, subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvred shall remain solely responsible on behalf of his vessel and the vessel's Owners for the safety and proper manoeuvring of the vessel.

The Company Mooring Master will remain on board throughout the vessel's stay in the berth to coordinate transfer operations, therefore suitable accommodation shall be provided for him on board the vessel.

ANCHORAGE: *Arrival at Pilot Station/Anchorage Area:* Means of access to vessel by the Mooring Master shall be provided in accordance with the requirements of SOLAS, and early advice will be given by Mooring Master regarding the side of the vessel where access should be provided. At night, the access area shall be adequately illuminated to provide for the approach and boarding of the Mooring Master, Government Officials and Terminal representatives.

The Notice of Readiness will be accepted only between the hours of 0600 and 1600, provided that the Terminal representative is satisfied that the vessel is apparently in all respects ready to moor and load/discharge. Notice of Readiness will not be accepted during a period when berthing is suspended on account of adverse weather, or when a vessel arrives prior to the date upon which it is nominated to load/discharge.

The foregoing paragraph notwithstanding, in no event shall a Notice of Readiness, whether previously accepted or not, be valid or binding on the Terminal unless and until such time as the vessel, her tanks and equipment, are in fact in every respect in the proper condition and operation to receive the cargo.

MAX. SIZE: Maximum draft is 15 ft. even-keel. Maximum size 6,400 d.w.t. Vessel must have the ability to discharge/load cargo and ballast/deballast simultaneously and maintain 30% of Summer deadweight or discharge cargo, stop and load ballast, then discharge balance of cargo to maintain 30% of Summer deadweight at all times. Vessel to maintain 2 valve segregation between cargo and ballast.

RADIO/VHF: *Communications:* Vessels bound for the Futila Terminal are required to advise their ETA via telex or cable to the office of the vessel's Agent in Cabinda, who will pass the information to the Company.

ETA messages are to be sent 72 hours, 48 hours and 24 hours before arrival at the Terminal and should contain the following information:

(a) Name of the vessel.
(b) ETA in GMT (Angola time is GMT plus 1 hour).
(c) Name of the Master.
(d) Arrival draft and intended departure draft (fore and aft).
(e) Time for discharge clean ballast, if any, also quantity of segregated ballast on board.
(f) Quantity of cargo required or to be discharged and any special requirement.

For short range communications, a VHF system is available covering Channels No. 1 to No. 78. Channels 16 and 12 are monitored continuously. The VHF Radio call sign is "Futila Terminal".

Approach to the Anchorage/Pilot Boarding Area: Normally all communications will be with the Futila Shore Terminal. When within VHF communication range, the Master of the vessel should ascertain berthing prospects from Futila Shore Terminal. Should it be necessary to anchor, then the vessel should proceed to the recommended Malongo Freighter Anchorage, which is Lat. 05° 31′ S., Long. 12° 08′ E.

Anchorage for any vessel in any other area within the Terminal limit is prohibited unless special clearance is received from Futila Terminal.

TUGS: *Mooring Launches:* Company mooring launch will deliver the Mooring Master and necessary equipment. In addition, the mooring launch brings the buoy's mooring lines to the vessel as directed by the Mooring Master. Similarly, the mooring launch remains in the area the entire time the vessel is in the moorings.

BERTHING: *Berthing Procedures:* See "Plan". The detailed procedures are modified to fit conditions of wind, current, sea state, vessel size, limitations of the vessel's mooring gear, and the technique of the Mooring Master. In general, the following is a typical procedure for berthing tankers at the berth:

(a) Vessel approaches the mooring on a 160° heading, passing approximately 100 m. off the mooring launch stand-by buoy.
(b) Starboard anchor is let go at Point A and about 5 shackles of chain are payed out on the run, starboard chain is then held.
(c) When starboard chain fetches up leading aft, port anchor is dropped at Point B, 1 shackle on deck, and stern is worked into berth as starboard chain is held, and the port chain is payed out to approximately 5 shackles as the vessel backs into the berth and launch brings the mooring lines from the mooring buoys. Then both chains are adjusted as necessary to position the vessel properly in the berth.
(d) The Mooring Master will decide which mooring lines launch will bring first, depending on wind and current conditions.

Mooring Operation: Mooring operation will normally be undertaken during daylight hours (0600/1600) under normal weather conditions and the Company Mooring Master's agreement.

Before arrival at the boarding area, it will be necessary to ensure that the following minimum moorings are ready for use on arrival at berth.

(a) Mooring gear shall include both bow anchors. The anchor windlass must be capable of operating at its rated speed, and adequate power shall be available to run the windlass at rated speed at all times while in the moorings. Each anchor shall be equipped with no less than 9 shackles of chain.
(b) The Futila CBM berth is a 3-point mooring. Each mooring consists of a cylindrical buoy fitted with a shackle. The two after buoys are fitted with a polypropylene mooring rope, 9 in. diameter and 300 ft. long. The forward port buoy is fitted with a polypropylene mooring

rope, 9 in. diameter and 200 ft. long. However, vessels should be equipped with sufficient synthetic lines to run to each of the buoys, plus additional synthetic lines for doubling up. Wires are permitted but must be fitted with synthetic pendants equipped with mandel shackles, and the strength of the pendant is 125% of the rated strength of the wire. Pendants are not acceptable on synthetic lines. Extra lines are required at each location in order to double up on lines to the buoys when wind or current conditions dictate.

(c) The mooring stations should be equipped with properly located and functioning winches, fairleads, bitts and chocks. Each synthetic line requires separate bitts, unless mounted on the winch drum.

The Mooring Master shall determine the suitability of the vessel's mooring equipment. Should the Mooring Master consider that the mooring gear is not adequate, the vessel shall not be brought into the moorings until deficiencies have been corrected.

LOADING: *Lifting and Connecting Hoses:* After the vessel is securely moored in the berth, the Mooring Master will supervise the lifting and connecting of the cargo hose, following the general procedure set forth below.

(a) Berth requires a minimum lifting capacity of 2.5 tons.
(b) Mooring launch crew makes vessel's runner fast to hose pick-up chain.
(c) Cargo boom lifts submarine hose to its correct height.
(d) Ship's crew hangs-off submarine hose at the rail with the chain attached to the hose. The hose is connected directly to the vessel's manifold with the end of the hose lowered in a smooth curve.
(e) Ship's crew remove the blind flange from the Camlock coupling at the end of the hose string. The hose is lifted to the vessel's manifold after the flange is removed. Top of the roll bar must be higher than the bottom of the manifold.

Start/Stop Notice to Shore Personnel: At least 10 minutes notice shall be given to shore personnel before starting or stopping cargo operations. The vessel shall notify shore personnel of any anticipated changes affecting pumping rates, such as stripping operations or swtiching pumps.

Procedure for Discharging: Cargo is discharged to the facility using the ship's pumps to transfer the product ashore. Booster pumps, at the pumping station located on the beach, then assist in pumping product uphill to the tank farm, once flow has been established. All shipboard cargo transfer action is undertaken by the ship's crew on the advice of the Mooring Master. The sequence of operations for each transfer is controlled by facility personnel in the pumping station control room ashore.

The shore will give the vessel a 10 minute notice, whenever possible, before starting, stopping or changing any cargo operations, including tank switches, line changes and booster pump operations.

It is important that the vessel maintains pressure at the ship's rail as indicated. It is essential that the discharging sequence be carefully planned, so that stripping and/or collecting of tank bottoms is going on during the discharge ashore, thus avoiding prolonged stripping ashore towards the end of cargo discharge.

The vessel will give the shore at least 10 minutes notice before starting and stopping of booster pumps, starting and stopping of discharge operations and any other operation which would have an impact on the cargo transfer (i.e. stripping, etc.).

Procedure for Loading: Loading of vessels consists of transferring the product from the shore tank farm, by gravity only, under the control of facility personnel in the control room. In each step of the loading operation, the vessel will be told by the shore facility precisely how many barrels of product to take aboard. The ship's crew, through the Mooring Master, shall advise the shore station when that quantity is reached. Facility personnel in the control room will close valves as appropriate to stop loading.

Important: Do not under any circumstances close ship's valves or submarine hose or tanker rail hose valve against flow.

The shore will give the vessel at least 10 minutes notice before starting or stopping any cargo operations.

The particular sequence of operations for each transfer is controlled by the facility personnel in the control room ashore.

Product Transfer Rates: Though the hoses are rated up to 225 psi, the Mooring Master will not allow the hose pressure to exceed 145 psi.

Emergency Shut-Down: Specific procedures have been developed by the Terminal for avoiding pollution of the sea, and the action to be taken to minimise pollution, should leakage occur. The procedures include loading and discharging operations, as well as leakage occurring when no vessel is in the berth. These emergency procedures call for shutting down vessel or facility transfer pumps and closing system valves.

In the event of fire or similar emergency on board a vessel, the vessel will cease cargo operations and direct all efforts to the emergency. The vessel should try to follow hose disconnection procedures when personnel safety is ensured.

Unmooring Operation: Unmooring will normally be undertaken on a 24 hours basis. Possibility exist that, due to weather conditions, vessel will have to anchor outside the Terminal awaiting daylight.

Departure from Berth: The procedure for leaving the berth includes the following steps:

(a) Hose is disconnected, blanked-off and held on the ship's side. Mooring lines are slacked until cargo hose starts stretching, and at this point hose is released and lowered to the bottom.
(b) Mooring lines to the buoys are released by the vessel's crew, then the mooring launch pull them away.
(c) Anchors are either heaved in simultaneously or the port anchor is heaved in first, while the starboard line (green mooring buoy) is sometimes held until the vessel's stern is well clear of the hose buoys.
(d) Mooring Master leaves the vessel after it is clear of the red and green buoys located at the Futila Terminal approach area entrance.

FRESH WATER: Not available.

FUEL: Not available.

GENERAL: Vessels calling at the Futila Terminal must comply with the latest SOLAS and MARPOL Conventions and Protocols. Vessels which are found to be seriously deficient in any way will be refused permission to berth or load/discharge.

All vessels are warned to approach the Futila Terminal with extreme caution, as drilling and survey work are proceeding on a continuous basis.

The national flag of the People's Republic of Angola shall be permanently displayed by vessels at the Futila Terminal, both by day and night.

Repair Work: A vessel, when in berth, shall be maintained in a state of readiness for vacating the berth under full engine power at short notice. Therefore, no repairs will be permitted. The testing of any electrical equipment, including radar, radio and domestic electrical equipment, is prohibited, unless permission of the Company Mooring Master has been granted. Tank cleaning and gas-freeing shall not be carried out while in the berth.

Chipping and scraping on deck or hull will not be permitted.

Display of Code Flag "B" and Anchor Signals: During all discharging, loading, ballasting or deballasting operations, the international code flag "B" and a black ball shall be displayed during daylight hours, and proper anchor lights shall be displayed during darkness.

Power Availability and Machinery: Any vessel in the moorings or in the vicinity of the moorings shall keep its engine plant on stand-by with full power immediately available to the main engine, steering gear, anchor windlass, all deck winches and the ship's whistle. No repairs to the engine plant are permitted in the mooring, if such repairs impair or limit the ship's power availability in any way. When fast in the mooring, the ship's propeller shall not be turned except by use of turning gear.

Ship Requirements: All requirements of a vessel will be handled by the vessel's Agent. No stores of any kind are available. Limited medical facilities are available only in emergency. Repairs will not be permitted when the vessel is in the berth. Repair facilities are not readily available. Masters are advised that shore leave is not permitted. Crew changes are only permitted in emergency situations, and then only when personnel involved hold all necessary valid certificates and documents.

Agency: The Company does not perform any vessel agency functions. Vessels calling at the Futila Terminal are required to arrange their own agency representation from an agency operator in Cabinda.

AUTHORITY: See "Cabinda".

KIABO MARINE TERMINAL: 07.20 S. 12.35 E.

(See Plan)

LOCATION: *Terminal Description:* The FPSO "Ocean Producer" is a Floating Production, Storage and Offloading vessel, located in territorial waters off the Coast of Angola, West Africa. The FPSO is a converted 78,061 d.w.t. export tanker, registered under the Liberian flag and has an overall length of 789 ft. The loaded draft is 44 ft. The total crude oil storage capacity is 514,000 barrels. The water depth at the location is 250 ft. with no significant change in depth within the operating area.

With a bow heading of 022.5° from true North, the FPSO has permanent moorings port and starboard to buoys off the bow and stern quarters (See "Plans" – Figures 1 and 2).

Two sub-sea production wellheads are 552 ft. astern of the FPSO (See "Plans" – Figures 1 and 2).

There is a laboratory onboard, capable of carrying out a limited number of tests on the crude oil stock.

There are no facilities to receive dirty ballast.

FPSO "Ocean Producer" Radio Call Sign: "5 LBJ".
Inmarsat "A" I.D. No. (871) 124-1412.

Operating Location:

FPSO Stern Co-ordinates: Lat. 07° 20′ 30″ S., Long. 12° 35′ 24″ E.
Angolan Shoreline: 17 nautical miles.
Water Depth: 250 ft.

Note: A maritime Exclusion Zone has been established around the Terminal. Vessels are not permitted to enter this area without authorisation from the Company.

The Exclusion Zone is bounded by the following co-ordinates:

Lat. 07° 19′ 30″ S., Long. 12° 35′ 00″ E.
Lat. 07° 19′ 30″ S., Long. 12° 38′ 00″ E.
Lat. 07° 21′ 30″ S., Long. 12° 35′ 00″ E.
Lat. 07° 21′ 30″ S., Long. 12° 38′ 00″ E.

PILOTAGE: Pilotage is compulsory within a 1.5 miles radius of the Marine Terminal.

Use of Mooring Master by Export Tanker: Mooring Master will meet the vessel before it proceeds to the Kiabo Field Marine Terminal. Mooring Master will advise the Export Tanker's Master on approaches to the FPSO, mooring and unmooring, connecting and disconnecting hoses, and in all other operations within the Marine Terminal area. All manoeuvring of ships within the Terminal area shall be done with the advice of Mooring Master, subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvred shall remain solely responsible, on behalf of this vessel's Owner for the safety and proper manoeuvring of the vessel. The Export Tanker's Master or qualified Deck Officer must be on the bridge at all times while the ship is manoeuvring.

Visiting Export Tankers may not commence final approach to the Marine Terminal until the Mooring Master from the FPSO is aboard, has completed all required safety checks and has authorised the Export Tanker's Master to proceed with final approach to the mooring.

Boarding Procedure: From FPSO to Export Tanker:

Prior to commencing final approach and after completion of all preparatory radio signals with the FPSO, the Export Tanker shall advise the FPSO of its speed and heading, as well as the location and status of the gangway for boarding by the Mooring Master. The Export Tanker's Master shall ensure Export Tanker's crew availability and readiness to facilitate safe alongside boarding by the Mooring Master. Export tankers are requested to have a pilot ladder safely and securely rigged, ready for immediate use, and long enough to reach the Mooring Master's boat. A life-ring with a heaving line should be provided near the pilot ladder for immediate use. If at night, adequate lighting must be rigged overside for the Mooring Master's ladder. Vessels will provide a lee for Mooring Master, both when boarding and leaving. If a pilot ladder is not suitable for use, then it is the responsibility of the Export Tankers' Master to change it. Vessels with a freeboard greater than 30 ft. are requested to provide a combination pilot and accommodation ladder.

Exchange of Arrival Documentation:

When the Mooring Master is safely aboard the Export Tanker, all required and designated documentation shall be exchanged between the Export Tanker's Master and the Mooring Master. When the exchange is completed, the Mooring Master shall so notify the FPSO Master.

Validation of Safety Condition/Measures:

Prior to authorising final approach to mooring, the Mooring Master shall satisfy himself that all requirements relative to safety conditions and measures aboard the visiting Export Tanker are in place and/or in a state of readiness according to the parameters of the OCIMF/ICS "Ship to Ship Transfer Guide".

Concurrence of Emergency Procedure: (ESD/Fire/others):

Prior to authorising loading and connection of transfer hose to the Export Tanker, the Mooring Master shall determine from the Export Tanker's Master that the Export Tanker's crew is in a state of readiness and is proficient in emergency safety, fire and other related procedures to ensure maximum safety during ship-to-ship cargo transfer operations.

APPROACHES: *Approach to Marine Terminal:*

1. Anchorage Area:
   The anchorage area for vessels awaiting the loading berth at the Kiabo Field Marine Terminal is at the Master's discretion, but in any event shall not be within the Exclusion Zone.
2. Mooring Master Pick-Up Zone:
   The Mooring Master Pick-Up Zone is an area between 2.5 – 3.0 miles N.W. of the FPSO location. Vessels should take a suitable heading to allow safe access for the Mooring Master. Following receipt of instructions from the Company or the Mooring Master, an Export Tanker should proceed from the anchorage area to the Mooring Master pick-up zone, where the vessel will be boarded by the Mooring Master.
3. Marine Terminal Safety Zone:
   Export tankers are prohibited from navigating within the safety zone at Kiabo Field Marine Terminal at any time unless the Mooring Master is on board. The safety zone is within 1.5 miles radius of the FPSO.

ANCHORAGE: No vessel may anchor within the Exclusion Zone. For Export Tankers requested to anchor, the recommended anchorage area is located East of location in 165 ft. of water. Anchoring within the FPSO's mooring legs is strictly prohibited. Prior to arrival, the Master of Export Tanker should contact the FPSO for information concerning anchorage positions. B.A. Chart No. 604 describes the area.

If an Export Tanker is not scheduled to moor on arrival, or the Terminal is closed due to adverse weather conditions, etc., the Export Tanker's Master will be advised by VHF radio and requested to anchor.

FPSO ACCEPTANCE CRITERIA FOR EXPORT TANKER:

Displacement/Cargo Capacity: FPSO capacity is 514,000 bbls. Export tankers should have a minimum arrival displacement not less than 25% Summer deadweight. Prior notice must be given of any Export Tanker not able to comply, and an agreement must be reached with the Master of the FPSO.

RESTRICTIONS: Mean sea water depth at the FPSO is 250 ft., no draft restriction. Mooring and unmooring during daylight hours only (See "Berthing").

MAX. SIZE: 150,000 d.w.t. Also see "Berthing".

RADIO: *Arrival Time:* The Export Tanker shall send an initial estimated time of arrival (ETA) message to Sonangol P&P upon departure from the previous port. The message should be updated 72 hours, 48 hours and 24 hours before arrival at the FPSO location.

Initial ETA: It is important that all in-coming Export Tankers advise Sonangol P&P at least 72 hours before the estimated time of arrival, giving best estimate of the ship's arrival time at the Marine Terminal via the operator.

Time to be used for ETA is the local time zone of GMT +1 hour throughout the year.

The first message should include the following information:

(a) Name of Export Tanker and radio call sign.
(b) Inmarsat "A" I.D. number for voice, fax and telex, if so fitted.
(c) Cargo requirements.
(d) Maximum loading rate.
(e) Arrival draft, fore and aft.
(f) Last port of call.
(g) Confirm that vessel has clean Bill of Health.
(h) If there is any sickness onboard, give all available information as to the possible type of sickness.
(i) Distance in feet from the bow to the loading manifold on the Export Tanker.
(j) Total length overall (LOA).
(k) If the ship's hose connections are different from a 16 in. flange.
(l) Name and full style of local Agent.

Subsequent ETA's: Further ETA messages should be sent to Sonangol P&P when the Export Tanker is 48 hours and 24 hours from the Terminal, and additional notification shall be given if the vessel's ETA will vary from the original notification by 6 hours or more. Notwithstanding the foregoing, in case the sea passage from the vessel's last port is less than 72 hours from the Kiabo Field Marine Terminal, the first notice shall be given immediately after leaving such port of call, and subsequent notices shall be given at regular time intervals.

Should the ETA change by one hour or more following the 24 hours notice, the vessel shall promptly notify Sonangol P&P of the new ETA.

Export Tanker Pre-Arrival Questionnaire: All Export Tankers will be required to complete the Export Tanker Pre-Arrival Questionnaire prior to arrival at the Terminal.

1. Vessel's name and call sign:
   Previous name(s):
2. Flag:
3. Year built and class:
4. Owners/Managers (including address and telex number):
5. Nationality of Master: Officers: Crew:
6. Last port of call / date:
7. Date of last dry dock / special survey:
8. Summer deadweight and draft:
9. Arrival draft and displacement:
10. Vessel dimensions (metres): LOA: Beam:
    Moulded depth:
11. Terminal factor (LOA × Beam × M.Depth):
12. Distance between bow and manifold:
13. Manifold size/crossovers onboard (the Export Tanker will be expected to provide all crossovers, etc., for connection to the FPSO 16 in. floating hose assembly):
14. Hose boom S.W.L.:
15. Length of anchor chains: Port: Starboard:
    Are there cleats and/or bitts in manifold area for securing overside hose?
17. Quantity and quality of slops onboard / L.O.T. intended?
18. Quantity of ballast onboard / are tanks segregated:
19. Vessel should not be less than 25% d.w.t. on arrival. Can vessel load and deballast simultaneously with 2 valve segregation to maintain 25% d.w.t. minimum?
20. If answer to (19) is NO, state deballast time required before loading:
21. State maximum loading rate (single 16 in. hose):
22. Is an Inert Gas System fitted? Are tanks under Inert Gas?
23. Is a crude oil washing system fitted?
24. Advise the number, size and locations of bow Panama leads (or equivalent):
    Note: Bow fairlead should be at least 23.6 in. × 17.7 in.
25. Is vessel fitted with Smit Brackets or patent chain stoppers in bow area? If so, state number, type and S.W.L.:
26. How many sets of bitts are located in the bow area:
27. What are the distances of these bitts from the bow fairleads:

Owner warrants vessel able to discharge ballast and load back cargo simultaneously (with two valve segregation) whilst maintaining a minimum 25% d.w.t. Any relaxation due to non-compliance with this clause is for Owner's account.

In any case of the vessel's deficiency in mooring design or hose handling capability, the Terminal will reserve the right to accept the vessel and will not, in any case, be responsible for any delay or costs arising from such deficiency.

VHF: *Radio Communication:* VHF/FM Channel 16 (156.8 MHz).

The FPSO maintains a continuous watch on VHF/FM Channel 16 and Export Tankers' Masters are recommended to use this channel when they are within range of the Kiabo Field Marine Terminal. Particularly when approaching the Marine Terminal, attention to VHF/FM communications will minimise the risk of delays in mooring.

During mooring operations, the Export Tanker's radio will be under sole control of the Master. Masters are reminded that if their vessel is requested to anchor to await mooring, it is their responsibility to maintain a constant listening watch on VHF Channel 16 to receive Marine Terminal instructions. Any delay due to failure to maintain a constant listening watch on Channel 16 will be for the Export Tanker's account and will not be included in a subsequent laytime calculation.

The communication equipment onboard the FPSO is capable of switching to all VHF marine frequencies.

Communications After Mooring Master has Boarded: For subsequent intership communications between the Export Tanker and the FPSO, portable VHF/UHF radio-telephone units will be utilised by the Mooring Master. These sets will be intrinsically safe.

General:

(1) Any telephone, portable VHF/UHF and radio-telephone systems utilised shall comply with applicable safety requirements.
(2) At a minimum, continual voice communication shall be maintained between the FPSO and the Export Tanker, Mooring Master and the Export Tanker's Chief Officer.
(3) The selected communication channels to be used shall be assigned prior to the final approach of the Export Tanker and shall be recorded on the appropriate forms, as per applicable regulations.
(4) All communications shall be in the English language.

Pre-Arrival/Arrival Exchanges:

(1) Prior to initiating final approach to mooring, the Export Tanker shall notify the FPSO of:
    (a) Course (heading).
    (b) Speed.
    (c) Location.
(2) The FPSO shall then advise the Export Tanker of the ETA of Mooring Master and his transportation type (utility boat, etc.).
(3) The Export Tanker shall advise the FPSO of the following:
    (a) Tanker draft and trim.
    (b) Available tank capacity for loading.
    (c) Disposition, composition and quantities of ballast plus time required for discharge and maximum light freeboard.
    (d) Quality of Inert Gas.
    (e) Any other information that may be deemed relevant.

Emergency Procedure:
(1) Prior to the commencement of any operational phase, a secondary, stand-by procedure for the communication of emergency signals shall be established, agreed upon and understood.
Signals should include, as a minimum:
(a) Radio Communication Inoperative.
(b) Stand-by.
(c) Start Loading or Start Discharging.
(d) Slow Down.
(e) Stop Loading or Stop Discharging.
(f) Emergency Stop.
(g) Emergency Disconnect.
(2) When primary radio communication fails, all mooring and/or cargo transfer operations should be suspended pending restoration of the service.
(3) Immediately when the need for emergency signalling procedure becomes evident, action should be taken to determine and correct the problem.

TUGS: *Use of Boat Services by Export Tanker:* Export tankers shall not undertake final approach to the designated mooring without the assistance of a tug.

On Arrival – Lines and Hoses: Preparation for mooring will be advised by the Marine Terminal through VHF radio communication prior to the Export Eanker's arrival or by the Mooring Master before the mooring operation commences. The Export Tanker will moor with her bow to the Marine Terminal FPSO. Prior to mooring, Export Tankers are required to have ready on the starboard side, a derrick at least 10 tons SWL, rigged and ready for connecting and disconnecting the cargo transfer hose.

Similarly, the Export Tanker shall be rigged and ready to heave up the mooring hawser from the FPSO as well as the towing wire from the hold back tug.
(1) While the tug is assisting the Export Tanker to the designated mooring location, a workboat shall deliver the FPSO bow hawser pick-up line to the Export Tanker.
(2) When the Export Tanker is secured, a workboat shall deliver the cargo transfer hose to the Export Tanker.
(3) After all mooring services are completed, the tug shall maintain sufficient thrust astern, so as to keep the bow hawser between the Export Tanker and the FPSO in constant tension. The workboat shall stand-by and be prepared to render any assistance required during cargo transfer operations.

On Departure:
(1) When summoned, the workboat shall approach the Export Tanker to assist in disconnection and retrieval of the cargo transfer hose.
(2) The workboat shall then assist in retrieval of the bow hawser.
(3) The tug shall then assist the Export Tanker in preliminary manoeuvring in preparation for departure.

Safety Precautions Aboard Export Tanker:
(1) All cargo tanks on the Export Tanker are to be gas free, all cargo tank lids, ballast tank lids and ullage ports shall be closed before the tug(s) comes alongside the Export Tanker.
(2) No tugs or any other vessels shall be permitted alongside until the Master of the Export Tanker has determined that it is safe.

BERTHING:
Operating Layout:
(a) FPSO Length: 789 ft.
(b) FPSO Bow Heading: 022.5°
(c) Permanent Moorings and Marker Buoys: 6
(d) Mooring Tie-In Locations, Quantities and Headings: (See "Plan")
Port Bow (1) 322.5° Starboard bow (2) 080° and 085°
Port Stern (1) 262.5° Starboard stern (2) 140° and 145°
(e) Wellheads: 495 ft. from FPSO, due astern on bearing 202.5°
(f) Export Tanker Berthed Heading: 172°
(g) Export Tanker Minimum Berthed Distance: 250 ft.
(h) Export Tanker Stern Mooring: Tug (Company supplied).
Export Tanker Bow Mooring: Bow Hawser (FPSO supplied).
(i) Offloading Hose: 970 ft. (BCM – 130 ft.)

Hours of Operation: The Kiabo Field Marine Terminal will generally operate 24 hours a day, 7 days a week. Ships are loaded at any hour, weather and other circumstances permitting, and at the full discretion of the Company. Vessels are moored and unmoored during daylight hours only. In order to assure all mooring activities occur during daylight hours, an arrival time of 1200 hrs. local time is recommended.

Notices of Readiness: Mooring Master will act on behalf of the Company to acknowledge receipt of the vessel's "Notice of Readiness", which should be tendered at time of arrival. Arrival time will be considered as the time the anchor is dropped at the anchorage area. "Notice of Readiness" will be accepted as the time that the Mooring Master boards the vessel, or the Export Tanker shall have dropped anchor within the recommended anchorage area and has advised the Marine Terminal of the time of anchoring. Exception to the above will be if the Export Tanker is in the anchorage area awaiting arrival of the Mooring Master and has been requested by the Marine Terminal not to anchor. In this case, "Notice of Readiness" will be accepted from the time the Marine Terminal requested the ship not to anchor.

Marine Terminal Closure: "Notice of Readiness" will not be accepted during periods when the Marine Terminal is closed. The Marine Terminal is closed when the weather is such that it is too rough for Export Tankers to moor or remain safely moored to the FPSO. Any decision regarding the opening and closing of the Marine Terminal will be made solely at the discretion of the Company. In such case, the Marine Terminal will provide the Export Tanker's Master with a written notice of the time during which the port was closed due to adverse weather. Vessels required to leave the Marine Terminal area on account of weather should keep in contact with the Marine Terminal via VHF radio, in order that they will be readily available when weather moderates. The Company reserves the right to decline to moor a specific Export Tanker, if in the Company's opinion existing conditions or facilities are considered unsafe for mooring or loading, even though the mooring may be open to other Export Tankers. Various combinations of wind, sea and tidal conditions, as well as the size, length, ballasted trim, and handling qualities of a vessel can affect the decision to berth a vessel at the Marine Terminal. All of these factors have to be evaluated before a final mooring decision is made. Should an Export Tanker be rejected for any of the aforesaid reasons, the Marine Terminal will supply the Export Tanker and the Owners/Charterers with written reasons for non-acceptance.

Departure Procedure for Export Tanker:
(1) Documentation:
After the disconnection of the cargo transfer hose and prior to preparing for departure of the Export Tanker, all necessary pre-departure documentation shall be completed.
(2) Export Tanker Departure:
(i) Mooring Master shall witness the Export Tanker's closure of the cargo transfer hose end butterfly valve, disconnection of the cargo transfer hose from the manifold, and fitting of the blind flange on the end of the cargo transfer hose.
(ii) Workboat shall approach Export Tanker to accept free end of hose when lowered by Export Tanker.
(iii) Workboat shall tow hose away from Export Tanker to the pre-assigned storage area.
(iv) Export tanker shall check and confirm that all manifolds are securely blanked, that ship is clear of obstructions, that winches and windlass are powered and operational, that crew are standing-by and ready to cast-off.
(v) Area shipping traffic to be checked and confirmed to be clear.
(vi) "Check List 4 – Before Unmooring" to be completed.

MOORING: A bow mooring hawser and hold back tug is provided for visiting Export Tankers up to 150,000 d.w.t., partially loaded or in ballast to a maximum displacement of 80,000 tonnes.

Forecastle: The Export Tanker bow mooring comprises an 18 in. circumference mooring hawser, 250 ft. long with 30 ft. of 3 in. diameter chafing chain attached to both ends. The hawser is equipped with 1,448 ft. of pick-up line and pick-up hardware.

Stern: An Anchor Handling Tug Supply (AHTS) vessel is provided to assist the Export Tanker in mooring to the FPSO, and will attach its towing wire to the stern of the Export tanker to hold it off the FPSO during cargo transfer operations.

Weather Conditions:
(1) Prior to commencing mooring and/or cargo transfer operations, all available weather forecasts for the FPSO location should be obtained.
(2) The operation should proceed and/or continue only if both Master and the Mooring Master are satisfied that the prevailing and anticipated conditions are within the limits considered safe for such an operation.
(3) The Master of either vessel and/or Mooring Master may, at his sole discretion, order cessation of mooring or transfer operations. In such event, the Master of the other vessel shall immediately enact required procedures to cease such operations.

Mooring Criteria: Figure 7 (See "Plan") estimates the allowable wind speed along with the allowable significant wave height for a range of Export Tanker sizes that may be connected at the Kiabo Field Marine Terminal.

HOSES: Sufficient crew must be available at all times to carry out, under the supevision of a responsible licensed officer, the instructions given by the Mooring Master. Raising, lowering, connecting and disconnecting of the cargo transfer hose, as well as other labours and duties on the Export Tanker connected with the loading of cargo or maintaining mooring lines in a correct manner, will be performed by the Export Tanker's crew directed by a responsible officer as required by the Mooring Master. Export tankers must also have an adequate supply of reducers, gaskets and wrenches to connect the cargo transfer hose.

Cargo Transfer Hose Connection Aboard Export Tanker: The cargo transfer hose is a 970 ft. long assembly of 16 in. hose terminating at the Export Tanker end with a 25 ft. long barbell type hose. The final termination components comprise a butterfly valve, a short spool Camlock, and a blind flange. When the hose is not in use, the butterfly valve shall be kept closed. At all times, when the hose is not connected, the blind flange shall be securely fastened in place.

Procedure:
(1) The barbell end of the cargo transfer hose will be delivered to the Export Tanker which shall hoist and correctly locate the hose ready for connection to the Export Tanker manifold.
(2) Ensure that the butterfly valve is closed.
(3) Remove blind flange and store in a safe place.
(4) Mooring Master will witness the connection of the cargo transfer hose to the Export Tanker manifold and shall inspect the hose for kinks or damage.
(5) Before transfer commences, all required pre-transfer checks shall be performed and completed.
(6) Prior to cargo transfer commencing, open the cargo transfer hose end butterfly valve.
(7) The FPSO shall inform the Export Tanker of the rate capable of being supplied, and shall provide such rate as mutually agreed between the Export Tanker's Chief Officer and the FPSO Master. The receiving Export Tanker shall set the maximum rate, regardless of the pumping capacity of the FPSO.
(8) When satisfied that the cargo transfer hose is correctly attached and the Export Tanker systems are ready for full rate transfer operations, the Export Tanker's Chief Officer shall indicate readiness to proceed with cargo transfer.
(9) Transfer shall commence at an agreed low rate, in order to check that the loading system is correctly aligned, that no leakage occurs, and that all valves, venting system, and other apparatus are correctly arranged to facilitate cargo transfer according to the applicable regulations.

FPSO Supplied Components and Spares:
(a) Butterfly valve handle for cargo transfer hose (Mooring Master).
(b) VHF/UHF portable radio (Mooring Master).

(c) Paperwork (Mooring Master).
(d) Spare O-ring seal for Camlock blind flange (Mooring Master).
(e) Handle for Camlock flange (Mooring Master).
(f) Spare export hose sections (FPSO).
(g) Spare bow line hawser and associated parts (FPSO).

LOADING: *Cargo Transfer Hose Handling Provisions:* Cargo transfer from the FPSO is through a 16 in. diameter hose. This hose is 970 ft. long and is terminated at the Export Tanker end by a barbell type hose with a butterfly valve and shaft spool Camlock. When not connected to the Export Tanker, a blind flange is fitted to the open end of the Camlock (See "Plans").

(1) (a) When not connected to an Export Tanker, the cargo transfer hose shall remain in the sea.
    (b) A marker buoy (unit) shall be permanently attached to the pick-up chain at the Export Tanker end of the transfer hose by a synthetic rope.
    (c) When not connected to an Export Tanker, the transfer hose shall be stored near the FPSO's No. 6 mooring leg with the hose marker buoy attached to a mooring buoy anchored near the No. 6 leg marker buoy.
(2) During handling operations prior to and following attachment to Export Tanker, care must be exercised to prevent kinking or other damage to the transfer hose. A minimum radius of 10 ft. for any bend in the hose is recommended.
(3) The Terminal will have a limited number of reducers available, but will accept no liability or obligation to provide them.

Inert Gas System: All Export Tankers must be fitted with an inert gas system and confirm that all tanks have an oxygen content of less than 8% by volume prior to loading.

(1) On request, the vessel will demonstrate the oxygen quality to the Mooring Master prior to commencement of transfer or at any time so requested during transfer.
(2) In the event of a failure of the inert gas system, immediate action shall be taken to prevent air from being drawn into the tanks. All tank operations shall be stopped and the deck isolating valve closed.

Fire/Pollution Control/Gas Detection Systems:

(1) Each Export Tanker must have its fire fighting system fully operational prior to commencing any mooring and/or transfer operations.
(2) All Export Tankers shall comply with all applicable regulations and requirements pertaining to the control of pollution of any type.
(3) All Export Tankers must be equipped with a fully operational inert gas monitoring system, which shall be in a monitoring mode (for oxygen content, pressure, etc.) prior to commencing any mooring and/or transfer operations.
(4) All Export Tankers shall conform with the International Maritime Organisation (IMO) regulations for the prevention of pollution by oil.

Loading Rate: The FPSO is capable of completing transfer of 500,000 bbls. within 36 hours, not including connection/disconnection time, providing the Export Tanker's facilities and operations permit.

Cargo/Ballast Tank Contents/Ullage:

(1) The maximum cargo oil storage capacity, both wet and dry, of the FPSO is approximately 514,000 bbls.
(2) The Export Tanker will load cargo and discharge ballast as previously arranged between the Export Tanker's Loading Master, Master and Chief Officer. This plan will be placed in written form and signed before operations commence.

Ballast Transfer:

(1) When the Export Tanker is loading, it may commence discharging clean ballast concurrently with loading only if the ballast system is completely separated from the cargo system.
(2) Export tankers having clean ballast in cleaned cargo tanks and lines are recommended to suspend loading when discharging ballast.
(3) Export tankers may only discharge ballast that is clean.
(4) The FPSO is *not* equipped to receive dirty ballast.

Loading/Ballast Operations: It is strongly emphasised that the undertaking and completion of a successful cargo transfer operation is dependent upon effective co-ordination and co-operation of all parties involved.

It is the Export Tanker's Master's responsibility to observe International Convention Laws and Angolan Government Regulations and to ensure that no crude oil, bunker C, diesel, bilges or dirty ballast is pumped or spilled overboard from his vessel whilst in the area of the Kiabo Field Marine Terminal. Drip pans should be used, especially when disconnecting hoses, in order to prevent any spillage.

Cargo/Ballast Transfer Plan: Prior to the commencement of a cargo transfer operation, the contents of each cargo and ballast tank shall be checked and recorded. The sequence of all operations during transfer of cargo to the Export Tanker shall be planned in detail with regard to personnel assignments, pumping/discharge rates, valve change over requirements, ballasting adjustments, and tank level measurements during operations, etc.

(1) Inspection of Cargo Tanks: The Export Tanker's cargo tanks are to be inspected by Sonangol P&P.
(2) Scuppers to be Plugged: Before loading commences, all overside scuppers shall be plugged and made oil-tight.
(3) Completion of Loading: Normally completion of loading is by Export Tanker's stop and any request for the Marine Terminal to stop the flow of oil at the pre-determined tonnage must be in writing. The request must include the statement by the Export Tanker's Master that the Company will not be held responsible for any error, and in the case of the vessel being overloaded, the Export Tanker's Master will be responsible for any oil spills caused by this request. Please note that under normal operations, excess cargo cannot be pumped back to the FPSO, only in an emergency will this be allowed, and all cost and delays will be to the account of the Export Tanker.
(4) Communication During Loading: All communications relative to the loading of the Export Tanker shall be routed through the Mooring Master who will remain in contact with the Marine Terminal continously via portable VHF radio communication.
(5) Failure of Communication: In the event of radio communications failure with the Marine Terminal, the Export Tanker should sound the emergency signal. Continuous blasts of the vessel's whistle will be sounded to notify the Marine Terminal of the radio communication failure. Upon hearing this signal from a loading Export Tanker, the FPSO will immediately cease loading to the Export Tanker until radio communications have been re-established.
(6) Leaking Oil from Export Tankers: If it is discovered that oil is leaking from an Export Tanker whether at anchor, deballasting or during loading, and so as to constitute a safety or pollution hazard, which is at the sole discretion of the FPSO's Master, the Export Tanker will cease operations and may be requested to leave the Marine Terminal limits. Completion of loading will only be undertaken when satisfactory evidence of repair, duly certified by the surveyors of ABS, Lloyds or DNV or another recognised classification society, is submitted.
(7) Valve Closure During Loading: *No Export Tanker valves, which stop or reduce the flow rate of oil from the pumps of the FPSO, are to be operated without prior authorisation of the Kiabo Field Marine Terminal.* It is extremely dangerous to close ship's valves against the incoming stream, such a procedure creates excessive pressure, which may damage hoses, piping or other Marine Terminal facilities. Vessels will be held responsible for damage resulting from failure to observe this precaution. The practice of throttling back on the Export Tanker's cargo manifold valves is to be avoided. If a lower loading rate is required, the Terminal is to be advised and the pumping rate will be reduced to the new agreed rate. A reduction in loading rate before topping-off a final tank or tanks may be arranged through the Mooring Master by the Export Tanker's officer-in-charge. On advice from the Export Tanker, a minimum of 3 minutes is required to stop the flow of crude oil from the FPSO.
(8) Crude Oil Overflow During Loading: Export tanker's Masters are warned that if at any time an overflow of crude oil occurs, cargo transfer operations will be suspended immediately. Loading will only be resumed when the oil is cleaned up and removed from the decks of the vessel and/or from the surface of the sea, any damage is repaired, and no further danger exists. All spillage of oil must be reported immediately to the FPSO Master. Subsequently, a detailed report, giving all relevant information, must be submitted in writing by the Master of the Export Tanker concerned to the FPSO Master. A joint survey of the Export Tanker by its Master and a Kiabo Field Marine Terminal Representative will be required.
(9) Cargo Transfer Plan:
    (1) A plan of operation shall be developed prior to each cargo transfer.
    (2) The plan of operation shall include, but not be limited to, the following details:
        (a) Date and time of arrival of visiting Export Tanker.
        (b) Weather and sea conditions anticipated at time of arrival and until Export Tanker departure.
        (c) Identity, size and Master of Export Tanker.
        (d) Mooring Master assigned.
        (e) Cargo officer assigned.
        (f) Crew/team assignments.
        (g) Cargo tanks contents start/finish.
        (h) Ballast tanks contents start/finish.
        (i) Mooring/cargo transfer hose connection timing.
        (j) Date/time for completion of pre-cargo transfer safety checks.
        (k) Date/time for commencing cargo transfer operations.
        (l) Detailed operational procedures.
        (m) Date/time for expected completion of cargo transfer operations.
        (n) Cargo transfer hose retrieval procedures – Date/time.
        (o) Date/time of Export Tanker departure.
        (p) Radio assignments – portable radios.
    (3) All relevant information from the plan shall be transmitted to the Export Tanker prior to its final approach to the Marine Terminal.
(10) Cargo Transfer Team Familiarisation:
    (1) FPSO Master shall ensure that the Mooring Master, Cargo Officer and designated Team Leaders are familiarised with and understand the requirements and details of the Cargo Transfer Plan.
    (2) Mooring Master, Cargo Officers and Team Leaders shall ensure that personnel, assigned to them for the cargo transfer operation, from arrival to departure of Export Tanker, are familiar and understand the Cargo Transfer Plan.
    (3) FPSO Master shall ensure that all personnel involved in cargo transfer operations have received satisfactory training in all functions for which they are, or may be, responsible.
    (4) FPSO Master shall ensure that all personnel are fully familiarised with emergency shut-down procedures, along with their corresponding assignements and responsibilities. Furthermore, he shall specifically impress the need for immediate action in raising the alarm in the event of an emergency situation, such as a fire on board.
    (5) No cargo transfer related operation may proceed until the Master of the FPSO is satisfied that the requirements of (1) through (4) of this section have been met.

(11) Equipment Deployment and Test:

- (1) All equipment required for interconnection to the visiting Export Tanker and for normal cargo transfer operations shall be checked for operability, availability and location prior to the arrival of the Export Tanker.
- (2) All FPSO equipment requiring operability, hydrostatic pressure and other tests shall be tested as specified in the Cargo Handling Manual. Specific examination, and if necessary, adjustment, repair or replacement of valve and pump glands, etc., shall be undertaken before commencing cargo transfer operations. All equipment static grounds shall be checked before commencing interconnection of the cargo transfer hose to the Export Tanker.
- (3) Inert Gas System shall be checked and in operation prior to and during all cargo transfer operations.
- (4) All fire fighting equipment shall be checked and fully operational before commencing any cargo transfer operations.

Dirty Ballast: FPSO "Ocean Producer" has no facilities for receiving dirty ballast. Export tankers are recommended to arrival with clean ballast.

Discharging Ballast at Night: In addition to the lights usually displayed, Export Tankers discharging ballast or loading cargo during darkness, will illuminate the area around the ship, to the satisfaction of Mooring Master, in order that any oil on the surface of the sea may be readily detected, and appropriate action taken. Export tankers unable to illuminate the sea satisfactorily, may not discharge ballast during darkness. Export tankers should provide suitable flood lights for working on deck during night operations. Export tankers equipped with separate tank system (SBT) will be allowed to discharge.

Ballast Required for Mooring: An Export Tanker must have sufficient ballast for safe manoeuvring. However, by a careful watch of the weather information, mooring, instructions and frequent exchange of information between the Export Tanker and the Marine Terminal, and by a knowledge of the behaviour of his own vessel, Export Tanker's Master may desire to come to the Marine Terminal with minimum safe ballast.

Load-on-Top or Discharge of Slops: Most responsible ship owners have adopted a system of tank cleaning using circulator methods of transfer of tank washings. The result is that no oil is discharged into the sea and the oil separated is collected to avoid pollution. With the written permission of the Export Tanker's Owners/Charterers, the Marine Terminal will load on top of such slops.

Penalties for Pollution of the Sea: The categories of pollution include crude oil, bunkers, bilges and dirty ballast or any other matter that may result in pollution of the sea. Any fines imposed for such pollution will be for the Export Tanker's account.

Concurrence on Loading Plan – Export Tanker/FPSO: Prior to commencing cargo transfer operations, the Master of the Export Tanker, the FPSO and/or the Mooring Master will confer and agree on a cargo transfer plan.

- (1) The Master of the FPSO shall inform the Master of the Export Tanker as follows:
  - (a) Cargo specifications.
  - (b) Quantity of cargo to be loaded.
  - (c) Tank venting requirements.
  - (d) Maximum loading rates.
  - (e) Maximum pressure available at the STS connection.
  - (f) Stand-by time for normal pump stopping.
  - (g) Communication system for cargo transfer control, including the signal for emergency stop.
- (2) The Master of the Export Tanker shall inform the Master of the FPSO as follows:
  - (a) Where the vessel has part cargoes on board, grade, volume and tank distribution.
  - (b) Maximum allowable loading rate and topping-off rates.
  - (c) Maximum allowable pressure at the cargo transfer hose connection during cargo transfer.
  - (d) Cargo quantities acceptable.
  - (e) Quantity, quality and disposition of ballast together with time required for discharge and maximum light freeboard.
  - (f) Quantity, quality and disposition of slops.
  - (g) Quality of inert gas.

Agreement on Delivery Rate/Rate of Exchange:

- (1) Prior to commencing cargo transfer operations and following the exchange of information as required in Section (1) (d) and (2) (b) above ("Concurrence on Loading Plan – Export Tanker/FPSO"), agreement between the Masters of the visiting Export Tanker and the FPSO shall be established regarding:
  - (a) Cargo transfer initiation rate.
  - (b) Cargo transfer normal rate.
  - (c) Cargo transfer topping-off rate.
  - (d) Stand-by time for normal pump stopping.
  - (e) Time required for rate changes, zero flow to maximum agreed rate (MAR), and from MAR to zero.
  - (f) Masters are reminded that, for safety reasons, it is advisable to have the Export Tanker loaded as quickly as possible.
- (2) Such agreement shall be confirmed in writing.

Manning Assignments/Stations Manned:

- (1) Cargo Officer: The Cargo Officer shall be an officer appointed by and responsible to the Master of the FPSO. The Cargo Officer shall be empowered to make and implement all decisions relating to the cargo handling and cargo transfer operations, having the necessary knowledge and experience for that purpose.
- (2) Pump Man: One or more crewmen as assigned by the Master of the FPSO to man the pumps and, when required, to operate the manifold valves. Pump men shall have the necessary knowledge and experience required for operation of pumps and valves to ensure maximum control capability, smooth operation and a minimum of pressure surge effect.
- (3) Deck Men: Ship's crew members assigned as required by the Master of the FPSO or the Cargo Officer. Care should be taken, when making assignments for normal cargo transfer operations, that there is no conflict relative to any crew member's assignment under any emergency planning.
- (4) Lead Man: Each group operating in the jurisdiction of the Cargo Officer shall have a lead man designated. Each such lead man shall be provided with a portable, two way radio for the purpose of relaying the Cargo Officer's commands and instructions to the respective groups. Each such lead man shall be competent in the use of a two way radio, shall be knowledgeable and experienced in the area of operations to which they are assigned, and shall be conversant with the established communications language to be utilised.
- (5) Others: As deemed appropriate for the safety and completeness of any cargo transfer operations, the Master of the FPSO and/or the Cargo Officer shall assign other personnel as is considered necessary.

Concurrence on Readiness to Proceed – Export Tanker/FPSO: Prior to commencing with any cargo transfer operation, the following requirements must be completed and reported to the Master of the FPSO. Cargo transfer operations may only commence after the report has been understood, acknowledged and the Masters of both the FPSO and the visiting Export Tanker concur on the readiness to proceed.

- (1) Export Tanker Personnel in Place:
  - (1) Prior to commencing cargo transfer operations, the Export Tanker crew shall be at their stations as normally assigned for cargo loading operations.
  - (2) All personnel assigned for radio duty, station and portable, shall have checked the serviceability/operation of their radio equipment, and shall have reported by radio as being in position and ready for the duty as assigned.
  - (3) All call signs assigned to Export Tanker crew and FPSO crew sections shall be advised to and recorded by the Masters of the FPSO, the Export Tanker, the tug, the workboat and the Mooring Master.
- (2) Tanks Vented: Export tanker and FPSO Masters shall confirm that the tanks are vented and that the agreed venting systems are operational and are being used.
- (3) Test Flows for Leakage/Correct Valve Positions:
  - (1) Prior to commencing cargo transfer operations, the Export Tanker's Master shall confirm that:
    - (a) All sea and overboard discharge valves are tightly closed and sealed.
    - (b) All unused connections on the manifold are closed and blanked.
    - (c) That the scuppers are effectively plugged and drip trays are in position under the manifold.
  - (2) During initial low flow cargo transfer, the Export Tanker's Master shall check and confirm that no leakage is apparent, and that all valves are correctly set for full cargo transfer rate operations.

Execution of Plan:

- (1) All personnel shall be at their designated stations when required.
- (2) All stations shall report status of equipment and personnel readiness.
- (3) Mooring Master and Cargo Officer shall concur on readiness to commence cargo transfer operations.
- (4) Cargo Officer shall order commencement of cargo transfer operations.
- (5) Cargo Officer shall supervise operation, ordering valve change-over when necessary to ensure correct withdrawal sequence from FPSO tanks according to the Cargo Transfer Plan.
- (6) When cargo transfer operations are 90%, 95%, 98% and 99% complete, Cargo Officer shall advise the Mooring Master accordingly.
- (7) When cargo transfer has been completed, the Cargo Officer shall so notify the Masters of the FPSO, the Export Tanker, the tug, the workboat and the Mooring Master. He shall then order the securing of all pumps and valves, informing the FPSO Master and Mooring Master when this has been completed.

Securing from Operations:

- (1) Mooring Master shall then order the closing of the butterfly valve at the Export Tanker end of the cargo transfer hose, the closing of the Export Tanker manifold valves and the disconnection of the cargo transfer hose. He will supervise the fitting of the blind flange to the cargo transfer hose prior to lowering the hose-off of the Export Tanker, the exchange of documentation and other requirements necessary to complete the operation.
- (2) Prior to departure of the Export Tanker, the Master of the FPSO and the Master of the Export Tanker shall reach agreement on the quantity of cargo that has been transferred, that all required documentation has been completed, and that all operations have been secured.
- (3) The Master of the FPSO shall, when satisfied that departure of the Export Tanker may proceed, provide clearance to the Master of the Export Tanker to initiate departure operations. He shall also advise the Mooring Master, the Tug Master and the Workboat Master, all of which shall acknowledge readiness to proceed with departure operations and responsibilities.

Close-Out Documentation:

Cargo Documentation: Crude oil loading documents, such as the Bill of Lading, Quality Certificate, Quantity Certificate, Dry Certificate, Ullage Report, Time Loading Report, Certificate of Origin, Cargo Manifest and Master's Receipt for Shipping Documents and Samples, are prepared at the Kiabo Field Marine Terminal.

Signing of these documents by the Master will take place at the same time as the final departure clearance formalities are being carried out.

Protest: Notes of Protest, if any, should be handed to the Mooring Master for onward delivery to the Company.

Masters are requested to pay particular attention to the fact that the Mooring Master will only acknowledge receipt of any "Note of Protest", and *is not authorised to accept* such letters.

GENERAL:

Agency: The Company does not perform any vessel agency functions. Export tankers calling at the Kiabo Field Marine Terminal must arrange for their own Agents.

Flag: Export tankers are required to fly the flag of Angola on the foremast during daylight hours while at the Terminal.

Government Officials: Government officials, such as the Customs Officer, Quarantine Officer, Immigration Officer, Captain of the Port and the Police, may be expected to visit the vessel. Should Customs guards be stationed onboard the Export Tanker while at the Terminal, it is expected that the Export Tanker will provide food for these guards and other governmental officials. Export tankers calling at the Terminal must provide an accommodation ladder for subject officials if required.

Quarantine Regulations: The rules governing the quarantine of Export Tankers are similar to those found in other parts of the world.

Roles/Responsibilities:

(1) Mooring Master shall assist with Export Tanker operations until the Export Tanker disengages from the mooring preparatory to leaving the Marine Terminal site.

(2) The Export Tanker's Master is responsible for the frequent monitoring and careful tending of the Export Tanker moorings to ensure that movement of the Export Tanker is minimised.

(3) While moored, the Export Tanker equipment and machinery essential for manoeuvring shall be maintained, ready to permit the ship movement from the mooring at short notice.

(4) Repairs or other work, which may prevent the rapid departure of the Export Tanker, should not be undertaken while the Export Tanker is moored to the FPSO.

(5) A watchman should be stationed aboard the Export Tanker to monitor the condition of the Export Tanker's mooring, to report any condition which may indicate imminent failure of the mooring, and also to report any leakage of oil.

(6) (a) In the absence of a third party cargo surveyor, the Mooring Master shall witness the ullage of all tanks onboard the Export Tanker prior to and following completion of the cargo transfer operations.
    (b) Each measurement record shall be delivered to and retained by the Master of the FPSO.

WEATHER/TIDE: *Operating Environment:*

(a) Weather conditions (20 years):
    Wind Speed: 29 knots – 41 knots.
    Wind Direction: 0° – 360°
    Significant Wave Height: 15.1 ft.
    Significant Wave Period: 13.7 seconds – 17.3 seconds
    Swell Height: 13 ft.
    Swell Period: 17.3 seconds
    Swell Direction: 180° – 225°
(b) Current Speed: 0 – 1.8 knots
    Current Direction: Primarily from 135°, can sometimes reverse.
(c) Sea Water Surface Temperature: 75°F – 85°F
(d) Mean Air Temperature: 72°F – 80°F

OPERATOR: Sonangol P&P.

Contact: Ranger Oil Ltd., c/o Atlantis Production Systems Ltd., B.P. 4430, Pointe Noire, Congo. *Tel:* (242) 945707. *Fax:* (242) 945708. *Tel/Fax:* Inmarsat +871-156-2136.

LOBITO: 12.20 S. 13.34 E. (See Plan)

LOCATION: Lobito is situated in Lobito Bay, midway between Luanda and Mocamedes.

The Port is formed by a 4.8 km. long sandpit, with an approach depth of 18.3 m.

The Port of Lobito is 1,410 miles from Cape Town, 7,537 miles from New York, 5,127 miles from Amsterdam, 5,050 miles from Southampton and 4,197 miles from Lisbon.

DOCUMENTS: Required on arrival:

Health Certificate.
2 Vaccination Certificates (cholera and yellow fever).
8 Crew Lists.
11 Passenger Lists (each for Landing and Transit).
4 Lists showing Ports of Call.
2 Lists of Articles held by Crew: cameras, binoculars, radio, spirits, cigarettes, etc.
3 Ship's Stores Lists.
6 Dangerous Cargo Lists.
8 Unfreighted Cargo Manifests.
1 Freighted Manifest.
3 Non-negotiable copies Bills of Lading.
3 Cargo Plans (preferably before ship's arrival).

Other necessary official forms prepared by Agent.

PILOTAGE: When Pilot required outside Harbour Entrance, vessel must request via Agent at least 12 hours before arrival. Otherwise Pilot boards inside Lobito Bay. Pilot boat: grey hull, white housing.

ANCHORAGE: Lobito Bay excellent holding ground, depths over 33 ft. and easily accessible day and night the year round.

RESTRICTIONS: Vessels may only enter harbour in daytime between 0730 hrs. and 2000 hrs. Special permission from the Port Authority is required to enter during darkness.

MAX. SIZE: Length 900 ft., draft 34 ft., max. depth 35 ft. – 37 ft. (normal tidal range: 3 ft. 3 in., maximum: 6 ft.).

HEALTH: Pratique never given by radio, but granted after Port Authorities (including Doctor) board vessel between 0700–1900 hrs. Pratique granted if no contagious illnesses aboard, otherwise quarantine restrictions imposed. Ships calling from other Angolan Ports – except coasters – subject same procedure.

RADIO: Because Lobito Radio (call sign CQZ) operating MW range 200/400 miles only, all ETA messages, etc., must be routed via Luanda Radio (call sign CQW). Agent uses same routeing.

TUGS: Tug (usually one only) joins vessel for berthing and sailing. Ships' lines used. Occasionally 2 tugs may be required.

BERTHING: Unless Masters indicate preference, Port decides which side alongside. No vessels usually allowed berth after sunset. Sailing after dark allowed at Port Authorities' discretion, up to 2400 hrs. No vessel permitted berth without Pilot. Before berthing, vessel must effectively cover water outlets, prepare accommodation ladder and have anchors "at the ready". (Authority fine any vessel ejecting water or waste on to quays.) Ships carrying explosives not permitted berth before Port Captain inspects cargo.

Passenger and Fruit vessels are given priority regarding berthing.

General Cargo and Bulk Berths:

Quay No. 1: Length 570 m., depth 10.36 m. at LW.
Quay No. 2: Length 552 m., depth 10.36 m. at LW.

Quay No. 1 is aligned N.E./S.W., with Quay No. 2 running at right angles to it at the S.W. corner.

CRANES: 26 cranes available with capacity 3 tons – 22 tons; 2 mobile cranes with capacity 16 tons – 150 tons and 1 floating crane of 100 tons capacity.

STEVEDORES: Important that vessel gives accurate ETA at least 24 hours in advance to enable Agent order necessary gangs. (Gangs ordered 0700 and 1500 hrs.) No work usually allowed at the weekend.

CARGO HANDLING FACILITIES: *Bulk Liquids:* The terminals for bulk discharge of liquids include:

(a) A terminal at the end of the South Quay for discharge of wine in bulk.

(b) Two terminals, situated on the final section of the South Quay; for discharge of petrol and oils for the Sonangol tanks existing within the port areas (See "Tankers"). These two terminals also provide oil fuelling facilities to ships.

(c) An off-shore terminal for discharge of petrol and oils for the Sonangol tanks existing in the port expansion area, near the base of the hills, on the bay side facing the sandpit expansion.

(d) A terminal at the start of the North Quay, for loading molasses through a small tank installed.

Silos: Silos with 25,000 tons capacity at Quay No. 2. Loading is by 2 elevators and chutes, each of 250 t.p.h. capacity.

Loading Plant: Bulk ore loading facilities at Quay No. 2 with loading rate 450 t.p.h.

Storage/Warehousing: 15 warehouses and sheds available, capable of storing over 100,000 tons of goods. Ten reefer chambers, each with capacity between 100 cu.m. and 120 cu.m., storage temperature +3°C to −18°C.

MEDICAL: Radio before arrival if medical assistance necessary on entry. Good hospital facilities available, but specialised treatment and surgery is not. Yellow Fever and Cholera Vaccination Certificates inspected on arrival.

TANKERS: No oil to be pumped overboard into Territorial waters. Heavy fines imposed for oil pollution, however slight. Three 8 in. diameter pipelines discharging into local storage tanks. No slop tanks available. Four berths available with depth 10.0 m. – 11.0 m. Berths operated by Sonangol.

DENSITY: 1024.

FRESH WATER: Normal requirements readily available and delivered by 3 in hose. Loading rate very slow as pressure usually low.

FUEL: Fuel Oil (Ordinary) available, viscosity up to 1500 sec. Redwood. 24 hours' notice bunker requirements essential. Gas oil also available.

CONSULS: Portuguese Consulate at Benguela, 30 km. from Lobito.

REPAIRS: Slipway accommodating vessels up to 1,200 tons available. Floating dock for vessels up to 2,000 tons displacement.

GANGWAY/DECK WATCHMEN: Compulsory, both day and night.

OPENING/CLOSING HATCHES: When closed or opened by Stevedores, cost per time per hatch. (Crew allowed to carry out this operation.)

CERTIFICATES: Registered Tonnage Certificate, Derat Certificate to be shown.

CUSTOMS ALLOWANCES: No restrictions. Customs Guard supervises opening and resealing of bond.

CARGO GEAR: Normal routine gear: wire and rope slings, nets, chain-slings, baskets, grabs, and shore-cranes (capacity 3–22 tons) available. Heavy lifts of over 10 tons must be discharged using ship's derricks. Two cranes 22 tons available, but not always accessible. 100 ton floating crane is available.

REPATRIATION: Possible via Luanda.

AIRPORT: Lobito Airport (Benguela) – 33 km. Lobito Airport (Catumbela) – 13 km.

TIME: GMT plus one hour.

HOLIDAYS: 1st January; 4th February; 1st May; 11th December.

SHORE LEAVE: Nationals from countries having friendly diplomatic relations with Angola usually granted shore leave, see "I.D. Cards". Shore leave during certain hours only.

IDENTIFICATION CARDS: On arrival, all crews' and passengers' passports must be handed to Immigration Police, who retain these and issue shore passes. Passes must be carried at all times when on shore. If lost, a fine is imposed.

SERVICES: Surveys, dirty ballast facilities, garbage collection facilities.

DELAYS: Congestion not unusual and berthing delays may vary from one to three days. Ships calling for bunkers have no priority but are sometimes berthed at sunset and fuel during night-shift. Discharging of bulk cargoes can be effected by shortage of suitable wagons.

WEATHER: March/May rain season. Heavy wind and rain can effect cargo work.

NOTICES: Supplied to Master by Agent.

For your information, the following Regulations are in force at Lobito. Failure to comply with these instructions will result in fines being imposed on the vessel under your command.

Over and above the Regulations listed hereunder, all international Regulations governing a ship's stay in port are also applicable.

1. It is essential that an Angolan Flag be flown during the time the vessel is in Port.
2. Maximum speed for vessels entering or leaving the harbour is set at 8 knots.
3. All sound signals are prohibited excepting regulation signals whilst manoeuvring or in cases of distress.
4. No boat may be lowered until permission for so doing has been received from the competent Authorities (Customs and Port Captain). Any boat thus lowered is allowed to make contact with land at one point only, i.e., the landing steps situated at the junction of the 2 quay walls.
5. No member of the crew may go ashore without a pass signed by the Master and visaed by the Immigration Police. If a member of the crew is found to be ashore without a pass, the ship will be fined £1,315.00 in every instance. All shore passes must be returned to the Immigration Police before vessel's departure.
6. Vessels are not allowed to make any communications by wireless during their stay in Port.
7. Water from ship's condenser outlets or other exhausts may not be ejected onto the quay. A Fine of £1,000 will be applied if this instruction is not complied with.
8. All lavatories on the side adjacent to the quay wall must remain locked and not used during the time the vessel remains alongside.
9. No vessel is permitted to take salt water ballast whilst alongside the wharf.
10. No vessel is permitted to test engines whilst alongside the wharf.
11. No games whatsoever are allowed in the Port area; if members of the crew disrespect this regulation, heavy fines are applied to the vessel.
12. No garbage, oily or petroleum substances, should be thrown in the Bay either at anchorage or alongside otherwise a fine will be imposed on the vessel by the Port Captain, Fine which ranges from £250.00 to £1,250.00
13. The engines may not be put out of use without the authorisation of the Port Captain.
14. No repairs whatsoever may be done on board without the Port Captain's authorisation.
15. The following procedure is to be adopted whenever cargo or vessel suffer damage by Stevedores or Port staff:
    (a) Master or Chief Officer should request the Port Officer in charge of commercial operations to examine the damage.
    (b) The Chief Tally Clerk of our Company should also be present when examination is carried out.
    (c) Written notice must be delivered to the Port Officer and a copy sent to the Agent at the same time.

Kindly take note of the foregoing Regulations and return 1 copy to us duly signed.

Thank you, Agence Maritime Internationale S.A.

GENERAL: Ships should not: Dispose of any wastes into harbour or on to quays. Change mooring lines or lower lifeboats or immobilise main engine or use ship's sirens or radio station without prior permission from Authorities. Vessels must use watchmen 24 hours per day on adequately illuminated gangway.

SHIPMASTER'S REPORT: June 1979 (Updated 1994).

Documents: Papers required for clearance:

If these are prepared before arrival Agent will pass to Persons concerned. i.e. Port Health, Customs & Immigration.

1 International Declaration of Health.

(Lobito have no forms, best to use some other Port form that can be altered).

1 List of Crews Vaccinations and date they expire.
10 Crew Lists.
10 Passenger Lists or "Nil" passengers.
4 Arms & Ammunition Lists or "Nil" if none.
2 Livestock Lists.
6 Ports of Call Lists.
Stores Lists. (Provisions, Deck & Engine) 2 lists.
Crew Custom Effects List (Own form or free form) 2 sets.
Narcotic Lists 2 sets or "Nil" Lists.
Small Package Lists to be landed or "Nil" statement 2 copies.
Manifests & Bills of Lading – 3 sets.

Observations:

The Main Lighthouse Light on the end of the Spit, and the 4 Channel Buoys are still lit. But on reduced candle power. Vessel is still required to enter the Bay and anchor without Pilot. Pilot only used when berthing. Caution is required at night as the buoys are difficult to pick up. Both by day and night it is better to only proceed about 1.5 miles into the Bay, as many trawlers are always anchored at the head of the Bay. The Berths consist of a right angled quay, with space for 4/5 ocean-going ships. (Depending on length.) The loading berth for ore cannot be used for general cargo, and as the loader is at present inoperative it is not used for loading ore.

Shore leave is allowed but only from 1800 hrs. to 2200 hrs. daily.

No cargo worked on Sundays.

Pilot will unberth vessels up to 2400 hrs.

The only VHF is located in the Agent's office, it is manned during office hours. Calling Channel 16 thence Channel 11.

Two Tugs are now used for berthing for vessels over 5,000 g.r.t.

Lobito Radio Station is not manned, all traffic sent through Luanda.

Continuous soundings give at least 26 m. from the entrance to the anchorage.

Discharging is at 8 tons per gang man hour.

Vessels swing at anchor twice daily to weak tide, rise about 1 m.

Pilot comes out to anchorage in launch using accommodation ladder for boarding, tug is used for swinging vessels if necessary, as Bay is narrow.

Provisions are available at any time.

AUTHORITY: Empresa Portuaria do Lobito, U.E.E., Caixa Postal No. 16, Lobito, Republica Popular de Angola. *Tel:* 22718. *Telex:* 2912. *FAX:* 22719. *Contact:* Jose Carlos Gomes, Director General.

LOMBO: 06.50 S. 12.22 E.

LOCATION: The Lombo Terminal is located 43 miles South of the Zaire River (Pta. da Moita Seca) and consists of one loading single mooring point.

The loading point is located in about 120 ft. of water in position Lat. 06° 49′ 35″ S., Long. 12° 21′ 49″ E.

Attached to the SPM loading point is a floating storage tanker (FSO) and the export tanker is moored in tandem to the stern of the FSO tanker.

A 12 in. sea line connects the SPM buoy with the Lombo East Production Platform, and a 20 in. floating hose connects the FSO to the SPM buoy.

The S.P.M. is equipped with a navigation light and foghorn.

Identification navigation light: Flash "U" 15 sec., 5 nautical miles.

Identification foghorn: "U" 5 sec. on, 30 sec. off. 0.5 nautical miles.

VESSEL ACCEPTANCE: Only vessels in Texpan Vessel Approved List will be accepted to load at Block 2 Terminal. Vessels intending to call at Lombo Terminal must send, before acceptance, the Texaco Charter Vessel Acceptance Questionnaire to:

Texaco Panama Inc. (Bloco 2), J.G.Santos Jr./R.H.Fritz, Luanda, Angola. Tel: 244-2-322606. Fax: 244-2-321703. Telex: 2619 Texpan An. or

Texaco Panama Inc. (Bloco 2), Offshore District, G.Donnarumma/ A.Leone. Tel: 871-1515147. Fax: 871-1515150.

TEXACO VESSEL ACCEPTANCE QUESTIONNAIRE:

1. Vessel IMO number.
2. Vessel name/previous names.
3. Vessel type.
4. Flag.
5. Port of Registry.
6. Date built/where built.
7. Date rebuilt.
8. Construction (Single hull/double hull/double sides/double bottom). If double hull, are all centre tanks sub-divided throughout by a centreline bulkhead to reduce free surface effect?
9. Is vessel fitted with C.O.W.?/Is it regularly used?
10. Is vessel fitted with I.G.S.?/Is I.G.S. in full working order?
11. Is vessel fitted with S.B.T.?/Quantity of segregated ballast?
12. Registered Owner.
    (a) Full style.
    (b) Address.
    (c) How long owned by present Owner?
13. Demise Charter Owner, or Time Charterer if any:
    (a) Full style.
    (b) Address.
14. Operating Company (responsible for daily management and expenditure on vessel):
    (a) Full style.
    (b) Address.
    (c) How long has vessel been with this Company?
    (d) Number of tankers operated by this Company.
15. Classification Society:
    (a) Name.
    (b) Address.
    (c) Number of years with this Society?
16. Do Owners/Operators adhere to the OCIMF guidelines?
17. Date of last Special Survey (Hull).
    Any outstandings?
18. When last in shipyard?
    Reason?
19. Date last dry docking?
20. Does vessel have a full complement of Certified Officers in accordance with Flag State.
21. License/Certificate of Origin of Master and Officers.
22. Nationality of Master and Officers.
23. Are Officers employed direct by Owner or via Manning Agency?
24. Nationality of ratings.
25. Are ratings employed direct by Owner or via Manning Agency? Name of Agency.
26. Are Officers able to communicate in English?
27. Are sufficient Officers certified to perform C.O.W. operations in accordance with MARPOL 73/78?
28. Date vessel last chartered to Texaco.
29. Date tanker from same company last chartered to Texaco (Include name of vessel).
30. Vessel last three Charterers and cargoes carried:
    (a) Last.
    (b) Next to last.
    (c) Second to last.
31. Expiry date of Certificate of Inspection or Annual General Survey for compliance with Flag State Regulations.

32. Does the vessel have the following Certificates on board which will be valid for the period of the expected voyage?
(a) Load Line Certificate Issued/Expire
(b) Safty Equipment Certificate Issued/Expire
(c) Safety Construction Certificate Issued/Expire
(d) Safety Radio Certificate Issued/Expire
(e) IOPP Certificate Issued/Expire
(f) CLC Certificate Issued/Expire
(g) TOVALOP Issued/Expire
(h) U.S.Coast Guard Regulations
 Compliance Certificate
 (T.V.E.L. or C.O.I.) Issued/Expire
(I) Certificate of Financial Responsibility
 in compliance with OPA90 (COFR) Issued/Expire
33. History of Groundings / Strandings / Collisions over previous 12 months:
(a) When.
(b) Where.
(c) Circumstances.
34. History of Pollution over previous 12 months:
(a) When.
(b) Where.
(c) Circumstances.
(d) Extent of cargo or bunker loss.
(e) Any Port prohibitions as a result of pollution incident?
35. Last U.S. Port visited:
Date.
36. Last U.S.C.G. Inspection:
(a) Date.
(b) Result.
37. Last Port State Inspection:
(a) Date.
(b) Result.
38. Name of P&I Club:
(a) What is P&I cover for pollution damage?
(b) What is P&I cover for general liability?
39. Does vessel have an Oil Pollution Contingency Plan approved by the U.S.C.G. as required by OPA90?
Qualified Individual:
Name, address, Telephone No.
40. Vessel Deadweight (m.tons).
Draft.
Cargo tank capacity, 98%.
41. Is cargo manifold of steel or cast iron?
42. TPI.
BCM.
KTM.
43. Hose boom capacity and safe working load.
44. Advise numbers, dimension and location of bow Panama Fairlead(s) or equivalent fairlead(s). Bow fairlead opening should be at least 40 cm. height and 60 cm. width.
45. Is vessel fitted with chain stopper in bow area.
If so, state number, type and S.W.L.
46. Does vessel have mooring bitts located not less than 3 m. and not more than 10 m. from Panama Fairlead which are clear of obstructions and capable of handling 50 mm. diameter wire?
47. If vessel does not have SBT (Question 11 above), can vessel deballast simultaneously with loading and maintain 30% or 40% of Summer deadweight at all times?
48. Confirm that vessel has 2 fire monitors, each having an output of 5,000 gallons per minute to dissipate the H_2S gas at the vent outlet.
49. Vessel has the following communication system on board: Inmarsat/VHF/SSB Radio/Telefax.
Please advise numbers and call sign.
50. Is the vessel equipped with hermetically sealed ullaging/sampling system?
52. Confirm vessel has a closed loading system.
53. Confirm vessel fitted with a recirculatory air-conditioning system.

Vessels not approved may be accepted for one voyage, provided they submit the Texaco Charter Vessel Acceptance Questionnaire to the above mentioned addresses 30 days in advance of scheduled arrival.

Inquire for inclusion in Texaco Vessel Approved List may be sent to:

Texaco Inc., Marine Department, Vessel Inspection Service, Port Arthur, Texas. Tel: 1-409-723-6783. Fax: 1-409-723-6666.

DOCUMENTS:
5 copies List of Passengers Disembarking or in Transit, even if nil.
5 copies Crew List.
5 copies List of previous Ports of Call.
5 copies List of Crew Vaccinations.
5 copies Stores List.
5 copies Personal Effects List.
5 copies Animal List, even if nil.
5 copies Arms and Ammunition List, even if nil.
Clearance from Last Port.

PILOTAGE: Pilotage is compulsory. The pilot boarding area is 3 miles N.W. of the FSO.

The Pilot will give, to the arriving vessel, the berthing instructions and/or confirm the anchoring position.

"Masters of vessels are reminded of their obligation to comply with statutory rules and are requested to comply with the following:
(1) The Officer responsible for the embarkation or disembarkation of the Pilot must be a Watchkeeping Officer.
(2) The pilot ladder must be properly secured (IMO rules).
(3) The pilot ladder and immediate areas must be adequately illuminated.
(4) Means must be provided to enable the Pilot to pass safely and conveniently from the head of the ladder into the ship and on to the deck.
(5) The ladder must be in good condition.
(6) The length of the ladder should not exceed 30 ft.
(7) Whenever the distance from sea level to the point of access is more than 30 ft., a combination accommodation ladder/pilot ladder should be used.
(8) Spreaders are to be positioned at intervals of not more than 10 ft.
(9) Two manropes, in good condition, should be ready but not lowered, unless so instructed by the Pilot.
(10) A lifebuoy with safety line must be available at the embarking area. The safety line must have a self-illuminating light.
(11) Suitable heaving lines ready to lift pilot's equipment and bags.
(12) The pilot ladder must be rigged on the Lee Side, clear from all discharges and water outlets.
(13) The pilot ladder must be rigged in such a manner that each step rests firmly on the ship's side.
(14) Nylon pilot ladders must not be used.
(15) The use of pilot hoists is not recommended.

If, in the opinion of the Pilot/Loading Master, the pilot ladder is not safe, the Pilot/Loading Master may refuse to board the vessel and thus cause delay to the ship. Such delay would be for ship's account.

All manoeuvring of ships within the Terminal Area is to be done with the benefit of the advice of the Pilot/Loading Master, although in all cases and circumstances, the Master of the vessel shall remain solely responsible on behalf of the vessel's Owners for the safety and proper manoeuvring of the vessel.

The Master or responsible qualified senior deck officer must be on the bridge at all times when the vessel is manoeuvring".

APPROACHES: The facilities in Lombo Field are all marked on the British Admiralty Charts, and all vessels bound for Lombo Terminal shall have on board the British Admiralty Charts No. 3206 and 604.

However, extensive drilling activities are underway in the area (July 1996) and therefore Masters should navigate with particular caution as new, uncharted platforms and drilling rigs may be encountered throughout the area.

Good radar targets are Lombo East Production Platform and Palanca Terminal, both of which flare continuously.

ANCHORAGE: Vessels waiting to berth are requested to anchor 3 miles N.W. of the FSO and contact Pilot upon arrival. At times, the Pilot may alter the anchorage location.

Due to the proximity of many sub-sea pipelines, great care must be taken when anchoring.

The sea bottom in the area is sand and mud.

Anchoring is prohibited within a distance of 1.5 nautical miles of any installations and navigation within 2 miles of the FSO is prohibited without a Pilot onboard.

RESTRICTIONS: In principle, mooring operations are not carried out at night, but unmooring operations are performed day or night. The Pilot/Loading Master *will in all cases* decide when mooring and unmooring operations shall be done.

MAX. SIZE: *Characteristics of Acceptable Vessels:*
Max. Displacement: 175,000 tons.
Max. Distance Bow to Manifold: 150 m.
Max. Stern Trim (Propeller immersed): 3.0 m.
Fitted with at least one AKD, OCIMF tongue type bow chain stopper, SWL 200 tons.
Derrick/crane minimum 15 tons SWL.
IGS fully operational.
Capable of loading/deballasting concurrently.
Capable of closed loading operation.
Operational recirculatory air-conditioning.
Hermetically sealed ullaging and sampling capability.
Cargo tanks fitments (i.e. valve spindles, tank lids, fixed automatic gauges, P.V. valves, etc.) must be gas tight.
Officers and crew must be familiar with dangers of H_2S.
Vessel must arrive at Terminal with clean ballast.
Fitted with at least one OCIMF standard Panama type fairlead on centreline of forecastle bulwark of minimum dimensions 60 cm. × 40 cm.
Vessel to be ready to load upon berthing, as soon as hose is connected.

HEALTH: Upon arrival, Government Officials and Agent board the vessel. The party comes by boat from the offshore district base.

RADIO:
Lombo Terminal SSB: 8,480.0 kHz.
Murjan SSB: 6,500 kHz.

Arrival Messages: Vessels nominated to load at Lombo Terminal, shall send to Texaco Panama Angola Inc., Offshore District, Marine Operations, Fax: 871-1515150, Tel: 871-1515147, ETA on receipt of orders, 7 days, 96 hours, 72 hours, 48 hours, 24 hours prior to arrival. The first message must contain the following information:
1. Vessel's name and previous name.
2. Flag and Port of Registry.
3. Call sign.
4. Satcom: Fax/Tel/Telex.
5. Name of Owners and Operators.
6. Name of Charterers.
7. Name of Consignee.
8. Name of Agents in Angola.
9. Name of Cargo Surveyor.
10. ETA at Lombo Terminal.
11. Name of Last Port.
12. Arrival Draft and Sailing Draft.
13. Loaded Displacement.
14. Gross and Net Tonnage.
15. Summer Deadweight.
16. LOA.
17. Distance Bow – Manifold.
18. Number and Type of Mooring Brackets Forward.
19. Cargo Requirements.
20. Amount of Clean Ballast on Arrival.

VHF:
Lombo Pilot: Channel 11.
Lombo Terminal: Channel 11.
Lombo East Platform: Channels 6, 72.
Murjan: Channels 6, 72.

MOORING: All mooring and unmooring operations are done by the ship's crew as indicated by the Pilot.

On arrival at Pilot Station, vessel shall have the port crane/derrick rigged and ready to be used. The SWL shall be not less than 15 tons.

A line boat and a crew boat will assist the vessel to moor and unmoor.

The Pilot/Loading Master will normally only accept the Notice of Readiness between 0600 hrs. and 1700 hrs., providing the vessel is in all respects ready to receive the cargo. Time of N.O.R. accepted will always be time of hose connected.

All mooring equipment, i.e. Panama leads, chain stoppers, etc., shall comply with relevant OCIMF recommendations. Smit Brackets are not longer accepted.

The Terminal line boat will bring the mooring box alongside, which is picked up using the ship's port crane/derrick.

One messenger line of at least 400 ft. length and two good heaving lines shall be ready for use, both on the forecastle and on the poop deck aft. There should also be a large hammer and a large crow bar available on the forecastle head during mooring.

The line boat brings in a 10 in. circumference pick-up line alongside the bow when the vessel is within a reasonable distance of the FSO. The messenger line is passed, by ship's heaving line, to the line boat and connected to the pick-up line. The pick-up line is retrieved until the chafe chain passes through the fairlead and is secured to the chain stopper.

Once the vessel is safely moored and the tug is made fast aft, the floating hose is brought alongside and connected to the manifold by the ship's crew. The single loading hose is equipped with a 16 in. Camlock connection.

The bow to manifold distance should not exceed 150 m. and the manifold to ship's rail distance should not be less than 4.6 m.

A pressure recorder will be installed in the ship's manifold.

During the whole period that the vessel is moored to the stern of the FSO, the Terminal tug will be made fast to the stern of the tanker. A messenger line will be passed from the tanker to the tug, using a ship's heaving line, and tug's tow wire retrieved and made fast onboard the tanker.

BALLAST: Vessel shall arrive with clean ballast only. No dirty ballast facilities available.

LOADING: The loading rate is approximately 30,000 barrels per hour, and Soyo Blend Crude Oil has an API of approximately 40.0. The temperature ranges between 80°F to 90°F.

Loading is direct from FSO and particular attention is required when operating cargo system valves to preclude causing a shut-down of the FSO tanker.

MEDICAL: Assistance only available in case of emergency.

FRESH WATER: Not available.

FUEL: Not available.

REPATRIATION: Crew changes can be arranged through shipping agencies on emergency basis, although not recommended.

TIME: GMT plus 1 hour.

SERVICES: The following services are not available: Stores, fresh provisions, cash, laundry, national flags, repairs, etc.

Charts are not available. B.A. Charts No. 604 and 3206 are pertinent and shall be on board when calling.

Mail sent from Europe usually takes 3 weeks.

SHORE LEAVE: Not possible.

WEATHER:

Winds: The general direction of the trade winds is E.S.E. to S.S.E. The direction is affected by onshore-offshore breezes.

The onshore breeze appears from the S.W. between 1000 hrs. and 1100 hrs. and falls at sunset. It is then replaced by a light breeze from the S.S.E. to E.S.E. which blows until 0800 hrs. or 0900 hrs.

From December until May, thunderly squalls from the N.E. occur. During the month of May, the trade winds often blow night and day.

From June to September (dry season), the winds are low, S.W. in the daytime and South to S.W. with calm periods at night. In mid-September, a stable S.W. breeze settles until the beginning of December, and then becomes more variable with calms at times.

Hygrometry: The relative humidity is above 80% for eleven months of the year, but in June falls to 50%.

Visibility: Fog appears more often during the dry season than during the rainy season. During the rainy season, visibility is reduced to heavy showers.

Tides and Currents: In general, the current flow at Lombo East is in a Northerly direction and has an average velocity of 0.8 knots. The current direction and velocity are governed by two significant sources, the Benguela Current flowing North and the outflow of the Zaire River.

At most times, the Benguela Current is the most influential, so the most common current direction is North. At times, however, especially during the rainy season (November to May), the effluent from the Zaire River may be so voluminous that it can over-rule the Benguela Current and reverse the direction of the current at Lombo. At the Terminal, we have witnessed a 180° change of direction in 10 minutes. When this happens during the daylight hours, it is possible to receive advance notice if the man on watch spots the muddy front from the Zaire River moving South. This notice allows the line handling tug crew to be in the best position to keep the tanker from contacting the S.P.M. When it happens at night however, the allowable reaction time is greatly reduced and any error or delay may allow contact of the tanker with the loading point. It is for such instances that the watches must be maintained and ready.

Independently of the Zaire River outflow, it has been observed that during the rainy season, a surface current may, at irregular intervals, run to the East. This can be seen clearly. It is manifested by stripes of agitated water, contrasting with stripes of smooth water.

Although, as stated previously, these phenomena are more likely to happen in the rainy season, they can and have happened in the dry season.

Tidal currents in this area are minimal. They have an average velocity of 0.5 knots and a maximum of 2 knots. The tidal range is about 1.5 m.

Swell: As far as swell is concerned, 93% of the waves come from the South (S.E. to S.W.).

The average height of the swell is 1.5 m. during the rainy season, and increases to 3.0 m. – 4.0 m. during the dry season.

GARBAGE DISPOSAL: No garbage disposal available.

WASTE OIL DISPOSAL: No waste oil disposal available.

NOTICE: *Safety of the Vessel:* The Master is responsible for the safety of the vessel while moored to the loading point. He must, therefore, strictly adhere to all safety requirements generally requested by the Company and the Port Authorities and accepted by the oil tanker industry.

Port Authorities can, at any time, prescribe special safety measures to be complied with by the vessel.

Only approved safety material may be used (radios, flashlights, etc.).

The Pilot/Loading Master will hand to the ship's Master a Safety Check List when boarding the vessel.

The Pilot/Loading Master will remain on board during the whole period of loading, and in case of any infringement of the safety regulations, will take any measure he deems appropriate, including stopping or not starting the loading operations. The time so lost will be debited to the vessel.

The following Safety Precautions must be taken by all vessels loading at Lombo Terminal.

Repairs to main engine and steering gear are prohibited.
Vessel's anchor *must* be secured by stoppers before manoeuvring near pipelines and structures.
Continuous deck and cargo watches must be kept by a responsible Senior Deck Officer.
Power must remain on deck machinery at all times.
Main deck and forecastle areas must be adequately illuminated.
Pilot/Loading Master *must* be informed of any electrical storms or squalls that may approach vessel during loading.

The Ship/Shore Safety Check List and Prior to Berth Check List must be strictly observed by all vessels loading at Lombo Terminal.

Hydrogen Sulphide: The cargo to be loaded contains high concentrations of hydrogen sulphide (H_2S).

Special precautions should be taken, as H_2S gas, when vented to atmosphere during loading, or when ballasting after discharge of cargo, is extremely dangerous to personnel. Because of this extreme danger, each and every person working in an area where H_2S gas may be present, should be aware of the potential dangers, and know how to protect themselves from the toxic effects of H_2S gas.

Closed loading of this cargo is *compulsory.* A Safety Team will board the vessel with the Pilot/Loading Master, and remain on board throughout the loading. The Safety Team will strictly control the safety measures necessary for the handling of this cargo, i.e. instructions to shipboard personnel, monitoring and measurement of gas levels, management and control of H_2S gas in the cargo tanks, on the decks, in the living quarters, and when vented to the atmosphere.

The Safety Team will provide emergency equipment, such as breathing apparatus, H_2S and combustible gas monitoring and measuring equipment.

During cargo tank venting, only crew members authorised by the Safety Team will be allowed on the open deck areas. All accommodation access doors must be closed and sealed during loading except one, and all shipboard personnel will be instructed to use *only* that assigned access, except in an emergency. Ship's air-conditioning plant must be on internal recirculation. Fire-line and pumps must be capable of sustaining a seawater pressure of at least 150 p.s.i. at one or more deck monitors. Gas reading values will be recorded every 2 hours, together with the vessel's heading, wind direction and speed, the latter being plotted on forms provided by the Safety Team.

Recommendations and Regulations as per IMO "Dangerous Hydrocarbon Cargo Handling" and ISGOTT "International Safety Guide for Oil Tankers & Terminals" must be followed at all times.

Pollution: The Master is responsible for ensuring that no petroleum is discharged or spilled from his ship into the water of the Terminal. Drip pans shall be in place at all times under all manifolds and all overside scuppers, pipes, or openings on the loading and/or transfer decks shall be securely closed and oil tight.

In the event of any spillage of petroleum, petroleum waste, contaminated water or residue on the deck of the ship, the same shall be cleaned up immediately, and under no circumstances shall be permitted to be swept or washed overboard. Adequate supplies of sawdust or other material, approved by the Company, shall be available on the ship for immediate use. Any vessel causing pollution of the water of the Terminal or sighting such pollution, shall immediately inform the Pilot/Loading Master. In the event that any ship should discharge or spill any dirty ballast, petroleum, contaminated water, bilge water or petroleum waste into the water at or in the vicinity of the Terminal, the Company shall have the right (but without prejudice to any other rights it may have) to take any action which, in its opinion, is necessary to clean up or remove any contamination or pollution resulting from such discharge or spills (whether contamination or pollution of the sea, the shore or any structure or property).

The Company shall have the further right (but not obligation) to settle any claims of third parties arising from such contamination or pollution.

All payments, costs, and expenses properly made or incurred by the Company in cleaning up or removing any such contamination or pollution, and in settling any claims of third parties, shall be the liability of the vessel, its Owners and its managers, and the Company shall be entitled to claim reimbursement accordingly.

The above refers mainly to petroleum pollution, but we would draw your attention to the fact that all pollution is covered by above, e.g. carbon deposits from the boilers.

The Company will take every precaution to prevent pollution occurring but, should it occur, speed is essential to control it, and the Company will, if necessary, "clean up first and discuss liability afterwards", rather than lose valuable time.

The vessel, if at fault, will be charged for use of boats, detergents, dispersants, labour (including overtime), transportation, use of equipment, etc., as well as the more obvious charge for the lost time whilst cargo operations are stopped.

Vessels carrying detergent are requested to have it available (not necessarily on deck) with a means of applying it, should the Company request such an action.

Special Requirements: During the whole period that the vessel will be moored at the Terminal, a forecastle watchman will be required. He must be in continuous contact with the duty officer and Pilot/Loading Master.

He shall keep the duty officer and the Pilot/Loading Master informed about the vessel's position and distance from SBM.

The vessel will be held responsible for all damages to the installations.

Vessels are requested to provide food and accommodation for the Loading Master and two Safety Inspectors throughout the loading operations. The accommodation should be equivalent to the minimum standard required for a senior officer. Accommodation may be required for visiting Port Authorities/Officers.

Ship's crew is required for mooring/unmooring operations and connection/disconnection of the hose. A 24 hour radio watch is required on VHF Channel 11.

Conditions of Use of the Terminal Facilities: All services and assistance provided by or on behalf of the Company (Texaco Panama Inc. – Angola), at or in connection with the Terminal, are subject to any applicable Bye-Laws and Harbour Regulations, Safety Regulations and Towage Conditions for the time being in force and to the following further conditions.

Neither the Company nor its servants, agents or contractors (in whatever capacity they may be acting) shall be responsible for any loss, damage or delay from whatsoever cause arising in consequence of any assistance, advice or instruction whatsoever given or tendered in respect to any vessel, whether by way of tugs, pilotage, or berthing services, the provisions of navigational facilities, including buoys or other channel markings or otherwise whosoever.

In all circumstances, the Master of any vessel shall remain solely responsible on behalf of his Owners for the safety and proper navigation of this vessel.

Although the Company exercises due diligence to ensure that the berths, premises, facilities, property, gear, craft and equipment, are safe and suitable for vessels permitted or invited to use them, no guarantee of such safety or suitability is given, and the Company, its servants, agents or contractors shall not be responsible for any loss, damage or delay of any sort that may be sustained by, or occur to any vessel, her Owners, her cargo or any part thereof (whether such cargo is onboard or in course of loading or discharging) by whomsoever and by whatsoever cause such loss, damage or delay is occasioned.

The Company will not be responsible for any loss, damage, or delay directly or indirectly caused by or arising from strikes, lock-outs or labour disputes or disputes or disturbance whether the Company or its servants are parties thereto or not.

If the use by any vessel of any berth, premises, any gear or equipment, any craft, or other facility or property, of any sort whatsoever, whether belonging to or provided by or on behalf of the Company, result in any damage to any such berth, premises, gear and equipment, craft or other facility or property, from whatsoever cause such damage may arise, and irrespective of whether or not such damage has been contributed to by the negligence of the Company or of its agents, servants, or contractors and irrespective of whether there has been any neglect or default on the part of the vessel or Owners, in any such event the vessel and the Owner shall pay for or hold the Company harmless from and indemnified, all such damage and against all loss sustained by the Company consequent thereon.

Further, the vessel and her Owners shall hold the Company harmless and indemnified against all and any claims, costs and expenses arising out of any loss, damage or delay caused to any third party by the vessel or by her Master or crew, or by any other servant or Agent of the Owners.

OPERATOR: Texaco Panama Inc., P.O.Box 5897, Luanda, Angola. *Tel:* 244-2-322606. *Telex:* 2619 Texpan An. *FAX:* 244-2-321703. *Contact:* Marine Superintendent (Tel: 871-1515147. Fax: 871-1515150).

LUANDA: 08.48 S. 13.15 E. (See Plan)

PORT LIMITS: A vessel to be considered an "arrived ship" should be anchored in the bay past a line drawn between the Ilha Light and across the bay to Fort S. Pedro.

DOCUMENTS:

8 Crew Lists.
8 Passenger Landing and Transit Lists.
2 Crew Lists, showing dates of Vaccinaion and Inoculation.
6 Lists of Ports of Call (with arrival and departure dates).
4 Stores Lists.
4 Personal Effects Lists.
6 Lists of Slop Chest Contents.
3 Photocopies of Bills of Lading.
6 Cargo Manifests.
6 Arms and Ammunitions Lists.
6 Lists of Birds and Animals.
6 Lists of Drugs.
6 Mail Lists.

Copies (if possible) of following Certificates will be taken ashore by Port Authorities:
Load Line Certificate.
Safety Construction Certificate.
Radio-Telegraphy Certificate.
Tonnage Certificate.
All Passports checked and stamped.

Shipmaster's Report: May 1989.

The following are to be prepared by the vessel:
1 copy Health Declaration (provided by Agent, to be filled in on arrival).
2 copies Vaccination List.
8 copies Crew List.
5 copies Passenger List.
8 copies Ports of Call List.
3 copies Crew Personal Effects List.
5 copies Birds and Animals List.
3 copies Narcotics List.
4 copies Ship's Stores List.
3 copies Arms and Ammunition List.
4 copies Dangerous Cargo List.
Bill of Lading.

PILOTAGE: 72 hours notice of arrival, addressed Agents via Luanda Radio, plus message of arrival at least 6 hours prior arrival received during working hours (0700 hrs. – 1700 hrs.). VHF available. Pilot launch comes out from port. Anchorage for Pilot in Luanda Bay. No draft restriction at anchorage. Pilot not required for anchoring in bay. Pilotage compulsory. No special berthing Pilot. Pilot launch white – flying Pilot Flag (H).

Pilot Boarding Station: Lat. 8° 44′ S., Long. 13° 16.5′ E.

ANCHORAGES: Luanda Bay offers safe, sheltered anchorage at all times of the year. Good holding ground – sand/mud. No draft restrictions.

RESTRICTIONS: Berthing in daylight only. Unberthing until midnight.

MAX. SIZE: Length 1,000 ft. (alongside); breadth, no restriction; draft, 34 ft. (alongside). Tankers, up to 55 ft. draft at the refinery buoys.

HEALTH: Pratique may be granted by radio through Radio Luanda, addressed Port Health or via Agents. Accommodation ladder must be rigged for doctor on arrival. Pratique must be granted at each Angolan port. Pratique is *not* automatic. If infectious disease on board inform Port Health/Agents by cable.

RADIO: Addressed "Luandaradio" for ETA, draft and requirements. Call sign CQW on 500 kHz, listening on "odd" hours only, throughout 24 hours. Listening between 0600 – 1800 hrs. Call sign CQW3 on 13,023 kHz on "even" hours only. Listening between 1800 hrs. – 0600 hrs. Call sign CQW on 8,565 kHz on "even" hours only.

Shipmaster's Report: May 1989.

It is not necessary to use Luanda Radio (D3E), vessel can send all information to Agent by telex and he will arrange requirements.

TUGS: Two available (1,500 h.p. and 480 h.p.) and compulsory for berthing and unberthing. Tugs join vessel off berths. Ship's lines used (if tug lines requested – extra charges).

BERTHING: Ships taken in strict rotation of arrival for berthing, except that passenger vessels have priority. There are 7 berths for import and export cargoes, all berths are available for oil bunkering.

The quays are divided into 5 zones with depths alongside of 32 ft. maximum.

Zone I.	1,380 ft. of which 900 ft. of quay length suitable for ocean-going vessels.
Zone II.	480 ft. quay length.
Zone III.	900 ft. quay length.
Zone IV.	540 ft. quay length.
Zone V.	574 ft. quay length.

Shoreside cranes of 3 tons and 5 tons, furthermore 2 cranes of 10 tons lifting capacity and also 1 mobile crane of 20 ton capacity for lifting heavy pieces only.

A self-propelled floating crane, capable of lifting 100 tons, was recently commissioned – maximum and minimum reach of 46 ft. 6 in. and 9 ft. respectively, lifting to about 78 ft. approximately.

BULK HANDLING FACILITIES: Ores in bulk are usually loaded at Zone III; no mechanical loading installation.

The ore is shovelled from railway trucks into buckets; daily loading average 4,000 tons per 24 hours.

Grain vessels will also be moored at Zone III alongside the grain shed. Discharging by means of tubes which are lowered into the holds and suck the grain out by an electrically propelled spiral fitted in the tube.

The rate of discharging is about 100 t.p.h. and the grain is loaded into railway wagons, each of 30 ton capacity, via the adjacent warehouse.

STEVEDORES: Gangs arranged by Agent/Shipmaster. Normal port working hours 0700 – 1200 hrs., 1400 – 1730 hrs. (overtime 1730 – 2330 hrs.), Saturday 0700 – 1230 hrs. Sunday/holidays – no work.

MEDICAL: For serious cases, as much advanced notice as possible should be given with all details available. Minor cases can be treated on arrival within half an hour without previous notice. Apart from Government Hospital, there are a number of private nursing homes with good facilities. Yellow Fever inoculations recommended.

TANKERS: Two tanker terminals, No. 2 Quay and off-shore terminal. Drafts – No. 2 Quay (Products Berth) 34 ft. Off-shore terminal (Refinery Berth) two sets mooring buoys, one for tankers with max. length 230 m. and max. draft 55 ft. and the other for tankers not exceeding 100 m. with draft 40 ft.

Shore Lines: Products Berth: 1×8 in. fuel oil pipe-line and 1×10 in. line for white products, 6 in. hoses for fuel oil and 10 in. hoses for White products.

Refinery Berth: 12 in. crude oil submarine lines and 8 in. for fuel; 8 in. LPG line and 6 in. hose; 8 in. G.O./Kero line and 8 in. hose; 12 in. G.O. line and 2×8 in. hoses.

Lub Oil: 1×10 in. sphere launching trap connected to ship's manifold, 100 ft. of 8 in. flexible hose between tap and floating pontoon, 0.5 miles of underwater 8 in. line from pontoon to shore tanks.

DENSITY: About 1024.
FRESH WATER: Fresh water available through quay pipe-lines, each hose delivering about 30 t.p.h.
FUEL: Limited number of grades can be obtained subject to nomination well in advance. No barges available.
FIRE PRECAUTIONS: For tankers loading/discharging alongside No. 2 Quay – no vehicles allowed within vicinity and other vessels cannot berth within 40 m. of tanker's stern or bow.
CONSULS:

Austria
Belgium
Brazil
Denmark
France
Germany
Great Britain
Italy
Netherlands
Norway
Spain
Sweden
Switzerland
U.S.A.

REPAIRS: Minor repairs and hull repairs above the water-line can be carried out.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: *Piracy:* Vessels in the Inner Anchorage have been boarded by armed pirates. Cargo, radio and T.V. equipment and stores were stolen.
1989: Vessel attacked by a gang of men dressed in army clothes and wearing fire arms. Stevedores and fork lift drivers had been seriously threatened by these men with the effect that the workers refused to work night shifts. About 50% of the discharged containers were spoiled or stolen.
OPENING/CLOSING HATCHES: Can be carried out by crew or stevedores at vessel's option.
CERTIFICATES: Tonnage and Derat Certificates.
CUSTOMS ALLOWANCES: No restrictions, but sales ashore is a serious offence.
CARGO GEAR: No additional requirements provided valid test certificates aboard.
REPATRIATION: Repatriation will not present any difficulties.
AIRPORT: Distance from port 4.5 miles.
TIME: GMT plus 1 hour all year.
HOLIDAYS: Saints Day (1st January), Saints Day (15th August), Saints Day (1st November), Saints Day (8th December), Christmas Day (25th December). No cargo work on these holidays.
POLICE/AMBULANCE/FIRE: Police 7408; Ambulance 25275; Fire 22222.
TELEPHONES: Can be placed on board.
SERVICES: Tank cleaning possible but advance notice required. Radio, radar repairs possible, but spares rarely available.
SHORE LEAVE: Crew members allowed shore leave subject Immigration approval provided inoculation certificates are valid.
IDENTIFICATION CARDS: Provided by Agents for crew proceeding ashore.
REGULATIONS: Mailboats have berthing priority over all other vessels, foreign *passenger* vessels next in precedence.
DELAYS: Congestion rarely exceeds 36 hours.
WEATHER: March/May rain season. Heavy wind and rain can affect cargo work.
GENERAL: Ample water in bay for anchoring, and most vessels enter port without Pilot. Pilotage is compulsory for berthing/unberthing on quays, this service being available from 0700 hrs. to midnight. If Master elects to wait for Pilot outside port and another vessel proceeds direct to anchorage, the latter will be first on turn for berth.
DEVELOPMENTS: Plans for reclamation and new berths round to the Forte da S. Pedro da Barra. Container terminal nearing completion. 3×27 ton Hyster lift on order.

SHIPMASTER'S REPORT: May 1990.

Luanda is the capital of the People's Republic of Angola. As a port, it is one of the best natural ports in West Africa. But due to various reasons, the port is dirty, and has a low rate for handling cargo.

There are 13 berths for ocean-going vessels, with depths from 9.0 m. – 11.0 m. alongside at the Commercial Quay (See "Plan").

There are at least 40 shoreside cranes on the quay, including 3×10 tons, 1×22 tons × 20 m. and others of 3 tons – 5 tons lifting capacity. Some of them were broken and cannot be used.

4×27 tons × 25 m. modern PPM motor cranes and 4 mobile cranes with 20 tons to over 50 tons lifting capacity respectively are used for handling containers in the open stowage area or for lifting heavy cargo only. The biggest crane appears to be damaged. Containers are usually discharged at Berth No. 2D to Berth No. 3E by ship's gear. 1×22 tons × 20 m. shore crane is available for use at this location.

Fresh water is available West of Berth No. 1E through a quay pipe-line, but pressure is very low during daytime. During night-time the average rate is 10 t.p.h. – 15 t.p.h. This fresh water is not suitable for drinking. Price is U.S.$ 2.50. No fresh water is available on the quay East of Berth No. 1E.

Luanda has a population of about 2 million people and stores and provisions are very expensive.

Soldiers/Police are stationed in the harbour day and night and occasionally shots can be heard.

Shore leave is possible in the afternoon until midnight only. Visaed passport is exchanged at the gate for a shore pass.

Finding an anchorage in Luanda Bay by radar navigation is not difficult. The lighthouse, light beacon and light buoy were extinguished during the night.

There were a few ocean-going vessels waiting for berths and some fishing vessels anchored in the bay.

Pilot not required for anchoring in the bay, but compulsory for berthing or unberthing. A small tug of 700 h.p. assists when berthing.

No armed pirates were encountered at anchorage or at the berth, but general cargo, especially foodstuff, was frequently stolen during the night.

Entry inspection carried out at the anchorage during daylight hours by 6 officials representing Port Health, Customs, Immigration, Harbour Authority and Agency. The entry formalities were easy and the bonded store was sealed. The Immigration Officers checked and visaed all Seamen's Books and a crew muster was required. Another 8 Immigration guards inspected crew cabins.

Documents required are same as shown in "Guide to Port Entry". List of slop-chest contents was not required.

VHF communications: Pilot Station on Channel 8, Port Control on Channel 16, but normally no one answers.

Departure Inspection carried out at berth before sailing. The Immigration formalities are the same as entry inspection. Thereafter Immigration Clearance is issued. No other officials were onboard. Agent brought Port Clearance and Customs' Clearance and returned 4 copies of Ship's Certificates at the same time.

AUTHORITY: Servicos de Portos, Caminhos de Ferro, e Transportes.

NAMIBE (Mocamedes) (incl. Porto Saco): 15.11 S. 12.07 E. (See Plan)

DOCUMENTS:
Health Certificate.
2 Vaccination Lists (yellow fever).
8 Crew Lists.
11 Passenger Lists (for each landing and transit).
4 Lists showing Ports of Call.
2 Lists of Articles held by crew/passengers, i.e. cameras, binoculars, radios, tobacco, etc.
3 Ships' Stores Lists.
6 Dangerous Cargo Lists, i.e. all types of explosives.
All foregoing to be signed by Master. Other essential official forms prepared by Agent.

Shipmaster's Report: May 1989.
The following are to be prepared by the vessel:
1 copy Health Declaration (provided by Agent, to be filled in on arrival).
2 copies Vaccination List.
8 copies Crew List.
5 copies Passenger List.
8 copies Ports of Call List.
3 copies Crew Personal Effects List.
5 copies Birds and Animals List.
3 copies Narcotics List.
4 copies Ship's Stores List.
3 copies Arms and Ammunition List.
4 copies Dangerous Cargo List.
Bill of Lading.

PILOTAGE: Pilot boards in Bay – safe, natural bay with no reefs and easily accessible both day and night. Vessel *must* wait for Pilot and instructions before berthing.
ANCHORAGE: No currents in harbour area, but slight prevailing winds constant. Good holding ground with depths over 34 ft. Approaches up to 45 ft. depth. Tidal range about 5 ft.
RESTRICTIONS: Berthing not permitted during hours of darkness. Unberthing permitted up till midnight. Authorities visit between 0700 hrs. and 1900 hrs. (approx.) only.
Shipmaster's Report: March 1987: No night entrance permitted to Namibe Bay. We entered Saco Bay at 0315 hrs. for anchoring and when 1 mile off, 5 red warning shots were fired at the vessel.
MAX. SIZE: *Mocamedes:* Governed by berth depth 33 ft. alongside.
Porto Saco: Vessels up to 14 m. draft. Largest bulk carriers handled.
HEALTH: Pratique granted on arrival after "Health Guard" visit: boarding 0700 – 1900 hrs. Normal quarantine restrictions imposed if contagious diseases aboard. Ships calling from other Angolan ports (except coasters) are subject same procedure.
RADIO: Messages *must* be routed via Luanda Radio (call sign CQW). No ship/shore radio link.
Shipmaster's Report: May 1989.

It is not necessary to use Luanda Radio (D3E), vessel can send all information to Agent by telex and he will arrange requirements.
TUGS: Two tugs available of 2,200 h.p., fitted with VHF Channels 16 and 29. Join vessel for berthing. Ship's lines used. Vessel under 5,000 tons use 1 tug only.
BERTHING: Unless Masters indicate preference, port decides berthing-side. No vessels berthed after sunset (except passenger ships), but sailing during nightshift permitted so long as prior warning given before 1700 hrs. No vessel is allowed to berth without a Pilot. Before berthing, important that vessel covers all water outlets, prepares accommodation ladder and has forward anchors ready. Ships carrying explosives not permitted berth before Port Captain surveys cargo.
CARGO FACILITIES: *Mocamedes:* The accommodation consists of 1 concrete quay, length 1,350 ft. providing 3 berths. For the handling of general cargo, there are 4 cranes of 5 tons and 2 cranes of 3 tons, modern cargo handling devices. Also lightening possible. One 10 ton floating crane available, subject ample notice from Lobito. Dangerous cargo is discharged alongside or into lighters, at the Port Captain's discretion.
Porto Saco (Saco Bay): Ore is loaded at the pier in Porto Saco; length is 1,066 ft., width 59 ft. Depth alongside 54 ft. 6 in. at low tide, normal sea water, clear height from water level at ISHW up to unloader 73 ft. 10 in. One mechanical loader of conveyor belt type; capacity often exceeds 3,500 metric t.p.h. Reach 65 ft. 6 in. approx. from fenders. Connections for supply of bunkers and water.
STEVEDORES: Radio accurate ETA 24 hours in advance to enable Agent order required gangs. (Gangs ordered 0700 hrs. and 1500 hrs.) No Sunday work permitted for cargo vessels.

MEDICAL: If medical assistance required on arrival radio to Agent. Adequate hospital facilities available, but no specialised treatment or surgery. Yellow fever certificate inspected on arrival.
TANKERS: No oil or waste products to be pumped overboard. Heavy fines imposed for breach of this regulation. Tankers discharge at Porto Saco – about 10 km. North of general cargo berths, situated Northern end of Mocamedes Bay. Maximum draft 54 ft., length of quay 1,066 ft. No dirty ballast facilities.
Shore Lines: All 1 mile flight to installation.
Benzine: 8 in. line and 8 in. or 6 in. hoses.
Kerosine/Gas Oil: 8 in. line and 8 in. or 6 in. hoses.
Fuel Oil: 10 in. line and 8 in. hoses.
DENSITY: 1024.
FRESH WATER: Available ex-wharf, rate 15 t.p.h.
FUEL: Available from dockside pipe-line. At Porto Saco, rate 200 t.p.h. Bunkers may be taken during loading operations without delay.
FIRE PRECAUTIONS: No special precautions except ships carrying explosives. Fire Brigade standby charge.
CONSULS: None.
REPAIRS: Only very minor voyage repairs.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Compulsory, day and night.
OPENING/CLOSING HATCHES: When performed by stevedores, costs per hatch per time, but crew allowed to perform this task.
CERTIFICATES: Registered Tonnage Certificate, Derat. Certificate, examined by authorities on arrival.
CUSTOMS ALLOWANCES: No restrictions. Customs' guard supervises opening and resealing of ships' bonded lockers.
REPATRIATION: Air communication via Lobito and Luanda.
AIRPORT: Small airstrip which is unable to take heavy aircraft.
TIME: GMT plus 1 hour.
HOLIDAYS: See "Lobito".
SERVICES: None available.
SHORE LEAVE: All nationalities from countries having friendly diplomatic relations are permitted shore leave. See "I.D. Cards".
IDENTIFICATION CARDS: All crew/passenger passports handed Immigration Police who issue shore passes. Passes must be carried when on shore.
DELAYS: Berthing delays are unusual.
GENERAL: Ships must not dispose of wastes into harbour or on to quays, change mooring lines, lower lifeboats, immobilise main engine, use ship's siren, or ship's radio station without prior permission from authorities. Vessels must use watchmen for 24 hours per day on well-illuminated gangways and hoist Angola flag from 0800 to sunset.
DEVELOPMENTS: Porto Saco (Iron-ore/Tanker berth) anticipated to augment present ore-loading equipment to enable loading ore-carriers up to 10,000 t.p.h. Dredging to projected depth of 65 ft.

SHIPMASTER'S REPORT: March 1987.
Restrictions: No night entrance into Namibe Bay, entry only permitted in daylight.
When our vessel entered Saco Bay for anchoring and when 1 mile offshore, 5 red warning shots were fired at the vessel.

PALANCA: 06.58 S. 12.24 E. (See Plan)

LOCATION: The loading station is located 230 km. N.W. of Luanda and approximately 20 nautical miles from the nearest coast and loading terminal.
The Floating Storage and Loading Terminal "Palanca": Lat. 06° 58′ 07; S., Long. 12° 24′ 03″ E. Water depth: 44 m.
The Auxiliary Loading Buoy (CALM): Lat. 06° 56′ 57″ S., Long. 12° 23′ 43″ E. Water depth: 42 m.
DOCUMENTS:
Documents required by Immigration on Arrival:
Immigration (DEFA) will check passports against the Crew List. Following documents are required:
5 copies Crew List.
1 copy Ports of Call List.
5 copies Passenger List.
5 copies Animal List.
5 copies Arms List.
5 copies Narcotics List.
For further information Shipping Agent should be contacted.
PILOTAGE: Pilotage is carried out by a Pilot representing Elf Exploration Angola, who will remain on board during the entire duration of the call.
The signals for contacting the Pilot are those set out in the International Code; the Pilot may be contacted by VHF Channel 16.
Pilotage is obligatory.
The Pilot shall take control of the vessel approximately 2.2 nautical miles in the 330° direction (N.N.W.) of the Loading Station at: Lat. 06° 55.3′ S., Long. 12° 22.5′ E.
It should be recalled that "piloting consists of assistance given to Masters in steering vessels upon entry into and departure from the piloting zone".
It should be stressed that the Master remains at all times entirely responsible for any damage or accidents resulting, whether at night or day, from the steering or manoeuvering of his vessel.
ANCHORAGE: Vessels coming to load at Palanca, may anchor in 45 m. of water, 2.2 nautical miles N.N.W. from the Loading Station, at Lat. 06° 55.3′ S., Long. 12° 22.5′ E.
It is prohibited to anchor in the Prohibited Area within 1.5 miles of the line of pipes connecting PAL F2 to PAL P1, and from PAL P2 to the Storage Vessel and at least 1.0 nautical miles from the Loading Station.
The sea floor is sandy and of good consistency for anchoring. Certain outcroppings of flat rocks can delay engagement of the anchor.
RESTRICTIONS: There will be no mooring after 1500 hrs. local time.
If tanker arrives after 1500 hrs. local time, Pilot will board the following day at 0700 hrs. local time.
MAX. SIZE: The maximum allowable size at the Palanca Terminal is 150,000 d.w.t., when the vessel is moored bow-to-bow with the barge, 300,000 d.w.t. when the vessel is moored at the SBM. Depending on the sea and wind conditions, this maximum size may be reduced to 280,000 d.w.t.
Also see "Loading".
NAVIGATION AIDS: The production facilities of Elf Exploration Angola are protected by an area of prohibited navigation which extends 0.5 miles around all fixed installations.
Access to this area is authorised only to vessels working for or authorised by Elf Exploration Angola.
This prohibited area is marked at night by white lights, emitting the letter 'U' every 15 seconds, installed on the corners of the platforms and on the front of the storage tanker "Palanca".
Average height of the lights – 19 m.
Range – 5 miles.
In the event of reduced visibility (less than 1 mile) the floating storage vessel emits audible signals in accordance with the international collision regulation for warning of approaches at sea, consisting of the letter 'U' every 30 seconds.
Platforms are located as follows (1994):
Production Platform Palanca (PAL P1): Lat. 06° 58′ 23″ S., Long. 12° 22′ 33″ E.
Drilling Platform (PAL F2): Lat. 06° 56′ 43″ S., Long. 12° 22′ 35″E.
Flare Platform (PAL T1): Lat. 06° 58′ 13″ S., Long. 12° 22′ 30″ E.
Flare Platform (PAL T2): Lat. 06° 58′ 24″ S., Long. 12° 22′ 38″ E.
Production Platform (PAL P2): Lat. 06° 58′ 25″ S., Long. 12° 22′ 40″ E.
Production Platform (PAC F1): Lat. 07° 05′ 59″ S., Long. 12° 20′ 19″ E.
Flare Platform (PAC T1): Lat. 07° 05′ 47″ S., Long. 12° 20′ 13″ E.
Production Platform (BUF F1): Lat. 07° 07′ 05″ S., Long. 12° 22′ 10″ E.
Production Platform (PAC F2): Lat. 07° 07′ 42″ S., Long. 12° 20′ 55″ E.
Production Platform (IPS F1): Lat. 07° 03′ 56″ S., Long. 12° 24′ 50″ E.
Production Platform (PAC F3): Lat. 07° 04′ 20″ S., Long. 12° 19′ 55″ E.
Production Platform (IMP F1): Lat. 07° 00′ 34″ S., Long. 12° 22′ 43″ E.
Drilling Platform (PAC F4): Lat. 07° 09′ 26″ S., Long. 12° 20′ 45″ E.
Drilling Platform (COB F1): Lat. 07° 12′ 14″ S., Long. 12° 23′ 31″ E.
A sealine of 2,600 m. links the production platform (PAL P2) with the Floating Storage "Palanca".
A sealine of 3,600 m. links the Production Platform (PAL P2) with the Auxiliary Loading Buoy.
A sealine of 2,164 m. links the Floating Storage "Palanca" with the Auxiliary Loading Buoy.
Additional rigs may operate in the vicinity of these platforms at any time. Consequently vessels coming to load at Palanca must refer to radio messages received prior to arrival.
HEALTH: Health inspection is carried out by the chief doctor of the Border Health Police.
The Health Authority of the Port of Soyo may grant Free Pratique by radio.
In the event of a contagious illness on board, Health Authorities must be advised by radio before arrival.
RADIO: *Arrival Advice:* Vessels should advise their ETA by radio 72, 48 and 24 hours in advance to Elf Exploration Angola.
Thereafter, they should give notice of any significant changes in their expected hour of arrival.
Vessels shall address their ETA to:

Elf Exploration Angola
Rua Marechal Broz Tito, No. 13, CP 2610, Luanda.
Telephone: 390293, 390343, 390393
Telex: 4130-4132 ELFANG

Palanca: Floating Storage Vessel.
S.S.B. monitoring (voice) on 6,342 kHz from 0700 hrs. to 1700 hrs.
VHF monitoring on Channel 16 permanently.
Monitors satellite communications permanently:
Via Atlantic satellite (See "Notice of ETA").
Telephone No.: (871) 111.07.77.
Fax No.: (871) 111.11.76.
Telex No.: 111.07.77 FJBZ.
The following is part of a message sent to a vessel in August 1992. Quote
Notices of ETA:
Please report to Palanca Offshore loading facilities 72 hours in advance of ETA, and again 48 hours and 24 hours before arrival.
Please send telex to Palanca Terminal/FJBX.
Elf Exploration Angola, Attn. Mrs. E.Gabriel DPRO/DEV/CB.

(A) Ship using INMARSAT:
Dial: 005811110777+ (FJBZ)
009914130+, 009914132+ or 009913513+ (A/B ELFANG AN).

(B) Ship using Radiotelex:
Dial: 05811110777
09914130, 09914132 or 09913513.
In respect of the shore station procedure.

(C) Ship using Wireless Telegraphy:
1. Address all messages to "Bureau Porthisheadradio".
2. First two words of text: "TLX 09914130 ELFLUANDA", and: TLX 0581111077 Terminal Palanca/FJBZ.
3. Messages to be treated and abstracted on board at normal radio/land line rates to U.K.

Please advise (Terminal Palanca and Elf Exploration Angola):
Name of your Shipping Agent.
Name of Master.
Vessel's Flag and Call Sign.
Voyage Number when leaving Palanca after loading.
Destination and last Port of Call.
If loading can be initiated while deballasting. If not, advise required deballasting time.

Quantity of clean ballast and permanent ballast on arrival.
Confirm that your heating coils and tanks are sound and not leaking.
Your loading rate with 1×16 in. hose.
Revert with dimensions of your forward Panama Fairlead.
Confirm that cargo tanks will be under inert gas on arrival.
If you have received Owner's instructions regarding insertions or special mentions to be added on Bill of Lading. Please revert with your standard Carrier Alpha Code.
According to your instructions, when can loading be initiated (date and time).
Quantity of slops on board, and if "Load-on-Top Procedure" will be followed this voyage.
Revert with your vessel's experience factor calculated as follows:
Total of ship's figures for the last five voyages, divided by
Total of B/L quantities for the same voyages.
If any more information needed.
Unquote.

TUGS: Mooring is carried out by a work boat using personnel designated by Elf Exploration Angola.

This vessel is at the disposition of the tanker, under the instructions of the Pilot, during the duration of the tanker's manoeuvring and its stay at the loading terminal.

MOORING: Moorings at the loading terminal are furnished by Elf Exploration Angola. Consequently, the vessel should be prepared to take on board, the hawser as close as possible to the centre line of the vessel, the mooring line being composed essentially of 45 m. of doubled 16 in. circumference nylon and 7 m. of 3 in. chain. This chain is intended to hold fast the nip of the hawser at the fairlead; and furthermore, in order to facilitate its taking on board, the hawser is furnished with an "in haul" of 10 in. circumference polypropylene, of approximately 200 m. in length.

The "in haul" is passed to the vessel by means of a tender. The vessel must prepare the messenger line for taking on board the "in haul" by the bow.

Weather and sea permitting, mooring will be undertaken between 0600 hrs. and 1500 hrs. In exceptional conditions, mooring can take place at night.

Unmooring shall take place as soon as loading is completed, whether day or night.

The port derrick should be rigged before arrival and have a minimum lifting capacity of 10 tons.

The port side manifold should be prepared for connecting 2×16 in. hoses.

BALLAST: Vessels should arrive with sufficient ballast and correct trim in order to be able to manoeuvre with safety; such ballast may not be less than 30% of the deadweight of the vessel. Deballasting may be carried out only with the agreement of the Pilot.

The storage facility at Palanca is not equipped with an oil separator. The vessel should therefore present itself with clean ballast.

Any vessel presenting itself with dirty ballast may be obliged to depart the loading terminal and any resulting delay shall be entirely for its account; the acceptance of the Notice of Readiness shall be appropriately adjusted.

The Master shall be responsible for overflow or leakage from the tanks or any other situation which can bring about accidental discharge of hydrocarbons.

The scuppers shall be plugged during the duration of loading.

Elf Exploration Angola shall not be responsible for any violation of international regulations.

LOADING: The Palanca Loading Station of Elf Exploration Angola is a single point bow mooring type.

The vessel shall moor at the bow with the Storage Vessel (tandem mooring) or with the hawser of the buoy (SPM).

The Storage Vessel is connected to a Turret Buoy by a semi-rigid arm. This buoy is fixed to the sea floor by chains to 6 driven stakes. These anchoring chains extend to a radius of 490 m. around the buoy.

The Loading Buoy is a CALM buoy (Catenary Anchor Leg Mooring) fixed to the sea floor by 6×4.25 in. chains.

The depth of water at the Turret Buoy is 44 m. The Storage Tanker "Palanca" has a capacity of 274,000 metric tons, is 256.5 m. long, and 60 m. beam.

The water depth at the CALM loading buoy is 42 m.

The sealine (2,500 m. × 20 in. diameter) connects the "Palanca" Floating Storage to the production platform, the buoy is connected to the sealine by 1×20 in. hose line.

For loading, there are two possibilities:

(a) A 20 in. floating line ending in 2×16 in. lines connects the bow of the storage vessel to the intake manifold of the lifting vessel at a length of approximately 250 m. from the bow.
(b) Dispatching of the production from the storage barge to the second Loading Station is made through a 30 in. sealine. A floating 20 in., 300 m. long, flexible line (ending in 2×16 in. lines) connects the loading buoy to the lifting tankers manifold.

The choice of the loading point shall be made by Elf Exploration Angola. The normal conditions at the loading stations are as follows:
Tankers of 40,000 d.w.t. to 150,000 d.w.t.
Liftings of 40,000 tons to 150,000 tons.

Exceptionally, the terminal may receive:
Tankers of up to 300,000 d.w.t. unballasted or half cargo, exclusively from the SBM buoy and with 10 days notice.
Liftings of up to 200,000 tons (programmed in advance according to Block 3 Rules).

The Palanca Terminal has the right to refuse these exceptions.

Notice of Readiness: Notice of Readiness is to be addressed to Elf Exploration Angola.

Connections: The loading of vessels is carried out by means of 1×20 in. flexible floating line of 256 m. in length, terminating in 2×16 in. hoses, 27 m. long. Connection to the manifold on board is carried out by means of a 16 in. flange (150 ASA.).

The operations to connect and disconnect the hoses will be executed by the mooring crew. During the entire duration of the vessel's stay at the Loading Station, the Pilot shall assure that a safety watch is kept on board. The Pilot is also the Loading Master and the representative of Elf Exploration Angola.

The work vessel shall remain at the disposal of the Pilot, and shall hold fast at the stern of the tanker under tow. A tow should be furnished to the work vessel at the stern of the tanker, permitting a permanent traction of approximately 10 tons – 25 tons, during tandem loading operations, and also at the loading buoy.

Loading: Three loading configurations are possible:
Loading in tandem, maximum rate 8,000 cu.m.p.h.
Loading on the buoy, maximum rate 6,000 cu.m.p.h.
Loading simultaneously on 2 tankers tandem/buoy, maximum rate 12,000 cu.m.p.h. (7,200 cu.m.p.h. tandem plus 4,800 cu.m.p.h. from the buoy).

Inspection of the tanks after deballasting and measurement of ullage after loading shall be done in the presence of the Pilot, representing Elf Exploration Angola.

Elf Exploration Angola shall place on board the vessel, 2 sealed (2 litres) samples representative of the cargo.

20 minutes before the end of loading, the tanker shall make contact with the storage vessel by VHF, so as to be able to stop the pumps at the appropriate moment.

The Master shall be entirely responsible for the valve manifold operations and for on board loading safety.

Palanca Crude Characteristics: (February 1996).

API @ 60° F.	38.00
Density in Vacuum @ 15° C.	834.8 kg./cu.m.
Pour Point	0° C.
Reid Vapour Pressure @ 37.8° C.	67 K. Pa

MEDICAL: In Kwanda (Soyo), there is a doctor who can attend to needs of primary urgency. Urgent health evacuations to Luanda are carried out by Elf Exploration Angola at the expense of the vessel.

The Agent of the vessel shall take charge of the evacuee upon his arrival in Luanda.

FRESH WATER: Not available

FUEL: Not available.

REPAIRS: The repair shops at Luanda have limited facilities, information can be obtained from ship's Agents.

AIRPORT: The airport is located 4 km. from the city of Luanda, there is on average 1 flight per day to Europe, except weekends.

TIME: GMT plus 1 hour.

WEATHER: The rainy season predominates in February to April.

The dry season and cool season extends two to three months in June, July and August.

Temperature of the Air: In the rainy season, the temperature of the air varies from 23°C to 30°C with a relative humidity of approximately 91%.

In the dry season the temperature varies from 18°C to 22°C with a relative humidity of approximately 86%.

Temperature of the Sea: On the surface, the temperature of the sea varies from 30°C at the start of the year to 20°C in the month of July.

Salinity varies from 28 to 35 grams per litre.

Visibility: During the rainy season, particularly February, March, and April, the rain limits visibility to 0.5 miles.

Tides at Palanca: The tides are diurnal, maximum height at Springs is 1.9 m. The average level is 0.95 m.

Winds: The dominant winds are from the South, generally less than 15 knots on the average. Strong winds have a short duration and blow from the East or S.S.E. in association with gales (70 km./hr.).

Currents: In the Palanca region, currents can be extremely variable in force and direction but the general dominant current, flows toward the N.N.W., its speed on the surface can attain 1.8 knots.

Swell: The predominant direction of the swell is from the S.S.W., the average height varies from 1.5 m. to 2.5 m. with a period of 12 seconds, the surface waves generated by local winds rarely exceed 2 m.

The swell is strongest from May to October and at maximum 2 to 3 days before Spring tide.

GENERAL:

Publications & Charts:
French Chart No. 3357.
American Chart H.O. No. 2203.
French Pilot Book Volume C, West African Coast, Volume 2.
French Light & Fog Signals, Series C.
British Admiralty Africa Pilot Volume 2.
Portuguese Chart No. 305.

Pollution: It is forbidden to discharge cinders, flammable materials, objects and waste of any kind into the sea.

Any object falling into the sea should be reported to Elf Exploration Angola.

Elf Exploration Angola may attempt, at any time that it may consider appropriate, to fish such objects out of the sea. Such fishing out shall be undertaken at the expense, risk and peril of the party responsible.

Safety: The Master is solely responsible for safety on board his vessel.

During the entire stay at the loading station, the Master must: maintain on board sufficient personnel so as to be able to manoeuvre the vessel without risk and to put into action appropriate fire fighting equipment; maintain engines so as to be ready to manoeuvre; to attend to the hawser so as to assure good mooring without abnormal wear; to keep a watch over the floating hose so as not to subject it to any wear or chafing which might cause deterioration; to keep watch so that the vessel does not collide with the storage vessel, whether as a result of a reverse in current or a severe change in wind direction or for any other reason.

Territorial Waters: The sovereignty of the Republic of Angola extends to a distance of 20 nautical miles from the shore line at low tide along the coast.

The Angolan authorities exercise fiscal, customs, health, and immigration control on the high seas contiguous to the territorial waters up to a distance of 200 miles.

Currency: The legal currency is the kwanza.

Storing: It is not possible to provision at the terminal.

Transport: The means of transport of Elf Exploration Angola cannot be utilised by the crew of vessels coming to load at Palanca. There is no regular transport between Palanca and Luanda.

SHIPMASTER'S REPORT: March 1987.

Berthing will not be commenced after 1500 hrs. (local time).

Pilot ladder to be rigged to the water as Pilot boards from rubber dinghy. On boarding, Pilot will go forward to inspect mooring arrangements.

Shore gear lifted on board on the port side.

Loading vessel moors bow to bow with storage vessel.

Just before taking up mooring lines the tug makes fast aft. Vessel requires a heavy messenger to lift tug's wire. Once vessel starts heaving mooring lines, Pilot goes forward and communicates with bridge on VHF Channel 72.

AUTHORITY: Elf Exploration Angola, Rua Marechal Broz Tito No. 13, C.P. 2610, Luanda, Republique d'Angola. *Tel:* 390293, 390343, 390393. *Telex:* 4130, 4132 Elfang. *Contact:* M. Deschamps, Head of Developments.

QUINFUQUENA: 06.20 S. 12.14 E. (See Plan)

LOCATION: The Quinfuquena Terminal is located 15 miles South of the Zaire River entrance and consists of one loading point. The loading point is a single mooring point.

DOCUMENTS:

5 Lists of passengers disembarking or in transit, even if nil.
5 Crew Lists.
5 Lists giving previous Ports of Call.
5 Lists of Crew Vaccinations.
5 Stores Lists.
5 Personal Effects Lists.
5 No Animal Lists, even if nil.
5 Arms and ammunition Lists, even if nil.
Clearance from last port.

APPROACHES: It is essential to be in possession of BA. Chart 3206.

Good radar targets, visible on 24 mile range are;

Moanda Oil Terminal in position Lat. 05° 56' S., Long. 12° 10' E.

Essungo Platform in position Lat. 06° 14' S., Long. 12° 09.8' E. See B.A. Chart No. 3206.

The Quinfuquena Oil Terminal, when a ship is alongside, otherwise poor echo. During the night a flare in position Lat. 05° 58' S., Long. 12° 25' E. is seen at a distance of about 30 nautical miles.

A steel structure radio mast 48 m. high with total height of 76 m. (28 m. above sea level) painted red and white with a red flashing light 2.5 sec. located in position Lat. 06° 14' 30" S., Long. 12° 21' 31" E. at the tank farm, can be observed from a distance of at least 25 miles.

Aero Beacons out of order as well as the lights of Pta. da Moita Seca and Cabeca da Cobra.

PILOTAGE: Pilotage is compulsory. The pilot boarding area is inside the anchorage circle North of the loading points (See "Anchorage").

The Pilot will indicate to the arriving vessel the loading point at which it will be loaded. At this times the Pilot will also confirm the anchoring position.

Masters of vessels are reminded of their obligation to comply with statutory rules and are requested to comply with the following:

The Officer responsible for the embarkation or disembarkation of the Pilot must be a Watchkeeping Officer.

The pilot ladder must be properly secured.

The pilot ladder and immediate areas must be adequately illuminated.

Means must be provided to enable the Pilot to pass safely and conveniently from the head of the ladder into the ship and on to the deck.

The ladder must be in good condition.

The length of the ladder should not exceed 30 ft.

Whenever the distance from sea level to the point of access is more than 30 ft., a combination accommodation ladder/pilot ladder should be used.

Spreaders are to be positioned at intervals of not more than 10 ft.

Two manropes in good condition should be ready but not lowered unless so instructed by the Pilot.

A lifebuoy with safety line must be available at the embarking/disembarking area. The safety line must have a self-lighting light.

The pilot ladder must be rigged on the lee side, clear from all discharges and water outlets.

The ladder must be rigged in such a manner that each step rests firmly on the ship's side.

Nylon pilot ladders must no be used.

The use of pilot hoists is not recommended.

If, in the opinion of the Mooring Master the pilot ladder is not safe, the Mooring Master may refuse to board the vessel and thus cause delay to the ship. Such delay would be for ship's account.

The Master or responsible qualified Deck Officer must be on the bridge at all times when the vessel is manoeuvring.

Vessels are requested to provide food and accommodation for the Loading Master. This accommodation should be equivalent to the minimum standard required for a Senior Officer.

Ship's crew required for mooring operations and connecting/disconnecting of the hose.

ANCHORAGE: Vessels awaiting mooring are requested to anchor inside an imaginary circle of 2 nautical miles diameter centred on Point "A" (See "Plan") where:

SPM (Texaco Panama Inc.) bearing is 225°
RMD bearing is 135°
Essungo flare bearing is 327°

This will place all anchoring vessels at a minimum of 1.5 nautical miles from each of the surrounding sea lines.

At times the pilot may alter the anchorage location for one reason or another.

The pilot's requests will always overrule anything written therein.

The sea bottom in the area is sand and mud. Strict attention must be paid to all of the offshore installations in the area.

In addition to the loading points, these installations include the Essungo and Cuntala Platforms, the 18 in. oil sealine from Essungo to shore, the 20 in. oil sealine from shore to the R.M.D., the 30 in. oil sealine from the R.M.D. to the Texaco S.P.M., the 8 in. oil sealine from Cuntala to shore, the 16 in. oil sealine between the S.P.M. and Essungo Platform and the 16 in. sealine from the Southern Block Two Fields to the S.P.M.

These facilities are all marked on the British Admiralty Charts and all vessels bound for Quinfuquena Terminal must have on board the British Admiralty Charts No. 3206 and No. 638.

Anchoring is prohibited within a distance of 1.5 nautical miles from any of the offshore installations. All traffic is prohibited within a distance of 1 nautical mile of the loading points.

RESTRICTIONS: Mooring carried out daytime only. Unmooring may be carried out at night.

MAX. SIZE: See "Berthing".

Characteristics of Acceptable Vessels:

	R.M.D.
Deadweight tons – maximum.	150,000 tons
Distance – Bow to Manifold – maximum.	150 m.
Draft at Loaded Condition.	47 ft.
Segregated Ballast Tanks. (See "Ballast")	Required
Inert Gas System.	Required
Derricks – minimum SWL.	10 tons

HEALTH: Upon arrival, Government Officials and Agent board the vessel. The party comes by boat from the Kwanda Base near Soyo, which is situated about 20 nautical miles from the Terminal. The Agent is a local clerk, and speaks English. He boards the vessel on arrival and a few hours before departure.

RADIO: *Initial Message:* Companies intending to lift crude oil from Quinfuquena Terminal will have to notify Fina Petroleos de Angola – Operations by telex (Telex No. 3246 Petrol An), 7 days prior to the anticipated arrival date.

This notification shall contain the following information:

Name of tanker.
Flag.
Gross tonnage.
Nett tonnage.
Deadweight tons.
Distance – bow to manifold.
Anticipated draft at loaded condition.
Nominated cargo quantity.
Shippers.
Agent.
Consignee.
Destination.
ETA QQ Terminal.
Deballasting time, if required.

Subsequent Updated Messages: Vessels bound for Soyo Quinfuquena Terminal must give their ETA 72 hours, 48 hours and 24 hours before arrival, addressed to Fina Petroleos de Angola, Soyo.

ETA can be sent by telex to Fina Petroleos de Angola – Operations (Telex No. 3246 Petrol An).

The message should contain:

Vessel's name and Flag.
Master's name.
ETA at loading Terminal.
Arrival draft.
Last port of call.
Deballasting time, if any.

48 hours before arrival, radio contact can be made with Fina Petroleos de Angola Marine Office in Soyo on S.S.B. 8,291.1 kHz between 0900 hrs. and 0930 hrs. GMT.

A 24 hour radio watch is maintained on VHF Channel 11 at the Mooring Master's Office, call sign "Quinfuquena Pilot".

Ships are usually able to make VHF contact at a distance of 30 miles from the loading buoy.

VHF: See "Pilotage" and "Radio".

A 24 hour radio watch is required on VHF Channel 11.

TUGS: One tug, 3,300 h.p. available, also see "Current".

BERTHING: The new oil terminal, built for The FST Association, has been in operation since December 1979 and is situated 7.5 nautical miles offshore.

The loading point is of the RMD-type (Ready Made Dolphin). This is a rigid structure standing on the seabed.

The RMD is located in about 72 ft. of water in the following position:

Lat. 6° 19' 45" S., Long. 12° 14' 42" E.

On the RMD 2 limits have to be observed:

Max. draft 47 ft.
Max. cargo intake 104,500 tonnes

The RMD is equipped with a white navigation light and fog horn.

Identification navigation light: Flash "U" 30 secs. 8.5 nautical miles.

Identification fog horn: "U" 30 secs. 1 nautical mile.

A 20 in. cement coated sea line connects the RMD with the shore in a position:

Lat. 6° 14' 54" S., Long. 12° 20' 57" E.

MOORING: In principle mooring operations are not carried out at night but unmooring operations are performed day or night. At times, if sea, current and weather conditions permit, night mooring can be considered. The Mooring Master will in all cases decide when mooring and unmooring operations shall be done.

All mooring and unmooring operations are done by the ship's crew as indicated by the Mooring Master.

On arrival, vessels must have the port derrick rigged and ready to be used. The SWL of the derrick should be 10 tons.

A line-boat and a crewboat assist the vessels while mooring and unmooring.

Notice of Readiness accepted between 0600 hrs. and 1700 hrs.

The line-boat will bring the terminal mooring gear alongside, which has to be picked up with the ship's derrick. It consists of: 2×14 m.×56 mm. wire snotters; 2×100 ton SWL Crosby shackles; hose slings; 2 pelican hook chain stoppers; pressure gauges.

Two messenger lines of minimum 400 ft. length must be ready on the forecastle. The wire snotters must be installed on the bitts as indicated by the Loading Master.

The line-boat brings 2×10 in. pick up lines alongside the bow when the vessel is within a reasonable distance of the loading point. The messenger lines will be connected to the pick-up lines and taken on board until the chaffing chains pass through the fairleads. The chaffing chains are connected to the wire snotters by means of the 100 ton shackles.

The fairlead should be a single Panama lead mounted on the centre line of the vessel suitable for receiving 2×3 in. chaffing chains. The approximate minimum inside dimensions of the inside of the fairlead have to be 40 cm. high and 60 cm. wide.

Two sets of mooring bits should be situated at the forward end of the forecastle head.

The bitts are to be located not less than 3 m. and not more than 10 m. from the centre Panama Lead and capable of handling 56 mm. diameter wires.

Once the vessel is moored to the loading point, the floating hose is brought alongside and connected to the manifold by the ship's crew. The floating hose is equipped with a 16 in. Camlock connection. The floating hose at both the R.M.D. and the S.P.M. is 16 in. The bow to manifold distance should not exceed 150 m. for the R.M.D.

A pressure recorder will be installed on the ship's manifold. During the whole period that the vessel is moored to the loading point the line-boat will be made fast to the stern of the tanker. The vessel shall supply a good towline for this purpose and keep a second one on stand-by ready to be used. If available, buoyant lines are also preferred in this operation.

MEDICAL: Assistance only available in an emergency.

BALLAST: Report: August 1989.

On contacting Loading Master at QQ Terminal via our Soyo office we have been informed that tankers without segregated ballast tanks and tankers with clean ballast in clean cargo tanks are acceptable. For any further technical details please contact Fina Petroleos de Angola (telex 3246 Petrol An), attention Operations Manager.

LOADING: The loading rate is approx. 1,550 cu.m.p.h. Soyo crude oil approx. API 39.5. The temperature varies with the seasons. At the end of May, the loading temperature was 78° F.

During the whole loading operation, a crew member is stationed on the forecastle and one by the manifold. Forecastle must be in permanent contact with Duty Officer and Loading Master by radio if available.

As the oil to be loaded may contain hydrogen sulphide, it is recommended to keep breathing apparatus and resuscitators readily available during cargo operations.

Also see "Mooring".

FRESH WATER: Not available.

FUEL: Not available.

REPATRIATION: Repatriation is available if necessary but can only be arranged via Luanda.

SERVICES: Following are not available: Stores and provisions, cash, laundry service, dirty ballast facilities, national flags and ship supply service.

Charts are not available. Vessels must have B.A. Chart Nos. 638 and 3206 onboard when calling at the terminal.

MAIL: Mail sent from Europe, usually takes one week.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Nova Kwanza.

SHORE LEAVE: Not allowed.

WEATHER:

Winds: The general direction of the trade winds is E.S.E. to S.S.E. The direction is affected by onshore/offshore breezes.

The onshore breeze appears from the S.W. between 1000 hrs. and 1100 hrs. and falls at sunset. It is then replaced by a light breeze from the S.S.E. to E.S.E. which blows until 0800 hrs. or 0900 hrs.

From December till May thunder squalls from the N.E. occur. During the month of May the trade winds often blow night and day.

From June to September (dry season) the winds are low. S.W. in the daytime and S. to S.W. with calm periods at night. At mid-September a stable S.W. breeze settles until the beginning of December. It then becomes more variable with calms at times.

Hygrometry: The relative humidity is above 80% for 11 months of the year but in June falls to 50%.

Visibility: Fog appears more often during the dry season than during the rainy season. During the rainy season visibility is reduced by heavy showers.

Tides and Current: In general the current flow at Quinfuquena is in a Northerly direction and has an average velocity of 0.8 knots. The current direction and velocity are governed by two significant sources; the Benguela Current flowing North and the outflow of the Zaire River. At most times the Benguela Current is the most influential so the most common current direction is North. However, at times, especially during the rainy season (November to May) the effluent from the Zaire River may be so voluminous that it can over-rule the Benguela Current and reverse the direction of the current at Quinfuquena. At the RMD we have witnessed a 180° change of direction in 10 minutes.

When this happens during the daylight hours it is possible to receive advance notice if the man on watch spots the muddy front from the Zaire River moving South. This notice allows the line handling tug crew and tanker crew to be in the best position to keep the tanker from contacting the protection ring of the RMD. When it happens at night, however, the allowable reaction time is greatly reduced and any error or delay may allow contact of the tanker with the loading point. It is for such instances that the watches must be maintained and ready.

Although, as stated previously, this phenomenon is more likely to happen in the rainy season, it can, and has happened in the dry season.

Tidal currents in this area are minimal. They have an average velocity of 0.5 knots and a maximum of 2 knots. The tidal range is about 1.5 m.

Swell: As far as swell is concerned 93% of the waves come from South (S.E. to S.W.). The average height of the swell is 1.5 m. during the rainy season and increases to 3 m. or 4 m. during the dry season.

NOTICE: Notice to Masters

Subject: Forecastle Head Watchman.

Quinfuquena Terminal has certain peculiarities and your attention is drawn to the following.

1. The tower is a "Rigid Mooring Device" and is standing on the sea-bed as opposed to a "Single Mooring Buoy" which is anchored to the sea-bed and therefore has some lateral movement.

2. Normally your vessel will ride to the Benguela Current (S'ly), however the Congo River outfall will occasionally produce an adverse current, which will change heading of your vessel to a Northerly direction in a very short period of time.

Therefore a watchman must be placed on the forecastle head at all times, and at the slightest indication that the vessel is "Riding-up" to the tower, he must not hesitate to call the Mooring Master on board who will take the necessary action.

A line-boat, which has the capacity to tow your vessel astern, clear of the tower, will be tied up to your vessel's stern at all times.

Please ensure that a tow rope of a good quality is passed to the line-boat.

NOTES

Please also advise Shipping Guides Ltd.

Anguilla

BLOWING POINT: 18.10 N. 63.05 W.
ROAD BAY: 18.11 N. 63.01 W. (See Plan)

PORT LIMITS: Port limits are that of the coast and sea contiguous thereto from the mean of the highest and lowest tides to the seaward edge of the furthest reef or 1,000 yards seawards where no reef exists.

DOCUMENTS: The following documents are to be presented to Customs upon arrival:

1 Ship's Register.
1 Clearance from last Port.
2 copies Crew List.
2 copies Passenger List.
2 copies Cargo Manifest.
2 copies Stores Declaration.

PILOTAGE: At present there are no Pilots.

ANCHORAGE: Within 1,000 yards of the shoreline.

RESTRICTIONS: No berthing of vessels to a pier is allowed at night. The approach to the pier must be clear of anchored vessels at all times.

MAX. SIZE: Vessels of 4,000 tons and under or 15 ft. draft are accepted.

HEALTH: Customs accept Pratique documents on behalf of the Public Health Department. In the event of any suspected disease on board, the yellow flag must be flown. The Public Health and Medical Department will be immediately contacted. Until their arrival, no person will be allowed to disembark.

RADIO/VHF: Communications for ship movements are on VHF Channel 16. Both sea ports (Blowing Point and Road Bay) are equipped with VHF radio.

TUGS: No tugs in operation at present. Vessels are required to berth alongside pier using their own lines.

BERTHING: Blowing Point has 2 piers. One is used for off-loading cargo. The other is used for passengers.

The Cargo Pier accommodates vessels up to 30 tons.

The Ferry Pier accommodates ferries up to 25 tons at present.

The depth alongside the pier at Road Bay is 14 ft. on the North side and 16 ft. on the South side.

Loading and off-loading is done by ship's gear.

CRANES: None at present.

SPECIALISED CARGO HANDLING FACILITIES: The front end of the pier at Road Bay is used by barges for off-loading. Vessels with containers can apply to Haskins Ltd. to assist with off-loading of containers as the company is equipped with special trucks for handling containers.

BRIDGES: There are no bridges at any approaches to Anguilla Ports of Entry.

STEVEDORES: There is no organised stevedoring at present. However, arrangements can be made to hire workers to assist with loading/off-loading operations. Normal working hours are 0830 hrs. – 1200 hrs. and 1300 hrs. – 1600 hrs. Monday, Tuesday, Wednesday, Friday and Saturday, and Thursdays 0830 hrs. – 1200 hrs.

MEDICAL: Medical attention can be obtained at the Cottage Hospital in the Valley which is approximately 5 miles from Road Bay and 8 miles from Blowing Point. There is also a dental unit in the Valley. Inoculations and vaccinations can be done at the Hospital or at the Clinic in South Hill.

TANKERS: Coritot Bulk Station is the petroleum port. The deepest depth is 30 ft.

DENSITY: The water at all ports is salt.

FRESH WATER: Fresh water is supplied by the following private water trucks:

(a) National Trucking.
(b) Charlie Fleming's Water Delivery.
(c) Island Transport.
(d) Vanterpool's Water Delivery.

The average cost per 1,000 gallon is $135.00.

FUEL: Shell Bulk Station supplies 45 Centane Grade Diesel Oil and 93 Octane Gas Oil. This is delivered by truck.

REPAIRS: There is no equipment available at the port for repairing vessels.

DRY DOCKS: None.

SURVEYORS: None.

GANGWAY/DECK WATCHMEN: Not necessary at present.

HATCHES: Opened and closed by the crew.

CUSTOMS ALLOWANCES: 1 quart of spirits, 4 ozs. perfume and 0.5 lb. of tobacco products.

CARGO GEAR: Loading and off-loading is done by ship's gear.

REPATRIATION: Repatriation arrangements are made through the Immigration Department.

AIRPORT: Wallblake Airport is approximately 3 miles from Road Bay and 6 miles from Blowing Point.

TIME: Local time is G.M.T. minus 4 hours.

HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Labour Day (1st May); Anguilla Day (30th May); Whit Monday; Queen's Birthday; August Monday (1st Monday in August); August Thursday; August Friday; Separation Day (19th December); Christmas Day and Boxing Day.

Overtime can be arranged on these days. Advance notice of 2 hours before the end of working day preceding the holiday is required.

POLICE/AMBULANCE/FIRE: Call 911 and ask for service required.

TELEPHONES: There are no facilities for placing telephones on board.

BANKS: No banks are situated at the port. However, the Bank of Nova Scotia is 3 miles away, and the Caribbean Commercial Bank, National Bank of Anguilla and Barclays Bank are 4 miles away.

SHIP SUPPLY SERVICE: None available.

IDENTIFICATION CARDS: Not compulsory.

DELAYS: Delays can be avoided if advance notice of ETA is given at least one week before scheduled arrival.

AUTHORITY: H.M. Customs Department, The Valley, Anguilla. *Tel:* (809) 497-2513, 497-5313. *FAX:* (809) 497-5483. *Contact:* Colonel Harrigan, Principle Customs Officer.

NOTES

Please also advise Shipping Guides Ltd.

Antigua and Barbuda

ST. JOHN'S, Antigua: 17.07 N. 61.52 W. (See Plan)

PORT LIMITS: All the waters enclosed by an imaginary straight line running due West from Weatherill's Point forming the Northern boundary by an imaginary straight line running due North from Shipstern Point forming the Western boundary and by the coast line running from Weatherill's Point to Shipstern Point forming the Eastern and Southern boundaries.

DOCUMENTS:
4 Crew Lists.
2 Stores Lists.
4 Passenger Lists.
1 Customs Declaration.
1 Declaration of Health.
4 Copies of Manifest.
Port Clearance from previous port.
3 Copies of B/L.
1 Copy Crew Personnel and Curio List.
Fumigation and Derat Exemption Certificate to be shown.

PILOTAGE: Compulsory. Messages should be received by Agents 48 hours in advance. Pilot boat may be identified by pilot flag.

Pilot boards at entrance of channel if vessel is proceeding to Deep Water Harbour. If vessel proceeding to Oil Berth, Pilot boards 2 miles North of Sandy Island.

ANCHORAGES: Area between Fairway Buoy, South Warrington Buoy and No. 1 Channel Buoy. Approximately 7 cables N.N.W. of Pillar Rock Light. Depths 40 ft. – 45 ft. Anchorage for vessels up to 54 ft., 2 miles N.E. of Sandy Island.

RESTRICTIONS: (a) No vessel is permitted to berth alongside before permission to do so is given by the Port Authority or unless such vessel is under the command of a Pilot.
(b) Tidal variation is negligible.
(c) Channel is 8,000 ft. long and 300 ft. wide.
(d) Draft restriction is 32 ft. at berth.

MAX. SIZE: Vessels of any size, but with a maximum draft of 45 ft. can anchor at the Outer Harbour. At berth max. draft is 32 ft.; length of dock 1,200 ft.; and turning circle 1,200 ft. diameter.

HEALTH: Pratique given at berth. Suspected infectious diseases must be notified to Port Health Inspectors in advance of vessel's arrival.

RADIO: Cable and Wireless (W.I.) Ltd. via Barbados Radio 8PO.

VHF: Port Authority maintains watch on Channel 16 during normal working hours. Watch is also maintained by Pilot and tugs on Channel 16 one hour before ETA of any vessel. Tugs and Oil Terminal Pilot use Channel 6 during berthing operations.

RADAR: Nil.

TUGS: Two harbour tugs, each with 1,500 h.p. engines. Tugs join vessel in Approach Channel. Tugs lines normally used. No charge.

BERTHING: Three berths on pier of length 1,200 ft.; maximum permissible shipdraft 32 ft. in salt water; loading or discharging can be done either by shore equipment or by ship's own gear.

Cruise Ship Berth: There is a new Cruise Ship Berth at Heritage Quay in St. John's. This berth consists of 1,500 ft. of berthing space with 2 mooring dolphins, electricity, telephones, water, banking and other facilities. The position of the berth is Lat. 17° 07.5′ N., Long. 61° 52.2′ W.

CRANES: Authority owns 1×150 ton P & H mobile crane and 1×10 ton Coles mobile crane.

2×75 ton cranes are available on dockside which are provided by a private contractor.

Lift Trucks: Authority owns 1 large truck with adjustable spreaders capable of lifting fully loaded 40 ft. and 20 ft. containers.
1×15 tons Container lift truck
2 Champion truck tractors
1 GMC truck tractor
6×20 ft. container chassis
2×40 ft. container chassis
1×40 ft. container lift frame
1×20 ft. container lift frame
9×2.5 tons forklift trucks

BULK CARGO FACILITIES: Presently the handling of grain, coal and fertilisers are being handled at a Ro/Ro dock at the main dock in St. John's.

SPECIALISED CARGO-HANDLING FACILITIES: There are berths where LPG carriers are docked and taken care of. This berth is situated outside of St. John's and handles only LPG. There is also a sea berth which handles all types of fuel, such as diesel oil, gasoline and bunker fuel. The port also accommodates Ro/Ro ships with containers, and also handles refrigerated cargoes to the freezer chill facility at the main port in St. John's.

BRIDGES: None.

STEVEDORES: 48 hours notice is required to arrange gangs. Average load or discharge rate is 10 t.p.h.

Working hours: 0700 – 1600 Monday to Friday and 0700 – 1100 on Saturday. Overtime possible weekdays and Sundays.

MEDICAL: Agents should have at least 24 hours notice should medical attention be required. Hospital facilities are available and can be arranged by either Ship's Agent or Port Authority.

TANKERS: *Sea Island:* A concrete platform 180 ft. long with 4 mooring dolphins, overall length 750 ft. The jetty platform is protected by 5 foam filled Yokohama type fenders. Depth alongside 35 ft. at MLW. Max. draft 32 ft. (deeper draft subject to Marine Terminal approval). Max. load displacement 22,000 tons. Berthing by tankers on South side only. Port side alongside with the assistance of 2 tugs.

Mooring arrangements: 2 head/stern lines, 2 breast lines, 2 springs. Distance to shore is 4,500 ft.

Pipelines: 1×16 in. crude line with 1×12 in. hose; 1×8 in. gasoline line and 1×8 in. distillate line each with 1×6 in.; 1×4 in. LPG line; 1×3 in. fresh water line. One grade at the time with max. throughput of 1,500 bbls.p.h. and max. back pressure of 120 p.s.i.

Sea Buoy: A CBM of 5 mooring buoys (3 head buoys and 2 stern buoys) in 50 ft. of water. Max. draft 43 ft. Distance to shore 7,800 ft. 1×16 in. crude line with 1×12 in. hose (both submarine). No slop residue discharge facilities available.

Hose Connections: Port side amidships on Sea Island and Sea Buoy.

All Bunker grades are available. The blender is on the jetty with meters. Lubricants are available. The bunker line is 10 in. with a 6 in. bunker hose.

There are no slops or dirty ballast facilities. Ships to load are to arrive with clean ballast.

There are always two jetty attendants who are to be provided with meals.

It is possible to arrange a boat service between ship and shore but the ship's motor lifeboat can be used as well for this purpose and can sail in Antiguan waters without restrictions, provided the ship is cleared by the Authorities.

DENSITY: 1025.

FRESH WATER: Available at Deep Water Harbour, 24 hours' notice required. Also at Oil Refinery Pier and by barge, but only in conjunction with bunker fuel deliveries.

FUEL: All grades of marine fuel available at the Marine Pier. Also available at the Sea Buoy and by barges at Deep Water Harbour.

FIRE PRECAUTIONS: (a) No open fires nor smoking are allowed near the open hatches or in the hold in which flammable or dangerous goods are stored, or at the place of discharge of shipment.

(b) No person may set off or ignite any flare, rocket, explosive device, firework or make any bonfire or barbecue in any port area other than for emergency life saving or ship safety purposes, unless permission has been granted by management.

CONSULS: American, Norwegian, Dutch, French, Danish, Swedish and Venezuelan.

REPAIRS: All types of deck, but only minor engine repairs are possible.

DRY DOCK: None.

SURVEYORS: Department of Merchant Marine, Lloyd's and ABS.

GANGWAY/DECK WATCHMEN: Services of watchman absolutely necessary.

HATCHES: Opening and closing normally carried out by ship's crew.

CUSTOMS ALLOWANCES: 1 carton of cigarettes, 1 bottle liquor.

CARGO GEAR: Loading and discharging effected both by shore and ship's gear, but mainly by shore gear.

REPATRIATION: Facilities exist for effecting crew changes and arranging for necessary repatriation.

AIRPORT: Airport is 4 miles from the Deep Water Harbour, and is served by such international airlines as Eastern, Pan Am, American Airlines, Air Canada, B.W.I.A., B.A., L.I.A.T., Prinair, Air Guadeloupe, etc.

TIME: Local time is GMT minus 4 hours. No adjustments made to clocks during the year.

HOLIDAYS: 1st January; Good Friday; Easter Monday; Labour Day (1st Monday in May); Whit Monday; 1st Monday and Tuesday in August (Carnival); State Day (1st November); Christmas Day; Boxing Day; Queen's Official Birthday which is either the 1st or 2nd Saturday in June.

POLICE/AMBULANCE/FIRE: Police Tel: 20125-6-7-8; Ambulance Tel: 20251-2-3; Fire Tel: 20044.

TELEPHONES: Arrangements exist for placing telephones on board.

SERVICES: No special services exist e.g. tank-cleaning equipment, discharge of tank washings, compass adjusting, etc. However, arrangements can be made to carry out these services.

SHORE LEAVE: Crew members are permitted to go ashore; there are abolutely no restrictions.

IDENTIFICATION CARDS: Not necessary to show identification cards. However, may be called upon to present seaman's book should the occasion warrant it.

GARBAGE DISPOSAL: Garbage collection available through agent. Charges are U.S.$100.00 per pick-up. Collection time may be arranged at ship's convenience.

WASTE OIL DISPOSAL: Waste oil service is available by truck. There is no shore tank.

SEAMAN'S CLUBS: No Seaman's Clubs available.

Shops, international telephones, postage services, churches available. Football matches can be arranged. Mini-bus service available.

CURRENCY: The Eastern Carribean Dollar is the local currency. The exchange rate against the U.S.Dollar is E.C.$ 2.70 = U.S.$1.00. There are no restrictions on seafarers. The $2.70 local currency is a fixed rate to the U.S.Dollar. No devaluations. The British Pound is also widely accepted. The rate for the Pound is E.C.$ 4.50 = £ 1.00.

REGULATIONS: Users of the Port should be acquainted with Port Authority Act and Port Regulations. Copies of these can be purchased at the Government printers.

DELAYS: Delays due to unavailability of berth are very infrequent. However, during the months of December to April, 24 hours delay can be expected.

AUTHORITY: Antigua and Barbuda Port Authority, P.O.Box 1052, St.John's, Antigua, West Indies. *Tel:* (809) 4620050, 4620053, 4621273, 4623439. *Telex:* 2179 Anport Ak. *FAX:* 809-462-2510. *Contact:* L. Adams, Port Manager. W.K.N. Gomes, Operations Manager.

Argentina

Information for ports of Argentina, including drawings of port areas as reproduced in our plan section, have been compiled not only with the assistance of Port Authorities but also with the very kind co-operation of Centro de Navegacion Transatlantica of Buenos Aires to whom we are very much indebted.

Shipowners and Masters wishing to be in possession of more detailed information concerning River Plate ports, Argentina South Atlantic ports and the Strait of Magellan, are advised to obtain a copy of the "C.N.T. Year Book" which is published by Centro de Navegacion Transatlantica, 25 de Mayo 489, Buenos Aires.

N.B. For practical purposes, we have sub-divided information for Argentina into three sections as follows:

I. *GENERAL.*
II. *RIVER PLATE PORTS.*
III. *SOUTH ATLANTIC PORTS.*

I. GENERAL

DOCUMENTS: *Required Prior to Arrival:*

(a) At least 24 hours prior to the anticipated arrival of the vessel, a request for berthing must be presented to the General Port Administration in triplicate. There is a special form for this request, indicating the specifications of the vessel and the freight to be handled, for the assignment of the berth.

Upon receipt of the allocation of the berth, the following authorities must be notified:

a. The Chief of the Office of Maritime Health, to whom a request must be made 24 hours in advance for a Health Pratique. This must be made in duplicate, on a special form, to which a copy to the radio request for a Health Pratique must be attached. This is necessary to obtain authorisation to dock in the assigned berth, without a prior boarding by the Health Officer;
b. The Naval Prefecture, to which the request for a Health Pratique must be presented indicating the date and time of arrival from the open seas at the Intersection (in Buenos Aires) and from the intersection at the assigned berth;
c. The Chief of the Office of Overseas and Coastwise Shipping of the Naval Prefecture, to whom a request for pilotage must be made in duplicate, indicating the date and time of arrival, and designation of berth for the vessel.

On Arrival:

Type of Document	Number and Distribution of Documents				
Basic Forms	Prefecture	Customs	Immigration	Health	Total
Additional Documents:					
1. General Declaration	1	–	2	1	4
2. Cargo Manifest	–	1	–	–	1
3. Crew List	2	–	2	–	4
4. Passenger List	2	–	2	–	4
5. Ship's Store List	–	2	–	–	2
6. Crew's Effects Declaration	–	2	–	–	2
7. Maritime Declaration of Health	–	–	–	1	1
8. Mail List (a)	–	–	–	–	1
9. Entrance Declaration	–	–	–	–	4
10. Standardised Manifest cover	–	2	–	–	2
11. Section request	–	2	–	–	2

(a) Delivered directly to Postal Service.

Prior to departure:

Type of Document	Number and Distribution of Documents				
Basic forms	Prefecture	Customs	Immigration	Health	Total
Additional Documents:					
1. General Declaration	2	–	2	–	4
2. Cargo Manifest	–	2	–	–	2
3. Crew List	2	–	2	–	4
4. Passenger List	2	–	2	–	4
5. Sailing Notice	–	–	3	–	3
6. Sailing Declaration	–	–	–	–	–

Request for Health Pratique:

At least 24 hours prior to sailing, a request for the Health Pratique must be presented to the Naval Prefecture (4 sets).

Other provisions:

A representative of the Naval Prefecture and a Migrations Inspector board the vessel prior to sailing.

(b) Masters should also have at hand for inspection as required all the various certificates such as Certificate of Registry, Postal Packet Permit, if pertinent, Freeboard, Measurement, Safety Equipment, Radio Installation, Bulk Cargo, Shifting Board Installations or equivalent, and Derat Certificate, or exemption.

None of these documents requires an Argentine Consular visa.

(c) Port Agents should also receive copies for their use and to facilitate any further contacts with the Authorities in case of need. In particular they require a large number of copies of Manifest, and from this they will prepare Spanish manifest, which must be presented to Customs within 48 hours of vessel's entry. A number of extra copies of Crew List are also needed, and 1 extra Store List.

(d) Every person figuring on the Crew List of a vessel entering an Argentine port must possess documents proving his identity, such as a Discharge Book, Passport or other documents in use in the country of origin, authorised by the competent Authorities.

(e) Vaccination Certificate: Members of crew must be provided with an International Vaccination Certificate, not more than 3 years old, which should be presented on arrival, together with the individual Identity Card. Failing this, the crew will be vaccinated by the boarding doctors.

(f) Identity Card On arrival at an Argentine port, Masters of foreign vessels must deliver Identity Cards complete with photographs and finger-prints of each member of the crew, together with 2 copies of Crew List. One set is retained by the Migrations Department, and the other document remains in possession of the individual so that once identified, the crew member may return to the country without the necessity of obtaining new documents. The Master is handed in exchange 1 copy of the Crew List, sealed and signed by the Immigration Officer to enable him to prove at other Argentine ports of call, that he has complied with the corresponding Regulation.

No member of the crew, except the Master, is allowed to land until the Immigration Authorities have checked the crew with the Identity Cards.

Masters may if necessary have the Identity Cards completed with photographs in the Argentine at the first port of arrival. In such cases it is advisable that Agents are advised in advance so that preparations may be made against vessel's arrival. The Authorities will not allow any members of the crew to be disembarked until they have presented their Identity Cards or have had their photographs taken. Agents must present these Identity Cards to the Authorities for stamping within 48 hours of arrival of the vessel. Immigration control is made at whatever hour the vessel arrives, forming part of the normal reception procedure.

(g) The Stores Lists should be completed with great care as a specially trained searchers' brigade has been visiting most ships as soon as Free Pratique is granted.

Particular care must be taken to declare all sizes and measures in the metric system. A plea of a regrettable mistake is not accepted and fines, if legally applicable, can be severe.

FREE PRATIQUE: Vessels take Pratique in port, and may enter and berth if they fulfil the following conditions:

(a) Clean port of sailing and ports of call.

(b) No persons with infectious or contagious diseases or with fever on board.

(c) No cases during the voyage of disease of international concern, or of infectious diseases of an epidemic nature.

To be able to obtain this privilege of taking Pratique in port, it is essential that Masters of all vessels arriving from abroad wireless their Agents, not more than 12 hours before arrival, that vessels under their command are in the sanitary conditions as required by Art. 45 of the regulations to enter port and go alongside.

On receipt of this message, Agents will present to the Health Authorities the request for a berth, accompanied by the telegram sent by the Master, not less than 6 hours (nor more than 12) in advance, detailing sailing port and ports of call, and indicating the approximate hour of arrival. If the wireless message is in code, Agents will give the necessary translation, and be held responsible for any error in such translated version.

The message may be sent either in English or Spanish, and we give specimen texts in both languages, which should be closely followed:

"Addressed to Agency in Buenos Aires (or other port) solicitamos pedir libre platica telegrafica buque ....(1), procedente de ....(2), con escalas en .... (3), con .....(4) ..... tripulantes, (5) ..pasajeros Buenos Aires, (6) ...pasajeros transito punto. declaro no tener abordo persones afectadas por ninguna enfermedad pestilencial punto estado sanatario bueno.

"captain (7)."

or in English:

"please request Free Pratique ms (or ss) ....(1), proceeding from ....(2), with calls at ....(3), with ....(4) .... crews, (5) .... passengers for Buenos Aires,(6) passengers in transit stop hereby declare that nobody on board affected by any pestilential disease stop sanitary condition good.

"master (7)."

In each case the gaps must be filled in as follows:

1. Port of vessel and flag.
2. Port of commencement of voyage.
3. Full details of all ports of call.
4. Number of crew.
5. Number of passengers for Buenos Aires (or whatever port first entered).
6. Number of passengers in transit.
7. Full name of Master, and also of doctor if there is one on board.

As there have been cases of insufficient information being received from vessels, and "added in" by Agents in the translation, the Authorities have established this standard form which Masters must follow in their messages, and which will accompany the request to the Health Authorities.

This facility now refers to all Argentine ports, the message requesting Free Pratique to be sent to the vessel's Agent at first port of call, after which Free Pratique is automatic in all subsequent Argentine ports. If, however, a non Argentine port is called at en route, Free Pratique must again be requested at what will then become the "first Argentine port".

Agents will confirm to the vessel, by radio, the date and hour of granting of Free Pratique, and with this information in hand, vessel can enter port and go alongside. The Port Authorities will board as soon as the gangway is placed for their routine inspection, and until they have boarded, no one else should be allowed on board.

Vessels which do not meet the sanitary requirements, or come from unclean ports, must fly the yellow flag on entering for the necessary inspection alongside.

River Ports: Vessels proceeding to river ports get Pratique at destination.

Vessels Lightening: Tankers and other ships lightening in River Plate waters, provided they comply with Art. 45, may later continue their voyage and go straight into berth at port of destination to take Free Pratique there.

Sick Crew Members: If there is a sick person aboard, the international sign "W" must be flown on entering, and for Free Pratique, the customary yellow flag.

Masters must report to the boarding Sanitary Authorities those members of the crew having venereal complaints.

Asian and African Ports: In accordance with WHO requests, all vessels proceeding from these ports will be subject to an inspection of all galleys and store rooms.

Infected Ports: Recent Cholera epidemics have caused the Health Authorities to tighten control. All persons on board vessels coming from ports in the countries named below must be in possession of the Anti-Cholera Inoculation Certificate, and from other zones as indicated as International Yellow Fever Vaccination Certificate.

Cholera: The international certificate is valid from the sixth day of inoculation, and for 6 months. The countries at present under control are:

Africa: Algeria, Burkia Faso (formerly Upper Volta), Benin, Cameroon, Chad, Ghana, Ivory Coast, Liberia, Mali, Niger, Nigeria, Senegal, Sierra Leone, Somalia, Togo.

Asia: Myanmar (Burma), India, Indonesia, Malaysia (West), Muscat, Nepal, Pakistan, Philippines, Vietnam.

Epidemics are not officially admitted in the Arab Republic of Egypt and Sudan, but the certificate is advisable as a precautionary measure.

Other zones may be affected at short notice.

Cholera Prevention: Agent's advice to vessels calling at Argentine ports:

If your vessel has called at South American Pacific Coast ports within the last 6 months prior to arrival at Recalada Pilot Station or Brazilian ports since 15th February 1992 (or first Atlantic port if applicable), the following anti-cholera measures must be strictly abided by and for sanitary inspection on arrival at first Argentine port of call:

All ballast (and bilge water if any) must be chlorinated at the ratio of 15 grams of granulated hypochloride per ton of ballast, and all ballast and bilge discharge valves must be sealed prior to arrival at Recalada (or Atlantic port, whichever applicable).

For passing on to the sanitary authorities, please radio or telex us the following:

Confirmation that ballast tanks/bilges are empty, alternatively quantity of ballast on board per tank.

Quantity of fresh drinking water expected on board on arrival.

Short description of vessels sewage system.

Usual Free Pratique request, stating number of crew, that nobody affected by any of the six pestilential diseases, that sanitary conditions of the vessel are good, signed Master's name.

If chloride insufficient on board, will arrange delivery at Zona Comun (ex-Buenos Aires Roads) (or at first Atlantic port).

Provided ballast water has been chlorinated, we can obtain permission from the authorities to pump out ballast after inspection in port, if so required.

Liquid chlorination is also acceptable.

Yellow Fever: The vaccination certificate is valid for 10 years, as from the tenth day of inoculation. It is required for all persons coming from:

Africa: Angola, Ghana, Kinshasa, Nigeria, Sierra Leone, Sudan.

South America: Brazil (territories of Roraima and Boa Vista), Colombia (Bolivar, Simiti, Boyaco and Paz de Ariporo).

Inflammables: It should be borne in mind that vessels carrying over 25 tons and under 100 tons of inflammables, explosives, etc., must be inspected in the roads before entering whether they have asked for Free Pratique by radio or not, although this is still advisable as the one inspection is independent from the other.

CLASSIFICATION OF ARGENTINE PORTS: In accordance with Article 31 of the Pan American Sanitary Code, the National Health Department has classified the Argentine ports as follows:

Clean Ports Class A – Buenos Aires, Rosario, Santa Fe, La Plata and Bahia Blanca.

Clean Ports Class B – San Nicolas, San Lorenzo, San Martin, Villa Constitucion and Concepcion del Uruguay.

Clean Ports Under the Vigilance of the Health Department – Mar del Plata, Necochea and Diamante.

A clean port, in general, requires the absence of non-imported cases of cholera, yellow fever, pest, exanthematic typhus or any other contagious disease of a serious epidemic nature, that may be carried through international trade. The clean ports of Class A have competent staff and suitable sanitary equipment, also bacteriological laboratories, registers of disease and deaths, lazarettos, etc.

The clean ports of Class B are those that have not got all the equipment required for Class A.

FLAG: The flag of the Republic is three horizontal and equal bands of which the centre one is white, and the upper and lower, sky blue.

The official colours, flown by Naval vessels and all official entities are distinguished by a rising golden sun in the centre of the white.

All foreign merchant vessels must fly the Argentine flag from the highest mast while in territorial waters and ports, and fly their own national colours from the ensign staff.

PILOTAGE: A. *Ordering:* For Recalada Station, minimum 48 hours in advance, for all other services Agents of the vessels to be piloted must apply, in writing, to the Pilotage Section of the Prefectura at their domicile before 1700 hrs. on the day before the service is to be effected, or on Sundays/holidays, before 1100 hrs. Pilots are obliged to render service in strict turn, in accordance with the register in the zone.

Applications for Pilots presented outside the hours established will be accepted but they will be classed under the headings of "Extraordinary" or "Urgent" applications. Pilots should always be ordered by the Agency; only in exceptional cases may a Pilot be requested direct by a Master, when by reasons of force majeure, or change of destination arrival is unforeseen. Vessels which are unaware of their Agents name may also request a Pilot direct. In such cases the request should be made direct, by radio, to the Prefectura with full explanations of the circumstances.

B. *River Plate Zone:* There are 3 Pilot Stations in this Zone, namely; Port of Buenos Aires, Intersection and Recalada.

(i) Inwards from sea. Inward vessels for up river ports Buenos Aires or La Plata have to take a Pilot at Recalada, and must give 48 hours advance notice of arrival, both to Agents in Buenos Aires and direct to Recalada, call sign LSR 500 kHz (600 m.) Type A1, A2.

The operator is on duty from 0800 – 1000 hrs., 1200 – 1400 hrs., 1600 – 1800 hrs. and 2000 – to 2200 hrs. Communications can also be made on 462 kHz (649 m.).

The second Pilot Station is at Intersection Km. 37 measured out of Buenos Aires.

The Recalada Pilot takes all vessels to Intersection only, where another Pilot comes aboard, as follows:

– if bound for Buenos Aires, a Port Pilot.

– if bound for La Plata, a river Pilot to La Plata Roads where at La Plata Port Pilot takes over.

– if bound for upriver, a River Pilot.

(ii) Outwards to Montevideo. Vessels sailing from Argentine Plate ports to Montevideo must take an Argentine Pilot up to Montevideo Roads, not drop him at Recalada.

(iii) Inwards from Montevideo. Vessels arriving from Montevideo come in charge of a Uruguayan Pilot to Intersection, where the second Pilot takes over as above: Uruguayan Pilots, when in Argentine waters are subject to all Argentine laws and regulations.

(iv) Outwards to sea. Outward bound vessels (except for Montevideo) are obliged to disembark their Pilots at Recalada, except when prevented by weather, in which case the Pilot must land at first available port and his travelling expenses back to Buenos Aires are for vessel's account.

Notice: Issued by the River Plate Pilot Association.

Information for Masters

We, the River Plate Pilot Association, welcome Masters and crew members visiting our country and wish them a pleasant stay. We also feel that in order to improve the fluent traffic of all merchant ships, it is convenient to inform Masters about some regulations connected with Pilots as well as recommend them to follow such procedures as:

(1) *Pilot's Category:* Argentine Regulations state that Pilots have the same rights and category as Masters of merchant vessels and thus share the same prerogatives. Accordingly, the Pilot is entitled to the use of a cabin of his own during his stay on board. When vessels have a special cabin for the Pilot, no problem exists. But if this special cabin is not available, another cabin with appropriate facilities in adequate condition of hygiene and cleanliness should be supplied.

(2) *Arrangement for Embarking and Disembarking Pilots:* Strict observance of IMO Rules and Argentine Regulations should be kept regarding:

(a) distance from sea level to the point of access to the ship's deck.
(b) firm resting of accommodation ladder against ship's side.
(c) absolute clearance of all discharges.
(d) horizontal position of platforms.
(e) proper security and tightness of angle slope, stanchions, rigid handrails or handgrips.
(f) adequate lighting at night-time.
(g) the obligation of an officer to be always present to supervise all these procedures, maintaining radio contact with the bridge of the ship.

If any of these recommendations were not strictly followed, the Pilot may refuse to board the ship.

(3) *Duration of Pilotage:* Masters should be advised that according to present Argentine Regulations the duration of the pilotage for a Pilot who is working alone is 6 hours. If the latter evaluates he can finish his duty, from the moment he goes to the bridge till he reaches his destination, in a period of no more than 8 hours, he will remain on duty. Otherwise he may anchor the vessel and rest for 6 hours. If the speed of the ship is such that the total duration of the pilotage is more than 8 hours and the lost time at anchor for the Pilot's rest is desired to be avoided then *2 pilots should be engaged.*

(4) *Trim by the Stern:* Masters of loading ships should take into consideration that later, when the ship is underway from "Zona Comun" to "Recalada Pilot Vessel", it should be possible to trim the vessel no less than 0.45 m. (1 ft. 6 in.) by the stern or more in accordance with the Pilot's requirement. This will permit the ship to continue her journey with the convenient tide and avoid her staying at anchor for a very long period of time, given that with even keel it is imperative to wait for an extraordinary High Tide due, mostly, to strong Southerly winds.

C. *River Parana Zone:* Comprises the River Parana from the port of Parana (Km. 600 from Buenos Aires) down to its mouth, and that part of the River Plate limited to the East by its left bank to Punta Negra (Uruguay), thence to Intersection, to the South by the North bank of the access channel to Buenos Aires Port, to the West the right bank of the River Plate from the entrance to Buenos Aires port to Kilometre 0 of the River Uruguay.

On the River Parana, on distances exceeding 200 km. two special Pilots must be ordered, and therefore there will be 4 Pilots on board (2 special and the 2 on turn), and the vessel has to pay for each of them, i.e. 4 times the tariff.

For distances of less than 200 km., the same ruling applies when continuous navigation is requested, which necessitates the employment of 2 Pilots on turn. However, when only 1 Pilot is asked for, only 1 special Pilot is nominated, if specially asked for, and consequently the tariff is double.

(i) Northbound: Pilots for navigation through this zone go on board, Northbound, at Intersection, whatever the destination. If for Uruguayan ports in the River Uruguay, the Uruguayan Port Pilot comes on board off Parana Bravo.

(ii) From River Uruguay. Vessels from River Uruguayan Ports, either Argentine or Uruguayan, change their River Uruguay Pilot for River Parana Pilot at the mouth of the Parana Bravo. However, if proceeding from a Uruguayan port, it is preferable to send the Parana Pilot to the Uruguayan port, and drop the Uruguayan Pilot off Nueva Palmyra. In certain cases the Argentine Parana Pilot can also come aboard at Nueva Palmyra.

(iii) Inside Parana River. There are 2 stations for despatching Pilots in the River Parana Zone; one at Buenos Aires and the other at Rosario. From the port of Buenos Aires Pilots will be cleared to take vessels to the Northern limits of the Zone, as also for vessels anchored at ports or places South of San Pedro, for any destination.

From the Rosario station, Pilots will be despatched to vessels anchored within the Port of San Pedro, and all places to the North of the port, whatever their destination.

At some of the smaller ports in this zone the Prefecture will, to avoid delay to the vessel, authorise the River Pilot to berth the vessel. This request must be made when ordering the Pilot, but Agents at the river port must also apply for a Pilot, and see that he is employed if available.

Draft is ruled by the depth of water at Martin Garcia Bar, which is at present 24 ft. 6 in. at zero. This varies, and from time to time the Prefecture has authorized clearance of vessels up to 27 ft. Occasionally it happens, in spring, that there is less water in the river above Martin Garcia, but the Weekly Bulletin issued by the Authorities covers this and all determining depths on the river routes.

(iv) To Montevideo. Vessels proceeding down river to Montevideo, take a Pilot at Intersection to Montevideo Roads, where a port Pilot boards.

(v) To La Plata. Vessels from up river ports for La Plata drop their River Pilot at Intersection, take another River Pilot to La Plata Roads (optional) and then a Port Pilot there.

The following are extracts from telexes received by a Master from the vessel's Agent (September 1992).

1. Recalada Pilots do not charge overtime costs.
2. Depth between Km. 12 and Km. 42 of the Mitre Channel is 8.06 m. Navigation width at Km. 34.8 is 60 m.
3. The Master is the responsible party with regard to the decision as to where to anchor to await daylight. He should advise Pilot on this matter when Pilot boards. Pilot will then advise best location, so as not to obstruct navigation of other vessels.
4. Pilotage service is now privatised.
5. River Parana Ports: Pilots advise that max. sailing draft is 29 ft. 06 in. for vessels of 225 m. LOA, navigating downriver through Mitre Channel.

   NOTE: Agent recommends 28 ft. max. draft as vessels have gone aground and river is not being dredged.

D. *River Uruguay Zone:* Comprises the River Uruguay from Concepcion de Uruguay, Km. 188 to its mouth, and that part of the River Plate mentioned under the Parana River Zone. All Pilots for this Zone will be despatched through the Buenos Aires Station.

E. *Bahia Blanca Zone:* Comprises the Bay from a line joining the buoys at Punta Tejada and Punta Lobos, up to the ports. There is no pilot vessel on station. The ordering of Pilots for the Bahia Blanca Zone is effected by the Overseas and Coasting Office at that port. As the official tug for taking Sea Pilots to meet incoming vessels is sometimes out of commission, Masters are requested to advise their Agents of the ETA 48 hours in advance. The cost of a special tug is heavy, and on occasions a saving can be made sharing expenses if the tug can take out Pilots for other incoming vessels, and also embark those from vessels outward bound from Bahia Blanca.

F. *Southern Ports:* South of Bahia Blanca and as far as Rio Grande pilotage is obligatory in port, when a vessel requires a Pilot, application should be made to the Pilots' Office of the Naval Prefecture through vessel's Agents in Buenos Aires with at least 5 days advance notice. They go on board either at Buenos Aires, off Mar del Plata, or at other ports as required, and are authorised to operate in all of the Southern ports: San Antonio del Oeste, Madryn, Commodoro Rivadavia and the adjacent oil berths, Deseado, San Julian, Santa Cruz, Rio Gallegos, San Sebastian, Rio Grande and Ushuaia.

Their duties are to act as Port Pilots for entering, mooring, unmooring and leaving any of these ports.

Vessels from South Atlantic Argentine ports, for Montevideo should pick up an Argentine Pilot from Recalada to Montevideo Roads, but if such vessels pass further than 5 miles away from Recalada Lightship and pass direct to Montevideo Roads, there is no such obligation.

G. *Embarking/Disembarking:* Accommodation ladder. The gangway should be lowered to about 3 m. above the surface of the water, and adjusted in such a way that the Pilot only needs to climb the rope for this distance, in order to step on to the gangway. This rope ladder must have all the steps resting firmly against the side of the ship, in accordance with the requirements of the Safety of Life at Sea Convention. Similarly, the gangway must rest against or be secured to the side of the vessel, and Pilots may refuse to board if these conditions are not complied with.

RADIO: All times are given in GMT unless otherwise specified.

Storm Warning, Met. Situation, Weather Forecasts and Notices to Mariners: Are transmitted in clear (A1) in Spanish and then English, daily, from the following stations:

General Pacheco Buenos Aires	LSV	3220.5 kHz	0.5 kW 0130 hrs.	Storm warning Met. resume
	LSV 2	5907.5	0.5 kW	Forecast
	LSV 4	12100	1 kW	
	LSV 5	17520	1 kW	

and again at 1600

while LPD 5 transmits the same information on 512 kHz (5 kW) at 0148 and 1630 hrs.

The weather forecast covers the zone from Rio de Janeiro to Drake Strait and is valid until 1200 hrs. of the next day. The word "nil" is used if there is no information to report, as for example in storm warnings.

Vessels at sea can request a forecast and state of the weather at any time from Meteoro Baires, through Pacheco – LPD on 4177, 4187, 8354, 8374, 11531, 12561, 16708, 16748, 22220 and 22270 kHz.

Radio Trelew	LPZ	20	527 kHz	3 kW	at 1730
Radio Comodoro Rivadavia	LPX	2	474 kHz		at 0400 and 1800 as above.

Vessels at sea in this area can request a forecast from Meteoro Comodoro Rivadavia through LPX 2.

Notices to Mariners and Urgent River Notices: Are transmitted in Spanish and repeated in English by Radio Pacheco and Radio Comodoro Rivadavia.

Radio	LPD 5	512 kHz	5 kW	A2 at 0030 hrs. Plate Area
Pacheco	LPD 6	4268 kHz	0.25 kW	A1 at 1230
Comodoro	LPX 2	474 kHz	3 kW	A2 at 1330 2000
Rivadavia	LPX 27	4428.6 kHz	0.5 kW	A3 at 0400 0800 1200 2100

This station only reports on Lat. 42° S. to 52° S.

In both cases messages are repeated twice at intervals of 1 minute at the times indicated. Notices are repeated daily during 6 days from publication, preceded by the signal TTT, followed by the number of the notice, the letter R and then the text in this sequence:

Zone, sea, river, province, locality, etc.

Lat. and Long. if necessary.

News in question.

Sign off with SHN to indicate the authority (Servicio Hidrografia Naval).

If there is no notice to transmit, the stations will transmit "no hay avisos para navegantes", "no notices for mariners".

Notices to Mariners, and Other Items, in Spanish Only: Notices to Mariners and other special information are given in Spanish only as follows:

Rosario – LSQ 38, 477 kHz, A1, at 1305 hrs.:

Depth of water in the Parana River from Los Pajaros to Los Ratones and also the minimum depth between Santa Fe and Rosario.

Concepcion del Uruguay – LSQ 57, 477 kHz, A1, 0.5 kW at 1300 hrs.:

Information on the Uruguay River from San Javier to Gualeguaychu.

Buenos Aires South Dock (Darsena ur) – LSQ 9, 477 kHz, A1, 1.5 kW at 0400, 0500, 0600, 0700, 0800, 0900, 1000, 1100, 1200, 1300, 1400, 1500, and 1545 hrs. except on Sundays and holidays.

Depth of water on the gauge at Riachuelo.

Buenos Aires Central de Comunicaciones (Prefectura Naval Argentina) – LSQ 4, 524 kHz, A2, from 05 to 10 minutes each hour:

Depth of water indicated by the semaphores at Puerto La Plata and Riachuelo, and of the El Codillo Zone of the Punta Indio Channel referred to zero on the Oyarbide Tide Gauge which is between pairs of Buoys 24 and 25 in the Main Channel, and the new tide gauges referred to under "Buenos Aires", Tidal Signals.

Buenos Aires, Meteo (All A1) – LSV 3220.4; LSV 2, LSV 6, 5907.5; LSV 4, 12100; LSV 5, 17520 kHz at 1705 hrs.

Depth on the River Plate, River Parana, River Paraguay and River Uruguay zones. Buenos Aires, Radio Nacional LRA 870 kHz, A3, at 0100, 1100, 1500, 1800 and 2100 hrs.

Depths of water and met. forecast for River Plate Zone, this station also transmits tidal forecasts at 0100, 1000, 1315, 1600, 1900 and 2200 hrs.

Intersection River Plate – LOI, 524 kHz, A2:

Continuous information on local depths of water, on request.

Recalada – LSR, 524 kHz, A1:

Same as Intersection.

Buenos Aires, Central de Comunicaciones (Navy) – LOL 457.2, 2162.5, 4856, 8030, 13101, 17180, 22840 kHz, A1, at 0230, 0300, 1300, 1330, 1930 and 2030 hrs.

Urgent Notices to Mariners, and Notices to Mariners covering the Argentine Coast and river systems.

Santiago River (La Plata) – LOM, 524 kHz, A2,

from 05 to 10 minutes each hour:

Depth of water on the semaphore at La Plata.

From 10 to 15 minutes each hour:

State of tides in El Codillo Zone of Punta Indio Channel, referred to zero on the Oyarbide Tidal Gauge (between pairs of Buoys 24 and 25).

All Atlantic ports also transmit local Notices to Mariners and weather forecasts in Spanish, the call signs and frequencies are indicated under each individual port, but between the powerful stations at Pacheco (Buenos Aires) and Comodoro Rivadavia, the whole coast is covered by the regular nformation given in both Spanish and English.

Facsimile Reports: Buenos Aires also transmits facsimile reports, of which the following correspond to surface forecasts, valid for 24 hours, and weather on Mercator projection.

		0800/0815 and 2000/2015 hrs.
From station	LRO 69	5185 kHz
and	LRB	10720 kHz

both of F4, white and black with a variation in frequency of plus 400 minus 400 – 5 kW and referred to observations made 8 hours earlier.

From the Antarctic, the Argentine Met. Station at the South Orkney Islands transmits an analysis of the Atlantic area at 0300 and 1700 hrs. from LOK on 4250 kHz and 13051.5 kHz.

Traffic Control and Safety at Sea: The Prefectura Naval Argentina, in charge of shipping activities including safety at sea, maintains a control centre at Buenos Aires, and another at Mar del Plata (where several hundred fishing vessels operate).

Objectives are to prevent collisions at sea or groundings and to keep a safe, expedite and orderly flow of traffic, as well as to alert safety and salvage systems when vessels need assistance.

A – The Controlled Area, from Buenos Aires, covers from parallel 57° W passing through pair of Buoys No. 21 in the Main Entrance Channel to a line from San Isidro (Buenos Aires) to the mouth of the Parana Guazu River.

The Centre is on permanent duty in the following VHF-FM channels:

16 frequency	156.8 MHz	for calls, assistance, urgency and safety.
12	156.6	notices to mariners.
14	156.7	annex to Channel 12.
6 and 8	156.3/4	bridge to bridge use.

Information all vessels in the area, both foreign and national, must inform the Centre of the following:

1. On entering the systems.
2. On leaving the systems.
3. On crossing Km. 57 in the main channel.
4. On arriving at Intersection.
5. On crossing Km. 11 of the Access Channel to/or from Buenos Aires.
6. When anchoring, mooring or unmooring.

In each case, except 2 and 6, they will give the estimated hour of arrival at the next point en route.

Vessels will also report, on Channel 16, the following:

(a) Accident or fire on board.
(b) Sighting another vessel in apparent difficulties.
(c) Sighting any dangerous obstacle to navigation.
(d) Any serious reduction in visibility.

They will also advise, on Channel 12, as soon as possible, if any mark, light or navigational aid is damaged, missing, functioning badly or evidently out of position. Vessels must keep constant watch on Channel 16 from entering the zone to leaving it, and immediately after using any of the other channels will continue to listen on Channel 16. If, for any reason, this is not possible, they will report this to Control Office by Channel 12.

The Centre transmits as routine information urgent Notices to Mariners, ruling weather conditions every 4 hours from 0000 hrs. and depth of water at El Codillo, La Plata Port, Riachuela and Martin Garcia Bar 5 minutes after every hour.

Also tide and met. forecasts at 0900 and 1500 hrs. Storm warnings, visibility reports and obstructions in channels will be transmitted immediately on being reported, and then included in the next routine transmission.

Information can be requested from the Centre at any time.

The Administration procedure is that figuring in the International Union of Telecommunications and/or the Manual for the Use of Mobile services.

Time used in this service is local Argentine time, i.e. GMT minus 3 hours.

Language: Personnel on duty in the Control centre will use only Spanish.

If necessary recourse can be had to the Code groups in the International Signal Code in use, and the spelling and lettering tables therein, or to Code Q.

B – Mar del Plata Centre controls the area from 35° 30′ S. to 41° S. In this zone the system is voluntary for foreign flag vessels. The Centre operates on the following frequencies:

	Coastal Frequency (kHz)				*Ship Frequency (kHz)*			
One:	Type	A3	H	2182	LSO	20	2182	a
				2100	LSO	69	2100	d
				4409.4	LSO	70	4410.8	f
				8754.4	LSO	71	8220.4	g
				13189.5	LSO	72	12410.5	i
	A1	A2		500	LSO	20	500	
	A1			437	LSO	20	437	
				4325	LSO	21	4325	
				12728	LSO	57	12728	

Two: The Mar del Plata Centre maintains a continuous listening watch on:

A1	A2	500	kHz	LSO	20
A1		4325		LSO	21
A3	H	2182		LSO	20
		4110.8		LSO	70
		8220.4		LSO	71

and also listens from 00 to 05 minutes each hour on A1 12728 kHz and from 45 to 50 minutes every hour on A3 H on 2100 and 12410.5 kHz.

Vessels can use any of the frequencies listed under "one" after calling any of the frequencies in "two". In radiotelephony, except for frequencies 2100 kHz and 2182 kHz traffic will be routed in semi-duplex as per frequency pairs as indicated in "one" f, g and i.

In this are Notices to Mariners and Safety information will be transmitted as follows:

A3	H	2100	8754.4	0005 and 0505	Argentine time (GMT −3)
		4409.4	7854.4	0805	Argentine time (GMT −3)
		4409.4	13189.5	1205 and 1605	Argentine time
A1		437	4325	0100 and 0600	Argentine time
		4325	12728	1300 and 1900	Argentine time

Storm warnings or other urgent information will be transmitted in A3H and A1 on 500 kHz and 2182 kHz.

Information: Vessels on entering or leaving the zone will indicate:

1. Position, course, speed, whence proceeding, whither bound.
2. Sailing from or entering ports in the area.
3. Report geographical position every 12 hours counted from time of first advice, giving course and speed.
4. Any change in course or speed which alters the normal route and time at which it occurred.
5. Anchoring in or leaving the area.

Happenings: All vessels will immediately advise the centre of:

(a) Accident or damage to own or another vessel.
(b) Sighting any object dangerous to navigation.
(c) Any serious reduction in visibility, or unfavourable meteorological conditions.
(d) Having observed if any lighthouse, beacon, buoy, etc., is not working properly or is out of its correct position.

Language and Time: As in River Plate Centre.

Time Signals: Time signals are transmitted from LOL Buenos Aires as follows: frequency 475.5, 2162.5, 4856, 8030, 13101, 17180, 22840 kHz, A1. at 0100, 1300 and 2100 hrs. GMT, using the modified modern American system, with dots every second from 54.30 to 54.50, a dash of 8 seconds ending with 4 half-second dashes, every minute to the hour, ending with a dash.

LOL also transmits on 5, 10 and 15 MHz simultaneously in A1, A2, A3. Carrier waves are modulated in 1000 and 440 kHz alternately.

Signal consist of dots every second, omitting the 59th second, and with 1 second interval before the next period commences. Transmissions is from 0800 to 0900, 1100 to 1200, 1400 to 1500, 1700 to 1800, 2000 to 2100, and 2300 to 2400 hrs. Argentine time (GMT minus 3 hours daily), except Sundays and national holidays.

At the end of each period of transmission the call sign is given in morse, and before each period the words Observatorio Naval Argentino are followed by the hour and minute corresponding to the commencement of the next signal.

Modulation on 440 kHz corresponds to the note LA of the fifth octave in the musical scale.

D/F BEACONS: A number of radio beacons specially for shipping have been installed down the coast, in addition to the air beacons which can also be used, though with less accuracy.

There are 8 beacons, and 18 aerial beacons in use as follows:

Practicos Recalada – Lat. 35° 10′ 06″ S., Long. 56° 15′ 00″ W. range 150 miles (on the lightship) frequency 320 kHz, A2.

Signal PR once 9.7 secs., followed by silence 2.3 secs., a long dash 17 secs., silence 1 sec. dash 17 secs., silence 1 sec. PR repeat the cycle, PR again and final silence 14.3 secs., making a period of 120 secs. (2 mins.).

In good weather there are 2 transmissions every 2 minutes, from 02 to 08 and 32 to 38 minutes each hour.

In fog, one 2-minute transmission every 4 minutes from 02 minutes.

Punta Mogotes – Lat. 38° 05′ 32″ S., Long. 57° 32′ 28″ W. range 120 miles. (On the lighthouse) frequency 295 kHz, A2.

Signal PM once 9.8 secs., followed by silence 2.2 secs., dash 17 secs., silence 1 sec., dash 17 secs., silence 1 sec. PM and repeat cycle. PM again, final silence 14.2 secs., total period 2 mins. of the hour.

In good weather 2 transmissions as from 06 and 36 minutes of the hour.

In fog, continuous commencing on the hour.

Bahia Blanca – (On the Recalada Lighthouse) Lat. 38° 59′ 33″ S., Long. 61° 15′ 38″ W. range 350 miles frequency 310 kHz, A2, 0.2 kW.

Signal BB 9.8 secs., silence 2.2 secs., dash 17 secs., silence 1 sec., dash 17 secs., silence 1 sec. BB and repeat cycle, then BB and final silence 14.2 secs., total period 2 mins.

In good weather 2 transmissions 4 mins. apart from 04 and 34 minutes after the hour.

In fog, 1 transmission every 4 mins. from 04 each hour.

Bahia Blanca – (On the Light Buoy El Rincon) Lat. 39° 23′ 12″ S., Long. 62° 00′ 48″ W. range 200 miles, frequency 310 kHz, A1 and A2, 0.15 kW.

Signal RN once, 7 secs., silence 2 secs., 2 long dashes 41 secs., silence 2 secs. RN repeat cycle, but 1 sec. first silence after signal then as before repeat RN and final silence 250 secs., total 6 mins.

In good weather, 2 transmissions from 02 and another 2 from 32 minutes of each hour.

In fog continuously from 02 each hour.

Bahia Blanca – (On the Segunda Barranca Lighthouse) Lat. 40° 47′ S., Long. 62° 16′ W. approx. range 200 miles, 310 kHz, A2.

Signal SB 9.7 secs., silence 2.3 secs., dash 17 secs., silence 1 sec., dash 17 secs., silence 1 sec. SB and repeat cycle, repeat SB final silence 14.3 secs., total period 2 mins. In good weather, 2 transmissions every 30 mins., at 00/02 06/08 30/32 and 36/38 minutes on the hour, in fog, every 4 mins. 00/02, 06/08, etc.

Punta Delgada-Los – Lat. 42° 46′ 00″ S., Long. 63° 38′ 00″ W. range 200 miles, frequency 315 kHz, modulation 1000 kHz modulated A2 signal PD 9.7 secs., silence 2.3 secs., long dash 17 secs., silence 1 sec., long dash 17 secs., silence 1 sec. PD repeat cycle, PD final silence 14.3 secs. total period 2 mins., good weather 4 transmissions every hour at 04, 10, 34 and 40 minutes after the hour. In fog, 2 mins. transmission and 4 mins. silence from 04 of the hour.

San Gregorio – Lat. 45° 01′ 30″ S., Long. 65° 37′ 51″ W. range 200 miles, frequency 295 kHz, A2, 2 kW.

Signal IL 9 secs., silence 3 secs., long dash 17 secs., silence 1 sec., long dash 17 secs., silence 1 sec., IL repeat cycle. IL final silence 15 secs., 2 mins. period in good weather 4 times every hour, 2 mins. each from 00, 06, 30 and 36 after the hour.

In fog, one 2 minute transmission and 4 silence, from 00 in the hour, but fog transmission temporarily suspended.

Cabo Blanco-Loa – Lat. 47° 12′ 12″ S., Long. 65° 44′ 33″ W. range 200 miles (on the lighthouse) frequency 295 kHz, A1, A2, 0.15 kW signal CB 12 secs., 2 long dashes 37 secs., CB repeat cycle CB final silence 250 secs., total period 6 mins. Good weather, twice from 08 and twice from 38 minutes after the hour; fog, continuously from 02.

Temporarily out of service.

Medical Advice: Medical consultations can be made, without charge, from vessels at sea with urgent illness or accidents on board. Messages should be brief, but clear and concise, describing the symptoms of the illness with all possible details, including age and sex of patient and informing what first aid equipment is available on board.

For priority, messages should be preceded by the urgent signal XXX and be signed by the Master of the vessel.

The Medical section of the International Signals Code, 1931, Volume 2, can be used, as also clear language if it is necessary to amplify the message.

Messages should be radioed to "Consulta Radiomedica" followed by the name of the coastal station used.

All consultations are gratuitous, they must be composed in Spanish, and indicate in this order:

Sex; Age; clinical antecedents; symptoms leading to the consultation; probable cause of the illness or conditions in which accident occurred; any other data which could assist diagnosis and facilitate treatment, such as pulse rate, temperature (in Centigrade) character and appearance of the wound, etc., and informing what first-aid equipment is on board.

The following stations at Buenos Aires give continuous service for this purpose:

LPD	4	44.5	kHz	A1	A2
LPD	68	4268	kHz	A1	
LPD	86	8646	kHz	A1	
LPD	32	13002	kHz	A1	
LPD	46	17045.6	kHz	A1	
LPD	91	22419	kHz	A1	
LPD	44	4434.5	kHz	A3	
LPD	8	8811.5	kHz	A3	
LPD	9	13180	kHz	A3	

The Following Beacons, all on A2, may be of assistance

		Lat.	*Long.*	*Freq. (kHz)*	*Time*
Bs. Aires, Aeroparque	OP	34° 31′ 18″ S.	58° 29′ 00″ W.	260	continuous
Bs. Aires, el Palomar	PAL	34° 37′	58° 36′	400	from sunset, on req.
Bs. Aires, Moron	MOR	34° 40′	58° 38′	355	continuous
Bs. Aires, Ezeiza	EZA	34° 49′	58° 32′	365	continuous
La Plata	PTA	34° 53′	57° 56′	250 or 275	continuous
Punta Indio	PDI	35° 18′	57° 16′	325	09/2300
Dolores	DOL	36° 20′	57° 42′	235	on request, range 120 miles
Bahia Blanca	BCA	38° 43′	62° 12′	330	daylight only, not Sundays/holidays, range 250 miles
Comandante Espora	EPO	38° 45′	62° 10′	370	daylight
San Antonio Oeste	SAO	40° 44′	64° 58′	220	daylight
Trelew	TRE	43° 14′	65° 19′	205	daylight, range 300 m.
Comodoro Rivadavia	CVR	45° 47′	67° 30′	230	daylight, range 230 m.
Puerto Deseado	ADO	47° 44′	65° 55′	210	continuous
San Julian	SJU	49° 18′ 30″	67° 46′ 30″	375	occasional, range 150 miles
Santa Cruz	SCZ	50° 01′	68° 34′	245	occasional, range 250 miles
Rio Gallegos	GAL	51° 37′	69° 17′	330	09/2300 350 miles
Rio Grande	RGN	53° 47′	57° 40′	365	on request
Ushuaia	USU	54° 49′	68° 19′	235	on request 200 miles

TUGS: Use of tugs compulsory. Exceptions may be made to vessels with bow thrusters.

Working Hours at Ports of the Interior: The working hours for towage services during the week are from 0700 – 1700 hrs. Saturdays 0700 – 1100 hrs.

Ordering of Towage Services: For a service to be performed during working hours this must be ordered 3 hours beforehand, and up to 1600 hrs. on working days and 1200 hrs. on Saturdays. In Bahia Blanca and other ports this is up to 1100 hrs.

Commencement of the Service: There is 30 mins. grace without surcharge.

Overtime Rates: Working days from 1900 – 0700 hrs., 40 per cent. extra. Saturdays 0000 – 0700 hrs., 40 per cent. extra. At Buenos Aires and Bahia Blanca 1300 – 2400 hrs., 40 per cent. extra. At other ports 1100 – 2400 hrs., 40 per cent. extra. Sundays and Holidays 0000 – 2400 hrs., 80 per cent.

Surcharges for Delays: These will be applied per hour or fraction of about 15 mins.

Cancellations Without Charges: In Buenos Aires it is possible to cancel a service 3 hours beforehand, and at Bahia Blanca 2 hours beforehand during working days. At other ports 1 hours' notice is required.

Cancellations With Penalty: There is a charge of a minimum of 1 hour for services ordered during working days and cancelled. On Saturdays, Sundays and Holidays, the minimum charge is 2 hours.

LOAD LINE: Vessels are permitted to load to their Summer marks all year round at all River Plate Ports as well as Atlantic ports as far South as Cape Tres Puntas; inclusive (Lat. 47° 06′ S., Long. 65° 05′ W.) and provided they are Northbound or Eastbound. All ports in the River Parana, River Uruguay and the River Plate proper are fresh water.

With regard to Loaded Draft, the mean draft and not the maximum must be taken into account, and this should not exceed the Load Line marks.

On the mean draft an allowance will be made equal to the weight of the fuel vessel will consume until it reaches the Sea from up-river ports. No allowance is given to vessels leaving Buenos Aires or La Plata.

LIGHTENING ANCHORAGE: Vessels wishing to lighten cargo and perform topping-off operations may do so in the following positions:

Position No. 1	Lat. 34° 42.0′ S.,	Long. 57° 57.2′ W.
Position No. 2	Lat. 34° 44.1′ S.,	Long. 56° 48.0′ W.
Position No. 3	Lat. 34° 46.0′ S.,	Long. 56° 48.0′ W.
Position No. 4	Lat. 34° 43.9′ S.,	Long. 57° 57.2′ W.

For ships performing such operations in the River Parana, after passing Martin Garcia, the respective zone is between Km. 172 and Km. 173 in the River Parana Guazu, outside the channel. It is forbidden for ships not lightening or topping off to anchor at these points.

SPEED: Maximum Speed in Ports, Channel and Rivers: Vessels operating in the proximity of an open port, close to quays or loading places where other vessels or barges are operating, will reduce speed to a maximum 6 knots.

In particular this refers to

Rosario	between Saladillo and Punta Barrancos (La Florida)
San Nicolas	between Km. 347 and 351
Ramallo	between Km. 322 and 326
Zarate	between Km. 104 and 111
Campana	between Km. 96 and 98

FUMIGATION: *(a) Exemption:* Vessels of foreign registry will be fumigated when proof is not shewn that fumigation has been effected by competent authority, and in a port duly authorised by the International Office of Public Hygiene, or that they have been exempted from such operation by the Health Ministry at authorised ports, within the last 6 months. Vessels arriving with an expired Fumigation or Exemption Certificate, will be fumigated except where a request of 1 month's grace is made to allow vessel to return to home Country or a request is made for an inspection. Should the vessel be in either case in a sanitary condition and have *no trace of rats,* an Exemption Certificate will be granted.

(b) Certificates are of no value if vessel is not in good sanitary condition. The Authorities will not recognize the validity of any Certificate or issue any Exemption Certificate to those vessels which in the opinion of the National Health Ministry, after inspecting the vessel, are not in a good sanitary condition. Both cyanide and sulphur (Clayton process) Fumigation Certificates are accepted by the Health Ministry.

(c) Permit to Commence Loading of Vessels Ordered to Fumigate: No vessels which have had an annotation on their Free Pratique Certificate to the effect that they must be fumigated or inspected, are permitted to commence loading before these requisites are complied with. To this effect the necessary advice will be passed by the Customs or Port Authorities to the Health Ministry for intervention.

(d) Ports Where Vessels can Fumigate: The sulphur fumigation is exclusively effected by the Health Ministry at the ports of Buenos Aires, La Plata and Rosario. The cyanide process is effected by private companies at practically every port of the Republic, provided sufficient notice is given, as at some ports it is necessary to bring the equipment from other ports.

Masters are recommended to ensure that their vessels are in good sanitary condition and free from traces of rats on arrival. Even although vessels may be given a Free Pratique Certificate, this does not always free vessel from fumigation if on arrival at port of loading, the Authorities discover traces of rats on board. The granting of Free Pratique has, in fact, no relationship to the granting of fumigation exemption, and permission to load.

(e) Weevil: The National Grain Board is very strict on inspecting for weevil on board vessels destined to load grain.

TIDES: Following data indicates the tidal range at Spring and Neaps in feet and tenths of a foot indicating the Argentine chart number on which the respective datum is given, and the height to be added to or deducted from that datum at the various ports, which are given in North/South rotation.

	Springs	*Neaps*	*Chart number*

DRY DOCKS AND FLOATING DOCKS: There are 2 dry docks at Buenos Aires and 2 at Bahia Blanca, and 5 floating docks at Buenos Aires, with smaller ones available at Rosario and Corrientes.

The 4 dry docks are under the control of the Ministry of Marine as are some of the floating docks, but all are available for merchant vessels, and private repair companies are permitted to carry out work in these Government docks.

(a) Applications for entering either Dry or Floating Docks are the same:

Name and class of vessel; flag, characteristics; NRT as per Register; nature of repairs; estimated stay in dock, date when ready to enter dock; vessels' Register number and plans of the hull for docking.

Tank vessels must also supply a "Gas Free" certificate.

(b) Buenos Aires: The 2 dry docks are at right angles in the North Basin, on the Northeast side and have the following dimensions:

No. 1 493 ft. (150 m.), breadth at top of entrance 66 ft. (19.75 m.) gradient 1: 300.

No. 2 590 ft. (180 m.), breadth at top of entrance 92 ft. (22.10 m.).

Vessels with large beam can only enter if their draft does not exceed 20 ft.

(c) Bahia Blanca.—The two dry docks are in the Naval Dockyard base.

No. 1 is 705 ft. (215 m.) in length, width on sill 72 ft. 6 in. (22.12 m.).

No. 2 is 672 ft. 6 in. in length (closed) (205 m.).

(d) Floating Docks: There are 7 in Buenos Aires, as follows:

	Lifting Capacity	*Length*		*Internal Breadth*	
No. 1	3,500 tons	413′	126.10 m.	56.0′	17.10 m.
No. 2	1,500 tons	300′	91.50 m.	41.0′	12.50 m.
No. 3	750 tons	216′	65.79 m.	44.0′	13.32 m.
No. B	2,800 tons	397′	110.00 m.	60.7′	18.05 m.
No. C	1,000 tons	246′	75.00 m.	51.4′	15.68 m.

All supply cranes, fire fighting equipment, compressed air, water pumps, electric supply – 380 V. and 110 V. AC or 220 V. DC. Telephone, sanitary discharge for ship's bilges and sanitary services on the dock.

FUEL: Bunker stocks of diesel oil are available in bond at Buenos Aires, Bahia Blanca and Montevideo, thus these ports are the most convenient for taking Diesel bunkers. It is available at other ports, but has to be transported by lorry from Buenos Aires. Lorries are unable to go alongside at some of the elevator berths, and there are no oil barges at Rosario, San Nicolas, or Necochea.

At Buenos Aires there are barges of 150 to 550 tons with tanks to carry all classes of oil. If smaller quantities are required transportation can be effected by lorries from the tanks, the cost being cheaper than barging.

Oil can be transported by lorry to any berth in the Port of Buenos Aires.

STEVEDORES: Working hours are officially 0700 – 1300 hrs.; 1300 – 1900 hrs.; 1900 – 0100 hrs. and 0100 – 0700 hrs. From 1900 – 0100 hrs. and 0100 – 0700 hrs. there is a 100% surcharge on Mondays to Fridays, or 200% on Saturdays, Sundays or holidays. On Saturdays the second shift (1300 – 1900 hrs.) and on Sundays/holidays the 2 day shifts (0700 – 1300 hrs. and 1300 – 1900 hrs.) are paid with 100% surcharge.

In Parana River ports, shifts start and finish 1 hour earlier, except at Santa Fe.

It is forbidden for a man to work more than 1 shift daily, unless no other labour is available at the halls, and the Port Captain agrees.

Use of mechanical appliances is encouraged, and when the Port has not sufficient available, the Stevedoring companies hire this to the vessel to speed up operations.

Stevedoring Damage: It is essential that Master and/or Agent leaves on immediate record any damage done to vessel or cargo by the stevedores, in order to assist in recovering the cost of repairs.

Holidays and Non-Working Days: National Holidays: January 1st (New Year's Day), Good Friday, May 1st (National Workers' Day), May 25th (National Independence Day), June 20th (Argentine Flag Day), July 9th (Independence Day), August 17th (Death of Gral. San Martin), December 25th (Christmas Day).

Non-Working Days: Maundy Thursday, December 8th (Catholic Holiday).

Drinking Water. A good supply of drinking water should be available on board, and in hot weather this must be iced.

WATCHMAN: The use of watchmen is obligatory in all ports, and they are the auxiliary delegates of the Maritime Authority. One man per gangway must be placed. Masters may also place a crew member on watch, but in ports where there is an official service the official watchmen must be used. His duties are to control access to the vessel, control the shipment or discharge of prohibited articles, to revise all packages brought on board or landed, see that the moorings are in order, that the gangway is duly illuminated and that rat guards are in place.

WHARF CLEANING: It is the Master's duty to see that the wharf is properly cleaned up before his vessel vacates a wharf. Port Authorities can do this, and charge the Agents of the vessel last berthed with the cost.

HATCHES: Opening and closing normally carried out by the stevedores in each port. All hatches must be kept closed when vessels are not operating, and when leaving port, must be well battened down and covered with two tarpaulins.

RAT GUARDS: All moorings must be provided with regulation pattern rat guards, 80 cm. diameter.

As part of the rat control gangways must be painted white and fully illuminated at night. Fines are imposed for non-compliance.

FENDERS: At all ports, vessel must be boomed off the quay at least 1 m. 50 cm. Any type of fender meeting this requirement will do, but at San Nicolas, special fenders are supplied.

NIGHT LIGHTS: All vessels when made fast must illuminate that side towards the water with at least one screened light. When vessels are double berthed, the one lying second off must comply with this rule. Similarly, vessels moored with either stern or bows to shore must show a light over the anchor chain to seaward. Vessels laid up or being dismantled are exempt from this, but owners are responsible for any resulting damages.

DESTINATION CHANGE: When at sea if there is any change in destination, within the Argentine, Masters must report this by radio to the Marine Prefecture, indicating the reasons for such change.

DESPATCHES: Once despatch is granted, this is valid for 12 hours only, after which period new despatches must be requested, and reasons given for not sailing. In ports where local conditions impose a longer limit, the maximum allowable is 30 hours.

SEAMEN'S INSTITUTES, HOME AND CHURCHES: There is one hostel for seamen, and five institutes operating in Buenos Aires and one in Rosario, as follows:

Stella Maris (Apostleship of the Sea)
Independencia 20 (corner Ing. Huergo). Tel: 33-0832

Open every day. Vessels visited daily. Hotel – Rooms, Meals, Bar. Information – Port Office, Books, Money Exchange, Souvenirs. Amusements – Dancing, table tennis, billiards, television, excursions. Salon Dance – Wednesdays, Saturdays and Sundays.

Religion – Mass every Sunday at 1930 hrs., and in the morning on board ship by request. Confession at all times. Night prayer for all seamen.

Football games arranged. Books freely exchanged.

The Missions to Seamen
Cochabamba 223. Tel: 33-0326

Open daily from 1900 hrs., with dances on Tuesdays, Thursdays and Saturdays from 2100 hrs. Shop, post office, billiards (three tables), snooker, table tennis, television, bar (beer, no spirits), etc.

There is a service of Holy Communion at 1900 hrs. every Sunday. Football games and excursions arranged. Vessels are visited.

Sjomandskirke
Ing. Huergo 1263. Tel: 33-3861

Open daily from 0800 hrs. Library, billiards, table tennis, sightseeing visits arranged, as also football matches. Vessels visited every day.

Church services every first Sunday at 1030 hrs.

Axel Johnson Minne till Svenska Sjoman
Juan de Garay 80. Tel: 33-7304

Open daily from 1800 hrs. Library, sightseeing arranged.

Details of religious services on board of Swedish Church in Azopardo 1428 (round the corner from the Johnson Foundation).

Dansky Kirke
Carlos Calvo 257. Tel: 33-9154

Danish seamen are welcome at the Norwegian Centre, while at the Church the office is open every Tuesday from 2000 hrs. to 2200 hrs. for assistance, and the Young People meet on Tuesdays and Fridays from 2000 hrs. to 2200 hrs., all being welcome.

Church services are at 1000 hrs. every Sunday, and on third Sunday in every month at 1600 hrs.

Finnska Sjomens-Kyrken. Suommerimien Kirkko
San Juan 234. Tel: 33-6797. Open daily 1800 hrs. to 2200 hrs.

Rosario: The Missions to Seamen at Sarmiento 209.

THE RIVER PLATE (See Plan)

The River Plate, or Rio de la Plata, is formed by the rivers Parana and Uruguay, and is one of the greatest river systems in the world, the Basin covering nearly four million square kms. It is some 150 miles long, and the mud and sand in the waters give a thick brownish colour. Tides are small, but the water level is subject to frequent and sudden fluctuations on account of the weather.

The official depth at zero of the long entrance channel from Recalada to the Port of Buenos Aires is presently (this varies slightly from time to time):

	Width of Channel (m.)	*Depth* (m.)	*Alternative Width* (m.)	*Alternative Depth* (m.)
Punta Indio	100	9.20	200	8.00
Intermedio	100	9.75	200	9.15
Paso Banco Chico	100	9.91	200	9.15
Buenos Aires Roads, Km. 37	100	9.75	200	9.30
Access Channel, Km. 37-7.3	100	9.00	—	—
North Channel, Km. 7.3-0.9	100	9.60	—	—
South Channel, Km. 6.2-0.1	140	8.20	—	—

From Recalada Lightship West the Bay is all fresh water.

Vessels drawing 31 ft. or even 32 ft. (fresh water marks) frequently navigate safely. The tidal rise and fall is from 3 ft. to 5 ft., but the state of the river is influenced to a far greater extent by the force and direction of the wind. There is no guarantee that a vessel drawing 31 ft. may not be caught by low water caused by a North wind, which carries the water seawards. Just as a North wind will reduce the depth of water, so a Southerly or Southeasterly wind raises it considerably, often several feet.

Winds from S.W. to E.N.E. through North make the level drop, North being the strongest in this sense.

E.N.E. to S.S.W. winds make the water rise, S.S.E. having the greatest influence.

Between S.W. and S.S.W. or N.E. and E.N.E. the influence of the winds is much less.

Vessels often touch bottom, or even bump slightly, but as the bed of the river is soft mud and silt, one never learns of these ships reporting damage. The Plate Pilots, of course, warn Masters of this not infrequent occurrence. The docks and basins in the port also have soft mud bottoms, except for the entrance between North Basin and Dock 4, and it is quite customary to see vessels lying safely aground when loading or discharging.

RECALADA LIGHTSHIP: Vessels enter the Plate system passing the Recalada Lightship, 16.8 miles South of Montevideo at Lat. 35° 10′ 06″ S., Long. 56° 15′ W. At this point it is obligatory to take an Estuary Pilot, if proceeding West, and a minimum 24 hours' notice must be given both to Agents in Buenos Aires and to Recalada Lightship.

The Recalada Lightship and Pilot Station is a small vessel, whose hull is painted in vertical black and white stripes, 2 m. wide, and with an orange/red housing.

Apart from the usual pilot lights (white above red) there is a lantern on the foremast, with a white flash every 8 seconds (1 second light, 7 seconds eclipse) placed at 19 m. above river level, range 12 miles.

The lightship also has a fog signal, period 30 secs. sounding for 3 secs. and silent for 27 secs.

Radio call sign is LSR on 500 kHz type A1, transmitting in clear every hour from 05 to 08 and 35 to 38 minutes. Operator on watch 08 – 10, 12 – 14, 16 – 18 and 20 – 2200 hrs., also listens on 462 kHz using 437 kHz as working frequency. For ship to ship 468 kHz or 156.3/156.4 MHz. 2182 kHz and 2065 kHz are used in A3 H/J as well as 4125/4239.5 in A1 or 3860.5 in A3, for P 3 156.8 or 156.7 MHz.

Punta Indio Channel

The term "Adjacent Zone" comprises the zones of the main channel of the River Plate which extends 500 m. to either side of the buoy at Km. 57 and Buoy No. 30 at Punta Indio Channel, likewise 300 m. on each side, outwards, of the pairs of buoys marking the Punta Indio Channel between Buoys No. 30 and 1.

Vessels navigating in these zones have equal privileges to those navigating the Punta Indio Channel, which comprises the zone of the general channel of the River Plate between Buoy No. 30 and the Recalada Lightship following the route buoyed for ocean going vessels by the Ministry of Public Works.

Vessels drawing over 24 ft. entering or leaving the River Plate are obliged to traverse the Punta Indio Channel from Buoys No. 1 to 30, and the Adjacent Zones existing between Buoy No. 30 and Km. 57.

Westbound traffic, after passing Buoy No. 30 will leave Buoy No. 31 on the port side, and continue along the North adjacent zone to Km. 57.

Eastbound, when water level permits, after passing Km. 57 will keep to the South adjacent zone as far as Buoy No. 32, then to the North leaving Buoy No. 31 to starboard and then heading for pair of Buoys No. 30. Should the water level not allow this at Km. 57, vessels will follow the North adjacent zone to Km. 66, then take the South zone to Buoy No. 32 and then as above, leaving Buoy No. 31 to starboard.

Vessels drawing 21 ft. and up to 24 ft. inclusive must follow the route of the general channel and the corresponding Adjacent Zones and may make use of the Punta Indio Channel or not, depending on the depths of the river.

Vessels drawing 19 ft. but under 21 ft. must use the general channel of the River Plate and the corresponding Adjacent Zones, but can only use the Punta Indio Channel between Buoys No. 19 and 23 when depth of the river makes this advisable.

Vessels drawing less than 19 ft., wishing to follow the route of the main channel, may do so through the corresponding Adjacent Zones but are forbidden to navigate along the Punta Indio Channel unless there are no other ships in that channel, which by reason of their draft, must navigate there. They must use the adjacent North Zone when Westbound, or South Zone if Eastbound.

Between pairs of Buoys No. 20 and 30 no crossing is permitted in the channel, neither is overtaking allowed. The Eastbound vessel should adjust speed to avoid such crossing with an entering (Westbound) vessel.

INTERSECTION: This Pilot Station, near Km. 37 and 166 km. West from Recalada is on the South side of the principal channel, at Lat. 34° 41′ 04″ S., Long. 57° 57′ 05″ W.

Call sign is now LSP on 500 kHz or other frequencies as for Recalada. Operator on duty from 0800 – 1000, 1200 – 1400, 1600 – 1800 and 2000 – 2200 hrs.

At this point the estuary Pilot concludes his stint, inwards, or takes over outwards, and Port Pilots for Buenos Aires take over or finish. Similarly up river Pilots for vessels bound for Uruguay or Parana Rivers take over or deliver vessels here.

If, owing to the bad weather or force majeure, the launch cannot transfer Pilots, by day the blue flag with the letter "P" normally flown at the fore will be struck, or by night the red and white pilot lights will be extinguished, and a red light exhibited at the stern.

At Intersection vessels anchor while waiting for draft to proceed to the Parana or Uruguay Rivers, as well as those awaiting berth in Buenos Aires.

The holding ground here is not good, being soft mud. All ships drawing more than 15 ft. must, before leaving Martin Garcia or Interseccion outward bound, ascertain the state of the channel from LSP (Radio Interseccion) who will give the departure time, draft, and speed of vessels navigating in the channel. Only after receiving this dual information can Masters and Pilots decide to proceed, and then must communicate time, draft and speed to Radio Interseccion. Vessels drawing less than 15 ft. can navigate freely between Martin Garcia and Interseccion, but must give way to vessels of deeper draft.

INTERSECTION TO MARTIN GARCIA: No vessel may cross the bar drawing more than 7.92 m. (26 ft.) (often less) and with a minimum speed of 10 knots. For those with less than 10 knots but not below 8 knots, vessels of 5,600 tons or over cannot exceed a draft of 6.70 m. (22 ft.) or those of lesser tonnage, 6.85 m. (22 ft. 6 in.).

If speed is below 8 knots but above 5 knots, the maximum draft admissible is 6.1 m. (20 ft.) but such vessels must request a clear channel. Ships of less than 5 knots, and tug convoys will request special permission from the Naval Prefecture.

From Intersection (Km. 38) to Martin Garcia (Km. 106) vessels will anchor near Km. 37 until there is sufficient water, with 1 ft. under the keel and a rising tide or river. If it is calculated that the vessel will have 3 ft. clear through the whole passage, she may leave, but on a falling or stationary river, she must adjust speed to avoid the difficulties between Km. 37 and Km. 79.

From Martin Garcia to Intersection, vessels drawing 22 ft. 6 in. or more will leave when conditions assure 1 ft. 6 in. of water under the keel. It is essential to radio LSP as above to check on tides, etc. Such vessels coming down river must also communicate to LSP the passing of Km. 101 and 38, while those going up river must advise passing Km. 38, 72 and 101.

In the sector Intersection/Martin Garcia vessels may anchor in any suitable place until depth of water permits them to go upstream on a rising river.

No vessel drawing over 4.6 m. (15 ft.) may cross or overtake another between Km. 47/52; 57/72; 83.5/95 and 100/106; Should a crossing appear necessary in any of the prohibited zones between Km. 38 and 79, the ship which commenced to navigate with 6.8 m. (22 ft. 6 in.) and with 0.45 m. (1 ft. 5 in.) under keel will hold back or manoeuvre to avoid crossing, except when the vessels which sailed from Intersection did so on a falling tide. If the crossing were to occur between Km. 83.5 and Km. 96 or Km. 100 to Km. 106 the vessel proceeding upriver will manoeuvre or regulate speed. Nevertheless, if crossing appears inevitable, any vessel affected by such a manoeuvre has the right to lodge a protest on arriving in port or at Intersection.

Vessels drawing 6.7 m. (22 ft.) or more are recommended to cross between Km. 72/74, 80/82 and 96/98. Those drawing less than 6.7 m. (22 ft.) may cross between Km. 52/56 and 98/100 provided that they keep 0.9 m. (3 ft.) beneath their keel.

In any case of grounding which may obstruct navigation, totally or partially, owners must take immediate action to remove the obstruction, including immediate lightening of the ship without waiting for any summary report.

MARTIN GARCIA BAR: The Island itself, in Lat. 34° 11′ S., Long. 58° 17′ W. is an almost circular mass of granite, about 26 m. high and some 3 miles in circumference. Shores are muddy but also rocky.

It commands the entrance to the Rivers Parana and Uruguay, and all vessels using these rivers must pass within 0.5 miles of the shore on the South side, or within less than 1 mile by the Northern Channel. There is an Argentine Naval detachment there.

Important: It is always said that Martin Garcia Bar rules the rivers; this is not strictly correct as, usually in the second half of the year, there may be less water in the stretches above Rosario, and at times even below San Nicolas to San Pedro, where new shallows keep forming which have constantly to be watched. Caution should be used, therefore, from July to January in this connection.

Lighthouse: At an elevation of 38 m. a light is shown from a circular stone tower standing 13 m. high in the centre of the island.

Tidal Signals: These are made from a signal mast placed alongside the lighthouse. See "Plan".

Day Signals: See "Plan".

Night Signals: (White flash)	Cycle: 30 seconds
(Red flash)	Long flash: 2.5 sec. each.
(Green flash)	Short flash: 6/10 sec. each.
White flashes	Rising tide: One long. Falling tide: Two short.
Red flashes	Above zero: For each m.: One long. For each 10 cm.: One short.
Green flashes	Below zero: For each m.: One long. For each 10 cm.: One short.
Green and red flashes	Zero: One green and one red, both short.

Depth of water here varies from hour to hour, with no pattern, and is not dependant on the depth of water in the Parana. The only relation between the River Parana and Martin Garcia and San Pedro Bars, seems to be that with a full and strong river, the water which is blown into the Plate Estuary by Southerly winds against the strong head of the river, makes deeper water than a similar Southerly wind opposed to a smaller stream from the river. Likewise, the water blown out to sea by Northerly winds causes lower depths when the river is running strongly than when it is low. The effect is almost that of a new or full moon on the lunar tides.

It must always be remembered, therefore, that the dominant factors from Martin Garcia seawards are the direction and force of the wind. A Southerly wind will bank up the water, while a Northerly wind will blow it out. There may be, say, 30 ft. in the Parana, with a strong North wind, and less than 20 ft. on Martin Garcia. With the wind in the S.E., the depth at Martin Garcia can rise in a few hours up to 30 ft.

A prudent course is never to attempt to cross Martin Garcia drawing more than 25 ft. even with the river at its highest.

Martin Garcia lies at Km. 99.4 from Buenos Aires, via Intersection, i.e. at Km. 62.4 from Intersection.

Vessels continue North to Km. 140, at which point the Uruguay and Parana Rivers meet to form the River Plate. This is opposite Nueva Palmira in Uruguay, and at this point the River Uruguay buoy numbers start from Km. 0, while the Parana numbering continues from 140 on through the Parana Bravo, which is the Northerly arm of the extensive Parana Delta.

WEATHER: *The yearly average direction of winds* of Force 7 or more, as observed at Recalada Lightship shows:

N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.
0.8	1.3	2.7	3.4	5.2	3.7	1.9	1.3

expressed in per cent of winds observed, the least frequent being the North. Division is relatively even over the year, with perhaps August showing a higher incidence of storms.

The average velocity of winds from the various directions, over the year, is 6.8 knots on the coast or 12.5 knots at Recalada Lightship, the highest figures being from S.E., S. and S.W. at 8.3, 9.3 and 9.2 knots respectively.

Percentagewise the direction of the winds through the year is remarkably even:

N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	calm
12.7	15.8	14.4	14.2	11.3	9.7	6.8	9.2	5.8

Visibility in the Plate area is normally good; rain storms may temporarily affect it, but these are usually of short duration. Fog (visibility less than 1,000 m.) or mist (visibility 1/2,000 m.) occurs from April to October, with June showing the highest percentage of fogs (13%). North winds seem to favour the forming of fog, as these figures show.

Direction	Calm	N	NE	E	SE	S	SW	W	NW
fog (%)	11	24	17	5	12	6	0	3	13

Fog on the river forms by a cooling from below of warm air which drifts from E. or N.E., and is formed only when the temperature of the air is greater than that of the water. If the current augments its velocity, the fog lifts and visibility improves at sea level. Shore fogs usually affect only the coast and are of short duration.

Rain falls, on average, 92 days a year, with a total of 1,089 mm. yearly in Buenos Aires, spread evenly through the year with a high in January of 113 mm.

Humidity is high, on average 77% with 82% Winter, and 71% Summer months.

Electric storms are not frequent, and usually limited in extent.

Average yearly temperature is 16.6°C, in Summer 22.2°, Autumn 17.2°, Winter 11.2° and Spring 16°. Extremes correspond to January 43.3° (all-time high) and minus 5.6° in July.

ACTION OF THE WIND ON TIDES: In this large body of enclosed and shallow water winds up and down its axis raise or lower the water level very appreciably.

Cross winds in general have much less effect, and the inner and centre sections of the Plate show greater variations than the outer part. We show below a table as estimated by the Hydrographic Office, based on many years observations showing the variations, in cm., due to speed and direction of the winds. The values quoted must be applied to the astronomic tidal figures to arrive at a net level over datum.

Four new tide-gauges have been installed – 2 in Punta Indio Canal, at Km. 99 and Km. 180, and 2 up-river. Eventually four more will operate at Palermo, Banco Ortiz, Martin Garcia and Atalaya. Connected to the Hydrographic Office, the date will be incorporated into the regular tidal bulletins.

Table showing variations in river level according to force and direction of wind in the River Plate
expressed in centimetres.

	Kilometres/hour								
	10	20	30	40	50	60	70	80	sign
N.	18	30	39	48	60	72	84	96	minus

(Source: Naval Hydrographic Service)

The tidal forecasts transmitted regularly over LRA (870 kHz), in telephony, in Spanish are, therefore, a combination of astronomical tide figures and meteorological influences on this basis.

Wind direction also affects the hours of the tide. In general, time of high water is not affected, but low water can be delayed or advanced by the wind force.

MITRE CHANNEL: The new channel, 5 miles off shore and 28 miles long was opened in 1976. It is between Km. 12 of the access channel to Buenos Aires and Km. 56 of the Parana de las Palmas branch of the River Parana, opposite San Fernando.

It was dredged to depth of 32 ft. with a width of 130 m. but silting up and lack of dredging have reduced the depth to 29 ft.

At present, ships going up river are allowed to use the channel but to proceed only as far as Zarate, with a draft of not more than 27 ft. (a maximum draft of 28 ft. is permissible but 2 ft. safety margin must be kept below the keel) and, because of the sharp bends in the river, the length must not exceed 220 m.

All the ships navigating down river can use the channel en route to ports in the Plate or to the sea, and the draft is limited to 27 ft. and the length to 220 m., as above.

The Mitre Channel shortens the distance between Buenos Aires and the grain loading ports up river by 36 miles compared to the Martin Garcia route Both routes are almost the same distance from Intersection. Campana is brought 95 miles closer to Buenos Aires, and Intersection about 90 miles.

The big advantage of the Mitre Channel is that ships can navigate with a draft of 27 ft. compared to an average 24 ft. via Martin Garcia, and without the risk of having to wait for more water at the bar, especially if drawing over 24 ft. This applies to ships loading grain at up-river ports and to those proceeding to and from Campana.

Vessels proceeding up river to ports beyond Zarate must still use the old Martin Garcia route. It is expected that such vessels drawing up to 27 ft., will soon be allowed to use the Mitre Channel, but some of the bends in the river above Zarate will probably have to be straightened out first.

Ships coming down river from Km. 456, just above San Lorenzo, or further South, if intending to proceed via the Mitre Channel must not draw more than 27 ft. As a point of interest, the depth of the river from Rosario to San Pedro is, on average, more than enough for ships to load to the 27 ft. maximum fixed, at present, from Km. 177 to Zarate. The Hydrographic Office records the river level, and can estimate ahead prospects of the depth of the water, and Owners should consult Agents before committing a vessel.

The regulations state that vessels over 120 m. in length or 18 ft. in draft may navigate only in day-time. The maximum speed is 12 knots, unless expressly agreed with the coastal radio station.

In the stretch between Zarate and Km. 177 (the junction with Parana Guazu) navigation down river is without restrictions but up river it is limited to pushed convoys not more than 225 m. long or 28 m. wide or 9 ft. draft, to ferry boats or to vessels not over 35 m. long or drawing not more than 11 ft. At night time, navigation is permitted to ships with a length or draft not more than 12 m. or 18 ft., respectively, to pushed convoys as above, and towed convoys not over 180 m. long or 28 m. wide.

Vessels over 35 m. long which cannot communicate with another by VHF or with the Coastal stations must not cross or overtake in the bends and stretches given below, and in any case, no vessel over 60 m. in length may do so; between Km. 175/177; 156/158; 148/149; 138/142; 134/137; 130/132; 124/128; 118/120; 105/108; 99/101; 89/91; 46/52.4. Any vessel navigating up stream in the Parana de las Palmas and meeting another coming down in the stretch 175/177 (i.e. the fork of the Parana de las Palmas – Parana Guazu), must regulate its speed until the other has cleared the sector. Similarly, if coming down river towards the Parana de las Palmas a vessel sighting another between Km. 230/235 of the Parana Guazu must regulate her speed until the other has left the stretch. Also, any vessel in the River Parana or Parana Guazu about to enter the Parana de las Palmas and sighting another coming up that branch of the river, is obliged to regulate her speed until the other has cleared Km. 177.

Ships over 35 m. long or 11 ft. draft must not anchor outside the waiting zones which are between Km. 62/75; 108/111; 120/123; 149.5/153, and those under 35 m. in length or 11 ft. draft must not anchor in the dredged channel between km 46.5 and 56 or in the bends and stretches between Km. 177 and 46, indicated above, or off Campana between Km. 95/99.

It is prohibited to extract sand or to practice nautical sports and water-skiing along the route.

Ship navigating between the Mitre Channel and the port of Buenos Aires may turn either at Km. 12 (the junction of the Mitre Channel and the Access Channel) or at Intersection depending on the weather, cargo and manoeuvrability of the ship, and with the prior consent of the Traffic Control of Buenos Aires. At Km. 12 at least 1 tug must be used for ships between 120 and 200 m. in length, and 2 tugs, if over 200 m.

Ships over 120 m. long when turning at Campana to come down river, must use one tug. Permission from the Zarate Coastal station is required for berthing and unberthing.

When passing under the Zarate-Brazo Largo Bridges, ships must have an anchor at the ready and an emergency electric generator on standby.

Ferries crossing the rivers must coordinate their movements with other vessels navigating, through the Zarate Coastal Station.

In the stretches where crossing is not allowed in the Parana de las Palmas, vessels longer than 60 m., going down river, must blow 3 blasts on the whistle – 1 long, 1 short, 1 long – to indicate that their length is more than 60 m.

All ships must reduce speed, consistent with their steerage-way, in the following stretches: off the ports of Zarate and Campana; when passing under Zarate-Brazo Largo Bridges; between Km. 69/70 (local quay).

Pilotage regulations are that of Buenos Aires port. Pilots take vessels between Intersection and Km. 12 of the Access Channel. However, revised regulations make an exception for Parana Pilots who are now authorised to operate on this stretch when vessels are proceeding to and from the Mitre Channel/Parana de las Palmas. This avoids the inconvenience and expense of having to send out the port Pilot by tug to Km. 12 or to bring him back, and the alternative of having to embark and disembark him at Campana.

When ships are coming to Buenos Aires from up-river ports, the port Pilot is sent out on the tug needed to turn the vessel at Km. 12, and vice versa.

PARANA RIVER: Maximum drafts permitted up to Km. 585 (Santa Fe) are governed by the Martin Garcia Bar, and must also, logically, take into account river conditions.

The River Parana rises in Brazil, and is formed by a junction of a number of rivers, the principal tributary being the Paraguay River.

It is a great river at all times, conveying an immense volume of water to the Atlantic. The Northern bank is comparatively high and rocky, the Southern bank low.

The stretch above Rosario is entirely riverlike in behaviour with an annual flood, rising and falling yearly. From Rosario to Martin Garcia Bar, where the river joins the Uruguay River to form the River Plate, there is also an annual flood, but this part is also influenced by the Plate tides. This section can be divided into two, from San Pedro to Villa Constitucion where the tidal fluctuations are always felt, and from Villa Constitucion to Rosario where the tide makes its influence felt only in periods of low water in the river.

Maximum depth in the river is normally reached in March and the low in September, but it is irregular in behaviour. There is a possibility that the series of dams being built in Brazil for hydro-electric purposes may eventually regularize the river by permitting some control over the seasonal increases.

When the river commences to fall, care must be taken in calculating loaded draft a few days ahead, as the official figures may be reduced one or more feet without warning.

HIGH AND LOW WATER: Maximum and minimum figures registered between Rosario and San Pedro in the last ten years.

		Jan.	*Feb.*	*March*	*April*	*May*	*June*
High	Max.	32′	32′ 8″	33′ 7″	36′ 3″	37′ 9″	30′ 5″
	Min.	27′ 2″	29′ 2″	29′ 2″	28′ 7″	29′ 5″	25′ 3″

	Min.	23′ 9″	21′ 8″	21′ 7″	23′ 3″	24′ 3″	24′ 3″

MAXIMUM DRAFT UP RIVER: When vessels by reason of their loaded draft have to complete loading at Buenos Aires or La Plata, they should never load deeper than 2 ft. less than the offical draft on the River Parana.

In the sector San Lorenzo/River Plate, when the height of the river is 4 ft. or more, 1 ft. must be calculated below keel depth; when the river is under 4 ft., 2 ft. clearance must be calculated.

In the sector Parana (Santa Fe)/San Lorenzo, when the height of the river on the hydrometer at Santa Fe is 5 ft. 7 in. or more over zero, 2 ft. must be calculated under the keel with vessels of under 50 fiscal units, or 2 ft. 6 in. over that size. When the depth on the hydrometer is less than 5 ft. 7 in. (1.70 m.) then 2 ft. 6 in. and 3 ft. 6 in. respectively must be allowed.

These safety margins for the Parana/San Lorenzo/Santa Fe zone refer to river navigation; in access channels and ports a margin of 1 ft. is sufficient.

The references to river height refer respectively to Rosario and Santa Fe.

A falling or rising river will also be taken into account.

BRIDGES: A road and rail bridge has been built from Zarate (Km. 107 on Parana de las Palmas) across the various islands and arms of the Parana to Brazo Largo (Km. 180 on the Parana Guazu). The span on this arm of the river is over 200 m. and clearance at high water 45 m.

A bridge from Resistencia (Capital of the Chaco Province) connects with Corrientes (Capital of Corrientes Province). This does not affect ocean shipping, beyond that going to Asuncion, and the clearance of the main span is 40 m. above high river level.

Two bridges have also been built over the River Uruguay, one at Paysandu, which will not affect ocean shipping, and another at Puerto Unzue to Fray Bentos, in Uruguay. This latter has a 220 m. span with 36 m. clearance above river level.

SHIPMASTER'S REPORT: 1979.

General: This river and its approaches serve the major ports of Montevideo, Buenos Aires and Rosario and numerous smaller ports.

The hinterland and Pampas of this area is of major importance as a grain exporting market and frozen meat exporter.

For the most part the river is shallow giving a maximum draft depending on suitable tide of 33 ft.

Although Argentina is self sufficient in oil, from her wells in the South, with prices around 70p per gallon (20.7.79) cheap by world standards, she imports about 300,000 tonnes of LPG per annum mainly from the Gulf and Venezuela.

The majority of the LPG is shipped during the Southern Winter with approximately eight 30,000 tonne shipments annually.

Shipments from Venezuela are in smaller vessels of the 15 – 30,000 cu.m. size.

All LPG is for the Account of Gas Del Estado, the state Gas Corporation, who tender for contracts from the major Gas traders generally bi-monthly.

The storage capacity at Doc Sud Buenos Aires is about 20,000 tonnes.

Currency is the Pesos which is very much orientated towards the U.S. dollar. The dollar is used for most commercial transactions.

Approaches to The River Plate:

Chui D/F (ALRS 5046) on Brasilian border is good.

A good longitude is obtained by 200 m. line. On Chart BA. 3064 the bank in the region of Lat. 35° 08′ S., Long. 53° 34′ W. is pronounced.

Cape St. Maria comes in at 35 miles on radar.

Punta Jose Ignacio is distinct on radar at 22 miles, light observed at 19 miles.

Isla Lobos observed at 26 miles on radar.

A strong N.E. current set is apparent from the 200 m. line to Isla Lobos, particularly so about 40 miles East of Lobos. Pta Del Este Light is difficult to pick out from the shore lights. This area is an important holiday resort area. A new light has been established: Fl. R. ev. sec. position Lat. 34° 51.8′ S., Long. 54° 44.0′ W. Vis. 25 miles.

Anchorages: On 2 occasions the vessel has anchored well East of Zone Alpha before proceeding to lighten. Once each in position Lat. 35° 10′ S., Long. 55° 32′ W.in15 m.andLat. 34° 57.5′ S.,Long. 55° 37.5′ W.in13 m.

It is wise to pay out plenty of cable as the wind can increase quickly.

There are 3 lightening or Topping Off anchorages – Alpha the most commonly used one being 10.5 miles South of Montevideo Pta Brava, Delta 39 miles to East and Bravo 36 miles to S.W. are little used.

Areas as marked on Argentina Charts H. 113 and H. 116 are not rigidly binding and it is as well to take advantage of the deeper water 3 miles to East of Zone Alpha.

There are 3 D/F stations in the area.

Carrasco (CAR) as Admiralty light and Radio signals (ALRS) 5036 good – Montevideo Airport. Continuous Aero 24 hours.

South Airport (CRO) 305.7 m. – Lat. 34° 50.5′ S., Long. 56° 01.5′ W. Aero Cont. 24 hours

Pta Gorda (BC) 340 m. – Lat. 34° 54′ S., Long. 56° 05′ W. Aero Cont. 24 hours.

Banco Ingles North Buoy moved position about 1.2 miles East to Lat. 35° 05.4′ S., Long. 55° 52′ W. light very weak.

The foul areas marked on Argentina Chart H. 113 and BA. 1749 (C) do not exist according to the Masters of local lightening ships and Pilots.

A – Lat. 35° 03.0′ S., Long. 55° 59.0′ W.
B – Lat. 35° 03.0′ S., Long. 56° 04.0′ W.
C – Lat. 35° 08.8′ S., Long. 56° 12.7′ W. BA 1749
D – Lat. 35° 09.0′ S., Long. 56° 15.9′ W.
E – Lat. 35° 11.0′ S., Long. 56° 14.0′ W.

The D/F on Isla Flores (ALRS 5038) is not operating and the light is very weak.

The 2 buoys to S.W. of Zone Alpha to Recalada are in position but no lights observed on passing them (20.7.79)

Communications: VHF: Montevideo Movement Control (ALRS 6-H1010) speaks little English. We tried to contact them on arrival but got no response. The Agents advise vessel to cable anchoring positions to its call sign 'CWC 104'.

Recalada Pilot Station works on Channel 12, English reasonable.

Interseccion Pilot Station works on Channel 12, English reasonable.

Lightening vessel "Permian Gas" – Channel 68.

Lightening vessel "Lavoisier" – Channel 8.

Bulk Topping off vessel on station Zone Alpha 'Arylanza' of Argentina flag with cranes works Channel 6.

Generally all Spanish communications – ALRS G 2655, 2670, 2680.

Montevideo R/T: Punta Carretas (CWF) 6020 transmits 2182 or 2768. Spanish and good English. Telephone only Montevideo area. Good.

Argentina: 'Pacheco' LPD, LPL, LPQ 5905 (no English).

Weather: Generally the weather in this region has been well documented. Reading publications one gets the impression at times that it can be severe all the time in mid winter. But this is not the case, although one should be on the guard all the time, we had very good weather during a stay of 16 days in July, generally light winds, clear skies, and little rain. Although quite quickly the opposite can happen.

Visibility can be excellent, up to 20 miles.

Forecasts for the area are predominately in Spanish.

The Fascimile that is published for Buenos Aires LRB, LRO 5910 was not received on any frequency.

Tides: Again very well documented. Generally out at Zone Alpha the tide is not strong and has little effect. Getting into Recalada and farther West to Interseccion the tide has a big effect and can alter very quickly with the wind.

The tides strength is very marked in the shipping channels from Recalada Westwards to Buenos Aires.

Density:		
	At Zone Alpha	: 1019
	At Recalada	: 1012
	At Km. 45	: 1005

Lightening: As previously mentioned there are three Zones for transhipping cargo and topping off. The most commonly used area is Zone Alpha the limits of which are not obligatory.

Before lightening can commence the ship has to be cleared by Customs/Immigration who come from Montevideo after travelling up from Buenos Aires. They either board by tug or by the first lightening tanker.

9 persons board with 4 persons leaving when formalities are complete leaving 5 persons onboard – 6 when Pilot boards at Recalada. They consist of Agency Representative, Immigration, Customs, Prefectura of Police, Gas Del Estado rep. etc. Those that stay being Agent, Police (1), Customs (1), Surveyor (1), Gas Del Estado (1). As long as vessels paper work and passes have been well prepared the formalities are quickly dealt with. Generally vessels proceed to Zone Alpha when the Officials/Lightening Tanker is due otherwise needless standby is required because of the close proximity of other lightening operations and draft.

We anchored with Pta Brava 320°×10.4 miles, depth at HW 12.5 m. Plenty of cable on port anchor is required, say up to 8 shackles to guard against any sudden gusts of wind. On occasions up to 10 shackles have been out.

Ships passing through this area are required by Argentina Law to proceed at slow speed, but rarely do with some narrow scrapes. Zone Alpha is joint Uruguay/Argentina territory.

Pratique: Cable to be sent (in Spanish) to Agent 12 hours before initial arrival. Granted when officials board.

Notice of Readiness: Send cable when vessel has anchored, N.O.R. received when Agent boards at Zone Alpha.

Mail: Agent will bring out mail at Zone Alpha and also give to Interseccion Pilot who boards after lightening at Km. 45 if requested in advance.

Money: If requested well in advance Agent will bring money out at Zone Alpha. This helps when berthing at Doc Sud as people can get ashore quickly without waiting for money.

Time: The Time Zone used at Alpha is Argentina time GMT – 3 hours. Uruguay time is on GMT – 2 hours.

Lightening Tankers: At present there are 2 vessels in this operation, however a 3rd vessel may soon be allocated. In the past numerous LPG ships of different owners have been used.

"LAVOISIER": A small semi-pressurized tanker of Argentina registry owned by Navigas.

Vessel has 3 Yokohama fenders floating and 2 small fenders hanging aft. Very good co-operation maintained – vessel was very efficient. The chief officer speaks little English but Master and one Second Mate spoke very good English. All very helpful.

Lines: 3+1 each end in moderate weather. No STBL lines.

Hose: 6 in. Braided wire (wear gloves) – 18 m. total length – 150 ASA couplings.

Tanks: 6 tanks max. temperature: –6°C 4 bar.

Capacity: Approximately 2,800 tonnes.

Rate: 300 t.p.h. Butane, 90 t.p.h. Propane which has to pass through heater for pressurization.

B.P.: Max. 8 bar.

Gangway: Use STBL gangway aft.

Radio: Use STBL UHF sets.

Vessel will take motors, etc., ashore if she is returning to Doc Sud for repair by Cromwell Engineering.

"PERMIAN GAS": Liberian Flag – call sign A8UR. Chartered by Gas Del Estado.

Has 2 Yokohama fenders and tyres forward and aft. Not very satisfactory as operations have to be broken off in any type of wind.

Lines: 3+1 plus two from STBL F & A.

Hoses: 6 in. 300 ASA with 300/150 spool piece. Compoflex type with rope lagging. Total length approximately 18 m.

Tanks: 6 semi pressurized – 6 bars 2 grades handled – not together.

Capacity: 5,200 tonnes max.

Rate: 350 t.p.h.

Gangway: From STBL, a short BOT type.

Radio: Motorola UHF sets from 'Permian Gas'.

Navigas are purchasing another LPG vessel about the same size as 'Permian Gas' and should be on station in October 1979. Generally the transferred cargo is taken to the smaller outports up the River Plate and down the coast, the vessel can be away for up to four days.

With a mixed cargo of Butane/Propane of 30,000 tonnes two to three weeks is the normal length of stay in the River Plate.

Pilot: Pilot does not board at Zone Alpha.

Pilot boards at Recalada Pilot Station at the end of the buoyed channel Canal Indio. Pilot vessel is an old coastal troop transport and has been on station for 10 years. It is painted with red upperworks and black and yellow striped hull.

Pilots board from small white launches which lie alongside the pilot vessels lee side.

Only 1 ship handled at one time, the launch returns to the pilot vessel. Long delays can occur if ships have got bunched up inwards and outwards.

Will use hoist, but have gangway and fixed pilot ladder arrangement ready. Make good lee otherwise Pilot will not board. Inwards pass to North of pilot vessel. Outwards to the South. Pilots generally speak good English.

Pilot vessel new position: Lat. 35° 10.8′ S., Long. 56° 06′ W.

Racon shows up well at 20 miles. No D/F. No boarding with wind speed above 30 m./sec. No anchoring within 1 mile of pilot vessel. Make arrangements for Pilot through Agent via Recalada or Pacheco Radio Station at least 48 hours in advance.

One Pilot to Interseccion Pilot Station, about 7 hours depending on tide. If stopping at Km. 45 for lightening, Pilot stays on board and changes at Interseccion.

In the vicinity of Recalada numerous vessels are anchored so its a case of having to proceed with caution.

Canal Indio: From Recalada to Interseccion, 95 miles.

This channel is marked by light buoys leads to the deeper water off Banco Chico near La Plata and is 50 miles in length to Canal Intermedio with a bend at Codillo.

Generally the depth is 28 ft. CD but patches of 27 ft. have been found between Recalada Pilot Station and No. 1 buoys.

We attempted to manoeuvre with a draft of 28 ft. 9 in. but constantly grounded near the wreck buoys East of No. 1 buoys.

The channel from Recalada to No. 1 buoys passes South of the wreck buoys, these wreck buoys should not be confused for channel buoys as has happened in the past.

Generally the max. draft is 31 ft. with a tide of 1.20 m.

Pilots always seem to think of drafts in terms of feet and tide heights given out in metres.

Vessels of up to 33 ft. have safely transitted.

Once inside the channel at No. 1 buoys the channel is very marked and steeply shelving.

The wreck at No. 17 buoys is to be lifted by a Japanese crane barge early in 1980. There is no passing at this point.

No dredging has been undertaken for five years in Canal Indio but it is hoped to resume in 1980 after Canal Nord and Sur have been dealt with.

On the day we left (20.7.79) three Spanish built suction dredgers arrived ("Buenos Aires", "Terra Del Fuego" and "La Plata") with three more to follow. It is reported that a total of 20 dredgers have been contracted for, partly Government owned as are the Spanish built dredgers and partly German contract work.

It is hoped dredging will start in Canal Nord and Sur late 1979 moving to Canal Indio in 1980 and Canal Mitre 1981.

The buoys are often missing or the lights out.

24 hours transit of all vessels is undertaken. Vessels of less than 22 ft. navigate outside the channel when deep draft ships approach in channel.

Vessels of less than 18 ft. navigate outside channel at all times.

No overtaking from Codillo Bend to Recalada.

Tides can be strong.

Km. 99-Racon not working (as BA.1749)

Tides given on VHF every hour plus 5 minutes in cms.

As long as no hinderances with ships ahead or draft a speed between manoeuvring full and full sea speed is requested.

La Plata Km. 45 Lightening: Further lightening is undertaken off La Plata in the deep water position: Lat. 34° 44.5′ S., Long. 57° 49.5′ W.

Pilots report that the foul area just South does not exist.

Interseccion: Pilots changed here after lightening at Km. 45.

Canal Accesio Buenos Aires: This channel is 15 miles in length and leads from Interseccion pilot vessel to the junction of Mitre Canal, Canal Nord and Canal Sur.

It has a depth of 31 ft. CD min. and is probably the deepest of all the channels in the area.

It presents no problems after final lightening.

The Beacon at Km. 14 on the North side of the channel has been destroyed.

At Km. 14 a forward tug can be engaged at extra charge. This is well worth the additional expense to get the vessel around the bend into Canal Sur and over the shallows.

Canal Sur: This relatively short length of channel leading to the Doc Sud area is 4 miles in length. It presents the worst problems with regard to draft in all the channels but the bottom is of soft mud and no grounding damage has been reported.

Ships invariably always bottom and the channel is kept open by the dredging action of vessels.

The worst area is the Eastern end between Km. 8.2 and Km. 7 with a poor area continuing to Km. 5.

The after tug is taken at Km. 8.2.

The least depth is 22 ft. CD which means vessels up to 24 ft. 6 in. can normally transit and up to 26 ft. with very high tides.

We had 60 cm. tide with a draft of 24 ft. and had to use full power with the vessel listing 5° to starboard when we got to the edge of the channel – Southern edge. The tugs were invaluable at this point.

Pilots report Southern edge of channel worst area. (One large LPG ship recently aground for 2 days at draft of 25 ft. 6 in. – 60 cm. tide and falling. Vessel aground between Km. 8.2 to 7.6.)

As soon as Canal Accesio is left at Km. 10.1 steep shelving occurs which is very marked on Echo Sounder and vessel is bottoming.

No night movements of LPG carriers.

At Km. 1 another shallow area of 21 ft. 6 in. CD is reported but we experienced no difficulty in this region.

Tugs: As previously stated forward tug can be taken at Km. 14 and after at Km. 8.2. When outward bound forward tug leaves at Km. 11 (extra charge) and after tug at Km. 5.

Tugs power varies from 2,000 h.p. to 3,500 h.p.

2 good lines are given to each tug through centre leads fore and aft, they will need them with large LPG carriers when turning in the narrow confines of Doc Sud.

Ante Puerto Sud: Vessel is swung in this area so as to enter Doc Sud stern first.

Clearance is very tight.

Pilot requires both anchors ready and engines prepared for maximum astern power.

Tide depth gauge on North inner entrance.

In Darsena 2 there are 2 floating dry docks capable of handling ships up to 15,000 d.w.t.

In Darsena 1 a Navy Synchrolift of 10,000 d.w.t. capacity has recently been constructed (vertical hoist type, not ramp type).

The new dock outside at Km. 1 in position: Lat. 34° 38′ S., Long. 58° 20′ W., has been completed but not dredged. This is to be undertaken 1980/81 and is intended for large LPG carriers for Gas Del Estado. The breakwater is completed and extends to Lat. 34° 37.9′ S. – 550 m. in N.E. direction.

Doc Sud: Least depth 33 ft. CD. In section 2 on the East side is the oil complex with Gas Del Estado berth North end section 2, South side of bend, East wall second berth. On West side are grain and frozen meat berths. Ships always berth head out. Starboard side to East wall, port side to West wall.

Narrow entrance which large vessels frequently hit, particularly the knuckle on East side which should be guarded against with fenders. From Interseccion to completion of tie up about 4.5 hours. In all of Doc Sud no engine movements are permitted. This is a new regulation.

If using midship gangway this has to be turned forward before arrival so as to land on small pipe jetty. If gangway is aft vessel has to use fixed section or hire boat on the offshore side.

Mooring: 2 headlines, 2 breastlines and 2 springs each end, the leads are not very good. Springs onto dolphins. Dolphins have poor fenders so advise use ships fenders.

Manifold: 12 in. – 150 ASA liquid, 8 in. – 150 ASA Vapour return, VRL has to be left open.

Tanks: Max. tank pressure on arrival to be 50 mbs.

Pumping: 500 to 700 t.p.h.

Berthing: Daylight hours only.

Labour: Shore labour for connection.

Surveyor: Surveyor from independent firm joins at Zone Alpha and makes survey together with Chief Officer before and after each transhipment and at Doc Sud. Generally paper work after each transfer takes about 1 hour. Ensure that signed statement of complete cargo discharged obtained.

Samples: An attempt is made to take samples at Zone Alpha.

Fresh Water: By Barge.

Stores: Arrange by Barge, very difficult otherwise.

Repairs: Cromwell Engineering: – 'Cromeng' generally good. By boat. As previously stated vessel can land motors etc. by lightening tanker if returning to Doc Sud for Cromwell to pick up.

Taxis: Difficult to obtain. Best obtained via Gas Del Estado office. Doc Sud is outside Buenos Aires municipal boundary so off meter. Meter starts at Boca Bridge. Generally about £6 into town in daytime and £10 back at night. No difficulty in getting taxi back at night, try and agree fare. Do not go ashore alone.

Do not take much money with you. Have shore pass. About 20 minutes to town if no delays.

Customs/Immigration: Board at Zone Alpha and again at Doc Sud and on Departure.

Formalities:

2 Stores Lists per department (Deck and Engine combined) (Argentine Official Papers).

1 copy taken off at Zone Alpha, 1 copy for customs at Doc Sud.

2 Copies International Maritime Declaration Health (Standard Form)

1 copy Zone Alpha, 1 copy Doc Sud.

2 Crew Personnel Declarations – (Argentina Forms)

Both Zone Alpha.

30 Crew Lists (Ship's form)

One is stamped by Immigration at Zone Alpha for Doc Sud. No officials onboard at Doc Sud.

Crew Passes – Fichas – Argentine Official Forms.

One for each crew member must contain photo. We used ships Polaroid camera. (Two heads to a shot.)

Stamped at Zone Alpha and *must* be handed back before departure Doc Sud for stamping and then given to Master.

2 Vaccination Lists (Ship's form)

Each time the vessel shifts/heaves up anchor the Agent onboard has to make out a departure declaration for Master to sign and give to Police onboard.

As long as vessel has Argentina papers and photocopier onboard no difficulties should exist.

Bond: Not sealed, quite in order and usual as long as ships staff only consume liquor.

Publications: These notes are in addition to information contained in: BA Charts 1749, 1751, 3561, 3064. Argentine Charts H 113, 116, 118, – 1979

Publications: NP 5 supp-2/78, NP 275 2 & 6 79/78, "Guide to Port Entry". C.N.T. Year Book 78/79.

SHIPMASTER'S REPORT: July/October 1983.

Navigation on the River Plate and River Parana: INWARD: The Uruguay Traffic Control System and Radar Monitoring now extend from the border with Brazil to the Recalada Pilot. Vessels are required to report course, speed, and ETA on passing each designated control point.

Recalada Pontoon was not heard on M/F radio and all messages were passed through General Pacheco. Recalada was slow to answer on VHF, and probably the watchkeeper has to call a Pilot to speak English (The ability to speak Spanish is a very marked asset trading to Argentina).

It is preferable to keep North of "Zone Alpha" and then to head for the small passenger ship that is the Recalada pilot vessel, Racon only about 8 miles.

The dredged channel is quite narrow with strict limitations about overtaking in certain areas. Averagely ballasted ships can pass outside the line of buoys. Subject to the Pilots advice it may be possible to use heavy oil for the 90 miles (7 hours) to La Plata Anchorage.

The Intersection Pontoon has been withdrawn and the operation is now based ashore in La Plata.

The 2 River Pilots are ordered for a suitable tide time to approach the Martin Garcia Channel. Each Pilot requires a cabin with bathroom en-suite, the Masters sea cabin may be refused. One Pilot had a very few words of English, the other none. Their use of English numbers was uncertain, so the Officer of the Watch must be very vigilant. The Pilots listen to 2 VHF Channels and their own radio, which makes the bridge very noisy.

The vessel proceeds always at Best Full Speed but it was difficult to get any programme from the Pilots because of the language problem.

The vessel anchored at 10 minutes notice at Km. 80 for oncoming ships in narrow channel. Then had to heave up as quickly as possible to get over the bar before tide fell.

Speed was reduced turning into the Rio Parana Guazu at Km. 121. The vessel had to stop and drift for sometime waiting for oncoming ships to clear the bridge at Km. 180. This bridge can only be passed in daylight and had a clearance of 45 m. in the prevailing floods which were estimated to be 4 m. over normal tide. If unable to pass before sunset, it is necessary to anchor and wait till the next day.

The vessel anchored for the night at Km. 243 to avoid a dangerous bend in the dark at about Km. 273. However, had to anchor again at 5 minutes' notice for fog at Km. 270. This later cleared and vessel proceeded to anchorage off San Nicolas.

Two anchors were employed, but the order to let go was given much earlier than the indicated place which caused some surprise (due to language difficulties).

The inspection party of Agent, Customs, Coastguard, Port Health, Grain Surveyor and Photographer boarded shortly after the River Pilots left. The forms had been put onboard on leaving La Plata Anchorage and were only completed in time by exceptional effort. The entry formalities were complete in about 1 hour, while the Grain Surveyor took about 1.5 hours.

A Harbour Pilot put the ship alongside, and took her off on sailing. An anchor was dropped for use on sailing.

The river is quite narrow and sparsely marked. The Pilots navigated by the tops of the trees sticking out of the flood water. Some salient points were marked by a single lighted beacon. Buoys marked critical sections. However, these could be capsized by the accumulated weight of vegetation floating down the river. Progress was erratic and diesel was used throughout the River Pilots guidance.

OUTWARD: The normal route down river is the Mitre Canal with a draft of 27 ft., however, this had silted up to 21 ft. The vessel loaded to 23 ft. (fresh water) to pass via the Martin Garcia. There is a similar bridge and restrictions on this route.

The vessel anchored at Km. 210 to wait for daylight for the bridge. Then used the River Parana Bravo to pass into the main river. This was very narrow and twisting in places, the Pilot was observed to be using reverse helm on the canal effect from the banks.

The vessel next anchored at Km. 117 to await a suitable height of tide before passing over the Martin Garcia Bars. However, the hourly VHF broadcasts showed that the tide did rise as predicted, and the vessel had to wait for the next tide.

The Regulations are that a minimum clearance of 1 ft. is required with a rising tide. The dredged channel is 100 ft. wide with minimum depths of 20 ft. – 21 ft.

The vessel sailed on the next tide and past the tide gauge at Martin Garcia when it was 1.3 m.

The Pilot watched the forward echo sounder reading and reduced speed whenever it came down to 1.0 m. However near Km. 70 the vessel first took a sheer to port, which hurriedly corrected by starboard helm. Then she took a list to port and the engine was increased to full speed to push through the shallow. Near Km. 69 the vessel again felt the ground and seawead, again the engine was put to full speed to push through.

At Km. 49 the vessel took a list but continued her progress. The crew working on deck at these times reported hearing rubbing noises.

The vessel anchored at La Plata Anchorage and the River Pilots left. The Recalada Pilot boarded almost 4 hours later as the tide was rising and the vessel sailed for Sea Channel.

At 22 ft. 6 in. salt water the vessel was not as unrestricted as when coming in. It was necessary to slow down in order to allow a deep laden vessel to clear the channel before we entered it. I understand that the normal maximum at the top of the tide is 31 ft.

Again subject to the Pilots advice it may be possible to use heavy oil for this passage.

The Pilot spoke good English and readily gave advice on the river and approaches.

We were bound for Bahia Blanca to complete loading. The Pilot advised that the banks had extended Eastward from the land, and Westward from the sea shoals, so that local knowledge was necessary for the most direct route. Tankers from the South lighten at Zone Brava and then come up to No. 1 Buoys on a North-Easterly heading (at 31 ft.) to avoid the encroaching shoals.

It was apparent that the buoys had been moved to new positions to allow for the movement of the shoals.

BAHIA BLANCA ANCHORAGE: The vessel had been warned that there was a delay of 30 days at Bahia Blanca. The Buenos Aires newspaper listed 37 ships at that port. On arrival it was found that there were 15 ships in the Buoy No. 17 Anchorage, 11 ships in the Buoy No. 11 Anchorage and 10 ships between Buoy Nos. 1 and 4. The local Port Control Radio Station speaks no English, however a Spanish speaking Officer keeping anchor watch kindly translated for us and advised that we could anchor off Buoy No. 4. The arrival telegram was sent from that position.

Contacting other company ships already anchored, it appeared that the actual time to wait was nearly 60 days. The ability to speak Spanish is an untold blessing on the Argentine coast. The Sea Pilots appear to be fluent in English, but the River Pilots and Radio Watch Keepers have no English nor French. The ability to consult ships in the nearer anchorages was most helpful.

The chart shows 3 radio beacons off the port, which are supposed to be in continuous synchronised operation. However we could only find one operating from 4 to 10 minutes past the hour and the half hour in clear weather. El Rincon and Recalada Bahia Blanca seemed to alternate day about.

A water boat of 350 tons capacity will come as far as Buoy No. 11 at a flat charge of U.S.$3,500.

BAHIA BLANCA: 28th July, 1983.

The vessel part loaded at San Nicolas where she was advised of 30 days' waiting at Bahia Blanca, the completion port.

The vessel was assisted by a Spanish speaking Officer keeping anchor watch to contact the Port Radio Station and permission was given to anchor near Buoy No. 4 due to the congestion. Arrival was reported by cable to the Agents from that position. The initial berthing prospect was quoted as being 8th September, then as time past this was amended to 22nd September and 4th October. The ship did actually berth on the 5th October.

Informatively Lloyd's List was found to have shown 57 days delay with 38 ships waiting soon after the ship's arrival. It would seem that the formula should be 2.0 – 2.5 days per ship waiting.

The delays were extended by 'go-slow' strikes, and at least two instances of contaminated cargo ex-silo.

Communications to and from Agents normally only by telegram. The Port Radio Station call sign "L4Z" – "Lima Quatro Zulu", another Control Station is "L2N" – "Lima Dos Novembre", VHF Channel 12 is watched with Channel 14 for working.

The pilot boats are modern fast launches using the call sign "Sierra Papa" 21, 30 etc. If there is a Pilot on board for your ship he may call up in English. The boats work to order and do not stay on station.

For a ship of 25,000 g.r.t. the shift from the Pilot Anchorage (Buoy No. 11) to the Commercial Ships Anchorage (Buoy No. 17) was quoted as U.S.$1,700 in July 1983. However, unless bunkers are needed there is only limited benefit from moving into this anchorage.

The Monacci Agency uses a ferry operator who has large very old white cabin cruisers, the costs were quoted in August 1983 as U.S.$500 per ship visited. In September the cost was quoted as U.S.$700 per ship visited. They operate from Port Rosales which dries out at LW. The Agency appeared to use the boats once a week only.

A water boat also operates from Port Rosales, with a nominal capacity of 350 tons. The cost per trip in July 1983 was quoted at U.S.$3,500 plus the amount of water supplied. In September this was quoted at U.S.$5,200 plus. It normally pumps in with 2 hoses in 3.5 hours. However in this vessel the available ullage was not even and the water boat stopped pumping and disconnected as soon as the first tank was full. Thus it delivered only 250 tons for the same fee! Thus it would seem necessary to ensure that there is at least 175 tons of ullage available for each of the 2 hoses. As the berth dries out where the boat secures, it may be that they will not delay by pumping only 1 hose so that they can get back alongside in the one tide.

The Monacci Agency uses one Shipchandler only, who has to deliver via the same launch described above. There is another Chandler who uses a different boat but the details are not known. All provisions sent to ships have to be cleared by the Customs with quite substantial service fees, quoted as U.S.$100 – $150 per delivery. The Customs also restrict the amount of rice that can be supplied. Of the fresh vegetables and fruit delivered the quality was not good, and condemnations had to be made when they were unpacked. The provisions came only with delivery notes, and the bills for August, September and October were prepared on board after the completion of loading! Those ships who have been to Bahia Blanca before take as much provisions as they can in the river ports, where quality and value are better, and delivery easier.

The Monacci Agency have VHF Channel 9 in their Port Rosales Office for use with their own fleet, and the Bahia Blanca Boarding Agency carries a walkie-talkie, with 60 VHF Channels, but normally on Channel 22A (the U.S. Coastguard Channel). They do not make this information known to the ships under their Agency.

In general they seem very reluctant to talk to ships, probably only a few of their staff speak English. Messages sent only to Monacci were never acknowledged and often not acted upon. Messages sent to Sudocean in Buenos Aires always acknowledged and acted upon. The use of telex numbers is preferred at least for routine messages.

Medical: Three men went to the doctor from the Inner Anchorage and stayed ashore for 6 days until the next weekly ferry trip, the hotel bills being apparently cheaper than the hire of the launch. When the vessel finally berthed after almost 70 days at anchor 12 men were medically treated and prescribed for on board plus additional tests, etc., for 4 ashore. The total fees came to about U.S.$1,000.

Grain Berths: There are 3 berths in use at Engeniro White No. 9 with a sailing draft of 38 ft. 6 in. (port side to, stern in), take bunkers by road tanker. Currently about 800 t.p.h. for 16 hours including overtime from one belt. The plant has been damaged (possibly by a dust explosion), and one belt is out of use at this time. Berth Nos. 5 and 6 are rated at 36 ft. 6 in. sailing draft, port or starboard side to, according to tide when off the berth, bunkers by barge. (Berth Nos. 7 and 8 are shallower, but was in use). This berth loaded 21,750 tonnes in 48 hours into the vessel. However, the subsequent vessel required 5 days for the similar amount due to shortage of cargo in the silos. No. 9 silo seems to be fed by road vehicles, while 5/6, 7/8 are fed by rail.

At both berths the vessels take the ground and dry out up to 10 ft. – 12 ft. at LW. The bottom is said to be soft mud, and every ship loading to the authorised drafts goes aground. The vessel has to wait for the rising tide in order to finish and be certain of the drafts.

On sailing the drafts are read by the Prefectura Naval (Coastguard) and both the Harbour and River Pilots. Thus it is necessary to be very precise when finishing. No surveyor examined the vessel after the initial hold cleanliness inspection by the National Grain Board.

On sailing (head out), with 2 tugs, the ship would not swing to port into the line of the flood tide and the ship came very close to the opposite bank before the port anchor was dropped. The beacons which are charted as being in deeper water are in fact well up on the mud bank and the channels appear much narrower. Two tugs were used inward and outward with twin ships ropes from offshore fairlead forward and centre aft. Swinging in the pilot hoist when berthing was a race against time. There are some floating fenders alongside Berth Nos. 5 and 6 but the upper works of the elevator system are very close to the edge. Bridge wings apparently often touch.

The passage outward depends on the conditions of the day. A ship at 37 ft. 2 in. sailed directly out to sea because of fresh onshore winds. Another of 38 ft. 4 in. took 4 days to reach the sea. She had to anchor at Buoy No. 18 from one daylight tide to the next, then the port was closed for naval movements, then anchor again at Buoy No. 11, before finally clearing the port. The tide predictions can be increased or decreased by as much as 5 ft. due to the weather prevailing.

Anchorages: One ship in the Commercial Ships Anchorage found that she had 4 lengths of her own chain fouled around the anchor when she hove up. She had to hire a barge to lay the chain on so that it could be cleared. The quotation was said to be U.S.$5,000 but the bill presented was for U.S.$18,000. The vessel was arrested when the bill was challenged. It would seem a wise policy to change anchors from time to time. Also when anchored off Buoy No. 18 to wait for the next HW over the bar, another ship's anchor and chain was picked up. It was necessary to put a wire onto the other cable and lower the ship's anchor out from under to clear it. The delay was about 45 minutes but the ship was still able to make the tide.

There is a dredged channel between Buoys No. 7 and 8 but in fact the shallow area extends from Buoy No. 9 to Buoys No. 3 and 4 and speed needs to be restricted to reduce the squat.

At this time British subjects were not allowed ashore.

Outline of Official Argentine Forms:

Personal effects of the crew.

In vertical columns the following items:

Radio sets
Typewriters
Sextant
Gramaphones
Gramaphone discs
Binoculars
Photographic cameras
Spirits
Tobacco
Plug Tobacco
Cigarettes
Packets of cigarette papers
Boxes of matches
Number of caged birds
Soap

Sundry other effects such as musical instruments new or used, new clothes, etc.

All electronic items, such as radios, cassettes, calculators, televisions, declared by type, makers name, model name, serial number on separate sheets which then attached to the original declaration. The original columns for such equipment must be marked "nil" so that no duplicate declaration is made. The ship's electronic items, as above, plus VHF, radars, walkie-talkie sets, the main radio equipment, etc. must all be declared on separate sheets in the above detail.

The authorities require two copies of every declaration, one of which is kept at the Port of Entry and the other travels on the ship with the clearance for landing at each subsequent port. i.e. "travelling manifest".

The ship should have its own copy for reference, as neither of the above may be on board while in port.

The Health Declaration is in the standard form and can be filled in quickly, but the Customs forms and the identity cards take a lot of time and it is better to have a rough copy ready for copying out on arrival. The official forms are not available outside Argentina, and are too big for photocopying. Photographs are required for the identity card, but if advised a photographer will board with polaroid 'mini Portrait' outfit and charge accordingly.

Crew lists should be in the IMO format with full details of date and place of birth, plus the type of identity document (passport or seaman's book).

6 copies arrival, and 6 copies each departure! Company crew lists said to be acceptable provided ALL the information required has been inserted.

The identity cards can be photocopied and this would allow them to be prepared at sea before arrival.

The inspection party was 6 strong with Coastguard, Agent, Customs, Grain Surveyor, etc. Formalities including holds took about 1.5 hours with all documents prepared since sailing from La Plata. This was a rush to be avoided. (The vessel was cleared at the loading port up-river.)

British subjects not allowed ashore, all British passports and S.N.I.C.'s taken ashore and not returned until the vessel was cleared outward and Pilots on board.

Store List

Deck Engine Refrigerating

Aluminium Paint
Paint driers
Paints assorted in pastes
Paints assorted in liquid
Enamels assorted
Varnishes assorted
Red lead
White lead
Paint Powder
Coils Manilla rope (new)
Steel cable (new)
Hemp rope (new)
Tarpaulins (new)
Tarpaulins (used)
Burlap (new)
Separation clothe
Oil engine
Oil cylinder
Oil solidified
Packing assorted
Methylated spirit
Binoculars
Nanometers
Typewriters (new or used)
Micrometers
Monographs
Ammunition, firearms, explosives, etc.
  such as:
Deck flares
Rockets
Rockets sticks
Rockets signals
Friction tubes
Blue lights
Lifebuoy lights
Company's signals
Cartridges
Carbines
Guns
Revolvers
Rifles
Rocket Projectors
Gunpowder
Other portable firearms and explosives
(Red Hand flares)
Orange Smoke floats
Deck and Engine Stores considered to be in excess of normal requirements
(Fuel Oil)
(Diesel Oil)

Signed Chief Officer/Chief Engineer/Master.

Cabin Stores:

Bitters
Brandy
Champagne
Gin
Fruit Juices
Liquors Assorted
Rum
Cider
Table Wines
Strong Wines (Sherry, Port)
Sparkling Wines
Vermouth
Whisky
Other beverages (Vodka,
Chinese Wine, Beer)
Tobacco (cut)(Chinese)
Tobacco plug
Cigars
Cigarettes
Alcohol (spirits of wine)
Jams (assorted Marmalade,)
Jellies
Caviar
Pickles
Pickles for crew
(Cooking wine)
Tobacco (50 mg./can)
Playing Cards (new)
Typewriters (new and used)
Calculating machines
(new and used)

Cameras
Wireless sets Portable
Micrometers
Monographs
Binoculars
Perfumes
Thermometers clinic
Alkaloids such as:
Morphine
Cocaine
(Phenobarbital)
(Butobarbitine)
Preserved fruits (in syrup)
Electric vacuum cleaners
Electric irons
Electric toasters
Electric kettles
Electric Rice cooker
Articles said to be in excess of
normal requirements:
Fruition declared as follows:
White sugar
Cooking oil
Tea
Coffee
Evaporated Milk
Rice
Flour
Cheese
Butter
Fresh eggs
Frozen Meats

Everything must be in units of the metric scale. Items in full time use normally not necessary to declare but extra items in quantities more than for normal use must be declared.

All electronic items were declared on a separate sheet giving type, makers name. Model type, serial number. No item can be declared twice.

Instructions for the Compiling of Argentine Official Port Arrival Forms:

1. Immigration Department – Crew Identity Card: This form is required by all crew members without exception in order to enter and depart from Argentine Ports. As well it is the only document valid for authorities. Therefore, special care must be taken by the bearer in order not to damage or lose said document as, eventually, inconvenience will arise. Furthermore, details in order to complete this form are printed in both Spanish and English. Particulars required of person, family names, status, when/how engaged. Fingerprints. One original card is required for each crew member.

Important: Each form must carry the photograph of the bearer. In this respect, Masters are kindly to inform Agent with anticipation if photographer will be required on arrival.

2. Customs Department – Deck and Engine Stores, Cabin Stores, personal effects of crew: Each form is required in original and 1 copy, the latter will travel with the ship from port to port. The ship will require one for her own records.

Store List (Green form): Instructions and details for filling this form are printed on it in Spanish and English.

Important: Even though items Fuel Oil and Diesel Oil are not listed on the form they must be declared in the blank spaces.

Cabin Store List (Yellow form): Instructions and details for filling this form are on it in Spanish and English.

Important: Even though the item coffee is not included in this form it must be declared in the blank spaces.

Personal Effects of Crew (Pink form): Instructions and details for filling this form are printed on it in Spanish and English.

N.B. Very important. Recently as per terms of local Customs Regulation Number 325/80, every vessel calling Argentine ports is compelled to declare every electronic item to Customs with their respective make, model, and serial number.

Consequently, and in order to avoid confusion, we suggest to declare on both the Pink and Yellow forms all items except electronic equipment (such as TV sets, VHF's, Radars, etc. which must be declared on an additional page (any kind) stating clearly their type, make, model and serial number particulars. The Yellow and Pink forms should be endorsed 'plus sheets declaring electronic items.' These additional sheets will also have to be signed by the owners of the equipment.

We believe that the above proceedure will prevent and avoid a possible "double declaration" which is also very important. Therefore everything declared on the additional page is not, must not, be declared on the above Pink/Yellow forms.

3. Coast Guard (Prefectura Naval)

Crew List. 12 copies for first port.

The preferred form is in the IMO format with headings in Spanish. The crew list must be completed according to the following points:

1. Name of ship
2. Port of Arrival/Departure
3. Date of Arrival/Departure
4. Nationality of ship
5. Arrival port (last port)
6. Kind and number of identity document (Seaman's Book or Passport)
7. Given name, family name (not initials)
8. Number as per Crew List
9. Rank
10. Nationality
11. Date and place of berth
12. Date, signature and stamp of Master

This form is used for clearance on arrival and again on departure.

4. Sanitary Authorities:

Maritime Health Declaration. One original form, printed in Spanish and English, international format. One Vaccination list to be attached to the above, showing cholera and yellow fever if from Africa.

SHIPMASTER'S REPORT: September 1986.

Report pertaining to recent call at the Rio de la Plata region for discharge of a cargo of approximately 53,000 tonnes of Sahara Blend crude oil.

The discharge operation encompassed two lighterages and subsequent completion at the Navipar Oil Terminal off Zarate. The cargo in question was consigned for Paraguay, and is moved onwards from the storage terminal by flat river barges (barge trains) up-river for distances of over 1,200 miles.

56,000 d.w.tonnes. Product/Crude oil carrier, on voyage charter to European Charterers, and laden with a consignment of crude oil from a North African port, consigned for discharge at Zarate to Navipar Oil Co.

Due to various draft restrictions applicable at the different areas in the Rio de la Plata estuary and the Rio Parana, 2 lighterage operations had to be conducted prior to achieving suitable drafts for passage to the Navipar Oil Terminal, off the port of Zarate.

The vessel arrived at Lighterage Zone designated as "Charlie" on the morning of the 27th, drawing 12.35 m. (40.5 ft.) aft in salt water, (12.63 m. (41 ft. 05 in.) aft in fresh water). This lighterage area lies off Cabo San Antonio and is bound by the following co-ordinates: Latitudes 35° 59′ S. and 36° 05′ S.; Longitudes 56° 30′ W. and 56° 38′ W.

The chartered lighter vessel was found awaiting our arrival and the Master of the lighter undertook the STS berthing operation himself once our vessel was anchored and brought up. The port anchor was used and the lighter was secured on the starboard side. Similarly un-mooring was also undertaken by the Master of the lighter and our vessel weighed anchor only after the lighter was cast off and clear. ICS/OCIMF STS Guidelines were followed in the main. The lighter provided 2 "Yokohama" type pneumatic fenders adequately suited for the purpose.

A quantity of approx. 17,000 tonnes was off-loaded to this lighter to achieve an even keel draft of 9.56 m. (31 ft. 04 in.) and the discharge was carried out using only 1 hose of 8 in. diameter, provided by the lighter. This quantity of 17,000 tonnes was based on the permissible transit drafts for Canal Indio and Intermedio, to reach La Plata Roads. The permissible drafts for these canals at the time was declared as 31 ft. initially but amended by the Pilotage Authorities to an acceptable 31 ft. 06 in. due to higher water available at that time.

The passage from Lightering Zone "Charlie" to Recalada Pilot Station was laid well East of Banco Rouen and Banco Ingles, this being advertised as the only safe route despite the lengthier distance involved. The lighter vessel, even despite drawing a draft of only 26 ft. also utilised these courses.

However, waters in these areas in general are quite shallow, and underkeel clearances of only 1 ft. were experienced (as expected), especially near the approaches to Recalada Light Vessel. Speeds had to be reduced to reduce squat.

The Recalada Pilot boarded the vessel from a small motor cutter when the vessel was about 2 cables from the Light Vessel. It may be noted here that Recalada Pilots insist on boarding vessels only with a combination accommodation ladder and pilot ladder system, irrespective of vessel's freeboard.

The Recalada Pilot demands full sea speeds, even with deep laden drafts and almost no underkeel clearance. On debate however it was agreed to proceed at full manoeuvring speed only.

The Pilot was received at Recalada on the early morning of the 29th and the vessel was anchored at the La Plata Lighterage Roads shortly after noon the same day.

The 2nd lighter vessel however failed to arrive till the evening of the 31st and the vessel had to therefore remain at La Plata Roads till that time.

STS operations with the 2nd lighter were also effected as with the first, only this time the starboard anchor was in use and the lighter berthed alongside on the port side. 2 "Yokohama" type rubber pneumatic fenders were again provided by the lighter.

A quantity of approx. 6,000 tonnes was discharged to this lighter at La Plata Roads to achieve a draft of 28 ft. (FW), this being the permissible draft for transiting the Emilio Mitre Access Channel to Rio Parana Las Palmas.

Transfer operations were completed on the night of the 31st but the vessel could leave the anchorage only in the morning of the 1st as transit of the Mitre Canal during hours of darkness is prohibited.

The Parana River Pilot boarded vessel on the morning of the 1st and the vessel duly transited the canal to arrive at a selected anchorage in the river at approx. Kilometre Mark No. 80. The vessel had to anchor in the river mainly due to the berth being occupied by the previous lighter vessel engaged in discharging her cargo at the Terminal.

Communications on the VHF with the Terminal were established and were good (Spanish), and the vessel weighed anchor on the following day to berth almost immediately after the departure of the lighter from the Terminal, the precise timing being attributed to the good communications.

Navipar Oil Terminal: The Terminal belonging to the Navipar Oil Co. lies at Km. No. 111, only a short distance up-river from the Port of Zarate. It has 2 berths; one being used for off-loading import cargoes from deep sea vessels and lighters, and the other being used for loading flat river barges for transhipment of the same cargo onwards to Paraguay up-river at a distance of over 1,200 miles.

The berth jetty was a bit fragile and the fendering inadequate for berthing vessels of this size and tonnage.

Use of tugs (expensive) can be dispensed with as steady river currents provide good control of the vessel. Both the berthing and unberthing operations were effected quite satisfactorily by the Pilots.

The berth is located immediately down-river of a bend and this seems to provide a "lee" from the major flow of the river current, the axis of which would be probably hitting off the opposite side of the berth before continuing downstream.

Sufficient water for 28 ft. draft was available at the berth and the vessel never rested upon the bottom. The river tides were also at Neap and this too contributed to prevent sitting on the bottom. Due attention to vessel's trim is also required.

The Navipar Terminal, which is basically a storage facility for import of crude oil for onward shipment by river craft to Paraguay, is provided with only 1 main shore line for crude oil of 14 in. diameter. The storage tanks are located atop a hill at a distance of some 2.5 km. and in the absence of any booster facilities, substantial back-pressure was experienced throughout the discharge operation, causing problems especially towards the end strippings. This is apparently the bane of all vessels calling here for discharge.

Two hoses of 8 in. diameter only were provided for the discharge.

The vessel finally completed all discharge on the night of the 4th, once again being prevented from unberthing due local regulations prohibiting movement during hours of darkness. The vessel could therefore only unberth on the morning of the 5th. Mention must be made here that local coastguards permit a maximum of 2 m. trim on the vessel.

The return passage in ballast was made via the Martin Garcia Channel to Recalada, this route resulting in substantial savings in costs at the sacrifice of some 60 miles additional steaming time.

A point of interest is the rail/road Bridge Spans across the Rio Parana Las Palmas at Km. 105 (slightly down-river from Zarate) and the Rio Parana Guazu at Km. 177. Both these spans can only be crossed during daylight as per local regulations. However, the Martin Garcia Channel can be transited at any time as with Canal Indio and Canal Intermedio.

Drafts available at the Martin Garcia Bar however are less and usually only 20 ft. – 21 ft. at Zero datum. Therefore in order to avoid anchoring to await tide, the draft, if possible could be minimised for the available depth for the transit only.

The vessel cleared the Martin Garcia Channel and arrived La Plata during the night of the 5th, and the Recalada Pilot was finally dropped in the morning on the 6th.

Manoeuvring in the Mitre Channel and in the Rio Parana had its own peculiarities but the Pilots attending the vessel were found to be very professional. A typical pecularity was the failure of the vessel to respond to hard-over helm albeit continue to swing in the opposite direction – the swing itself not having been induced but more of a shearing-off of the vessel's head, caused by the particular flow pattern of the heavily silt laden waters across and over the bulbous bow at high speeds, as reported by the Pilot. To counteract this shear the speed was immediately reduced and the vessel responded to the corrective helm rapidly.

Port Customs, Regulations and Formalities: Whilst requirements to meet the formalities and regulations governing the area in question were very much as described elsewhere in the "Guide", it may be worth mentioning here that for this operation a contingent of 3 Shore Officials boarded the vessel soon after the 1st lighter was fast at Zone "Charlie" on the morning of the 27th (they having travelled aboard that vessel to the lighterage area) and set up residency on board from that time till the vessel was finally fast alongside the Terminal at Zarate on the evening of the 2nd.

These officials comprised of representatives from the Customs, Prefectura, and Immigration. The Customs Official is appointed to oversee cargo quantities on arrival and transferred, and also clear the vessel inwards. The Prefectura Official is appointed to check vessel's movements within the port, anti-pollution watch, etc. The Immigration Official for inward clearance only.

Two Independent Cargo Inspectors appointed for the operation also stayed on board throughout the vessel's stay in the port and were responsible for all gauging, sampling and calculation of cargo quantities on board and that transferred, including effecting gauging of the lighter vessels and finally to determine shore outturn.

Further, two representatives from the Agents were also assigned to the vessel; whilst one remained permanently on board throughout the vessel's stay, the other functioned as a courier between ship and shore, using whatever means of transportation were available to him, even using the returning pilot boats to La Plata.

These representatives from the Agents proved beneficial to the vessel as all liaising, courtesies, translations, co-ordination with the shore including Pilots, and a lot of sundry chores of the like were handled by them. The paperwork here was voluminous besides being all in Spanish and each lighterage area and the berth were to be treated as independent calls as far as clearing papers were concerned, and in this respect the Agent's representatives were valuable.

Pilot offices here require some lengthy notifications; at least 24 hours notice for Recalada Pilots and minimum 12 hours notice for Rio Parana. If the vessel is delayed more than 12 hours from the ETA given to the pilot office in writing by the Agents, the booking stands cancelled and a fresh requisition for Pilot services has to be raised. Since again the minimum notices are incurred, it becomes apparent that if ETAs are not kept updated frequently, unnecessary delays to the vessel can be incurred in awaiting Pilots.

Ship's Radio facilities were abundantly utilised by the shore personnel in liaising with their offices, especially from the lighterage areas, and a substantial Radio bill amounted.

Communications from the Navipar Terminal at Zarate, to the city of Buenos Aires some 60 km. away, were good and the Agents representatives could maintain a good rapport with their offices there.

Permission to effect Crude Oil Washing operations was granted and the vessel effected same through the discharge.

ATUCHA: 33.58 S. 59.16 W.

"C" category port. Km. 132 – River Parana de las Palmas Province of Buenos Aires.

Situated on the left bank (from seaward) of the Parana de Las Palmas at Km. 132, 15 miles upstream from Zarate, and 80 miles by river from Buenos Aires, via Mitre Channel.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

BERTH: A small berth 33 m. long with two dolphins in 44 ft. built especially for the discharge of heavy material for the new Atomic Energy Plant. There is a 300 ton heavy lift crane on the concrete platform. The plant is now in full operation.

AUTHORITY: There is no port authority here, the port comes under the jurisdiction of Zarate.

BUENOS AIRES: 34.36 S. 58.22 W. (See Plan)

"A" category port

Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

APPROACHES: Access is by the "Punta Indio" channel which requires constant dredging and commences just West of the Recalada Lightship, which is situated 30 km. due South of Montevideo. The channel with 28 ft. 6 in. on a width of 100 m. or 23 ft. over 200 m. winds up to the Outer Roads, which are some 37 km. from the Port. Direct entrance is by a channel, dredged to 29 ft. 6 in. with a 50 m. width, and 28 ft. 6 in. on an 80 m. width, to within 10 km., where the channel divides into North Channel, serving the New Port and Madero Port berths, and South Channel, for the rest of the port. North Channel at present has a depth of 25 ft. with a width of 50 m. or 19 ft. with 80 m. width. South Channel has 23 ft. 6 in. with a width of 35 m., or 21 ft. 6 in. over 50 m. All depths given here and elsewhere refer to the zero of the Riachuelo tidal indicator and semaphore in Buenos Aires port, which practically corresponds to the level of the ordinary lowest water, and is marked 0.72 m. under the average medium level of tides. Tides average 3 ft., but the principal factor is that of wind, which can raise or lower the water by 5 ft. or more.

The Mitre Channel (depth 29 ft. 06 in.) enters the access channel at Km. 12, and under existing regulations the Mitre Pilot ceases his job there, and a Buenos Aires Port Pilot will either take the vessel into Buenos Aires or out to Intersection, or vice versa. This involves use of tugs for the changeover, unless the vessel goes only to Campana or comes from there, when the Buenos Aires Pilot can travel by land.

When large passenger liners or LASH vessels are entering or leaving, it is possible to have the access channel closed to all other traffic for a period of four hours on account of the narrowness of the dredged channel.

ROADS: The Outer Roads are between Buoys 25 and 37, according to draft. The Inner Roads are between Buoys 12 and 15. Intersection Pontoon, or Pilot station, is at Buoy 37, North side.

PORT: The port, which is artificial, comprises:

Puero Madero	North Basin, Docks 4, 3, 2, 1 and South Basin.
New Port	Basin A, B, C, D, E and F.
South Dock	First and Second sections.
Liquid Gas Basin	On the South side of the South Channel before reaching S. Dock
Inflammables Basin	On the South side of the South Channel between Liquid Gas Basin and South Dock.
East Basin	On the North side of the South Channel.
Riachuelo	The Districts known as Boca and Barracas.

TUGS: From vessels drawing up to 22 ft., service is rendered by a bow tug from Km. 5, and a stern tug from Km. 1, or vice versa, and to or from Kms. 8 and 4 respectively when draft exceeds 22 ft.

Stand-by time will be charged if a vessel is delayed in entering or leaving by bad weather, fog, low water, no berth, etc., plus usual Sunday/holiday surcharge.

Tug hours now coincide with ordinary port working hours and time is counted from the hour they leave their moorings and until they return.

When a vessel is leaving port, and tugs are ordered to accompany her beyond normal limits, an overcharge will be made on an hourly basis.

Once a vessel is moored, all further service in the same section will be charged by hour. If the vessel shifts section, this movement is charged plus the sections traversed.

A special compensation charge is made when tugs are ordered but not used.

For the services of tugs supplying electricity or steam, charges are made per day and per hour, varying with the size of the tug.

If vessels do not use their engines while under tow, a surcharge of 50% is made.

Tow ropes must be supplied by the vessel, but can also be hired. The towage company is not responsible for breakages, fouling of propeller, expenses of diver or any other consequence.

Also see "General" before first port.

BERTHING:

Puerto Madero (Central Zone): This is the oldest part of the Port. Ocean going vessels mainly operate in North Basin, and Docks 4 and 3.

North Basin: Built in the form of an irregular pentagon, with the entrance, 100 m. wide in one angle. The two piers at the entrance are 200 m. and 225 m. long, respectively. The West side is 390 m. long and the South 377 m., North 326 m., and with a depth presently 22 ft.

As the basin was built for a depth of 21 ft., and later dredged, when vessels load deeper than 20 ft. they should be careful to keep well off the quay wall to prevent grounding. Up to three vessels can discharge at anchor.

There are 2 dry docks in the basin, and a repair shop.

Usually only 1 berth, Section 6, is used for loading/discharging operations and can be used for containers. Sections 1 and 2 are used by vessels repairing or laid up, while Sections 3 and 5 are for Navy use. The warehouse of Section 7 is used by the Custom House.

Dock 4: Connected to North Basin by a lock 197 m. long, and 25 m. wide. The dock itself is 630 m. long and 160 m. wide, with 19 ft. of water.

On the West side there are 4 warehouses, each 4 storeys high and 12×3 ton cranes. Berths, or sections, numbered 1 to 4.

On the East side, section No. 5-8 (No. 6 reserved for State vessels) open area for handling containers and heavy lifts. Electric gantry cranes on rails of 6.3 tons capacity.

Between Berths 6 and 7 on the East side there is a large open space where vessels or lighters can discharge direct to trucks or to railcars. Trucks may also go alongside at the other berths, at all of which there are railway lines, but space is limited.

The dock heads are used for discharging sand and gravel from barges.

Dock 3: South of Dock 4, connected by a cutting 70 m. long by 20 m. wide, with a swing-bridge. This dock is 690 m. long and 160 m. wide, depth 18 ft.

On the West side, Berths 1 to 5, there are 4 four-storey warehouses, and there are 13×3 ton cranes. Section No. 3, forms part of the open space for general discharge and storage.

On the East side, there are 2 elevators used for storage.

Between the elevators, on the East side, there are open spaces where vessels may berth and discharge lumber or drummed cargo, but this section is limited to medium and small vessels only.

Dock 2: This is connected with Dock 3 by a cutting 80 m. long, and 20 m. wide, with a swing-bridge. The Dock is 570 m. long by 160 m. wide and 15 ft. deep at zero.

On the West side there are 4 berths, and 13×3 ton cranes. The area has been cleared, but at Berth No. 3 there is a warehouse for cargoes for Paraguay.

LASH barges are discharged at Berth No. 1.

The East side is used for laid-up vessels.

Dock 1: Connects with Dock 2 by a cutting 80 m. long, 20 m. wide, with 14.5 ft. This dock is chiefly used by Government-owned river craft.

The West side has 4 sections (No. 1-4), each with a Customs warehouse. Section 4 is used for cargoes for Bolivia.

On the East Side there is an elevator for shipments of grain to nearby countries.

South Basin: This basin is connected with Dock 1 by a lock 184 m. long by 20 m. wide, with a swing-bridge.

The basin is 1,029 m. long and has a width of 100 m.–200 m. and a depth of 4.00 m.–5.80 m. The dock is used by ferries to Montevideo and Ascuncion and Ro/Ro service to Santos and Colonia.

New Port: The New Port, lies to the North of Puerto Madero, and entrance is via the Northern Channel. A breakwater extending from the North anteport protects the basin of the New Port from rough seas, and extends as far as Basin D, from which point another breakwater protects Basin E. Between the two, a channel is kept dredged for the movement of coasters to and from upriver. Basin F is used entirely for small coasters and river craft.

The 5 basins of this part (excluding F, coastal) offer good accommodation for the larger vessels entering Buenos Aires, and in all the berths there is sufficient water (depths 8.0 m.–10.0 m.) to float any vessel which can navigate the entrance channels. Max. draft should not exceed 9.90 m. Basins are numbered from South/North.

Basin A: Used by passenger vessels as well as general cargo. A landing station for passengers has recently been opened here and all vessels carrying over 50 passengers must land them here, shifting later to another berth if necessary.

The basin is 365 m. long by 140 m. wide, with 870 m. of wharfage. Northern side can accommodate 2 medium/large ships. Western side is frequently reserved for the Argentine Navy. On the S.W., passenger section, there is room for 1 vessel. On the S.E. another berth is available if the vessel operating at the Maritime Station is medium size only.

Pier Head No. 1 is 100 m. long, but is mostly used as waiting berth for river going vessels. There are two railway lines on each side of the basin, and also at the back of the deposits. There are five warehouses and a total of 14×3 ton cranes.

Basin B: Used for general cargo vessels, is 565 m. long on the North side, 464 m. on the South and 140 m. wide at the Western end, with 1,165 m. of wharfage.

The South side has 3 sections. Berth No. 1 at the dock head is an open area with 2×35 ton gantry cranes for containers. Berths No. 2 & 3 have a customs shed and are equipped with 5×3 ton cranes.

The North side, Berths No. 5, 6 and 7, are reserved for the state fleet. Berths No. 5 and 6 equipped with 7×3 ton cranes and No. 7 equipped with 2×6 ton and 1×35 ton gantry cranes.

The West wharf, length 151 m., is equipped with 1×6 ton and 1×12 ton electric gantry crane on rails.

Basin C: This is 495 m. long on the North, 585 m. on the South and 140 m. wide at its Western end, with 1,284 m.

On the South side there are 3 warehouses, built 15 m. back from the quay to facilitate operations. There are 8×6 ton cranes.

On the North and West sides there are no sheds, and this is used for operating directly to or from trucks or rail cars.

There are 7×3 ton cranes on the North and 3 on the West side.

On Pier Head No. 3 which is 236 m. long there are 2×6 ton cranes and 1×12 ton crane. Berth reserved for state fleet.

Railway tracks are fitted with a third rail for narrow gauge traffic.

The South side of this basin is reserved for ELMA (State Fleet).

The North side 1/2/3 is used for grain.

Basin D: This is 495 m. long on the North, 585 m. on the South and 150 m. wide at its Western end, with 1,300 m. of wharfage.

Along the Southern side is the Grain Elevator, which occupies all the water front and extends also along Pier Head No. 4 — 295 m. Capacity is 170,000 tons. It can deliver 13,500 t.p.d. to a total of 3 vessels.

On the North side a Container yard has been operating with 25,000 sq.m. of pavement and 1 shed, 100 m. long, 10 m. high and 30 m. wide. There are also 2 side loaders for 20/22 tons and 1 for 35 tons. Eventually the flooring will be extended to twice the area. 20 ft or 40 ft. Containers can be handled by 4×35 ton gantry cranes and 1 Liebherr "T 100".

For vessels with a reduced number of Containers, Basin E, North side, can also be employed, using the same concentration area at the Ericson yard.

Also see "Developments".

Basin E: The basin is 495 m. long on the North side, 585 m. on the South and 150 m. at the West end. Coal is discharged on the North side and there is also a warehouse there for other cargoes, although basically this basin is used for coal.

On Pier Head No. 5, which is 523 m. long, the Power plant discharges its coal or oil. There is 1 oil intake and 2 travelling grabs, capacity 4 tons each, and also a 30 ton crane.

On the South side of this Basin vessels operate loading or unloading fruit and generals.

On the West, or shore side of the basin there are 20 tanks (more building) for caustic soda, present capacity 7,400 cu.m. These are all steel tanks, and there are 11 lines to the pier. There are truck loading installations in the plant, and a weighbridge, but no fire-fighting installations. Wine tanks are also being built.

Basin F: This faces North, and is used for river craft only, pusher barges and tugs, while on the land or West side there are discharging facilities for sand hoppers.

Pier Head No. 6, between Basins E and F is 310 m. long, with room for 1 vessel only, and with 2 intakes for fuel oil and a 7.5 ton travelling grab for discharging Coal, capacity 150 t.p.h.

South Dock:

First Section: The first section has continuous quays on both sides, and a width of 90 m., widening to a turning basin before reaching the connecting channel to the second section.

Before the turning basin are 8 steel tanks for chemical or vegetable oil products, total capacity 5,260 cu.m., with 2×6 in. stainless steel lines and 2×4 in. steel lines, maximum discharge rate is 175 t.p.h.

Nearer the basin itself are 28 tanks, capacity 14,494 cu.m. plus 8 more tanks in the installation for use both with caustic soda and other chemicals or alcohol. Only one tank (No. 3) of 320 cu.m. is of stainless steel, the others are all steel.

The West quay is 911 m. long, and the East side 1,109 m., both in use for liquids and general.

The old Freezing plant is inactive and on the East side of the turning basin there is an elevator capacity 6,500 tons, 4 tubes and 3 chutes, plus another storage shed for 19,100 tons grain. Only 1 tube at a time may be used at 400 t.p.h.

At warehouse 10 there are 3 steel tanks capacity 10,600 cu.m. with a 10 in. line used for caustic soda, and by the grain board elevator 11 tanks capacity 23,640 cu.m. for vegetable oils.

On Pier A there are 41 tanks, capacity 18,580 cu.m. with 2 load lines for use with inflammables, handling usually caustic soda, fatty acids, tallow dodecilbencene and vegetable oils.

At Piers E and G there are 19 tanks total capacity 21,058 cu.m. for alcohol and chemical products, with 4 lines to the pier.

At F and G there are also 15 tanks, capacity 8,199 cu.m. for caustic soda, alcohol and chemical products.

Pier G has a further 6 tanks, total 3,259 cu.m. for any kind of chemical products, with 5 lines to the pier.

Second Section: The connecting channel is 90 m. wide, with earth banks. Jetties for discharging petroleum are placed along the East side, while on the West there is a continuous quay 1,000 m. long, on which there are 4×3 ton cranes and 8×1.5 ton cranes for discharging sand.

There are 7 berths, 5 of which are for general use, 1 for the Power plant for discharge of coal, with a 5 ton grab, and 1 elevator berth, Unit 10, capacity 23,500 tons. The loading bridge has 5 turrets, each with 2 tubes and 1 chute. Only 1 can load at a time, rate 400 t.p.h.

There are also 6 tanks, total 4,698 cu.m. for use with Tung oil with 1 line to the pier.

There are 8 petroleum jetties on the East side for the discharge of tankers and loading oil barges ex-shore tanks. The jetties are marked A to H. On reaching a draft of 23 ft. 6 in. vessels must shift to New Port.

The gangways to the mooring dolphins for tankers are in a very precarious state, which may lead to the closing of this sector.

It will be seen that there has been a considerable increase in number and capacity of tanks, all for private companies. In South Dock there are 134 tanks, capacity 87,147 cu.m.

Liquid Gas Basin: The Liquid Gas Basin lies on the South side of the channel, immediately East from the Inflammables Basin, and consists of a central mooring platform 520 m. long, with 4 pairs of dolphins and 2 mooring dolphins at each end, all joined by a foot gangway. The basin is protected by a breakwater 850 m. long. The Gas lines are insulated to carry liquid gas at minus 45°C.

The berth can accept vessels up to 45,000 d.w.t. Depth at zero tide is 33 ft.

As with the Inflammables Basin, all transit to land is by launch.

Inflammables Basin: This is situated outside the South Channel in front of Km. 0.500 and about 300 m. distant from the axis of the Channel and at a right angle. The dimensions are as follows: length: 616 m. on the East side, 425 m. on the West side, 180 m. on the S.W. side and 72 m. on the South side. The dock walls at the entrance are 44 m. long on each side. The entrance is 50 m. wide. All the dock walls of this basin are of cement, as well as the intakes and landing dolphins. It has 7 jetties for mooring vessels. The present tank storage in South Dock lies to the S.E. of this basin at a distance of about 1,000 m. Depth alongside 26 ft.

Ocean going tankers discharge at the piers on the West side. There are no facilities for reaching the city by land and therefore all the transport of officials, crew, stores, etc., must be done by launch.

The oil for the Y.P.F. tanks on the East side of the Basin and the M.O.P. workshops is sent from South Dock by piping under the South Channel.

East Basin: At the entrance to the South Anteport, a breakwater and 2 new basins have been constructed.

Basin No. 1 is used exclusively by the Port Works Department for laying up and repairing dredgers and other maintenance craft. It also contains a dry dock and a shipyard. Depth of water is 24 ft. in the basin but only 16 ft. at the entrance.

Basin No. 2, in form an irregular quadrilateral, is separated from No. 1 by a mole, and is 146 m. wide at the entrance, 170 at the base and with walls 372 m. long to the S.E. and 294 m. long to the West, allowing a number of vessels to berth. Alongside this mole is the SEGBA Power Plant. Depth in the basin varies from 24 ft. to 14 ft. at the entrance.

From No. 2 there is a mole parallel to the South Access Channel, 260 m. long, with a central salient 120 m. long, and 2 side salients 15 m. long each, and at 55 m. from the central mole. This is used by tankers discharging fuel for the Power Plant. There is 1 crane, 16 tons, and a narrow gauge railway line.

The breakwater has been built on the South side of the access channel as a protection for the basins, and commences 100 m. South of the light buoy on Km. 1 of this canal.

South Anteport: The construction of the Inflammables Basin, and of the East Basins, before arriving at the entrance to South Dock, Riachuelo or South Basin has created an Anteport. The North part has a mole 384 m. long from East Basin No. 1 to South Basin. This is used by the Port Works Department for workshops, deposits and offices.

The Prefecture has an office here, on top of which is a mast 2 m. high, used as a signal station. A white-edged red flag by day or a flashing red light by night indicates that a vessel is entering by the Southern Channel from Km. 8 to the Anteport. This signal will remain until the vessel reaches the Anteport, and signifies that the Channel is closed to all except tugs, sand hoppers and river passenger craft, provided draft does not exceed 14 ft.

Riachuelo: This is a narrow, winding stream which flows to the Plate by way of the South Channel. It has a depth in its axis of 21 ft. and from 17 ft. to 19 ft. at the berths, while the banks being sloping can cause trouble with moorings on a falling tide. Ocean-going vessels rarely use this now, except for occasional discharge of timber, and it is used mainly by lighters and coastal craft, as well as by laid up vessels and what are now virtually wrecks.

This is the old-time Boca and Barracas area.

DENSITY: Fresh water.

FRESH WATER: There are hydrants at all berths, with very few exceptions, at which vessels can take water at a charge per cu.m.

There are no hydrants in the Inflammable Basin, and only at Berth No. 1 on either side of Basin E in the New Port.

Delivery rate varies from 5 to 10 t.p.h., depending on the number of vessels taking water, time of day, etc. An extra charge is made in overtime.

FUEL: Available by barge.

CARGO: *Classification of Import Cargo:* Argentina being a tariff protected country, all cargo landed is subject to Customs control.

To facilitate control, there are Custom House warehouses on the city side of the dock zone, on the quays, in the South Dock, and others away from the quays. The Dock Zone is enclosed.

The transport of all goods from vessels is currently effected by State owned vehicles. There are no longer any private warehouses.

All fine cargo, cargo in cases, and most baled cargo must be discharged to Custom House Warehouses, direct from the ship, by means of dock cranes.

Other cargo in cases, barrels, etc., which might be damaged if stowed in the open air, also cargo which from its nature might damage other cargo stowed with it must go to the Custom House warehouses away from the quays, and is conveyed there by port railway wagons that take the cargo from alongside the ship. This same class of cargo can also be sent to private fiscal warehouses and is similarly conveyed there from the ship's side by railway wagons.

Cargo that can be stowed in the open air without risk of damage, such as cases of glass, motor cars, sanitary ware, etc., is also conveyed from the ship's side by railway wagons to open spaces (plazoletas) within the dock zone, reserved for the stowage of such cargo.

Certain classes of cargo, such as bales of gunnies, jute, rice, agricultural implements, and all articles the nature of which can be seen at a glance, can be discharged direct to consignees' carts, motor lorries, etc., from the ship's tackle. Also certain classes of rough cargo, such as coal, lumber, iron, cement, etc., must be discharged direct in this way.

The Custom House, in order to expedite despatch, has enlarged the list of goods that can be discharged in this manner, and also authorises the carrying out of these operations outside ordinary working hours, which has hitherto been prohibited.

Storage of goods in Custom House Deposits is limited to six months, counting from the date of the vessel's entrance to port.

All classes of cargo can be discharged into lighters (by permit from the Custom House).

Discharge to lighters can take place in all sections of the port.

Use of Special Deposit Called "Transit" for Reception of General Cargo:

In order to facilitate the discharge of vessels with general cargo for delivery to Fiscal Warehouse, the Custom House Authorities have authorised the direct discharge from vessels to a special warehouse which receives all the cargo as it comes out of the hold, labour being supplied by Agents.

This facility is only available at certain sections of the port and whenever a vessel discharges at a berth where there is a "Transit" deposit, this must be used unless the vessel carried homogeneous cargo or of such a nature that it does not require the use of the "Transit" deposit.

The cargo discharged in these special warehouses must be delivered by the Agents at ship's expense, into the Customs warehouses.

Cargo in transit to or from Paraguay is now stored in sections of Warehouse No. 5 of Dock 4. The goods may remain in the warehouse, once onwards transportation has been arranged, for 3 days, where the ocean carrier is operating, or in a special shed in Section 1 of Dock 2, where the river vessels load for that country.

Cargo in transit for other countries can be deposited in any approved space. In all cases, special permit must be obtained in order not to lose the status of "transit cargo".

Time Limit for the Permanency of "In Transit" Cargo in Lighters: Maximum time limit is set at 90 days, but it is possible to renew this, while on the expiry of such authorisation, the cargo must be discharged to fiscal warehouses, and be subject to all the rules and conditions governing this operation.

The Custom House is authorised to grant an extension of time when the interested party requests this before expiration date, and providing the causes are, in the opinion of the Custom House Authorities, justified.

Cargo in transit that is discharged by mistake to fiscal deposit, has to be removed from there within 48 hours; otherwise it must be added to the cargo manifest as a surplus discharge.

A tariff in the style of railway tariffs is in force with a variety of charges, all depending on the class and nature of the cargo that is being trans-shipped. Therefore, Shipowners, their Agents and Forwarding Agents should, in every case, communicate with their Agents in Buenos Aires to ascertain the exact cost of these charges. Subsequently to the new tariff being enforced, various increases were declared, so that the extra freight on cargo trans-shipped is now an important item to be considered when accepting through bookings.

Delivery of Cargo: The receiver of the merchandise or holder of the Bill of Lading must deliver this document to the Custom House to clear the goods. The merchandise, whether for deposit of direct despatch is delivered to the Consignees without the intervention of the Master of the vessel or the Agents. The Bill of Lading remains with the Custom House, under whose control the cargo is delivered. The Custom House verifies the legitimacy of ownership, and whether all the import dues or services have been paid on the merchandise before leaving warehouse.

Collection of Freights on Imported Goods: In the Argentine, the Custom House releases the cargo, and not the Agent, therefore the only means of ensuring collection of freight when payable at destination, is for the Agent to place a judicial embargo on the entire cargo. This action necessitates the Consignee first obtaining the Agent's conformity to the documents before the Custom House will accept them and deliver the goods.

Without an embargo the Agent, once he has presented the Cargo Manifest, cannot intervene between the Custom House and Consignee. Not even the retention by Shipper of all the signed original Bills of Lading is a safeguard, because the Custom House, which is only concerned with the delivery of the cargo to the lawful Owner and is in no way concerned with the freight payment, will deliver the cargo against production by consignee of a bank guarantee that the Bills of Lading will be forthcoming in due course.

From the foregoing it may be gathered that freight should always be prepaid when possible.

The Custom House usually does not release the cargo, if the Bills of Lading are claused "Payable at destination", until the importer produces an account for freight, duly receipted by the Agent, but this is not a sufficient cover, as the Customs are not under any legal obligation to effect this control, and therefore cannot be held responsible for the freight of goods delivered without it being paid.

Cargo Discharged to or Loaded from Vehicles: The Custom House Administrator has authorised the access of vehicles of all classes to the quays of this port for the reception or delivery of cargo of any class, size or weight.

It is necessary for the importers, exporters or Custom House brokers to obtain a permit for this, and the applicant is held responsible for any damage to port installations caused by said vehicles. Sufficient space must be left between truck and sheds to allow passage of Port Authority vehicles and fire engines.

The authorities will not be responsible for any accidents to the vehicles, their crew or their cargo. The vehicles must be so handled as not to interfere with the railway traffic.

Discharge of Inflammables: This is now permitted in the Port of Buenos Aires under strict security control.

Discharge of Sulphur: It is compulsory to have a motor launch fire extinguisher alongside vessels during the discharge of sulphur. An extra man is also required at each hold for carrying water to the stevedores.

Delivery of Fresh Fruit: The Custom House allows the consignees of fresh fruit to take away their cargo immediately on vessel's arrival, upon presentation of a special permit endorsed by a bank and Agents, and whereby the receivers guarantee presentation of the Bill of Lading in due course.

Placing of Lighters between Vessel and Wharf: When lighters are placed between the vessel and the wharf for the convenience of discharging a vessel's hold, full Port Service Dues are charged.

Lighters may be placed between the vessel and the wharf when the vessel's work to shore is not interfered with thereby. In such cases the vessel will continue to pay full dues. Lighters are, in fact, not considered as occupying any berth unless they are allotted a special berth by the Custom House to load or discharge. It is only when lighters are so commissioned by the Custom House, that a vessel going alongside these lighters would be charged in the category of a vessel lying second off.

Discharge of Heavy Lifts: There are 3 floating cranes, one for lifts of up to 60 tons, another of 100 tons and a new one of 250 tons. The first two may have lost part of their capacity. The 250 ton crane can navigate carrying its cargo, so making special movement of the vessel unnecessary, but the two smaller cranes must operate between ship and shore in swivelling movement.

There is also a floating crane capacity 30 tons belonging to the Navy, and two others, each 75 tons capacity, belonging to the State Fleet.

Hire counts from getting the crane alongside, and in condition to work, until work is completed, plus an extra hour to compensate crews from getting the crane back to its mooring place. Slings must be supplied by

There are 2 dry docks in the basin, and a repair shop.

Usually only 1 berth, Section 6, is used for loading/discharging operations and can be used for containers. Sections 1 and 2 are used by vessels repairing or laid up, while Sections 3 and 5 are for Navy use. The warehouse of Section 7 is used by the Custom House.

Dock 4: Connected to North Basin by a lock 197 m. long, and 25 m. wide. The dock itself is 630 m. long and 160 m. wide, with 19 ft. of water.

On the West side there are 4 warehouses, each 4 storeys high and 12×3 ton cranes. Berths, or sections, numbered 1 to 4.

On the East side, section No. 5-8 (No. 6 reserved for State vessels) open area for handling containers and heavy lifts. Electric gantry cranes on rails of 6.3 tons capacity.

Between Berths 6 and 7 on the East side there is a large open space where vessels or lighters can discharge direct to trucks or to railcars. Trucks may also go alongside at the other berths, at all of which there are railway lines, but space is limited.

The dock heads are used for discharging sand and gravel from barges.

Dock 3: South of Dock 4, connected by a cutting 70 m. long by 20 m. wide, with a swing-bridge. This dock is 690 m. long and 160 m. wide, depth 18 ft.

On the West side, Berths 1 to 5, there are 4 four-storey warehouses, and there are 13×3 ton cranes. Section No. 3, forms part of the open space for general discharge and storage.

On the East side, there are 2 elevators used for storage.

Between the elevators, on the East side, there are open spaces where vessels may berth and discharge lumber or drummed cargo, but this section is limited to medium and small vessels only.

Dock 2: This is connected with Dock 3 by a cutting 80 m. long, and 20 m. wide, with a swing-bridge. The Dock is 570 m. long by 160 m. wide and 15 ft. deep at zero.

On the West side there are 4 berths, and 13×3 ton cranes. The area has been cleared, but at Berth No. 3 there is a warehouse for cargoes for Paraguay.

LASH barges are discharged at Berth No. 1.

The East side is used for laid-up vessels.

Dock 1: Connects with Dock 2 by a cutting 80 m. long, 20 m. wide, with 14.5 ft. This dock is chiefly used by Government-owned river craft.

The West side has 4 sections (No. 1-4), each with a Customs warehouse. Section 4 is used for cargoes for Bolivia.

On the East Side there is an elevator for shipments of grain to nearby countries.

South Basin: This basin is connected with Dock 1 by a lock 184 m. long by 20 m. wide, with a swing-bridge.

The basin is 1,029 m. long and has a width of 100 m.–200 m. and a depth of 4.00 m.–5.80 m. The dock is used by ferries to Montevideo and Ascuncion and Ro/Ro service to Santos and Colonia.

New Port: The New Port, lies to the North of Puerto Madero, and entrance is via the Northern Channel. A breakwater extending from the North anteport protects the basin of the New Port from rough seas, and extends as far as Basin D, from which point another breakwater protects Basin E. Between the two, a channel is kept dredged for the movement of coasters to and from upriver. Basin F is used entirely for small coasters and river craft.

The 5 basins of this part (excluding F, coastal) offer good accommodation for the larger vessels entering Buenos Aires, and in all the berths there is sufficient water (depths 8.0 m.–10.0 m.) to float any vessel which can navigate the entrance channels. Max. draft should not exceed 9.90 m. Basins are numbered from South/North.

Basin A: Used by passenger vessels as well as general cargo. A landing station for passengers has recently been opened here and all vessels carrying over 50 passengers must land them here, shifting later to another berth if necessary.

The basin is 365 m. long by 140 m. wide, with 870 m. of wharfage. Northern side can accommodate 2 medium/large ships. Western side is frequently reserved for the Argentine Navy. On the S.W., passenger section, there is room for 1 vessel. On the S.E. another berth is available if the vessel operating at the Maritime Station is medium size only.

Pier Head No. 1 is 100 m. long, but is mostly used as waiting berth for river going vessels. There are two railway lines on each side of the basin, and also at the back of the deposits. There are five warehouses and a total of 14×3 ton cranes.

Basin B: Used for general cargo vessels, is 565 m. long on the North side, 464 m. on the South and 140 m. wide at the Western end, with 1,165 m. of wharfage.

The South side has 3 sections. Berth No. 1 at the dock head is an open area with 2×35 ton gantry cranes for containers. Berths No. 2 & 3 have a customs shed and are equipped with 5×3 ton cranes.

The North side, Berths No. 5, 6 and 7, are reserved for the state fleet. Berths No. 5 and 6 equipped with 7×3 ton cranes and No. 7 equipped with 2×6 ton and 1×35 ton gantry cranes.

The West wharf, length 151 m., is equipped with 1×6 ton and 1×12 ton electric gantry crane on rails.

Basin C: This is 495 m. long on the North, 585 m. on the South and 140 m. wide at its Western end, with 1,284 m.

On the South side there are 3 warehouses, built 15 m. back from the quay to facilitate operations. There are 8×6 ton cranes.

On the North and West sides there are no sheds, and this is used for operating directly to or from trucks or rail cars.

There are 7×3 ton cranes on the North and 3 on the West side.

On Pier Head No. 3 which is 236 m. long there are 2×6 ton cranes and 1×12 ton crane. Berth reserved for state fleet.

Railway tracks are fitted with a third rail for narrow gauge traffic.

The South side of this basin is reserved for ELMA (State Fleet).

The North side 1/2/3 is used for grain.

Basin D: This is 495 m. long on the North, 585 m. on the South and 150 m. wide at its Western end, with 1,300 m. of wharfage.

Along the Southern side is the Grain Elevator, which occupies all the water front and extends also along Pier Head No. 4 — 295 m. Capacity is 170,000 tons. It can deliver 13,500 t.p.d. to a total of 3 vessels.

On the North side a Container yard has been operating with 25,000 sq.m. of pavement and 1 shed, 100 m. long, 10 m. high and 30 m. wide. There are also 2 side loaders for 20/22 tons and 1 for 35 tons. Eventually the flooring will be extended to twice the area. 20 ft or 40 ft. Containers can be handled by 4×35 ton gantry cranes and 1 Liebherr "T 100".

For vessels with a reduced number of Containers, Basin E, North side, can also be employed, using the same concentration area at the Ericson yard.

Also see "Developments".

Basin E: The basin is 495 m. long on the North side, 585 m. on the South and 150 m. at the West end. Coal is discharged on the North side and there is also a warehouse there for other cargoes, although basically this basin is used for coal.

On Pier Head No. 5, which is 523 m. long, the Power plant discharges its coal or oil. There is 1 oil intake and 2 travelling grabs, capacity 4 tons each, and also a 30 ton crane.

On the South side of this Basin vessels operate loading or unloading fruit and generals.

On the West, or shore side of the basin there are 20 tanks (more building) for caustic soda, present capacity 7,400 cu.m. These are all steel tanks, and there are 11 lines to the pier. There are truck loading installations in the plant, and a weighbridge, but no fire-fighting installations. Wine tanks are also being built.

Basin F: This faces North, and is used for river craft only, pusher barges and tugs, while on the land or West side there are discharging facilities for sand hoppers.

Pier Head No. 6, between Basins E and F is 310 m. long, with room for 1 vessel only, and with 2 intakes for fuel oil and a 7.5 ton travelling grab for discharging Coal, capacity 150 t.p.h.

South Dock:

First Section: The first section has continuous quays on both sides, and a width of 90 m., widening to a turning basin before reaching the connecting channel to the second section.

Before the turning basin are 8 steel tanks for chemical or vegetable oil products, total capacity 5,260 cu.m., with 2×6 in. stainless steel lines and 2×4 in. steel lines, maximum discharge rate is 175 t.p.h.

Nearer the basin itself are 28 tanks, capacity 14,494 cu.m. plus 8 more tanks in the installation for use both with caustic soda and other chemicals or alcohol. Only one tank (No. 3) of 320 cu.m. is of stainless steel, the others are all steel.

The West quay is 911 m. long, and the East side 1,109 m., both in use for liquids and general.

The old Freezing plant is inactive and on the East side of the turning basin there are an elevator capacity 6,500 tons, 4 tubes and 3 chutes, plus another storage shed for 19,100 tons grain. Only 1 tube at a time may be used at 400 t.p.h.

At warehouse 10 there are 3 steel tanks capacity 10,600 cu.m. with a 10 in. line used for caustic soda, and by the grain board elevator 11 tanks capacity 23,640 cu.m. for vegetable oils.

On Pier A there are 41 tanks, capacity 18,580 cu.m. with 2 load lines for use with inflammables, handling usually caustic soda, fatty acids, tallow dodecilbencene and vegetable oils.

At Piers E and G there are 19 tanks total capacity 21,058 cu.m. for alcohol and chemical products, with 4 lines to the pier.

At F and G there are also 15 tanks, capacity 8,199 cu.m. for caustic soda, alcohol and chemical products.

Pier G has a further 6 tanks, total 3,259 cu.m. for any kind of chemical products, with 5 lines to the pier.

Second Section: The connecting channel is 90 m. wide, with earth banks. Jetties for discharging petroleum are placed along the East side, while on the West there is a continuous quay 1,000 m. long, on which there are 4×3 ton cranes and 8×1.5 ton cranes for discharging sand.

There are 7 berths, 5 of which are for general use, 1 for the Power plant for discharge of coal, with a 5 ton grab, and 1 elevator berth, Unit 10, capacity 23,500 tons. The loading bridge has 5 turrets, each with 2 tubes and 1 chute. Only 1 can load at a time, rate 400 t.p.h.

There are also 6 tanks, total 4,698 cu.m. for use with Tung oil with 1 line to the pier.

There are 8 petroleum jetties on the East side for the discharge of tankers and loading oil barges ex-shore tanks. The jetties are marked A to H. On reaching a draft of 23 ft. 6 in. vessels must shift to New Port.

The gangways to the mooring dolphins for tankers are in a very precarious state, which may lead to the closing of this sector.

It will be seen that there has been a considerable increase in number and capacity of tanks, all for private companies. In South Dock there are 134 tanks, capacity 87,147 cu.m.

Liquid Gas Basin: The Liquid Gas Basin lies on the South side of the channel, immediately East from the Inflammables Basin, and consists of a central mooring platform 520 m. long, with 4 pairs of dolphins and 2 mooring dolphins at each end, all joined by a foot gangway. The basin is protected by a breakwater 850 m. long. The Gas lines are insulated to carry liquid gas at minus 45°C.

The berth can accept vessels up to 45,000 d.w.t. Depth at zero tide is 33 ft.

As with the Inflammables Basin, all transit to land is by launch.

Inflammables Basin: This is situated outside the South Channel in front of Km. 0.500 and about 300 m. distant from the axis of the Channel and at a right angle. The dimensions are as follows: length: 616 m. on the East side, 425 m. on the West side, 180 m. on the S.W. side and 72 m. on the South side. The dock walls at the entrance are 44 m. long on each side. The entrance is 50 m. wide. All the dock walls of this basin are of cement, as well as the intakes and landing dolphins. It has 7 jetties for mooring vessels. The present tank storage in South Dock lies to the S.E. of this basin at a distance of about 1,000 m. Depth alongside 26 ft.

Ocean going tankers discharge at the piers on the West side. There are no facilities for reaching the city by land and therefore all the transport of officials, crew, stores, etc., must be done by launch.

The oil for the Y.P.F. tanks on the East side of the Basin and the M.O.P. workshops is sent from South Dock by piping under the South Channel.

East Basin: At the entrance to the South Anteport, a breakwater and 2 new basins have been constructed.

Basin No. 1 is used exclusively by the Port Works Department for laying up and repairing dredgers and other maintenance craft. It also contains a dry dock and a shipyard. Depth of water is 24 ft. in the basin but only 16 ft. at the entrance.

Basin No. 2, in form an irregular quadrilateral, is separated from No. 1 by a mole, and is 146 m. wide at the entrance, 170 at the base and with walls 372 m. long to the S.E. and 294 m. long to the West, allowing a number of vessels to berth. Alongside this mole is the SEGBA Power Plant. Depth in the basin varies from 24 ft. to 14 ft. at the entrance.

From No. 2 there is a mole parallel to the South Access Channel, 260 m. long, with a central salient 120 m. long, and 2 side salients 15 m. long each, and at 55 m. from the central mole. This is used by tankers discharging fuel for the Power Plant. There is 1 crane, 16 tons, and a narrow gauge railway line.

The breakwater has been built on the South side of the access channel as a protection for the basins, and commences 100 m. South of the light buoy on Km. 1 of this canal.

South Anteport: The construction of the Inflammables Basin, and of the East Basins, before arriving at the entrance to South Dock, Riachuelo or South Basin has created an Anteport. The North part has a mole 384 m. long from East Basin No. 1 to South Basin. This is used by the Port Works Department for workshops, deposits and offices.

The Prefecture has an office here, on top of which is a mast 2 m. high, used as a signal station. A white-edged red flag by day or a flashing red light by night indicates that a vessel is entering by the Southern Channel from Km. 8 to the Anteport. This signal will remain until the vessel reaches the Anteport, and signifies that the Channel is closed to all except tugs, sand hoppers and river passenger craft, provided draft does not exceed 14 ft.

Riachuelo: This is a narrow, winding stream which flows to the Plate by way of the South Channel. It has a depth in its axis of 21 ft. and from 17 ft. to 19 ft. at the berths, while the banks being sloping can cause trouble with moorings on a falling tide. Ocean-going vessels rarely use this now, except for occasional discharge of timber, and it is used mainly by lighters and coastal craft, as well as by laid up vessels and what are now virtually wrecks.

This is the old-time Boca and Barracas area.

DENSITY: Fresh water.

FRESH WATER: There are hydrants at all berths, with very few exceptions, at which vessels can take water at a charge per cu.m.

There are no hydrants in the Inflammable Basin, and only at Berth No. 1 on either side of Basin E in the New Port.

Delivery rate varies from 5 to 10 t.p.h., depending on the number of vessels taking water, time of day, etc. An extra charge is made in overtime.

FUEL: Available by barge.

CARGO: *Classification of Import Cargo:* Argentina being a tariff protected country, all cargo landed is subject to Customs control.

To facilitate control, there are Custom House warehouses on the city side of the dock zone, on the quays, in the South Dock, and others away from the quays. The Dock Zone is enclosed.

The transport of all goods from vessels is currently effected by State owned vehicles. There are no longer any private warehouses.

All fine cargo, cargo in cases, and most baled cargo must be discharged to Custom House Warehouses, direct from the ship, by means of dock cranes.

Other cargo in cases, barrels, etc., which might be damaged if stowed in the open air, also cargo which from its nature might damage other cargo stowed with it must go to the Custom House warehouses away from the quays, and is conveyed there by port railway wagons that take the cargo from alongside the ship. This same class of cargo can also be sent to private fiscal warehouses and is similarly conveyed there from the ship's side by railway wagons.

Cargo that can be stowed in the open air without risk of damage, such as cases of glass, motor cars, sanitary ware, etc., is also conveyed from the ship's side by railway wagons to open spaces (plazoletas) within the dock zone, reserved for the stowage of such cargo.

Certain classes of cargo, such as bales of gunnies, jute, rice, agricultural implements, and all articles the nature of which can be seen at a glance, can be discharged direct to consignees' carts, motor lorries, etc., from the ship's tackle. Also certain classes of rough cargo, such as coal, lumber, iron, cement, etc., must be discharged direct in this way.

The Custom House, in order to expedite despatch, has enlarged the list of goods that can be discharged in this manner, and also authorises the carrying out of these operations outside ordinary working hours, which has hitherto been prohibited.

Storage of goods in Custom House Deposits is limited to six months, counting from the date of the vessel's entrance to port.

All classes of cargo can be discharged into lighters (by permit from the Custom House).

Discharge to lighters can take place in all sections of the port.

Use of Special Deposit Called "Transit" for Reception of General Cargo:

In order to facilitate the discharge of vessels with general cargo for delivery to Fiscal Warehouse, the Custom House Authorities have authorised the direct discharge from vessels to a special warehouse which receives all the cargo as it comes out of the hold, labour being supplied by Agents.

This facility is only available at certain sections of the port and whenever a vessel discharges at a berth where there is a "Transit" deposit, this must be used unless the vessel carried homogeneous cargo or of such a nature that it does not require the use of the "Transit" deposit.

The cargo discharged in these special warehouses must be delivered by the Agents at ship's expense, into the Customs warehouses.

Cargo in transit to or from Paraguay is now stored in sections of Warehouse No. 5 of Dock 4. The goods may remain in the warehouse, once onwards transportation has been arranged, for 3 days, where the ocean carrier is operating, or in a special shed in Section 1 of Dock 2, where the river vessels load for that country.

Cargo in transit for other countries can be deposited in any approved space. In all cases, special permit must be obtained in order not to lose the status of "transit cargo".

Time Limit for the Permanency of "In Transit" Cargo in Lighters: Maximum time limit is set at 90 days, but it is possible to renew this, while on the expiry of such authorisation, the cargo must be discharged to fiscal warehouses, and be subject to all the rules and conditions governing this operation.

The Custom House is authorised to grant an extension of time when the interested party requests this before expiration date, and providing the causes are, in the opinion of the Custom House Authorities, justified.

Cargo in transit that is discharged by mistake to fiscal deposit, has to be removed from there within 48 hours; otherwise it must be added to the cargo manifest as a surplus discharge.

A tariff in the style of railway tariffs is in force with a variety of charges, all depending on the class and nature of the cargo that is being trans-shipped. Therefore, Shipowners, their Agents and Forwarding Agents should, in every case, communicate with their Agents in Buenos Aires to ascertain the exact cost of these charges. Subsequently to the new tariff being enforced, various increases were declared, so that the extra freight on cargo trans-shipped is now an important item to be considered when accepting through bookings.

Delivery of Cargo: The receiver of the merchandise or holder of the Bill of Lading must deliver this document to the Custom House to clear the goods. The merchandise, whether for deposit of direct despatch is delivered to the Consignees without the intervention of the Master of the vessel or the Agents. The Bill of Lading remains with the Custom House, under whose control the cargo is delivered. The Custom House verifies the legitimacy of ownership, and whether all the import dues or services have been paid on the merchandise before leaving warehouse.

Collection of Freights on Imported Goods: In the Argentine, the Custom House releases the cargo, and not the Agent, therefore the only means of ensuring collection of freight when payable at destination, is for the Agent to place a judicial embargo on the entire cargo. This action necessitates the Consignee first obtaining the Agent's conformity to the documents before the Custom House will accept them and deliver the goods.

Without an embargo the Agent, once he has presented the Cargo Manifest, cannot intervene between the Custom House and Consignee. Not even the retention by Shipper of all the signed original Bills of Lading is a safeguard, because the Custom House, which is only concerned with the delivery of the cargo to the lawful Owner and is in no way concerned with the freight payment, will deliver the cargo against production by consignee of a bank guarantee that the Bills of Lading will be forthcoming in due course.

From the foregoing it may be gathered that freight should always be prepaid when possible.

The Custom House usually does not release the cargo, if the Bills of Lading are claused "Payable at destination", until the importer produces an account for freight, duly receipted by the Agent, but this is not a sufficient cover, as the Customs are not under any legal obligation to effect this control, and therefore cannot be held responsible for the freight of goods delivered without it being paid.

Cargo Discharged to or Loaded from Vehicles: The Custom House Administrator has authorised the access of vehicles of all classes to the quays of this port for the reception or delivery of cargo of any class, size or weight.

It is necessary for the importers, exporters or Custom House brokers to obtain a permit for this, and the applicant is held responsible for any damage to port installations caused by said vehicles. Sufficient space must be left between truck and sheds to allow passage of Port Authority vehicles and fire engines.

The authorities will not be responsible for any accidents to the vehicles, their crew or their cargo. The vehicles must be so handled as not to interfere with the railway traffic.

Discharge of Inflammables: This is now permitted in the Port of Buenos Aires under strict security control.

Discharge of Sulphur: It is compulsory to have a motor launch fire extinguisher alongside vessels during the discharge of sulphur. An extra man is also required at each hold for carrying water to the stevedores.

Delivery of Fresh Fruit: The Custom House allows the consignees of fresh fruit to take away their cargo immediately on vessel's arrival, upon presentation of a special permit endorsed by a bank and Agents, and whereby the receivers guarantee presentation of the Bill of Lading in due course.

Placing of Lighters between Vessel and Wharf: When lighters are placed between the vessel and the wharf for the convenience of discharging a vessel's hold, full Port Service Dues are charged.

Lighters may be placed between the vessel and the wharf when the vessel's work to shore is not interfered with thereby. In such cases the vessel will continue to pay full dues. Lighters are, in fact, not considered as occupying any berth unless they are allotted a special berth by the Custom House to load or discharge. It is only when lighters are so commissioned by the Custom House, that a vessel going alongside these lighters would be charged in the category of a vessel lying second off.

Discharge of Heavy Lifts: There are 3 floating cranes, one for lifts of up to 60 tons, another of 100 tons and a new one of 250 tons. The first two may have lost part of their capacity. The 250 ton crane can navigate carrying its cargo, so making special movement of the vessel unnecessary, but the two smaller cranes must operate between ship and shore in swivelling movement.

There is also a floating crane capacity 30 tons belonging to the Navy, and two others, each 75 tons capacity, belonging to the State Fleet.

Hire counts from getting the crane alongside, and in condition to work, until work is completed, plus an extra hour to compensate crews from getting the crane back to its mooring place. Slings must be supplied by the lessee, and no responsibility is accepted for damage or breakage, the charge being on a tonnage/hour basis.

The 250 ton crane is not self-propelled, and has a length of 45 m., 23 m. beam and a draft of 5 m., displacing 1,400 tons. If required it can be used in salvage operations, towage being for account of lessee.

Normally these cranes, except for the 250 ton crane, navigate under their own power, but the Craneman has the right to employ a tug or tugs for lessee's account when he considers it necessary and two tugs are also generally employed.

Wharf Cranes: The hire of shore cranes is charged by the Port Administration to the Agents of the vessel requesting their use. Special permission must be obtained for overtime work, and also to have shore cranes handle ship's machinery, ballast, or any other non-commercial commodity.

Movable Cranes: Charged per hour from arrival until work finishes. These are used for shifting cargo from one wagon to another, or for shifting cargo for convenience of consignees.

Advertisements: Advices of arrival of vessels with cargo, inspections of general cargo and notices of general average are published in the local press.

Notarial Protest and Extensions: When vessels arrive with cargo it is customary to note protest before a Public Notary, for which there are fixed fees per page to be filled in, plus further fees should an extension be necessary later.

TELEPHONE: There is no special installation for vessels in port. Many Agents have one or more lines of their own, which can be placed on board, if there are connections available in that sector. The telephone company makes a connecting charge each time, at a high cost to the vessel, plus the usual charges for the service.

REPAIRS/DRY DOCKS: Syncrolift with capacity 40,000 d.w.t.

SURVEYORS: Germanischer Lloyd, Av. Leandro N. Alem 790, 9th Floor, 1001 Buenos Aires. Tel: (01) 3112085, 3114398.

DEVELOPMENTS: Port access to be dredged to 32 ft. for a width of 460 ft. At a later stage dredging of the port to 35 ft. will be undertaken.

TIDAL SIGNALS: See "Plan".

Signals by Day: See "Plan".

Signals by Night:

(White flash) Cycle:	30 seconds.	
(Red flash) Long flash:	2.5 secs. each.	
(Green flash) Short flash:	6/10 secs. each.	

White flashes — Rising tide: One long.
Falling tide: Two short.
Above zero:
Red flashes — For each metre: One long.
For each 10 centimetres: One short.
Below zero:
Green flashes — For each metre: One long.
For each 10 centimetres: One short.
Zero:
Green and red flashes — One green and one red, both short.

A weekly bulletin is issued by the public works ministry and widely distributed among Pilots and Agents reports depths referred to the zero of the Riachuelo indicator in channels, passages, basins and berths and it is possible to know the real depths at that moment in each part of the port area.

GENERAL: *Port Zone:* No one is permitted to enter the port zone on Sundays or holidays, or any working day after 1800 hrs., unless supplied with a pass. Visitors to ships must have cards issued by the Agents and approved by the authorities.

There are several access gates open during day time, but after working hours and on Saturdays/Sundays and holidays only those at Cangallo Street (by Dock 4) and Maipu (New Port) are open on a 24-hour basis.

Allotment of Berths: Vessels to discharge are allotted berths by the Port Authorities in strict turn, as from arrival in the roads, and according to the nature of the cargo to discharge or load and its quantity. A certain time is granted for completing operations, though an extension can usually be obtained, the Port Authority reserving the right to order a vessel out if operations are not completed on time.

Berths are allotted in South Dock when the greater part of a vessel's cargo is for the factories in that zone.

Berths at the Elevators: These are allotted in accordance with the certificate given by the National Grain Board, and in strict order of arrival in the roads.

Time Limit for Occupying Berths and Commencing Operations: Vessels which do not commence operations within 4 hours of the first ordinary period, are liable to have the berth given to others. Similarly those which suspend operations without due cause may lose the berth.

ELMA Berths in New Port: Any vessels may solicit one of the reserved berths, if vacant, but must shift as soon as a State vessel requires the berth.

Discharge of Inflammables: Consignees must take delivery from alongside. Should Customs clearance for such cargo not be ready, it must be discharged into lighters and the authorities will indicate where it must be placed.

Entrance: Vessels can enter or leave at any time of day or night, with advance notice to the authorities.

Movements: Vessels are not allowed to shift if their draft is not at least 10 in. less than the depth of water on the semaphore, with a rising river. No vessel can interrupt the operations of another to shift within the port, but if ready to sail, the other vessel must facilitate its departure whatever the hour may be.

All vessels moored alongside one another, at the quay, must reciprocally facilitate their operations, and open out when the vessel on the inside finishes her operations, and must leave or change berth. They must also make room for lighters with cargo for the vessel next to the quay, outside working hours.

When a vessel has to shift along the quay up to one ship's length to discharge or load from another hatch, neither towage nor pilotage is necessary when the shift is between the forward hatches, or the after hatches. Prior permission must be obtained.

Shifting from North to South or Vice Versa: There is no set rule, but usually vessels going from say, South Dock to New Port, will let tugs go and sail out to Intersection Roads to turn round and take up tugs again in the North Channel. It is also possible to have tugs follow out to Km. 9, where the North and South Channels meet, turn there and come into the new berth with the same tugs, if length of vessel permits.

It is for the Master and Pilot to decide where the vessel will turn, depending on weather, draft, current, etc.

Opening of Dock Bridges: The established time table, twice an hour is not observed, and Agents arrange for this when a vessel is ready to move through. Vessels should not attempt to pass the lock gates if clearance is less than ten cm. and the river is not rising. It must be remembered that the sole of the locks in each case is of concrete.

It is frequent in Madero docks to see vessels resting on the soft muddy bottom.

Prefecture Control: On both entering and leaving the Prefecture Officers may check with the crew list that all members of the crew are on board, particularly on sailing.

Draft on Sailing: Must be checked by the Pilot and Master, and duly recorded in the Pilot's book. Load lines are strictly checked; in case of hogging, drafts fore and aft are taken while in sagging marks will prevail.

Shiftings and Manoeuvres: In port are carried out under the responsibility of the Master, but Pilots are also responsible, at least to the Prefecture, since they are under direct authority and at the same time considered assessors to the Prefecture.

Trim: Also controlled, no list is allowed, and maximum tolerance for difference of draft fore and aft is 6 ft. to 7 ft. according to vessel's length overall. Vessels should not be down by the head.

Hatchways: All hatches must be kept closed when a vessel is not working. If hatches are found open when a vessel is idle, the vessel is fined.

Garbage: A garbage barge goes round the port every morning to take away the garbage, which must be left in drums slung over the stern ready for lowering into the barge. It is also possible to arrange for a barge to take off refuse from holds, old dunnage, bedding, etc. Collection is often a rushed affair, and good watch must be kept for the barge. Fines are imposed if garbage is not removed.

Working Hours: Ordinary working hours are now fixed as from 0700 to 1300 and 1300 to 1900 hrs. Tugs are now also on this same time table.

Overtime can be worked from 1900 to 0100 hrs. and from 0100 to 0700 hrs., but Stevedores are not allowed to take two consecutive shifts.

Custom House guards and other official workers follow the same schedule from Monday to Friday, but earn overtime on Saturdays, Sundays and holidays.

SHIPMASTERS' REPORT: September 1980.

Documents: In addition to the papers mentioned in the "Guide" the following papers were requested.

2 Vaccination Lists.
3 Arms Lists.
2 Crew Lists with the numbers of the passports.
1 List of loading ports of the last voyage with dates of arrival and departure.

The I.D. cards were checked before departure and stamped again.

AUTHORITY: Administrador del Puerto Buenos Aires.

CAMPANA: 34.15 S. 58.58 W. (See Plan)

(Province of Buenos Aires) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank (from seaward) of the Parana de las Palmas arm of the Delta from seaward, 155 miles by river from Buenos Aires, Martin Garcia, or 60 miles via Mitre Channel.

The port is mainly used for receiving and despatching petroleum and its products. There are also facilities for handling timber and general cargo, as well as steel tubes for the petroleum industry, both for internal requirements and for export, which are made here.

PILOTAGE: Compulsory.

RESTRICTIONS: Draft is controlled by depth of water at Martin Garcia Bar. Daily draft forecasts made by local authorities. See "Mitre Channel" (in River Plate section).

MAX. SIZE: Max. LOA 225 m. Up to 27 ft. draft, dependent on local river conditions.

HEALTH: Free Pratique can be obtained in the usual way, by notifying Buenos Aires Agents. Tankers lightening part of their cargo in Buenos Aires Roads, can take Pratique here, provided that the convoy formed by the tanker and barges follows up to Campana, and no one on board has any contact with shore until after the medical visit. If the vessel is "unclean" however, Pratique is taken before lightening.

RADIO: Use Buenos Aires stations for overseas, but for traffic control this comes under Zarate VHF (Channel 14) LSO 23.

TUGS: See "General" before first port.

BERTHS: *Siderca Wharf:* Km. 98.5. Owned by Dalmine Siderca S.A. Length 185 m. Depth 35 ft. Discharge of iron ore by travelling crane with grab, outreach 22 m. from fender line. Airdraft 23 m. Discharge rate 350-400 tonnes p.h.

Steel tubes are loaded by ship's gear at a rate of 150-180 tonnes p.h. per gang per shift (6 hours).

National Mole: Length 116 m. Depth alongside 20 ft. (5 m. off the wharf the depth is 25 ft. (upstream) and 27 ft. (downstream). 3×3 ton electric cranes.

Carboclor: Located 1,500 m. downstream from Esso Jetty "E". Privately owned by Carboclor Industrial Quimicas S.A. Berth consists of a small jetty with dolphins. Depth alongside 32 ft. Liquid chemicals loaded and discharged at rates up to 1,000 cu.m.p.h.

Tolueno: Located 500 m. downstream from Carboclor Jetty. Privately owned berth with depth of water 20 ft. Berth consists of a concrete platform (20 m.×8 m.) with connections for loading and discharging liquid chemical products to coasters.

Esso – Jetty H: See "Tankers".

There are 2 towers, one on each dolphin, 27 m. from each end of the tanker platform. Chutes are able to swivel 180° and delivery rate for petroleum coke is 4,000–5,000 tonnes per day. Airdraft 17 m.

MEDICAL: Doctors and hospital available.

TANKERS: *Esso Refinery Berths:*

Jetty A: For discharge of dirty ballast and tank washings. Max. LOA 100 m. Depth alongside 20 ft.

Jetty C: Max. size 36,000 d.w.t. Max. LOA 250 m. Depth alongside 40 ft. Berth consists of a platform on piles with 9 pipelines for crude, fuel oil, gas oil, petroleum and slops.

Jetty H: Max. size 38,700 d.w.t. Max LOA 230 m. Depth alongside 45 ft. Berth consists of a concrete platform (16 m. long) on piles with 15 connections for loading/discharging of crude oil, refined products and slops.

Jetty G: Max. size 5,000 d.w.t. Max. LOA 100 m. Depth alongside 18 ft. Berth consists of a concrete platform (14 m. long) on piles with 13 connections for crude oil, refined products and slops. Vessel lies against 2 dolphins. Fresh water available.

Jetty E: Max. size 5,000 d.w.t. Max. draft 27 ft. Berth consists of concrete platform on wooden piles and 2 concrete dolphins. Tugs compulsory for berthing and unberthing. There are 20 connections for crude oil, refined products, additives, lubricants and slops.

DENSITY: Fresh water.

FRESH WATER: Available at Esso Moles and National Mole.

FUEL: Available at Esso berths and by trucks or barges.

CONSULS: Italy.

REPAIRS: Can be effected.

AUTHORITY: Administracion de los Puertos Parana.

CONCEPCION DEL URUGUAY: 32.29 S. 58.12 W. (See Plan)

Km. 183 – Uruguay River (Province of Entre Rios) "C" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the River Uruguay from seaward, 182 miles from Buenos Aires.

APPROACHES: Access to the port is by a channel 1,000 m. long, 75 m. wide, which is 19 ft. at zero.

The roads of the port extend from the buoy marking the entrance to the channel, and about 2 km. up river, where vessels may anchor if awaiting berth.

Access is governed by the water on the Montana and Altos y Bajos passes, where there is normally no more than 19 ft. over zero and this draft should be taken as a determining factor.

PILOTAGE: Compulsory. Pilots for Uruguay River board off Buenos Aires Entry Channel.

ANCHORAGE: In Uruguay River, about 900 m. North of Entry Channel Buoy.

RESTRICTIONS: Day and night navigation allowed. Channel dredged to 21 ft. LW. Depth on bars, 19 ft. LW.

MAX. SIZE: Maximum permitted draft in Uruguay River is 19 ft. plus height above zero minus 1.0 ft. Fresh water, according to local conditions.

HEALTH: When the vessel enters the jurisdiction of Prefectura Naval Argentina, Prefectura Rio Uruguay, from about km.116, radio agent and advise the number of passengers and crew on board and health condition of vessel, on VHF Channel 16 – call sign L8T (Lima 8 Tango).

RADIO: The port station "L8T" transmit daily information about the condition of the Uruguay River from San Javier to Gualeguaychu. The radio gives the news everyday at 0055, 0655, 1255 and 1855 hrs.

TUGS: Vessels can enter or sail to the Quays No. 3,4,5,6 and 7 without tug. It is compulsory to use tugs at other quays.

BERTHS: There are two berths for general cargo and one berth for tankers. There is an elevator of 20,000 tons capacity, working with two tubes of 500 t.p.h. each. Due to the silting alongside quay, vessel should be prepared to be fendered about 1.5 m. off the quay.

MEDICAL: All medical facilities available.

TANKERS: One berth for tankers up to 19 ft. draft.

YPF Berth: Eight hose connections, 12 in. and 6 in. diameter.

DENSITY: Fresh water.

FRESH WATER: Available, there are several hydrants of 1.5 in. diameter on the mole.

FUEL: Available by tank truck from local suppliers.

REPAIRS: National and privately owned workshops for all types of minor repairs.

DRY DOCKS: One, owned by Ministerio de Obras Publicas, length 70 m.

REPATRIATION: Can be arranged subject to Immigration formalities.

AIRPORT: Situated 10 km. away at Gualeguaychu, with daily services to Buenos Aires.

CONSULS: There are Italian, French, Uruguayan and Spanish representatives.

POLICE/AMBULANCE/FIRE: Police Tel: 22222. Ambulance Tel: 27792/22464. Fire Service Tel: 23333. Vida (Emergency) Tel: 27889/27858. Hospital Tel: 22464.

TELEPHONES: Arrangements can be made for placing telephone on board.

SHORE LEAVE: Permitted subject to Immigration control.

AUTHORITY: Prefectura Naval Argentina, Prefectura Concepcion del Uruguay.

Capitania del Puerto Concepcion del Uruguay, Spiro y Estrada, 3260 Concepcion del Uruguay, Entre Rios – RCA, Argentina.

DIAMANTE: 32.05 S. 60.33 W. (See Plan)

Km. 533 – River Parana (Province of Entre Rios) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the right bank of the River Parana from seaward, above Rosario and 240 miles and 276 miles from Buenos Aires via the Mitre Channel and Martin Garcia respectively.

APPROACHES: There is ample depth of water in the port for vessels with 24 ft. draft, but draft is governed by the water on the various bars on the river, the shallowest above Rosario being Isla de los Pajaros, at Km. 468 to Km. 473 where 2 ft. keel clearance is required.

PILOTAGE: There is no resident port Pilot, and Pilot has to be ordered from Rosario. Minimum 10 hours notice required. The river Pilot ends his duties in the Outer Roads. Vessel must sail to make Los Pajaros Pass in daylight.

HEALTH: Vessels arriving directly from abroad must take Free Pratique at San Nicolas or Rosario, with the usual pre-advice to Agents there, which is essential for preparation of Notice of Readiness.

RADIO: Nearest station is Rosario LSQ 38, on 477 kHz. A1 LSQ broadcasts daily, at 1305 hrs., the depth of water in the Parana River from Los Ratones to Los Pajaros, and also the minimum depth between Santa Fe and Rosario.

TUGS: Tugs available from Santa Fe. No tugs required for berthing. One tug required for unberthing vessels under 160 m. LOA and 2 tugs if over 160 m. LOA.

BERTHS: Grain is loaded from the elevator at the North end of the port, Section 4, where there is 30 ft. Only one vessel may load at a time. Loading rate is up to 600 tons per tube per hour, work being possible with 2 tubes simultaneously. Max. LOA 250 m.

It is possible to load a second vessel, lying second off, if the beam of the vessel alongside permits.

Storage capacity in port is about 50,000 tons, of which 20,000 tons are in elevator at section 4.

There are tanks for vegetable oil with a capacity of 4,000 tons. Pumping rate is about 120 t.p.h. to vessels' tanks.

STEVEDORES: Working hours: 0600 hrs. – 1800 hrs. Monday to Friday and 0800 hrs. – 1200 hrs. on Saturday. Overtime if required 1800 hrs. – 2400 hrs. and 0000 hrs. – 0600 hrs.

FRESH WATER: Available at the elevator berth.

FUEL: Not available.

MEDICAL: Hospital available.

DENSITY: Fresh water.

CONSULS: None. Outward bound consulate despatches should be requested from Rosario or Buenos Aires.

REPAIRS: Only minor repairs possible.

IBICUY: 33.39 S. 59.15 W.

Km. 218 – River Parana (Province of Entre Rios) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Situated 3.5 miles up the River Ibicuy, on the right bank of the River Parana Pavon from seaward, 117 miles from Buenos Aires by river.

With the closing of the rail ferry from Zarate this port has now been closed down, and is unlikely to reopen.

LA PLATA: 34.54 S. 57.55 W. (See Plan)

(Province of Buenos Aires) "B" category port.

N.B. Refer to beginning of Argentina and River Plate ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

This port is situated on the left bank of the estuary of the River Plate from seaward, 30 miles South of Buenos Aires. It is the capital of the Province of Buenos Aires and is rapidly becoming industrialised.

APPROACHES: Access to the port is by a channel, which leaves the main entrance channel to Buenos Aires at Km. 57. It can be dredged to 28 ft. maximum. La Plata Roads extend for 3.5 miles from the moles.

PILOTAGE: Compulsory. Coming from the sea, or Montevideo, the Recalada or Uruguayan Pilot will take the vessel to La Plata Roads 27 ft. where a La Plata Port Pilot comes aboard.

From up river to La Plata, the River Pilot is dropped at Intersection, where a new Pilot takes the vessel to La Plata Roads for the Port Pilot to come aboard.

ANCHORAGE: Four miles S.E. of Recalada.

RESTRICTIONS: Vessels navigating in the Entrance Channel have preference over those in the River Santiago, and those which by reason of size must turn at Four Mouths have priority over others in their vicinity.

There must be no crossing or overtaking of vessels over 60 m. long or 9 m. beam, or 20 ft. draft and for this reason vessels ready to sail from Gran Dock will not let go while any vessel is entering by the Entrance Channel.

Vessels over 190 m. in length can only manoeuvre in daytime, with a minimum visibility of 1,500 m. and with a wind not exceeding 10 knots.

Regulations for the Santiago River Channel prohibit movement between sunset and sunrise for vessels over 140 m. long, or drawing over 24 ft. Vessels over 11 m. beam cannot cross or overtake, and vessels in this channel must not interfere with those moving in Four Mouths (Cuatro Bocas).

Depths: Access Channel: Length 12 km. Depth at zero tide is 23 ft. 08 in.

Turning basin: Depth 26 ft. at zero tide.

Channel to Puerto Ing. Rocca (Propulsora) dredged to 28 ft.

MAX. SIZE: Max. LOA 215 m. Draft: 24 m. beam – 25 ft. draft; 24 m. – 33 m. beam – 23 ft. draft; both drafts are with 3 ft. under keel.

Vessels with a beam in excess of 33 m. require special permission to use the channel.

HEALTH: Free Pratique — radio messages should be sent direct to Agents in La Plata if vessel is entering direct.

RADIO: Station LOM 524 kHz, A2. State oilfields have a VHF service, range 50 km. for communication with their vessels on 156.5 MHz during the first 15 minutes of each hour.

TUGS: Two tugs must be used, each of a minimum 820 h.p. Normally join vessel in entrance channel. Also see "General" before first port.

BERTHS: The port comprises Rio Santiago, Gran Dock and the Propulsora berth, 5 km. up the river Santiago, also known as Port Ingeniero Rocca.

Rio Santiago: The grain elevators on the West side of the Entrance Channel are no longer in use. The berth is 450 m. long, due West of the Four Mouths Turning Basin. Four tanks for reception of liquid chemicals have been installed here, capacity 2,300 tons. Depth alongside 23 ft.

Gran Dock: (Also see "Tankers").

Berths No. 10 and 11 are used by Copetro for the export of coke.

Berth No. 11 is equipped with a conveyor belt and can deliver 5,000 tonnes in 12 hours (2 shifts). A similar system is being installed at Berth No. 10.

The depth alongside Berth No. 11 is 26 ft. and at Berth No. 10 the depth is 23 ft.

There is a turning basin at the head of Gran Dock with a width of 200 m. where vessels up to 175 m. LOA can turn.

Prior to berthing, vessels must swing and berth head out.

Propulsora: A cold rolling steel mill has been built inland and a 5 km. channel dredged to 28 ft. from "Cuatro Bocas". There is one berth here, 154 m. long, though vessels of up to 220 m. length with beam of 31.5 m. with special permission can berth. Depth alongside 28 ft. The material used in the mill is imported in coils, and exports of cold rolled sheets and wire are also handled. There are two cranes, 30 ton and 32 ton capacity and combined rate of discharge is 500 t.p.h. Work is continuous.

Some 600 m. from the wharf itself, there is a turning basin 300 m. diameter. Vessels go in bow first, as there is less water to the South end of the wharf, and turn in this basin before returning down channel to La Plata proper. Only one vessel can operate at a time here. Vessels are secured to bollards on shore at the bow, and a mooring buoy astern. 2 tugs required for berthing and unberthing.

TANKERS: *Gran Dock:* The dock has a total length of 2,500 m. but the Northern half of the dock is in a state of disrepair and unused. The State Oil Field (YPF) Refinery is located on the East side where crude oil is received by pipeline from Bahia Blanca. The Refinery has 5 berths (Nos. 1-5) for the loading and discharging of clean petroleum products. Tankers load to maximum draft and then proceed to the roads to complete loading from barges, to the maximum draft permitted for the River Plate.

On the West side, Berths No. 6 and 7 are operated by Petroquima and Berths No. 8 and 9 are connected by pipeline to the YPF Refinery on the East side.

MOORING: Vessels of up to 150 m. length will employ 4 men for mooring, and those over 150 m., 6 men. Mooring hours in ordinary time are from 0600 – 1800 hrs. on week days, 0600 – 1200 hrs. on Saturdays. There is a 50% extra from 1800 – 2400 hrs. on week days or from 1200 – 1800 hrs. Saturdays, and 100% at all other times.

SEMAPHORE: For night signalling of the depth of water in the access channel, the system is similar to that at Martin Garcia and Riachuelo, Buenos Aires. By day signals are hoisted on a tower at Km. 4,460 on the access channel arm if tide is rising. If the river is stationary or falling, no flag is hoisted.

MEDICAL: Doctors and hospital facilities available.

FRESH WATER: Delivery by barge, capacity 300 tons and pumping with barge's own pump, 100 t.p.h. There are also connections at the berths in Gran Dock.

FUEL: Available alongside in Gran Dock and by barge or truck.

CONSULS: Following countries are represented in La Plata: Italy, Norway, Peru and Spain. All other consuls at Buenos Aires.

REPAIRS: All repairs can be effected except those requiring a dry dock.

SHORE LEAVE: Allowed, provided crew members in possession of Identification Cards.

AUTHORITY: Capitan de Puerto de La Plata.

RAMALLO: 33.32 S. 59.59 W. (See Plan)

Km. 326 – River Parana (Province of Buenos Aires) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

APPROACHES: The port is on the left bank of the Parana from seaward, where the river is divided into two by the Isla de las Hermanas.

Access Channel: The entrance is from the main river channel about 5 miles from the port. The channel is buoyed but not lighted. The depth is 23 ft. – 25 ft., depending on the river. Agent should be consulted.

PILOTAGE: Pilotage is compulsory and the Port Pilot boards at the entrance to the access channel. Agent requires 6 hours notice of arrival to order the Pilot from Rosario.

RADIO: Agents at San Nicolas must be contacted either through Buenos Aires Radio, or via Rosario, LSQ 38, on 477 kHz, A1.

TUGS: Tugs are not necessary but if required must come from Villa Constitucion.

BERTHS: *Grain Board Mole:* There is an elevator, capacity 20,000 tons and two loading belts, load rate 250 tonnes p.h. each. The berth, for one vessel 180 m.–200 m. length, consists of a small jetty (length 150 m., depth 30 ft.) and several dolphins and two mooring buoys.

Fiplasto Mole: Used for discharge of fuel to the hardboard factory, from tankers. There are two dolphins with 23 ft. depth alongside. As the current runs fast here, vessels may roll with any wind, and it is recommended to put out more ropes than usual, both fore and aft.

MEDICAL: Attention available, but no hospital.

FRESH WATER: Not available, except by drums from a tank on the National Mole.

FUEL: Not available.

CONSULS: None, consular clearances can be effected at San Nicolas.

REPAIRS: No repair facilities.

ROSARIO: 32.57 S. 60.33 W. (See Plan)

Km. 420 – River Parana (Province of Santa Fe) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

APPROACHES: Outer Roads, between Buoys 410 and 413.

PILOTAGE: The port Pilot will come on board between Km. 410/415, by launch. Vessel should whistle for him if not here to meet the ship (2 long, 1 short).

ANCHORAGES: 7 vessels can anchor at Km. 425 (Rosario Roads) and 3 vessels can anchor at Km. 407 (Punta Alvear Roads). Both anchors should be used.

RESTRICTIONS: *Fog:* In thick fog, special permit must be obtained to enter or leave. There is an average of 6 days fog per month in the period April/August but only 1 day per month in the rest of the year. Electric storms are frequent.

Maximum Speed in Zone: From Saladillo stream North, there is a limit of 6 knots, up to Punta Barrancas.

There are no restrictions as to length and breadth of vessels, but draft and size of vessels are subject to river depth, which is very variable and no standard information can be given. Vessels up to 27 ft. draft are permitted to navigate the River Parana up to Rosario and San Lorenzo, provided vessels speed exceeds 10 knots and that there is at least 1 ft. keel clearance. Above Rosario controlling depth 22 ft. Vessels loading in Parana Ports must keep close contact with Agents for daily forecasts of admissible draft crossing Martin Garcia Bar to avoid risk of overloading and consequent delays.

HEALTH: Free Pratique, use Radio LSQ 38, on 477 kHz, or via Buenos Aires Radio.

RADIO: All messages through Pacheco Radio, call sign LPD, operating on 425 kHz. Pilots equipped with VHF radio Channel 16.

TUGS: Two tugs are available, controlled by Port Authority. See "General" before first port.

BERTHING:

Berth	*Length* (m.)	*Depth* (ft.)	*Remarks*
FACA	130	30	Floating jetty. Air draft 14 m. Max. LOA 240 m. Grain loading, rate 1,000-1,200 tonnes p.h. Storage 19,000 tons.
Genaro Garcia	140	35	Private elevator. Max. air draft 21 m. Grain loading, rate 1,000 tonnes p.h. Storage 7,000 tonnes.
Unit III	80	30	Air draft 13.0 m. Max. LOA 220 m. Grain loading, rate 400 tonnes p.h. Storage 80,000 tonnes.
Unit IV	145	29	Air draft 12.0 m. Grain loading, rate 400-500 tonnes p.h. Storage 35,000 tons.
Sheds 3-17	2,000	28	Bulk cargoes (grain by-products and sugar) by belt, rate 150-200 tonnes p.h.
Bolivian Free Zone	820	28	8 cranes. Bolivian imports and exports.
Sheds A, B, C.	300	28	Storage and export of sugar.
Paraguay Free Zone	350	29	Leased to Paraguay.
Sheds F to J	550	29	5 sheds×10,000 tonnes capacity for grain by-products. Loading by portable conveyor belts. Sheds H and I are waiting berths.
New Wharf	609	30	5 electric cranes travel length of wharf. (2×6.3 tons, 2×12.5 tons and 1×20/35 tons). Sulphur and manganese ore discharged to trucks. Privately owned sheds for storage of grain by-products. 2 fixed conveyor belts, rate 190 tonnes p.h. At the South end there are 3 lines for loading vegetable oil, rate 500 tonnes p.h. Storage capacity 50,000 tonnes.
Unit VI	250	31	Grain elevator berth. 9 chutes, 5 belts, rate 1,500 tonnes p.h. (300 tonnes p.h. per belt). Storage capacity 125,000 tonnes. Max. LOA 250 m. Max. air draft 13.5 m.
Unit VII	215	30	Grain elevator berth. Storage 80,000 tonnes. Rate 1,000 tonnes p.h. Berth not in use. Control room destroyed by fire.
Carnes Argentinas	175	–	Meat and products loaded by ship's gear.
Punta Alvear	144	35	Private grain elevator 14 km. below Rosario. 3 towers. 2 towers deliver 1,800 tonnes grain or 1,200 tonnes by-products per hour. Storage 55,000 tonnes in silos and 15,000 tonnes in sheds. Max. air draft 21 m.

Cranes: There are a large number of electric cranes, and the port is built in such a way that with few exceptions all cargo discharged must be handled by shore cranes. If the river is high, and shore cranes cannot operate to the vessel, the ship may discharge to shore, for the shore crane to place on railway cars, etc.

Bills of Lading covering lifts of 2.5 tons or more should be claused in such a manner that any extra expense in landing them is for account of the cargo.

Allotment of Berths: May depend on the availability of grain to the particular shipper, but normally berths are allotted in order of arrival.

Fenders: Vessels must use fenders for keeping them off, and can use their own or hire from the port.

STEVEDORES: Working hours: 0600-1200 and 1200-1800 weekdays and Saturday morning. Other times are on overtime rates. Gangs supplied according to vessels requirements by private companies under Government supervision.

Normal capacity per gang, per shift:
20 to 25 t.p.h. frozen meat.
120 to 140 tons per shift general cargo.

MEDICAL: Private and state-owned hospitals. All facilities available.

TANKERS: Discharge at Moles 3 and 4.

FRESH WATER: Only available at the berths on the Southern part of the port, except at the new wharf.

FUEL: All grades available by barge, but cost is high.

CONSULS: The following countries are represented at Rosario:

Bolivia
Chile
Finland
Germany
Greece
Italy
Lebanon
Netherlands
Nicaragua
Norway
Paraguay
Peru
Spain
Sweden
Switzerland
Syria
Uruguay

REPAIRS: All repairs excluding dry docking, can be effected.

CUSTOMS ALLOWANCES: 60 cigarettes per day, and 2 bottles spirits each man.

AIRPORT: 16 km. from port. Daily flights to Buenos Aires.

POLICE/AMBULANCE/FIRE: Police 29071; Ambulance 45600; Fire 20147.

TELEPHONES: Can be placed aboard.

SHORE LEAVE: No restrictions.

SHIPMASTER'S REPORT: February 1988.
River Plate Passage and Loading at Rosario.

The vessel had ordered a pilot for 0200 hrs. but due to favourable winds arrived at 0100 hrs. The pilot vessel advised in English that the Pilot would only be available at 0200 hrs and the vessel reversed course for a time.

Draft had been reduced to 21 ft. to facilitate passage in the adjacent zones and near Martin Garcia. Pilot boarded at 0215 hrs. and vessel proceeded at near to sea speed on fuel oil for the 6.75 hours to the Common Zone off La Plata. The two River Pilots were standing by and the pilots were exchanged without anchoring, and the ship resumed its upriver passage. The River Pilot ascertained that shipping was light, and that it was not considered necessary to anchor for any oncoming traffic. The ship changed to fuel oil and proceeded at near to sea speed. Passage was North of Martin Garcia Island to Nueva Palmyra, where the ship turned into the Rio Parana Bravo.

A dredger was working at km. 299 and the Pilot requested reducing the maximum draft to 20 ft. to allow the use of the secondary channel, which was duly done. The vessel anchored off Rosario with two anchors at 0400 hrs., 26 hours after taking the first pilot.

An inspection party of 6 persons boarded at 0715 hrs. and the vessel was cleared at 0800 hrs. The holds were concurrently inspected and the ship passed fit for grain at 0830 hrs. This was passed by walkie-talkie to the local agency, who in turn telephoned Buenos Aires Agency who in turn gave Notice of Readiness to the National Grain Board in Buenos Aires.

The vessel had a set of port entry papers from a previous call, and there was no delay. The Customs required the completion of a 'Draft Survey' statement with draft and details of the weights on board. No copy was given to the ship, but as the Chief Officer was inspecting hatches at the time it needs to be prepared for.

The Harbour Pilot boarded at 1000 hrs. and the vessel was all fast alongside a dolphin berth called Unit 4 by 1230 hrs. in a heavy downpour. The hatches re inspected by a second surveyor, and 'fogged' by a section of the Grain Board for the prevention of insects (though none had been found).

The stevedores' working hours were from 0600–2100, or 15 hours per weekday, with 6 hours on Saturday. No work on Sunday. Access was by a small gangway lowered from one of the two elevator towers on to the ship. This berth had only 2 towers, each with 2 booms. The ship's loading plan was amended to avoid having to shift the ship. Moving ahead against the current is said to require pilot, and main engine.

One of the towers was experiencing difficulties and the loading rate was less than that forecast. The vessel had nominated 24,946 tonnes to load to not exceed 27 ft. 03 in. F.W. draft. The River Authorities published daily readings of the available depth of water on each section of the river. It is necessary to keep the ship close to even keel towards finishing in case of a sudden drop in the permitted river draft.

Provisions could not be delivered from the shore due to the pedestrian only form of access. In fact the mooring boat was hired to bring the stores to the ship's offside. However, it was of limited capacity and charged extra to the bill. This applies to the majority of the terminals, which are mounted on top of the high river bank, while ships berth offshore on dolphins that may be fixed or floating. Cash payment in United States Dollars is preferred and in general, the provisions were considered to be of good quality.

Difficulties were experienced with the shore cargo figure being about 2.7% in excess of the ship's draft calculation. The vessel's sailing was delayed for an hour, but no correction appeared to be possible. Letter of Protest submitted and the Statement of Facts endorsed. Receipts are submitted daily, and each needs to be endorsed individually. Shortages appear to be not uncommon but with no means of obtaining rapid positive corrections to documents.

The departure inspection party consisted of one person and the vessel proceeded upriver to turn off No. 1 Unit. The Harbour Pilot left near the South or No. 6 Elevators, and then proceeded with the River Pilots. The vessel passed the dredger by arrangement, at km. 299 and then anchored at km. 244 to await daylight. Vessel hove up about one hour before sunrise and was turning into the Rio Parana de las Palmas at sunrise. This is a very narrow and sinuous river that leads into the Mitre Canal. Some mornings fog was experienced in the early sections. There are very, very few aids to navigation, a string of buoys indicates one side of a dredged channel.

Once the fog had lifted, a clear run through until the Common Zone off La Plata where the Sea Pilot boarded. Fuel oil was used for the majority of the time, excepting during the twilight time and fog periods.

The Sea Pilot arrived and the pilots were exchanged without anchoring and the vessel continued to Recalada. However, at 26 ft. draft, vessel bumped over a mudlump in the channel. Pilot disembarked at 2230 hrs. Due to shallow water, slow speed maintained until 2400 hrs.

SHIPMASTER'S REPORT: July 1994.
Berth: Grain Wharf.
Cargo: Degummed soya bean oil (connection – hoses).
Gangway: Ship's accommodation ladder.
General: Port is sited 300 miles from Sea Pilot Station (River berth). Strong current. No tugs used. Ship berthed port side to. Cargo loaded via manifold and via tank hatch. No work at night or weekends, as no overtime payments sanctioned by Charterer. Max. draft 29 ft. (F.W.). Density – fresh.

Berth: Grain Terminal.
Cargo: Degummed soya bean oil (connection – hoses).
Gangway: From shore.
General: River berth 10 miles down-stream from Rosario. No tugs. Vessel berthed using offshore anchor. Strong river current at all times. Max. draft 29 ft. (F.W.). Vessel suspected of touching bottom on departure when least depth in Emilio Mitre Channel less than advised (our draft 24 ft. 3 in.) (minimum depth in channel advised as 25 ft. 7 in.).
Recommendations: Check maximum draft available for all approach channels to this port.

AUTHORITY: Rosario Port Administration.

SAN LORENZO: 32.45 S. 60.38 W. (See Plan)

Km. 442 – River Parana (Province of Santa Fe) "B" category port.
N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the right bank of the River Parana from seaward, 16 miles above Rosario and 238 miles by river from Buenos Aires via Martin Garcia or 202 miles via the Mitre Channel.

The port includes the separate sections of Puerto Borghi, Puerto San Lorenzo and Puerto San Martin.

APPROACHES: Access is controlled by the passes Destileria and Borghi above Rosario.
PILOTAGE: Available, 6 hours' notice required.
ANCHORAGE: Vessels may anchor in the roads between Buoys 447 and 449.
MAX. SIZE: Up to 27 ft. draft depending on river depths.
HEALTH: Vessels coming in from abroad, should take pratique in Rosario Roads, advising Agents there in good time.
RADIO: Use Radio Rosario LSQ 38, on 477 kHz A1. This broadcasts, in Spanish at 1305 hrs. daily, depth of water in the river between Santa Fe and Rosario.
TUGS: See "General" before first port.
BERTHS: Puerto San Martin:
Terminal VI: Km. 458. New privately owned jetty for handling of grain and by-products. Length 180 m. with 4 dolphins. Four loading chutes of which two can work at one time. Rate for grain 2,200 t.p.h. and 1,600 t.p.h. for by-products. Depth alongside 40 ft., but sailing draft restricted by Paso Bellavista. Fresh water available alongside and fuel by truck.
El Quebracho Elevator Wharf: Km. 456. Owned by Cargill SA. The facility is for loading grain and by-products and vegetable oil. Vessels berth on 3 dolphins and send mooring lines to dolphins fore and aft. The overhead loading gallery has 3 loading tubes but only one can be used at any one time. The loading rate for grain is 1,000 tonnes p.h. and for by-products 750 tonnes p.h. Storage capacity of silos 36,500 tonnes. There are 2×10 in. lines for vegetable oil, rate 900 tonnes p.h. Storage capacity 12,000 tonnes.

The depth alongside is 35 ft. Sailing draft is restricted by Paso Bellavista. Air draft 17 m.
PASA Wharf: Km. 452. Private berth. Vessels berth against 2 dolphins which are 80 m. apart and send lines to mooring buoys fore and aft. Maximum sailing draft on average river level is 21 ft. if proceeding bow first down river. However, if vessels proceeds stern first with the assistance of 2 tugs (or one tug for vessels with bow-thruster) and turning down stream the vessel can load to 25 ft. 5 in.
IMSA Elevator Wharf: Km. 451. Berth owned by Nidera Argentina S.A. Grain, by-products and vegetable oil handled. Vessels berth at 4 concrete dolphins with rubber fenders. Depth alongside 30 ft. Air draft 18.5 m. Distance between berthing dolphins 150 m. Head and stern lines are sent to mooring dolphins ahead and astern. The loading gallery has 4 chutes and 2 loading belts. Delivery rate for grain 15,000 tonnes p.h. and by-products 900 tonnes p.h. Vegetable oil is delivered by gravity by 2×10 in. lines at a rate of 300 tonnes p.h.

Storage capacity of the silos and cells is 85,000 tonnes and the tank capacity for vegetable oil is 30,000 tonnes.
El Transito Wharf: Km. 449. Privately owned berth operated by Bunge and Born. Grain, by-products and vegetable oil handled. Vessels berth at 3 concrete dolphins, overall distance 140 m. Head and stern lines are sent to buoys fore and aft. Depth alongside 32 ft. Air draft 15 m.

There are 2 fixed loading towers. Loading rate 400 – 500 tonnes p.h. Vessels must shift in order to load all hatches.

Vegetable oil is delivered by 2 pipelines at a rate of 700 tonnes p.h. Storage capacity for grain is 26,000 tonnes and for oil 10,000 tonnes.
Dempa Wharf: Km. 447. Owned by Indo S.A. Grain, by-products and vegetable oil loaded. Berth has 5 dolphins with rubber fenders and the overall length between dolphins is 100 m. Headlines are sent to a buoy. Berth equipped with one fixed loading tower. Delivery rate 300 – 500 tonnes p.h. Vegetable oil is loaded by 2 pipelines at 600 tonnes p.h. Depth alongside 35 ft. Air draft 15 m.

Storage capacity for grain and by-products is 110,000 tonnes and for oil 25,000 tonnes.

Vessels may experience difficulty loading end hatches. The berth is at an angle to the current which is strong and with shifting, the assistance of a Pilot and linesmen is often required.

The berth is being reconstructed and additional chutes are to be provided in order to avoid shifting.
San Lorenzo:
State Gas Wharf: Berthing for small vessels loading liquid gas. The berth receives propane at 200 cu.m.p.h. and butane at 150 cu.m.p.h. Ammonia is also handled.
Esso Wharf: 2 mooring dolphins for loading and discharging petroleum products. Discharge lines 6 in. and 10 in. Depth of water 23 ft.
Y.P.F. Wharf: Refinery berth with 5 concrete mooring dolphins. Tankers discharge crude oil and load clean petroleum products. Products are loaded through 6 in. and 10 in. lines. Rate 700 t.p.h. – 800 t.p.h.
A.C.A. Elevator Wharf: Km. 444. Owned by Asociacion de Cooperativas Argentinas. Depth alongside 30 ft., air draft 23.5 m. Loading rate for grain 1,800 tonnes p.h. with 2 belts serving 4 chutes. Storage capacity for grain 55,000 tonnes. Vegetable oil loaded at a rate of 300 tonnes p.h. Storage capacity 5,000 tonnes.
Vicentin/Duperial Pier: Km. 442.5 Jointly owned by Vicentin to load grain and by-products and by Duperial to discharge sulphur. There are 4 berthing dolphins and 2 mooring dolphins at each end. There is no restriction on length of vessel.

Grain and by-products loaded by 3 chutes. Loading rate with 2 chutes is 1,200 tonnes p.h. for grain and 900 tonnes p.h. for by-products. Storage capacity 35,000 tonnes.

Sulphur is discharged by ship's gear using grabs and conveyor belts to stockpile. Rate of discharge 300–500 tonnes p.h. Depth alongside 34 ft.
Port Borghi:
Sulfacid Wharf: Privately owned wharf for loading zinc, ores, sinters and sulphuric acid. Berth consists of 3 dolphins (6 m.×9 m.), giving an overall length of 60 m. Lines are run to mooring bollards on the shore and both anchors are used. There is a conveyor belt, rate 60–80 tonnes p.h. There is a fixed crane, so vessels have to shift to load into all hatches.
MEDICAL: Attention available.
STEVEDORES: Working hours – 0600/1200, 1200/1800, in ordinary time, and in overtime, if required, from 1800/2400, 0000/0600.
FRESH WATER: Small quantities available; Masters are recommended to take elsewhere if possible.
FUEL: Available.
CONSULS: Consular clearances must be made at Rosario.
REPAIRS: Small repairs attended to. It is also possible to bring specialists from Rosario if bigger jobs have to be handled.
AUTHORITY: Administracion de los Puertos Parana Medio.

SAN NICOLAS: 33.20 S. 60.13 W. (See Plan)

Km. 343 – River Parana (Province of Santa Fe) "B" category port.
N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the Parana River, from seaward, below Rosario, and 188 miles (via Martin Garcia) by river from Buenos Aires.
APPROACHES: Between San Nicolas and Rosario are the "Paso Paraguayo" and "Abajo Yaguaron" passes, and below San Nicolas, apart from Martin Garcia, the "Tonelero" and "Las Hermanas" passes.

The old-time characteristic of a grain port has been submerged in the industrial complex which has grown up around the steel mill, but grain is still shipped here.

The entrance channel to the port from the river is kept dredged to 24 ft. 6 in. at zero.
PILOTAGE: Compulsory. 6 hours' notice required to bring Pilot from Rosario.
MAX. SIZE: Draft up to 24 ft. depending on river conditions.
August 1988: Max. sailing draft San Nicolas to San Pedro 28 ft.
RADIO: Use LSQ 38, Rosario, on 477 kHz A1.
TUGS: None needed at the New Port or Buitagro berths, as vessels enter bow upstream, and the current is strong enough to turn them on leaving. Only in the event of high winds should tugs be ordered from Villa Constitucion. Also see "General" before first port.
BERTHS: *Customs Wharf:* Consists of a 537 m. long berth, with depth 29 ft. There are no sheds on the dockside, but one railway line exists, and there are 7 portal cranes (4×20 tons and 3×27 tons).

General cargo and bulk cargoes loaded and unloaded. Grain by-products loaded by portable conveyor at 3,000 – 4,000 tonnes per day. Grabs are used for discharging scrap iron and loading petroleum coke.

There is a pipeline for loading alcohol at 250 tonnes per hour from storage tanks with capacity 21,000 tons.

2×30 tons and 1×70 tons mobile cranes available.

New Port Administration and Naval Prefecture offices have been installed on the cliff above the berth. Agency offices are in the old town.
Grain Berth: The Grain Board Elevator Berth is 220 m. in length and will accept vessels of 250 m. LOA. Depth alongside 30 ft. Rate of loading 600 – 800 tonnes p.h.

Power Plant: Length of wharf 200 m. Coal and oil discharged to power plant. 2×16 ton cranes discharge coal at 250 tonnes per hour each to the belt and stockpile.

1×200 ton fixed crane, which can lift 140 tons out of a hatch, or 180 tonnes from the deck. Max. outreach 25 m.

Puerto Buitagro lies South of the Ramallo brook, and comes under the district of Ramallo, although administered by the San Nicolas port authorities. It handles all the movement of the State Steel Mill, Somisa, the capacity of which is presently being increased to produce 2,500,000 tons of steel per year.

Ing. Buitagro Commercial Wharf: 320 m. long, for movement of general cargo. It is 16 m. wide and has 1×30 ton crane and 2×15 ton cranes.

Coal Wharf: This berth consists of 4 dolphins, 35 m. apart, with bollards on the 1st and 4th used mainly to discharge coal lightened to self-discharging barges from colliers in the roads in the River Plate.

Ing. Buitagro Bulk Wharf: Total length of wharf 680 m.

350 m. is for discharging bulk coal and mineral ores by grab from overhead cranes on rails. There are three overhead cranes (2×10 tons and 1×16 tons) and the rate of discharge for coal is 7,500 tons per day and for ore 10,000 tons per day.

330 m. of the wharf is for self discharging vessels.

Depth alongside the North end is approximately 30 ft. At the South end, the depth is less and requires regular dredging.

Work is carried out in 3×8 hour shifts and Somisa employs all its own labour.

MEDICAL: Doctor, hospital facilities available.

DENSITY: Fresh water.

FRESH WATER: Available at berths.

FUEL: Available, but must be delivered from Buenos Aires, Campana or San Lorenzo by truck.

CONSULS: None.

REPAIRS: Possible.

SAN PEDRO: 33.42 S. 59.39 W. (See Plan)

Km. 277 – River Parana (Province of Buenos Aires) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the Parana River from seaward, below Rosario and 151 miles from Buenos Aires, by river.

APPROACHES: There are no bars below this port, except Martin Garcia, and vessels can therefore load to the limits of either Martin Garcia or Mitre Channel at its maximum of 30 ft.

The roads are 1,500 m. down-stream from the entrance channel. Also see "Berthing".

PILOTAGE: Compulsory. Pilot to be requested 6 hours in advance through Agent. Pilot comes from Rosario and boards in the roads.

ANCHORAGE: Vessels can anchor if necessary about 500 m. from wharf.

HEALTH: Free Pratique should be requested 24 hours in advance via Agents at Buenos Aires as there is no radio here and the Doctor must come from San Nicolas.

RADIO: None; use Rosario LSQ 38, 477 kHz A1, or Buenos Aires.

TUGS: See "General" before first port.

BERTHING: Access channel from the roads is kept at over 32 ft. Draft in all the Overseas Basin is well beyond 30 ft., soundings taken in April 1977 showing 45 ft. in the centre and a minimum of 28 ft. at plumb of the wharf (taken on a river height of 2.48 m.) the loading gallery, at 35 m. high, has 7 tubes, and an overall length of 110 m. Tube radius is 16 m., and extension to the telescopic arms is available. Vessels moor bows to the N.E., swinging in the basin East of the wharf, with a maximum turning length of 225 m., and turn on their engines, use of tugs not being necessary, since wind problems are minimal with the high cliff close in.

Vessels moor port side to with three lines from the bow, two astern and two springs from midships aft. Max. LOA 225 m. Maximum beam is 32 m. Air draft 18 m. Depth alongside 30 ft.

Elevator capacity is 7,000 tons in one, plus 24,000 tons in a second elevator which came into use in early 1978, and another 90,000 tons in underground chambers connected by belts to the main elevator. At the moment only one belt is working, capacity 500/600 t.p.h. A second belt is to be installed with a similar capacity shortly. Hand trimmers are available if needed and there are also centrifugal trimmers for use on the tube. Any bagging needed must be done on board.

By-products are also loaded over a second berth at the head of the wharf, 88 m. wide at this point, taking vessels of up to 150 m., shifting as needed. Loading is over portable conveyor belts, of which there are three in use, loading 40/50 t.p.h. each. The by-products are loaded ex-truck onto the conveyors, and can be stored in a shed on the main mole.

There are no cranes or railway lines, in the port, the station being some 4 km. away, and the grain enters by truck from the large hinterland nearby.

The coastal basin, N.W. from the main basin, can only take river barges, maximum depth being 11 ft., and some by-products enter there.

Authorisation has been granted for a second grain berth to be installed on the South side of the overseas basin, which is 100 m. wide. This will be a privately owned berth, with elevators for 150,000 tons, and an estimated yearly tonnage of 500,000 tons.

MEDICAL: All medical assistance can be obtained. Hospital.

DENSITY: Fresh water.

FRESH WATER: Available at the berths.

FUEL: Not available.

CONSULS: None; consular clearances effected at San Nicolas.

REPAIRS: Minor repairs can be effected.

SANTA FE: 31.40 S. 60.37 W. (See Plan)

Km. 585 – River Parana (Province of Santa Fe) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

Situated on the Santa Fe river, a tributary of the Parana, 90 miles by river from Rosario and 312 miles from Buenos Aires (Via Martin Garcia) or 276 miles via Mitre Channel.

APPROACHES: Entrance to the port is through an access channel, 6,085 m. long, and with 23 ft. at zero.

On this section of the river, from Rosario to Santa Fe, vessels must keep 2 ft. under the keel if measuring less than 50 fiscal units, or 2 ft. 6 in. if over. This applies when the hydrometer at Santa Fe indicates over 1.70 m. of water over zero. If the hydrometer measures less than 1.70 m. (5 ft. 7 in.) then vessels must have 2 ft. 6 in. and 3 ft. 6 in. respectively under the keel.

PILOTAGE: Port Pilot comes aboard in the Parana, at the mouth of the entrance channel. 6 hours advance notice is required for the Pilot to be in position.

ANCHORAGE: Although partially dredged in 1975, restrictions have not been lifted and vessels can only enter or sail between 0900 hrs. and 1700 hrs., and if unable to enter within this period must wait in Diamante Roads (km. 533) and follow radio instructions from the Prefecture. If the Diamante Roads have already been passed, a vessel may lie below Punta Alvear, or eventually at km. 568 (Animas de Paracao) but must immediately notify the Santa Fe Prefecture.

Vessels sailing must leave with sufficient margin to be able to pass "Los Pajaros" (km. 468/473) in daylight, and avoid anchoring in the sectors indicated above as reserved for Northbound vessels.

Exceptionally vessels under 160 m. LOA may anchor in Diamante Roads, if they leave in daylight and arrive in the roads before sunset, and provided there is no other ship anchored there. These instructions apply under normal hydrological conditions, and with unusual changes in water depth may be changed by the Prefecture.

SIGNALS: There is a signal station on the top of the tower of the new elevator (unit 1) in visual and radio contact with the control station tower at the river end of the access channel, where the signals are hoisted. It is also possible to observe movement in the roads from here.

The signals in the entrance channel are:

By day (shown at both ends of the access channel)

White globe, 60 cm. diameter	Channel free for overseas vessels.
Red biconic mark	Exit only for overseas vessels.
Green cone	Free movement of coastal vessels.
Yellow cone	Movement of coastal vessels allowed, but with precaution.

By night (interior signal staff only)

White flashes	Entrance free for overseas vessels.
Red flashes	Exit free for overseas vessels.
Green flashes	Free movement for coastal vessels.
Green and red flashes	Coastal movement only with restrictions.

Absence of signal – signifies port and channel closed.

All vessels will await the corresponding signals, which can be asked for by whistling, repeating 1 long, 3 short, for overseas vessels, or 2 short, 1 long, for coasters.

Should the absence of signals be due to a failure of the system, instructions will be sent by the Authorities.

NAVIGATION: *In the Channel:* Maximum speed in the entrance channel is 5 knots, however, the Pilot can advise on other speeds.

Movement by night is possible, but usually Pilots will not take a vessel out after 1500 hrs., since navigating the passes down river might oblige a vessel to lie in the roads, and turning there would require the use of 2 tugs, it being easier to wait until through transit down stream is possible.

During fog. Usual international precautions must be observed, but if the fog is very thick, entrance or departure of vessels is prohibited without special permission. There are no official statistics as to frequency of fog, but in the period May/August there may be 5 to 6 foggy days a month, and in the rest of the year one or two a month.

HEALTH: As there is no radio station here, Master should radio Agents with the usual request for Free Pratique.

RADIO: Regulations in this port state that Agents or Consignees must give written notice to the Port Authorities 24 hours before ETA, with details of vessel, cargo carried etc., or if in ballast, indicating for account of whom the vessel will load.

ETA should be confirmed if there is any change, since the port Pilot and tugboat must be sent out to the main river to meet the vessel. This will also allow the preparation and presentation of the Notice of Readiness without delay.

Radio LSQ 38, on 477 kHz A1, at Rosario, transmits river depth at 1305 hrs. GMT.

TUGS: 2×1,800 h.p. and 1×600 h.p. One tug is required by all vessels over 20 Fiscal units and up to 165 m. LOA, with a second tug standing by at Km. 592 unless the Pilot calls for its services (high winds, etc.).

Vessels over 165 m. will have a second tug standing by in the roads. Outbound vessels over 20 fiscal units will take two tugs, and let go the stern tug at Km. 592, the bow tug continuing until the roads are reached. However, if sailing from Basins 1 or 2 or the Terminal berth and with no other vessels in the way, one tug only may be taken, provided the wind is below 22 knots.

Also see "General" before first port.

BERTHS: The port is composed of four parts:

Dock No. 1, with stone wharves, 564 m. frontage on the East and 672 m. on the Western side, 120 m. wide and well equipped with cranes, and sheds; 24 ft. at zero.

Between Dock 1 and Dock 2, on the pierhead are tanks for vegetable oil, capacity 4,000 tons and pumping capacity 2/300 t.p.h.

Dock No. 2 lies parallel to Dock 1, and has a piling frontage 900 m. long on the East, 720 m. on the West and 120 m. wide. 22 ft. at zero.

Both docks are served by broad and narrow gauge railway lines.

Derivation Channel. 2,178 m. long, lies to the West of Dock 2. It has open banks, with no stone or wooden frontage. There are a number of dolphins and mooring facilities. It is reserved for Inflammables and there are also two deposits for Quebracho logs and for bones. Although there are railway lines, there are no cranes or facilities for handling cargo. Vessels awaiting orders or effecting repairs can lie up in the Eastern side of the Channel, North of the Esso plant. Shell and YPF plants on the Western side, where vessels may take on bunkers.

Coastal Wharf. Concrete wharf, 810 m. long, lying between the West side of Dock 1 and the Elevator at Unit 1. It has 4 dolphins and can berth and work 2 vessels simultaneously in 24 ft.

Allotment of berths. Allotted by the port by order of arrival. If berthing in the Derivation Channel, spars must be placed to fend the vessel off the bank, and an anchor may also be cast, but this must be done under the direction of the port Pilot.

Loading Grain. There are 2 units, comprising 3 elevators in use. Unit 1 on the South end of the West quay of Dock 1, next to the coastal section, can berth 2 vessels in 24 ft. The elevator has a capacity of 50,000 tons, and the loading gallery has 8 spouts with 3 belts, so that both vessels can operate simultaneously, although no more than 3 spouts can be in use together, with a load rate of 300 tons each, rising to 400 tons in favourable conditions, or when only 1 vessel is loading.

Unit 2 is now composed of the ex-Bunge Elevator on the Northwest of Dock 2, capacity 12,000 tons, and with 6 tubes, loading simultaneously by 2 at a rate of 200 t.p.h. each, and also of the De Ridder Elevator, on the S.W. side of the dock, capacity 6,000 tons, and with 2 tubes, capacity 200 t.p.h. each.

STEVEDORES: Working hours: 0600 hrs. – 1800 hrs. on weekdays and 0600 hrs. – 1200 hrs. on Saturdays.

MEDICAL: Doctors and hospital facilities available.

TANKERS: Berths owned by Esso, Shell, and YPF in Derivation Channel.

FRESH WATER: From hydrants in Docks 1 and 2, or by tug in the Derivation Channel.

FUEL: Available by truck.

CONSULS: At Santa Fe the following countries are represented: Italy, Paraguay, Spain. Other consuls at Rosario and Buenos Aires.

REPAIRS: Can be arranged. There are several tugs and lighters equipped to render assistance to vessels.

CUSTOMS ALLOWANCES: For consumption on board each man allowed 40 to 60 cigarettes a day and 1 litre of spirits a week.

AIRPORT: 17 km. from Santa Fe, regular flights to Buenos Aires and other Argentine cities.

POLICE/FIRE/AMBULANCE: Police: Tel. 21141; Ambulance: 36220 and 24687; Fire: 21212.

TELEPHONES: On board connection is only made for naval vessels.

SHORE LEAVE: Allowed, provided Crew members in possession of identification cards.

AUTHORITY: Administracion de los Puertos Parana Medio.

VILLA CONSTITUCION: 33.15 S. 60.17 W. (See Plan)

Km. 365 – River Parana (Province of Santa Fe) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the River Parana from seaward, 25 miles below Rosario and 197 miles (via Martin Garcia) by river from Buenos Aires.

PILOTAGE: Port Pilot compulsory. Order through Agent 6 hours prior to arrival.

ANCHORAGE: Anchorage for 6 vessels between Km. 361.5 and Km. 363.5.

MAX. SIZE: Up to 25 ft. draft depending on river depths.

RADIO: Rosario LSQ 38, on 477 kHz, A1.

TUGS: Vessels over 110 m. LOA must use 1 tug when entering, sailing or moving. If wind speed over 22 km.p.h. 2 tugs must be used. Tugs not required at Puerto Acevedo. Also see "General" before first port.

BERTHS: *Elevator Berth:* Owned by the Grain Board. Length of pier 175 m. Depth alongside 27 ft. The Northside Berth can accommodate vessels of 230 m. LOA but due to reach of spouts the South Berth accepts vessels of 180 m. LOA. Delivery is by a maximum 2 spouts at any time (1 spout to each berth or 2 spouts to one berth) at rate of 350/450 tonnes p.h. per spout. Storage in vertical silos 55,000 tonnes and underground silos 155,000 tonnes.

Coastal/Overseas Wharf: Depth alongside 25 ft. Max. LOA 220 m. Grain and by-products loaded by portable conveyor belts at 150 tonnes per hour. Storage capacity 8,000 tonnes.

Puerto Acevedo. Two km. South of Villa Constitucion is Acindar Mole, otherwise known as Puerto Acevedo, where a large steel mill is installed. The port is under the jurisdiction of Villa Constitucion and pending a definite resolution as to Villa Constitucion Roads, vessels awaiting berth anchor off the Acindar mole.

The mole is 110 m. long by 34 m. wide, in 29 ft. and is used for the loading of steel products. It is fitted with 2×12 ton electric cranes on rails. Vessels of any length can moor, but must shift to present distant hatches.

The new wharf with length of 170 m. and depth alongside 32 ft. is used for discharge of iron ore. 1×10 ton overhead crane with grab, rate 80 tonnes p.h.

Port Pilot from Villa Constitucion attends here. Fresh water available by long hose, rate 15 t.p.h. Consult Agent before ordering tugs.

MEDICAL: Doctor and hospital facilities available.

FRESH WATER: Obtainable. (See above).

FUEL: Not available.

CONSULS: Consular despatches must be taken at Rosario.

REPAIRS: Can be effected, if necessary bringing men and equipment from Rosario, or San Nicolas.

ZARATE: 34.09 S. 59.05 W. (See Plan)

"B" Category port. Province of Buenos Aires.

Km. 108. Situated on the West bank of Parana River, 150 or 65 miles by river from Buenos Aires, and 5 miles upstream from Campana.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

MAX. SIZE: Up to 26 ft. depending on river depths.

TUGS: See "General" before first port.

BERTHING: The river here is wide and deep, but the old moles are no longer in use, having been silted up, with a maximum of 10 ft. at the National Mole. With the opening in 1978 of the rail road bridge over both branches of the Parana (de las Palmas and Guazu) to the Entre Rios Province the rail ferry has been closed down, and there is no sign of any new port works being undertaken here.

The Naval Prefecture at Zarate remains in charge of transit under the bridges and Pilots must maintain VHF contact with Zarate while in this zone (Channel 14). (LSO 23) Vessels not carrying VHF must use medium wave.

Shipmaster's Report: July 1983.

The river at Zarate is wide and deep but the 8 old wharves are no longer used by oceangoing vessels and have silted up to depths of 10 ft. or less.

MEDICAL: Doctor and hospital facilities available.

TANKERS: *Navipar Oil Terminal:* See "River Plate" – "Shipmaster's Report" dated September 1986.

FRESH WATER: Available.

FUEL: Not available.

CONSULS: Italy is represented locally. All other consuls at Buenos Aires.

REPAIRS: Small repairs can be effected.

BAHIA BLANCA: 38.47 S. 62.16 W. (See Plan)

(Incl. Galvan, Ingeniero White, Puerto Belgrano, Puerto Rosales, Punta Ancla and Punta Ciguena.)

(Province of Buenos Aires) "B" category port.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

N.B. Refer to Argentina, Section I.

PORT LIMITS: Berthing priority is fixed when vessel arrives at No. 11 Buoy in the channel entrance.

Final berthing marks the commencement of time authorised for loading and/or discharging.

DOCUMENTS: Required by foreign vessels.

Registration Certificate.
International Tonnage Certificate.
International Freeboard Certificate.
International Safety Certificates.
General Declaration, Crew List and List of Passengers (signed by the Master).

Sailing Clearance Certificate from port of origin or from last port of call, whichever the case may be.

APPROACHES/PILOTAGE: *Entrance Channel.* Commences at Rincon Light Buoy, which is a whistling Buoy, fitted with radar reflectors and is stationed some 17 miles S.S.W. from the Recalada Lighthouse. It is a large Buoy, painted with black and white vertical stripes, it can shift or be extinguished, being rather exposed. In case of doubt vessels are recommended to sound and stay outside the 10 fathom line until daylight or fog has cleared. Pilots must be requested 24 hours in advance. See "VHF".

From this Buoy vessels must proceed past Buoys 1 to 10, and the Bay Pilot comes aboard near Buoy 11 (39° 05′ S. and 61° 48′ W.). There is no pilot ship on station, and vessels arriving at this point after sunset must stand off until daybreak, unless a Pilot has been ordered and is approaching, when vessels can anchor and wait near Buoy 11. To avoid delay and waiting time, Masters should keep Agents well advised by radio to station LPW 2, which listens from 0700 to 2400 hrs. on 500 kHz. from 19 to 25 minutes past each hour, every hour. As the coast is shallow here, with South or East winds it is advisable to stand well off at night as there is also a tidal current favoured by these winds.

Locations where the Pilot can be taken on board are: Buoy 11, Buoy 22 and exceptionally Buoy 1 (at Master's request).

Pilot vessels intended for this service are: Launch "Skipper" – length 18.40 m., beam 5.6 m., depth 2.60 m., 85 h.p. engine, capacity 10 persons, steel hull; Launch "Carumbe" – length 18.6 m., beam 3.6 m., depth 1.20 m., 105 h.p. engine, capacity 10 persons, wooden hull; Launch "Alo" – length 10.46 m., beam 2.71 m., depth 1.74 m., 105 h.p. engine, capacity 10 persons, wooden hull.

The Bay Pilot takes the vessel to the Bahia Blanca roads, which commence for Ing. White and Puerto Nacional between Naposta Brook and the South Elevator. For Galvan he takes the vessel as far as the South Elevator. At either of these points the port Pilot comes aboard for actual berthing operations.

Vessels bound for Punta Ciguena, Punta Ancla, Rosales or Puerto Belgrano, take on their port Pilot (ordered in advance through the Agents by radio), at Buoy 17.

In the access channel the following regulations must be observed:

(a) in the areas included between the pairs of Buoys 07–08, 12–16, and 26–29, it is prohibited to approach or cross in front of any vessel which because of its draft has to remain in the centre of the channel, such vessels always having priority.

(b) in the event of two vessels meeting whose drafts do not permit them to depart from the centre of the channel, the vessel leaving port has priority, the vessel entering having to effect such necessary manoeuvres so as to not interrupt its navigation.

The access channel is 180 m. wide and is marked with light buoys, which permits navigation by night. Between Buoys 12–16 the depth is 30 ft. and in the access channel to port Ingeniero White, between pairs of Buoys 24 and 29, the depth is 33 ft. with a width of 170 m. The maximum draft for vessels navigating the channel is 38 ft. 6 in., and dredging operations are in hand to bring the depth to 40 ft. at LW.

Buoys 01, 02, 03, 04, 05, 06, 09, 18, 19, 20 and 21 are mid-channel, and all illuminated. There is a Degaussing Buoy between Nos. 18 and 19, conical, painted blue and white checks.

Also see "Developments".

Special warning. At very low neaps, and with strong North winds there may be up to 5 ft. less water than is shown on charts.

Tidal range is 12.6 ft. at springs to 6.4 ft. at neaps, but as much as 19 ft. has been observed with S.W. winds, whose action is similar to the Plate winds.

Inner Roads. From Ing. White to Galvan there is room for two vessels drawing 32 ft. to anchor, as well as a number of vessels drawing 24 ft. The access channel to Galvan has been dredged to 32 ft. for the new Inflammable berths, and a turning basin 400 m. in diameter at 33 ft. dredged due South of Galvan pier. The Inflammable berths are at 40 ft.

Report: November 1987.
The following telex was sent to a vessel by their local Agent.
Quote
Bahia Blanca Pilot Service:
Please note that pilot service at Bahia Blanca is very strict regarding compliance with regulations which refers to vessel's draft declaration.

Shipping Agents must declare in writing on special form for request of pilots, vessel's draft forward and aft, as accurately as possible.

Not more than one per cent of error is accepted.

Should the difference between drafts declared by Agents when requesting pilots and the actual arrival/departing drafts of vessel be in excess of one per cent, high fines will be imposed by Coast Guard (pilot service).
Kindly acknowledge receipt.
Unquote

Quote
Bahia Blanca – Information – Important:
Regulation No. 122/85 of Argentine Coast Guard addressed to all Shipping Agents. Free translation.

We herewith request you to inform all vessels consigned to your agency, timely prior arrival to his port, that in accordance with Regulation O.M. 06/82 and Law 17.094, vessels must report when abeam of "Rincon" Light Buoy to Coast Station of Coast Guard "Bahia Blanca Prefectura Radio" L2N and L2H on Channel 12 and 14 respectively of VHF, the following details:

(A) Name of vessel
(B) Flag (Nationality)
(C) Call Sign
(D) LOA, Extreme Breadth, Draft, Speed
(E) Origin

Furthermore, and in addition to the aforegoing, vessels calling this port must be informed, regarding the obligation to anchor at Buoy 4 and await the authorisation of the Naval Authority to anchor at Zone "Alpha" and/or "Bravo" according possibilities.

Please note, that the non-compliance of above mentioned Regulations will place the Masters of the vessels and/or their representatives in a position to be fined in line with these regulations.
Unquote

Please note FYG, Zone Alpha refers to Buoy 11 and Zone Bravo to Buoy 17.

ANCHORAGE: *Anchorage for merchant vessels:* Buoy 11, 7. The anchorage area has been rendered suitable for merchant vessels. This area is limited by six lit (white) buoys which mark a zone approx. 6 miles by 1.6 miles. Depth of water in the area is 10.5 m.

Punta Ancla Oil Loading Point: Constituted by a revolving buoy of the "Swedish" type, situated 1.25 miles to the East of the mid-channel buoy No. 9. It is recommended that vessels do not navigate in this area nor anchor to the North of the axis of the channel.

Punta Ciguena Oil Loading Point: One mile to the South of Punta Ciguena is the oil loading point; its alignment for anchorage is 036.7° formed by the front and rear buoys.

Ingeniero White Roads: The port roads are considered to be from the mouth of the Naposta stream to the front of the Ingeniero White South Elevators Quays, and roads "B" as far as the quays of Puerto Galvan. At high tide, the banks cannot be seen.

RESTRICTIONS: Port is experiencing silting therefore depths should be checked prior to arrival/fixture. Long delays may be expected.

Also see "Developments".

Puerto Galvan: Night entries are not authorised, sailings being subject to favourable weather conditions.

Shipmasters' Report: 1979.
The Port Authority will not allow vessels with a list to sail.

MAX. SIZE: Entry into the port is allowed for vessels up to 230 m. LOA with a keel clearance of 1 ft.; in the access channels the safety margin is 2.5 ft. In accordance with the current dredging conditions, this allows operation with 34 ft. 9 in. draft. (38 ft. 06 in. reported in January 1988).

HEALTH: It is necessary to present: Crew List, Derat Certificate and Inspection Certificate of Maritime Health.

The Ship's Agent carries out all orders for obtaining free pratique. The health inspection takes place normally at the mooring berth, and is effected by the doctor who comes on board. Notice must be given 24 hours in advance of ETA, with indication of the port from which the vessel has recently left together with any intermediate ports of call. Likewise, an indication must be given of any illness on board, particularly anything of an abnormal nature.

The Master of the vessel must indicate the number of crew members, passengers if any, and the non-existence of "plague" diseases: Cholera, Yellow Fever, Exanthematous Typhus, Recurrent Fever and Bubonic Plague. Also there is a requirement for declaration that there is no transmittable illness on board.

RADIO: LPW 2 on 500 kHz. A2, working frequency 431.5 or, LPW 45 on 4415.8. A3.

For weather forecasts in English, use either Radio Pacheco at Buenos Aires LPD 5 on 512 kHz. A2, or Radio Comodoro Rivadavia LPX 2 on 474 kHz. A2.

VHF: Pilots now use VHF, and Channel 12 is set as a "listening channel' during transit of the entrance and the Naval Base at Belgrano acts as receiver/repeater.

Channel 8 is kept for manoeuvring in port, after contacting tugs and walkie-talkies are used by Pilots and tugs in this band.

Any "bridge to bridge" communications will use Channel 6, returning later to Channel 12.

Channel 9 is reserved for oil tankers for Punta Ancla or Punta Ciguena.

Channel 4 is reserved for Navy use in the Navy Base, but may be used in emergency.

RADAR: No service available.

TUGS: No tugs are required at Punta Ancla or Punta Ciguena. For Rosales and Puerto Belgrano tugs are requested from the Naval Base at Puerto Belgrano, and make contact between buoys 24 and 25.

For the other ports (White, etc.) tugs come alongside in the anteport, where the port Pilot boards.

Argentine vessels are berthed by the Bay Pilot at any of the berths, but foreign flag vessels take a Port Pilot, who comes on board at the Inner roads on one of the tugs, regulations for which are as follows:

Vessels over 3,000 tons gross require 2 tugs, those from 500 to 3,000 tons, 1 tug, and under 500 tons none.

For the Iron mole, vessels up to 10,000 tons do not need a tug, from 10,000 to 15,000 gross, 1 tug and over 15,000 tons 2 tugs.

For Puerto Galvan, vessels over 3,000 tons gross take 2 tugs on entering, and one on leaving provided they berth bows outwards, otherwise they need 2 tugs. Between 1,000 and 3,000 tons, vessels take 1 tug when entering and leaving if they berth bow inwards. If mooring bow outwards they must take 2 tugs on berthing, but require none on leaving.

These rules are for normal weather conditions. Masters can ask for more tugs, or alternatively not pass cables to the tugs if this could be dangerous to the vessel or tugs, but in this case, tugs must accompany the vessel during the manoeuvre to act in emergency.

BERTHS: N.B. Agents must give 5 days' advance Notice of Arrival of vessels to the Authorities, and check this with 48 hours confirmation of arrival. Tankers are exempt from this rule but must confirm arrival time at Buoy No. 4, 48 hours in advance. Precedence for berthing granted in accordance with arrival at Buoy 11 at the entrance channel. All requests for free pratique by radio are made in the usual manner to Agents, with 12 hours advance notice.

The ports in the Bahia Blanca area are, from East to West:

Punta Ciguena	adjacent to each other between buoys 21 and 22 of the access channel.
Puerto Rosales	
Puerto Belgrano	
Ingeniero White	approx. 14 miles West of Puerto Belgrano.
Puerto Galvan	approx. 2 miles West of Ing. White.

Punta Ciguena and Punta Ancla

At Punta Ancla (near Buoy 21) there is a SBM in 60 ft. depth. The buoy is 2,000 m. offshore. The size of tanker is governed by the depth in the access channel of 38 ft. 6 in. The oil is pumped to tanks 10 miles away at about 3,000 cu.m.p.h. The tanker is connected to 2×12 in. lines.

At Punta Ciguena (Buoy 22) there is also a similar SBM.

Puerto Rosales

Puerto Rosales is a port used by launches servicing ships anchored in the roads for crew changes, provisioning, repairs, etc. YPF, in particular, use it in support of their tankers.

Puerto Belgrano (Naval Base)

The entrance channel, 2 miles West of Punta Ciguena buoys, is 1.7 miles long, 150 m. wide and dredged to 30 ft. at zero.

Being a Naval base, care must be taken to observe regulations. In daytime signals are hoisted at the head of Mole C, and at night lights are shown at a height of 34.5 m. from the signal station, being visible for ten miles. A strong green light prohibits entry, and a white light above green prohibits sailing from the port. Two green lights, vertical, both entry and leaving prohibited.

Gunnery Exercises. Captains are warned that in order to avoid any danger, the greatest care should be taken when navigating or anchoring in the security zone, between the coast and an imaginary broken line which passes through the following:

(A) Lat. 39° 00′ 01″ S. Long. 61° 37′ 01″ W.
(B) Lat. 39° 05′ 02″ S. Long. 61° 40′ 01″ W.
(C) Lat. 39° 02′ 05″ S. Long. 61° 47′ 09″ W.
(D) Lat. 38° 58′ 02″ S. Long. 61° 51′ 00″ W.

Danger Zone. Situation Lat. 38° 53′ S., Long. 62° 06′ W. (approx.).

During gun practice at the Naval Base of Puerto Belgrano, navigation is prohibited in the circular area of 180° from the central point of the Signal Station which extends from 152° to 332°. The boundary of this area passes 9 miles off the Signal Station.

While gun firing is being carried out, the Signal Station will hoist during the day 2 "B" flags of the International Code on the same yard-arm. This signal will be hoisted half an hour before practice commences and will be furled when firing ceases.

At night the signals will be substituted by 3 vertical lights, the top one, red, and the following two, white. In addition a searchlight will sweep the zone every 15 minutes, casting a beam of 3 minutes duration.

The Prefecture of Ingeniero White will notify all ships in good time of the expected hour and date on which firing practice will commence.

Should exercises not commence on the date and hour fixed for same, the fire signal will be hoisted half an hour before the appointed time, and on the other yard-arm, the flag "N" (negative of the International Code). These signals will be shown for half an hour from the time they are hoisted.

During exercises, the firing intervals will be signalled in the following form: during day, by hoisting "N" flag, and at night by 2 vertical lights; the top one white, and the bottom one, green.

Ingeniero White (See Plan)

Berths 1, 2, 3 and 4: Reserved for auxiliary vessels.

Berths 5 and 6: Assigned for loading cereals, length 300 m., dredged to 29 ft. Berth has 12 tubes and 2 belts of 480 t.p.h. capacity. Max. LOA 230 m. Max. sailing draft 37 ft. 06 in.

Berths 7 and 8: Same as Berths 5 and 6. Max. LOA 200 m. Max. sailing draft 36 ft. 06 in.

Berth 9: Assigned for loading cereals. Possibly general cargo using ship's derricks. Length 234 m., dredged to 40 ft. Berth has 5 tubes with a total capacity of 1,000 t.p.h. Max. LOA 230 m. Max. sailing draft 38 ft.

Also see "Shipmaster's Report" dated February 1988.

DEBA Wharf: Berth for discharging coal to power station. Since accident at No. 9, the berth has been used for loading grain from trucks. There are 4 travelling gantries on rails, each with a belt and chute and a rate of 150 t.p.h., giving a max. rate of 600 t.p.h. Max. sailing draft 38 ft. 06 in.

Iron Quay: Being dismantled.

Berth 10: Out of service.

General Cargo Quay, Berths 17, 18 and 19: With a total length of 430 m., Depth 20 ft. Has 4 cranes of 1,500 kgs. capacity.

Berth 20: Length 211 m., and dredged to 25 ft. (5 m. from the quay). Berth has 4 cranes of 3 tons capacity. On these quays there is a useful working width of 25 m. on which it is possible to work with wagons and lorries.

Shipmaster's Report: February 1982.

Ingeneiro White Elevators:

Documents: 6 Crew Lists.

Approaches & Pilotage: The line of buoys from the Rincon Light Buoy No. 1 cannot be relied upon and a vessel should remain to the South by some miles as the weather is frequently altering the relative positions while shoaling at No. 5 is considerable.

The Outer Bar between the No. 7 and 8 pairs is shoaling from the West but if the tide is low or falling after half tide, it is worth trying to call Bahia Blanca Pilots on Channel 16 VHF for advice on the relative depths prevailing. This bar is not dredged with any regularity and soundings are taken less frequently than with the Canal Principal, hence a vessel entering to anchor with a deep draft from loading "up coast" is cautioned regarding the "alleged" 10 m. prevailing.

The anchorage is not good, being of uncertain bottom nature and dragging is frequent. There is more space near to Buoy 11, the position of which has been altered, but the strongest winds are from the South and South West hence any dragging leaves little margin if in this section.

Pilotage is available from Buoy 6 at DOUBLE fees for both boat and Pilot.

The pilot launch is a large black high speed launch with white wheelhouse and "Prefecturar" in white on the starboard side "Praticos" on port side. The Pilots usually give a call when leaving their base at Puerto Rosales thus affording about 1 hour's warning. The Pilot messages are also sent from the Puerto Rosales Control Centre of the Prefecturar or Coast Guard who will supply the Pilot with tidal information obtained from the radio connected gauge to the East of the Outer Bar and showing a green light. This is essential as, despite the large modern dredger operating almost exclusively in the Canal Principal, there are depths well under the 10 m. claimed, especially near Buoy 13 Red and between 13 and 14 on the East side of the channel where the movement of the bank is not yet controlled.

It is planned to dredge a new channel directly towards Rincon Buoy but parallel to the coast to the East of the inner buoyed anchorage, but this is only now being subjected to surveys for assessing the dredging.

The buoyed channel from Belgrano inwards to the elevators is subject to problems as the buoys shift their positions and dredging has to be frequent to be effective throughout yet the loading berths are reported to require little work to keep their 30 ft. depth.

Stevedores: An 18 hour day can be worked.

Puerto Galvan (See Plan)

Berth 1: Assigned for general cargo, with a length of 150 m., and dredged to 25 ft. No cranes.

Berth 2/3: Length of 270 m., and dredged to 25 ft. Berth has an elevator for loading oil-seed by-products, rate 800 t.p.h. Vegetable oil loaded by pipeline at 450 t.p.h. Max. LOA 225 m.

Berth 5: Assigned to general cargo, with a length of 150 m., and dredged to 29 ft. Berth has 2 modern cranes with a capacity of 35 tons at 16 m. radius, and 20 tons at a 27 m. radius. Containers handled.

Berth 6: Assigned to general cargo, with a length of 115 m., and dredged to 25 ft. No cranes.

Berths 7, 8, 9 and 10: Assigned to auxiliary craft and possibly general cargo for small craft with lengths of 60 to 65 m., dredged to between 15 ft. and 20 ft.

Inflammable Quay: 2 berthing fronts of 370.80 m. each, dredged to 40 ft. Each berth has a platform of 30.80 m. length and 20.80 m. width. Berth No. 1 is intended for oil and its derivates, and Berth No. 2 for LPG and petrochemical products. Minimum LOA permissible is 110 m.

CRANES: The Puerto Belgrano Naval Base has a floating crane of 50 ton capacity, which can be hired. Also see "Berthing".

SPECIAL CARGO HANDLING FACILITIES: The cranes located at Berth 5 of Puerto Galvan are suitable for handling small containers and have grabs of 8 cu.m. capacity for operation with bulk cargo (minerals, by-products, etc.).

The port has mobile cranes of up to 45 tons capacity. The stevedoring companies have vehicles with automatic elevators and various equipment basically suited for loading boxes of fruit, loading and discharge of boxes of frozen fish, etc. There are no special facilities for Ro/Ro traffic. The elevator quays have special installations for bulk loading of cereals.

BRIDGES: There are no bridges in the access channel or in the port.

STEVEDORES: Permanent stevedores available, no prior advice being required for their availability. The vessel requiring labour must present their order 45 minutes prior to the contracting time to the Port Captaincy at the Contracting Centre.

Contracting times are 0630, 0930, 1230, 1530 and 1830 hrs. (on this shift contracting is also made for night working).

The usual working period is from 0700 to 1900 hrs. from Monday to Friday, and from 0700 to 1300 hrs. on Saturday. Nevertheless, it is possible to operate 24 hours a day, including Sundays and Holidays, but premium rates for this will apply.

MEDICAL: All kinds of medical treatment are available, there being various state and private hospitals. For very specialised treatment, in extreme cases, evacuation to the city of Buenos Aires is possible.

TANKERS: See "Berthing" – Punta Ciguena and Punta Ancla.

DRY DOCKS: Capacity of the dry docks are:

No. 1 215 m. LOA, width on the sill 22.12 m. or at 34 ft. above the sill, 26.25 m.

No. 2 235.45 m. LOA, afloat, or 205 m. closed there is also a floating dock for smaller vessels 65.8 m. LOA, beam 13.46 m., capacity up to 750 tons.

The dry docks are located at the Puerto Belgrano Naval Base, and vessels of the Argentinian Navy have priority of usage.

SURVEYORS: American Bureau, Norske Veritas, Bureau Veritas, Lloyds (insurance only).

HATCHES: Work on deck is prepared by the stevedores during working hours. Preparation of the gangway to be effected by the ship's crew. Stevedores only will close and open hatches with mechanical means. Covered ways will be closed and opened by the stevedores.

LOAD-LINE: Vessels North- or East-bound may load to Summer Marks all year round.

WEATHER: Average velocity of winds is 11 knots, direction North and N.E. 30%, and West and N.W. 32%.

Rainfall averages 558 mm., with July/August the driest months.

Maximum temperature in Summer about 31° C, with an absolute maximum of 42.5° C, and a minimum of about 15° C. In Winter, maximum of about 15° C, average minimum 3.5° C, and absolute minimum minus 8.8° C.

DENSITY: 1025.

FRESH WATER: Available at any berth at Ing. White, Galvan and Puerto Belgrano, at 10 t.p.h. and by barge at anchor (capacity 350 tons).
FUEL: All grades available ex-wharf or by barge.
GANGWAY/DECK WATCHMEN: Vessels Agent must ask Port Authority for watchman.
FIRE PRECAUTIONS: Tankers, during loading or discharge operations, whether in port, in the roads, at loading points or to other vessels, will comply with the following requirements:

All conduits for loading or discharge of hydrocarbon oils which are land-based for connection to a tanker vessel, must have insulated installations, or, in the absence of same, non-conductive hoses must be used in such a way as to constitute an insulating circuit between the main pipeline and the connecting flange with the ship.

Pipelines carrying hydrocarbon oils, converging on the quay, must be earthed in an effective manner, in the immediate section adjacent to the existing insulating flange on the quay or in the section of hose which is not electrically conductive.

In the event of pipe-lines being used with cathodic protection connected to the vessel with non-conductive loading hoses, insulating flanges must be fitted at their ends. If the pipeline does not have cathodic protection, it must be earthed conventionally.

At the commencement of and during operations, tankers must fly the "B" flag during hours of sunlight and during the rest of the day a red light in adequate safety conditions.

It is necessary to check that the connecting hoses for loading and discharge operations are in good condition, do not show any cracks or any signs of deterioration.

It is necessary to check that the connecting flanges, when they are bolt-connected, are fixed with all the bolts which they require, and when they are of another type, they must fulfil also the maximum requirements of mechanical efficiency for prevention of oil leaks.

Beneath each of the connecting flanges must be installed drip trays to prevent product reaching the water or the quay; in the same context, all loading deck scuppers must be blocked.

Loading hoses must be installed in such a way that there are no sharp bends nor sudden changes of direction. In the event that the hoses have to rest on sharp edges, adequate protection must be used, to prevent any possibility of wear.

In the event of excessive movement in the berthing area, either during bad weather or due to the manoeuvring of an adjacent vessel, pumping of the product must be stopped. Likewise, if there is any untoward occurrence, such as fire or explosion on the quay or in the quay safety area, on adjacent vessels, or in the event of electric storms of great intensity, or if leakage of the product is observed, pumping must be stopped.

In the event of operations at loading points with long pipe-lines connected to the land, approved communication systems must be used between vessel and the shore to permit the need to stop operations immediately in the event of damage to the pipe-line or any other untoward occurrence.

Whenever it may be necessary to keep open any observation cover of a tank the flame prevention fabric must be positioned.

Constant vigilance must be maintained at the access to the vessel and on deck to prevent the entry of unauthorised persons.

With the exception of very high frequency equipment, which are safe for use, the vessel's radio/electrical equipment must not be used, the wireless room being sealed.

Loading and discharge of tanks must be effected solely by the corresponding pipe-line, the usage of the integral outlets of the tanks being prohibited.

Double berthing of vessels is not permitted, unless they are carrying out operations of lightening, repairs or in the event of emergency.

A foam extinguisher must be placed next to the connecting flange of a hose, and the fire pump must be maintained operational, except where the latter incorporates a remote control system which is approved.

The hose at the loading point and on the main deck must have a proper sealing joint in its unions.

The sealed doors on the main deck must remain closed.

Tankers effecting operations between one another, in the roads or at suitable anchorages, must have main engines ready to manoeuvre at all times; likewise, the necessary personnel for operations of anchors, chains and mooring equipment.

Masters or Owners are obliged to order cessation of any operation, and to request, if necessary, the collaboration of the Maritime Authorities, whenever at the operations quay or in its safety area, in the vessel operating under their control, the requisite safety stipulations are not being met.

During degassing operations, those involved with cleaning, repairs and maintenance, tankers must comply as follows: during degassing operations, no passengers or other unauthorised persons must be on board the vessel.

Whilst gasses are being liberated during the degassing process, the use of galleys must be reduced to a minimum, and open flame burners must be sealed, except boilers and heaters. Under the same circumstances, openings to quarters on deck must be kept closed, so as to obviate any contamination, and smoking must not be permitted anywhere in the vessel.

Boilers must not be lit up, and the combustion pattern must not be altered.

On decks no rags, or absorbent material impregnated with fuel may be deposited. Such material must be placed in adequate receptacles, with covers, for transporting away from the vessel.

When opening covers, and parts of them have to be struck, only anti-spark tools must be used.

Tankers effecting minor repairs, which do not involve cutting or welding of metals but cause sparks or other risky operations of a similar nature, must carry out such work only at the quays in the oil area appropriately equipped, or outside the oil area. When work of a greater magnitude is carried out, this cannot be effected at the special quays, except where reasons of emergency dictate, and in any case only after prior permission has been obtained from the Prefecture.

All degassing operations or opening of tanks not certified as being gas-free are prohibited in the ports, docks, breakwaters, piers or quays intended for operation with combustible or inflammable products or hydrocarbon derivates.

The tasks of washing or cleaning of tanks in port, docks, breakwaters, piers or quays intended for operation with combustible or inflammable products or hydrocarbon derivates may only be effected when a Certificate for Safety of Work has been issued.

Cleaning or degassing of tanks is prohibited in vessels carrying out movement operations of combustible or inflammable products which are hydrocarbon derivates in ports, docks, breakwaters, piers or quays.
CONSULS: Belgium, Chile, Denmark, Greece, Italy, Netherlands, Norway, Peru, Portugal, Spain, Sweden.
REPAIRS: All classes of repairs possible including dry-docking.
CUSTOMS ALLOWANCES: 60 cigarettes and 1 litre of liquid per day. No cigarettes or alcohol may be taken ashore.
REPATRIATION: Possible.
AIRPORT: Regular air service with Argentine cities.
TIME: GMT minus 3 hours.
HOLIDAYS: (a) National holidays – January 1st, Good Friday, May 1st, May 25th, June 20th, July 9th, August 17th and December 25th.

(b) Not worked – Holy Thursday – December 8th. Nevertheless, the port can work; The stevedores receive an extra of 75% on their pay.
POLICE/AMBULANCE/FIRE: Argentine Naval Prefecture is responsible for port safety, Tel: 71720/71727/71833. Ingeniero White Volunteer Fire Brigade, Tel: 70115. Ambulance of the Port and Maritime Chamber can be requested from the hospital at Ingeniero White, Tel: 70267.
TELEPHONES: There are no facilities for installation of telephones on vessels at the quay. The offices of Maritime Agents, stevedoring contractors and official bodies have telephones and telex. There are public telephones at the dock gates at Puerto Ingeniero White and Puerto Galvan.
SERVICES: These can be obtained via private firms.
SHORE LEAVE: No restrictions.
IDENTITY CARDS: Seaman's Book is sufficient.
REGULATIONS:

a. Owners and Maritime Agents must communicate to the Port Captaincy and Port Administration the intention to position the vessel for loading and/or discharge five days in advance (exception to this is made for tankers and grain ships).

b. ETA at Buoy 11 must be confirmed 48 hours in advance (including tankers and grain vessels), indicating overall length, estimated draft on arrival and departure, and type of operation to be effected, with specification of tons, packages or volumes to be loaded or discharged.

c. At anchorage at Buoy 11 or on passing it, in the event of direct entry, ETA must be confirmed. This time gives the priority for entry, provided the previous communications have been made.

d. Minimum quantities authorised for loading and discharge are:

Cereals	10,000 tons per day
Fruit	21,000 boxes per day
Loading frozen fish	600 tons per day
Discharge of frozen fish	200 tons per day

Other cargoes: The Port Administration determines this in each individual case.

e. These and other regulations with regard to the operations of loading and discharge, obligation to free quays, etc., are recorded in a Circular issued jointly by the Port Captaincy and the Port Administration.
DELAYS: Normally, there are no delays in berthing of vessels, although occasionally during the peak period for cereal exports grain ships may be delayed. It can be considered that vessels load as quickly as they can receive if the cargo is in port.
DEVELOPMENTS: With the dredging work already carried out in the entry channel, and that which is to be effected in the access to the elevators, it is expected that vessels of up to 40 ft. draft can operate. A study carried out under the auspices of the P.N.U.D. is on the point of being implemented, under which a notable improvement will be made in the loading conditions of cereals by means of the construction of a new elevator, remodelling those already in existence, construction of three quays in place of those already there, construction of waiting berths, etc.
Note: The Approach Channel with 45 ft. depth from sea to the Pilot Station was opened in December 1991.

SHIPMASTER'S REPORT: February 1988.

The vessel arrived from the River Plate and anchored independently in anchorage "A". Contact was made with Bahia Blanca Port Control (L2N) on VHF Channel 12 when passing El Rincon light buoy (Buoy No. 4) and again on anchoring. The Agent also checked the vessel's progress by their own VHF, and requested a telegram confirming time of anchoring.

Anchorage "A" was occupied by 6 ships increasing to 8 ships soon after we arrived. Of these, 5 vessels were delayed by lack of cargo papers to load for the Middle East. Anchorage "B" held some 11 ships, but all were Argentine tankers and not part of the queue for the grain berths.

After a 5 day wait, the vessel was ordered in for loading. Arriving off Ingeniero White about 2.5 hours before high water, swinging round to starboard without tugs, close above the first red beacon. The vessel waited with 2 lengths of cable in the water, making fast tugs during the interval.

3 ship's lines required for the two-funnelled tug aft, and 2 lines required for the Japanese "duckpeller" type tug forward. This was reversed on departure, with the two-funnel tug forward. The vessel berthed stern first starboard side to Nos. 5/6 Berths at 0100 hrs. Inspection party of one man (Coast Guard) boarded.

Loading commenced at 0700 hrs. and continued until 2200 hrs. As No.7/8 was empty the ship had the use of 4 pipes for a while. Otherwise

2 of the 12 pipes may be used. Loading rates varied but might average 600 t.p.h. for two pipes.

The depth in berth was found to be 25 ft. 03 in. on the fenders, and 28 ft. when vessel slid some 8 ft. off the fenders during low tide. Work continues while the ship is aground. Half day worked on Saturday and no work on Sunday.

It is the preferred practice that the vessel finished the cargo on the rising tide, after coming afloat so that draft and list can be checked.

The departure draft is read by the Coast Guard, Harbour Pilot and River Pilot. It is illegal for a grain ship to sail with a list. The sailing draft had been 38 ft. 00 in. but reduced to 37 ft. 06 in. while negotiations were going on for 37 ft. 02 in. and later 36 ft. 06 in. The controlling bar being between Buoys No. 12 and 15, the dredger is out of use due to a broken cylinder block requiring a replacement from Europe.

A new wharf has been built slightly downstream to service a power station, but has been equipped to load grain from road transport. The depth is said to be 39 ft. below chart datum.

The No. 9 Berth silo has been damaged by a series of explosions and is out of use. Alternative arrangements have been made for a mixture of temporary towers and mobile conveyors to load grain from road transport. It is reported that this system has many problems and delays. Other than for ships over 220 m. it is possibly the last choice for loading from the 4 berths.

Provisions were delivered alongside, but still with a Customs, stevedores and transport surcharge. A number of cases of vegetables were sent back as not being of adequate quality. The village of Ingeniero White is conveniently close by for personal shopping, shop hours being 0800-1200 and 1600-2000 and banks, etc. from 0800-1300.

The Argentine Press had reported that a contract was to be signed between the Argentine Government and a Russian consortium to dredge out and recondition the Port of Bahia Blanca. The figure of 45 ft. at high water was being discussed, but how far in the future and how long it would be sustainable, is unknown.

On sailing at the beginning of neap tides, the vessel was anchored at Buoy 17, to await the next high water. Vessel then anchored again near Buoy 11 to await the next tide, after which the ship was able to proceed independently after reporting to VHF Channel 12 (L2N) to confirm that the tide had actually risen.

A shortage of displacement compared with the stated loading figures was also experienced of about 2.5%. Though reported on the Saturday before sailing on the Monday, apparently there was no way of obtaining correction of blatant errors. All concerned were aware of the problems in the previous port of Rosario.

The Approach buoys were in a mixed state, Buoys El Rincon to No. 4 could be seen to be in a staggered line. Speed was restricted from Buoy No. 2 due to limited depth under keel. The direction from No. 4 to No. 5 to No. 6 bent to the Southwest. The No. 7 port hand (black) buoy was missing. The No. 8 port hand (black) and No. 10 port hand appeared to be displaced Southward. No. 11 was missing, while an unknown rogue buoy was floating about to the Southwest of that position.

No. 9 and No. 10 were believed to be extinguished.

AUTHORITY: Capitan de Puerto Bahia Blanca.

COMODORO RIVADAVIA: 45.51 S. 67.27 W.

(Province of Chubut) "B" category port.

N.B. Refer to Argentina, Section 1.

On the San Jorge Gulf, 947 miles South of Buenos Aires.

PILOTAGE: Compulsory. Pilot ordered by Agent 48 hours in advance of arrival.

ANCHORAGE: Anchorage within the five or six fathom line offers little difficulty for regular work to lighters, but the reserved zone off the YPF Pier must be respected.

RESTRICTIONS: Port should be entered at high water in daylight only. Tidal range from 19 ft. 6 in. to 7 ft. 4 in.

MAX. SIZE: Dry Cargo, Length 150 m., draft 15 ft. Tankers up to 30 ft. draft.

RADIO: For radio regarding free pratique, or reporting ETA call LPX 2, on 474 kHz. This station transmits weather forecasts in English at 0400 hrs. and 1800 hrs. GMT.

TUGS: See "General" before first port.

BERTHS: The main part of the port consists of:

National Wharf: At the end of the breakwater built over the Punta Borja reef, and still unfinished. It is L shaped, presently 1,160 m. long with a depth of 17 ft. (Max. draft 15 ft.). On the inner side the depth is 15 ft. The breakwater gives some protection from the S.W. and S.E. winds, but vessels with large superstructure should not go alongside, and it is recommended to leave the pier after work is finished each day in case North or West winds blow strongly.

Cranes: 1×60 ton (often under repair), 3×7 tons and 2 mobile cranes of 5 tons and 25 tons capacity. 2 floating cranes for heavy lifts.

General Mosconi Pier: Built over the Coronel Reef a short distance North of the town. It has a length of 956 m. and 21 ft. at low water. It is used exclusively for discharging cargo consigned to YPF and for loading their oil and other products, so that special permission from YPF is required to operate here. There are 2×15 ton cranes and 1×4 ton crane on the mole.

The privileged zone extends 150 m. either side of an imaginary line projected from the mole, and 2,500 m. seawards, reserved for tankers loading YPF products, and other vessels cannot moor in this area. There are 5 mooring buoys, two each side of the mole near to its head, the fifth is 200 m. from the beacon at the sea end of the mole bearing 020°.

CARGO: It is advisable to stow inwards cargo aft for this port, as lighters lying at hatches one or two receive little protection from sea and swell, and in any case, owing to the limited number of lighters, vessels usually work with two or three gangs at most.

To avoid loss of time, it is the custom in this port to leave the sling loads "as is" in the lighters and therefore a larger quantity than usual of slings have to be hired from the Agents. It is advisable to establish in Bills of Lading that lighterage is at the risk of the cargo.

MEDICAL: Hospital available.

TANKERS: The oil berths within the Comodoro Rivadavia port area are, from North to South:

Caleta Olivares, at 45° 46′ S. and 67° 22′ W.

A loading berth for crude, with berthing in daytime only. A minimum of 6 hours advance notice of arrival must be given to Agents in Comodoro Rivadavia. There is a launch which assists in mooring to the 4 buoys, which are cylindrical painted black and clearly numbered. There is another cylindrical buoy, also black, but unnumbered marking the end of the line. Loading is through 1×14 in. line at 550 cu.m.p.h. VHF communications maintained with the shore.

Caleta Cordova, at 45° 43′ S. and 67° 21′ W., some 12 miles North.

SBM: Located 3 miles offshore and 1.5 miles South of Astra Beacon. Max. size 70,000 d.w.t. Depth 95 ft. 1×30 in. pipeline for loading crude and 1×14 in. line for deballasting. Loading rate for crude is 2,000 cu.m.p.h.

Caleta Olivia, the third oil-loading berth, is South of Comodoro Rivadavia at 46° 26′ S. and 67° 31′ W.

A small wharf, 70 m. long, is used for discharge of lighters or landing boats at high tide only. Stores are available here, and the small town is connected by phone with Comodoro.

SBM: 3,000 m. offshore. Depth 115 ft. Max. size 70,000 d.w.t. Crude oil is loaded through a 30 in. pipeline at 2,000 cu.m.p.h.

The Caleta Cordova and Caleta Olivia Terminals are operated by Terminales Maritimas Patagonicas S.A. (TERMAP S.A.), Democracia 51, 9000 Comodoro Rivadavia, Chubut, Argentina. Tel: 0967-34400. Fax: 39291.

FRESH WATER: Obtainable at National Wharf and General Mosconi Pier. Ships supply own hoses.

FUEL: Fuel oil and diesel available at the General Mosconi Pier in Comodoro Rivadavia.

CONSULS: Belgium, Chile, Greece, Italy, Netherlands and Spain.

REPAIRS: Urgent repairs can be carried out by the oil companies, and there is a permanent service of divers, equipped to operate to 150 ft.

WATCHMEN: Recommended. Normally arranged by Agent.

HATCHES: According to port regulations, stevedores open and close hatches at commencement and end of cargo operations.

CUSTOMS ALLOWANCES: Only sufficient for normal daily consumption on board.

Custom House: Fully authorised for import/export cargo, including reception of explosives for commercial use.

AIRPORT: Situated 11 km. from port. Daily services to Argentine cities.

POLICE/FIRE/AMBULANCE: Regional Hospital 2451; Clinica Central 2282; Police 2778; Fire Brigade 2505.

TELEPHONES: No connection aboard vessels.

WEATHER: Average wind velocity 17 knots, with 79% from S.W., W. or N.W.

The port is open to N.E. and E. winds.

Rainfall is scarce, 189 mm. yearly, evenly distributed.

Temperature: Summer maximum is 25.5° and minimum 13.4°C, while in Winter maximum averages about 11° and minimum 3°.

DEVELOPMENTS: Dredging to increase depth to 26 ft. alongside wharves.

AUTHORITY: Capitania de Puerto de la Patagonia.

MAR DEL PLATA: 38.00 S. 57.32 W. (See Plan)

(Province of Buenos Aires) "B" category port.

N.B. Refer to Argentina, Section 1.

On the Atlantic Coast, 302 miles from Buenos Aires.

DEPTHS: The dredged channel is officially 100 m. wide, but dredging is now only occasional, and the official depth is 24 ft. and tidal ranges 3 ft. 8 in. Spring to 1 ft. 2 in. Neaps, with constantly forming sandbanks off the South breakwater.

There is often a heavy swell in this port, causing vessels to range in all berths, fenders being essential. It is safer to lie outside in 36 ft. to 42 ft. if awaiting berth than in the anteport within the breakwaters.

APPROACHES: The port is some 3 miles South of the main town, sheltered by 2 breakwaters (Northern arm 1,099 m. long, Southern arm 2,750 m., entrance, facing North 300 m. wide). Both breakwaters carry roads and access is open to all traffic, so that car headlights and street lighting can cause confusion at night on taking the Southern bearing.

PILOTAGE: Pilotage compulsory. Pilots requested through Agent, at least 12 hours in advance.

Pilot boat about 8 m. long, grey-white in colour. Pilot boards approximately 1 mile from port entrance.

ANCHORAGE: The best anchorage bears 191° on the Southern breakwater light beacon and 313° on the Cape Corrientes Buoy, or even farther out. Holding ground is good and strong winds may safely be ridden out here, even with a big swell.

MAX. SIZE: Draft dependent on state of tide. Keel clearance of 2 ft. required. Normal maximum draft 27 ft. 06 in. at HW, but greater in best possible conditions.

RADIO: For radio regarding free pratique or reporting ETA call LPM 2 on 512 kHz. A2. English weather forecasts from Radio Pacheco, Buenos Aires, LPD 5, on 512 at 0148 and 1630 hrs. GMT.

TUGS: Use of tugs is obligatory; vessels over 1,000 N.R.T. must use 2 tugs.

Also see "General" before first port.

BERTHING: Big swell causes vessels to range, therefore Masters recommended have ready fenders for use at berth. Vessels can enter or sail any time day or night.

There are three basins (A, B, C) in the commercial port, of which the smaller fishing vessels or inshore craft use the most Southerly Basin (A), and the trawlers the Coastal basin (B). Here an extension of the marine railway and dry docking facilities is now ready.

Basin C: The basin has an Elevator (Berths No. 12 and 13) on its Northern side, capacity 25,000 tons, with 8 tubes and 2 belts, load rate 350 t.p.h. per belt. Air draft at LW is 12.5 m.

In addition to the elevator berth there are Berths No. 7 to 11.

Lengths: No. 7 – 178 m.; No. 8, 9 and 10 – Total length 500 m.; No. 11 – 134 m.; No. 12 and 13 – 276 m.

Depths: No. 7, 8, 9, 12 and 13 – 26 ft.; No. 10 – 24 ft. and No. 11 – 21 ft.

Pier 6: Cruise Ship Pier: Max. LOA 220 m. Depth alongside 30 ft.

CRANES: Mobile cranes with capacity up to 20 tons available for hire.

STEVEDORES: Gangs engaged by Port Authority according to vessels requirements.

Normal capacity per gang, per shift:

150 to 175 tons fish (direct transhipment).

70 to 100 tons general cargo.

Working hours: 0700 – 1300 and 1300 – 1900 weekdays and 0700 – 1300 on Saturday.

MEDICAL: Masters should telegraph Agent in good time expected date and hour of arrival. Hospitals and sanatoriums.

TANKERS: Tankers berth at Pier 7 (length 260 m.) or at the "Inflammables Berth". Depths alongside 22 ft. – 22 ft. 06 in. Products handled are petroleum products and liquid gas.

DENSITY: Sea water.

FRESH WATER: Available at all berths, delivery from 1 t.p.h. to 2 t.p.h. (rates better during night); at the Northern tourist berth through 3 hydrants, total 60 t.p.h. Being slightly salty it is not recommended for boiler use.

FUEL: Fuel oil and diesel available at Pier No. 7 and by truck.

CONSULS: French, Italian, Portuguese, Spanish, Uruguayan.

REPAIRS: All types of repair possible, except dry-dock repairs. Divers available.

WATCHMEN: Compulsory. Arranged by Agent.

OPENING/CLOSING HATCHES: Can be performed by crew, but in any case subject to charter party terms.

CARGO: *Loading marks.* Vessels can load to their Summer marks all year round if sailing Northbound.

Import cargo. This is a fully authorised Custom house. Berth 9 in the central basin is the most appropriate berth for handling import cargo, there being little space on shore at the other berths. Berth 7, the pierhead here, has 30 ft. and is also reasonably suitable for discharging, but in the Northern basin there is little or no room for depositing cargo alongside.

Import of Potatoes. Is permitted here, this being near the main potato growing region but permission must be obtained for the discharge of certified seed potatoes.

REPATRIATION: Can be arranged.

AIRPORT: Six miles distant. Two regular lines: Austral and Aerolineas Argentinas, 2 services/day between Mar del Plata and Buenos Aires.

HOLIDAYS: None. Work every day during year.

TELEPHONES: No telephones are available on board or on the berth.

IDENTIFICATION CARDS: Compulsory. Arranged on board immediately after arrival.

DELAYS: In accordance grain elevator capacity. Normally none.

WEATHER: *Wind.* There is no really predominating wind, 42% being from W., N.E. and N.W., average velocity being 11 knots.

Rain. Rainfull averages 941 mm. evenly distributed.

Temperature. Summer maximum about 25° and 13° minimum, while in Winter the maximum averages 14° and minimum 3.5°. Absolute maximum and minimum are 41.6° and minus 6.7° C.

DEVELOPMENTS: Dredging to obtain depth of 30 ft. in channel and port.

AUTHORITY: Captain of the port: Port Administrator.

PUERTO DESEADO: 47.46 S. 65.54 W. (See Plan)

(Province of Santa Cruz) "B" category port.

N.B. Refer to Argentina, Section 1.

988 miles South of Buenos Aires. The port is situated on the right bank of the river, and at its mouth. There is a meat packing plant.

APPROACHES: The approaches and entrance to the harbour are determined by two pairs of beacons as range or leading lights. Care must be taken not to confuse the installed portal cranes, each 18 m. high, with the beacons, which are painted the same colour.

There is 27 ft. on the bar, at low water: tidal range is 17 ft. 6 in. to 6 ft. 2 in.

PILOTAGE: Compulsory. Agent requires 48 hours' notice of arrival for Pilot to come from Puerto Madryn. If vessel Southbound, arrangements can be made for boarding at Puerto Madryn or Comodoro Rivadavia.

RADIO: For radio regarding free pratique, or reporting ETA call LPO 5 on 461 kHz. A1. For weather reports in English, listen to Comodoro Rivadavia LPX 2, on 474 kHz., at 0400 and 1800 hrs. GMT.

TUGS: See "General" before first port.

BERTHING: With a narrow entrance channel flow of tides often exceeds 5 knots. There is a mud and gravel bank almost opposite and slightly West of the wharf, some 200 yards out from it, with only 16 ft. at zero.

Commercial Wharf: Length 266 m. Depth alongside 27 ft. The Eastern part (119 m.) is served by 2×6 ton cranes. Mobile crane of 6 tons capacity also available.

MEDICAL: Attention available.

FRESH WATER: Available at the wharf, but in limited supply in Summer.

FUEL: Available by truck from Comodoro Rivadavia.

CONSULS: Italy and Spain.

REPAIRS: Minor repairs only.

WEATHER: Conditions are generally good, and winds seldom exceed 40 knots. If anchored awaiting Pilot or berth, care should be taken to watch for strong winds against the current. When a strong W. wind blows there can be heavy dust storms, which impede proper visibility; in such cases it is advisable to keep position by radar and stand off or anchor until the visibility improves.

Yearly average for winds is 14 knots, 63% of the time from W., S.W. or N.W.

Rainfall is low, 202 mm. yearly with an average 74 days a year evenly distributed. Maximum temperature in Summer months is 35.6°C., while in Winter maximum ranges to 15.6° and minimum to minus 8.6°.

DEVELOPMENTS: A new dock with length 250 m. to be constructed.

PUERTO MADRYN: 42.46 S. 65.02 W. (See Plan)

(Province of Chubut) "B" category port.

N.B. Refer to Argentina, Section 1.

On the Atlantic coast, 767 miles South of Buenos Aires. One of the most sheltered and deepest harbours in Argentina.

PILOTAGE: Compulsory. Agent required 12 hours notice for ordering Pilot. Pilot boards 0.5 miles East of pier.

ANCHORAGE: At least 1.5 miles East of pier. Depth 60 ft.

RADIO: For free pratique, or reporting ETA call LPZ 20, at Trelew, on 427 kHz. A1, and for weather forecasts to LPX 2, at Comodoro Rivadavia in English, at 0400 and 1800 GMT, on 474 kHz.

Vessel to advise Agent, 5 days in advance of arrival, ETA, vessel particulars and cargo particulars. Further advices required 48 hours and 12 hours prior to arrival.

Vessels with containers are to give 10 days and 48 hours notice.

TUGS: Not necessary but if required they are ordered from Bahia Blanca.

BERTHING:

Berth No.	*Length (m.)*	*Depth (ft.)*	*Remarks*
1	217	44-55	Aluar S.A. vessels have priority. Max. LOA 220 m. Bulk discharge by grab at 300 t.p.h.
2	217	45-55	Max. LOA 175 m. General and containers.
3	139	33-42	2×6 ton cranes. General, ingots, fruit, fish, containers.
Waiting	250	20-24	Waiting Berth. Can be used for cargo using ship's gear.

CRANES: 2 mobile cranes, capacity 40 tons and 10 tons. 2 electric gantry cranes on rails at Berth No. 3. 1×10 ton grab crane at Berth No. 1.

MEDICAL: Attention available.

FRESH WATER: Available at 20 t.p.h.

FUEL: By truck from Comodoro Rivadavia, Neuquen or Bahia Blanca.

CONSULS: Italy and Spain.

REPAIRS: Minor emergency repairs only, also divers available.

HATCHES: According to Port Regulations, stevedores open and close hatches at commencement and end of cargo operations.

CUSTOMS ALLOWANCES: Sufficient for daily requirements only.

AIRPORT: Trelew distant 64 km. Scheduled flights to Buenos Aires and other cities.

POLICE/AMBULANCE/FIRE: Police and fire tel. 249. Hospital 240.

TELEPHONES: No arrangements for placing telephones on board.

SHORE LEAVE: Crew members allowed ashore but must be provided with identification cards.

IDENTIFICATION CARDS: Required.

DELAYS: Possible delays due congestion owing berth shortage and tide.

WEATHER: *Winds* mainly West, with a yearly average of 8.3 knots but reaching 15 knots in Summer months.

Rainfall scarce, average 173 mm. evenly distributed throughout the year.

Temperature. Summer maximum is 27°C and minimum 13°, and in the rest of the year maximum 21° minimum 8°.

Tidal range is 18 ft. 8 ins. and 6 ft.

SHIPMASTER'S REPORT: July 1980

Pilotage: Compulsory. Pilot requires 24 hours notice. At present the pilot boat is small with only about 1 ft. freeboard therefore vessels do not berth or unberth in any sort of wind, sea or swell.

Restrictions: Vessels can berth and unberth at any state of the tide, day or night.

Tugs: None available. Vessel able to dock and undock without aid of tugs.

Health: Authorities require 72 hrs. notice.

Radio: Bahia Blanca (LWP) and General Pacheco (LPD).

Documents: See "General" before first port.

Services: Fresh water available. Limited amount of fresh provisions available. Minor repairs possible. Airport, Doctor and hospital available. Groceries, meats and laundry services also available. Dry docking facilities, surveyors, fuel and slop facilities not available.

Consuls: No Consular representative. Nearest at Buenos Aires.

Anchorage: In position Lat. 42° 44′ S., Long. 65° 00′ W.

Berthing: Vessel berthed at a general cargo berth in position Lat. 42° 44′ S., Long. 65° 01′ W. Berth being about one mile from the Pilot Station. Any medium sized vessel able to dock at the southern berth (general cargo berth). Vessel able to dock and undock at any stage of the tide day or night.

Density: 1025.

Cargo Handling Facilities: There is a Bulk Aluminium berth opposite the general cargo berth. Two small cranes of approximately 2.5 tonnes capacity available. No floating cranes or Ro-Ro facilities. No facilities for handling containers or palletised cargoes.

PUNTA COLORADA: 41.41 S. 65.00 W. (See Plan)

PILOTAGE: Pilotage is obligatory, and 72 hours advance notice must be given in Buenos Aires for the Pilot to travel down.

MAX. SIZE: No. 1 Berth: 70,000 d.w.t. (approx.) LOA 230 m. Draft 11.58 m.

No. 2 Berth: 25,000 d.w.t. (approx.) LOA 230 m. Draft 10.05 m.

BERTHING: The mechanical loading arm for iron ore movement from Sierra Grande iron ore mines has been placed at Punta Colorada, a small peninsula, mid-way between Point Pozos and Point Porfido, the neck of land often being under water at high tide. After grinding and concentrating at the mines, which are some 25 km. due West from the coast, the slurry is pumped to the pelletizing plant at Punta Colorada, stockpiled there and taken by conveyor some 1,600 m. to a retractable loading arm. This has a loading rate of 2,000 t.p.h., and turns on an arc permitting it to load over a length of 112 m., without shifting position of the vessel. There is 42 ft. at Berth No. 1 at LWST, vessels lying due North/South as shown on the plan and 35 ft. in Berth No. 2 lying East/West.

The port is privately owned and run by the Mining Company.

OPERATOR: Hierros Patagonicos de Sierra Grande S.A.M.

PUNTA MEDANOS: About 280 km. South of Buenos Aires.

New deep-water port under construction. On completion, expected to accept vessels up to 50 ft. draft.

PUNTA QUILLA (Santa Cruz): 50.07 S. 68.25 W. (See Plan)

(Province of Santa Cruz) "C" category port.

N.B. Refer to Argentina, Section 1.

On the estuary formed by the Rivers Santa Cruz and Chico, 1,172 miles South of Buenos Aires.

APPROACHES: The entrance to the port is by a channel 10 miles long. The Santa Cruz Lighthouse and 9 other beacons determine 4 pairs of leading lights for the approaches and entrance to the harbour, which can be entered only at HW, as both in the bar, either North or South passage, there are shoals on the leading lines, and also just before taking the anchorage in front of the town.

PILOTAGE: Compulsory. Agent requires 48 hours notice to order Pilot from Puerto Madryn.

ANCHORAGE: Good anchorage 2 miles from the entrance with 40 ft. at LW.

RADIO: For radio regarding free pratique or reporting ETA call LPT 2 on 441 kHz. A2. For weather forecasts in English tune to Comodoro Rivadavia LPX 2, on 474 kHz, at 0400 and 1800 hrs. GMT.

TUGS: None.

BERTHING: Wharf with length 160 m. with dolphins 60 m. off at each end with berths on both sides. Depth alongside 40 ft. at LW. Range of tide 30 ft.

CRANES: 1×6 ton, 1×25 ton (private) and 1×45 ton (private) mobile cranes.

STEVEDORES: Working hours: 0700 – 1300, and 1300 – 1900.

MEDICAL: Attention available.

FRESH WATER: Available, rate 15 t.p.h.

FUEL: Available to supply vessels only.

WEATHER: A dry zone, with an average of 186 mm. rain, spread over 72 days throughout the year. Wind averages 11 knots.

Tidal range is 39 ft. 8 in. to 9 ft. 4 in.

CONSULS: None.

REPAIRS: Minor repairs only.

QUEQUEN/NECOCHEA: 38.35 S. 58.42 W. (See Plan)

(Province of Buenos Aires) "B" category port.

N.B. Refer to Argentina, Section 1.

On the Atlantic Coast, 375 miles South of Buenos Aires, Necochea, is on the right bank, and Quequen, on the left bank of the Quequen River. The ports, whose administration is centered in Quequen, are the outlet for a very rich agricultural zone.

APPROACHES: The port is at the mouth of the river, protected by two breakwaters, the Western arm being 1,192 m. long, lying from N.W. to S.E., and the Easterly arm 572 m. long and lying North/South. The passage between the arms is 210 m. wide, and the entrance channel proper 90 m. wide.

PILOTAGE: Compulsory. Pilots must be applied for as usual through Agents at least 24 hours ahead, using Radio Pacheco LPD 5 on 512 kHz, A2, since there is no radio station at Quequen. This can be done by phone from Buenos Aires or other ports if vessels are not coming from abroad.

No Pilots will come out in bad weather. The small pilot boat is painted grey, with a yellow deckhead, and the Pilot comes aboard about 1.5 miles off the South end of the breakwater.

ANCHORAGES: Not advisable to anchor in bad weather due extremely dangerous winds from West through South to East. Anchorage in open sea 800 m. – 1,500 m. from cliffs.

RESTRICTIONS: Day and night entry possible. Vessels with length in excess of 175 m. require channel navigation permit obtainable from Maritime Prefecture.

MAX. SIZE: *Max. Draft.:*

Up to 175 m. LOA = 31 ft. 01 in.
Up to 185 m. LOA = 30 ft. 01 in.
Up to 195 m. LOA = 29 ft. 01 in.
Up to 205 m. LOA = 28 ft. 01 in.
Up to 215 m. LOA = 27 ft. 01 in.

Vessels with LOA 215 m.–220 m. must not enter without permission.

Vessels must have an under keel clearance of 1 ft. in calm weather on a rising tide and 2 ft. clearance on a falling tide.

Tidal range: 2 ft. (Neaps) and 5 ft. 2 ins. (Springs).

Also see "Shipmaster's Report" – February 1982.

HEALTH: Free Pratique is now given only when alongside, or in the pool. Master should advise agent in advance of health situation aboard. If proceeding from another Argentine port, health inspection not required. Derat Certificate to be shown.

RADIO: For radio regarding free pratique, or reporting ETA call Radio Pacheco LPD 5, on 512 kHz. There is no station here and advice to Agents can be given by phone or telegraph from Buenos Aires or other ports, also Costera del Mar de Plata (LPM).

TUGS: Two tugs must be used both on entering and leaving and these come alongside at the entrance, and are also needed for movements in the port. Both are old, however, and with insufficient power for anything other than work inside the port. Ship's lines used.

Two vessels cannot be in the entrance channel at the same time. Should the weather make it imprudent for the safety of the ship and/or tugs to make fast ropes in any position, the tugs will continue at the side of the vessel to be engaged when necessity arises. In every case tugs must be paid for, used or not, and any damage done by the non use or late engagement of the tugs will be attributable to the vessel.

Also see "General" before first port.

BERTHING:

Quequen

Berth No.	*Length* (m.)	*Depth* (ft.)	*Remarks*
1	200	31	6 in. lines for loading vegetable oil. Pellets loaded by conveyor at 200 t.p.h.
2	100	26	6 in. lines for loading vegetable oil. Rate 350/400 t.p.h. Storage capacity 39,000 tonnes (Berths No. 1 & 2).
3	220	32	Private elevator berth. 2 loading belts (600 t.p.h. each) and 1 pipe fitted with trimming gear. Air draft 14.0 m. Storage capacity 70,000 tonnes. Vegetable oil by pipeline, rate 1,200 t.p.h. Storage capacity 5,000 tonnes.
4 5	230	30	National Grain Board. Silo capacity 80,000 tonnes. 4 belts serving 8 tubes. Delivery rate 300/350 t.p.h. to 2-3 tubes each. Air draft 14 m.
6	120	32	Max. LOA 220 m. Elevator berth. 2 belts serving 7 tubes. Rate 600 t.p.h. (2 tubes). Grain and by-products also loaded by conveyor at 200 t.p.h.
Necochea			
7 8 9	450	30	General cargo, cement and logs by ship's gear. Grain by-products by portable conveyor at 200 t.p.h.
10			Cold stores. Loading and discharging fresh and frozen fish.
11	200	19	Fishing vessels.
12	200	22	Power station berth. Discharge of fuel oil.

MEDICAL: Attention available.

TANKERS: Fuel oil discharged. (See "Berthing").

DENSITY: Salt water.

FRESH WATER: Obtainable from hydrants on the wharves, vessel must supply hoses. Rate 6 t.p.h. – 10 t.p.h.

FUEL: Advance notice essential as deliveries by truck from Buenos Aires, Mar del Plata, or Bahia Blanca.

CONSULS: Danish, Greek, Italian and Spanish.

REPAIRS: Minor repairs only.

WATCHMEN: Compulsory.

HATCHES: Opened/closed by stevedores additional charge made.

REPATRIATION: Through Buenos Aires.
AIRPORT: 5 miles distant. Daily flights to Buenos Aires.
TIME: GMT minus 3 hours.
HOLIDAYS: Vessels worked every day of year.
POLICE/AMBULANCE/FIRE: Police, Necochea 2148 and Quequen 6008; Ambulance, Necochea 2350 and Quequen 6052; Fire, Necochea 4900.
TELEPHONES: No arrangements for placing aboard.
SERVICES: Any special services required, technicians sent from Buenos Aires.
SHORE LEAVE: Not permitted.
DELAYS: Daily cargo work 18 hours/day. One waiting berth available. Delays up to four days can occur in January and February.
WEATHER: *Winds,* average velocity is 7 knots, with 46% from N., N.E. and E., and only 29% from S.W., W. and N.W.
Rainfall. Averages 909 mm., evenly distributed.
Temperature: Summer maximum averages 26°C and minimum 14° with an absolute maximum of 39.9°, while in Winter the maximum is around 13° and the minimum 4°, with an absolute recorded minimum of – 4°.
Tidal range is 5 ft. 2 in. spring to 2 ft. neaps.

SHIPMASTER'S REPORT: February 1982.
Approaches: The channel is being maintained by a new dredger at 28 ft. 02 in. this allows a sailing draft of 30 ft. 02 in. *providing* the swell on the bar is less than 1.3 m. as decoded by the Pilots from observations.

The pool inside the breakwaters and the swell mole are used for swinging before berthing if the weather is good, and after loading if wind prevents this, hence NO anchoring is permitted in this area.

The tugs meet the vessel just outside the breakwaters and two lines each are the normal requirement (ship's lines), but these have to be sent away quickly when directed or else the vessel cannot swing in favourable weather. A deep sea tug has joined the tug fleet.
Berthing: All vessels wait at anchor in the roads where the holding ground is of mixed type. The strong Southerly winds must be watched and rise of the barometer.

A vessel of some 42,000 tonnes deadweight was accommodated head out at the main elevator berth, while two vessels waiting to sail were accommodated at the Ultramar II berth, each 183 m. overall, and without hindering the berthing and loading operations of a 31,700 ton bulk carrier. It should be noted that the inner vessel took the ground at 29 ft. draft when the tide was low; dredging is planned here when the newly restored berths on the Necochea side are completed and dredged to 10 m. as a lay-by and general cargo wharf. However, the nature of the piling is preventing much increase in depth at this old wharf. The limited number of shoots will prevent much use of this berth when it is again in use.

All linseed oil and similar cargoes are being handled at the berth to the East of the Overseas Wharf on the Quequen side but the lack of water makes taking the ground normal for tankers at low water while the swell effect is marked.
Density: This varies with the season and the flow of water down the River Quequen. A flash flood destroyed the footbridge above the elevator and this is now mainly cleared away but no extension has been planned as yet for the adjacent elevator berth. Thus the density can range from salt to near fresh in season.
Fresh Water: Very slow rate of delivery and very salty (500 parts).
Shore Leave: Permitted as soon as Argentine Identity Cards have been processed.
Developments: The Ultramar I Berth has 8 tubes and can pour four at 350 tonnes/h. each. Work now proceeds according to who pays the overtime, but an 18 hour day is available on most weekdays, from 0700 hrs. to 0100 hrs.

AUTHORITY: Capitania de Puertos de Quequen y Mar del Plata.
Contact: Francisco Cesar Gallo, Chief of Operations Division.

RIO GALLEGOS (including Punta Loyola): 51.33 S. 68.59 W.

(Province of Santa Cruz) "B" category port.
N.B. Refer to Argentina, Section 1.

About 8 miles up the river, 1,247 sea miles South of Buenos Aires.
PILOTAGE: Compulsory. Agent requires 48 hours' notice to order Pilot from Puerto Madryn.
ANCHORAGE: Good anchorage when awaiting tide is off Punta Loyola in 30 ft. or on the Northern coast in front of Punta El Gancho or between Punta Bustamante and Isla Deseado, this latter in the case of N.W. storms only.
RESTRICTIONS: Entrance to the anchorage is buoyed. The Northern Channel has a shingle bank bar 13 ft. at low water. The Southern Channel is more sheltered and the current not so strong. Rio Gallegos is a tidal port, the height of tide being as much as 40 ft. at times.

The port is characterised by the intensity of the currents, up to 6 knots, and should be entered on a rising tide there being only 22 ft. in the pool of the port at low water.
RADIO: For radio regarding free pratique, or reporting ETA call LPG 2 on 486 kHz. A2. For weather reports in English tune to Comodoro Rivadavia LPX 2 on 474 kHz. at 0400 and 1800 hrs. GMT.
TUGS: The Coal Board operate a small tug.
BERTHS: *Commercial Wharf:* Length 45 m. Vessels moor to chains on the shore and berth at high water. At low water, vessels are aground on shingle which is levelled by the Port Authority from time to time. Vessels work cargo with ship's gear and 2 mobile cranes (45 tons and 10 tons) when ship's gear cannot reach the quay at LW.
Coal Wharf: "T" shaped jetty with loading platform 60 m. in length. Loading of coal is by 2 chutes at 1,000 t.p.h. from half tide (flood) to half tide (ebb), which is approximately 5-6 hours. Vessels which do not wish to go aground can only work for 2-3 hours, as they have to go out to anchor and return to complete loading.

There are pipelines for receiving clean petrolem products. The storage tanks are 1,500 m. upstream.
Punta Loyola: Length of berth 185 m. Vessels berth against dolphins with mooring dolphins at each end giving an overall mooring length of 375 m. Depth alongside 45 ft. at LW. Range of tide 12 ft. Tankers of 60,000 d.w.t. load crude oil, eventually coal will also be loaded.
MEDICAL: Doctor available.
FRESH WATER: Available at the Coal Wharf and the Commercial Wharf.
FUEL: Available at the Coal Wharf and by truck.
CONSULS: Chilean, Spanish and Italian.
REPAIRS: Workshop facilities for small repairs.
AIRPORT: Daily air service to Buenos Aires.
WEATHER: *Winds.* Characterised by constant winds from W. and S.W. averaging 16 knots during the day. In Spring and Summer 25 knots rising to 75 knots at times. Easterly winds are rare, usually with rain.
Rain. There are usually about 100 days with rain, in total 222 mm. distributed from April to October.
Temperature. Average maximum temperature in Summer is 18°C, maximum recorded being 29°, Summer minimum is 5.8° while in Winter the average maximum is 6.5° and minimum minus 11°.
Tidal range is 39 ft. 4 in. spring and 9 ft. 6 in. neaps, tides of over 40 ft. have been registered.
AUTHORITY: General Ports Administration.

SAN ANTONIO ESTE: 40.49 S. 64.54 W. (See Plan)

PILOTAGE: Pilotage is compulsory and ordered via vessel's Agent 48 hours prior to arrival. Pilot supplied by Puerto Madryn Pilot station.
ANCHORAGE: In San Matias Gulf, 5 miles South of entrance to bay.
BERTHS: A new pier with a length of 200 m. at the head has been built. The outer berth accepts vessels of 170 m. LOA, occasionally 178 m. and the Inner Berth accepts vessels of 147 m. LOA. Depth alongside 30 ft.

Vessels over 111 m. require a tug.

Max. draft in the initial stages will be 26 ft.
STEVEDORES: Working hours: 0700-1300 and 1300-1900 Monday to Friday and 0700-1300 on Saturday.
MEDICAL: Hospital at San Antonio Oeste.
FRESH WATER: Available.
FUEL: Available by truck from Bahia Blanca.

SAN JULIAN: 49.18 S. 67.43 W. (See Plan)

(Province of Santa Cruz) "C" category port.
N.B. Refer to Argentina, Section 1.

In the Bay of San Julian, 1,111 sea miles South of Buenos Aires.
APPROACHES: Access is well buoyed, but vessels must wait for high tide to enter.
PILOTAGE: Compulsory. Agent requires 48 hours' notice of arrival in order to arrange Pilot from Puerto Madryn.
ANCHORAGE: Best anchorage situated in front of the town, in 22 ft. at LWS. When heaving anchor care must be taken as the 3 knot current drives vessels towards the shore. Puerto Scholl is the best of several anchorages.
RADIO: For radio regarding free pratique, or reporting ETA call LPY on 428.5 kHz, A2. For weather forecasts in English, tune LPX 2, Comodoro Rivadavia on 474 kHz, at 0400 and 1800 hrs. GMT.
TUGS: See "General" before first port.
BERTH: Length 60 m., with dolphins 60 m. off each end. Depth alongside 30 ft.

Loading of frozen fish, sea products and other cargoes is by ship's gear.
MEDICAL: Doctor, and hospital available.
FUEL/FRESH WATER: Not available. In emergencies, water could be supplied in drums.
CONSULS: Chile and Spain.

USHUAIA: 54.49 S. 68.18 W. (See Plan)

PILOTAGE: Compulsory. Vessels to give Agent 48 hours' notice in order to arrange Pilot.
RADIO: For Free Pratique or reporting ETA, vessels call "LPC 2" on 512 kHz or "LPC 27" on 4428.6 kHz.
TUGS: In an emergency, naval tugs can be provided.
BERTHING: Length of berth 180 m. In addition, there are 3 dolphins off the S.E. end of the berth, giving an overall berthing length of 250 m. The depth at the head of the berth is 30 ft., decreasing to 18 ft. at the shore end. Vessels can berth either side of the wharf.
CRANES: 2×45 tons mobile cranes.
STEVEDORES: Work is carried out in 2 shifts of 6 hours each. Weekdays 0700 hrs. – 1900 hrs. and Saturdays 0700 hrs. – 1300 hrs.

MEDICAL: Hospital available.
TANKERS: *YPF Pier:* The pier is 1 km. N.E. of the Commercial Pier. Length 85 m. Vessels berth starboard side to and moor to 4 dolphins. Depth alongside 35 ft. Tankers discharge clean products to storage tanks.
FRESH WATER: Available at both piers.
FUEL: Available at the YPF Pier, advance notice required.
CONSULS: Chile and Italy.
REPAIRS: Possible.
AIRPORT: There is a regular air service to Buenos Aires.

SHIPMASTER'S REPORT: July 1994.
Vessel:
LOA 156 m.
Breadth: 24.7 m.
D.w.t. 18,277 tons.
Draft 7.30 m.
Vessel called to discharge and load containers.
Location: The port of Ushuaia is close to South Polar Region, and is situated at centre of the "Canal Beagle" River, approximately 54 nautical miles from the Easterly open sea Pilot Station.
Restrictions: Restriction limits by a line joining the following approximate positions:
(a) Lat. 54° 15′ 00″ S., Long. 66° 54.7′ W.
(b) Lat. 54° 57′ 50″ S., Long. 66° 50.9′ W.
All foreign vessels without a Pilot on board prohibited entry West of this line.
Pilotage: Compulsory. Four licensed Pilots are available at any time. Pilots usually join ship in approximate position Lat. 55° 01.8′ S., Long. 66° 49′ W.

Vessel must give Agent 48 hours notice, in order to arrange Pilot and give accurate ETA to their Agents (not to the Pilot Association). When within VHF range, vessel should communicate with the Ushuaia Pilot Boat, via Channel 16, working Channels are 14 and 12.

The Pilot boat was not at the Pilot Station, but at the following approximate position: Lat. 54° 53′ S., Long. 67° 20′ 30″ W. (Pto. Harberton). Pilot boat has to sail about 20 nautical miles to the Pilot Station. Therefore the Pilot shall be confirmed 4 hours, 2 hours and 1 hour in advance by VHF. The pilot boat "La Pampa" is easily identified, as it is painted with blue hull and white bridge and clearly marked "Pilot" and displays international pilotage signals.

Pilot Office Address: Gdor. Deloqui 304-(9410) Ushuaia. Tel:/Fax: 0901-22448.
Documents:
Customs:
1 copy Crew List.
8 copies Special Form-Deck and Engine Spares and Stores List (one original, 2 copies for Customs).
3 copies Crew Effects Declaration.
3 copies Bond Stores List.
Sanitary Officials:
1 copy Health Declaration.
2 copies Crew List.
1 copy Vaccination List.
Maritime Police:
4 copies Crew List.
4 copies General Declaration, issued by Agent.
4 copies Passenger List.
3 copies Drugs List.
3 copies Arms and Ammunitions List.
Immigration:
3 copies Crew List and Shore Pass issued by each crew member (photograph necessary).
3 copies Passenger List.
Port Authority check and sight following ship's certificates:
Certificate of Vessel's Nationality.
International Tonnage Certificate.
Derat Exemption Certificate.
Cargo Ship Safety Equipment Certificate.
Cargo Ship Radio-Telegraphy Certificate.
Cargo Ship Safety Construction Certificate.
International Load Line Certificate.
International Oil Pollution Prevention Certificate.
Last Port Clearance.
Ship Reporting System: Compulsory system in effect for vessels, call sign "L4D".
Vessel should report:
(a) Vessel's name.
(b) Call sign.
(c) Flag.
(d) Port of departure (Inward-bound) next port (Outward-bound).
(e) Type of vessel.
(f) Draft.
Anchorage:
(A) Roadstead: Within 1.5 miles to 4.0 miles from Pta. Moat Lighthouse. There is an anchorage for awaiting Pilot.
(B) Port Anchorages:
South Anchorage:
(i) Lat. 54° 50.02′ S., Long. 68° 16.08′ W. (Buoy)
(ii) Lat. 54° 50.20′ S., Long. 68° 16.40′ W.
(iii) Lat. 54° 49.53′ S., Long. 68° 18.10′ W.
(iv) Lat. 54° 49.72′ S., Long. 68° 18.20′ W.
North Anchorage:
(i) Lat. 54° 48.45′ S., Long. 68° 15.71′ W.
(ii) Lat. 54° 48.38′ S., Long. 68° 15.90′ W.
(iii) Lat. 54° 48.76′ S., Long. 68° 17.35′ W.
(iv) Lat. 54° 48.65′ S., Long. 68° 17.38′ W.
Above anchorage for awaiting berth or quarantine.

Radio/VHF: Ushuaia Radio call sign "LPC2" 512 kHz, or "LPC27" 4428.6 kHz.

VHF Channel 16, working 14 and 12 for Pilot and Port Control. Channel 69 for Agents.
Tugs: None.

In an emergency, the ship's Agent requests a tug from the Navy.
Medical: Assistance available.
Fresh Water: Available at berth.
Fuel: All grades of bunkers available from Muelle "Orion" Pier, subject to advance notice being given.
Cranes: No cranes on berth, usually use ship's cranes. Stevedore company has 2×45 tons mobile cranes and 1×30 tons truck crane.
Stevedores: Working hours: 0700 hrs. – 1900 hrs. Saturdays 0700 hrs. – 1300 hrs. Overtime if required from 1900 hrs. – 2400 hrs. and 0000 hrs. – 0700 hrs.
Gangway/Deck Watchmen: Required.
Opening/Closing Hatches: Usually by crew.
Time: Summertime: GMT minus 4 hours (from October to March).
Wintertime: GMT minus 3 hours (from April to September).
Tides: Springs about 5.2 ft., Neaps about 2.2 ft.
Identification Cards: Required.
Shore Leave: Crew members allowed ashore, but must be provided with identification cards.
Airport: Small airport with service to Buenos Aires.
Currency: U.S.$ 1.00 = Un.Peso 1.00.
Seamen's Club: None.

NOTES

Please also advise Shipping Guides Ltd.

Aruba

BARCADERA: 12.29 N. 70.00 W. (See Plan)

LOCATION: The industrial harbour of Aruba is situated 3 miles S.E. of Oranjestad.
DOCUMENTS: Documents and all general information, refer to "Oranjestad".
PILOTAGE: Compulsory.
RESTRICTIONS: Harbour open day and night. Depth of water in entrance is 36 ft. Depth of water alongside is 36 ft. Swinging basin width 1,000 ft.
MAX. SIZE: Max. LOA 225 m., max. draft 32 ft.
TUGS: Available.
BERTHING: 1,150 ft. of dockside accommodation.
FRESH WATER: Not available.
FUEL: Can be supplied.
AUTHORITY: See "Oranjestad".

ORANJESTAD: 12.31 N. 70.02 W. (See Plan)

DOCUMENTS:

Clearance from Last Port.
Derat Exemption Certificate.
Ship's Register.
Manifest of Cargo (or ballast), or Bills of Lading for import goods and transit goods separately.
Crew List (4 copies).
List of Stores on Board (2 copies).
Consignee Mail (if cargo for discharge) (2 copies).
Passenger List (if any passengers) (2 copies).

The Passenger List must carry full names, date of birth, sex, nationality and occupation of passengers landing at Aruba. The ultimate destination of in-transit passengers must also be shown on the Passenger List.

Derat Exemption Certificates can be renewed at Oranjestad, Barcadera and St. Nicholas.

Outward Clearance, cargo documents and list of outgoing passengers are delivered on board by the Agent's representative, thereby making it unnecessary for Masters to visit the Customs Office to obtain outward clearance.

PILOTAGE: Masters are requested to advise Agents of their expected time of arrival at least 48 hours in advance. Arrival messages should include advice regarding cash or other requirements. This information is particularly necessary in order to give prompt attention to vessel's requirements and to avoid delay after arrival.

Pilots are government employees and pilotage is compulsory for vessels from 50 g.r.t. upward entering or leaving the harbour. Pilots board inbound vessels within 2 miles of shore. The Agent's representative will arrange for Pilots to board vessels as necessary. Inbound vessels should close the West entrance of the harbour as near as prudently possible and make a lee to facilitate the Pilot's boarding.

Every vessel arriving or departing must provide and properly secure a pilot ladder which conforms with the standards of construction normally accepted by international safety standards. Failure to provide such a ladder may result in the Pilot's refusal to board a vessel.

ANCHORAGE: Anchorages, suitable even for deepest draft vessels, are located 7-8 miles South of Orangestad, where the depth is 45 m.
Restricted Anchorage: The limits are shown on B.A. Chart No. 702. Anchorage extends West of the coast, and is reserved for the use of vessels carrying out repairs and underwater hull cleaning. Special permission for anchoring is to be obtained from Direktie Scheepvaart (Tel: 297-8-35192. Fax: 297-8-35221).

MINIMUM DRAFTS: For tankers arriving or sailing in ballast the following minimum drafts are required for manoeuvring under normal weather conditions:

G.R.T.	*Forward*	*Aft.*
16,600	8 ft.	18 ft.
18,000	8 ft.	18 ft.
27,000-30,000	10 ft.	20 ft.
30,000-36,000	14 ft.	22 ft.
37,000	14 ft.	24 ft.
46,000	16 ft.	26 ft.

MAX. SIZE: The harbour itself has a depth of 36 ft. at MLW. The safe salt water draft approved for docking at the Long Pier is 30 ft. and in the two Western Basins is 28 ft. Vessels normally enter via the West channel and depart via the East channel.

HEALTH: The Port Doctor will visit an arriving ship only if there is a case of quarantinable disease on board, if the ship has no clean Bill of Health or if one of the preceding ports of call has been declared to harbour a quarantinable disease.

RADIO/VHF: Shore station for R/T communication with 24-hour service. VHF Channel 16, 156.80 MHz (calling); Channel 11, 156.55 kHz (working channel).

HF 2182 kHz, 2558 kHz (working frequency transmitter), 2760 kHz, 2738 kHz, 3032.5 kHz, 4125 kHz (receiving frequency SSB).

TUGS: 2 tugs available, 2,200 h.p. and 3,500 h.p. Both fitted with VHF Channel 16 (working Channel 11).

BERTHING: In total there are 4,070 ft. of dock length available to accommodate ocean-going vessels and 1,090 ft. of dock for small craft, of which:

1,720 ft. with 36 ft. of water alongside
2,350 ft. with 34 ft. of water alongside
460 ft. with 16 ft. of water alongside
230 ft. with 10 ft. of water alongside
400 ft. with 6 ft. of water alongside

CONTAINER FACILITIES: 30 acre container terminal in operation. Length of quay 255 m., depth alongside 12.0 m. 1×50 ton container crane. 2×35 ton forklifts. 1 back-up mobile crane of 140 tons available.
STEVEDORES: Stevedoring is performed at a fairly fast rate compared with other ports in the Caribbean area. All cargoes are handled by shore cranes. The terminal has extensive electrical installations for refrigerated container cargoes.
MEDICAL: Excellent medical and dental attention is available at any hour of the day or night to crew members of all vessels.
BALLAST: Vessels must arrive with sufficient ballast to permit safe handling. All vessels should enter port with clean ballast that can be pumped over board when alongside, as it is prohibited to pump dirty ballast into the harbour.
FRESH WATER: Boiler and drinking water of purest quality is supplied by hose from the docks at a rate of 200 t.p.h. (in special cases 400 t.p.h.).
FUEL: Various grades of bunker oil available by barge from Coastal Fuels Marketing. A minimum of 48 hours advance notice is required.
CONSULS: The following countries have consular representatives on Aruba:

Brazil
Chile
Colombia
Costa Rica
Denmark
Dominican Republic
El Salvador
Germany
Guatemala
Haiti
Italy
Lebanon
Liberia
Nicaragua
Norway
Panama
Peru
Portugal
Spain
Sweden
Switzerland
United Kingdom
Venezuela

Necessary for Masters of Panamanian and Italian flag vessels to visit Consulates at Oranjestad to present documents and receive despatches. Other Consulates have similar requirements. Masters may check with Agent for clarification.

REPAIRS: There are no facilities at Aruba for major ship repairs. Local workshops can do repairs of minor nature. Preliminary advice regarding such minor repairs should be included in ETA messages and work requisitions for repairs should be prepared for handing to the Agent's representative immediately upon arrival.

Radar, radio and gyro repairs can be carried out. However, it is important that Masters radio in their requirements as early as possible and give a brief reference as to the nature of the breakdown or fault of the equipment concerned.

While alongside vessels must be prepared to move at 1 hour's notice. Engine repairs to the effect of demobilising the vessel may only be carried out with special permission.

SURVEYORS: Representatives of the American Bureau of Shipping, the Lloyd's Register of Shipping and the Norske Veritas are resident in the area. Masters may request the surveyors' services through the Agent.
GANGWAY/DECK WATCHMEN: An efficient and continuous watch must be maintained on deck and in the engine-room of all ships while in port, and a sufficient number of men must be on board at all times to move vessels either for harbour operations purposes or in emergency situations.
OPENING/CLOSING HATCHES: This work is normally carried out by the crew.
AIRPORT: The Port of Oranjestad – the commercial and tourist harbour of Aruba – is only 5 miles by road from the airport. The connection by air with the U.S.A. and Europe is very good and frequent (Air Aruba, KLM, VIASA); other airlines operating in Aruba are: ALM, LAV, Avensa and Avianca.
TIME: Local time is 4 hours behind GMT. Vessels are requested to use local time in ETA messages and when dealing with their Agents.
POLICE/AMBULANCE/FIRE: Police, Oranjestad, Tel: 11100/24555; Ambulance, Oranjestad, Tel: 24200/21234; Fire Alarm, Tel: 115.
CUSTOMS GUARDS: Local authorities assign 1 or more Customs guards to each vessel during its stay in port; the charges for guarding are for the account of the vessel.
SHORE LEAVE: Under normal circumstances no restrictions are imposed by the Government Immigration Authorities on shore liberty. Masters are requested to endeavour to have all crew members on board prior to departure time, so that the ship will have no delay in sailing.
AUTHORITY: Aruba Ports Authority N.V., L. G. Smith Boulevard 23, Oranjestad, Aruba. *Tel:* 2978-26633. *Telex:* 5120 Hafar NA. *FAX:* (2978) 32896. *Contact:* Managing Director – Aruba.

SAN NICOLAS: 12.26 N. 69.55 W. (See Plan)

DOCUMENTS/HEALTH and all General Information, refer to "Oranjestad".
APPROACHES: *Report:* 1982. The predominant wind in the area comes from an Easterly direction and the main ocean current sets in a Westerly direction. The tourist industry is an important economic factor in Aruba, and to avoid the possibility of vessels being erroneously accused of contributing to oil pollution of the North Coast and resort beaches, it is recommended that vesels, when practical, approach San Nicolas from the West.
PILOTAGE: (Inner Harbour) Pilotage is compulsory. Pilot boards 1.5 miles S.W. of the West Entrance Buoy.

A pilot service for anchoring off the Terminal is available upon the Master's request, providing radar and echo sounder are functioning properly.

ANCHORAGES: There are 3 anchoring areas off Aruba.

1. About 3 miles W.S.W. of Noordwest Point.
   This anchorage can be affected by swell so equipment and personnel changes can be risky in poor weather. Because of the changeable weather this anchorage is not recommended for vessels staying for long periods or for VLCCs. When anchoring care should be taken to avoid the submarine cable in this vicinity.

2. About 6 miles S.W. of Oranjestad.
   This anchorage is generally quieter than the one described above, however, transport to the shore may take longer. This area is suitable for all ship sizes and with many years of experience there have been no reported problems of anchors dragging.
3. The "Restricted Anchorage".
   There is a Restricted Anchorage about 2 miles off-shore and some 4 miles N.W. of Oranjestad. This anchorage is only to be used by vessels engaged in operations requiring assistance from the shore. Operations would include repairs, hull cleaning or tank cleaning. Vessels proceeding to this anchorage will be specially advised by Charterers or Owners. For anchoring Masters are recommended to take a Pilot.

It should be noted that in all the anchorages described above inward clearance and other formalities are not necessary, as long as there is no direct contact with the shore. If crew changes or other direct contact with the shore is to take place then normal procedures have to be followed.

Tug and launch services are available at all the anchorages for stores or personnel reasons.

Whilst waiting for orders or acting as floating storage, vessels are required to take every precaution to avoid all forms of pollution including dumping of floating garbage.

Prohibited Anchorage: Lat. 12° 25.83′ N., Long. 69° 55.52′ W., in the vicinity thereof.

Report: 1982.

Due to the high aesthetic value and pollution sensitivity of the West and S.W. coast, it is prohibited for vessels to anchor in the area bounded on the North by a line drawn with California Light (Noord Westpunt) bearing 025° True and on the South by a line drawn with Hooiberg Peak bearing 090° True.

Vessels should anchor about 12 miles West of San Nicolas Harbour. Loaded ULCC's should not anchor off the coast of Venezuela.

Another anchorage is located outside the reef South of San Nicolas Harbour. This anchorage is intended for vessels that have to perform small repairs and for which repair, parts are required from shore. These vessels are requested to proceed to the Outer Anchorage as soon as they have completed the repairs. Lightering vessels, before proceeding to the lightering area, will also be anchored off the reef in order to put the Yokohama fenders alongside. Pilots are available to anchor vessels at the Reef Anchorage 24 hours a day. All navigational equipment (fathometer, radar, etc.) must be in good working order.

RESTRICTIONS: The port is open for day and night navigation. The safe salt water draft approved for entering is 40 ft. and 41 ft. for leaving. Maximum beam for entrance to inner harbour finger pier is 135 ft. Vessels normally enter via the West channel and depart via the East channel.

Tides: Diurnal with max. amplitude of 18 in. Datum used is MLW., water level never falls more than 6 in. below MLW.

MAX. SIZE: *Reef Berths:* Tankers up to 550,000 d.w.t. No. 2 Reef berth, depth alongside, 105 ft. MLW. Also see "Reef berths".

Inner Harbour: 90,000 d.w.t.

Also see "Berthing" – "Note".

VHF: Coastal Marine on VHF Channels 16 and 8.

TUGS: 3 diesel-powered tugs are used for berthing and unberthing. For vessels over 60,000 d.w.t. a third tug is used.

BERTHING: The max. limitations for vessels using San Nicolas facilities are:

Berths	*Length* (ft.)	*Beam* (ft.)	*Salt water max. draft* (ft.)	*Bow to manifold* (ft.)	*Approx. d.w.t.*
1 South	745	UNL	39	376	50,000
1 North	740	110	39	350	50,000
2 South	out of service				
2 North	out of service				
3 South	900	130	40	450	80-90,000
3 North	850	120	41	397	80-90,000
HDS Pier	650	95	31	UNL	30,000 (Coke and dry cargo only)

The max. entering draft is 40 ft. even keel salt water.

HDS (Dry Cargo Pier): Note: The maximum beam is based on reach of coke shiploader. Also the maximum clearance under the shiploader spout to mean sea level is 50 ft.

The following is the suggested ballast draft for vessels.

MDWT	*Fore* (ft.)	*Aft* (ft.)
10 – 20	8	18
20 – 30	10	20
30 – 40	14	22
40 – 50	14	24
50 – 100	16	26

Capability of Berths to load/discharge products:

Product	Finger Pier No.1-S	No.1-N	No.3-S	No.3-N
(Loading)				
Naphtha	X			X
Lt. St. Run Gasoline	X			X
Kero/Jet A	X			X
Gas Oil/No.2 Diesel	X			X
V.G.O.		X	X	
No.6 Fuel Oil		X	X	
Asphalt			X	X
Bunker Fuel	X	X	X	X
(Discharge)				
Cutterstock		X	X	X
50 Be' Caustic	X	X		
Imported Fuel Oil		X	X	

REEF BERTHS: *Operators:* Berth No. 1: Coastal Aruba Refining Co.N.V. Berth No. 2: Wickland Oil Co.

VLCC anchorage: When anchoring is necessary, Masters of VLCCs may wish to anchor in the following position; 12° 24′ N., 70° 07′ W., approx. 12 miles West of San Nicolas Harbour in approx. 25 fathoms.

Pilot Station: 2 miles to 3 miles West of San Nicolas Harbour entrance. When Pilot is boarding, the vessel should be on an Easterly course with a speed of not more than 2 knots.

Embarking Pilot, Loaded VLCCs: On the port side with either pilot hoist or conventional pilot ladder.

Ballast VLCCs: On the port side with a combination of accommodation ladder and conventional pilot ladder, or with only accommodation ladder.

Disembarking Pilot, Loaded VLCCs: On the starboard side with either pilot hoist or conventional pilot ladder.

Ballast VLCCs: On the starboard side with a combination of accommodation ladder and conventional pilot ladder, or with only accommodation ladder.

Tugs: Normally 4 tugs used for tankers over 300,000 d.w.t. 2 on long lines, 1 forward and 1 aft and 2 alongside starboard side. Tug's lines used.

Docking: Always portside to, with starboard anchor ready.

Mooring Launch: Used for all lines, except for the spring lines fore and aft. Forward moorings first, after moorings second.

Mooring Capstans: All mooring and breasting dolphins are equipped with capstans, 2 ton pull capacity, 100 ft./min. line hauling capacity.

Max. Size:

	MDWT	*Max. LOA* (ft.)	*Beam*	*Depth* (ft.)	*Max. draft* (ft.)	*Pier Heading*	*Approach angle*
RB I	40–400	UNL	UNL	80	75	130° true	15°
RB II	40–550	1400	UNL	105	95	114° true	10°

Sailing Draft Ballast VLCCs: about 25 ft. fore and 35 ft. aft.

Lines and Winches: Mooring lines assumed to be 1.625 in. diameter steel wire with a breaking strength of 90 – 100 tons.

Mooring winches assumed to have about 25 metric tons heave capacity and 55 metric tons brake holding capacity (minimum).

Combination of a wire and a synthetic line to a single dolphin will not be permitted.

Mooring lines must not be stressed beyond 55% of their breaking strength.

Self-tensioning is not permitted. Automatic winches should be used on manual brake.

Synthetic tails on wires should have a higher breaking strength than the wire to which they are connected. The eyes of the tails should be protected from abrasion with suitable coverings, and tails should be connected to wires with suitably designed shackles.

A maximum of only 2 layers of line to be allowed on working or tension drum of split drum winches.

Current and Wind: Current is less than 0.5 of a knot 90% of the time. Wind is less than 20 knots 50% of the time, and less than 25 knots 85% of the time.

Wind direction True	*% of time*	*Current direction* True	*% of time*
20° – 40°	2	40° – 70°	24
50° – 60°	6	100° – 110°	17
70° – 80°	33	140° – 240°	10
90° – 100°	40	260° – 290°	24
110° – 120°	13	320° – 340°	25
140° – 170°	1		
220°	5		

Wind tolerance: (Not imposed at RB I). At 30 knots steady, loading will be discontinued, and the loading arms will be drained, engine to be confirmed ready for use.

At 35 knots steady, arms will be disconnected and tugs will be on stand-by.

Loading Arms: RB I; four 16 in. cargo arms with 16 in. bolted flange connections. One 8 in. bunker arm (No. 5 arm, the most Westerly arm). RB II; five 16 in. cargo arms with 16 in. connections.

Discharge/Loading Lines: RB I 36 in., 3,000 ft. long. RB II 56 in., 4,000 ft. long.

Radio Contact: Contact between Loading Master, control room, marine office by VHF and UHF. Particulars will be given by Loading Master.

Bunkers: RB II; through No. 1 or No. 5 loading arms with reducers.

Water: Not available.

Provisions: By launch; to be taken on board by ship's lifting gear on the port quarter.

Shore Leave: No pedestrian traffic allowed between ship and main gate. Arrangements for crew transportation can be made with Agent.

LIGHTERING OPERATIONS: VLCCs discharging at Aruba may be called upon to discharge part of their cargo by ship-to-ship transfer off Aruba. The lightening operation is carried out by vessels suitably equipped for ship-to-ship transfer operations, and is under the control of Coastal's Lightening Master on the lightening vessel.

The Lightening Master will board about 1.5 miles off San Nicolas Haven to discuss the operations. A derrick or crane should be ready on the lee side to pick up various equipment for the mooring and pipeline connection. A Lightening Assistant stays on board to advise and assist with mooring procedures.

The VLCC and the Lightening vessel rendezvous in position: Lat. 12° 24′ N., Long 70° 14′ W. Communications are by portable radio placed on board and/or VHF Channel 8. The designated lightening area is bounded by the following positions:

(1) Lat. 12° 25′ N., Long 70° 04.4′ W.
(2) Lat. 12° 25′ N., Long 70° 10.3′ W.
(3) Lat. 12° 30′ N., Long 70° 13.5′ W.
(4) Lat. 12° 30′ N., Long 70° 07.2′ W.

The mooring takes place whilst steaming into the prevailing wind on an Easterly course at about 3 knots. Thereafter the VLCC anchors within the designated lightening area for the ship-to-ship transfer. Wind speeds in excess of 23 knots are considered unsuitable for the mooring and the lightening operations to take place.

Masters need not come ashore to clear ship with Customs. The ship's Agent can do this by proxy. Ship's papers for clearance and signed proxy will be picked up from ship off port by tug or launch.
BALLAST: Vessels must arrive with no more than 8% d.w.t. dirty ballast. Clean ballast will be discharged overboard after docking. Slops can be discharged to the disposal facilities ashore. Shore reception facilities are limited.
FRESH WATER: Limited supply available.
FUEL: All grades of bunkers available.

Bunkers available for offshore delivery via bunker vessel. Contact Coastal Aruba or Coastal Miami (Tel: (305) 551-5288).

Also the following considerations apply:

1. Vessels working cargo have priority over vessels bunkering.
2. In assigning tugs, vessels working cargo take priority. (2 to 3 hours tug service required at the sea berth.)
3. Vessels using the Reef Berths must have at least 12 good mooring lines. All mooring winches and equipment will be inspected and must be in good order. Vessels may not be docked if equipment is faulty.
4. In the event of marginal weather, deep draft vessels calling for bunkers may not be docked.

Shipmaster's Report: November 1992.

Offshore Bunker Supply:

1. Advise Coastal Marine of ETA, 48 hours, 24 hours and 12 hours prior to arrival.

Coastal Marketing	Telex:	5244 Comar Aw
Coastal Marine	VHF:	Channels 16 and 8
	Telephone:	(297) 894-359
	Fax:	(297) 894-554
	Telex:	5241

2. When sending ETA, advise Coastal of size of manifold and location.
3. The bunkering barge "Irini K" (17,200 d.w.t.) is fitted with Yokohama fender. The bunker location is Lat. 12° 29.5′ N., Long. 70° 07.5′ W.
   The barge may be contacted by Telex No.1334160.

PORT FIRE PROTECTION: The Port of San Nicolas is very well equipped with modern equipment for fire-fighting and fire prevention.
REPAIRS: A local workshop can do minor repairs.
SPECIAL REGULATIONS: Strict compliance with Harbour Safety Regulations is mandatory. Stringent regulations prohibit the transportation of alcoholic beverages through the refinery and harbour area. No liquor or beer may be taken on board or removed from vessels except only bonded stores ordered by the Master.
POLICE/AMBULANCE/FIRE: Dial 8131 on jetty telephone. Call "Coastal Marine" on UHF set which is supplied to every ship whilst alongside.
GARBAGE DISPOSAL: Service can be provided with advance notice through ship's agent.
WASTE OIL DISPOSAL: Ship's dirty ballast and product slops may be discharged ashore or to 15,000 bbl. barge. Advance notice required.
SEAMAN'S CLUBS: None.
CURRENCY: Aruban Florin (AFl.).
SHORE LEAVE: As all ship's personnel when going ashore have to pass through the docks and the company's concession, every seaman must carry an identity card to check off against ship's Crew List at main gate. Seamen must have special pass to use any other gate than refinery main gate.
AUTHORITY: Coastal Aruba Refining Co. NV, P.O. Box 2150, San Nicolas, Aruba. *Tel:* 297-8-94359/94500. *Telex:* 5244 Comar Aw and 5241. *FAX:* 297-8-94579. *Contact:* Captain T. Touchstone, Marine Manager.

Also see "Oranjestad".

NOTES

Please also advise Shipping Guides Ltd.

Ascension Island

GEORGETOWN: 07.55 S. 14.20 W. (See Plan)

DOCUMENTS: Crew and Passenger Lists, Health Documents, Manifests and Bills of Lading if discharging cargo.

PILOTAGE: No pilots are available and not required as it is an open anchorage. 48 hours notice of ETA is required. Call Ascension Island Radio on 2182 kHz. or VHF Channel 16.

ANCHORAGE: Anchorage positions are available and will be given as bearing and distance in feet from Bates Rock Beacon, available from Harbourmaster by telex or "Turtle" Channel 6 or 16 (See Ascension Island Chart No. 1691 dated April 1985). Depths at anchorage from 11 to 31 fathoms. Abandoned cables are in the area and if picked up should be released without cutting, if possible. Regular mailship always takes precedence for anchorage and cargo facilities.

RESTRICTIONS: Advisable for ships or yachts arriving at night to wait until daylight unless contact is made with "Turtle" on Channel 16 or 6 and specific instructions are given for berthing. Occasionally a floating pipe-line connects tankers at anchor in Clarence Bay with the Pierhead.

HEALTH: Pratique should be requested when giving ETA.

RADIO: VHF Channel 6 or 16 "Turtle" or Ascension Radio 2182 kHz. Shipping Agents Ascension Island Services, Telex 3219. Harbour Authority, the Administrator, Telex 3214.

RADAR: None.

TUGS: No tugs available.

BERTHING: No alongside berthing. See "Anchorages".

Cargo Facilities: Cargo has to be discharged by ships' cranes onto lighters. Lighters pull alongside Pierhead where cargo is off loaded. Pierhead cranes can handle weights up to a maximum of 18 tonnes.

MEDICAL: Facilities available. 48 hours notice required if possible. Georgetown has a 12 bed hospital. Dental facilities usually available. Vaccination and inoculation certificates not normally required.

TANKERS: Anchorages available. Tankers for English Bay should anchor off Clarence Bay until boarded, it is not normally possible to put tankers into English Bay after 0900 hrs.

FRESH WATER: Not normally available.

FUEL: Not normally available.

CONSULS: No Consulates. British Administrator attends to all requirements.

REPAIRS: Only minor repairs can be effected.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Preferable that this done by crew to avoid delays in starting discharge.

REPATRIATION: No facilities for crew changes. Repatriation can usually be arranged but only in the case where a person has been hospitalised or in extreme compassionate cases. No civil airlines call at Ascension but RAF (to UK) or USAF (to Antigua weekly) can usually assist. Master of vessel required to give guarantee in writing that all hospital fees and air fares will be honoured by his shipping line Agent.

TIME: Always GMT.

HOLIDAYS: Cargo vessels can be discharged during public holidays – no night work.

SERVICES: *Offshore Services:* Ascension Island Services. Contact the Senior Manager.

SHORE LEAVE: Limited facilities ashore make shore leave impracticable for most crews but Immigration Officer ready to consider special limited arrangements at the request of the Master. Yachts are normally granted 48 hour stay with daytime shore leave.

GARBAGE DISPOSAL: Open anchorage. Garbage barges can be arranged with Marine Manager. Call "Pierhead" on VHF Channels 6 or 16.

WASTE OIL DISPOSAL: No oil collection service available.

SEAMAN'S CLUBS: No seaman's clubs. Small shop available,but not for bulk buying. Normal international telephone facility available. Postage facilities. Weekly church service.

CURRENCY: Pound sterling. £1 = U.S.$1.50.

GENERAL: There are no facilities for visitors on the island. With certain exceptions no-one is allowed to land at Ascension without an entry permit.

AUTHORITY: Office of the Administrator, Ascension Island, South Atlantic. *Tel:* 247-6311/6313. *Telex:* 3214 Govt. Av. *FAX:* 247-6152. *Contact:* R.C. Huxley, The Administrator.

The Marine Manager, Ascension Island Services. *Tel:* 247-6217. *Telex:* 3219. *FAX:* 247-6139, 247-6827 (direct).

Australia

GENERAL

AUSTRALIAN SHIP REPORTING (AUSREP) AREA: (See Plan)

AUSREP
Australian Ship Reporting System
Australian Maritime Safety Authority
Canberra

Foreword

The Australian Ship Reporting System (AUSREP) has been established in accordance with the International Convention for the Safety of Life at Sea, 1974 (SOLAS 1974), which requires signatories to the convention to provide marine search and rescue (SAR) facilities for prescribed areas, and also recommends the establishment of a ship reporting system. Australia, as a signatory to the 1974 SOLAS Convention, has accepted SAR responsibility for the area shown in the attached general instructions and AUSREP procedures.

The AUSREP system was established in 1973 and is operated by the Maritime Rescue Coordination Centre, Canberra, which is part of the Australian Maritime Safety Authority. It is a 'positive' system that is, if a Position Report or Final Report is not received, the Maritime Rescue Coordination Centre will initiate checks to establish the safety of the vessel. These checks are aimed solely at establishing whether a vessel is safe, and include broadcasts to shipping and communications with Owners, Agents or Charterers. If these checks are unsuccessful, then air search action will be initiated. As a 'positive' system, it is important that Masters comply with the defined procedures as closely as circumstances permit.

1. Should you need any further information, please do not hesitate to contact the Maritime Rescue Coordination Centre, telephone (06) 253 4411 (International +61 6253 4411).

May I take this opportunity to thank those Masters who have been regular participants of AUSREP, and to welcome those who are new participants to the reporting system. I would also be grateful if those of you who have not done so, would complete and promptly forward the ship's particulars form located in Appendix B to this publication.

In conclusion, may I also make the point that the effectiveness of AUSREP and any SAR response depends on the accuracy and timeliness of your reports.

P.M.McGrath
Chief Executive
Australian Maritime Safety Authority
July 1995

1.0 Functions of the Maritime Rescue Coordination Centre:

The International Convention for the Safety of Life at Sea 1974 (SOLAS 1974), and previous conventions, requires governments to '.... ensure that any necessary arrangements are made for persons in distress at sea, around its coasts'. The Australian Government, being a signatory to the SOLAS Convention, established the then Marine Operations Centre in April 1972.

The present Maritime Rescue Coordination Centre (MRCC) was previously known as the Sea Safety Centre and is now a part of the Australian Maritime Safety Authority, situated in Canberra, in the Australian Capital Territory. This Authority was established on 1st January 1991.

The principal function of the MRCC is the coordination of marine search and rescue (SAR) activity, within the Australian area of responsibility which is shown on the inside cover. The MRCC is also part of the international COSPAS/SARSAT system and is equipped to receive and evaluate information transmitted by Emergency Position Indicating Radio Beacons (EPIRBS).

The MRCC is operated 24 hours a day by persons with considerable marine, and in some cases, aviation qualifications and experience. These officers have specialised knowledge of search and rescue procedures.

Communications are the very heart of all search and rescue coordination and the MRCC is well equipped with a network enabling worldwide coverage. This network includes telephone, telex, facsimile and satellite systems, with radio communications provided by Telstra Maritime Services, which maintains the maritime radio communications stations (MCS) network in Australia. These MCS provide the link between a ship and shore, and have telex lines to the MRCC.

An important part of the SAR framework is the Australian Ship Reporting System (AUSREP), which was introduced in December 1973 on a voluntary basis. In 1981 legislation was passed making AUSREP compulsory for all Australian-flag vessels, and for foreign vessels under the circumstances which are explained in the general instructions on the following pages. On voyages where it is not compulsory, ships are encouraged to participate whenever they are in the AUSREP area.

In addition to the MRCC's functions in the SAR role, it is also the section of the Australian Maritime Safety Authority responsible for coordination and promulgation of Maritime Safety Information NAVAREA X warnings, which includes Australian Coastal Navigation Warnings (AUSCOAST).

The facilities of the MRCC are available to all seafarers whether they are private boating enthusiasts, commercial fishermen or professional seamen of the merchant fleets of the world.

2.0 Australian Ship Reporting System General Instructions:

2.1 Introduction:

The Commonwealth of Australia Navigation Act 1912 (Division 14 Part IV) makes participation in the Australian Ship Reporting System (AUSREP) compulsory for certain ships. AUSREP is a ship reporting system established in accordance with the International Convention for the Safety of Life at Sea, 1974. Its objectives are:

(i) to limit the time between the loss of a vessel and the initiation of search and rescue action, in cases where no distress signal is sent out;
(ii) to limit the search area for a rescue action;
(iii) to provide up-to-date information on shipping resources available in the area, in the event of a search and rescue incident.

The coverage of AUSREP and the Australian Search and Rescue (AUSSAR) area, as advised to the International Maritime Organisation (IMO), is identical to the International Civil Aviation Organisation search and rescue regions around Australia. It is illustrated in the map (See "Plan") together with the co-ordinates of the area.

2.2 Applicability of Navigation Act 1912 Division 14 Part IV:

Division 14 Part IV of the Act and the Regulations apply to:

(a) All Australian-registered ships engaged in trade and commerce, interstate or overseas while in the AUSREP area.
(b) Ships not registered in Australia but engaged in the coasting trade between Australia and an external Territory, or between external territories, while in the AUSREP area.
(c) Ships not registered in Australia, but demised under charter parties to charterers whose residences or principal places of business are in Australia, while in the AUSREP area.
(d) Foreign ships, other than the above-mentioned vessels, from their arrival at their first Australian port until their departure from their final Australian port. However, they are encouraged to participate from their entry into and final departure from the AUSREP area.
(e) Australian fishing vessels proceeding on overseas voyages, while in the AUSREP area, but not including those vessels operating from Queensland ports, which may call at ports in Papua New Guinea as an incidental part of their fishing operations. A definition of "overseas voyage" is given in Section 6(1) of the *Navigation Act 1912* (Commonwealth).

2.3 Offences:

The Navigation Act provides penalties involving fines of up to $10,000 for infringements of reporting provisions.

2.4 Operating Authority:

The Australian Maritime Safety Authority through the Maritime Rescue Coordination Centre.

Signal Address:	MRCC Australia.
Telephone:	Canberra (062) 253 4411 (International +61 6 253 4411).
Telex:	62349 (computer connected) – Answerback MRCC AUS (Refer Appendix D for Satcom procedures).
Facsimile:	Canberra (062) 257 2036 (International +61 6 257 2036).

2.5 Main Features of AUSREP:

On departure from an Australian port or on entering the AUSREP area, a Sailing Plan (SP) is sent to the MRCC where a computerised plot is maintained of the vessel's position. Position Reports (PR) are sent each day at the time selected by the Master so that a report is received at least every 24 hours. *Should a vessel at any time, be in a position more than 2 hours steaming from the position that would have been predicted from the last SP or PR, then a Deviation Report (DR) must be sent.* Failure to do so, in the event of a missed report, will result in the search being concentrated in the wrong area in the event of a missed report, and the possibility that survivors from a stricken ship may not be found. On arrival at the ship's destination or on departure from the AUSREP area, a Final Report (FR) is to be sent. AUSREP is a positive reporting system which means that, should an expected report not be received, action including worldwide communication checks, alerting of ships in the vicinity and the launching of search aircraft, will be initiated. Masters should note that in some parts of the AUSREP area the ability to conduct an air search is restricted by aircraft range limitations (See "Plan").

Dates and times contained in AUSREP reports are to be in Universal Co-ordinated Time which is indicated by the suffix 'UTC'.

3.0 AUSREP Format Components:

The following list shows all the AUSREP format components. The full list of components do not have to be included when sending AUSREP reports. Masters should include those components shown in the examples given for each report, others may be included at the Master's discretion or when relevant to the type of report being sent.

To assist with data processing, components of all reports should be preceded by the relevant alphabetical character and a stop(.).

The following format complies with the reporting format contained in IMO Resolution A648 (16) of 19th October 1989.

A. Vessel name and call sign.
B. Date/time of position (UTC).
C. Position (Lat. and Long.).
D. Geographical position (not to be used in AUSREP messages).
E. Course.
F. Speed (vessel's anticipated average speed until next report).
G. Name of last non-Australian port of call.
H. Date/time (UTC) and point of entry into AUSREP system. The point of entry must be the Australian port the vessel is departing from, or if entering the AUSREP area, the latitude/longitude of crossing the AUSREP boundary.
I. Next foreign (non-Australian) destination and estimated time of arrival at that port.
J. Whether Pilot is carried on vessel (notification required on all Great Barrier Reef passages).
K. Date/time (UTC) and point of exit from AUSREP system (point of exit is the latitude/longitude at which the vessel is leaving the AUSREP area, or the Australian port the vessel is to arrive).
L. Route (vessels intended track – state Rhumb Line/Coastal/Great Circle/Composite with limiting latitude).

M. Coast radio maritime communications stations monitored (include Satcom number if fitted).
N. Daily reporting time.
O. Draft.
*P. Cargo.
*Q. Defects or other limitations.
*R. Pollution (or reports of any pollution seen).
S. Weather conditions in area.
T. Ship's agents.
U. Ship type and size.
V. Medical personnel carried (Sailing Plan only).
W. Number of persons on board.
*X. Remarks.

*Harmful substances, Marine Pollution and Dangerous Goods and probability of discharge reports refer Appendix A.

4.0 Types of Reports:

4.1 Sailing Plan Report (AUSREP SP):

A sailing plan report is sent to the MRCC either within 24 hours prior or up to 2 hours after entry into the AUSREP area.

The SP contains information necessary to initiate a plot and give an outline of the intended passage.

Should a vessel not sail within 2 hours of the time stated in the SP the plan should be cancelled and a new SP sent.

If the Master of a foreign vessel departing on an overseas voyage from an Australian port does not intend sending position reports, this must be indicated in the SP by the inclusion of the words NOREP in place of the daily reporting time. Under this option, the MRCC will not undertake search and rescue action unless specific information is received, which indicates an air search is warranted.

4.2 Commencement of Active SAR Watch:

Masters should be aware that if a vessel lodges an SP prior to entering the AUSREP area, active SAR watch on their vessel WILL NOT COMMENCE until a report is received by the Centre indicating the vessel has entered the AUSREP area.

4.3 Mandatory AUSREP SP Components:

AUSREP SP
A, F, H, K, L, M, N, V.
N refer to Section 3.0 for components;
(ii) include component 'G' when entering AUSREP from overseas, or component 'I' when leaving AUSREP to an overseas destination;
(iii) if ship intends to transit Great Barrier Reef/Torres Strait notification is required regarding the carriage of a Pilot (See "J" in Section No. 3.0).
(iv) other sections of the basic format may be included at Master's discretion: for example 'X' if report required to be passed to AMVER, or details of name/call sign change since last report.

4.4 Example of SP on Entering AUSREP Area:

	Format		*Example*
AUSREP SP		AUSREP SP	
A.	Vessel name and call sign	A.	HESPERUS/BCBC
F.	Speed	F.	12
G.	Name of last port of call (when entering from overseas)	G.	Port Said
H.	Date/Time and point of entry into AUSREP system	H.	020400Z 0448S 07555E
K.	Date/Time and point of exit from AUSREP system (Australian port of arrival)	K.	180600UTC Adelaide
L.	Route (Vessel's intended track)	L.	129 to Cape Leeuwin then direct coastal route
M.	Coast radio/maritime communications stations monitored (INMARSAT number if fitted)	M.	GKA, 9VG, VIP, VIS (INMARSAT A No. 1290617)
N.	Daily reporting time	N.	0600UTC
V.	Medical personnel	V.	No medic
X.	Remarks	X.	Pass to AMVER, name/call sign changed from SWEETAPPLE/ABAB since last report.

Example of message transmitted: AUSREP SP A HESPERUS/BCBC F 12 G Pt Said H 020400UTC 0448S 07555E K 180600UTC Adelaide L 129 to Cape Leeuwin M GKA 9VG VIP VIS INMARSAT 1290617 N 0600UTC V no medic X pass to AMVER, name/call sign changed from SWEETAPPLE/ABAB since last report.

4.5 Example of SP submitted on departure from a Port within AUSREP Area to a Port outside AUSREP Area:

(May be submitted up to 24 hours prior to sailing and up to 2 hours after departure).

	Format		*Example*
AUSREP SP		AUSREP SP	
A.	Vessel's name and call sign	A.	HESPERUS/BCBC
F.	Speed	F.	12
H.	Date/Time and departure port for this voyage	H.	020500UTC Fremantle
I.	Next overseas destination and ETA	I.	090600UTC Jakarta
K.	Date/Time and point of exit from AUSREP area	K.	080600Z 1200S 10700E
L.	Route (vessels intended track)	L.	To 2900S 11327E then 1200S 10700E
M.	Coast radio/maritime communications stations monitored	M.	GKA, VIP, PRI, 9VG. (SATCOM/INMARSAT number 1290617)
N.	Daily report time	N.	0400UTC
V.	Medical personnel	V.	No medic
X.	Remarks	X.	Report to AMVER

Example of message transmitted: AUSREP SP A HESPERUS/BCBC F 12 H 020500UTC Fremantle I 090600UTC Jakarta K 080600UTC 1200S 10700E L to 2900S 11327E to 1200S 10700E M GKA VIP PRI 9VG (INMARSAT 1290617) N 0400UTC V no medic X report to AMVER.

Note: In the case of a foreign vessel whose next port of call is outside Australia, if the Master does not intend to send position reports, this should be indicated in the AUSREP SP by inclusion of the group NOREP in paragraph N.

4.6 Example of SP submitted on departure from and to a Port both within AUSREP Area:

(May be submitted up to 24 hours prior to sailing and up to 2 hours after departure).

	Format		*Example*
AUSREP SP		AUSREP SP	
A.	Vessel's name and call sign	A.	HESPERUS/BCBC
F.	Speed	F.	12
H.	Date/Time and point of entry into AUSREP system (Australian port of departure)	H.	212200UTC Adelaide
K.	Date/Time and point of exit from AUSREP system (Australian port of arrival)	K.	Melbourne 231400UTC
L.	Route (vessel's intended track)	L.	Coastal direct
M.	Coast radio/maritime communications station monitored	M.	VIM
N.	Daily reporting time	N.	0100UTC
V.	Medical personnel	V.	No medic
X.	Remarks	X.	Nil

Example of message transmitted: AUSREP SP A HESPERUS/BCBC F 12 H 212200UTC Adelaide I 231400UTC Melbourne L Coastal direct M VIA VIM N 0100UTC V no medic X nil.

4.7 Example of SP submitted when transiting AUSREP Area from and to a Port not in AUSREP Area:

	Format		*Example*
AUSREP SP		AUSREP SP	
A.	Vessel's name and call sign	A.	HESPERUS/BCBC
F.	Speed	F.	15
G.	Name of last port of call	G.	Durban
H.	Date/Time and point of entry into AUSREP system	H.	120800UTC 3550S 07500E
I.	Next overseas destination and estimated time arrival	I.	Surabaya 190200UTC
K.	Date/Time and point of exit from AUSREP system	K.	172330UTC 0806S 10107E
L.	Route	L.	Great circle
M.	Coast radio/maritime stations monitored	M.	VIP, 9VG, PKI
N.	Daily report time	N.	0600UTC
V.	Medical personnel carried	V.	No medic
X.	Remarks	X.	Pass to AMVER

Example of message transmitted: AUSREP SP A HESPERUS/BCBC F 15 G Durban H 120800UTC 3550S 07500E I Surabaya 190200UTC K 172330UTC 0806S10107E L GC M VIP 9VG PKI N 0600UTC V no medic X pass to AMVER.

4.8 Position Report (AUSREP PR):

Each day at the nominated daily reporting time given in the SP, a PR should be transmitted to the MRCC. The first PR is required within 24 hours of the SP, and daily thereafter at the nominated daily reporting time, including the day of arrival at, or departure from the AUSREP area. The information contained in the PR will be used by the Centre to update the plot. The PR must reflect the position, course and speed of the ship at the time of the report.

If it is necessary to alter the nominated daily reporting time, the alteration should be shown in the PR sent before the change. Speed must be the anticipated speed until the next report time. See "Section 6 – Sub-section 6.5".

If any PR is sent at a time other than previously nominated by the ship, the time of this PR must not exceed 24 hours from the previous port.

The ETA at the Australian destination, or AUSREP area boundary, is always confirmed in the last PR of a passage. It may also be amended in any report whenever the Master is aware of a revised ETA.

4.9 Mandatory AUSREP components for a PR:

Mandatory AUSREP format components for a PR are:
AUSREP PR
A, B, C, E, F.

4.10 Example of a PR:

	Format		*Example*
AUSREP PR		AUSREP PR	
A.	Vessel's name and call sign	A.	HESPERUS/BCBC
B.	Date/Time of position (UTC)	B.	030400UTC
C.	Position	C.	0748S 07940E
E.	Course	E.	129
F.	Speed	F.	8.5
X.	Remarks (for example, change of reporting time or revised ETA)	X.	ETA now 060200UTC

Example of message transmitted: AUSREP PR A HESPERUS/BCBC B 030400UTC C 0748S 07940E E 129 F 8.5 X ETA now 060200UTC.

4.11 Deviation Report (AUSREP DR):

Should a vessel, at any time, be in a position more than 2 hours steaming from the position that would be predicted from the last SP or PR, then a deviation report **must be sent.** Masters are reminded that this is an important component of the system, in that any alteration of course or speed sufficient to affect the estimated position as above may result in the search effort being concentrated in the wrong area, should the vessel subsequently be in distress.

4.12 Mandatory AUSREP components for a DR:
Mandatory AUSREP format components for a DR are:
AUSREP DR
A, B, C + (extra components – see example below).

4.13 Example of a DR:

Format	*Example*
AUSREP DR	AUSREP DR
A. Vessel name and call sign	A. HESPERUS/BCBC
B. Date/Time of position (UTC)	B. 050200UTC
C. Position	C. 3900S 14500E

(Then include whichever format components are affected by the deviation).

F. Speed	F. 9
I. Destination and ETA	I. Adelaide 080200UTC
X. Remarks (include reason for deviation, for example, reduction in speed due weather, change of route or port of destination, etc.)	X. Reduced speed due to main engine problems.

Example of message transmitted: AUSREP DR A HESPERUS/BCBC B 050200UTC C 3900S 14500E F 9 I Adelaide 080200UTC X reduced speed due to main engine problems.

4.14 Final Report (AUSREP FR):

When the vessel approaches the Australian destination and arrives at a position where VHF contact is made with the local Harbour Authority or Pilot Station, which under normal conditions is within 2 hours steaming of the pilotage, a FR is sent to the MRCC. Under no circumstances should a FR be sent more than 2 hours before arrival. Alternatively, if the arrival is outside radio watchkeeping hours, the FR may be telephoned immediately after berthing, but no later than 2 hours after arrival. If it is known that the vessel is to anchor or berth where telephone facilities are not available, then the FR should be passed through the appropriate coast radio/maritime communications station.

For a vessel departing from the AUSREP Area the FR is to be sent after crossing the area boundary. Again, Masters **must** ensure that an FR is sent to the MRCC to prevent unnecessary search action.

4.15 Mandatory AUSREP components for an FR:
Mandatory AUSREP format components for an FR are:
AUSREP FR
A, K, X.

4.16 Example of an FR on arrival at a port in AUSREP Area:

Format	*Example*
AUSREP FR	AUSREP FR
A. Vessel's name and call sign	A. HESPERUS/BCBC
K. Date/Time and port of arrival	K. 080200UTC Adelaide
X. Remarks (must include the words *Final Report*	X. Final Report

Example of message transmitted: AUSREP FR A HESPERUS/BCBC K 080200UTC Adelaide X Final Report.

4.17 Example of FR, vessel departing AUSREP Area:

Format	*Example*
AUSREP FR	AUSREP FR
A. Vessel's name and call sign	A. HESPERUS/BCBC
K. Date/Time and point of exit from AUSREP area	K. 070030UTC 1100S 10631E
X. Remarks (must include the words *Final Report*	X. Final Report

Example of message transmitted: AUSREP FR A HESPERUS/BCBC B 070030UTC 1100S 10631E X Final Report.

4.18 Method of Passing Reports:

In an Australian port:

A reverse charge telephone call or telex may be used when making an AUSREP or SAR message. Should Satellite Communications (INMARSAT C) be used, refer to Appendix D. It is advisable to communicate all reports direct from the ship to the MRCC to avoid delays associated with intermediate agencies: Tel: (06) 253 4411 (reverse charge); Telex 62349; Facsimile (06) 257 2036.

At Sea:

All reports are addressed MRCC AUSTRALIA and may be sent free of charge through any Australian maritime communication station controlled by Telstra Maritime Services. Schedules and frequencies are given in *Admiralty List of Radio Signals, Vol. 1.* Reports passed via Satellite Communications will be free of charge (INMARSAT C), providing procedures outlined in Appendix D are used. All reports sent by voice should include the mandatory components, including the identifying letter.

5.0 Overdue Reports:

TO AVOID UNNECESSARY SEARCH ACTION IT IS MOST IMPORTANT that ships report at the their reporting time each day and send their FINAL REPORT when leaving the AUSREP area. If a ship is unable to pass a Position Report for any reason (for example unserviceable radio equipment), attempts must be made to pass a signal to this effect through another vessel, harbour or other shore authority, either by VHF, signalling lamp, or use of emergency transmitter. Masters are requested to ensure that these procedures are followed. Please remember the AUSREP system is in operation FOR YOUR SAFETY.

Action taken by the MRCC

As AUSREP is a positive reporting system; if an expected report is not received by the MRCC within 2 hours, necessary steps are taken to ascertain the safety of the vessel. The following is an outline of the action that will be taken should a report become overdue. Circumstances may dictate more rapid action.

1. During the first 2 hours internal checks will be carried out.
2. Vessel will be listed on traffic lists requesting Master to furnish the overdue report.
3. At 6 hours overdue broadcast of ship's call sign with (JJJ/REPORT IMMEDIATE indicator*) will precede traffic lists indicating concern due to non-receipt of PR/FR. An all station (CQ) inquiry may be initiated.
4. Extensive communication checks with Australian and overseas radio stations, owners, agents and other vessels are carried out to trace the last sighting or a contact with the vessel with the aim of confirming her safety.
5. At 24 hours overdue the JJJ/REPORT IMMEDIATE broadcast may be upgraded to the Urgency Signal XXX/PAN indicator. Search planning will be in progress and details included in NAVAREA X and facsimile weather broadcasts via AXM and AXI. By the time the report is 24 hours overdue, positive action will have been initiated to locate the vessel. This action will include the launching of search aircraft** where possible. However, as indicated in paragraph 2.5, due to aircraft range limitations the resources available for an air search decrease with distance from an Australian base.

* This signal consists of the vessel's call sign followed by JJJ/(RTG) or **report immediate** (RTF). Any sighting of, or communication with, this vessel by any other vessel should be reported immediately to the CRS/MCS stating time of contact, position and estimated course and speed of the vessel overdue for report.

** Search aircraft will not necessarily be launched when it its known that the vessel is equipped with a 406 MHz float free EPIRB.

6.0 Notes on Procedures:

6.1 Date/Time Group:
Dates and times contained in AUSREP reports are to be in Universal Co-ordinated Time (UTC) which is indicated by the suffix 'UTC'.
Example: 5 November 1982, 0600 LMT (UTC 9 hrs.) transmitted as 042100UTC.

6.2 Latitude and Longitude:
Latitude
Four figure group indicated by suffix 'S' (south).
Example: Latitude 06° 15′ 46″ South. Transmitted as 0616S.
Longitude
Five figure group indicated by suffix 'E' (east).
Example: Longitude 82° 06′ 24″ East. Transmitted as 08206E.

6.3 Intended Route:
Indicate Great Circle or Rhumb Line with way points being followed, expressed in latitude or longitude. Courses are not required if way points are mentioned.

6.4 Speed:
Anticipated average speed vessel will make till next report time.

6.5 Course:
True course anticipated until next reporting time. When more than one course will be steered enter 'various'. If course shown as 'various', the Centre will interpret this as being the normal courses a vessel will follow on that particular passage. However, if the above assumption does not apply, clarification should be made.

6.6 Radio Stations Monitored:
Details should be provided of those radio stations which the vessel normally works for commercial radio communications, in addition to Australian maritime communications stations monitored. If the ship is fitted with Satellite Communications, the station identify number(s) should also be included.

6.7 Daily Reporting Time:
When selecting their daily reporting time, Masters of single-radio-operator-ships will appreciate that reports nominated during the last single-operator-period of the day, if not received, cannot be followed up until the next radio watch period. This may cause considerable delay in activating any SAR action that may be required. It is therefore desirable that reports are transmitted during the first single-operator-period of the day.

If any position report is different from the PR time, the next report should be no more than 24 hours from that PR time.

6.8 Two Hour Rule:
Should a vessel, at any time, be in a position more than 2 hours steaming from the position that would be predicted from the last SP or PR, a deviation report MUST BE SENT.

6.9 Severe Weather:
Vessels which anticipate passing through areas of severe weather conditions or are experiencing severe weather, are urged to report their position at more frequent intervals to the MRCC. The time of their next anticipated Position Report should be included under Remarks.

6.10 Reports to AMVER:
Whilst participating in AUSREP, Masters may also wish their reports to be forwarded for inclusion in the AMVER plot. This should be indicated in report remarks, and will particularly relate when sending the Final Report when vessel leaves the AUSREP area.
Masters are requested to note that AMVER reports will only be forwarded to the U.S. Coast Guard if the vessel is in the AUSREP area of responsibility, reporting to the AUSREP system. If the ship also requires its AUSREP report to be passed to AMVER, a request is to be included in the report.

6.11 Reports to Other Reporting Systems:
Reports from ships to other reporting systems (JASREP/SINGREP, etc.) are not normally forwarded by the MRCC. Ships are requested to pass these reports direct.

6.12 Computer Processing by the MRCC:
To enable efficient processing by the MRCC's computer, ships are encouraged to send reports in IMO format as detailed throughout this publication. Components should be clearly identified by the relevant alphabetical letter followed by a stop(.), and be listed across rather than down the page, this is particularly relevant to those vessels reporting by automatic or semi-automatic means. Please note examples of messages transmitted.

APPENDIX A: Detailed Reporting Requirements:

A.1 Dangerous Goods Reports (DG):

Primary reports should contain items A, B, C, M, Q, R, S, T, U of the standard reporting format; details for R should be as follows:

R 1. Correct technical name or names of goods.
2. UN number or numbers.
3. IMO hazard class or classes.
4. Names of manufacturers of goods when known, or consignee or consignor.
5. Types of packages including identification marks. Specify whether portable tank or tank vehicle, or whether vehicle or freight container or other cargo transport unit containing packages. Include official registration marks and numbers assigned to the unit.
6. An estimate of the quantity and likely condition of the goods.
7. Whether lost goods floated or sank.
8. Whether loss is continuing.
9. Cause of loss.

If the condition of the ship is such that there is danger of further loss of packaged dangerous goods into the sea, items P and Q of the standard reporting format should be reported; details for P should be as follows:

P 1. Correct technical name or names of goods.
2. UN number or numbers.
3. IMO hazard class or classes.
4. Names of manufacturers of goods when known, or consignee or consignor.
5. Types of packages including identification marks. Specify whether portable tank or tank vehicle, or whether vehicle or freight container or other cargo transport unit containing packages. Include official registration marks and numbers assigned to the unit.
6. An estimate of the quantity and likely condition of the goods.

Particulars not immediately available should be inserted in a supplementary message or messages.

A.2 Harmful Substances Reports (HS):

In the case of actual discharge, primary harmful substances reports should contain items A, B, C, E, F, L, M, N, Q, R, S, T, U, X of the standard reporting format. In the case of probable discharge, item B should also be included. Details for P, Q, R, T and X should be as follows:

P 1. Type of oil or the correct technical name of the noxious liquid substances on board.
2. UN number or numbers.
3. Pollution category (A, B, C or D), for noxious liquid substances.
4. Names of manufacturers of substances, if appropriate, where they are known, or consignee or consignor.
5. Quantity.

Q 1. Condition of the ship as relevant.
2. Ability to transfer cargo-ballast-fuel.

R 1. Type of oil or the correct technical name of the noxious liquid discharged into the sea.
2. UN number or numbers.
3. Pollution category (A, B, C or D), for noxious liquid substances.
4. Names of manufacturers of substances, if appropriate, where they are known, or consignee or consignor.
5. An estimate of the quantity of the substances.
6. Whether lost substances floated or sank.
7. Whether loss is continuing.
8. Cause of loss.
9. Estimate of movement of the discharge or lost substances, giving current conditions if known.
10. Estimate of the surface area of the spill if possible.

T 1. Name, address, telex and telephone number of the ship's owner and representative (charterer, manager or operator of the ship or their agent).

X 1. Actions being taken with regard to the discharge and the movement of the ship.
2. Assistance or salvage efforts which have been requested or which have been provided by others.
3. The Master of an assisting or salvaging ship should report the particulars of the action undertaken or planned.

Particulars not immediately available should be inserted in a supplementary message or messages.

The Master of any ship engaged in, or requested to engage in an operation to render assistance or undertake salvage should report, as far as practicable, items A, B, C, E, F, L, M, N, P, Q, R, S, T, U, X of the standard reporting format.

A.3 Marine Pollutants Reports (MP):

In the case of actual discharges, primary MP reports should contain items A, B, C, M, Q, R, S, T, U, X of the standard reporting format. In the case of probable discharge, item P should also be included. Details of P, Q, R, T and X should be as follows:

P 1. Correct technical name or names of goods.
2. UN number or numbers.
3. IMO hazard class or classes.
4. Names of manufacturers of goods when known, or consignee or consignor.
5. Types of packages including identification marks. Specify whether portable tank or tank vehicle, or whether vehicle or freight container or other cargo transport unit containing packages. Include official registration marks and numbers assigned to the unit.
6. An estimate of the quantity and likely condition of the goods.

Q 1. Condition of the ship as relevant.
2. Ability to transfer cargo-ballast-fuel.

R 1. Correct technical name or names of goods.
2. UN number or numbers.
3. IMO hazard class or classes.
4. Names of manufacturers of goods when known, or consignee or consignor.
5. Types of packages including identification marks. Specify whether portable tank or tank vehicle, or whether vehicle or freight container or other cargo transport unit containing packages. Include official registration marks and numbers assigned to the unit.
6. An estimate of the quantity and likely condition of the goods.
7. Whether lost goods floated or sank.
8. Whether loss is continuing.
9. Cause of loss.

T 1. Name, address, telex and telephone number of the ship's owner and representative (charterer, manager or operator of the ship or their agent).

X 1. Action being taken with regard to the discharge and movement of the ship.
2. Assistance or salvage efforts which have been requested or which have been provided by others.
3. The Master of an assisting or salvaging ship should report the particulars of the action undertaken or planned.

Particulars not immediately available should be inserted in a supplementary message or messages.

The Master of any ship engaged in or requested to engage in an operation to render assistance or undertake salvage should report, as far as practicable, items A, B, C, M, P, Q, R, S, T, U, X of the standard reporting format.

A.4 Probability of Discharge:

The probability of discharge resulting from damage to the ship or its equipment is a reason for making a report. In judging whether there is such a probability and whether the report should be made, the following factors, among others, should be taken into account.

1. The nature of the damage, failure or breakdown of the ship, machinery or equipment, and
2. sea and wind state and also traffic density in the area at the time and place of the incident.

It is recognised that it would be impracticable to lay down precise definitions of all types of incidents involving probable discharge which would warrant an obligation to report. Nevertheless, as a general guideline, the Master of the ship should make reports in cases of:

1. Damage, failure or breakdown which affects the safety of the ship; examples of such incidents are collision, grounding, fire, explosion, structural failure, flooding, cargo shifting, and
2. failure or breakdown of machinery or equipment which results in impairment of the safety of navigation; examples of such incidents are failure or breakdown of steering gear, propulsion plant, electrical generating system, essential shipborne navigational aids.

APPENDIX B: See Page 73

APPENDIX C: *Check List for AUSREP Reports:*

AUSREP REPORTS CHECK LIST

–	SP	PR	FR	DR	
A	*	*	*	*	name/call sign
B		*		*	date/time of position
C		*		*	lat/long of position
E		*		†	course
F	*	*		†	speed
G	%%				last port of call, only when entering from overseas
H	*				date/time and point of entry (lat/long) into AUSREP area or Australian port of departure
I	%%			†	next overseas destination and ETA
J	%				whether pilot is carried on vessel
K	*		*	†	date/time and point of exit, either the next Australian port OR lat/long when leaving the AUSREP area
L	*			†	route
M	*			†	MCS monitored/INMARSAT NUMBER
N	*			†	nominated daily reporting time
V	*				medical personnel carried
X			*	†	remarks

* Mandatory.
%% This information is only required when entering or departing the AUSREP area.
† Include these only if affected by the deviation.
% Notification of pilot required for all Barrier Reef passages.
More detailed information about these message components will be found in Section 3.0 (AUSREP format components).

APPENDIX B: Ship's particulars:

Information contained in this form will only be used for the purpose of safety of life at sea.

Please attach two colour photographs of your vessel; one beam on, the other from the air (if possible).

If you are unable to supply photographs, please sketch the vessel - illustrating main features and colours.

Basic Vessel Details

Vessel's Name	*Black/Purple*
Call Sign *CYAN*	Port of Registry *Quebec*
Previous Name	*White Red*
Previous Call Sign	*GREY*
Vessel Type	*Bulk Carrier*
Vessel Size (Length and Deadweight Tonnage)	*185 metres 35000DWT*
Hull Colour *Black*	Deck Colour *Orange*
Superstructure Colour and Postion	*White/Aft*
Normal Complement of Vessel	*26*

Doctor or medical personnel carried ? ☐ Yes ☐ No

Owner Operator Details

Registered Owner's Name	*Orange White Inc.*
Telephone (Business) International Code	*(616) 99-9999*
Telex International Code	*(616) 99-9999*
Facsimile International Code	*(616) 99-9999*
Address	*999 Black Street* *Sydney NSW 2699 Australia*

Complete this section if registered owner is NOT the actual vessel operator.

Management Company's Name	*Green Ship Management*
Telephone (Business)	*Sydney (02) 88-8888*
Telex	*9999*
Facsimile	*(02) 22-2222*
Address	*999 White Street* *Sydney NSW 2688 Australia*

Please provide details of TWO contacts ashore (eg Marine Superintendents) who could supply information on the vessel.

Name	*Mr Black*
Telephone (Business)	*Sydney (02) 22-3333*
Telephone (Home)	*Sydney (02) 33-2222*
Address	*888 Gray Street* *Sydney NSW 2677 Australia*
Name	*Mr White*
Telephone (Business)	*Sydney (02) 22-4444*
Telephone (Home)	*Sydney (02) 33-5555*
Address	*88 Blue Street* *Sydney NSW 2655 Australia*

Main Australian Agent

Agent's Name	*Blue Agency*
Telephone (Business)	*Melbourne (03) 44-4444*
Telex	*4444*
Facsimile	*(03) 44-5555*
Address	*99 Yellow Street* *Melbourne Vic 2599 Australia*

Ship Classification Society

Classification Society's Name	*Lloyd's Register*
Telephone (Business)	*London 99-9999*
Telex	*9999*
Facsimile	*99-9999*
Address	*333 Indigo St* *London UK*
Classification Society Representative's Name	*Lloyd's Agent*
Telephone (Business)	*Sydney (02) 66-6666*
Telex	*6666*
Facsimile	*66-6666*
Address	*777 Violet St* *Sydney NSW 2655*

Emergency Position Indicating Beacons (EPIRB's)

121.5 EPIRB's

Quantity	Frequencies	Manufacturer	Where Stored	Operating Duration
2	*121.5/243 MHz*	*Black Electronics Sydney*	*Liferafts*	*48 hrs*
2	*121.5/406 MHz*	*White Electronics Perth*	*Bridge Wings*	*48 hrs*

2	*9.3 Giga Hz*	*Nippon Electronics Tokyo*	*Lifeboats*

Position Fixing Aids Fitted (e.g. SATNAV) - please list below

SatNav, DF, Loran, Radar, Omega, Decca

INMARSAT Numbers

INMARSAT A *1730315* Alternate *1730317*	INMARSAT B *173031951* Alternate *173032052*
INMARSAT C *173032192* Alternate *173032234*	INMARSAT M *173032323* Alternate *173032414*

D.S.C. Identification	SELCALL Number
503 000031	*12151*

Helicopter Position

Is there a helicopter transfer position? ☑ Yes ☐ No

Is a helicopter able to land on this position? ☑ Yes ☐ No

- Where is the position situated? *No. 4 hatch*
- What is the maximum size/weight the deck can support? *Size 100 m^2 Weight 9000 kg*

Please attach a list of any other details you consider relevant or which may assist search and rescue coordinators.

Date *11 April 1995*

APPENDIX D:

INMARSAT A, INMARSAT C Procedures:

The following applies to the forwarding of AUSREP reports by INMARSAT from the Pacific and Indian Ocean Regions to Perth Land Earth Station (LES). These procedures apply strictly to AUSREP messages only.

INMARSAT A or B fitted Ship Earth Stations: Please note that AUSREP reports sent via INMARAST A or B will be accepted, but at senders cost.

Select: * a. 02 (for Perth) then telex 71 62349.

* Ensure ship's antennae is directed at appropriate Indian or Pacific Ocean satellite.

INMARSAT C fitted Ship Earth Stations:

Ships will not be charged for these messages if correct procedures are followed:

Select: a Special Access Code (SAC) 43+
b (LES Perth) Pacific Ocean (222) or Indian Ocean (322)

Notes:

(i) There could be delays in Perth Land Earth Station's store and forward facility, particularly during busy periods.
If ships are concerned as to delivery of AUSREP messages to the MRCC, they should first check the status of the message on their Standard C Mobile Ship Earth Station (SES).
If no confirmation of delivery has been received some 30 minutes after receiving STATUS information indicating the transmission has been acknowledged by the LES, but not delivered to the MRCC, ships should then telex LES Perth (71 197075), to enquire as to the status of their AUSREP message before attempting to send their message again. Note however, that the AUSREP system will attempt to contact a vessel whose report has not been received.

(ii) Whilst reporting to AUSREP, ships are to ensure their INMARSAT equipment remains active in the "Login" mode.

(iii) It is expected that INMARAST will develop a short data reporting format for INMARSAT C type systems. Information will be promulgated when this system has been satisfactorily developed and implemented.

(iv) Special Access Code (SAC) 43 (Ships Reports) is available via Perth LES for INMARSAT C AUSREP Reports.

(v) AUSREP reports sent via HF radio through Australian Coast Radio Stations will be accepted free of cost to the sender.

FEDERAL SEA SAFETY AND SURVEILLANCE CENTRE:

Information Notice

The International Convention for the Safety of Life at Sea, requires governments "to ensure that any necessary arrangements are made for the rescue of persons in distress at sea, around its coasts". The Australian Government being a signatory to the International Convention for the Safety of Life at Sea, established the Marine Operations Centre in April 1972 to comply more fully with the Convention's requirements.

The Centre was subsequently renamed as the Australian Coastal Surveillance Centre (ACSC) in 1978 with the introduction of an enhanced coastal surveillance function and renamed again in 1984, as the Federal Sea Safety and Surveillance Centre (FSS&SC). This recent change reflects the Centre's primary role of Search and Rescue, as the coastal surveillance function has been largely transferred to the Coastal Protection Unit of the Australian Federal Police, which is co-located within the Centre.

The Federal Sea Safety and Surveillance Centre is a part of the Department of Transport's Maritime Safety Division, situated in Canberra in the Australian Capital Territory. The FSS&SC is in fact Australia's Maritime Rescue Co-ordination Centre.

The principal function of the FSS&SC is therefore the co-ordination of marine search and rescue activity, (other than incidents involving the defence forces), within the area of Australian responsibility, which is shown in the instructions of the Australian Ship Reporting System. The FSS&SC works in close liaison with the State Authorities who are responsible for SAR activity within port limits, and where their facilities permit, for small craft such as pleasure boats and fishing vessels in near coastal waters. The State police are the local SAR Authority around the Australian coastline, and are often assisted by the various volunteer coastal associations.

For incidents which occur further out to sea and those beyond the resources of the State Authorities, Defence Forces and Civil marine/aviation facilities are used to perform the air or sea search and the resulting rescue.

The facilities of the FSS&SC are available to all seafarers whether they are private boating enthusiasts, commercial fishermen or professional seamen of the merchant fleets of the world. When a vessel is in distress and lives are at stake, no effort is spared to search for and rescue survivors.

The FSS&SC is manned continuously 24 hours a day by co-ordinators with considerable marine and in some cases aviation qualifications and experience. These men have specialised knowledge in search and rescue procedures to analyse the various situations that may arise and devise methods to resolve them.

Communications are the very heart of all search and rescue co-ordination and the FSS&SC is well equipped with a network of telephone and telex systems giving a complete coverage throughout Australia, and overseas to other international marine authorities, such as the U.S. Coast Guard at Honolulu, San Francisco, and New York, Lloyd's Intelligence, London and the Japanese Maritime Safety Agency in Tokyo, to name only a few.

Apart from telephone and telex links, radio communications play a major role when co-ordinating a SAR incident. The Overseas Telecommunications Commission (OTC) maintains the coast radio stations (CRS) around the Australian coastline, and it is these radio stations which provide the vital link between the ship and shore. The CRS also have direct telex lines to the FSS&SC.

When advice is received at the FSS&SC of a distress, or any information likely to be related to distress, the duty co-ordinator will initiate whatever action he considers necessary depending on the type of incident reported, whether it be a single flare sighting, a report of a vessel or yacht overdue, a vessel grounding, or a radio received distress message.

Also operated at the Federal Sea Safety and Surveillance Centre as a functional part of the SAR framework is the Australian Ship Reporting System (AUSREP), the area of operations being the same as for the Australian SAR Organisations. AUSREP was introduced in December 1973 on a voluntary basis to enable mariners to familiarise themselves with the reporting system. Since then legislation has been passed which makes AUSREP compulsory for all Australian flag vessels and foreign vessels under certain circumstances which are explained in the AUSREP Instructions and the relevant Marine Notice. However, all ships are encouraged to participate whenever they are in the AUSREP area.

In addition to the Centre's functions in the SAR role, the FSS&SC is also the section of the Department of Transport responsible for:

(i) Co-ordination and promulgation of Navigational Warnings (NAVAREA X), Australian Coastal Navigation Warnings (AUSCOAST) and weapons practice warnings.

(ii) Operation of the Licensed Foreign Fishing Vessel Reporting System in the 200 nautical miles Australian Fishing Zone.

In all aspects of the Federal Sea Safety and Surveillance Centre's activities, over 2,000 incidents a year are handled, ranging from co-ordination of full scale search and rescue operations, planning evacuation of medical cases at sea, plotting the movements of oil slicks and spillage to receiving reports of illegal fishing by foreign fishing vessels and various flare sightings, around Australia's coastline.

PILOT LADDERS: Australia strictly observes the international regulations and recommendations for pilot ladders and pilot boarding arrangements:

The following refers:

SOLAS Chapter 5 reg 17	Regulations for Pilot Ladders and Mechanical Pilot Hoists.
IMO Res A.426(XI)	Recommendation on Arrangements for Embarking and Disembarking Pilots in Very Large Ships.
IMO Res A.667(16)	Recommendation on Pilot Transfer Arrangements.
IMO Res A.275 (VIII)	Recommendation on Performance Standards for Mechanical Pilot Hoists.

PILOTAGE: *Coastal and Reef Pilotage:* Licensed pilots are available for the whole of the Queensland coast, including Torres Strait, the Inner Route of the Great Barrier Reef, the Great North East Channel, and the reef entrances at Hydrographers Passage, Palm Passage and Grafton Passage. See "Torres Strait" for details.

Compulsory Pilotage: The Inner Route of the Great Barrier Reef between Cape York (Lat. 10° 41′ S.) and Cairns (Lat. 16° 40′ S.), and also Hydrographers Passage, has been declared a Compulsory Pilotage District. All vessels 70 m. or more in length and all loaded oil tankers, chemical carriers and liquified gas carriers, regardless of length, are required to use the services of a licensed Pilot. The compulsory pilotage areas are rigorously monitored by the Authorities. See "Torres Strait".

IMO Recommendation on Pilotage: The attention of Shipmasters is drawn to the IMO Recommendation A(710) on pilotage in Torres Strait and the Great North East Channel. See "Torres Strait".

Pilotage Providers:

Queensland Coastal Pilot Service Pty.Ltd., Level 13, Dalgety House, 145 Eagle Street, Brisbane, Queensland, Australia (Postal address: GPO Box 209, Brisbane, Queensland 4001). *Tel:* +61-7-3839-5144. *FAX:* +61-7-3839-5242. *Telex:* AA 140222 TORRES. *Cables:* 4B TORRES. *Contact:* Perry Sutton (after hours Tel: +61-7-3399-1478). Iain Steverson (after hours Tel: +61-7-3263-2642).

Australian Reef Pilots (previously The Queensland Coast and Torres Strait Pilots Association Pty.Ltd.), Suite 14, 2 Argyle Street, Breakfast Creek, Queensland 4010, Australia (Postal address: P.O. Box 338, Albion, Queensland 4010). *Tel:* +61-7-3262-4600. *FAX:* +61-7-3262-5633. *Telex:* AA140003 (answerback REEFS). *Cables:* 4BREEFS BRISBANE. *Contact:* Ken Casey, Operations Manager (after hours Tel: +61-18781602).

HEALTH:

QUARANTINE REGULATIONS – RADIO PRATIQUE

The attention of Mariners is drawn to current Radio Pratique regulations, which require the Master of any vessel arriving from overseas to transmit to the Quarantine Officer, if necessary through the Agent, not more than 24 hours and not less than 12 hours before arrival, a statement giving the details as per the accompanying Request for Radio Pratique Questionnaire.

Request for Pratique (Health Clearance):

Commonwealth of Australia Quarantine Act 1908.

Note: Masters or Medical Officers who wilfully make a false statement in answering A-H, are liable to a fine not exceeding $5,000 or imprisonment for a period not exceeding 2 years.

A. Name of vessel . . . .
Call sign . . . . . . Type . . . .
Nationality . . . .

B. Where is the vessel from and departure date?

C. Where bound and ETA first port?

D. ETD and name of next port?

E. Details of any deaths during the current voyage or cases of illness during the last 21 days with a fever of 38°C or above, and
(a) accompanied by rash, jaundice or glandular swelling, or
(b) accompanied by diarrhoea lasting longer than 24 hours.

F. Are there any animals onboard?

G. Have you carried livestock or grain in the last 6 months?
If Yes:
list type, ports visited and cleaning performed since the last voyage on which livestock or grain was carried.

H. Date of issue of Derat/Derat Exemption Certificate?

I. Optional Section – Ballast Water (Answering this section may assist in the clearance of your vessel when it arrives in port).

a) Do you undertake not to discharge ballast while in Australian waters? Yes/No
If No, have you:

b) Exchanged ballast water at sea during the voyage and logbook certification of time and co-ordinates when re-ballasting occurred: or Yes/No

c) Is your vessel part of a compliance arrangement for ballast water control accepted by Australian Quarantine and Inspection Service? Yes/No

NOTE: The granting of Pratique to a vessel does not release it from being subject to Quarantine. Goods require separate clearance.

Date . . . . Signed . . . .
Shipping Agency Name: . . . .
Department of Health, Canberra.

BALLAST WATER MANAGEMENT: The IMO International Guidelines for Preventing the Introduction of Unwanted Aquatic Organisms and Pathogens from Ships' Ballast Water and Sediment Discharges apply to vessels entering Australian ports. Similar Australian Ballast Water Guidelines also apply for international shipping. Masters should also note that vessels may be subject to inspection by the Australian Quarantine and Inspection Service.

HOLD LADDERS: Australian maritime legislation, which is administered by the Australian Maritime Safety Authority (AMSA), requires all vessels, other than tankers, loading or unloading at Australian ports be provided with hold access ladders which comply with specifications detailed in Appendix 7 to Marine Orders Part 32 "Cargo and Cargo Handling – Equipment and Safety Measures", Issue 1 (Order No. 12 of 1986 as amended by Order No. 5 of 1992). A vessel arriving without "Australian" hold access ladders will not be worked if Maritime Union of Australia (MUA), formerly WWF, labour is required to work in the holds. The Agent may be able to secure an exemption for a specific voyage where MUA labour is not required below deck.

Obtaining an exemption requires application to the AMSA Area Manager, Ship and Personnel Safety Services at State level. Such exemption will normally be granted within 24 hours of receipt of a written request.

For the guidance of Owners, we precis below details of the required ladder types:

Bulk Carriers: Ships used exclusively as bulk carriers must be fitted with at least one access in each hold comprising a combination of vertical and sloping step (or spiral staircase) type ladders, so arranged that the vertical entrance section does not exceed 2.5 m. in length and the bottom vertical section does not exceed 6 m. in length. The sloping section must be provided with handrails, fenced access platforms must be provided at either end of it, and wherever there is a change of slope or direction.

Holds of bulk carriers constructed on or after 17th November 1986 must be provided with a second means of access that may comply with the above or is formed of a series of vertical ladders linking fenced resting platforms spaced not more than 6 m. apart vertically.

General Cargo Vessels: Vessels with tween-decks may be fitted with vertical ladders, provided the distance between each deck does not exceed 6 m. and provided that a person may step onto the tween-deck and rest in safety. Intermediate decks used as resting stages must have the hatchway opening fenced off. Where the distance between decks exceeds 6 m., sloping step type ladders must be fitted for the full length. At least one hold access ladder must be accessible at all stages of loading and unloading.

Vessels constructed on or after 17th November 1986 must be provided with two of the above means of access placed as far apart longitudinally as possible.

In all vessels, access opening must be provided with adequate handholds and footholds.

Full details of the requirements, including maximum angles of ladders, dimensions of steps, platforms, access openings, etc. may be obtained from the vessel's Agent.

GRAIN CARGOES: *Guidelines for Grain Cleanliness Surveys:* On arrival a vessel fixed to load grain must have holds clean, dry and free from residues of previous cargoes, free from insect infestation, and be in all respects ready to load. Surveyors from the Australian Maritime Safety Authority (AMSA), and the Australian Quarantine Inspection Service (AQIS) will board, together with charterers and other surveyors to check the condition of the ship.

Ships' crews cannot be used to clean holds after arrival, so every opportunity must be taken to prepare the holds at a previous port or enroute to avoid the use of costly Australian labour.

Essential Preparation for Loading: Special attention should be placed on removal of all loose scale and rubbish, and the cleanliness of other obstructions which might harbour insects or the remnants of previous cargoes, including underdeck girders, and the underside of steel hatch covers. Scale should be removed by high pressure water jets or chipping and scraping. If jets are used to remove scale, or areas chipped and scraped are painted over, ample time must be allowed for water to dry and paint fumes to totally disperse. Loose scale or previous cargo residues must not be painted over.

AMSA surveyors will pay particular attention, in addition to the stability requirements, to the satisfactory operation of hold bilges, and will require each suction to be tested to demonstrate its efficiency. Following satisfactory test, each bilge well should have its perforated plate cover put in place, with a single layer of burlap over it to prevent grain getting into the bilge well. They will also require hold lighting to be switched off and the fuses removed, to prevent any possibility of the lights being left on and the grain being heated by the lights sufficiently to ignite it.

AQIS surveyors will pay particular attention to residues of previous grain cargoes, and to insect infestation. If such are found, the ship will probably be required to be sprayed or fumigated. The latter will normally require the crew to be accommodated ashore until the vessel is certified safe for them to return. This may be as long as 48 hours.

AMSA surveyors will require to be satisfied that the ship will have sufficient stability to carry the grain to her final destination safely. A form, Form GA, on which the fully detailed calculations should be shown, is available from AMSA offices. This should be completed in detail. Similar forms from other grain exporting countries, such as the National Cargo Bureau's form in the U.S.A., are acceptable in lieu of the Form GA. Masters are warned that good quality Australian wheat stows well, and stowage factors considerably below those normally expected are frequently encountered. AMSA surveyors will also require to be satisfied that the ship will not be overstressed during loading or on voyage. If a ship is loading a full cargo at one port, with only one or two slack hatches, there will normally be little difficulty in doing this, and reference to an approved grain loading condition will usually demonstrate compliance with the longitudinal strength requirements. However, when a ship loads at two ports, the requirements may be difficult, and for some ships, impossible, to satisfy. Where doubt exists regarding the stresses that the cargo may place on the ship, surveyors may require detailed calculations to be made.

LOAD LINE ZONES: *Extension of Seasonal Tropical Zones:* Amendments to the Load Line Convention are in course of ratification regarding changes to the Seasonal Tropical Zones in Northwest and East Australia. They extend the Seasonal Tropical Zones to cover the ports of Dampier, Port Hedland, Point Sampson and Port Walcott, on the Northwest coast of Australia, during the period 1st May to 30th November each year, and to cover the port of Gladstone on the East coast of Australia, during the period 1st April to 30th November. As the amendments have not yet been ratified, ships cannot take advantage of the additional loading as of right. In order to be able to load to her Tropical Marks during the appropriate season, a ship's *Flag State Administration must have advised AMSA in writing that it accepts the proposed amendment, under Article 8(1) of the Load Line Convention, as equivalent to the current requirements.* If in doubt, a Master should seek written advice from his Flag State Administration that it has so accepted the relevant amendment. This should be obtained prior to arrival, as after arrival it will normally be too late to obtain this confirmation.

TIME: Daylight saving is adopted in some States in accordance with table below:

Western Australia	GMT + 8 hours	No change
Northern Territory	GMT + 9.5 hours	No change
Queensland	GMT + 10 hours	No change
South Australia	GMT + 9.5 hours	GMT + 10.5 hours
Victoria	GMT + 10 hours	GMT + 11 hours
Tasmania	GMT + 10 hours	GMT + 11 hours
New South Wales	GMT + 10 hours	GMT + 11 hours

Date of change may vary by as much as 14 days from state to state (normally late October to early or mid-March).

SHIPMASTER'S REPORT: July 1983.

Radio/Health: I sent a request for Free Pratique to the Commonwealth Director of Health, Sydney, that being my first port, but the radio operator instructed our Radio Officer to address the message to Quarantine Sydney.

There was no advice as to the vessel having been granted Free Pratique when the Port Health Authorities boarded the vessel in Sydney. I was told that the Radio Pratique must be requested 18 – 24 hours prior to arrival from the Agents (See "Health" above).

The questionnaire to be answered was Form 106 No. 3.13.

ABBOT POINT, Queensland: 19.52 S. 148.05 E.

(See Plan)

PORT LIMITS: The area comprised within a line commencing at the intersection of the high water mark and meridian of Longitude 147° 59′ E. and bearing 000° True along that meridian to its intersection with parallel of Latitude 19° 48′ S.; then bearing 090° True along that parallel to its intersection with meridian of Longitude 148° 08′ E.; then by a line to the Northern extremity of Gloucester Head on Gloucester Island; then by the high water mark along the Western edge of Gloucester Island to the Southern extremity of the island; then by a line to the Northern extremity of Cape Gloucester; then by the high water mark to its intersection with the Northern edge of the wharf at Bowen; then by a line to the port entrance beacon to Bowen Boat Harbour; then by a line to the Southern extremity of Dalrymple Point; then by the high water mark to the point of commencement and including all navigable rivers and creeks communicating with that area and the banks and foreshores of the rivers and creeks.

DOCUMENTS: See "Townsville".

PILOTAGE: Compulsory. Prior notice confirming ETA 24 hours before arrival to be given through local Agent. Boarding ground is Lat. 19° 48.5′ S. Long. 148° 05′ E. or as directed by Pilot vessel.

Maintain listening watch on VHF Channel 16/67. Standard IMO pilot ladder rigged as per IMO recommendations. Usually starboard side 1 m. above water.

Coastal and Reef Pilotage: Pilotage through Hydrographers Passage, Palm Passage, Grafton Passage and the Inner Route of the Great Barrier Reef to Torres Strait is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details. For information about Hydrographers Passage see "Hay Point".

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

ANCHORAGE: Lat. 19° 49′ S., Long. 148° 06.5′ E. in 25 m.

RESTRICTIONS: Ballast condition, propeller fully immersed with maximum trim 1.8 m. by the stern and forward draft not less than 2% of LOA.

No restrictions on time, however berthing at discretion of Harbour Master with regards to weather conditions.

Engines must not be immobilised whilst alongside without prior permission of Harbour Master.

Unberthing in accordance with state of tide and draft. Under keel clearance required is 10% of deepest draft plus 0.61 m.

MAX. SIZE: Optimum max. size vessel is 297 m. LOA and 47.5 m. beam, however, consideration given to larger vessels provided that mooring arrangements on board vessel are satisfactory.

With a rise of tide of 3.5 m., vessels may sail with a draft of 18.26 m.

HEALTH: Standard Australian Regulations and procedures apply, radio pratique is available.

VHF: Pilot vessel and tugs, call on VHF Channel 16 and work on VHF Channel 6.

TUGS: 2 twin screw Zed-Pellor tugs of 56 tonnes bollard pull are available. Tugs' lines always used.

BERTHING: One berth only which is a bulk coal loading facility, serviced by conveyor and shiploader. Length of berth fendering 268 m. Plus 4 mooring dolphins. Depth of water in approaches is 17.2 m. below datum. Depth of water at berth is 19.4 m. below datum.

Shiploader has a rated capacity of 4,600 tonnes/p.h. and an average capacity of 4,000 tonnes/p.h.

Max. reach from fender face – 34 m.

Max. operating air draft above L.W.D. – 27.5 m.

DENSITY: 1026.5.

FRESH WATER: Not available.

FUEL: Available by barge from Townsville.

GANGWAY/DECK WATCHMEN: Ship's crew as watchman, ship's gangway used.

AIRPORT: Townsville Airport, 210 km. by road.

TIME: See "General" before first port.

EMERGENCY CO-ORDINATION: Through Abbot Point Control using internal telephone 337 or external telephone (077) 860337 or contact vessel's Agent.

TELEPHONE: Provided on berthing.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar.

GENERAL: Provisions available on request.

Nearest town is Bowen, 32 km. by road, Bowen has full facilities.

SHIPMASTER'S REPORT: March 1986 (Updated 1996).

Abbot Point is within a Permanent Tropical Zone, within the Great Barrier Reef.

Tropical Zone: 1st April/30th November.

Summer Zone: 1st December/31st March.

Anchoring Position: Indicated on Chart AUS. No. 255 – Abbot Point and Approaches. In position: Lat. 19° 49′ S., Long. 148° 06.5′ E.

Pilot Boarding Position: Indicated on Chart AUS No. 255 – Abbot Point and Approaches. Lat. 19° 48.5′ S., Long. 148° 05′ E.

Pilot boards by pilot boat, tugs stationed at Bowen. This chart is well recommended.

The Harbour Master and Pilots are stationed in Townsville.

Abbot Point: Australia's most Northerly deep-water coal shipping port, situated about 20 km. North of Bowen. The port is established under the auspices of the Harbours Corporation of Queensland. Developed by the MIM Holdings Ltd. and operated by the Abbot Point Bulkcoal Pty. Ltd. Development began in 1981, and operations commenced in 1984. Coking coal from Collinsville and steaming coal from Newlands are the only two MIM products handled.

Heavy duty railway, using modern rolling stock, and multiple diesel electric locomotives conveys coal from the fields to the 450 hectare site.

Loading Procedure: Coal travels on conveyors via a 1,350 tonne surge bin. There are 2 weightometers and an automatic continuous sampling plant. The conveyor system extends along a 100 m. rock causeway and a 2.8 km. approach trestle, which also supports a roadway to the deep-water wharf and shiploader.

Size of Vessels: From 20,000 d.w.t. to 165,000 d.w.t. Larger vessels have been considered on individual merits.

Depths: Approach depth, (stated) 17.2 m. Alongside berth (stated) 19.4 m.

Tugs: 2×55 tonne bollard pull. Tugs' lines used.

Line Boats: None available.

Berthing: In normal circumstances vessels will berth starboard side to. However, be prepared to berth either side to in accordance with the Harbour Master's requirements.

In normal conditions draft is to be adjusted so that the propeller is fully immersed and vessel trimmed approximately 1.8 m. by the stern. The arrival draft must be cabled to the Harbour Master and Agent who will advise any adjustment required.

To ensure maximum safety all vessels using heavy mooring wire ropes are requested to have the ends terminating in a 9 m. *rope spring finished with a standard eye for placing over the bollards and hooks.* All mooring ropes and wires should have a 6 m. tail of light rope spliced into the eye.

Hooks on mooring bollards are electrically operated and self release.

Pilot Ladder: Constructed and rigged in accordance with SOLAS requirements.

Berth: Length of trestle from shore to berth – 2.75 km.

Length of Berth: (Extent of fender system 264 m. approximately).

Length between extreme mooring dolphins – 466 m.

Length of Berthing Basin: 512 m.

Width of Berthing Basin: 70 m.

Depth at Berthing Basin: 19.4 m.

There are 7 breasting dolphins, equipped with Bridgestone energy absorbing cell-type rubber fenders.

Height of top of fenders above datum 7.5 m. approximately.

Height of underside of fenders above datum 0.9 m. approximately.

Ship Loader: Type: Travelling gantry with luffing boom.

Design rate maximum capacity: 4,600 tonnes/p.h.

Length of travel: 212 m.

Boom operating range: +12° to – 10°.

Maximum outreach from fender line: 34 m.

Height above datum (plus 12°): 27.5 m.

Height below datum (minus 10°): 19.5 m.

Travel speed variable from 3 m./min. to 30 m./min.

Stowage Factor: *Steaming coal: approx. 1.11 cu.m./tonne. Angle of repose from 35° – 50°.

Coking coal: approx. 1.05 cu.m/tonne. Angle of repose 33°.

*Vessel achieved a better stowage factor loading steaming coal.

Final Quantity: It has to be remembered when requesting to stop loading that there is about 3,000 tonne on the belt, which must be run off.

Loaded Tonnage: Calculated on draft survey. (Vessel experienced S.W'ly winds Force 4 and swell of about 1 m.).

Cargo Completion: Vessels must vacate berth without delay, subject to tidal conditions.

Arrival Notice: At least 7 days prior to arrival cable to "Abbotcoal Bowen" Telex: AA47689 (MIMABB). Fax: (077) 860305.

(a) Name of vessel.
(b) Type of vessel. (If O.B.O. confirm that vessel is "Gas Free").
(c) ETA.
(d) Total cargo quantity required. (Subject to C/P requirements and allowances).
(e) Hatch loading sequence, Pour by Pour.

Reference to (b) above – Master to advise Agent and Harbour Master.

1. Date vessel discharged last oil cargo.
2. Time and place of last Gas Free Certificate.
3. Location and amount of slops on board (and assurance that slop tanks inerted or pressed-up).

48 hours prior to arrival – advise ETA.

24 hours prior to arrival – confirm ETA and Hatch Number ("1st Pour"). Also advise Harbour Master of ETA/Berthing Draft/and ballast water is not contaminated.

Note: To avoid delays to berthing and to avoid tug cancellations it is important that all adjustments to ETA's are advised to all parties.

All hatches to be clean/dry and opened before berthing.

Hatch lids are to be clearly numbered, for easy identification, no responsibility attached to shore loading personnel if any infringement to this requirement.

All loading is expressed in metric tonnes of 1,000 kg.

Pratique: Radio Pratique is available. Send message to the "Quarantine Officer" through the ship's Agent, not more than 24 hours prior to arrival. (This stipulation is not enforced). The Agent will keep vessel advised. Text of the message is in accordance with the advised procedure in the Sailing Directions for Entry to First Australian Port.

If Radio Pratique has not been granted prior to berthing ensure that there is no contact with the wharf or employees by crew until Pratique is granted.

Shore Leave: Crew are permitted to go ashore after Immigration and Customs Clearance. The Agent can arrange a minibus service to Bowen and return. Cost about Australian $85.00 for the round trip. The trip to Bowen is 30 minutes.

Telephone: A telephone is placed onboard. No STD calls, only overseas and local operator service on a reverse charge basis.

Restrictions: Access to wharf and loading plant is restricted.

Persons requiring access (crew members/visitors) must wear safety helmets, safety shoes and adequate eye protection, and comply with all safety regulations.

Abbotcoal are not responsible for accidents incurred by personnel who use their wharf gangway.

Pedestrian access along the wharf approach is not permitted.

Special authorisation is required for private vehicles and visitors, within the port area and wharf access.

Access to the remainder of the port site is strictly forbidden.

Derat Examination Certificate: Quarantine doctor will arrange for renewal. Cost Australian $45.00.

Consuls: None available.

Repatriation: Can be arranged. Coach leaves Bowen for Townsville, with direct flights to New Zealand and Brisbane for other international connections.

Fresh Water/Fuel/Diesel: Not available from wharf, there are no facilities.

Ship Chandler: Will attend vessel if necesary. Bonded stores are also available. Prices may be high due to transportation costs.

AUTHORITY: Ports Corporation of Queensland, P.O.Box 409, Brisbane, Queensland 4001, Australia. *Tel:* (07) 3224 7088. *FAX:* (07) 3224 7234. *Contact:* Captain R.C. Johnson, Regional Harbour Master (Townsville). Tel: (077) 715135. Fax: (077) 212028.

Regional Harbour Master, 60 Ross Street South, P.O.Box 1921, Townsville, Queensland 4810, Australia.

Terminal Operator: Abbot Point Bulkcoal Pty.Ltd., Abbot Point via Bowen, P.O.Box 207, Bowen, Queensland 4805, Australia. *Tel:* 077 860300. *Telex:* ABCOAL AA47689. *FAX:* 077 860305. *Contact:* B. Byrne, Acting Operations Manager.

AGENT: See "Mackay".

ADELAIDE, S.A.: 34.51 S. 138.30 E. (See Plan)

PORT LIMITS: Northern Limit: a line drawn due East from Lat. 34° 40.42′ S., Long. 138° 22.55′ E. to shore.

Southern Limit: a line drawn due East from Lat. 34° 51.30′ S., 138° 24.80′ E. to shore.

Western Limit: a line drawn between Lat. 34° 40.42′ S., Long. 138° 22.55′ E. to Lat. 34° 51.30′ S., Long. 138° 24.80′ E.

DOCUMENTS: See "Melbourne".

Customs Officers board at the wharf and if any inspections required, Department of Transport officials also board at the wharf.

PILOTAGE: Advance notice 24 hours, telegraphic requests through ship's Agent. VHF Channel 16. Call sign "Adelaide – Outer Harbour" Pilot launch orange hull, yellow deck house, "Pilot" on each side in black letters. Give pilot launch good lee and safe pilot ladder. Pilot boards 1.5 miles seaward of Entrance Beacon.

ANCHORAGE: One mile West of Entrance Beacon.

RESTRICTIONS: Controlling depth in channel to container berth 39 ft. 4 in. (12.0 m.) and to Inner Harbour 30 ft. (9.1 m.) ISLW. All vessels to maintain 1 ft. (0.3 m.) keel clearance in berth at all times.

Night berthing/unberthing subject to Harbour Master's approval.

24 hour operations at Container Terminal.

Keel Clearance: 10% of draft with a minimum of 3 ft. (0.9 m.) under keel at all times.

MAX. SIZE: Inner Harbour – length 206 m. LOA; draft 31 ft. (9.4 m.) Neaps, subject to tide; 34 ft. 06 in. (10.5 m.) Springs. Outer Harbour (Container Berth) – length 945 ft. (288 m.) OA; draft 37 ft. (11.3 m.) Neaps, subject to tide; 39 ft. (11.9 m.) Springs.

HEALTH: Free Pratique given by radio message.

TUGS: 4 tugs available.

BERTHING: Depth at berths: Inner Harbour: 27 ft. (8.2 m.) – 36 ft.(11 m.). Outer Harbour: 36 ft. (11.0 m.) – 40 ft. (12 m.).

Berth	*Length* (m.)	*Depth LW* (m.)	*Type*	*Cargo*	*Cranes*
13 & 14	303	9.1	Conventional	Steel & scrap	2/6.5t travelling

29	245	9.8		Dry bulk and Repair	—
H	304	11.0	Bulk loading	Cement clinker	Loader (Fixed)
Osborne					
1	208	9.8	Bulk	Liquid	—
2	159	9.4	Bulk	Bulk liquid	
O.H. 1	185	11.3	General	Sheep/Cars	
O.H. 2	183	11.0	General	General	—
O.H. 4	214	11.0	Ro/Ro quarter ramp	Containers	—
O.H. 6A O.H. 6B	453	13.0	Container berths	Containers	1×35t and 1×45t container crane 60t on hook

STEVEDORES: No advance ETA required.

MEDICAL: Contact Quarantine Department in ample time.

TANKERS: "Leak free" advice to Harbour Master to be given through Agent. 500 tons slop discharge facilities. Unauthorised persons not allowed on board.

Berths:

"M"	Oil Berth	Depth alongside 8.5 m.
"N"	Tallow Berth	Depth alongside 8.5 m.
OSB. 1	—	Depth alongside 9.8 m.

DENSITY: Slightly denser than sea water; not affected by tide.

FRESH WATER: Inner Harbour: Through Hydrants at 12 – 15 t.p.h. Outer Harbour: 50 t.p.h.

FUEL: Fuel oil, thin fuel oil, diesel, gas oil. 48 hours notice required. A bunkering barge capable of transporting 1,000 metric tons of bunkering oils operates in the port. The use of this bunkering barge will enable vessels to bunker without leaving their loading berths or using road tankers.

CONSULS: The following countries are represented:

Austria
Belgium
Denmark
Finland
France
Germany
Greece
Guatemala
Italy
Japan
Lebanon
Liberia
Netherlands
Norway
Peru
Philippines
Portugal
Sweden
USA

REPAIRS: All repairs possible.

DRY DOCKS: None.

SURVEYORS: E.J.C. Carr & Assoc. Pty. Ltd, 242 A St. Vincent Street, Port Adelaide, S.A. 5015, Australia. Tel: (08) 475924. Fax: (08) 3411564.

GANGWAY/DECK WATCHMEN: Optional except for white spirit tankers. Cost varies according to time of shift.

OPENING/CLOSING HATCHES: Carried out by crew.

CERTIFICATES:

Last Port Customs Clearance.
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment.
Light Dues Receipt.
Ship's Articles (British Vessels).

CUSTOMS ALLOWANCES: Each Crew member 200 cigarettes or 40 cigars or 8 oz. tobacco. Limited amounts of spirits per man.

CARGO GEAR: Accordance Australian Regulations. See "Melbourne".

REPATRIATION: Available.

AIRPORT: Adelaide Airport 8 miles, regular airlines.

TIME: See "General" before first port.

HOLIDAYS: Xmas Day, Waterside Workers' Picnic Day (late January), Good Friday, Anzac Day (25th April), Adelaide Cup Day (3rd Monday in May), Eight Hours Day (2nd Mon. October). Restricted holidays, Boxing Day, New Year's Day.

TELEPHONES: Port Adelaide Police 207-6444. Fire Brigade 204-3825.

Note: Connection fee plus cost of calls.

SERVICES: Garbage disposal, cleaning out and fitting out and compass adjusting.

IDENTIFICATION CARDS: See "Melbourne".

GARBAGE DISPOSAL: Compulsory daily garbage collection service using plastic mobile garbage bins (M.G.B's) of 240 ltr. capacity which are placed on board. Charges: $ 40.00 plus $ 2.70 per person per day. Contractors: Waste Management Services Pty. Ltd. Tel: (08) 260-2122.

WASTE OIL DISPOSAL: Liquid road tankers (1×16,000, 1×8,000 and 1×10,000 ltr. capacity) available from Envirogaro (Cleanaway). Tel: (08) 472777. Fax: (08) 3411829.

SEAMAN'S CLUBS: Seafarer's Centre, 2 Nelson Street, Port Adelaide. Tel: 475733. Services: Telephone, snacks, bar, television, beds, table tennis, snooker, library, showers, money exchange. Open daily from 1600 hrs.

AUTHORITY: Ports Corporation South Australia, P.O. Box 19, 293 St. Vincent Street, Port Adelaide, S.A. 5015, Australia. *Tel:* (08) 470611. *FAX:* 470603. *Cables:* Depmah. *Contact:* Division Manager, Port Operations.

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., P.O.Box 107, 22 Nile Street, Port Adelaide, S.A. 5015. Tel: (08) 47-4655. Telex: 82624 PATSLE. Fax: (08) 47-6139. Seagram Code: 5APATSLE.

AIRLIE ISLAND TERMINAL: 21.20 S. 115.10 E. (See Plan)

LOCATION: Airlie Island is situated off the N.W. Australian coast. The island is 16 nautical miles off the Australian coast and 27 nautical miles South of Barrow Island in position Lat. 21° 20′ S., Long. 115° 10′ E. Master should refer to latest hydrographic chart Aus. 743 and the Australian Pilot Volume V. The tanker mooring is situated 1.0 nautical miles N.N.E. of Airlie Island.

Crude oil produced from South Pepper, North Herald and Chervil offshore oil fields is brought ashore to storage and loading facilities on Airlie Island. The South Pepper and North Herald fields are located 15 to 18 nautical miles N.N.E. of Airlie Island.

Crude oil produced from the Chervil Field is piped ashore to production and storage facilities on Airlie Island. Chervil field is located 5 nautical miles East of Airlie Island.

The crude oil storage situated on Airlie Island consists of 2 floating roof storage tanks, a pump station, Chervil process plant and associated pipework. The Island is manned on a 24 hour basis.

Vicksburg is located 15 nautical miles N.N.E. of Airlie Island in Lat. 21° 07′ 27″ S., Long. 115° 16′ 12″ E.

Chervil is located 5 nautical miles East of Airlie in Lat. 21° 18′ 23″ S., Long. 115° 13′ 47″ E.

North Herald is located 12 nautical miles N.N.E. of Airlie Island in Lat. 21° 10′ 28″ S., Long. 115° 15′ 54″ E.

PILOTAGE: The pilot boarding ground is in Lat. 21° 10′ S., Long. 115° 06′ E. Pilot will communicate with the ship via VHF from the pilot boat prior to boarding. When the pilot is boarding the Master should ensure that a good lee is provided and that the pilot ladder is rigged in compliance with current SOLAS regulations.

Pilotage to the Airlie Island mooring is compulsory. Airlie Island is now incorporated within the Port of Onslow and there are 4 gazetted pilots for this port. On completion of mooring the Pilot/Loading Master will act as terminal representative, liasing with the tanker's Master on all matters relating to safety, loading and commercial papers.

As soon as possible prior to arrival at the pilot boarding ground the tanker should establish communications with the Vicksburg or Airlie Island on VHF Channel 16 or 74 then move to a working channel.

ANCHORAGE: *Recommended Anchorage:* Vessels waiting for the berth are recommended to anchor in position Lat. 21° 10′ S., Long. 115° 06′ E. The holding ground in this area is poor and Masters should exercise caution when anchoring or lying at anchor.

RESTRICTIONS: Terminal operates 24 hours.

Water Depth: In the berth and approach channel there is a least depth of 15.3 m. To provide a safe margin there is a minimum under keel clearance of 1.5 m. to be maintained at all times. Maximum arrival and departure draft is restricted to 13.8 m.

If the berth or channel is subject to a swell in excess of 0.5 m. the underkeel clearance may be increased at the discretion of the Pilot/Loading Master.

MAX. SIZE: Specifications for tankers berthing at Airlie Island should conform to the following dimensions and draft restrictions:

The CBM is designed for tankers size between 30,000 d.w.tonnes and 120,000 d.w.tonnes

The maximum design dimensions are:

300 m. length overall
50 m. beam
120,000 d.w.tonnes
Max. draft restriction of 13.8 m. fully loaded.

Arrival Draft: Vessels should arrive with a maximum ballast draft to assist berthing or suitable to the Pilot/Loading Master or where appropriate at IMO draft, without exceeding the maximum draft of 13.8 m.

RADIO/VHF: Perth Communications:

WMC Resources Ltd. – Office: Telephone (09) 442 2000. Facsimile (09) 442 2077. Telex 92245 Wesmin AA.

Drilling Rig "Vicksburg":

Telephone: 091 846 911 and 091 846 912.
Fax: 091 846 913.
SSB HF Radio Frequency: 4,451.5 kHz and 6,781.5 kHz.
VHF Radio Frequency: Channels 16 and 74.

Airlie Island:

Telephone: 091 846 100.
Facsimile: (091) 846 240.
VHF Radio Frequency: Channels 16 and 74.

ETA Advice: Master must ensure that WMC Resources is advised of the tanker's ETA 96 hours prior to arrival and ETA is confirmed or updated at 72 hours, 48 hours and 24 hours prior to arrival. When within range of Airlie Island contact should be established on VHF Channel 16 before going to the VHF working channel.

Pre-Arrival Messages: The 96 hour pre-arrival message should also advise arrival draft and answer the following questions:

(a) Is the hull leak free?
(b) Is an inert gas system fitted?
(c) Is the inert gas system, if fitted, fully operational?
(d) Is a crude oil washing system fitted?
(e) Is the crude oil washing system, if fitted, fully operational?
(f) Are there any defects to the ship, machinery and equipment which effect safe pilotage, mooring, cargo handling or ballast operations?
(g) Have stress calculations for the envisaged programme of cargo handling and ballasting been made?
(h) Is the hull stress calculated within recommended safety limits?
(i) Quantity and origin of all cargo onboard or expected to be loaded prior to arrival at Airlie Terminal. This should include API gravity, specific gravity and pour point specifications.
(j) Quantity of bunkers on board prior to arrival at the Airlie Terminal, detailing API gravity, specific gravity and pour point specifications.
(k) Vessel's gross tonnage.

MOORING: When the tanker has been manoeuvred into the berth, the mooring launch will run the ship's lines, preventers and swamp moorings as required by the Pilot/Loading Master.

When the tanker is safely moored at the terminal the Pilot/Loading Master and the Western Mining Corporation operator will commence pick-up operations of the submarine hose.

The tanker mooring is an 8 leg conventional buoy mooring (CBM). The berth is aligned 285°/105° with the mean flood/ebb tides running 094°/291° respectively.

The 8 buoy mooring consists of pile driven anchor points:

65 m. ground chain 81 mm.
55 m. chain 87 mm.
6 m. chain 81 mm.

Buoy with 1×100 tonnes quick release hook and preventer consisting of 50 m. of 52 mm. wire, highload swivel, 100 m. of 80 mm. polyester superline rope with a minimum breaking load of 150 tonnes.

The seabed in the vicinity of the tanker mooring is smooth hard caprock with patchy sand cover, consequently the holding ground in the area is considered poor. It should be noted by Masters that the ship's anchor cannot be considered to be an integral part of the mooring system and all preventers, swamp moorings and ship's lines required must be passed and secured for the tanker to be considered safely moored.

The normal arrangement is for one ship's line to be secured to each of the 8 buoys and a total of 8 shore lines to be taken onboard and secured (8 buoy preventers). The shore lines are to be made *fast to bitts* rather than put on winches.

Equipment and Ropes:

(a) Tankers using the mooring unit must be capable of passing and securing ship's ropes, receiving and making fast shore preventers.
The ship will have ready 8 ship's lines and the capacity to secure 8 shore lines.
(b) Fairlead positions should be noted to avoid lines crossing each other.
(c) Ship can be berthed either heading East or West depending on weather and tidal conditions. Pilot will advise once on board.
(d) Manifold and derrick/crane to be used will depend on direction of berthing. Loading hose will be brought aboard from the Airlie Island side of the tanker (Southern side of the mooring).
(e) Running Lines: Ship's lines will be run and secured to 8 buoys by line boat.
Note: If ship is equipped with wires then there is a minimum requirement to have 12 m. rope tails of suitable strength fitted. This is to allow safe handling of wires by the line boat.
(f) Ship will be required to lower a suitable messenger line to the line boat to retrieve shore lines.

BALLAST: There are no dirty ballast or slop reception facilities at Airlie Island Tanker Terminal.

De-ballasting: Tankers should not commence discharge of segregated ballast without permission of the Pilot/Loading Master. With the available depth of water at the mooring, larger tankers in ballast may in certain weather conditions find it more appropriate to discharge ballast after departure from mooring.

Pollution:

Tankers shall:

(a) Comply with the relevant provisions of the International Convention for the Prevention of Pollution from Ships defined as the "Convention" in the Pollution of Waterways by Oil and Noxious Substances Act 1987 of the State of Western Australia and the Protection of the Sea (Prevention of Pollution from Ships) 1983 of the Commonwealth, those Acts and other legislation of the State or Commonwealth pertaining to pollution.
(b) Masters must ensure that the tanker is capable of compliance with all relevent ISGOTT (International Safety Guide for Oil Tankers and Terminals) recommendations.
(c) Provide evidence to WMC Resources that the tanker is enrolled in the Tanker Owners Voluntary Agreement concerning Liability of Oil Pollution (TOVALOP), including supplement thereto effective 20th February 1987.
(d) Provide evidence to WMC that the tanker has in force insurances and certificates as are required of the owner of ships under Australian law.
(e) Provide evidence to WMC Resources that any cargoes carried by the tanker are either owned by, or deemed owned by a member of CRISTAL, being the Contract Regarding an Interim Supplement to Tanker Liability for Oil Pollution dated 14th January 1971, as amended from time to time.

LOADING: The propeller shall not be turned with the main engine while the flexible loading hose is connected or after it has been disconnected without notifying the Pilot/Loading Master.

Master and Pilot/Loading Master will exchange relevant information regarding start of loading, maximum loading rate, slow down and stopping procedure. Tankers are required to maintain a 1.5 m. under keel clearance (UKC) at all times whilst at the loading terminal, unless the pilot advises that this may be increased.

Loading Line: A 508 mm. (20 in.) loading line runs N.N.E. × 1.0 nautical miles from Airlie Island to the PLEM at the tanker mooring. Attached to the PLEM is a submarine hose string consisting of 11 lengths of 10 m.× 16 in. diameter hose and one length of 10 m.×300 mm. (12 in.) diameter rail hose. At the end of the rail hose is a butterfly valve and a 12 in. quick connect Camlock coupling plus blind flange. The hose string has a maximum working pressure of 1,550 kPa.

Tank Storage: 2×150,000 barrel floating roof tanks.

Pump Capacity: The pump station consists of 2 TKL Worthington centrifugal pumps delivering an average load rate of 2,000 cu.m./hr.

Manifold: Tankers must present a 12 in. manifold in compliance with the "Oil Companies Maritime Forum" (OCIMF) guidelines.

Derrick/Crane: Tankers must have certified derricks or cranes with a minimum SWL of 10 tonnes.

Product: Airlie Light Crude – API 44°.

UNMOORING:

Sailing Draft: Tankers will be advised of the allowable sailing draft by the Pilot/Loading Master.

Sailing: On completion of loading the submarine hose will be laid back onto the seabed. The preventers and swamp moorings will be released and laid back onto the seabed as appropriate. The mooring launch will then assist in letting go the ship's lines as required.

DEPARTURE: When the vessel is clear of the berth the Pilot/Loading Master will ensure that all WMC Resources equipment is returned to the mooring launch, that all the commercial paperwork is completed and will conduct the vessel to the pilot boarding ground.

TIME: GMT plus 8 hours.

GENERAL: *Weather Reports:* Weather reports will be sent to vessel during loading on a 12 hour basis. Airlie Island is located in a tropical cyclone belt during the months from November to April. With the development of any storms, more frequent weather reports, including hourly position broadcasts will be received.

It should be noted that with any forecast of a Northerly wind, tanker berthing may be delayed. If the vessel is positioned in the berth and wind direction swings Northerly, the Pilot will be informed and the situation reviewed as to whether to cease loading and to vacate the berth. Likewise if windspeed exceeds 30 knots during loading, the situation will be reviewed as to cease loading and vacate the berth.

Tides: The mean flood tide flows 094° with the mean ebb tide flowing 291°. The maximum speed of the tidal flow is approximately 0.5 knots. The nearest standard port is Onslow but tidal heights and times may be determined by using site specific data obtainable from the Pilot/Loading Master. Normal tidal range is approximately 2.0 m.

Safety: The Pilot/Loading Master may check some or all the ship's certificates prior to berthing and any equipment or ship's ropes as appropriate.

After berthing the tanker will be required to ensure that the following safety practices are completed prior to commencement of loading:

1. Ship/Shore safety check list is completed.
2. Smoking regulations are adhered to.
3. Emergency satchel is placed in the mooring launch.
4. Both lifeboats are turned out to the embarkation deck.
5. Fire fighting and pollution equipment is ready for immediate use.
6. Isolate impressed current cathodic protection systems before berthing.

The Pilot/Loading Master will liaise with the Master on all matters relating to safety of the vessel and loading operations. Masters should be ready to vacate the berth and put to sea at short notice when requested to do so and sufficient crew should always be on hand to tend moorings and assist with release of loading hose.

Cathodic Protection: Before berthing, Masters must ensure that vessels fitted with impressed current cathodic protection systems are switched off and remain off while in the berth.

Agents: Tankers must make their own arrangements to appoint agents.

Customs and Quarantine: Tankers requiring customs and/or clearances must make appropriate arrangements through their agents.

Agents/Customs – Arrange own transport to Onslow. Helicopter provided from Onslow to Airlie Island.

GARBAGE DISPOSAL: No service.

WASTE OIL DISPOSAL: No service.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar. However, there are no facilities at this port for seamen to come ashore.

AUTHORITY: *Operator:* WMC Resources Ltd., QV1 Building, 37th Floor, 250 St. George's Terrace, Perth, WA 6000, Australia. *Tel:* (09) 442 2000. *FAX:* (09) 442 2077. *Contact:* S. Keenihan, Regional Manager. P. Henderson, Engineering and Production Manager.

ALBANY, W.A.: 35.02 S. 117.53 E. (See Plan)

PORT LIMITS: All the waters of King George Sound and Princess Royal Harbour Westward of a line drawn from Herald Point to Bald Head.
DOCUMENTS: See "Melbourne".
PILOTAGE: Compulsory for vessels over 500 g.r.t. Service provided by Albany Port Authority. Captain C. Shuttleworth (Harbour Master) available on Pager No. 016983366. Tel: (098) 413056. Fax: (098) 421204.

Pilot boards vessel with King Point Light bearing 292° × 3 miles.

Address: 85 Brunswick Road (P.O.Box 175), Albany, W.A.6330.

ANCHORAGE: King Point Light, bearing 292°, distance 3 miles, or as directed by Agent's radio message. There is a Prohibited Anchorage of 0.5 miles radius from a position on the line of main leads midway between Buoys No. 1 and 2.
RESTRICTIONS: The Entrance Channel from King George Sound to Princess Royal Harbour has a width of 550 m. land to land. The Navigation Channel therein being 145 m. wide, with a depth of 12.8 m. – 12.2 m. LWOST. Depth of Swinging Basin in the harbour is 12.20 m. and vessels with a draft of 11.50 m. can work No. 3 Berth and 9.8 m. No's. 1 and 2 Berths. Although some margin is allowed at the Harbour Master's discretion, dependent upon weather and tidal conditions, (HHW 0.9 m.). Vessels up to 200 m. LOA can be berthed day or night. Vessels over 200 m. LOA daylight only.
MAX. SIZE: LOA 225 m., beam 32 m., draft 11.5 m. at Berth No. 3 and 9.8 m. at Berths No. 1 and 2, deadweight 38,000 tonnes.
HEALTH: Master should supply answers to a prescribed questionnaire 24 hours before arrival. Details of the questionnaire can be obtained from vessel's Agent and answers should be radioed to Agent, who will arrange pratique.
RADIO: Perth Radio.
VHF: Call sign is "Albany Port" and is normally open 0830 – 1630 hrs. Monday to Friday except holidays. Otherwise by special arrangement Channels 6, 12 and 16.
TUGS: Motor tug available, bollard pull 27.4 tons. Normally ships lines are used.
BERTHING:
King George Sound: Safe anchorages are available.
Princess Royal Harbour: The following berths are available:

Land Backed Wharf: A continuous wharf face of 608 m. allocated into 3 berths. Berth No. 1: 209 m., depth 10.4 m. Berth No. 2: 172 m., depth 10.4 m. Berth No. 3: 227 m., depth 12.2 m. There is no swell at any of these berths.

Max. permissible ship draft at LW is 11.5 m. at Berth No. 3 and 9.8 m. at Berth Nos. 1 and 2.

Load/discharge is by ship's gear other than loading of grain on Berth No. 3 which is by shore equipment.

The wharf berths are served by road.

Berth Uses: No. 1 Wharf has a transit shed with a floor space of 4,300 sq.m. and is used mainly for general cargoes. Whilst the berth has not been constructed to receive Ro/Ro vessels, it has been possible to work them at this berth.

No. 2 Wharf is used for loading of livestock and the discharge of rock phosphate, sulphur and for general cargoes. This wharf has also been designed as a secure wharf for petroleum products discharge.

No. 3 Wharf is a general purpose berth and has been designed for receiving Ro/Ro vessels and container traffic, although it is used mainly for the loading of bulk grain.

CRANES: No cranes are available and ships use their own gear.
BULK CARGO FACILITIES: All berths are capable of receiving bulk cargo via ships gear and grabs into hoppers and road trucks.

No. 3 Wharf has a grain loading facility consisting of conveyors, 3 loading booms and spouts of which any 2 can operate together. The design loading rate (wheat) is 1,600 t.p.h. The facility is also designed to load 50,000 d.w.t vessels, although vessels up to 67,000 d.w.t. have been accommodated on occasions.

STEVEDORES: By private companies.
Normal Working Day: Day Shift (Ordinary Time) 0730 to 1530 hrs. Evening Shift (Time and a Half) 1530 to 2330 hrs. Night Shift (Double Time) 2330 to 0730 hrs. Saturday (Double Time) 0730 to 1530 hrs., Sunday (Double Time) 0730 to 1530 hrs. and 1530 to 2330 hrs.
MEDICAL: No advance notice except in case of serious illness to be included in arrival cable, ample hospital facilities available.
TANKERS: Discharging facilities are provided only at No. 2 Wharf where the hose is 200 mm., connecting to a 300 mm. main. Loading facilities are provided on all 3 berths from 100 mm. hoses.

Max. drafts at these berths are Berth Nos. 1 and 2, 9.8 m. and Berth No. 3, 11.5 m.

DENSITY: Average salinity of water in the port is 1026 – 1027.
FRESH WATER: Available at all berths at a rate of approximately 60 – 80 t.p.h. Unlimited quantities available. Supply by 62 mm. hoses metered individually or if more hose required from 200 mm. main meter.
FUEL: Light marine diesel oil is available at all berths from pipeline or road tanker. Pipeline approximately 100 t.p.h.
FIRE PRECAUTIONS: During receival of fuel, Berth No. 2 is isolated and all Australian Association of Port and Marine Authorities' guidelines complied with.
CONSULS: None.
REPAIRS: A slipway of 340 tonne capacity is available. Small repairs only are dealt with by Board of Trade Engineers. Shore based facilities for minor engine repairs. Local shipwrights are available.
SURVEYORS: Cargo Inspectors: S.G.S., C.A.S.C.O. and Associated Marine Surveyors, W.A., Lloyd's Register, American Bureau, Bureau Veritas available at 4 hours notice from Fremantle.
GANGWAY/DECK WATCHMEN: Gangway watchmen required on all Australian crewed vessels and foreign fuel tankers.
HATCHES: Normally carried out by ships crew.
CUSTOMS ALLOWANCES: Each crew member 200 cigarettes or 40 cigars or 250 gm. tobacco; spirits 1 litre per person.
REPATRIATION: Crew changes and repatriation can be carried out with little difficulty.
AIRPORT: Airport located 11 km. from port with domestic flights to Perth.
TIME: See "General" before first port.
HOLIDAYS: As for Fremantle, except W.W.F. Picnic Day being late January.
POLICE/AMBULANCE/FIRE: Police Tel: 41 1411; Ambulance Tel: 41 1666; Fire Tel: 41 2122.
EMERGENCY CO-ORDINATION CENTRE: State Emergency Service contacted through Police Tel: 41 1411.
TELEPHONES: Telephones are available at all berths. Arrangements made through Agents.
SERVICES: Some radio and radar repair facilities available. Minor electrical and mechanical repairs.
BANKS: Commonwealth Trading, 261 York Street. Tel: 41 2022.
Australia & New Zealand, 23 Albany Highway. Tel: 41 1300.
National Commercial, 250 York Street. Tel: 41 2655.
Rural & Industries, 232 York Street. Tel: 41 1288.
Westpac Banking Corp., 281 York Street. Tel: 41 1722.
STORING: Vessels can be stored by launch in King George Sound or alongside the berth by road. Stores can be loaded during cargo operations. Forklifts can use all wharves. For stores Customs Form 43 to be submitted giving details of stores. For any storing in excess of 3 hours W.W.F. labour must be engaged.
SHIP SUPPLY SERVICES: Fremantle Tug Operators, c/o Hall's Shipping & General Agencies, Port Road, Albany, W.A. 6330.
Bairstow AG & ME, 13 Alicia Street, Albany, W.A. 6330.
Ocean Services Albany, P.O.Box 42, Albany, W.A. 6330.

Servicing of ships in this area is done by launch, as helicopters are not readily available to take off sick personnel. Ocean Services Albany operate launches and a 50 ft. tug which are used for servicing ships in the area.

The transfer of personnel, sick seamen and transport of stores is carried out by launch or tug. Communication is done by VHF.

SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Container available for dry garbage and drums available for wet garbage alongside. For service Tel: 098-412759.

Charges A$ 45.00 per day plus A$ 3.00 per crew member per day.

WASTE OIL DISPOSAL: Tanker trucks only, capacity 1,500 gallons. Current rate A$ 130.00 per load. Operator: Rassmussens Waste Disposal. Tel: (098) 41-2467, after hours (098) 44-7656.
SEAMAN'S CLUBS: Missions to Seamen (Flying Angel), Lot 12, Princess Royal Drive (P.O. Box 1299), Albany, West Australia 6330. Tel: (098) 41-2440. Located within 5 minutes walking distance from all wharves. Facilities: Canteen, international telephone calls, bus tours, sporting events arranged, chapel/church services, postal facilities, library, pool, table tennis, currency exchange.
CURRENCY: Australian Dollar.
DELAYS: Not normally experienced unless waiting for another vessel on grain loading or deep draft Berth No. 3.
GENERAL: Quarantine incinerator available.
AUTHORITY: Albany Port Authority, 85 Brunswick Road, Albany, W.A. Postal Address: P.O.Box 175, Albany, W.A. 6330. *Tel:* (Office) (098) 413056. *FAX:* (098) 417566. *Contact:* Captain C. Shuttleworth, Harbour Master.

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., P.O.Box 42, Port Road, Albany, W.A. 6330. Tel: (098) 413538. Telex: via Fremantle 92434 PATSLE. Fax: (098) 417690. Seagram Code: 6APATSLE.

ARDROSSAN, S.A.: 34.26 S. 137.55 E. (See Plan)

DOCUMENTS: See "Melbourne".
APPROACHES: *Navigation Beacon:* The light beacon, flashing white every second, marks the Northern side of the seaward limit of the dredged exit channel.
Lead Lights: Lead light towers line up on a grid bearing 249°. Towers are located approximately 10 m. from the clifftop edge and approximately 610 m. from clifftop edge.
PILOTAGE: Compulsory (except for B.H.P. vessels). 24 hours notice required. Pilot boards one mile East of berth.
MAX. SIZE: Max. size 46,000 d.w.t. for berthing and loading. Max. LOA 200 m.
HEALTH: Officials board at berth. 24 hours notice required.
VHF: "Ardrossan Port" on Channel 16. Manned weekdays 0730 hrs. – 1200 hrs. and 1245 hrs. – 1615 hrs.
TUGS: Available from Port Adelaide.
BERTHING:
B.H.P. Jetty:

Length 931 m. "T" head – 6 Dolphins and 2 mooring platforms. Total berth length 409 m. Continuous fendering installed from Dolphin No. 2 to Dolphin No. 5 for 160 m. length. Depth of water – 9.2 m. MLWS.

Loading is via a belt conveyor system. A fixed loading boom necessitates vessel warping along "T" head during loading.

Loading rates:	Dolomite 2,400 t.p.h.
	Wheat 800 t.p.h.
	Barley 800 t.p.h.

Boom:

Height of chute above MLWS – 16.18 m. Loading chute extends across vessel from wharf face – 16.1 m.

TIDE: Average rise and fall 1.8 m. – 2.4 m. max. 3.1 m. at Spring tides.
STEVEDORING: Arranged with private companies.
Operations: Working hours are flexible to suit vessel's requirements.

Working Hours –	Night Shift	0001 – 0800 hrs.
	Day Shift	0800 – 1600 hrs.
	Afternoon Shift	1600 – 2359 hrs.

FRESH WATER: Small quantities can be made available by special arrangement. (Flow rate is approximately 3 tonnes/hour).
FUEL: Not available.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: No seaman's clubs.
Religious contact: Les Adams, Weetulta. Tel: 88-352233.
Post office and shops available in Ardrossan (2 km.).
CURRENCY: Australian Dollar.
AUTHORITY: Ports Corporation South Australia, P.O.Box 19, Port Adelaide, S.A. 5015, Australia. *Tel:* +61-8-47-0611. *FAX:* +61-8-47-0605. *Contact:* Division Manager, Port Operations.
Operator: BHP Steel, Long Products Division, Rowe Terrace, Ardrossan, South Australia 5571, Australia. *Tel:* (088) 373106. *Telex:* AA 89520. *FAX:* (088) 373676. *Contact:* A. Fisher, Manager.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Adelaide.

BARROW ISLAND, W.A.: 20.49 S. 115.33 E.

(See Plan)

LOCATION: The port is situated on the Eastern side of Barrow Island, Western Australia. The moorings are located approximately 9.875 km. offshore at Lat. 20° 48′ 57″ S., Long. 115° 33′ 09″ E. Refer to the current hydrographic Chart No. AUS 742 for further information.
PORT LIMITS: 7 nautical miles radius from intersection point at Lat. 20° 46′ 50″ S., Long. 115° 27′ 54″ E.
DOCUMENTS: Refer to "Melbourne" - also see "Health".
PILOTAGE: *Pilot Boarding:* The pilot ladder shall be available to the Pilot/Mooring Master and be kept at a proper height for his safe use for boarding and disembarkation. When the distance from the water to the deck exceeds 9.0 m., the pilot ladder shall be rigged with the accommodation ladder or an approved mechanical pilot boarding appliance used. Tanker shall provide adequate lee for embarking and disembarking Pilot/Mooring Master, who will board at the arrival position. The hose connection equipment is contained in 2 large metal boxes which should be lifted onboard at the Arrival Position and landed just forward of the starboard manifold.
Order of Berthing: Tankers will normally berth in the order of arrival, but due regard will also be given to nominated date ranges, and such other matters as WAPET deems relevant to a fair and necessary berthing order.
Restrictions: Unless otherwise approved by the Pilot/Mooring Master, berthing shall take place:
(a) during ebb tide;
(b) provided there is no strong wind or strong wind warning in force for the terminal area; and
(c) when there is no tropical cyclone, or tropical depression which is likely to develop into a cyclone, within 400 nautical miles of the Terminal or likely to pass within that range within 24 hours of the tanker berthing; and
(d) in daylight.
Accommodation: The tanker shall provide victualling and accommodation for the Pilot/Mooring Master. Additional personnel may at times be required by WAPET to board tankers. The Pilot/Mooring Master will advise numbers on such occasions.
Also see "Anchorage" and "Mooring".
NOTICE OF READINESS: The Notice of Readiness is accepted:
(a) where the berth is available, at such a time as the tanker is all fast in the berth, i.e. when all mooring lines and the preventer lines are made fast;
(b) where the berth is not available, 6 hours after the tanker drops anchor at the Arrival Position (See "Anchorage");
(c) in the case of a tanker:
  (i) making its first call at the port; or
  (with inadequate searchlights (See "Restrictions"). 6 hours after sunrise following arrival or when the tanker is all fast in the berth, as defined in (a) above, whichever occurs first.
Laytime ceases for the period of time taken for the tanker to move from the anchorage and is resumed when the tanker is all fast at the berth as defined in (a) above.
ANCHORAGE: *Arrival position:* On arrival at the port, the tanker should proceed to a position ("Arrival Position"), approximately 2 nautical miles off the moorings at a bearing of 090° from the moorings (See Aus. Chart No. 742) and anchor there if waiting to berth. The Pilot/Mooring Master will board the tanker at this position.
Crane/Derrick: The tanker shall arrive with a crane/derrick rigged on the starboard side and in all respects ready to lift equipment including the hose connection equipment from a mooring vessel at the Arrival Position.
MINIMUM STANDARDS OF ACCEPTANCE: A tanker will be accepted for loading at the Terminal provided it conforms to the minimum requirements described herein. WAPET may at its discretion refuse to moor or load any tanker which does not conform to the requirements of is deficient in any manner whatsoever. In all cases, the Tanker Suitability Assessment Form must be completed.

1. *Size:* See "Max. Size".
2. *Tanker Loading:* Tankers loading at the Marine Terminal must comply with the latest SOLAS and MARPOL Conventions and Protocols. Tankers found to be deficient or substandard in safety requirements will not be permitted to moor and load.
3. *Deballasting:* The Terminal will not be responsible for any free water or deadfreight. For acceptance at the Terminal, tankers must have segregated ballast tanks or otherwise comply with the ballast regulations (See "Ballast"). There are no reception facilities at the Terminal for the discharge of dirty ballast.
4. *Inert Gas System:* The cargo tanks will be checked on arrival to verify that they are inerted to 8% oxygen or less by volume and pressurised as required by existing regulations. Vessels with tanks not properly inerted, and/or with an inoperative inert gas system, will be rejected. In the event of failure of the inert gas system during tanker loading/deballasting operations, or if the tank atmosphere exceeds 8% oxygen, cargo/ballast operations will be stopped, and if the deficiency is not promptly corrected, the tanker will be removed from the berth.
5. *Mooring Equipment:* Tankers shall be equipped with mooring equipment which complies with the minimum specifications described in this regulation.

(i) Mooring Winches: The tanker shall be equipped with mooring winches which shall:
  (a) Be power operated and capable of warping the tanker.
  (b) Have a mooring line permanently attached.
  (c) Be capable of making fast mooring lines by securing the brake on the winch.
  (d) Have warping drums capable of handling preventer lines and swamped mooring lines.
  (e) If equipped with constant tension devices, have these devices disconnected and the brake fully applied.
  (f) Number at least 8 and be located in the following positions:
  Poop deck – 4.
  Foc'sle head – One each, port and starboard, located in such a position that the port and starboard swamp mooring lines may be hove in and made fast to adjacent mooring bitts (a single winch in this position, located so that ropes may be similarly handled from either side, may be acceptable).
  Aft main deck – One each, port and starboard. Tankers fitted with only one winch in the aft main deck area will be accepted provided a line can be deployed mechanically from that winch to each beam. On tankers fitted with only one winch, where only one of the two lines can be handled (hauled or veered) at once, berthing may be delayed in marginal weather. A tanker will not be accepted where only one mechanical line can be deployed and the other would be handled by hand.

(ii) Mooring Bitts: The tanker shall have at least 8 sets of mooring bitts. Each set shall be of a size and located near a mooring winch to enable making fast the preventer lines or the swamped mooring lines as the case may be.

(iii) Mooring Lines:
  (a) The mooring line on each mooring winch shall have a minimum breaking strain (MBL) of 80 tonnes. Tankers with mooring lines with a MBL of less than 80 tonnes will only be accepted at the discretion of WAPET. Tankers with mooring lines of less than 80 tonnes MBL may be subject to greater than normal delays awaiting berthing in marginal weather conditions.
  (b) Each mooring line shall have a minimum length of 220 m.
  (c) Each mooring line, if a wire line, shall have a fibre tail (attached to each wire) between 10.5 m. to 12.0 m. with strength equivalent to the wire line, plus 25%. Prior to arrival, fibre tails should be carefully inspected for damage and any suspect tails replaced. Polypropylene is not acceptable.

(iv) Bow Anchors: The bow anchors shall:
  (a) Be located on each port and starboard bow.
  (b) Have a minimum of 10 shackles (shots) of chain in tankers up to 50,000 tonnes load displacement and a minimum of 12 shackles in tankers over 50,000 tonnes load displacement.
  (c) Comply with a Classification Society recognised by the Australian Maritime Safety Authority.

(v) Crane/Derrick: The tanker shall have a crane or derrick on the starboard side with a minimum SWL of 10 tonnes. Arrangements for lifting and securing hose must comply with the Oil Companies International Marine Forum (OCIMF) recommendations.

(vi) Personnel: The tanker shall provide competent personnel to perform, supervise and approve all work to connect and disconnect the loading hose.

(vii) Manifold Specification: The tanker's manifold shall be capable of being bolted to the 12 in. USAS flange of the loading hose, and comply with OCIMF standards for oil tanker manifolds and associated equipment.

(viii) Searchlights: To permit berthing and unberthing during darkness, the tanker shall be equipped with a searchlight with a minimum diameter of 300 mm. fitted to each port and starboard bridge wing to provide a wide scanning range.

(ix) Responsibility of Owner: The onus is exclusively on the Master or Owner to ensure that the tanker is seaworthy, and that all equipment is and remains in good working order and condition. Failure by WAPET to reject any tanker not meeting the requirements will not relieve the Owner of liability.

6. *Safety and Pollution:*
   (i) Safety:
      (a) Tankers, which could in the opinion of WAPET possibly contravene the International Convention for the Safety of Life at Sea 1974 as amended by the 1978 Solas Protocol, will not be accepted.
      (b) Tankers shall be in a state of readiness at all times to leave the moorings. Engines should be on 20 minutes notice.
      Tankers visiting the Barrow Island Marine Terminal must comply with the minimum safety requirements specified in the I.S.G.O.T.T.
   (ii) Pollution: Tankers shall:
      (a) Comply with the relevant provisions of the International Convention for the Prevention of Pollution from Ships defined as the "Convention" in the Pollution of Waters by Oil and Noxious Substances Act 1987 of the State of Western Australia and the Protection of the Sea (Prevention of Pollution from Ships) Act 1983 of the Commonwealth, and comply with other legislation of the State or Commonwealth pertaining to pollution.
      (b) Ensure that no rubbish is dumped from the tanker at or near the Marine Terminal.
      (c) Provide evidence to WAPET that the tanker is enrolled in the Tanker Owners Voluntary Agreement concerning Liability of Oil Pollution, including TOVALOP Supplement thereto effective 20 February 1987.
      (d) Provide evidence to WAPET that the tanker has in force insurances and certificates as are required of the Owner of ships under Australian law.
      (e) Provide evidence to WAPET that any cargoes carried by the tanker are either owned by, or deemed owned by, a member of CRISTAL, being the Contract Regarding an Interim Supplement to Tanker Liability for Oil Pollution dated January 14th 1971, as amended from time to time.
7. *Tanker Inspections:*
   (a) When nominating a tanker for loading at the Terminal, the Shipper shall provide WAPET with a statement in writing, on the approved WAPET form, that the nominated tanker has satisfactorily undergone a ship inspection, based on OCIMF guidelines, and that the results of the inspection are acceptable to the Shipper as at the time of inspection, and at the time of nomination.
   (b) Where a tanker has undergone an inspection as specified in 7(a), WAPET, at its absolute discretion, may accept the tanker for loading at the Terminal, subject to the tanker undergoing an inspection prior to loading commencing, by a qualified inspector at the Shipper's sole cost. In such case, Notice of Readiness shall not be tendered until the Shipper provides WAPET with a written statement, including, without limitation by fax or telex, that the inspection was satisfactory.

RESTRICTIONS: *Minimum Water Depth/Underkeel Clearance:* The minimum water depth in the vicinity of the berth and in the approach channel is 12.0 m. below C.D. Barrow Island Tanker Moorings. A copy of the latest hydrographic certificate of the depth of the water is available from the Pilot/Mooring Master on request.

To provide a safety margin, should sailing be delayed for any reason, the following underkeel clearance shall be maintained at all times up to and including the low water following the tanker's projected sailing time as follows:

(a) for tankers up to 33 m. beam – not less than 1.56 m.; or
(b) for tankers over 33 m. beam – clearances specified below:

Beam (m.)	*Underkeel Clearance* (m.)
33.0	1.56
34.0	1.60
35.0	1.63
36.0	1.67
37.0	1.71
38.0	1.74
39.0	1.78
40.0	1.81
41.0	1.85
42.0	1.89
43.0	1.92
44.0	1.96
45.0	2.00
46.0	2.03
47.0	2.07

Arrival Condition: Tanker shall arrive ballasted to at least one quarter of its Summer deadweight tonnage, with propeller (and bow thruster if fitted) submerged, unless directed to carry more ballast by the Pilot/Mooring Master during adverse weather. Tankers should have a stern trim of less than 4.0 m.

MAX. SIZE: The Marine Terminal is restricted to Tankers which have:
(a) A loaded displacement of up to 105,000 tonnes.
(b) A maximum beam of 47.0 m.
(c) A maximum slab side area of 4,838 sq.m., being the product of the overall length and moulded depth.

HEALTH: Tankers arriving from foreign ports must make prior arrangements for Quarantine and Customs Clearance through their agents. Port Walcott, Western Australia, is the nearest port where Customs and Quarantine Clearances can be obtained.

RADIO: *Initial Message:* All incoming tankers must advise the Barrow Island Marine Terminal of their estimated time of arrival (ETA) not less than 96 hours before arrival, and thereafter at intervals of 48 hours, 24 hours and 12 hours before arrival at the Arrival Position. Should the expected ETA change by more than 1 hour following the 12 hour arrival notice, the incoming tanker must promptly notify the Terminal of the new arrival time.

Time to be used for ETA is local time, which is UTC plus 8 hours throughout the year.

The first message should also include:
(a) Name and nationality of tanker, radio call sign, and INMARSAT telephone number.
(b) Cargo requirements.
(c) Deballasting time, if not concurrent with loading.
(d) Maximum loading rate.
(e) Arrival draft, fore and aft.
(f) Distance in metres from the bow to the tanker's loading manifold.
(g) Distance from the bridge conning position to the bow in metres.
(h) Details of the quantity and condition of ballast.
(i) Confirmation that the inert gas system is tested and working, and that all cargo tanks are at or below 8% oxygen level (tanks will be inspected before berthing).
(j) Confirmation of the capability to carry out closed system loading.
(k) The Master's full name for the preparation of Bills of Lading.
(l) Last port of call.
(m) Confirmation that the tanker has a clean Bill of Health (if there is any sickness on board, the message must give all available information as to the possible type of sickness).
(n) Advice of voltage of power supply and type of outlet socket (i.e. British, European, Japanese, etc.).
(o) Number of shackles (shots) of anchor cable on each anchor.
(p) Number and location of mooring wires on winches.
(q) Number and location of synthetic mooring lines on winches.
(r) Number and location of mooring bitts.
(s) Is the manifold arrangement, including rigging equipment, in compliance with OCIMF recommendations.
(t) Is vessel equipped with a crane or derrick, and in what position.
(u) SWL of crane or derrick.
(v) Indicate whether tanker can receive a helicopter, land-on or winch.

ETA messages shall be sent to each of the following centres:

Barrow Island: Tel: 091 84-3700 (office hours or by arrangement). Telex: AA 99125. Fax: 091 84-3799.

Perth (all hours): Tel: 09 263 6299. Fax: 09 263 6699.

VHF: *Communications with Pilot/Mooring Master:*
Approaching the terminal:

Tankers shall listen to Marine VHF Channel 16 when within 100 nautical miles of the terminal.

The Pilot/Mooring Master can be contacted during daylight working hours or at other times by prior arrangement on the following International Maritime VHF frequencies, call sign "Barrow Island":

Channel 16	156.8 MHz	Safety and Calling;
Channel 14	156.6 MHz	Barrow Island working channel; or

During Berthing and Loading:

WAPET will provide portable UHF radios for communications between the tanker and the Terminal Onshore Control Room during berthing, loading and unberthing. Channels used are:

Channel 1	469.775 MHz
Channel 2	469.800 MHz

TUGS: *Mooring Vessels:* WAPET may provide one or two vessels to assist in mooring tankers at the Barrow Island Marine Terminal:

"Total Endeavour", a 48 tonne bollard pull (3,200 b.p.h.) omni-directional vessel is used on a tow line from its bow to the tanker's stern when berthing. It will be positioned as near to the centre line as possible. "Total Endeavour" may stand-by throughout the loading and may assist in unberthing. The vessel is equipped for fire-fighting.

If for any reason the tug is not available, berthing without tug assistance shall be at the Master's discretion. WAPET shall not be held liable for any costs or delays incurred due to a vessel awaiting a tug to berth.

A utility vessel or tug, whose hull is painted international orange, will deliver the Pilot/Mooring Master and if necessary, additional WAPET personnel, Agent, Customs and Cargo Surveyors to the tanker.

Tankers should be ready to receive 2 large metal boxes from the utility vessel, containing hose connection equipment, at the time the Pilot boards. These boxes will be lifted onboard the tanker using the starboard crane or derrick.

PORT FACILITIES: *Pilot/Mooring Master:* WAPET shall provide a Pilot/Mooring Master to:
(a) assist in piloting the tanker in and out of the moorings;
(b) advise on connecting and disconnecting the loading hose;
(c) advise on matters concerning the safety of the tanker and Terminal facilities.

Moorings: An 8 point mooring system consisting of 6 mooring buoys and 2 swamped moorings are installed.

Preventer Lines: Preventer lines are permanently connected to each mooring buoy by 4.0 m. of 56 mm. U2 stud link chain. The preventer lines and swamped mooring lines are constructed as follows:
(a) 76 m. of 52 mm. wire rope;
(b) 76 m. of 88 mm. polyester superline;
(c) 47 m. of 26 mm. FSWR; and
(d) 30 m. tail of 32 mm. polyester.

WAPET will provide stoppers for making fast the preventer lines and swamped mooring lines to the tanker's mooring bitts.

Crude Oil Handling Facilities – Onshore: The onshore storage and pumping facilities include:
(a) 5 × 200,000 bbl. (31,782 kilolitre) floating roof tanks;
(b) 2 (gas engine driven) centrifugal loading pumps rated to deliver up to 14,000 bbls. (2,200 cu.m.) per hour of Barrow Island Crude Oil with up to a maximum pressure of 100 p.s.i. at the tanker rail;
(c) one diesel driven stand-by loading pump;
(d) associated computer control and monitoring equipment;

Crude Oil Handling Facilities – Marine: The submarine pipeline is comprised of 2 sections:

(a) Linking the shorebase facilities on Barrow Island to the Marine Terminal is 9,875 m. of 510 mm. × 9 mm. steel pipe, the seaward end of which is marked with a spar buoy.

(b) At the seaward end of the pipeline described in (a) there is a flexible rubber tail/rail hose measuring 61 m. of 400 mm. and 9.0 m. of 300 mm. (which flexible tail/rail hose is referred to in these regulations as the "Loading Hose"). The tanker end of the loading hose is fitted with a 300 mm. (12 in.) locking butterfly valve. The seaward end of the loading hose is marked with a yellow conical buoy. The tanker's manifold shall be in compliance with the "Oil Companies International Marine Forum (OCIMF) Standards for Oil Tanker Manifolds and Associated Equipment", and its presentation flange shall be equipped with a 300 mm. (12 in.) ANSI Class 150 flange.

Fittings and Connections available at the Marine Terminal: WAPET will make available the following fittings to connect the loading hose to the tanker's manifold:

(a) 300 mm. to 300 mm. 150 USAS drain spool, with 25 n.p.t. and 15 n.p.t. spigots for drain line and pressure gauge, with a slipping flange at its outboard end to ease loading hose bolt alignment.

(b) Hanging-off connecting chain and specially modified "Blake Stopper" for use with loading hose.

(c) Nylon straps and associated slings to suspend loading hose from tanker's crane/derrick runner.

(d) Flange gaskets and grease.

BERTHING/UNBERTHING: *Tidal Berthing:* Berthing and unberthing at the Marine Terminal shall take place during ebb tide unless otherwise approved by the Pilot/Mooring Master.

Generally berthing will take place at high water or low water slack tide, to avoid the period of strongest tidal stream in the middle of the ebb tide. The direction of the tidal stream is approximately 245° on flood and 065° on ebb, and attains a rate 1.0 knots at Springs.

Unberthing: Unless otherwise directed by the Pilot/Mooring Master, the tanker shall unberth:

(a) during ebb tide after completion of loading; or

(b) after consultation with the Master when there are strong winds at the Terminal area or a strong wind warning has been issued for the area.

(c) in daylight, unless the tanker is fitted with approved searchlights.

Mooring Lines: The Master shall ensure that the mooring lines are run off the winch sufficiently to enable it to be passed to the mooring boat for running to the mooring buoys. To speed up the running of the first line, the mooring winch should be in single gear. On completion of mooring, the brake on each mooring winch should be securely screwed up.

Preventer Lines: The preventer lines and swamped mooring lines are to be hove onboard with a messenger of at least 24 mm. diameter, supplied by the Terminal, to the warping drum of mooring winch and then made fast to the bitts, being stoppered off, using "Chinese" of "West Country" method, with stoppers supplied by WAPET.

Propeller: The propeller shall not be turned over with the main engine while the loading hose is connected or after it has been disconnected without first notifying the Pilot/Mooring Master.

MOORING EQUIPMENT (TANKER): *Pilot/Mooring Master:* The Pilot/Mooring Master will board incoming tankers at the "Arrival Position". The Pilot/Mooring Master will advise the Master on approach to the berth, mooring and unmooring, connecting and disconnecting hoses, and all other operations within the Terminal area, including all manoeuvring of the tanker. The Master, or one of his qualified deck officers, must be on the bridge at all times while the tanker is being manoeuvred.

Mooring Vessels: WAPET will provide one or more mooring vessels and crew to handle the tanker's mooring lines to the buoys and bring the preventer lines and swamped mooring lines to the tanker, and to assist in berthing and unberthing. The mooring vessels will stand-by during loading and unmoor the tanker on completion.

The mooring vessels shall be under the direct control and supervision of the Pilot/Mooring Master. Any service and/or facilities provided by WAPET including, but not limited to, the services of a Pilot/Mooring Master, mooring vessels and their crews, or mooring and loading equipment, shall be at the tanker's sole risk.

Tanker Mooring Procedure:

(i) The Mooring is a conventional buoy mooring, with 6 mooring buoys and 2 swamped mooring lines. The swamped mooring lines are at the port and starboard shoulders. These swamped mooring lines lie on the sea bed when not in use, well clear of the manoeuvring area.

(ii) An open running moor is carried out, dropping the port anchor first, running ahead and paying out between 9 and 11 shackles (shots) of cable, depending on the tanker's size. When the tanker is in the correct position to drop the second anchor, the starboard anchor is let go. The port cable is put into gear, and the cable weighed as the tanker is manoeuvered astern into the berth, whilst the starboard anchor cable is paid out.

(iii) Whilst working the anchors, as much information as possible should be passed by the officer-in-charge of the foc'sle to the bridge to the Pilot/Mooring Master. The amount of cable paid out, the direction of the cable and the weight on the cable, are vital information for the Pilot/Mooring Master.

(iv) Berthing assistance may be rendered by 2 mooring vessels. As the tanker manoeuveres astern, the windward beam tanker mooring rope/wire, at the after end of the main deck, will be sent away to the windward buoy. The tanker's own mooring lines will be deployed as the weather dictates, and together with the tanker's anchors will be used to position the tanker in the berth.

(v) Once the tanker is in position and all the tanker's lines are fast, a mooring vessel will pick up the preventer lines in sequence and tow them alongside the tanker. The tanker should pass a heaving line to the mooring vessel to pick up the terminal messenger. The first part of the preventer line to come onboard is the preventer tail which is 39 m. × 32 mm. of polyester rope. This soft line is connected by a shackle to 48 m. of 26 mm. steel wire rope, which is in turn connected by a 32 mm. snotter to the 88 mm. polyester superline ("Superline"), which is made fast onboard.

(vi) The Superline should be hove as tight as possible, stoppered-off using the polyester stoppers supplied by WAPET and made fast to the tanker's bitts. It is important that the preventer lines and swamped mooring lines are made fast in this way. Winding onto the tanker's winches is not permitted.

(vii) The port and starboard swamped mooring lines will be the last lines to be picked up in a similar way to the preventer lines.

(viii) The tanker is not considered all fast in the berth until all the preventer lines and swamped mooring lines are made fast as required by the Pilot/Mooring Master.

(ix) Once the tanker is all fast, a mooring vessel will tow the hose marker buoy alongside, and the Pilot/Mooring Master will advise the tanker's crew on the connection of the loading hose. A responsible officer and sufficient members of the tanker's crew should be available at the manifold to carry out this operation.

(x) An emergency towing-off wire of adequate strength shall be made fast to a forward bollard on the tanker, and its eye run out and maintained at or about the waterline.

CARGO: *Barrow Island Crude Oil Properties:*

API Gravity	37.07°.
Density at 15°C in vacuum	0.8390 kg./lt.
Reid Vapour Pressure	4.6.
Pour Point	less than −54°C.
Flash Point (Abel)	less than −27°C.
Viscosity at 20°C	2.666 cSt.

The average load temperature of the crude oil will vary from Summer to Winter. As a guide, the minimum temperature during Winter (May to October) can be expected to be about 23°C. In the Summer (November to April) the maximum temperature can be expected to be about 32°C. Masters requiring more information about loading temperature should contact the Terminal.

LOADING: Throughout the loading operation, a responsible deck officer shall be in charge of operations, either on deck, or in the cargo control room. In addition, an efficient deck watch in constant contact with the cargo control room must be maintained at all times.

Loading rates can be reduced on request at any time. Except in an emergency, 10 minutes notice should be given to the Pilot when rate reduction is required. *Valves must not be closed against the oil flow without permission from the Terminal. Part or full closure of valves during loading is extremely dangerous, and can cause extensive damage to equipment. The Master will be held liable for any damage arising from such malpractice.*

Hose Connection:

1. Upon completion of the mooring operation, the loading hose will be connected to the tanker's starboard manifold. The hose connection will be made by the tanker's crew, who must be under the supervision of a responsible deck officer. The Pilot/Mooring Master will advise on the correct procedures to be adopted.
2. The crane/derrick rigged on the starboard side will be used to hoist the loading hose and assist in its connection to the starboard manifold. The crane/derrick will be used during loading to suspend and take the weight of the loading hose.
3. When the loading hose is hung-off at the tanker's rail, and lowered to manifold level, the blank flange on the end of the hose shall be removed and the loading hose bolted to the tanker's manifold. A pressure gauge is provided at the top of the spool and a drain line at the bottom of the spool.
4. The propeller shall not be turned over with the main engine while the loading hose is connected, or after it has been disconnected without first notifying the Pilot/Mooring Master.

Commencement Checks: The submarine pipeline is left full of crude oil between tanker loadings. When all hose connections have been made and approved, and safety checks outlined in the International Safety Guide for Oil tankers and Terminals have been completed, the butterfly valve on the loading hose shall be opened. The butterfly valve on the loading hose will be bolted in the open position before loading commences, and should be checked frequently during the course of loading.

Loading Commencement: The tanker's manifold shall be opened and crude oil shall be loaded by gravity. Once checks for flow have been completed on the tanker, the Pilot/Mooring Master will be advised to start the loading pumps.

WARNING Against Back Pressure: The submarine pipeline and loading hose may be damaged if subjected to sudden increases in pressure. Back pressure on the loading hose at the tanker's rails must not exceed 700 Kpa/100 p.s.i. To avoid damage to the loading equipment the tanker shall ensure that the following precautions are taken:

(a) The flow of crude oil shall not be shut off by closing the tanker's valve or the butterfly valve on the loading hose without the prior approval of the Pilot/Mooring Master;

(b) As many tanks as possible are to be open during loading. At least 2 tanks must be open while onshore pumps are operating at full speed. If the Master considers it necessary to load into one tank, or to otherwise reduce the loading rate for safety or its operations, he shall notify the Pilot/Mooring Master in sufficient time to reduce the loading rate;

(c) The Master shall advise the Pilot/Mooring Master when 250 cu.m. of crude oil are required to complete the loading, so that the onshore pumps can be eased down slowly and reduced to idle.

(d) The Master shall advise the Pilot/Mooring Master when 60 cu.m. of crude oil are required to complete loading, so that the onshore pumps can be stopped and loading completed by gravity.

(e) On completion of loading, the tanker's manifold valve is to be closed slowly to minimise the surge pressure of oil in the pipeline.

Availability of Deck Machinery: The Master shall ensure that the deck machinery is available for immediate use at any time throughout the loading operation.

Test Calls During Loading: In order to check radio communcations between the tanker and the onshore control room, the tanker shall call Barrow Island Terminal every hour at 15 minutes past the hour and advise the Terminal of the previous hour's loading rate, and total quantity loaded.

Barrow Terminal shall call the tanker every hour at 45 minutes past the hour.

Should either of these calls fail to establish communications between the tanker and the Terminal, after taking reasonable steps to re-establish communications, the Terminal will shut down loading until communications are re-established.

Suspension of Loading during Strong Winds: During periods of strong winds, the Pilot/Mooring Master may advise the tanker's Master to discontinue loading and disconnect the loading hose.

The loading hose may be hung-off ready to slip or be laid down.

Hose Disconnection:

1. On completion of loading by gravity, the tanker's manifold valve shall be closed slowly. If the manifold valve is of the type that cannot be closed slowly, the flow of oil shall be stopped by slowly closing a proportional tank valve. The back pressure at the rail will be monitored during this operation. Once the tanker's proportional valve and/or manifold has been closed, and it is confirmed that all oil flow has ceased, the hose end butterfly valve will be closed. Finally the Pilot/Mooring Master will instruct the Terminal to close the sealine valve.
2. The tanker personnel shall make every effort to drain the manifold outboard of the manifold valve between the manifold valve and loading hose end butterfly valve. A drain cock is provided in the spool attached to the manifold for this purpose.
3. When the hose is disconnected from the manifold, sufficient drip trays must be available to contain any oil remaining in the spool pieces and reducer and the blind flange will be replaced on the hose. The weight of the hose is taken on the blind pulling flange and the hose lifted above the deck. The hose is raised to sufficient height to enable the weight to be taken off the hanging-off chain. The hanging-off chain is then slipped and secured to the support chain. The hose is lowered to the rail and hung-off by the slipping chain to the Blake Slip. The crane hook is removed from the blind pulling flange. The hose buoy is then slipped and recovered by the mooring vessel. The Pilot/Mooring Master will instruct the mooring vessel to commence towing the hose buoy, and when the weight comes on the hose buoy chain, the order will be given to slip the hose. The handle of the Blake Slip is pulled and the hose falls into the sea. The mooring vessel tows the hose buoy to its resting position.

Cargo Documentation and Inspection:

1. Documents such as the Bill of Lading, Quality Certificate, Quantity Certificate, Time Loading Report, Certificate of Origin, Cargo Manifest and Master's Receipt for Documents/Samples, etc., will be prepared at the Marine Terminal. When the tanker has been loaded, the documents will be completed onboard the tanker for the Master's signature.
2. Immediately upon completion of loading, the official Bill of Lading quantity will be relayed to the Pilot/Mooring Master by radio. In the event of a dispute, the tanker will be requested to recheck the measurement and calculations of the quantity, but the Pilot/Mooring Master will not witness such measurement and calculations. After both tanker and Terminal figures have been verified, should an appreciable difference still exist, receipt of a Letter of Protest will be acknowledged by the Pilot/Mooring Master.
3. Letters of Protest, if any, should be handed to the Pilot/Mooring Master for onward delivery to WAPET. The Mooring Master will acknowledge receipt of the Letter of Protest only, and is not authorised to approve such letter or otherwise.
4. From time to time, Owners, Charterers, Consignees, or other interested parties, may appoint third party inspectors to survey the loading operation on their behalf. Any delays caused by such inspectors shall be considered delays caused by the tanker.
5. The Pilot/Mooring Master shall keep an Operations Log of the times of all operations, delays, quantities loaded, ballast discharged and arrival and departure drafts.
6. Prior to the disembarkation of the Pilot/Mooring Master, the tanker's Master shall sight and verify the times and details contained in the Operations Log, sign the log in the space provided and affix the tanker's official stamp thereto.
7. Should the Master so require, the Pilot/Mooring Master will sight, verify and sign the tanker's Record of Operations prior to his disembarkation.

BALLAST: There are no facilities at the Marine Terminal to receive ballast from tankers.

DEBALLASTING: The tanker shall wherever possible arrive at the port with clean segregated ballast which can be discharged overboard during loading.

Ballast Operations:

1. As there are no ballast or slop reception facilities at the Marine Terminal, all tankers must arrive with clean ballast suitable for discharging directly to sea in accordance with the standards set by the International Conventions. Tankers arriving with ballast unsuitable for discharge to sea will be rejected for loading. Any tanker rejected because of contaminated ballast or sea pollution will automatically invalidate her Notice of Readiness and will lose any priority of loading. Tankers discharging contaminated ballast overboard shall be subject to the anti-pollution laws of Australia. Penalties for pollution are severe.
2. Tankers arriving at the Barrow Marine Terminal should have sufficient ballast to ensure safe handling and manoeuverability in the prevailing weather and sea conditions and in accordance with good seamanship practice.
3. Tankers should have the ability to deballast concurrently with loading operations and any crossovers between cargo and ballast system must be blanked.
4. Where a tanker arrives with clean ballast, which is not part of a segregated ballast system and wishes to discharge such ballast over the side, the following conditions shall be met:
   (a) The tanker must be operating with dedicated clean ballast tanks in accordance with the provisions of Regulation 13(9) or (10) of the MARPOL Annex 1992 revision.
   (b) The tanker must comply with MARPOL Regulation 13A, 1992 revision.
   (c) When operating the oil content monitor required by MARPOL Regulation 13A, the monitor record shall be kept and the record given to the Pilot/Mooring Master for inclusion with the tanker's in port documents.
   (d) The discharge ballast from dedicated clean ballast tanks (CBT) will be carried out in daylight, so that the quality of the ballast being discharged to the sea can be constantly observed.
   (e) If possible, an independent inspector shall inspect the ballast tanks at the discharge port where the ballast is taken on and certify that the ballast is clean.
   (f) Prior to the discharge of the ballast, an independent inspector shall inspect the tanks, or tanks containing the ballast and certify that it is clean and take samples of the ballast, one sample to be retained on board and the other to be kept by WAPET.
   (g) The Master of the tanker shall make a declaration that the lines used for the discharge of such ballast are clean and that the blanks separating the discharge line and the crude oil lines and tanks are tight and free from leaks.
   (h) Where this ballast forms part of the ballast required to keep the tanker at the required safe arrival draft, it should be understood that it will not be discharged until an equivalent amount of crude oil has been loaded to maintain a safe draft as required by these regulations.
5. The attention of Masters, Owners and Shippers using the Terminal, is respectfully drawn to the Australian Government Guidelines with respect to the discharge of any ballast.

SAFETY/POLLUTION:

Safety:

(a) Tankers will not be accepted which could possibly contravene the International Convention for the Safety of Life at Sea 1974 as amended by the 1978 Solas Protocol.

(b) The tanker shall be in a state of readiness at all times to leave the moorings.

Pollution:

(a) Tankers shall comply with the relevant provisions of: the International Convention for the Prevention of Pollution from Ships as defined as the "Convention" in the Pollution of Waters by Oil and Noxious Substances Act 1978 of the State of Western Australia and the Protection of the Sea (Prevention of Pollution from Ships) 1983 of the Commonwealth; those Acts; and other legislation of the State or Commonwealth pertaining to pollution.

(b) The dumping of rubbish overboard at the port is prohibited.

GARBAGE DISPOSAL: No facilities available.

WASTE OIL DISPOSAL: No facilities available.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar (A.$).

GENERAL: *Port Facilities:* Mail forwarded to Barrow Island for the tanker or its crew will be delivered by the Pilot/Mooring Master. Mailing address is "Name of tanker, Barrow Island, Western Australia 6712".

None of the following services are available at the port:

(a) Customs or Quarantine;

(b) ship's agency, repairs, surveying, bunkers or potable water;

(c) medical, consular facilities, telephone, accommodation or laundry;

If a tanker requires any of the above services, most can be obtained at the port of Dampier. WAPET's prior approval should be obtained if the attendance of any person to the tanker requires the services of the mooring vessel.

Discretionary Acceptance: A tanker will be accepted for loading at the Port provided it conforms to the minimum requirements described in these Regulations. WAPET may at its discretion refuse to moor or load any tanker which does not conform to the requirements or is deficient in any manner whatsoever.

Responsibility of Owner: The onus is exclusively on the Master or Owner to ensure that the tanker is seaworthy and that all equipment is and remains in good working order. Failure by WAPET to reject any tanker not meeting the requirements will not relieve the Owner of liability.

Cathodic Protection: Tankers equipped with impressed current cathodic protection systems shall ensure the system is switched off prior to approaching the moorings until the tanker is unberthed. The Master will be required to sign a declaration to the effect that the impressed current cathodic protection system is turned off before the tanker is allowed to berth.

AUTHORITY: West Australian Petroleum Pty. Limited, 233 Adelaide Terrace, Perth. Postal Address: Box S 1580 P.O., Perth, WA 6001, Australia. *Tel:* (09) 263 6000. *Cables:* Wapet. *FAX:* (09) 263 6699. *Contact:* J.C. Wright, Operations Superintendent. Captain C.J. Sutton, Marine Superintendent (Tel: (09) 263-6299 (after hours) or 018-906-744 (mobile).

Barrow Island Tanker Terminal: *Tel:* 091-843700 (hours 0700 – 1630) *Telex:* AA 99125. *FAX:* (091) 843799. *Contact:* Captain W.E. Deacon (Tel: (09) 310-4875), Pilot/Mooring Master.

BOTANY BAY, N.S.W.: 34.00 S. 151.14 E. (See Plan)

DOCUMENTS:
2 Crew Lists (Form M. & S. II).
Stores List (Form 42 A).
Personal Effects List (Form 5).
2 copies Health Report (Form A Q360).
3 copies Ports of Call List (Form C & E 886).

APPROACHES: Channel to Kurnell berths and swinging basin 12.2 m. minimum depth. Channel to port (Port Botany) 213 m. wide and has a minimum depth of 15.0 m. The swinging basin at Brotherson Dock is dredged to 14.6 m.

PILOTAGE: Compulsory. Ordered by Agent basis Master's ETA. Pilot boards outside Botany Bay Heads in position Lat. 34° 01.1′ S., Long. 151° 17.5′ E. Vessels waiting for Pilot not to proceed West of Long. 151° 15′ E. Pilot vessels fitted with VHF for communication with other ships. Watch maintained on Channel 13 while at sea and messages conducted on Channel 6.

RESTRICTIONS: Tankers not berthed at Kurnell after sunset. Mooring normally effected 2 hours before HW at Kurnell No. 3.

MAX. SIZE:

Berth	*Max. Length*	*Max. Draft*	*Remarks*
Kurnell No. 1	183 m.	8.8 m.	
" 2	200 m.	10.7 m.	
" 3	254 m.	11.6 m.	
Bulk Liquids Berth	200 m.	14.0 m.	Max. D.W. 45,000 tonnes

HEALTH: See "Health" before first port.

RADIO: Sydney Radio.

VHF: A continuous watch is kept by the Port Operations and Communications Centre on Channels 16 and 12 (call sign 'Sydney Maritime') and all traffic movements and approval for entry or departure are controlled from the Centre on Channel 13 (call sign 'Sydney Harbour Control').

All vessels proceeding to the Port of Botany Bay are required to advise 'Sydney Maritime' by VHF or 'Marboard' at least 4 hours and again 2 hours prior to their estimated time of arrival at the Port.

All vessels (with exempt Masters only) preparing to proceed to sea are required to call "Harbour Control" on Channel 13 at least one hour prior to departure for permission to proceed.

Also see "Sydney".

TUGS: Three tugs permanently stationed at Botany Bay.

CONTAINER FACILITIES: Container Terminals Australia Ltd (CTAL):

Street Address: 42 Friendship Road, Matraville, Sydney, NSW 2036. Tel: 61 2 666 4144. Fax: 61 2 666 5108.

Summary: Located on the Southern side of Brotherson Dock, CTAL has a capacity to handle more than 500,000 TEUs per year.

CTAL is owned by a consortium of shipping companies, including P&O Containers Pty.Ltd., Nippon Yusen Kaisha Ltd (NYK), Mitsui, OSK Lines (MOL) and Navix Lines Ltd.

CTAL operates 24 hours a day, 7 days a week.

Area: Total terminal area 38 ha.

Berthing Facilities: Total wharf length 936 m. Depth range 13.9 m. – 14.8 m.

Storage: Includes reefer container facilities for 216 integral and 108 non-integral units.

Equipment: Includes 4 twin-lift and 2 high-speed single lift quay cranes, each with a spreader capacity of 40 tonnes and heavy lift capacity of up to 84 tonnes. CTAL also has a modern fleet of forklift trucks, yard tractors, 'bathtub' chassis and 20 rubber tyred gantries (RTGs). CTAL is fully computerised, using a Computerised Vehicle Booking System (VBS) and the Navis Ship/Yard Planning System.

Access: Road access via Friendship Road. On-site transport facilities include 80 truck parking slots and rail sidings linked to the Freight Rail and National Rail Corporation systems.

Patrick – The Australian Stevedore:

Street Address: Penrhyn Road, Port Botany, Sydney, NSW 2036. Tel: 61 2 666 0888. Fax: 61 2 666 3704.

Summary: Located on the Northern side of Brotherson Dock, Patrick Stevedores have a capacity of more than 500,000 TEUs per year. Patrick Stevedores operate 24 hours a day, 7 days a week.

Area: Total terminal area 44.2 ha.

Berthing Facilities: Total wharf length is 1,000 m. with a stern Ro/Ro ramp located at Berth 3. Depth range 12.6 m. – 14.8 m. Maximum draft 15.2 m.

Equipment: Includes 5 single-lift quay cranes, each with a capacity of 35 tonnes, with 3 also having a heavy lift capacity of 80 tonnes.

Storage: Two sheds located near Berth 3 with an area of 6,400 sq.m. and 2,500 sq.m. Reefer container storage includes 568 integral outlets and 216 porthole outlets.

Equipment: Includes 12 rubber tyred gantries (RTGs), 2 rail mounted transtainers and a modern fleet of forklifts, prime movers and trailers.

Transport/Access: Road access via Penrhyn Road. On-site rail includes 2×600 m. sidings linked to the Freight Rail and National Rail Corporation systems.

TANKERS: See "Berthing" and "Developments".

Kurnell Nos. 1 & 2: Operators: Australian Petroleum Pty.Ltd. Finger pier with 2 berths; No. 1 – Eastside. No. 2 – Westside. Crude 1×26 in. 1×18 in. lines – 8 in. hoses. Fuel 1×24 in. 1×12 in. lines – 8 in. hoses. White 6 in. – 16 in. Bunkers and FW ex-wharf. Slop facilities up to 8,200 tons. Berthing and unberthing at all tides, berthing during daylight hours only, can unberth after dark. Vessels restricted by length or deep draft restricted to movement one hour either side of tide.

All vessels turn prior to berthing and are always heading out. At Berth No. 1 port side alongside, Berth No. 2 starboard side alongside.

Kurnell No. 3 Berth: Operators: Australian Petroleum Pty.Ltd. Vessel moors using both anchors forward and ropes to 5 buoys and 7 swamp moorings, semi-circle (astern). Hoses connected midships – 2×12 in. to submarine line (crude). Bunkers, fuel and diesel.

After embarking the Pilot, vessel proceeds on the main entrance leads, (312°), until abeam of Bumbora, or entering the arc of visibility of Bare Island Light, then turn to port on the leading beacons line 271° 22′. In the meanwhile, the Sydney Ports Corporation Superintendent has joined the vessel and taken up station on the forecastle. The vessel continues on the leading beacons line until the drop marks ashore are in line and then drops starboard anchor and turns to starboard to drop port anchor. After dropping the second anchor, the vessel goes astern (with the aid of tugs) until the hose pick-up buoys are abeam of the vessel's starboard manifold. When finishing up 8 shackles of chain will be in the water, so the vessel has to be equipped with minimum 12 shackles of chain on both anchors. The anchoring procedures vary with the individual Pilot. Some Pilots (now that a larger area has been dredged) prefer to drop first the port anchor and then starboard, depending on wind speed and direction.

Ships initially connect their own ropes to the mooring buoys and later pick up the preventer wires. Weather conditions may warrant the connection of a second ship's rope to the buoys.

Vessels moor with their anchors at 45° angle.

Usually 3 tugs are being used for vessels berthing and 2 tugs for vessels unberthing. Ship's ropes are being used for towing ropes.

An accommodation ladder should be rigged on the port side and pilot ladders on both sides.

The sequence of letting go the mooring ropes and heaving up the anchors depends on the wind direction.

Bulk Liquids Berth: Berthing and unberthing undertaken at all hours and at all stages of the tide. Vessels over 215 m. LOA berthed and unberthed in daylight hours only.

Vessels usually turn prior to berthing and go port side alongside heading out.

The Bulk Liquids Berth at Port Botany services the discharge requirements of the petro-chemical industry in New South Wales, and is the busiest of Sydney's 'common user' berths. Bulk liquid petrochemical cargoes are piped to nearby industry storage facilities in an adjacent tank farm complex which is operated by private companies, including PD Van Ommeren, Terminals Pty.Ltd., Boral Energy Pty.Ltd. and ICI Australia Ltd.

Location: This facility is located near the entrance to Brotherson Dock and comprises a piled approach roadway and pipe support structure with "T" head with mooring and berthing dolphins.

Bulk Liquids Berth Users:

PD Van Ommeren, 49 Friendship Road, Matraville, Sydney, NSW 2036. Tel: 61 2 666 4455. Fax: 61 2 694 1182.

Summary: Providing storage and handling facilities for liquid chemical and petroleum products, PD Van Ommeren is a joint venture tank terminal project between Powell Duffryn Terminals Pty.Ltd. (PD) and Van Ommeren Tank Terminals Australia Pty.Ltd. The joint venture includes PD's existing chemical and storage facility, and will mean the development of a new petroleum facility which is expected to be commissioned in 1996.

Site A Facilities (Existing Chemical Terminal):
Area: 4.5 ha.
Product Range: Easy and especially chemicals, vegetable oils and low pressure gases.
Capacity: 36,000 cu.m. with 70 tanks ranging from 30 – 2,000 cu.m.
Type of Tanks: Stainless and mild steel, including various linings.
Services: Heating, blending, nitrogen blanketing, vapour emission control, road tanker, Iso-container, IBC filling, drumming, weighbridge, pipeline connection to Site B.

Site B Facilities (Future Petroleum Terminal):
Area: 6.0 ha.
Product Range: Gasoline, distillate, jet fuel.
Capacity: 94,600 cu.m. (Phase 1) with 12 tanks ranging from 1,500 cu.m. – 16,000 cu.m.
Type of Tanks: Mild steel with aluminium internal floater and dome.
Services: Blending, vapour emission control, fully automated truck loading.
Operational: 1996.

Boral Gas (NSW) Pty Ltd, 47 Friendship Road, Port Botany, Sydney, NSW 2036. Tel: 61 2 316 3800. Fax: 61 2 316 4614.

Summary: The Boral Port Botany LPG Terminal has a (pressure) storage capacity of 4,500 tonnes LPG in 18 sand mounded tanks. The Terminal is the major supplier of high purity aerosol grade LPG propellant to the Sydney market and maintains dedicated un-odourised equipment and trucks for this market. On-site equipment enables the removal of some trace impurities from the LPG.

Area: Total Terminal area 3.78 ha.

Berthing Facilities: Operates a 6 in. marine loading arm at the Port Botany Bulk Liquids Berth.
Storage: Includes 18 sand mounded LPG storage tanks of 540 cu.m. each, giving total storage of approximately 4,500 tonnes LPG.
Equipment: Fleet of 10 LPG delivery trucks ranging from 2 – 22 tonnes capacity. Loading bays for 3 LPG trucks.
Transport/Access: Road access for outgoing product.

ICI Australia Ltd., 39 Friendship Road, Port Botany, Sydney, NSW 2036. Tel: 61 2 316 8612.
Summary: ICI operates an import terminal for propane and butane. Facilities exist for the import of ethylene and LPG, as well as ethylene export. Purging facilities are also available.
Area: 7.25 ha.
Storage: 1×8,000 cu.m. refrigerated ethylene storage tank. 1×14,000 cu.m. refrigerated propane storage tank. 1×14,000 cu.m. refrigerated butane storage tank.
Access: Pipeline distribution system to ICI Petrochemical Plant and LPG Distribution Terminal.
Berthing Facilities: Operates a 6 in. marine loading arm at the Port Botany Bulk Liquids Berth.

Terminals Pty.Ltd., 45 Friendship Road, Port Botany, Sydney, NSW 2036. Tel: 61 2 316 9743. Fax: 61 2 316 9742.
Summary: Terminals Pty.Ltd. provides bulk liquid storage, handling and repackaging services and import and export shipping of non-hazardous liquid chemicals, oils and tallows.
Storage: 64 tanks with a capacity for 47,000 cu.m. The tanks range in size from 200 cu.m. – 800 cu.m. Licensed Bond Warehouse.
Berthing Facilities: 6×150 mm. stainless steel multi-purpose docklines capable of servicing any of the tanks.
Transport/Access: Good road access, with road tanker loading or discharge capabilities.

Also see "Shipmaster's Report" dated August 1995.

BALLAST: *Tank Cleaning and Dirty Ballast Facilities:* APPL Berths No. 1 and 2: Maximum quantity acceptable 8,255 tons. Rate 1,000 t.p.h.

Approval is required to discharge ballast water within the port.

Severe penalties will be imposed by the Corporation for any infringement of Harbour Regulations.

DENSITY: 1025.

FRESH WATER: Available at all berths, rate 30 t.p.h.

FUEL: Marine fuel and diesel oil available at Kurnell Berths No. 1, 2 and 3, and at Brotherson Dock by barge (450 tons), or road tanker.

FIRE PRECAUTIONS: Normal restrictions.

REPAIRS: Most repairs. Tankers are not allowed to be immobilised. Approval is required for immobilisation, and applications are made through the work permit screen on the harbour management system.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Available.

AIRPORT: 6 km. – regular airlines.

TIME: See "General" before first port.

HOLIDAYS: Container Terminals work 360 days per year.

POLICE/AMBULANCE/FIRE: Tel: 000.

SERVICES: Compass adjusting only.

IDENTIFICATION CARDS: See "Melbourne".

DELAYS: Normal only.

GENERAL: *Weather:* The area is subject to severe squalls during Summer months. These line squalls can be seen approaching from the South and their passage is confirmed by strong S.-S.E. winds. Winter storms are caused by the passage of cold fronts moving up the coast from the South. Winds shift rapidly from N.-N.W. to S.W. then S. to S.E. increasing in force and building up swell from S.E.

Propellers: The turning of propellers while a vessel is secured to a berth is not permitted unless permission is granted by the Harbour Master.

DEVELOPMENTS: A second Bulk Liquids Berth is planned to the South of the existing Bulk Liquids Berth (See "Tankers" – PD Van Ommeren – Site B).

SHIPMASTER'S REPORT: August 1995.

Charts: AUS. No. 197, 198 and 199.

Approach: From the North, Port Jackson/Sydney area is prominent.

Do not get Potter Point, the Northern entrance to Bate Bay, which is to the South of Botany Bay, confused with Cape Banks, the Northern entrance to Botany Bay.

Anchorage: Only in Bate Bay to South of Botany Bay, with Point Hacking bearing 220°×8 cables. Beware of Osborn shoal in centre of Bay. This anchorage can be dangerous in poor weather (this ship's first-hand knowledge). If there is any sign of wind increasing in strength, pick-up anchor and steam outside.

Vessel cannot anchor in Botany Bay, due to berthing movements and the airport.

Ships generally have to drift off if awaiting berthing.

Pilots: VHF as per ALRS and boarding as per AUS. No. 198. Pilot often boards further out, about 4 miles from the entrance, from a fast cutter.

Pilot is very partiuclar about the pilot ladder and will give deficiency report for slightest defect.

Pilotage available throughout 24 hours.

Steaming time to Bulk Liquids Berth is about 45 minutes.

Channel: From Cape Banks to berth is 3 miles, minimum depth 15.0 m. at MLW.

Tugs: Three tugs of 35 tons bollard pull are based at Botany Bay. Tugs' lines are used. Normally 2 tugs are used and join vessel off breakwater.

Berths: Multi-User Bulk Liquid Berth: Berth is heavily utilised and under frequent repair. The berth is situated at the Southern entrance to Brotherson Container Dock (concrete construction).

It is the only refined product liquid berth in Botany/Sydney area (Crude and raw products berths and moorings on S.E. side of Botany Bay).

It is a tanker 'T' type jetty set off about 90 m. from the shore line. Fender length 95 m. Depth 14.5 m. at datum.

Vessels always berth head out port side alongside. Forward moorings go to dolphin connected by catwalk to main jetty. Stern moorings to corner of container wharf. 4,2 each end by line boat.

Fresh water available and is included in port dues, so top-up.

Accommodation ladder can be landed.

Store trucks not allowed on jetty roadway to shore. But LPG operated forklift can be supplied by Boral to take pallet stores from parking bay to ship's side.

N.E. corner knuckle has poor fendering.

It is proposed to develop a second liquids berth just South of the existing berth.

Terminal: Basically two parcels of LPG handled:

Refrigerated – Receivers were Elgas and Gogas (into ICI Terminal).

Pressured – Receivers were Boral.

Refrigerated Chicksan is the Northern arm (or stern arm port side to) and ambient the Southern arm. Distance apart 6.0 m.

Refrigerated 6 in. × ASA 300. Ambient 6 in. × ASA 300 connections.

The refrigerated arm has a height envelope restriction:

Distance above W/L – 4.0 m. to 11.7 m.
Distance to ship's side – 0.5 m. to 5.0 m.

Vessel has to shift along berth 6.0 m. (about 30 minutes) between parcels. Normally ambient (Boral) discharged first.

ICI storage (refrigerated):

1×7,500 tonnes Propane.
1×7,600 tonnes Butane.
1×4,200 tonnes Ethylene.

ICI pumping 300 tonnes/hr. at 5.0 Bar back pressure.

Boral storage: 18×500 cu.m. pressure tanks.

Pressure pumping rate 160 tonnes/hr. at 9 Bar back pressure, temperature +4°C.

The distance from berth to both tank storage installations is about 0.5 miles.

Sydney Ports Corporation who own and operate the berth are very safety conscious. They require ship's ESD to be tested before commencement of discharge. Ship's fire wallet to go ashore. Frequent check rounds are made. Fire hose connected from shore to ship via international connection. It is not to be pressurised except in an emergency, otherwise berth alarm sounds and valves shut down.

Other liquids are also handled through flexi-hoses, such as chemicals, fats and fuels.

The land on peninsular South of the berth is gradually being in-filled for further tank farm installations.

Customs: If first port of entry, Inward papers (on Australian forms) to be submitted via Agent by Fax at least 7 days in advance. Failure to do so might delay vessel.

The forms include Crew Report List (Alphabetical order), Ship's Inward Cargo Report, Quarantine Declaration, Report of Ship's Stores, Ports of Call List, Ship's Report of Arrival.

On arrival, Crew Effects Declaration (Alphabetical order) is also required. Customs are generally fair and reasonable.

If sailing coastwise, Customs then issue 'Rider Envelope' with all relevant documents, plus Clearance to next port.

Customs also act for Immigration and sign crew on and off.

Telephone: Pay/card telephone ashore in watchman's cabin at end of jetty.

Airport: Sydney-Kingsford Smith International about 4 miles away.

Chandler: East Coast – Tel: 02 317 2199. Fax: 02 317 2342. Telex: 22503.

Sealanes – Tel: 02 666 4533. Fax: 02 666 6581. Telex: 120925.

Bunkers/Lube Oil: By barge. Vessels cannot take on whilst cargo Chicksan/hose is connected, basically due to the fact that the one and only barge is not rated as intrinsically safe by the Ports Corporation.

AUTHORITY: Sydney Ports Corporation, P.O.Box 25, Miller's Point, NSW 2000, Australia. *Tel:* (02) 364 2999. *FAX:* (02) 364 2812. *Contact:* Shipping Manager.

AGENT: See "Sydney".

BOWEN, Queensland: 20.01 S. 148.15 E. **(See Plan)**

The channel was sounded in 1988 and a least depth of 7.0 m. was found. The depth in the swinging basin was 5.5 m.

The seaward end of Wharf No. 1/2 has been demolished.

The coal loading facility on Wharf No. 3 has been removed.

AUTHORITY: Department of Transport, Division of Harbours and Marine, P.O.Box 889, Bowen, Queensland 4805. *Tel:* (077) 861933. *Telex:* 47435. *FAX:* (077) 862719. *Contact:* Captain R.C.Johnson, Regional Harbour Master (Townsville). Tel: (077) 715135).

BRISBANE, Queensland (including Fisherman Islands, Hamilton, Pinkenba): 27.27 S. 153.04 E. (See Plan)

PORT LIMITS: A vessel is considered an "arrived vessel" when it is at the Pilot boarding grounds 3 nautical miles S.E. of Point Cartwright.

DOCUMENTS: See "Melbourne" and Radio Officer's Report.

APPROACHES: Good navigation conditions in Moreton Bay except in exceptionally heavy weather in N.W. channel. Minimum depth in N.W. channel 13.5 m., in Bar Cutting 13.0 m., in Swinging Basin at Luggage Point 13.0 m., to Hamilton 9.1 m. (all LWOST). Dredged channels in Moreton Bay minimum 300 m. width. River Cuttings 120 m. width, Bar Cutting 180 m. width.

In Moreton Bay and Brisbane River the mean spring rise is 2.13 m. above LWST and mean neap rise is 1.74 m. above LWST. The lowest neap tide 1.22 m. above LWST and maximum spring tide 2.7 m. above LWST. The visibility is generally good except in cyclonic weather when heavy rain.

PILOTAGE: Notify Agent approximately 1 week in advance. Confirm ETA to Duty Harbour Master 24 hours before arrival at pilotage ground, plus max. draft. Master of vessel to radio ETA Pilot boarding ground 8 hours before arrival. Messages should be sent to Telex: Harcal AA 42215 or Fax: +61-7-3895-1311.

Contact "Brisbane Harbour" by VHF Channel 16 when within range. Pilot boards S.E. of Cartwright Point in position, Lat. 26° 43′ S., Long. 153° 10.6′ E. Pilot vessel white hull with words "Pilots" in black letters. Orange superstructure. Place ladder about 2.0 m. from water.

Pilot ground is 44 miles from entrance to river. River then navigable to ocean going vessels for 14 miles from the mouth.

Same Pilot remains to berth vessel. Pilotage time about 4 hours.

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

RESTRICTIONS: Berthing times dependent on vessel's draft in relation to state of tide.

MAX. SIZE: Waterline length in river 250 m. at 9.7 m. draft. Draft at HWOST for tankers 12.2 m.; for cargo vessels 9.7 m. and bulk carriers 13.2 m. downstream of Pelican Bank (Fisherman Islands).

HEALTH: See "Melbourne". Doctor boards at river entrance or at berth. Available 24 hours per day.

RADIO: Most traffic channelled through VIB, coastal radio station Brisbane. VHF Channel 16, 156.8 MHz.

RADAR: Continual watch kept at Harbour Control on relay from Caloundra Head and Redcliffe Peninsular Radar Stations.

TUGS: Five tugs available, 2×62 tonnes, 1×27 tonnes and 3×42 tonnes bollard pull. Tugs are privately owned. Tugs join vessel approaching the berth, or as may be required elsewhere in the river. Line boats available.

Fisherman Island No. 2	1	35 (Gantry), 60 (Heavy Lift)
Fisherman Island No. 3	1	30 (Gantry), 80 (Heavy Lift)
Fisherman Islands No. 4 & 5	2	36 (Gantry), 64 (Heavy Lift)
	1	45 (Gantry), 60 (Heavy Lift)

BULK LOADING FACILITIES: *Hamilton Wharf Berth No. 4:* Gross handling rate for loader is up to 1,800 t.p.h. Movable conveyor system services 110 m. of wharf. Mineral Sand – Daily rate 7,000/8,000 tonnes.

Pinkenba: Single shiploader. Loading rate for grain 1,300 t.p.h. Silica sand and other dry bulk cargoes loaded via grain shiploader.

Coal Wharf: Single shiploader, loading rate for coal up to 3,300 t.p.h. Clinker unloading rate up to 1,800 tonnes per hour.

Grain Wharf: Single shiploader, loading rate up to 2,500 t.p.h. Storage capacity 60,000 tonnes.

Woodchip Facility exports bulk pinewood chips via grain loader and wharf. Storage capacity 80,000 tonnes. Loading rate up to 1,000 t.p.h.

BRIDGES: Gateway Bridge in Quarries Reach. Clearance 57.4 m. at highest tide. Vessels with structures exceeding 45 m. above waterline must obtain approval of Harbour Master to pass under bridge.

STEVEDORES: Ample labour available for all cargo working.

Normal capacity per gang per shift: 60 tons break bulk; 75 tons palletised cargo.

TANKERS: Port and Harbour Regulations stipulate that tankers use large coir/nylon springs for attaching vessel's fore and aft springs to the mooring bollards on the wharves except where tension winches are fitted. The springs are supplied by wharf owners.

Moorings should consist of at least 4 parts out each end in addition to 2 back springs both fore and aft. If these lines are not tended and taut at all times the vessel cannot be considered to be securely moored. In addition to the above 2 lines have to be made fast: 1 fore-line from the main deck and 1 aft-line from the main deck.

A rat guard is to be properly fixed to each mooring line and where it is not possible to place a guard on the forward or after spring lines, a piece of tarred rag or hessian should be attached.

A Radar Station at Brisbane Harbour Control, Whyte Island, at the mouth of the Brisbane River, conducts a 24 hours, all weather watching brief over all ships entering or leaving the port of Brisbane.

The load-line and freeboard of tankers arriving with full cargo may be inspected by the Australian Maritime Safety Authority.

All officials or crew wishing to go to or leave the B.P. Terminal at Luggage Point must do so by launch. Masters should contact the local Agents to arrange.

Ampol Refinery, Fisherman Islands: Dolphin berth. Berth length 260 m., depth 13.0 m. Grades handled:

Crude Oil discharge, 4×10 in., 3,353 m., 150 p.s.i./3,500 cu.m.p.h. max.

Fuel Oil, Diesel Oil, Gas Oil, loading 4×8 in., 3,353 m., 290 cu.m.p.h. max.

No dirty ballast facility.

Berthing is usually starboard side alongside (so first turning in turning basin). Depending on the tide, port side alongside is also a possiblity.

B.P. Refinery, Luggage Point: Dolphin berth. Berth length 274 m., depth 13.5 m. LWOST. Grades handled:

Crude Oil discharge 2×12 in., 1,402 m., 150 p.s.i./3,500 cu.m.p.h. max.

Fuel Oil, Diesel Oil, loading 2×12 in., 1,402 m., 300 cu.m.p.h. max.

No dirty ballast facility.

Port side alongside.

Ampol Products Wharf, Lytton: T-head and Dolphins. Berth length 182 m., depth 9.8 m. LWOST. Grades loaded:

Fuel Oil, 1×8 in., 1,676 m., 200 cu.m.p.h. max.

Gas Oil, 3×8 in., 762 m., 1,500 cu.m.p.h. max.

Ballast, 2×8 in., 1,676 m., 1,000 cu.m.p.h. max.

Kerosene, 2×8 in., 1,676 m., 1,000 cu.m.p.h. max.

Diesel Oil, 1×8 in., 1,676 m., 350 cu.m.p.h. max.

Dirty Ballast: 2×8 in., 762 m., max. 6,000 tons, max. rate 1,000 cu.m.p.h.

Starboard side alongside.

B.P. Products, Bulwer Island: T-head and Dolphins. Berth length 225 m., depth 11.0 m. LWOST. Grades loaded:

All products: Loading 1×8 in., 2,764 m., 550 cu.m.p.h. max. Discharge 1×8 in., 183 m., 150 p.s.i., 1,000 cu.m.p.h. max.

LPG: Loading 1×6 in., 671 m., 45 cu.m.p.h. max.

Dirty Ballast: 1×8 in., 90 m., max. 4,460 tons, max. rate 1,000 cu.m.p.h. max. No ballast with chemicals acceptable.

Either side alongside.

Shell, Pinkenba: T-head and Dolphins. Berth length 220 m., depth 11.0 m. LWOST. Grades discharged:

Fuel Oil, Diesel Oil, Bitumen, 1×8 in., 427 m., 150 p.s.i., 1,000 cu.m.p.h. max.

Gas Oil, Ballast, Kerosene, Chemicals, 1×8 in., 427 m., 150 p.s.i., 850 cu.m.p.h. max.

Lub Oils, 1×8 in., 732 m., 150 p.s.i., 320 cu.m.p.h. max.

No dirty ballast facilities.

Starboard side alongside.

Mobil, Colmslie: T-head and Dolphins. Berth length 190 m., depth 8.0 m. LWOST. Grades discharged:

Ballast, Kerosene, Gas Oil, Chemicals, 1×8 in., 577 m., 150 p.s.i., 750 cu.m.p.h. max.

Fuel Oil, Diesel Oil, 1×8 in., 577 m., 150 p.s.i., 800 cu.m.p.h. max.

Lub Oils, 1×8 in., 577 m., 150 p.s.i., 300 cu.m.p.h. max.

LPG, 1×2 in., 91 m., 15 cu.m.p.h. max.

No dirty ballast.

Either side alongside.

Maritime Wharves, Hamilton: T-head and Dolphins. Grades discharged:

Ballast, Kerosene, Gas Oil, Fuel Oil, Diesel Oil, 1×8 in., 1,676 m., 150 p.s.i., 750 cu.m.p.h. max.

No dirty ballast facilities.

Starboard side alongside.

All berth depths must be confirmed prior to arrival.

Gas freeing facilities not available, but chemist available to issue Gas-free Certificate. There are slop discharge facilities at both refineries.

Also see "Shipmaster's Report".

There are no restrictions on berthing/unberthing for MARPOL tankers with DBTs, SBTs and IG systems, other than MARPOL mid-deck tankers.

Operator's Reports: *Caution:* Buoys may sometimes be found in positions other than charted due to the effect of bad weather conditions or being deliberately moved as required by natural channel and bank movements. The channels and banks are constantly changing due to the effect of tidal streams accentuated by bad weather conditions. Tidal streams set obliquely across channels and great caution is required.

Approaches: Caution on draft: The tidal situation in the entrance channels, Moreton Bay, Brisbane River Bar and swinging basin of Luggage Point is rather complex. Masters of crude vessels, bound for the Ampol or B.P. Refineries and not regularly trading to these terminals should, prior to loading, contact the refineries through their agents and ask for the maximum allowable draft. This is in order to avoid deadfreight claims if not loaded to maximum draft or the necessity for lightering prior to entering the river if too deeply loaded. There are 2 bunker barges available (1×1,575 tons and 1×800,000 litres).

Traffic Control and Regulations: The Port of Brisbane Corporation operates an advisory type of traffic control under the control of a certified officer in charge of the Harbour Control.

All shipping movements on Brisbane River shall be advised to the officer in charge and no vessel, with a length of 51 m. or more, shall enter any of the dredged cuttings or leave her berth except at a time approved by the Harbour Master's office. A ship about to enter the Brisbane River shall advise "Brisbane Harbour" at least 30 minutes prior to that time.

No tanker movements in the Brisbane River during the hours of darkness unless approved by the Harbour Master. Normally no permission will be granted to enter the port and to berth between sunset and sunrise, but as a rule unberthing and departure will be approved if on flood tide and heading out.

Shell Terminal:

(a) Description:

The terminal is located at Pinkenba and connected with the berth at Pinkenba by 8 in. pipeline of about 5,700 ft. length.

The berths are also used by grain, silica sand and other dry bulk and general cargo carriers, and berthing priority is in order of arrival.

(b) Berthing and Unberthing:

Harbour Regulations restrict berthing to daylight hours only. Since it is normally required that tankers berth heading downstream, berthing is in fact restricted to daylight flood only. Normally permission will be given for night time unberthing on flood tide and departure. All berths in the Brisbane River are subject to siltation and maximum allowable draft should be checked prior to loading for this port.

Pilots usually use 2 tugs for berthing and unberthing of vessels over 150 m. LOA.

Vessels turn in the Pinkenba Cutting prior to berthing with assistance of tugs. If necessary, anchor is used.

Standard mooring configuration is 3 head lines, 3 stern lines, 1 breast line forward and aft, and 1 backspring forward and aft.

Since ranging may be expected due to passing ships, it is recommended to double the back springs and to use the shore side nylon springs provided. A breasting dolphin about 75 ft. downstream of the wharf has been installed in order to decrease the overhang of longer vessels.

(c) Cargo Operations:

The berths are used for the discharge of white products, base lube oils and solvents. If flammable products are being discharged barricades will be erected, with guards.

Ship's boom is used for hose connecting and disconnecting.

Port Corporation inspectors may attend.

B.P. Crude Berth: Max. LOA 261 m. Max. draft is dredged depth less 1.0 m. plus tide (range 1.2 m. – 2.4 m.), but subject to approach channel depth of 11.58 m.

(a) Description:

The B.P. Crude Berth is an island berth, consisting of a central platform with 2 breasting dolphins and 2 mooring dolphins at either side, located at Luggage Point on the Northern side of the Brisbane River entrance. There is no fendering on the face of the central platform. There is 1 × 20 in. crude oil pipeline from the berth to the B.P. Refinery on Bulwer Island of about 6,000 ft. length. In addition there is an 8 in. bunker line and a 3 in. fresh water line. 2 × 12 in. Wheaton Loading Arms and 1 × 8 in. Wheaton Loading Arm, all with Camlock couplings.

Shore gangway. No ballast or slop facilities.

(b) Berthing and Unberthing:

Vessels turn in the swinging area off the berth, with the assistance of tugs and starboard anchor if necessary. Pilots use 2 tugs for vessels up to 700 ft. LOA and 3 tugs for longer vessels. Normally there are no restrictions on unberthing and vessels can unmoor and depart at all times and at all stages of the tide.

Standard mooring configuration is minimum 3 head lines, 3 stern lines, 1 breast line forward and aft, and 1 backspring forward and aft.

(c) Cargo Operations:

Two loading arms are used for the discharge of crude oil.

Max. pressure 200 p.s.i. (1,380 kPa).

Larger quantities of fuel oil are back loaded through the 20 in. crude oil line, smaller quantities through the 8 in. bunker line.

An inspector of the Port Corporation may attend.

(d) COW: Crude Oil Washing would be allowed during discharge only on the following conditions:

1. Any delay in crude discharge to be to vessel's account.
2. Crude Oil Wash system must be fixed, permanent installation that does not include any flexible or portable components.
3. Tank inerting system must be capable of maintaining 8% or lower oxygen content throughout operation.
4. Ship must agree to terminal inspection of both systems 2 and 3.
5. Ship to obtain any necessary approval from Port Authorities.

B.P. Products Berth: Max. LOA 185 m. (210 m. with Harbour Master's approval). Max. draft is dredged depth less 1.0 m. plus tide (range 1.2 m. – 2.4 m.).

(a) Description:

The B.P. Products Berth is located on Bulwer Island, nearly 3 miles upstream of the B.P. Crude Berth. The berth is a T-head jetty with 2 breasting dolphins, 2 mooring dolphins and mooring posts on the river bank. There is no fendering on the face of the T-head.

(b) Berthing and Unberthing:

Since the Port Corporation objects to turning loaded tankers off the berth, berthing is normally restricted to the daylight flood tide and vessels turn in the swinging area off the berth prior to going alongside. Starboard anchor is used for turning if necessary.

Pilots use 2 tugs for berthing and 1 – 2 tugs for unberthing.

Standard mooring configuration is 3 head lines, 3 stern lines, 1 breast line forward and aft, and 1 back spring forward and aft. In connection with ranging due to passing ships, it is recommended to double the back springs. Mooring lines should be tended at all times while alongside.

Ship's gangway is used.

(c) Cargo Operations:

Ship's boom is used for hose connecting and disconnecting. Ballast and slop facilities are available (7,000 tons). Shore connects and disconnects hoses.

Connections: 3×8 in. (200 mm.) arms for white products, black oil and ballast. 2×50 mm. and 1×150 mm. hoses for LPG.

An inspector of the Port Corporation may attend.

Ampol Crude Berth:

(a) Description:

The Ampol Crude Oil Berth is at Fisherman Islands on the south side of the Brisbane estuary. It consists of a central platform with 1 breasting dolphin and 2 mooring dolphins at either side of the platform. The face of the platform is fitted with fendering. There is a 28 in. crude oil pipeline of about 10,866 ft. length from the berth to the Ampol refinery situated adjacent to Fort Lytton. Shore gangway. Slop and facilities are usually not available but in an emergency the 8 in. bunker line can be used for this purpose.

(b) Berthing and Unberthing:

Vessels usually berth stemming the tide at approximately 1.5 hours after the HW at the Pile Light.

Pilots use 2 tugs for vessels up to 700 ft. LOA and 3 tugs for longer vessels. Normally vessels can unberth and depart at all times and at all stages of the tide.

The controlling depth alongside the berth is 13.0 m. below chart datum. Maximum allowable draft 41 ft. (depending on height of tide). Maximum LOA 850 ft.

Standard mooring configuration is minimum: 3 head lines, 3 stern lines, 1 breast line forward and aft, and 1 back spring forward and aft.

Shipmaster's Report: February 1992.

No objections to turning loaded vessels. According to our pilot's information, tankers usually turn before berthing, to go alongside head outward.

Foreign tankers berth in daylight only, against the tide.

(c) Cargo Operations:

3 loading arms are used for the discharge of crude oil.

An inspector of the Port Corporation may attend.

Ampol Products Berth:

(a) Description:

The Ampol Products Berth is located 2 miles further up the south bank of the river from the Crude Berth at Lytton Rocks Cutting. There is a road from the refinery main gate direct to this berth (1 mile). The berth is a T-head jetty with 2 breasting dolphins and 4 mooring dolphins.

(b) Berthing and Unberthing:

Vessels usually berth head down river and consequently berthing is restricted to the daylight flood tide and vessels turn in the swinging area at Pinkenba prior to going (starboard side) alongside. Port anchor is used if necessary.

Two tugs are being used for berthing and one tug for unberthing.

Unberthing normally at day or night floodtide.

Standard mooring configuration: 3 head lines, 3 stern lines, 1 breast line forward and aft, and 1 back spring forward and aft. It is recommended to double the back springs. Mooring lines to be tended at all times while alongside.

Ship's gangway is used.

(c) Cargo Operations:

Ship's boom is used for hose connecting and disconnecting. A number of products are loaded through common pipeline. Ballast and slop facilities are available. Shore connects and disconnects hoses.

An inspector of the Port Corporation may attend.

DENSITY: 1025 (possibly less during cyclone conditions).

CONSULS:

Austrian Honorary Consul, 30 Argyle Street, Breakfast Creek. Tel: (07) 3262 8955.

Belgium Honorary Consul, 92a Macarthur Avenue, Hamilton. Tel: (07) 3268 7955.

Bolivian Honorary Consul General, 210 Queen Street, Brisbane. Tel: (07) 3221 1606.

British Consulate General, BP House, 1 Eagle Street, Brisbane. Tel: (07) 3236 2575.

Canadian Consul General, Sydney. Tel: (02) 364 3000.

United States of America Consul, 383 Wickham Terrace, Brisbane. Tel: (07) 3831 3330.

Uruguayan Honorary Consul, 140 Links Avenue, Eagle Farm. Tel: (07) 3868 1181.

FRESH WATER: From mains, generally at 35 t.p.h. Contact local agent to confirm.

FUEL: Oil bunkering facilities are available at Maritime Wharves No. 1, 2 and 3.

Also from the following oil company terminals:

B.P. (Pinkenba); Shell (Pinkenba); Ampol (Lytton); Mobil (Colmslie); B.P. Maritime (Hamilton).

The oil companies will also deliver fuel by road tanker to cargo berths.

A barge bunkering service supplying marine fuel oil, plus lube and gas oil, is operated within the port by Riverside Oil Bunkering Co. Pty. Ltd. The largest capacity barge is 1,575 tons, discharging rates up to 580 t.p.h.

This service is also available at Moreton Bay Anchorage (Brisbane Roads) for ships requiring bunkering only (24 hours service). Apart from pilotage, there are no navigation charges or tugs required to stand by at anchorage.

REPAIRS: All major repairs undertaken, including main propulsion diesel engines, steam turbines, boilers, reduction gearing servicing, propellers, tailshafts, stern bearings, all engine-room repairs, deck gear, radar, radio and sonar equipment, fitting-out berths.

DRY DOCKS: Keppel Cairncross Shipyard Complex offers 24 hour dry dock and fitting out berth, ship repair and maintenance facilities. Dry dock capacity 85,000 tonnes. Tel: 61-7-3227-0888.

SURVEYORS: Brian Petitt & Assoc. Pty. Ltd., Thynne Road, Morningside, Qld. 4171. Tel: (07) 3993755. Fax: (07) 3998850.

GANGWAY/DECK WATCHMEN: Normally by crew, but can be hired.

OPENING/CLOSING HATCHES: Performed by stevedores/crew.

CARGO GEAR: Heavy lift cranes and facilities up to 80 tons available at certain wharves.

HOLIDAYS: New Year's Day; W.W.F. Picnic Day; Australia Day; Good Friday; Easter Monday; Anzac Day; Queen's Birthday; Christmas Day; Boxing Day.

Close Holidays – Christmas Day, Good Friday, Anzac Day, Labour Day, W.W.F. Picnic Day (No labour available these days). Some public holiday dates vary from year to year. Consult Agent for current information.

CUSTOMS ALLOWANCES: See "Melbourne".

AIRPORT: International flights to all major Asian, European, Pacific and North and South American destinations.

TIME: See "General" before first port.

POLICE/AMBULANCE/FIRE: Tel: 000 and ask for service required.

TELEPHONES: At all wharves. Can be connected on board.

IDENTIFICATION CARDS: See "Melbourne".

SEAMAN'S CLUBS: Seafarers' Centre, Harbour Road, Hamilton. Tel: 3268-3495. Public transport to and from the city is convenient/available. Look for bus numbers 150, 160, 170, 180 and 190.

Seafarers' Centre, Port Drive, Fisherman Islands. Tel: 3895-1181. Regular public (bus) transport is not available. However, group bus tours and/or group bus transport to the city can be organised by informing the Seafarers' Centre. Fisherman Islands, 12 hours before the bus is required. Taxis: Black/White Tel: 131008; Wynnum Tel: 3396-2111 (local company); Yellow Tel: 3391-0191.

GENERAL: *De-Bunkering:* In order to load more cargo, a vessel de-bunkered whilst alongside and re-bunkered in Moreton Bay in deep water and was thereby able to load an additional 600 tons of cargo (October 1987).

Charts: Australian Charts No. 235, 236, 237 and 238.

DEVELOPMENTS: A strategic plan for development of the port to 2005 and beyond was released in May 1992, and is available for inspection.

Rail Intermodal Terminal, 3 container parks and standard gauge rail link to Fisherman Islands are now operating, serving road/rail/sea container traffic via Brisbane.

Please contact the Port of Brisbane Corporation for further details.

RADIO OFFICER'S REPORT: September 1990.

Brisbane was the last port of call in Australia.

Documents:

Customs will normally only board the ship at departure. Quarantine will not board the ship.

Sealed envelope from Customs in Sydney handed over. 2 copies of Crew List required.

If the vessel is going to Indonesia, Hong Kong or Singapore after Australia, the following forms should be faxed prior to departure:

Indonesia:	Crew List to be faxed to first Indonesian port for pre-arrival clearance.
Hong Kong:	Crew List to be faxed to Hong Kong for pre-arrival clearance (not possible with crew originating from communist countries). Also List of Ports of Call, copies of Registry, Safety Equipment, Safety Construction, Safety Radio, Load Line and Derat Certificates.
Singapore:	Crew List to be faxed for pre-arrival clearance.

SHIPMASTER'S REPORT: August 1995.

Charts: AUS. No. 235, 236, 237 and 238.

Approach: The prominent pinnacles of Glasshouse Mountains are unmistakable. Point Cartwright with its very conspicuous water tower stands out. Caloundra, 7 miles to South, with its many buildings, is also conspicuous.

The Racon on the Beacon NW2 at Morton Bay Channel entrance is radar conspicuous.

Anchorage: See AUS. No. 235. Anchorage is 4 miles S.S.E. from Point Cartwright, outside port limits, if awaiting pilot/berth, in about 30 m. Very exposed and holding ground is poor, so best to steam in poor weather.

Inside Port Limits/Pilotage Waters: Lower end of Morton Bay clear of main shipping channel in varying depths from 12.0 m. to 27.0 m., about 3 miles N.E. of Mud Island.

STS transfers under pilotage also take place in this area.

Pilots: VHF as per ALRS. Pilot boats as per AUS. No. 235 from Mooloolaba Harbour, inside Point Cartwright, by fast cutter.

24 hour pilotage dependent on draft and tide. Pilot boards in all weathers, and a good lee is required.

One Pilot used throughout, about 4 hours to tanker berths.

Morton Bay crossed at sea speed.

Red flasing light required for tankers (New regulations to be published).

Channel: Morton Bay Channel, about 36 miles in length from Beacon NW2 to entrance beacons of Brisbane River.

Controlling depth is 13.00 m., which is also maximum draft to Lytton Cutting, dependent on tide, squat and weather conditions.

Strong cross currents, particularly at Morton Bay entrance. Good buoyage and lights.

Upriver from Lytton Cutting depths decrease. To Pinkenba Cutting Turning Basin (the upper limit for LPG tanks) depth is 9.1 m., generally 10.0 m. is maximum draft handled, dependent on tide.

Gas carriers generally do not proceed above Pinkenba Swinging Basin, which 9.1 m. dredged datum and 280 m. swinging circle.

Tugs: Stationed at North end of Whyte Island off Lytton Rocks Cutting. 6 tugs available from 30 ton to 68 ton bollard pull, which includes 2 salvage tugs. Tug's lines used. Vessels bound for LPG/NH3 berths, met by tugs at Lytton Cutting.

Salvage tugs also do harbour towage.

For small ships often large tugs and for large ships often small tugs, Pilots have no control. Pilots said QE2 visit ended up with one small tug as tug supply depends on tug crew rotas.

Berths: Three berths handle gas carriers, BP, Shell and Incitec for NH3 (Ammonia).

BP: Products berth on North side of river on Bulwer Island, about 8 miles upriver from Brisbane River Channel entrance.

Chicksans for products. Hoses for LPG.

Wooden construction with one mooring dolphin each end.

Pilots quote depth alongside as 10.7 m. MLW.

Tanker type 'T' jetty. Out from river bank about 20 m. Good fenders.

Port or starboard side to. Generally Agents request ships head out – port side to (due to tug problems).

Length of fender landing is 80 m. Dolphin to dolphin 220 m.

Roadway about 25 m. from jetty face, which is nearest trucks can come.

Fresh water through meter.

Brow gangway available.

Moorings were 4 and 2 each end. One line boat operated by tug company. Mooring gang was good, but do not like wires. They will not handle breast wires at LW.

Use of aft store crane not possible.

Shell: 600 m. upriver from BP on North bank of river at Lytton. General products berth. No Chicksans.

Same construction as BP. Fender length 80 m. Mooring dolphin either end, 205 m. apart.

Pilots quote depth alongside as 10.5 m. MLW.

Accommodation ladder can be landed.

Either side to (Generally port side to).

Tanker 'T' jetty stands out from river bank about 15 m.

Nearest roadway for trucks about 20 m. from jetty face.

Aft stores crane can just plumb.

Moorings and procedure same as BP.

Incitec – South: For NH3. Located at Pinkenba Swinging Basin, South side of river. Vessel can land accommodation ladder.

Flat face quay used for fertiliser loading. Fender length 150 m.

One mooring dolphin either side connected by catwalks to quay, 205 m. apart.

Quoted 10.5 m. alongside MLW.

Fresh water available.

Vessels berth port or starboard side alongside, but generally starboard side to.

Terminal: LPG at BP and Shell: Interconnected by 4 in. lines. Tanks from 100 m. – 1,000 m. from jetties.

LPG pressure storage discharge.

Three receivers in total (Boral, Gogas (Shell) and Elgas).

Boral is situated beside BP Terminal, whilst Gogas and Elgas are at the Shell terminal.

If discharging at BP, Boral can receive at	150 tonnes/hr.	7 bar BP.
Gogas and Elgas receive at	130 tonnes/hr.	15 bar BP.
If discharge at Shell, Boral receive at	140 tonnes/hr.	14 bar BP.
Gogas and Elgas receive at	170 tonnes/hr.	13 bar BP.

6 in. 300 ASA hose at both berths into 10 in. line.

Discharge restrictions regarding temperature apply at both berths. Vessel can discharge C3 (Propane) down to −30°C, but first and last 50 tonnes must be at ambient or warmer.

The jetty watchman at both berths provides vessel with walkie-talkie.

NH3 at Incitec – South: Loading warm product – protest.

Found oil carry over on cleaning after discharging in Taiwan.

It is best to load first and last 2 hours into same tank.

Rate: 230 tonnes/hr. at 0.5 bar BP. Shore hose 10 in. 150 ASA.

Customs: If first port of entry inward, papers (on Australian forms) to be submitted via Agent by Fax at least 7 days beforehand. Failure to do this might delay vessel.

Papers required: Crew Report List (Alphabetical order), Ship's Inward Cargo Report, Quarantine Declaration, Report of Ship's Stores, Ports of Call List, Ship's Report of Arrival.

On arrival, the additional papers are required: Crew Effects Declaration (Alphabetical order).

Customs generally fair and reasonable.

If sailing coastwise, Customs then issue 'Rider Envelope' with all relevant documents plus Clearance to next port.

Customs also act for Immigration and sign crew on and off.

Telephone: Payphone ashore at all berths.

Airport: Brisbane International Airport on North side of river near BP and Shell berths. International and domestic flights available.

Chandler: Several boarded.

Technical: We found Heybridge Engineering very good for most engineering/technical matters. Tel: (07) 3822 3400, mobile 018 876 628, A.O.H. (07) 3344 2460. Fax: (07) 3344 3880.

Also Keppel Cairncross have recently reopened (together with dry dock) on South side of river near Hamilton. Tel: (07) 3227 0888. Fax: (07) 3899 0879.

Bunkers: Available ex-BP Jetty (IFO 180 at IFO 380 prices), or by barge.

Public Transport: All berths about 7 miles from city. BP and Shell have no public transport facilities. Incitec (NH3) is 1 mile South of Hemmatt Railway Station with cheap trains into city.

AUTHORITY: Port of Brisbane Corporation, Port Centre, 369 Ann Street, G.P.O. Box 1818, Brisbane, Australia 4001. *Tel:* (07) 32584888. *Telex:* AA42780. *FAX:* (07) 32584703. *Cables:* Portbris. *Contact:* G.J. Martin, Chief Executive Officer.

Regional Harbour Master (Captain John Watkinson), Queensland Transport, Marine Operations Base, MacArthur Avenue East, Pinkenba, Queensland 4008, Australia. *Tel:* (07) 3860 3549. *FAX:* (07) 3860 3560. *Contact:* Duty Harbour Master. (Tel: (07) 3895 1318. Fax: (07) 3895 1311).

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., G.P.O. Box 1460, 4th Level, Elders House, 10 Felix Street, Brisbane, Queensland 4000. Tel: (07) 3221 2275. Telex: 40260 PATSLE. Fax: (07) 3221 0124. Seagram Code: 4BPATSLE.

BROOME, W.A.: 17.59 S. 122.14 E. (See Plan)

PORT LIMITS: East limit: From Fall Point (17° 59.1′ S., 122° 20.3′ E. approx.) in a direction 180° – 4.5 miles to position 18° 03.6′ S., 122° 20.3′ E., thence.

South limit: In a direction 270° – 10.5 miles to position 18° 03.60′ S., 122° 09.35′ E., thence.

West limit: In a direction 000° – 8.25 miles to position 17° 55.40′ S., 122° 09.35′ E., thence.

North limit: In a direction 090° about 3.1 miles to the shore (17° 55.40′ S., 122° 12.60′ E. approx.)

CERTIFICATES/DOCUMENTS/HEALTH: See "Melbourne".

PILOTAGE: Resident Pilot available. Inform Department of Transport of ETA 7 days in advance. Pilot boards approximately 292° (T) distant 4.5 miles from Gantheaume Point.

RESTRICTIONS: Channel between Channel Rock and Middle Bank dredged to 5.3 m. LWOST. Vessels of more than 5.2 m. draft restricted to height of tide for arrival/departure. HWOST 8.38 m. HWONT 5.24 m.

MAX. SIZE: Draft 9.15 m.

RADIO: HF SSB Marine Channel 4,620 kHz.

VHF: Channels 6, 12 and 16.

TUGS: None.

BERTHING: 2 berths. Outer berth max. length 186 m., 9.75 m. LWOST. Inner berth length 146 m., depth 8.5 m. LWOST.

STEVEDORES: Labour available 24 hours. Maximum shift length 14 hours.

CARGO GEAR: See "Melbourne".

FRESH WATER: Unlimited supply. Rate up to 20 t.p.h. at a cost of $1.50 per 1,000 litres.

FUEL: Diesel oil available, provided prior notice given to BP or Shell Agents.

REPAIRS: Minor repairs possible through Broome Slipways.

TIME: See "General" before first port.

GARBAGE DISPOSAL: Garbage disposal available with skips, A$18.00 per removal at any time.

Overseas garbage subject to quarantine restrictions as no large capacity incinerator available. Garbage Contractor: Tel: 091-921169.

WASTE OIL DISPOSAL: Very limited service available – Mobile road tanker capacity 8,000 litres.

No barges, no shore tanks, no special berth available. Telephone garbage contractor on telephone number above.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar. A$1.00 = U.S.$0.78. No currency restrictions.

GENERAL: Tides: Both ebb and flood in direction of line of jetty. Tide has apparent ebb period of 8 hours, flood 4 hours. Slack water 2.5 hours prior HW and LW. Information given by radio.

AUTHORITY: Department of Transport, P.O. Box 402, 1 Essex Street, Fremantle, WA 6160, Australia. *Tel:* (09) 335-0888. *Telex:* 94784. *FAX:* (9) 335-0850. *Contact:* R.S. Purkiss, Director of Marine.

Department of Transport, P.O.Box 46, Broome, WA 6725, Australia. *Tel:* (091) 921304. *FAX:* (091) 921778. *Cables:* Port General Manager. *Contact:* M. Gower, Port Superintendent. B. Martin, General Manager.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Fremantle.

BUNBURY, W.A.: 33.19 S. 115.38 E. (See Plan)

DOCUMENTS:

No. of Copies	*Form*	*Notes*
2	Form 5 – Part One Ship's Report of Arrival	—
2	Form 5 – Part Two Crew Effects Declaration	—
2	Form 5 – Part Three Crew Effects Declaration (continuation)	—
1	Form 5 – Part Four Record of Ship's Stores	—
2	Form 3A – Crew Report	
2	Form 3B – Crew Report	—
2	Form B921 – Loading Ports List	If entering with Cargo.
1	Ships Pets (QA 76 Form E)	Nil return required.
1	Shipmasters Bond (QA 5)	Only if Ship has Pets on Board.
1	Animal Cargo (QA 3)	Only if Animal Cargo on Board.
2	Form F. Q360 Primary Health Report	
If Passengers on Board:		
3	List of Passengers Disembarking in Australia (Form M308)	To be Divided into Ports of Disembarkation
5	List of Passengers not Disembarking in Australia (Form M309)	

In addition to the above Forms, the following certificates need to be sighted.

1. Last Port Clearance.
2. Ship's Registry.
3. Load Line.
4. Safety Radio.
5. Safety Construction.
6. Safety Equipment.
7. International Oil Pollution Prevention Certificate and Attachment.
8. International Tonnage Measurement Certificate.

Pre-Arrival (48 hours prior to Arrival): Crew List and Ship's Arrival Details (Ship's Particulars, previous Ports, Certificates).

PILOTAGE: Compulsory with exception of Masters who hold an exemption certificate for the port. Radio Harbour Master, Bunbury 24 hours and 4 hours notice. VHF Channel 16 – pilot boat. Base set not manned continuously but pilot boat may be contacted 1 hour before arrival. Pilot boat – White hull, orange wheelhouse, three blue stripes, "No. 104" on hull, name "Leschenault" and "Koombana".

Pilot boards 1.5 – 2.0 miles from Breakwater in position Lat. 33° 17′ S., Long. 115° 37′ E.

ANCHORAGE: Between Latitudes 33° 16′ S. and 33° 17′ S. and Longitudes 115° 36′ E. and 115° 37′ E.

Holding ground is good, but unprotected during bad weather conditions. In such conditions Masters are advised to remain at a minimum of 5 miles off the coast.

RESTRICTIONS: Vessel may berth and sail at night, but this will be dependent on priority of other vessels, labour availability, and weather conditions.

Channel Limitations:

Depth in Approaches	13.4 m. at Chart Datum.
Depth in Inner Harbour	12.2 m. at Chart Datum.
Stepped to 12.8 m. at seaward end, at Chart Datum.	
Depth in Approaches to Outer Harbour	9.6 m. at Chart Datum.

Tides:

Maximum predicted H.W. Springs	1.3 m. above Chart Datum.
Minimum predicted L.W. Springs	0.0 m. above Chart Datum.

Heights are subject to atmospheric conditions; up to 0.3 m. either side of predicted height.

MAX. SIZE: *Outer Harbour:* Max. length 220 m. Deepest permissible loaded draft 9.0 m. at No. 1 Berth and 8.7 m. at No. 2 Berth.

Inner Harbour: Max. length 233 m. Max. draft 11.6 m.

HEALTH: Quarantine inspection required if Bunbury is first Australian port. Quarantine inspection for Health Clearance – hours of inspection 0600 – 2200. Also see "Melbourne".

RADIO: Perth Radio.

VHF: The Base Station is "Port of Bunbury", Call Sign "V Z 6 P O", which monitors Channel 16.

It is not manned continuously, but a listening watch is kept prior to a vessel's expected arrival, except when the Master has previously been advised by radio to anchor and await pilot.

TUGS: 2 tugs available. "Capel" (42 tonne bollard pull) and "Elgin" (42 tonne bollard pull). Join vessel off berth. Ship's lines used if necessary. The tugs are normally manned from 0800 hrs. to 1600 hrs. weekdays. At other times, tugs must be pre-arranged.

BERTHING: Berth names from the 1st May 1996

Old Name	*New Name*
Outer Harbour No. 1 Land Backed Berth No. 1 Ilmenite berth	Berth 1
Outer Harbour No. 2 Land Backed Berth No. 2	Berth 2
Inner Harbour No. 1 Woodchip Berth	Berth 3
Inner Harbour "A" Alcoa/Alumina Berth	Berth 4
Inner Harbour No. 2 General Purpose Berth	Berth 5
Inner Harbour "B" Worsley Alumina Berth	Berth 6
Inner Harbour "C"	Berth 8

The number 7 is being reserved for a new berth which may be constructed on the South side of the inner harbour.

Outer Harbour:

No. 1 Breakwater (Landbacked) Berth: Primarily a specialised bulk berth, length 184 m., with a travelling mechanical Shiploader, rated at 800 tonnes per hour, linked with adjacent storage for the export of Mineral Sands. Vessels up to 233 m. in length have been safety accommodated at this berth.

Deepest Permissible Draft: 9.0 m., plus an allowance for tide.

No. 2 Breakwater (Landbacked) Berth: General purpose berth, length 184 m.

Deepest Permissible Draft: Southwest end 8.0 m. and Northeast end 9.0 m., plus an allowance for tide.

Weighbridge: Capacity 50 tonnes, platform 15 m. × 3 m.

Original Wooden Cargo Jetty: Now disused, and not maintained. Not suitable for laying up (to be removed in February 1994).

Inner Harbour:

No. 1 Berth: Primarily a specialised Woodchip loading berth, length 381 m., equipped with a fixed mechanical loader, rated at 1,000 t.p.h., linked to adjacent storage. Vessels should prepare extra long flaked back springs on the main deck amidships for hauling the vessel along the berth during loading operations.

No. 2 Berth: General purpose berth, length 240 m., equipped with mobile hoppers for bulk discharge. Large ship's side storage area available. There is a rail spur on to this berth, but not to the ship's side.

Weighbridge: Capacity 60 tonnes, platform 18 m. × 3 m.

'A' Berth: Specialised Bulk Alumina loading berth, utilised by Alcoa and Worsely Mining Companies. Equipped with a travelling mechanical shiploader rated at 2,000 t.p.h., linked to adjacent storage. Vessels up to 230 m. in length, and 36 m. beam, may be accommodated without shifting ship during loading.

There is also provision for discharging bulk liquid caustic soda through 'Chicksan' connections to adjacent storage tanks. Connection is 12 in. bore with 19 in. outer diameter flange.

Deepest Permissible Draft in Inner Harbour at all berths is 11.6 m.

Air Draft of Mechanical Loaders:

No.1	Breakwater Berth	12.0 m. above chart datum
No.2	Breakwater Berth	
No.1	Inner Habour	17.0 m. above chart datum
'A'	Inner Habour	13.5 m. above chart datum

Outreach of Mechanical Loaders:

No.1	Breakwater Berth	12.2 m. from Wharf Face. +4.6 m. with spout at 30°.
No.2	Breakwater Berth	
No.1	Inner Harbour	18.5 m. from Wharf Face over a length of 163 m.
'A'	Inner Harbour	Mechanical trimmer permanently attached.

Hopper Limits (No.2 Inner Harbour):

Ship side to hopper centre	4.3 m.
Hopper height	6.1 m.
Head clearance under hopper	3.5 m.

Bulk Discharging Rate (No.2 Inner Harbour): Free grabbing average of 100 t.p.h. per grab.

Wharf Loading Limits:	Vehicle	Stack Tonnes sq.m.
No.1 Breakwater Berth	Standard Semi Trailer	1.7
No.2 Breakwater Berth	10 tonne Mobile Crane	3.4
No.2 Inner Harbour	'Towmotor AH60' 60T.	4.4
	'Scheuerle' 96 wheel 350 T.	
	'MS18' 14.7 T.	

Fendering System Levels:		Height Above C/D
No.1 Breakwater Berth	Horizontal Rubber Fenders	3.0 m.
No.2 Breakwater Berth	Timber Facing	1.0 m.
No.1 Inner Harbour	'Bridgestone' C1600H Rubber Fenders	2.0 m.
No.2 Inner Harbour	Horizontal Rubber Fenders	2.5 m.
	Vertical rubber Fenders over 65 m. section.	1.5 m.
'A' Inner Harbour	'Seibu' H1400 Timber Faced, Rubber Fenders.	0.5 m.
All Wharf Deckings		3.66 m.

Gangway:

No.1 Breakwater Berth	Ship's Gangway
No.2 Breakwater Berth	Ship's Gangway
No.1 Inner Harbour	Shore Gangway from shiploader
No.2 Inner Harbour	Ship's Gangway
'A' Inner Harbour	Shore Gangway from S.W.dolphin

BULK HANDLING FACILITIES: See "Berthing".

Stowage Factors: (Average):

	cu.ft./ton	cu.m./ton
Ilmenite	14	0.40
Rutile	14	0.40
Zircon	14	0.40
Leucoxene	14	0.40
Synthetic Rutile	25	0.71
Kaolin Clay	27	0.77
Spodumene	24	0.68
Alumina	36.5	1.03
Woodchips	85	2.40

STEVEDORES: Weekdays – ETA to be advised by 1500 hrs. previous day for labour requirements on that day. Weekends – ETA required by 0600 hrs. Friday.

DENSITY:

Outer Harbour	1024 – 1025
'A' Inner Harbour	1022.5 – 1024
Berths No.1 & 2 Inner Harbour	1023 – 1026

MEDICAL: Medical attention available. Hospital facilities available. Vaccinations and valid certificates required.

TANKERS: No facilities.

FRESH WATER: Readily available. Rates: Outer Harbour 25 t.p.h. Inner Harbour 30 t.p.h. and Inner Harbour (non potable) 100 t.p.h.

FUEL: Furnace oil by road ex-Fremantle. Marine and light diesel by road.

CONSULS: Vice-Consul for Norway.

REPAIRS: Ship repairs, engineering, electrical and electronic repairs can be arranged through agent.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Not required, except for Hazchem products.

OPENING/CLOSING HATCHES: Preferably by crew.

CUSTOMS ALLOWANCES: Each crew member 200 cigarettes initially and thereafter as required in reasonable quantities. Wine and/or Spirits, open bottles of spirit on arrival not to exceed 1 litre and thereafter as required in reasonable quantities.

CARGO GEAR: Must comply with Australian Loading and Unloading Safety Regulations. See "Melbourne".

REPATRIATION: Facilities available.

AIRPORT: Light aircraft landing strip only.

TIME: See "General" before first port.

HOLIDAYS: Days on which work cannot be performed by stevedores: Good Friday, Anzac Day, Labour Day, Christmas Day, Waterside Workers' Picnic Day.

POLICE/AMBULANCE/FIRE: Emergency Number Bunbury 000.

TELEPHONES: Available on application.

IDENTIFICATION CARDS: See "Melbourne".
GARBAGE DISPOSAL: Daily collection by Bunbury Port Authority. Bins placed alongside. Charges: A$45.00 per day per visit plus A$3.00 per day per person on board.
WASTE OIL DISPOSAL: Service by road tanker. Contact: South West Waste Disposals, Short Street, Picton, W.A. 6229. Tel: (097) 254419.
SEAMAN'S CLUBS: Missions to Seamen, Victoria Street, Bunbury. Tel: (097) 212370.
DELAYS: Generally no delays.
GENERAL:
Charts: Australian Charts No. 115, 334, 335, 755, 756, 4726.
Publications: Australia Pilot, Volume V.
Oily Water Disposal: Privately owned road tankers with limited capacity available.
Stores: Available through local providoring companies, including bonded stores.
Services: Electricity, garbage disposal, and other sundry services by arrangement with the Port Authority.
DEVELOPMENTS: Two new berths to be constructed with depth 12.2 m. for handling of alumina and mineral sand.

SHIPMASTER'S REPORT: February 1993 (Updated 1996).
Approaches: Australian Chart No. AUS 115, found to be as charted.
Pilots: Pilots request that vessels arriving do not come closer than 1.5 miles from the Buoy No. 3. They will come further out to meet approaching vessels. Boarding speed about 5 – 6 knots.
Ship Supply Services: Most Fremantle chandlers will attend vessels at Bunbury.

On this visit, vessel was attended by Sealanes, 178 Marine Terrace, South Fremantle, for Unitor Gasses, and Imes Ship Supply, 47 Quarry Street, Fremantle, for provision.
Fuel: Vessels are not permitted to take bunkers at the alumina loading berth, but may take bunkers by road tanker at other berths.

The nearest bunker facility is at Fremantle.
Repatriation/Airport: Perth International Airport is about 2 hours away by road. Joining and repatriation can be arranged through this airport.
Loading Rate: At alumina facility, rate is 2,000 tones per hour, and work is reported to be on a 24 hour basis, 365 days a year.
Holds: Hold cleanliness for loading alumina is to the grain standards for Australia.
Crew List: The Agent requested a Crew List to be faxed from the previous port (Singapore), and this was updated by telex for persons signed-off at a port of refuge during the passage to Bunbury.

No problems were experienced with Immigration formalities.
Identity Cards: Immigration Authorities were happy that recent photographs of all crew on suitable I.D. cards were ready on arrival for retention on board.

The Agent arrived on board with a polaroid camera, to take the photographs if required, and also the Flying Angel will take photographs and arrange I.D. cards.
Radio Pratique: Granted prior to arrival, the required quarantine message having been sent to the agency some 36 hours before arrival.

When acknowledging ETA messages, the Agent sent reminders that this message was to be sent to them, and not direct to the Health Authorities.
Mobile Telephone: Placed on board by the Agent.

AUTHORITY: Bunbury Port Authority, P.O.Box 4, (1 Henry Street), Bunbury 6230, Western Australia. *Tel:* (097) 21-2800. *FAX:* (097) 218253. *Contact:* D. Figliomeni, General Manager. C. Ambrose, Harbour Master.

AGENT: Patrick Sleigh Shipping Agencies Pty.Ltd., Unit 1, 23 Thomas Street, Bunbury, W.A. 6230. Postal address: P.O.Box 537, Fremantle, W.A. 6160. Tel: (097) 21 5077. Telex: Via Fremantle 92434 PATSLE. Fax: (097) 21 9922.

BUNDABERG, Queensland: 24.45 S. 152.24 E. (See Plan)

PORT LIMITS: Along the major arc of a circle radius 4 miles, centred on South Head light (24° 45.6′ S., 152° 24.7′ E. approx.), commencing at a point (24° 44.3′ S., 152° 20.6′ E. approx.), extending in a Northerly, Easterly and Southerly direction to a point near Bargara (24° 48.6′ S., 152° 27.6′ E. approx.).
CERTIFICATES/DOCUMENTS/HEALTH: See "Melbourne".
DEPTHS: (Datum) Channel 7.26 m.; Swinging Basin 7.26 m., Sugar Berth 9.66 m.; Oil Berth 9.66 m. Keel clearance normally 0.9 m.
PILOTAGE: Compulsory. Radio not less than 24 hours ETA; VHF Channel 16.

Pilot boards 2.5 miles East of South Head Lighthouse.
Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".
RESTRICTIONS: Length 182.87 m. maximum. Vessels not to pass out through sea reach on ebb. Channel width 76 m. Also see "Delays".
RADAR/VHF: No radar service. Bundaberg Port Authority office, craft, tug and pilot launch can be contacted on VHF Channel 16 during office hours.
TUGS: One tug, 33 tonnes bollard pull, owned by Gladstone Tug Services Pty. Ltd., and one work boat of 4 tons bollard pull, owned by the Port Authority, which may be used for pushing, are available, both fitted with VHF. Ship's lines or tug's lines are used, and no charge for tug's lines.
BERTHING: No. 1 Bulk Sugar Berth 190 m. long. No. 2 Oil, Molasses, 80 m. long.
SPECIALISED CARGO HANDLING FACILITIES: *Bulk Sugar Berth:* Loading by movable gantry at 1,400 t.p.h.
Bulk Molasses: Loading rate 240 t.p.h. No facilities for containers or Roll-on/Roll-off traffic.
Oil Berth: Facilities for discharge all petroleum products and loading molasses.
MEDICAL: Hospital facilities available.
TANKERS: 10 in. lines. No slop discharge facilities. Oil tankers, discharge only. Molasses tankers, load only. Depth alongside tanker berth 9.66 m. Datum.
DENSITY: Average density about 1025.
FRESH WATER: Available, delivered by hose, variable loading rate and quality (bore water) 12 t.p.h. Cost A$ 2.00 per 1,000 litres.
FUEL: All grades available, 24 hours notice required.
CONSULS: None.
REPAIRS: Almost all types of deck and engine repairs possible.
DRY DOCKS: No dry dock. Slipway for small vessels only. Mobile and floating cranes may be hired.
SURVEYORS:
(1) Cargo surveyors available (Lloyd's Agent).
(2) Classification surveyors available from Brisbane.
GANGWAY/DECK WATCHMEN: Not necessary, but available.
OPENING/CLOSING HATCHES: By crew.
CARGO GEAR: No additional local regulations. See "Melbourne".
REPATRIATION: Facilities exist.
AIRPORT: Airport 2 miles from city serviced by regular internal airlines.
TIME: See "General" before first port.
HOLIDAYS: Normal Queensland holidays observed but cargo worked regardless of holidays.
POLICE/AMBULANCE/FIRE: Dial 000 from the port.
EMERGENCY CO-ORDINATION CENTRE: Contact Bundaberg Harbour Master.
TELEPHONES: Telephone connection placed at tanker berth and sugar berths.
BANKS: Major Australian Banks have branches in Bundaberg.
STORING: See "Prelims".
(1) Yes.
(2) Yes at sugar berth. No at oil berth.
(3) Yes.
(4) Yes.
(5) Same as other Australian ports.
(6) No. None available.
IDENTIFICATION CARDS: See "Melbourne".
GARBAGE DISPOSAL: Collection service available from port authority, including quarantine garbage. Drums provided alongside. Base charge $65.00 plus $45.00 per drum. Collection time by arrangement.
WASTE OIL DISPOSAL: Waste disposal available through local contractor by tanker truck.
SEAMAN'S CLUBS: None.
DELAYS: Vessels can berth at any state of the tide provided there is 0.9 m. under keel clearance. Vessels sail on flood tide only.
AUTHORITY: Bundaberg Port Authority, M.S. 108, Bundaberg, Queensland 4670. *Tel:* (071) 594233. *FAX:* (071) 594655. *Contact:* D. Antrobus, Chief Executive Officer. Captain M. Lutze, Harbour Master.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Brisbane.

BURNIE, Tasmania: 41.03 S. 145.55 E. (See Plan)

PORT LIMITS: Within all waters that are bounded by an imaginary circle having a radius of 5 nautical miles and centred at the Eastern end of the Island Breakwater situated in Emu Bay.
DOCUMENTS: See "Melbourne". Port Authority requires Inward Manifests to be lodged on arrival. Agents supply Manifests and non-negotiable copy Bills of Lading to Customs for checking prior to vessels arrival.
APPROACHES: Port situated on Western shore of Emu Bay and easy of access. Bay is 2 miles wide and 1 mile deep facing in a Northerly direction. The bottom is sand and clay interspersed with patches of reef and rock, particularly in the South Eastern sector of Bay. Vessels may anchor on main leads in vicinity of Pilot Boarding Ground, but it is not advisable remain at anchor during strong on-shore winds. Port protected by 2 breakwaters: the inner, founded at inner end of Blackmans Reef, lies in a 110° direction and is 380 m. long. The other, an island structure 488 m. long and protecting the port from Easterly weather, lies in a 130°/310° direction, with its N.W. end bearing 045°, 213 m. from the S.E. end of the Inner Breakwater.

Vessels approaching the port from the West should, by day, keep the two orange beacons on the shoulder of Round Hill open to the North and then turn onto the main harbour leads which are in transit 213° true. By night, keep in the white sector of Round Hill Point Light until the green sector of the light on the back main lead is visible.

Vessels approaching from the East should keep well off until clear of Round Hill Point and then turn onto the main leads by day, or the sector light by night.
PILOTAGE: Compulsory for vessels over 35 m. LOA. Prior advice through local Agents, ETA by radio telegraphy through Melbourne Radio (VIM) or Hobart Radio (VIH) to Burnie Port Authority. Immediate advice VHF Channels 16 and 12.

Pilot launch – 12.5 m. orange hull with buff cabin aft, name "Hellyer". International Signals apply. Boarding area on main harbour leads 210° (T) with Round Hill Point Lighthouse bearing 155° (T). Ladder 1.5 m. from water, manropes, no boat rope. Boarding speed 8 knots.

ANCHORAGES: See "Approaches".
RESTRICTIONS: Maximum length 280 m. 24 hour service.
MAX. SIZE: (See "Restrictions"). Tankers at Island Breakwater to 10.0 m. draft at all states of tide.
HEALTH: Pratique automatic when from other Australian ports. When from overseas Radio Pratique should be applied for 12-24 hours before arrival to vessel's Agent.
RADIO: Melbourne Radio (VIM).
RADAR/VHF: No radar service. Port equipped with VHF, R/T operating International Maritime Bands. Pilot vessel, tug, and other floating plant similarly equipped. "Burnie Harbour" on VHF Channels 16, 12, 14 and 67 continuously. Pilot vessels and tugs on Channels 16, 12, 8, 6 and 67.
TUGS: Tug(s) join East of Island Breakwater. Usually lashed alongside with tug's lines (no extra charge). When on towing duty, usually ship's line. 1×40 tonne bollard pull tug stationed in the port. Additional tugs available from nearby ports.
BERTHING: *Ocean Wharf:* Being reclaimed.
McGaw Pier: Being reclaimed.

Berth No. 4 has 183 m. of effective berthage with a dredged depth of 10.5 m. The axle loading on this berth is unlimited. A stern loading ramp has been constructed at the inner end.

Berth No. 5, a modern pre-stressed concrete berth, is 213 m. in length with a large mooring dolphin off the seaward end. Vessels of 250 m. in length are accommodated. The width of the apron is 13.4 m. and axle loading is 50 tonnes. The berth incorporates a bulk loader with a capacity in excess of 1,000 tonnes per hour. The berth is also suitable for general cargo and container operations. The dredged depth at the berth proper is 11.0 m. At the inner end provision is made for the quarter ramps of the largest Ro/Ro vessels. There is a liquid acid loading point and a tallow loading point at this berth.

Berth No. 6 is a modern pre-stressed concrete berth 198 m. length and dredged to 11.5 m. Axle loading is 50 tonnes.

A single lift post Panamax portainer (40 ton at 44.5 m. and 80 ton at 23.5 m.) is available at this berth, which can accommodate vessels (including Ro/Ro quarter ramp) of 250 m. in length. The berth is dredged to 11.5 m.

There is a storage shed of 1,500 sq. m. and 240 reefer points.

Berth No. 7 is 219 m. long and 40 m. in width and has 2 large mooring dolphins on the seaward end which enables vessels of 250 m. in length to berth. The berth is dredged to 11.5 m.

On the inner end, a modern slewing container handling crane of 50 tonnes capacity is on this berth. On the outer end of this berth, there is a twin lift Paceco gantry crane (28 ton per normal lift and 65 ton on 2 hoists heavy lift). Both cranes travel the entire length of the berth. Stern loading facilities are provided by 8.5 m. wide ramp. Axle load is 50 tonnes. There are 146 reefer points at the berth and quarter ramp vessels can be accommodated.

On the outer end is a new woodchip shiploader which can travel the length of the berth and loads at about 1,000 t.p.h.

Mobile cranes available if required.

Cargo: The port is equipped to handle all types of cargo. This includes containers, general cargo, dry bulk, bulk liquids, woodchips, logs and livestock. Large quarter ramp vessels can be accommodated at 3 berths and there are also 2 stern loading ramps. There is ample container handling and storage area within the port with an abundant supply of power points for refrigerated containers and fantainers. Container services include steam cleaning, pre-tripping, repairs and surveys.
Mechanical Equipment: A comprehensive fleet of mechanical handling equipment is available, including container handling forklifts of up to 30 tonnes capacity.
Cold Store Complex: The Authority operates a cold store with a capacity of 31,279 cu.m. (1,104,620 cu.ft.), which can hold product at −25°C. In addition, there is a small cool room of 134 cu.m. (4,731 cu.ft.) capacity, which can operate between +15°C and −5°C.

Cold storage is available for small or large quantities of frozen goods at competitive rates. Cool storage is available only for small quantities.
BULK CARGO FACILITIES:
Conveyor Loader: At bulk berth for export of zinc, lead and copper concentrates to 1,000 t.p.h.
Inward Bulk: Berth and crane at Berth No. 6.
Sulphuric Acid: Loading and discharging facility at Island Tanker Berth and bulk berth, with rate of 1,000 t.p.h.
STEVEDORES: Labour to be ordered (1) by 1400 hrs. for following day (weekdays), (2) by 1300 hrs. Friday for Saturday and Sunday, (3) by 1400 hrs. Sunday for Monday.
MEDICAL: Notify Agent prior arrival of extra requirements other than pratique. General Hospital 1 km. from port. Cholera revaccinations arranged by prior notice.
TANKERS: Berth No. 1 (Tanker Berth) is 85 m. long and 30 m. wide, sited on South side of Island Breakwater. 10.0 m. of water in this berth, which will accommodate vessels of up to 250 m. in length. Diameter of lines are 250 mm. No residue discharge facilities. 1 berth, maximum draft 10.9 m.
DENSITY: 1025 to 1028.
FRESH WATER: Readily available at all wharves, rates 50 t.p.h.
FUEL: Diesel and heavy fuel available from road tankers.
FIRE PRECAUTIONS: Normal. 24 hour ferry service to be maintained to tanker berth. Firemen on duty while tanker pumping. Fire-fighting tug in port while tanker is at berth.
CONSULS: None.
REPAIRS: Engineering firms with extensive workshops are situated nearby.
GANGWAY/DECK WATCHMEN: Watchmen not used.
OPENING/CLOSING HATCHES: Stevedores will close hatches.
CERTIFICATES:

Tonnage Certificate.
Safety Construction.
Safety Equipment.
Safety Radio Telegraphy.
Load Line.

CUSTOMS ALLOWANCES: 200 cigs. or 250 grams tobacco. Beer is carried outside the bond. One bottle spirits per man every 10 days.
CARGO GEAR: Australian Navigation (Loading & Unloading) Regulations apply.
REPATRIATION: On crew member signing off Agent requires passport or identification card. Agent handles repatriation details and notifies Immigration Department, Hobart, re movements of crew member.
AIRPORT: Daily services: 17 km. distant.
TIME: See "General" before first port.
HOLIDAYS: Cargo work performed on all holidays except Christmas Day, Good Friday, WWF Picnic, Anzac Day, Labour Day.
POLICE/AMBULANCE/FIRE: Dial 000.
TELEPHONES: Telephones are available at all wharves, through Port Authority.
GARBAGE DISPOSAL: The port provides a full galley waste and rubbish disposal service, including incineration of garbage.
WASTE OIL DISPOSAL: No service available.
SEAMAN'S CLUBS: None.
CURRENCY: Australian Dollar. No restrictions.
AUTHORITY: Burnie Port Authority, P.O.Box 216, Burnie, Tasmania 7320, Australia. *Tel:* 004-313444. *FAX:* 004-314690. *Contact:* Captain M.J. Boss-Walker, Harbour Master.
AGENT: See "Devonport".

BUSSELTON, W.A.: 33.38 S. 115.20 E. (PORT CLOSED)

This port is closed to commercial shipping and it is unlikely that the jetty will be re-opened.

Jetty partly demolished by cyclone in 1978.
AUTHORITY: Busselton Shire Council, P.O.Box 84, Southern Drive, Busselton, Western Australia 6280, Australia. *Tel:* Busselton (097) 810444. *Contact:* Director, Technical Services (Tel: 018-933441).

CAIRNS, Queensland: 16.56 S. 145.47 E. (See Plan)

PORT LIMITS: Commencing at the HW mark on the Northernmost tip of Taylor Point and bounded thence by a line bearing approximately 83° 52′ T. (83° 30′ A.M.G.) for a distance of about 29 km. (15.66 nautical miles) to a point on the LW mark on the Northernmost tip of the coral reef surrounding Green Island.

Then from this point in an Easterly and South-Easterly clockwise direction around the aforesaid coral reef to its Easternmost tip, thence by a line bearing 180° T. (179° 38′ A.M.G.) for a distance of about 17.3 km. (9.34 nautical miles) to a point on the HW mark on the Northern shore of Fitzroy Island.

From this HW mark generally in a South-Westerly, South-Easterly and North-Easterly direction anti-clockwise around the aforesaid Fitzroy Island to a point on the Southern shore where the HW mark intersects with the Southerly projection of the line from the Easternmost tip of the coral reef surrounding Green Island to the Northern shore of Fitzroy Island.

Then by a line bearing 180° T. (179° 38′ A.M.G.) for a distance of about 7.6 km. (4.10 nautical miles) where it intersects with a line bearing 90° T. (89° 38′ A.M.G.) and distant of 10.7 km. (5.78 nautical miles) on the Northern bank of Bubbabadoo Creek where it runs into the Pacific Ocean. Then by that HW mark generally Northerly and Westerly back to the point of commencement at Taylor Point, including all navigable rivers, creeks and waters communicating with the area described above.
DOCUMENTS:

1 copy Ship's Articles.
3 copies Crew Report (Forms 3A and 3B).
4 copies Passenger Report (Forms 2A and 2B).
4 copies Transit Passenger List (Form M309).
1 copy Ship's Report of Arrival (Form 5 part 2).
1 copy Return of Barber's Stock on a Ship or of Stocks in a Ship's Shop or Canteen (Form 5 part 3).
1 copy Report of Ship's Stores (Form 5 part 4).
1 copy Ports of Call and Ports of Call Loading List (Form B921).
1 copy Last Port Clearance.
1 copy Request for Radio Pratique Health Clearance.

APPROACHES: Deep water passage to Cairns through the Great Barrier Reef is available via Grafton Passage from the East, which is 34 km. long and 8 km. wide. It is free of any encumbrances and is lighted by a group flashing light on Fitzroy Island, which is visible in clear weather for a range of 47 km. Alternately the inner reef passage via Torres Strait can be taken from the North.
PILOTAGE: Pilotage is compulsory for all vessels 35 m., unless the Master holds a Pilotage Exemption Certificate, and is available 24 hours a day.

The Department of Transport, Marine and Ports Division, provides pilotage for vessels entering or departing the port. Vessels requiring the services of a Pilot should cable their Agent or the Harbour Master from the last port of call giving the probable time of arrival and estimated draft, to enable the Pilot to be at the pilot boarding ground on their arrival.

The pilot boarding ground is approximately 4 km. seaward of the Fairway beacons, at position Lat. 16° 48.7′ S., Long. 145° 50.6′ E.

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait and also Grafton Passage is conducted by licensed Pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

ANCHORAGE: Cairns has 195 pile berths located on the Eastern side of Trinity Inlet. There are also areas designated for anchorage only, situated North and South of the piles, East of Admiralty Island and in Smith's Creek.

RESTRICTIONS: *Under-Keel Clearance:* Vessels must have 600 mm. under-keel clearance when navigating in the port and 900 mm. for larger vessels (over 30,000 tonnes d.w.t.). Whilst in a berth, an under-keel clearance of 300 mm. must be maintained.

Seasonal Operating Restrictions: Cairns Seaport is an all-weather port outside the cyclone season which runs from approximately November through to April (Draft and tidal restrictions may apply).

MAX. SIZE: Cairns can routinely accommodate vessels up to 32,000 d.w.t. Maximum draft is 8.5 m. Larger drafts may be accommodated depending on tide.

Longest Vessel to date: "Crystal Harmony", 241 m. LOA.

Heaviest Vessel to date: "Statendam", 55,451 g.r.t.

Largest Cargoes: Raw Sugar: "Eryu Maru", 30,961 tonnes, 9.3 m. draft.
Bulk Molasses: "Teamtroma" 22,980 tonnes.
Petroleum Products: "Ampol TVA" 26,162 tonnes, 9.5 m. draft.

HEALTH: Radio Pratique can be obtained 24 hours a day, 7 days a week through the ship's Agent, Piermaster or direct from the Department of Primary Industries.

RADIO/VHF: A VHF radio service is maintained by the Cairns Port Authority on Channel 16 (156.8 MHz), call sign "Cairns Harbour". Radio communication with the Piermaster's office is also available on HF frequencies 2182, 4125 (stand-by) and Marine CB 27.88 mHz (stand-by).

Arrival Advice: Vessels bound for the port are required to advise their ETA 72 hours before arrival, and again at 48 hours, and then every 12 hours.

TUGS: Patrick Sleigh are the Agents for licenced towage operator, North Queensland Marine Towage Pty. Ltd.

For vessels over 100 m., tugs are compulsory under the following conditions:

Vessels 100 m. – 130 m.	One tug
Vessels over 130 m.	Two tugs
Vessels going to and from Wharf No.12 that do not require swinging	One tug

As a general rule, twin-screw vessels do not require a tug aft and vessels fitted with a bow thruster will not require a tug forward.

These conditions can be varied according to the pilot.

Two tug are generally available in the port, one strictly for port use and the other for outer port. A third tug can be made available from the port of Mourilyan if requried. Tugs details are:

Name	*Bollard Pull*	*Propulsion System*
"Babinda"	15 tonnes	Directional Kort nozzles
"Hamilton"	28 tonnes	Twin screw
"Otto Assman" *	28 tonnes	Directional Kort nozzles

* Based at Mourilyan.

BERTHING: Wharves No. 1 to 6 form a continuous quay length of 595 m. with a height of 4.9 m. above port datum and design depth. Wharves No. 1 to 5 are reinforced concrete construction, with Wharf No. 6 a combination of timber and concrete. Wharves No. 7 and 8 are made of reinforced concrete decking on steel piles forming a continuous quay length of 250 m. Wharves No. 1 to 6 are 5.0 m. above port datum, and Wharves No. 7 and 8 are 5.2 m. above port datum. All wharves have a design depth of 8.4 m. below LAT, unless noted otherwise. Wharves No. 10, 11 and 12 are three special purpose wharves.

No. 1: Passenger vessel berth served by No. 1 International Terminal with mobile covered ship-to-shore walkway. The walkway has an adjustable height between 8.5 m. and 14.5 m. above port datum.

No. 2: This is the main cruise liner wharf, and is used in conjunction with Wharves No. 1 and 3 for longer vessels. Passenger vessel berth served by 1,271 sq.m. international passenger terminal.

No. 3: General cargo and passenger berth with 1,271 sq.m. shed.

No. 4: General cargo berth.

No. 5: General cargo and bulk molasses berth, equipped with a single 25.4 cm. (10 in.) pipeline for loading product parcel tankers with molasses at a rate of 300 – 350 tonnes/hr. from adjacent tank.

No. 6: General cargo berth and containerised cargo loading berth served by 25.4 tonne wharf crane. Adjacent container terminal has open storage area of 3,800 sq.m.

No. 7: General cargo berth and containerised cargo loading berth made of reinforced concrete deck on steel piles. It has a wharf height of 5.2 m. above port datum and design depth of 10.8 m. Used in conjunction with Wharf No. 8 for vessels up to 250 m. in length.

No. 8: General cargo berth and containerised cargo loading berth made of reinforced concrete decking on steel piles. It has a wharf height of 5.2 m. above port datum and a design depth of 10.8 m.

No. 10: Tanker berth for oil and LP gas with maximum vessel length of 189 m., design depth of 9.3 m. LAT and wharf height of 4.8 m. above port datum. Alternately used for bunkering.

No. 11: Royal Australian Navy berth.

No. 12: Bulk sugar terminal with berth length of 183 m., design depth of 10.5 m. LAT and wharf height of 4.6 m. above port datum. It is served by a travelling gantry loader with an average capacity of 1,750 tonnes/hr.

Smith's Creek No. 1: General cargo berth for vessels less than 65 m. The wharf is 53.4 m. long and has design depth of 8.3 m. LAT and wharf height of 3.7 m. above port datum. It has an open storage area of 1,360 sq.m. and cargo shed of 1,225 sq.m.

Marlin Jetty: For the embarkation or disembarkation of passengers only. Fuel is provided by Trinity Petroleum Services for commercial fishing boats and tourist vessels.

Floreat Wharf: For the embarkation and disembarkation of passengers only. Fuel is provided by road tanker with prior arrangement.

Marlin Marina: This floating marina has 114 berths – 98 for game fishing vessels, dive vessels and pleasure craft from 8.0 m. – 21 m. in length, 14 for tourist and commercial vessels up to 34 m. in length, and 2 berths for seaplanes. Each berth has access to water and power with fuel available at the adjacent Marlin Jetty.

A tourist vessel terminal with waiting lounge and booking offices is located behind the marina within the Pier Marketplace. This shopping complex offers a large food hall with numerous restaurants, bistros and bars; includes a large range of fashion stores and tourist retail outlets, together with a 200 room international standard hotel.

CRANES: A wharf crane is located on Wharf No. 6 with a capacity of 25.4 tonnes. Mobile and handling equipment is available from local stevedores or hire contractors. The equipment available includes forklifts up to 22.7 tonnes capacity, 2 tonne to 40 tonne capacity mobile cranes, tractors, bulldozers and tow motors.

SPECIALISED CARGO HANDLING FACILITIES:

Cruise Liner Terminals:

No.1: Located on the second floor of the Trinity Wharf complex at Wharf No. 1, the terminal has immigration and customs facilities. The terminal is linked by escalator and lift to the ground floor interstate coach station, and is adjacent to the Cairns central business district.

No. 2: Located at Wharf No. 2, the terminal has immigration and customs facilities. It is next door to the interstate coach station and adjacent to the Cairns central business district. Public telephones are also located within the terminal.

Containerised/General Cargo: Wharves No. 6, 7 and 8 are specialised general cargo/container berths. Wharf No. 6 has a 25.4 tonne capacity wharf crane and adjacent open storage area of 3,800 sq.m. Wharves No. 7 and 8 form a continuous quay length of 250 m., has design depth of 10.8 m. and wharf height of 5.2 m. above port datum. It has an open storage area of 10,374 sq.m.

Molasses Terminal: Located behind Wharf No. 5. The molasses terminal is operated by CSR. The tanks have a combined storage capacity of 18,500 tonnes and a loading rate of 300 – 350 tonnes/hr. via a 10 in. pipeline to Wharf No. 5.

LP Gas and Petroleum: Wharf No. 10 has a maximum vessel length of 189 m., design depth of 9.3 m. LAT and wharf height of 4.8 m. above port datum. Alternately used for bunkering.

Also see "Shipmaster's Report".

Bulk Sugar Terminal: Wharf No. 12 has a berth length of 183 m., design depth of 10.5 m. LAT and wharf height of 4.6 m. above port datum. It is served by a travelling gantry loader with an average capacity of 1,750 tonnes/hr.

TANKERS: See "Specialised Cargo Handling Facilities".

STEVEDORES: Northern Shipping and Stevedoring (NSS) has a full time workforce of ten employees, supplemented as required by casual and interport transfers. There are 3 operating shifts: 0001 hrs. – 0700 hrs., 0800 hrs. – 1500 hrs. and 1600 hrs. – 2300 hrs. Continuous work is available on request. NSS also has a range of stevedoring equipment available, including forklifts up to 23 tonnes, excavators, endloaders and container spreaders.

Cairns also has a number of intrastate coastal operators using their own labour to load vessels servicing outlying communities.

MEDICAL: Medical and dental services are located close to the port and Cairns has 2 major hospitals.

Health requirements are according to the World Health Organisation.

People from Yellow Fever areas or visitors to these areas require a vaccination certificate if entering Australia within the 6 day incubation period.

DENSITY: 45 – 50 mS/cm.

FRESH WATER: Fresh potable water is available at all wharves on arrangement with the Cairns Port Authority through Agent. Up to 120 tonnes/hr. can be loaded at Wharf No. 1 and 60 tonnes/hr. at Wharves No. 2 to 6. Charges are in accordance with the Cairns City Council scale of water charges.

FUEL: Quantities of fuel over 30,000 litres can be supplied at Wharf No. 10. For quantities less than 30,000 litres, vessels can be supplied at Wharf No. 8.

A bunkering barge service is offered by Jardine Shipping for quantities up to 700,000 litres. This service provides fuel lighterage for products from the local fuel distributors. Heavy oil, medium fuel oil and distillate can be delivered. Adequate notice must be given.

For small commercial and fishing vessels refuelling up to 50,000 litres, facilities are provided by Trinity Petroleum Services Co. at the fuel wharf at Commercial Fisherman's Base No. 1.

Pleasure craft and charter craft may refuel 7 days a week at the Trinity Petroleum Services Mobil facility at the Marlin Jetty. Trinity Petroleum also provide tanker service to vessels alongside Wharves No. 1 – 8 and in designated areas of Commercial Fishermen's Base No. 2.

FIRE PRECAUTIONS: Hydrants and hose reels are located at all wharves and berths. Fuel berth (Wharf No. 10) has an independent fire fighting pump, foam monitors and a supply of foam concentrate is available for fire brigade use. The tug "Babinda" is equipped with fire fighting equipment and can pump 2,275 litres per minute. Several other vessels are also fitted with equipment for small craft fire fighting purposes.

CONSULS: Italian Consular Agency, 91 Grafton St., Cairns. Tel: (070) 516472.

Spanish Consul, 81 Sheridan St., Cairns. Tel: (070) 516640.

REPAIRS: Cairns has an extensive, highly experienced shipbuilding and repair industry with a growing export list for vessels such as trawlers, naval patrol vessels, luxury yachts and high speed catamarans.
DRY DOCK: A dry dock is available for vessels up to 60 m. in length as well as 2 travel lifts, a floating dry dock and 5 slipways, the largest with a capacity of 3,000 tonnes. For larger vessels, voyage repairs of any kind can be undertaken alongside by experienced local repair companies.
SURVEYORS: Cargo inspectors available through the Department of Transport (Harbours & Marine). Surveyors are available through the American Bureau of Shipping (070) 534278, Det Norske Veritas (070) 576521, Lloyd's Register of Shipping (070) 314633, Rannard & Assoc. Pty. Ltd. (070) 937536, Russ Larkin & Assc. (070) 316046, Olufson D.Holdings (070) 321536, Captain Copland & Assc. (070) 937945.

Germanischer Lloyd: D. Olufson Holdings Pty.Ltd., 18 Cassia Street, Edge Hill, Cairns, Qld. 4870. Tel: (070) 321536.
GANGWAY/DECK WATCHMEN: Port Officers are on duty 24 hours per day.

Additional security is supplied during cruise liner visits, and more officers can be arranged through the ship's Agent of North Queensland Shipping Services Pty.Ltd.
HATCHES: Hatches to be closed by the crew.
CUSTOMS ALLOWANCES: 250 grams of tobacco and 1 litre of alcohol is permitted per crew member.
REPATRIATION: Facilities are available for crew repatriation. Prior arrangement should be made with Customs and the Department of Immigration through Agent.

There are 7 international airlines presently operating regular services to Cairns. Flights are available to Japan, North America, Papua New Guinea, Solomon Islands, Europe, Indonesia, Hong Kong, South East Asia and New Zealand.
AIRPORT: Cairns International Airport is located 6 km. from the seaport. It is served regularly by 7 international airlines with connections throughout the world, and 5 domestic airlines with services to all major domestic cities and more than 30 regional centres.
TIME: GMT + 10 hours "L", all year round.
HOLIDAYS:

	1995
New Years Day	January 2
Australia Day	January 26
Easter	April 14 & 17
Anzac Day	April 25
Labour Day	May 1
Queen's Birthday	June 12
Cairns Show Day	July 21
Christmas Day	December 25
Boxing Day	December 26

POLICE/AMBULANCE/FIRE: Dial 000.
EMERGENCY CO-ORDINATION CENTRE: Australian Volunteer Coast Guard: (070) 512192, (070) 512384.

They monitor radio frequencies 27.88 MHz. and 27.91 MHz., VHF Channel 16, CV11 and HF frequencies 2182 and 2524.
TELEPHONES: Wharves No. 1 – 8 have telephone lines available, the cost of connection being $34.10 per line with an additional telephone rental fee. Standard Telecom rate charges for usage. Vessels must supply: Name of the vessel, Wharf No., contact name, estimated time of arrival and to whom the bill is to be sent.

Only major vessels may have lines connected, generally arranged by the ship's Agent or through the Piermaster who organises connection of the required lines.

Public telephones are located at Commercial Fisherman's Base 1 and 2 and within the No. 2 Cruise Liner Terminal.
SERVICES: Services such as compass adjusting, radio and radar repairs, supply of charts, nautical publications and safety equipment, can be arranged through Agent or local suppliers.

Compass Adjuster: Marine Operation Service & Salvage, 35 Jones Street, Westcourt. Tel: (070) 518684.
BANKS:

Australia & New Zealand Banking Group Ltd., 15 Spence Street, Cairns. Tel: (070) 504711. Fax: (070) 518015.

Bank of Queensland Ltd., 17 Spence Street, Cairns. Tel: (070) 519188. Fax: (070) 517242.

Citibank, 42 Abbott Street, Cairns. Tel: (070) 511400. Fax: (070) 516291.

Commonwealth Bank of Australia, 76 Lake Street, Cairns. Tel: (070) 526526. Fax: (070) 521083.

National Australia Bank Ltd., 63 Abbott Street, Cairns. Tel: (070) 515844. Fax: (070) 515416.

Westpac Banking Corporation, 61 Abbott Street, Cairns. Tel: (070) 511544. Fax: (070) 314163.

Metway Bank Ltd., 13a Spence St., Cairns. Tel: (070) 311199. Fax: (070) 312279.
STORING: Vessels can be stored by barge or vessel. Vessels can be stored from barges during loading and unloading as per requirements of the Cairns Harbour Master – Department of Transport (Harbours & Marine). Trucks and forklifts are permitted to proceed alongside and local riggers can be employed to assist with storing.
SHIP'S SUPPLY SERVICE: Nautilus Trading Co. Pty. Ltd., 26b Martyn St., Cairns. Tel: (070) 311146. Fax: (070) 311256.

Pickers Yacht & Ship Chandlers, 108 Mulgrave Road, Parramatta Park. Tel: (070) 511944. Fax: (070) 510629.

R.F.D. Safety Marine Pty. Ltd., 182 Scott St., Portsmith. Tel: (070) 527381. Fax: (070) 511280.

Sharplift Pty. Ltd., 48 Aumuller St., Bungalow. Tel: (070) 351981. Fax: (070) 351065.

Taylor Marine, 93 Aumuller St., Portsmith. Tel: (070) 351322. Fax: (070) 351661.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: Seaman's Book is sufficient.
GARBAGE DISPOSAL: The Cairns Port Authority provides daily garbage collection services for both non-quarantine and quarantine garbage as determined by the Department of Primary Industries. Garbage should be placed in sealed plastic bags (inside covered bins), and kept on the vessel until collected.

Non-quarantine garbage removals are charged according to the manpower required and plant and machinery utilised.
WASTE OIL DISPOSAL: There is no dedicated berth, waste oil collected by tanker truck with prior arrangement through:

Cairns Waste Disposal: Tel. 018 772020 or 552481.

North Queensland Waste Disposals: Tel. 018 183634 or 577511.
SEAMAN'S CLUBS: None.
CURRENCY: Australian Dollar.
REGULATIONS: None.

SHIPMASTER'S REPORT: August 1995.
Charts: Aus. No. 262 and 830.
Approach: The Murray River range of hills to the South of Cairns provides a good landmark.

The beaconed channel is conspicuous with few other features around.
Anchorage: The anchorage is outside Cairns Port Limit as per AUS. 830 and is exposed. We noticed other vessels anchored around position Lat. 16° 49.5′ S., Long. 145° 53′ E.
Pilots: VHF Range is good. Contact as per ALRS. Pilotage available 24 hours but dependent on tide for large vessels. Pilot boards from fast cutter in position Lat. 16° 49′ S., Long. 145° 50.5′ E. Time to berth is approximately 1 hour. North of Cairns to Torres Strait, Barrier Reef pilotage is compulsory for most classes of vessels.
Channel: The channel has good lights and is dredged to 8.5 m.

Minimum UKC in calm weather is 0.6 m. We found 7.1 m. draft any tidal state to Tanker Berth. Normal maximum draft is 8.5 m. (dependent on tide). Deeper drafts up to 10.0 m. can be considered, but dependent on tide and weather (swell).
Tugs: 3 small tugs of 20 ton bollard pull each are available. One tug is away frequently working one of the small outports. Tugs lines are used.
Berth: Multi-User Tanker Berth No. 10: The berth handles all fuels, bunkers and LPG. Berth is a tanker type 'T' jetty of concrete construction and handles vessels up to 200 m. LOA. Berth is dredged to 9.5 m. datum. The berth has a fender flat face of 50 m. with outlying mooring dolphins North and South. The fenders are good.

For this ship starboard side alongside is best as we can more easily land Brow gangway. Tie up is 3–2 each end. Head/stern lines to detached dolphins by line boat, only one boat so mooring can take a long time.

Fresh water is available but meter is unreliable. Berths No. 1, 2, 3, 4 for Cruise Ships, No. 5 and 6 for General and No. 7 and 8 for Containers.
Terminal: BORAL Gas: 200 m. to tanks of 4,500 cu.m. capacity. Pressure storage only. We have only discharged Propane. Boral works with Townsville exchanging product by rail car. Minimum operating temperature is +5° C., preferably +7° C. Shore hoses are 6 in. 300 ASA with 10 in. line to tanks. ESD on ship which closes valves ashore and on end of hose against vessel's manifold valve (50 seconds closing time). Pumping rate about 160 tonnes/hr. at 10 bar.
Documents: Customs/Immigration documentation as Townsville.
Chandler: We used Nautilus. Fax: 070 31 1256. Tel: 070 31 1146.
Telephone: Pay/Card phone at Berth No. 8, next to toilet block (5 minutes walk).
Airport: Cairns International Airport is 4 miles to the NW. Frequent domestic flights to Brisbane. International flights to Far East destinations.
AUTHORITY: Cairns Port Authority, P.O.Box 594, Cairns, North Queensland 4870. *Tel:* (070) 523888, 523811. *Telex:* 48256. *FAX:* (070) 521493. *Contact:* D.Burgess, Piermaster.

Department of Transport, Marine and Ports Division, Tingira St., Portsmith. *Tel:* (070) 527400. *Contact:* Regional Harbour Master.
AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., P.O.Box 621, Unit 1, 35 Grafton Street, Cairns, Queensland 4870. Tel: (070) 51 5211. Telex: 48412 PATSLE. Fax: (070) 51 5082. Seagram Code: 4CPATSLE.

CAPE FLATTERY, Queensland: 14.59 S. 145.21 E.

(See Plan)

SHIPMASTER'S REPORT: April 1987 (Updated 1996).

LOCATION: Cape Flattery is situated approximately 130 miles north of Cairns on the East coast of Queensland. The Port exports bulk silica sand and is within the boundaries of the Great Barrier Reef.

Entrance through the reef for larger vessels can be made through Grafton Passage (East of Cairns), or through One and a Half Mile Passage about 30 miles E.N.E. of the Port, this latter entrance should only be transversed with local knowledge as the area of the passage is unlit and there are no navigational marks on the reefs.
PORT LIMITS: The area comprised within a line commencing at a point on the H.W. mark at Latitude 14° 50′ S. on the mainland at the northern extremity of Lookout Point, thence by a line due east for 2.0 nautical miles at its intersection with Longitude 145° 15.8′ E., thence in a S.E'ly direction for about 7.2 nautical miles to the intersection of Longitude 145° 22.1′ E. and Latitude 14° 55.2′S. Thence in a S.S.E'ly direction for a distance of about 4.5 nautical miles to the intersection of Longitude 145° 23′ E. and Latitude 15° 00′ S., thence in a W'ly direction for a distance of about 2.7 nautical miles to a point on the H.W. mark to the point of commencement together with all navigable waters, rivers, creeks communicating with that area, and the banks, shores and foreshores thereof.

DOCUMENTS:
2 copies Crew List (Form 11), Pages 1 and 2.
1 copy Crew Declaration (Customs Form 5).
1 copy Ship's Stores Consumed in Australia (Form 42A).
1 copy Loading Ports List (Form B 921).
2 copies Ship's Report Inwards (Customs Form 1).
1 copy Department of Primary Industry (Animal Declaration)(Form E).
1 copy Health Declaration (Form F).

The Agent brings a full set of papers with him and acts for Customs in the event that they do not attend.

PILOTAGE: When approaching Australia from the N.W., reef pilotage is compulsory. See "Torres Strait".

Local Pilotage: Pilotage is compulsory and the Pilots are stationed in Cairns.

It is necessary to give 48 hours notice of E.T.A. at the Pilot Boarding Ground with an update at 24 hours, via Agent at Cairns. The Pilot will board 3 miles north of the wharf or at either anchorage. At present berthing will be carried out in daylight hours only. The Pilot boat has a black hull with brown upperworks and has VHF Channel 16 and other working channels, it also doubles as one of the mooring boats.

Also see "Cairns" – "Pilotage".

ANCHORAGES: On approaching the port, and if not berthing on arrival, vessels should anchor on the North side of the Cape and maintain a listening watch on VHF Channel 16. The recommended anchorage is defined by a line joining the following co-ordinates:
(a) Lat. 14° 52.81′ S., Long. 145° 15.74′ E.
(b) Lat. 14° 52.99′ S., Long. 145° 16.72′ E.
(c) Lat. 14° 54.03′ S., Long. 145° 16.67′ E.
(d) Lat. 14° 54.49′ S., Long. 145° 18.86′ E.

RESTRICTIONS: Berthing may be suspended in winds exceeding 20 knots. Loading is usually stopped if wind exceeds 40 knots. Distance from the waterline to the top of the hatch coaming not to exceed 35 ft.

Arrival Condition: Vessels should arrive in a condition where the vessel is trimmed by the stern with the propeller completely immersed and the forward draft not less than 2% of the vessel's overall length.

MAX. SIZE: Max. d.w.t. 70,000 tons. Max. LOA 225 m. Max. beam 32 m. Max. draft 14.0 m.

HEALTH: Customs and Health Clearance can be obtained off Cairns if using Grafton Passage. If approaching from the North, arrangements for clearing the ship must be arranged through Agent at Cairns.

Note: Application for Radio Pratique was refused although all in order.

Port Health Inspection: Dry stores and fridges are inspected by Government Inspector from Cairns, garbage bins must be properly covered. No garbage collection available. Because of the restrictions on the environment in this area, no waste or garbage should be disposed of into the sea. It should be noted that a Scientific Research Station is situated on nearby Lizard Island, any waste materials may well be monitored, resulting in heavy fines if Masters of vessels are found guilty of disposing of garbage in this area.

RADIO/VHF: See "Pilotage" and "Anchorage".

TUGS: No tugs available. The two 40 ft. mooring launches are not allowed to tow.

BERTHING: Because of the exposed position of the wharf, vessels should ensure that all mooring lines are in good condition and to facilitate the handling of lines, each should have a 30 mm. rope tail attached to the eye, about 6 m. in length. This is required for handling of the fore and aft lines by the launches. Anchors and windlass must be in good working order as the normal routine is to berth starboard side to using the port anchor, which can be hove home after vessel is all fast. Vessel lies on the east side of the wharf head outward. This ship (29,000 d.w.t.) used 2 breast lines and 2 backsprings at each end plus 2 long drifts on the head and stern lines. All lines should be prepared and made ready, prior to berthing approaches to avoid delays and complications during berthing procedures. Forward breast lines are normally positioned first.

Ballast: On arrival all vessels must have clean ballast water as, being in close proximity to the Great Barrier Reef,any polluted ballast will not be tolerated. There are no facilities at Cape Flattery to transfer dirty ballast ashore.

Hold Inspection: Cleanliness required is of a higher standard than that required for grain cargoes. Should the ship fail inspection, the crew have the privilege of painting. No indications of rust will be tolerated.

Loading Arm: The loading arm is a single stacker type with telescopic chute and trimmer. Slewing angle 45° to 115°. Luffing +17° to −15°. Travelling distance 139 m. Outreach 21.5 m. from face of the fenders. Loading rate about 1,300 t.p.h. (average), 2,000 t.p.h. (maximum), clearance water to boom at dolphins is a minimum of 15 m. Max. air draft above L.A.T. – 14.5 m.

Cargo: High quality Silica Sand in bulk. Crew covers with vinyl sheeting on completion of each hold and before sailing.

Prior to sailing the Loading Master requires:-
4 copies Notice of Readiness
4 copies Stowage Plan
4 copies Statement of Facts.

MEDICAL: As there is no hospital or doctor, emergency cases only are flown to Cairns.

FRESH WATER: Not available.

FUEL: Not available.

HATCHES: Hatches are opened and closed by crew. Once open the stevedores prefer not to close them again for fear of cargo contamination by loose scale or dirt falling from the underside of the hatch covers.

CERTIFICATES: The following Certificates were examined: Ship's Register, Load-line, Safety Equipment, Safety Construction, Safety Radio, I.O.P.P. Certificate and De-Rat. Cargo Equipment and hold accesses must conform to Australian Regulations.

AIRPORT: There is a landing strip for light aircraft on the north side of the Cape. As there are no roads or rail service, this is the only means of transport for pilots, Agents and Port Officials who are all based in Cairns.

SHORE LEAVE: No shore leave as Cape Flattery is in an Aboriginal Reserve.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: No facilities are available at Cape Flattery due to the remoteness of the area and the difficult and dangerous terrain. All crew members are required to remain aboard the vessel.

CURRENCY: Australian Dollar (A$).

WEATHER: The wharf is exposed to the weather which for most of the year (9 months) is the S.E. Trades. The wharf lies in a direction of about 150° T. The berthing of vessels will be determined by the strength of the winds and currents at the time of berthing. The current usually runs under the wharf in a N.E'ly direction, ranging up to 1 knot and may be stronger during the wet season (December to March). After N'ly winds it does occasionally set S'ly or S.W.

Because of the exposed area and the wharf facilities, vessels alongside must remain with their engines ready as the weather can deteriorate rapidly and the vessel may have to vacate the berth at short notice, therefore any work on the vessel's engines is prohibited.

GENERAL:

Cleanliness: Holds must be free of all rust.

Surveys: Draft surveys are carried out although somewhat hampered by the fresh S.E'ly winds. Shore scale seems unreliable.

Shippers: Cape Flattery Silica Mines Pty. Cables: "Flattrysand". Telex: AA48381.

Stores: There are no supplies of stores available. Anything required by the local population that cannot be shipped by plane must come by lighter from Cairns.

AUTHORITY: Ports Corporation of Queensland, GPO Box 409, Brisbane 4001, Queensland, Australia. *Tel:* (07) 3224 7088. *FAX:* (07) 3224 7234. *Contact:* Captain P. Matthews, Regional Harbour Master (Cairns). Tel: (070) 527400. Fax: (070) 351127.

Operator: Cape Flattery Silica Mines Pty.Ltd., Box 6212, Mail Centre, Cairns, Queensland 4870, Australia. Tel: (070) 515099, (070) 603966. Telex: AA 48381. Fax: (070) 518960, (070) 603993. Cables: Flatrysand. Contact: A. Temperley, General Manager.

AGENT: See "Cairns".

CARNARVON (Including Useless Loop & Cape Cuvier) W.A.: 24.53 S. 113.40 E. (See Plan)

(A) CARNARVON
(B) CAPE CUVIER
(C) USELESS LOOP

(A) CARNARVON

BERTHING: There is a small boat harbour but no other facilities are available.

AGENT: See "Fremantle".

(B) CAPE CUVIER

LOCATION: Cape Cuvier is situated on the N.W. coast of Australia approximately 75 km. N.N.W. of Carnarvon, in position Lat. 24° 13′ S., Long. 113° 23′ E.

PORT LIMITS: This port is now incorporated in the Port of Carnarvon the limits of which have been extended as follows:—

"A line due West for 4 nautical miles from a point on the mainland in Lat. 24° 10′ S. and Long. 113° 26′ 4.5″ E., and thence in a S.S.W. direction to Cape Ronsard at the North End of Bernier Island" and then as for Carnarvon to the starting point.

DOCUMENTS: The following documents are currently required and must be completed prior to arrival and sailing.

Form 42A:	Ship's Stores Consumed in Australia.
Form M&S–11 (2 copies):	Crew List.
Form W080:	Boarding Report.
Form 5:	List of all Articles Owned or in Possession of Master, officers and crew.
Form QA4:	Quarantine Notice.
Form QA5 (if required):	Ship Master's Bond.
Form F Q360:	Primary Health Report.
Ship's Stationery:	Crew List.

APPROACHES: Red Bluff about 12 miles North of Cape Cuvier can be picked up by radar at a distance of about 20 miles. Cape Cuvier is easily identified by large white salt hill.

The berth is floodlit at night when a vessel is being loaded.

PILOTAGE: Facilities provided by vessels for Pilot boarding at Cape Cuvier must comply strictly with SOLAS regulations in all aspects.

Pilot, supplied by Dampier Salt Limited, will board approximately 1 mile North of jetty-head.

Any delays to vessels berthing due to non-compliance with Solas regulations (IMO current resolutions) will be for Owner's account.

Guidelines for all ships calling at Cape Cuvier: From past experience we have found it necessary to insist that all vessels intending calling at Cape Cuvier must supply plans showing winch layouts and deck machinery. In the case of older type vessels it is in the Owner's interest that the Pilot checks the vessel before arrival. The best way to organise this is to send the plans of the vessel's winch configuration to the Pilot (via Dampier Salt Limited) for approval.

The winches are the controlling factor and must be in first class working condition. There must be no rust on the brake drums and all brake linings must be renewed and to be of non-asbestos material. If the vessel is old it may be necessary to machine the brake liner so that old it may be necessary to machine the brake liner so that the brakes will grip. The worm drive brake lever must be free and greased and be able to apply considerable pressure on the brake linings without running out of thread.

The winch reels must be capable of taking 250 m.×80 mm. rope on vessels over 30,000 d.w.t. and 250 m.×70 mm. for vessels under 30,000 d.w.t. A minimum of 2 drums each end and for vessels under 30,000 d.w.t., and a minimum of 4 drums each end (but would prefer 6) on vessels over 30,000 d.w.t.

The winches must be capable of supplying full power for long periods so steam or hydraulic lines and associated machinery must be in first class working order.

Remember: The condition of the winches control the safety of the vessel while in berth.

The leads must be good with all rollers working. The 2 centre winches are used for 266 m.×36 mm. wires so they must have provision for securing the wire to the side of the drum. Roller leads (aft only) must have a 75 mm. top bar to prevent the wires from jumping off the rollers when the vessel is trimmed by the stern.

The Pilot will remain on board for the entire loading and will be responsible for moving the vessel in the berth. Good accommodation with toilet and shower facilities and meals must be provided.

ANCHORAGE: Recommended anchorage is in position with the jetty bearing approximately 200° (T) at a distance of 1.5 miles. Depth at anchorage is about 15 fathoms. 3 cables off the shore, the depth is about 9 fathoms. Holding ground is good.

RESTRICTIONS: No berthing at night. Also see "Pilotage".

MAX. SIZE: Vessels of 70,000 d.w.t. call on a regular basis. Depth alongside is 17.80 m.

HEALTH: In the case of each vessel arriving from overseas the following information must be sent to the Port Health Authorities between 12 and 24 hours before arrival, addressing the message to the relevant shipping agency (a copy of which message is required to be sent also to Dampier Salt Limited (Telex No. 99283)):

1. The expected hour and date of arrival of the vessel.
2. Confirmation that the Master has individually inspected all persons on board within 24 hours before arrival.
3. Particulars of any cases of serious illness on board.
4. Confirmation that all persons on board are satisfactorily vaccinated against cholera and in possession of valid Vaccination Certificate.
5. Request for permission to enter Port.

On receipt of quarantine message, Dampier Salt Limited, will advise anchorage position if vessel is not berthing on arrival.

Vessels must also ensure International Quarantine signals are displayed at all times until cleared by the Quarantine Officer (Clearance will be issued via Shipping Agency).

Whilst berthed at Cape Cuvier all food and organic waste must be kept in efficiently sealed containers and frequently doused with a soluble disinfectant. No garbage may be thrown overboard.

RADIO: Perth Radio.

Weather Broadcasts: Vessels are advised to listen to daily weather broadcasts by:

1. Perth Radio (VIP) at 0100 hrs. GMT and 1200 hrs. GMT, on 484 kHz, 8597 kHz, 12294 kHz or at 0200 GMT and 1000 GMT on 16947 kHz or 22315 kHz.
2. Local broadcast by VHF Channel 24, twice daily. Broadcast is via Perth Radio.

Vessels Arrival Requirements: Cape Cuvier is a First Port of Entry and all vessels bound for the berth are required to radio to Dampier Salt Limited, Telex No. 99283 (Fax: 414029. Cables: 6 CDPR SALT C), through the normal recognised coastal radio station, i.e. Perth Radio VIP the following information additional to Port Health messages (See "Health"):

1. Upon departure from previous port, estimated time of arrival and whether or not the port is the first port of call in Australia.
2. 10 days before intended arrival at the port, the estimated time of arrival and whether or not the port is the first port of call in Australia.
3. 7 days before intended arrival at the port, confirmation or any variation of the advice previously given.
4. 4 days before intended arrival at the port, confirmation or any variation of the advice previously given.
5. 48 hours before intended arrival at the port – estimate time of arrival at the Pilot boarding ground and also advise the vessel's estimated draft fore and aft.
6. 24 hours before intended arrival confirmation or any variation of the advice previously given.
7. 12 hours before intended arrival, final confirmation of time of arrival.

Note: Because of the isolated location of Cape Cuvier and the need to organise transport for the various berth services it is imperative that ample notice is given on arrival times. This is particularly so for weekend arrivals. Failure to adhere to these requirements may jeopardise vessels berthing to the detriment of Owner's account.

VHF: Call sign: Cape Cuvier. Available frequencies: Channels 6, 8, 12, 16, 67. Loading Operation Frequency: 155.97 MHz. Emergency Working Frequency: Channel 67.

A continuous watch must be maintained by the vessel on VHF Channel 16. All vessels approaching the Port or at anchor must maintain a continuous watch on this frequency. *Disregard of this requirement is a contravention of Berth By-Laws and may adversely affect expeditious berthing.*

TUGS: A contractor operates the tugs and line launches which are available at all hours.

The following craft are available to assist in berthing and unberthing.

Line launch – "Bigidda". Length 16.7 m. Twin screw.

Tug "Pilbara Neptuna". Bollard pull 28 tonnes. Length 26.41 m., breadth 9.3 m. Main engines: 2×Dilhatsu eight cylinder at 950 BHP each. Twin screw "Z" peller.

"Boolathana" – tug. Bollard pull 25 tonnes. Length 24 m., breadth 8 m., draft 3.4 m. Main engines: 2×V12 Caterpillar 398 1,400 r.p.m., 850 b.h.p. each. Twin screw kort nozzles.

BERTHING: *Salt Loading Berth:* Situated at Lat. 24° 13' S., Long. 113° 24' E. The berth is used only for salt loading.

A central timber decked wharfhead carrying a fixed position, stiff arm, slewing and luffing conveyor boom shiploader with deflector.

Six mooring buoys anchored to the seabed.

Vessels moor to buoys and warp themselves into position for loading each hold. The shiploader generally has the capacity to load 2 adjacent holds for each warped position of the vessel.

The principal berth dimensions are as follows:

Natural seabed level: R.L. – 17.8 m.

Minimum distance between vessel and jettyhead structure: 14.5 m.

Berth length 670 m. between fore and aft mooring Buoys No. 2 and 5.

Berth width 180 m., between breasting mooring Buoys No. 3 and 4, and minimum vessel stand-off from jettyhead (14.5 m.).

R.L 0.0 m. is Indian Spring Low Water at Cape Cuvier. The maximum tidal range at Cape Cuvier is 1.7 m.

The principal shiploader dimensions are as follows:

Jettyhead area:	18 m.×18 m.
Jettyhead deck level:	R.L. 13.2 m.
Shiploader boom underside:	R.L. 16.2 m.
Shiploader boom outreach:	Approx. 30 m.
Shiploader boom luff:	incline 45° decline 15°
Shiploader boom loading arc:	incline 18° decline 15°
Shiploader boom slew:	± 90°
Shiploader boom conveyor width:	1,600 mm.
Shiploader boom conveyor speed:	3.1 m./sec.
Shiploader boom conveyor capacity:	3,500 t.p.h.

Also see "Loading".

MOORING: *Ship's Mooring Lines:*

1. Vessels shall provide the following lines:

6×250 m.×80 mm. diameter polylines on forecastle deck.

6×250 m.×80 mm. diameter polylines on afterdeck (in case of vessels under 30,000 d.w.t., 70 mm. to apply).

All lines to have a reinforced soft eye, 1 m. long in the outer end.

2. All vessels shall provide satisfactory ship's lines on both fore and after decks, such to pick up the 36 mm. diameter steel wires, 2 from each mooring buoys Nos. 2 and 5.

3. All working and spare lines supplied by the vessel are to be in first class working condition.

Note: If vessel cannot supply lines, Dampier Salt Ltd. will supply at no cost.

Mooring Equipment – Supplied by Dampier Salt:

1. Dampier Salt shall supply 2×265 m.×36 mm. diameter steel wires from each of mooring buoys Nos. 2 and 5. These lines are to be run back to the vessel and secured on drum winches to act as the fore and aft longitudinal mooring lines.

2. Dampier Salt Limited shall supply all ropes necessary for stopping-off polylines.

Berth Operating Conditions: Unless the Pilot otherwise directs, berthing operations will generally be restricted to the following conditions:

Winds: Zero winds from Northern quadrants and below 25 knots within the Southern sector between East and West.

Swells: Up to a mean amplitude of 2 m. as recorded on the berth wave rider.

Ballast: The vessel to maintain ballasted state with the propeller 75% immersed and a stern trim.

Berth Occupancy: Unless the Pilot otherwise directs, berth occupancy will generally be restricted to the following conditions:

Winds: Below 35 knots from the Southern quadrants. Below 10 knots from the Northern quadrants.

Swell: Up to a mean amplitude of 2.5 m. as recorded on the berth wave rider.

Mooring Procedure:

1. Preparation before Berthing – Two central drums, both fore and aft, are to be left bare ready to receive the 36 mm. diameter wires when these wires are landed on board from mooring buoys Nos. 2 and 5.

2. On berthing – Immediately prior to berthing, a number of shore based personnel will board the vessel to assist in handling lines during berthing. As instructed by the Pilot, polylines will be run out as both breasting lines and to pick up the steel wires from the fore and aft mooring buoys. Polylines unable to be held on drum winches will be taken up on warping winches, stoppered off and placed on bitts.

The Pilot will give instructions as to how much tension is to be applied to each line.

3. On Warping – During the shiploading operation, it will be necessary to shift the vessel such that the shiploader can load the vessel in accordance with the loading schedule. Normally, the shiploader will load only two hatches from the one positioning of the vessel.

The shore-based personnel will board the vessel to assist in line handling for the warping operation. The tugs will also assist as required.

Under the direction of the Pilot, lines shall be played out or taken in such to warp the vessel to the next loading position.

4. On unberthing – All lines shall be dropped or taken in as instructed by the Pilot. The shore personnel will assist in line handling.

LOADING: *Condition to Load Salt:*

1. Ensure that vessel's holds are thoroughly washed and all traces of the previous cargo are removed.

2. Ensure that vessel's holds are thoroughly lime washed with slaked lime (calcium hydroxide – $Ca(OH)_2$ and that no other substances are mixed with it.

Note: Limewashing is a pre-requisite of vessel's loading.

In the event that holds are not acceptable, the Master may be required to sign a "Letter of Indemnity" accepting the cargo on behalf of the Operating Line, acknowledging that holds are in the condition described in the report by the independent Marine Surveyor.

Provided the vessel's holds are acceptable to the Surveyor as being "clean" the Surveyor will issue a Hold "Cleanliness Certificate".

3. Ensure that mooring lines are laid out in readiness for berthing in accordance with "Mooring Procedure".

Loading Procedure: The vessel is to ensure that the first 2 holds to be loaded have the hatch covers removed on berthing. On berthing the vessel will be positioned by the Pilot, such that the loading can commence immediately upon acceptance of the Notice of Readiness and verification that vessel's holds are clean to standards set by Dampier Salt Limited.

An independent Marine Surveyor appointed by Dampier Salt will agree all draft readings and ballast soundings with the Chief Officer prior to commencement of loading.

An Operations Supervisor from Dampier Salt Limited will board the vessel prior to berthing to check that the vessel is ready to load. This Officer will agree with the Chief Officer a loading sequence, loading schedule, warping procedures, draft problems (if any) and any other matters relating to the loading of the vessel. Warping procedures shall be confirmed with the Pilot.

The Operations Supervisor will draw up a loading schedule, after consultation with the Chief Officer, nominating the approximate hold loading duration, times of warping and the estimated time of completion of loading, and sailing time.

The Operations Supervisor will normally remain on board the vessel for the duration of loading in order to liaise with the Chief Officer on matters concerning the loading procedures.

A belt weightometer is used by Dampier Salt Limited to indicate loading rates and tonnages loaded in each hold. This instrument has an accuracy of ±1.5%. It is the practice of Dampier Salt Limited for the Surveyor and Chief Officer to agree a preliminary draft survey when the second last hold is approximately 80% loaded. This survey then allows the correct loading of the remainder of the cargo so as to ensure correct trim and prevent inadvertent overloading. The final loaded cargo tonnage is determined by draft survey, calculated by and agreed between the Surveyor and Chief Officer.

No labour is available at Cape Cuvier to board the vessel for any shipboard duties other than handling of mooring lines. Trimming is by conveyor discharge at the end of the loading spout only.

Salt – General Specifications: Stowage factor of Salt. Normal stowage density 32 cu.ft. per long ton or 0.89 cu.m. per metric tonne. Angle of repose 33°.

STEVEDORES: Dampier Salt Ltd.

MEDICAL: Master to advise by telex via coastal radio if any crew members require medical or dental services. Prior advice will generally ensure adequate arrangements can be made to accommodate such requests. Insufficient notice, or advice only on berthing may jeopardise the chances of obtaining normal medical/dental treatment. Emergency medical treatment is normally available through Carnarvon Regional Hospital.

DENSITY: 1025.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: There are no ship repair facilities. However, vessels may carry out repairs of a limited nature but only with the prior approval of Dampier Salt Limited and the Harbour Master.

DRY DOCK: None.

WATCHMEN: No shore watchmen available.

HATCHES: To be opened/closed by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes in opened carton, or 0.25 lb. cigars, or 0.5 lb. tobacco, and one opened bottle spirits per crew member.

An Australian Customs Boarding Officer is resident in Carnarvon. Regulations of Australian Department of Customs and Excise apply to the Port.

CARGO GEAR: Not required. Salt loading is by conveyor belt.

REPATRIATION: Road connection to Carnarvon, which is 97 km. distance from Cape Cuvier, thence air connection with Perth where international flights available.

AIRPORT: Carnarvon has a daily air service to Perth. Connecting flights for other Australian cities and also for overseas destinations are available from Perth.

TIME: See "General" before first port.

GENERAL: Port is gazetted under Western Australian legislation and controlled under Ports and Harbours Regulations.

Ordering Stores: Telex advice of any and all stores and provisions requirements should be given to Agent at least 4 days prior to arrival. Stores orders received later than this may not be able to be filled.

Australian Chart AUS 330 (Pt. Cloates to Quobba Pt.)
Australian Chart AUS 331 (Quobba Pt. to Geraldton)
British Chart BA 1055 (Bedout Island to Cape Cuvier)

Access to Vessel:

At Anchorage: Whilst at anchorage, access will be by authorised personnel only from the line launch or one of the tugs.

In Berth: Whilst in berth, access will normally be by a hydraulically operated gangway. On these occasions the shiploader supervisor will direct the timing and positioning of the shiploader boom such to minimise inconvenience to the shiploader operation.

Vessels Engines: Vessel's engines are not to be demobilised whilst the vessel is in berth. Adverse weather conditions affecting the area may require the vessel to be moved. Vessels in the berth will be on notice to shift at all times.

OPERATOR: Dampier Salt Limited, Lake Macleod Division, P.O.Box 501, Carnarvon, W.A. 6701. *Tel:* (099) 412677. *Telex:* AA 99283. *Cables:* 6CDPRSALTC. *FAX:* (099) 414029.

AUTHORITY: Department of Transport, 1 Essex Street, Fremantle, Western Australia 6160. *Tel:* (09)239-2399. *FAX:* (09) 430-6229. *Contact:* Director Marine Safety.

AGENT: See "Fremantle".

(C) USELESS LOOP (Shark Bay)

LOCATION: Useless Loop is situated in position Lat. 26° 05′ S., Long. 113° 24′ E.

DOCUMENTS: See "Melbourne".

PILOTAGE: Compulsory. Notice for Pilots is by 'Shipserv' message to Superintendent of Pilotage, Department of Marine and Harbours, Fremantle, 7 days, 48 hours and 24 hours prior to arrival.

APPROACHES: Vessels from the North proceed direct to Denham Channel, vessels from the South can navigate through Naturaliste Channel with caution using Chart AUS 331. All vessels must anchor at pilot boarding ground situated 1 mile North of Denham Channel Lat. 25° 52′ S., Long. 113° 15′ E. and wait for further instructions on VHF Channel 16. Vessels must provide a good lee for pilot boat with ladder always on starboard side unless otherwise ordered. It is important that final ETA is correct and must be amended if necessary. It is important that vessels arrive in full or good ballast condition otherwise they may be unable to berth.

Pilots remain on board during transit to Useless Loop.

TUGS: None.

BERTHING: One berth. Owned and operated by Shark Bay Salt Pty. Ltd. Conveyor belt system from Salt Stock Pile to ship gross rate 800 t.p.h. for salt, 600 t.p.h. for gypsum. Dolphin type jetty length 189 m. runs approximately North and South directions and 2.1.cables from Topper Island. Min. depth at berth 10.06 m. LWOST. Rise of tide approximately 0.91 m. Winds predominantly S.E./S.W.

As the loading equipment is fixed, the vessel must shift from hatch to hatch as required.

As strong winds prevail in the area, vessels should plan for a minimum of shift ships to prevent crew exhaustion. As no shore weights are available, the ship's officers must load by draft, and a careful check of deballasting is advised.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: Not available.

AUTHORITY: Department of Transport, 1 Essex Street, Fremantle, Western Australia 6160. *Tel:* (09) 239-2399. *FAX:* (09) 430-6229. *Contact:* Director Marine Safety.

AGENT: See "Fremantle".

CHALLIS VENTURE: 12.07 S. 125.00 E.
JABIRU VENTURE: 11.55 S. 125.00 E.
SKUA VENTURE: 12.30 S. 124.25 E. (See Plan)

LOCATION: The Jabiru and Challis Oilfields are in the Timor Sea, about 680 km. West of Darwin and some 300 km. off the Kimberley coast of North Western Australia.

"Challis Venture" – Lat. 12° 07′ 17″ S., Long. 125° 00′ 43″ E.
"Jabiru Venture" – Lat. 11° 55′ 33″ S., Long. 125° 00′ 23″ E.
"Skua Venture" – Lat. 12° 30′ 36″ S., Long. 124° 25′ 16″ E.

ANCHORAGE/RESTRICTIONS: There are prohibited anchoring areas in the vicinity of the Timor Sea production areas. If an offtake vessel cannot moor on arrival at one of the Facilities and wishes to anchor, it must be within the Permitted Anchoring Areas. Contact should be made with the Master of either Facility for information and guidance on this matter.

Vessels should make every endeavour to arrive with propeller and rudder fully submerged and trim should not exceed 10% of the after draft. Masters should note that in event of arrival with excessive trim or too light in draft, berthing will be refused.

DOCUMENTS: Masters will complete the following forms which will be delivered to Customs by the ship's Agents at least 48 hours prior to arrival:

Ship's Inward Cargo Report (Form 1).
Passenger Report (if applicable) (Form 2A and Form 2B).
Crew Report (Form 3A and Form 3B).

Masters should endeavour to complete the following forms ready for collection on arrival by Customs Officers, if the facility is the vessel's first Australian destination:

Ship's Report of Arrival (Form 5 – Part 1).
Crew Effects Declaration (Form 5 – Part 2).
Ship's Stores consumed in Australia (Form 42A).
Shipmaster's Notice (Animals, Hides and Skins) Not for Importation (Form QA4).
Shipmaster's Bond regarding animals carried (only if pets on board) (Form QA5).

The Customs Officer in attendance will advise any other documentary requirements, and provide forms if necessary.

Because the "Challis Venture", "Jabiru Venture" and "Skua Venture" are not designated ports, offtake vessels should have their Agents apply for Certificates of Permission for Entry to Australia at other than a designated port as required under Section 58 of the Customs Act 1901 (Commonwealth of Australia).

Customs Authorities have advised that permission will generally be granted. However, Customs Officials retain the right to board offtake vessels for inspection at their discretion and Masters of offtake tankers are required to provide accommodation and mess facilities for visiting Customs Officers.

APPROACHES: The Facility Master will advise by radio the bearing on which offtaking vessels should approach.

Hazard to Navigation: An unlit wave rider buoy is located at Lat. 11° 57.97′ S., Long. 125° 03.42′ E.

PILOTAGE: Pilotage is compulsory. The Facility Master or an appropriately qualified nominee of the Facility Master will transfer to the offtake vessel when it reaches a distance of 2 nautical miles from the Facility and will act as Pilot during approach and mooring.

Two Berthing Superintendents from the Facility will board with the Facility Master and will remain on board the offtake vessel for the time the vessel is moored. Suitable accommodation is to be provided for these personnel.

READINESS: *Restricted Berthing Hours:* Notice of Readiness will only be accepted during the hours 0700 to 1600 when prevailing weather conditions permit safe mooring.

Notice of Readiness: Arriving offtake vessels may not tender Notice of Readiness until 2 nautical miles from a facility and until otherwise in all respects ready to approach, moor and offtake in accordance with these regulations and the Terminal Conditions.

MAX. SIZE: 150,000 d.w.t.

HEALTH: *Australian Government Requirements:* A Radio Pratique message should reach the vessel's Agent no more than 24 hours, and no less then 12 hours before arrival, as per the following instructions.

Please answer the following questions, indicating NIL where necessary, and answer them in order. If answers are not correct, or not in the correct order, it could cause unnecessary delay to vessel berthing.

NOTE: Masters or Medical Officers who wilfully make a false statement in answer to any question, are liable to a fine not exceeding $ 5,000 or imprisonment for a period not exceeding 2 years.

Question	*Answer*
1. Name, type and nationality of offtake vessel.	....
2. Where from and departure date?	....
3. Where bound and ETA first port	
4. Details of any communicable disease or illness or death on board since sailing.	....
5. Are there any animals or plants on board?	....
6. Have you carried livestock in the last six months?	....
If yes: List type, ports visited and cleaning performed since last livestock voyage.	....

Optional section (answering this section will facilitate clearance of your vessel when it arrives in port).

If the vessel is entering in ballast:

1. Have you:
   (a) Exchanged ballast water at sea during the voyage *and* logbook certification of time and co-ordinates when re-ballasting occurred *or*:
   (b) Certification that the area where ballasting took place is free from toxic dinoflagellates?

OR

2. Is your vessel part of a compliance arrangement for ballast water control accepted by Australian Quarantine and inspection services?
3. Will you be discharging ballast whilst in Australian waters?

Yes/No

NOTE: The granting of pratique to a vessel does not release it from being subject to quarantine. Goods require separate clearance.

Date .... Signed ....

RADIO/VHF:

Advice of Arrival: Incoming vessels must advise BHP Petroleum Operations Manager and the Facility of their ETA 72 hours and 48 hours before intended arrival and give the following information:

1. Name of vessel and radio call sign.
2. HF radio telephone frequencies, if so equipped.
3. Inmarsat identification number and which satellite in use.
4. Arrival draft and trim.

ETA should be confirmed or varied, as appropriate, 48 hours before arrival.

Radio Communication with Challis Venture: The "Challis Venture" has radio communication hours of 0600 to 1800 local time (2030 hrs., – 0830 hrs. GMT).

The "Challis Venture" operates without a dedicated Radio Officer, however messages can be sent to the Facility via Inmarsat, the shipping Agent representing the offtake vessel.

"Challis Venture" Call sign:	VLN 4720
"Challis Venture" Inmarsat number for telex:	582 1543357 CHAV X 583 1543357 CHAV X
"Challis Venture" Inmarsat number for telephone:	0011 872 1543357 0011 873 1543357

The Facility is on the Indian Ocean or the Pacific Ocean Inmarsat, depending on conditions.

Incoming offtake vessels may use the frequencies 4125 kHz or 4143.6 kHz for *radiotelephone* communications with the Facility. The "Challis Venture" will use VHF Channel 72 as a working frequency.

The "Challis Venture" is equipped with a radio direction finding (RDF) beacon with a frequency of 404 kHz. Call sign is XCHA and range is 100 nautical miles. The beacon transmits on request.

Radio Communication with "Jabiru Venture": The "Jabiru Venture" has radio communication hours of 0600 to 1800 local time (2030 hrs. – 0830 hrs. GMT).

"Jabiru Venture" Call sign:	VJJJ
"Jabiru Venture" Inmarsat number for telex:	582 1543604 JABV X 583 1543604 JABV X
"Jabiru Venture" Inmarsat number for telephone:	0011 872 1543604 0011 873 1543604

"Jabiru Venture" is on Indian Ocean or Pacific Ocean Inmarsat, depending on conditions.

Incoming offtake vessels may use frequency 4125 kHz or 4143.6 kHz for *radiotelephone* communications with the Facility, which will listen for incoming offtake vessels between 2030 to 0830 hrs. GMT on 4125 kHz, VHF Channel 16 and 500 kHz. The Facility will use VHF Channel 6 as a working frequency.

The "Jabiru Venture" is equipped with a radio direction finding (RDF) beacon with a frequency of 436 kHz. Call sign is JVX and the range is 100 nautical miles. The beacon transmits continuously.

Radio Communication with "Skua Venture":

"Skua Venture" Call sign:	VNXI
"Skua Venture" Inmarsat number for telex:	582 1543726 SKUV X 583 1543726 SKUV X
"Skua Venture" Inmarsat number for telephone:	0011 872 1543726 0011 873 1543726

The Facility is on the Indian Ocean Inmarsat, depending on conditions.

Incoming offtake vessels may use the frequencies 4125 kHz or 4143.6 kHz for *radiotelephone* communications with the Facility. The "Skua Venture" will use VHF Channel 8 as a working frequency.

TUGS: A workboat is available for line handling.

BERTHING: *"Challis Venture":* The "Challis Venture" is a purpose built 115,000 d.w.t. barge fitted with process facilities and a metering system to enable stabilisation of crude oil and delivery to offtake vessels. The "Challis Venture" has around 135,000 kl. total storage capacity (approximately 845,000 bbls. or 110,000 metric tonnes). Oil is delivered through a 16 in. floating hose system at a rate of approximately 5,000 kl. (31,500 bbl.s) per hour. Allowing for start up and slow down periods, 103,290 kl. (approximately 650,000 bbls.) will require over 20 hours pumping.

"Jabiru Venture": The "Jabiru Venture" is a converted 140,000 d.w.t. tanker with process facilities and a metering system to enable stabilisation of crude oil and delivery to offtake vessels. The "Jabiru Venture" has around 155,000 kl. total crude oil storage capacity (approximately 975,000 bbls. or 126,000 metric tonnes). Oil is delivered through a 16 in. floating hose system at a rate of approximately 3,400 kl. (21,400 bbls.) per hour. Allowing for start up and slow down periods, 103,290 kl. (approximately 650,000 bbls.) will require over 30 hours pumping.

"Skua Venture": The "Skua Venture" is a converted 132,000 d.w.t. tanker (similar in design to the "Jabiru Venture") with process facilities and a metering system to enable stabilisation of crude oil and delivery to offtake vessels. The "Skua Venture" has around 157,000 kl. total crude oil storage capacity (approximately 988,000 bbls. or 128,000 metric tonnes). Oil is delivered through a 16 in. floating hose system at a rate of approximately 3,500 kl. (22,000 bbls.) per hour. Allowing for start up and slow down periods, a standard cargo of 103,290 kl. (approximately 650,000 bbls.) will require up to 30 hours pumping.

Standard of Offtake Vessels: Offtake vessels between 25,000 d.w.t. and 150,000 d.w.t. only can be accommodated at any Facility.

Exhibited (See "Appendix") is a Questionnaire to which the offtake vessel is obliged to provide answers before being nominated to visit a Facility. It is imperative that if at any time the particulars given in those answers should be seen to be inaccurate, or should change in any respect, BHP Petroleum Operations Manager and Master of the Facility must be notified forthwith in writing. Without prejudice to any other consequence of such inaccuracy or change, failure to so notify and to provide all necessary details relating thereto may cause delay at the Facility.

The offtake vessel should be fitted with a centre Panama type fairlead and bow chain stoppers capable of handling the 76 mm. diameter chafing chain.

The bow windlass or winch must be capable of pulling 15 tonnes and should have one empty drum to take the 72 mm. diameter messenger line. The drum must have a good hauling lead from the Panama fairlead directed through the chain stopper in order to retrieve the chafing chain and hawser.

Under no circumstances will the warp end be used to heave in the system. A winch drum only is acceptable.

Offtake vessels should have manifolds and associated offtake equipment conforming to Oil Companies' International Marine Forum (OCIMF) standards and a manifold derrick or crane rated at 10 tonnes S.W.L.

Given the particular requirements of each Facility, offtake vessels should ensure that their mooring systems are checked for suitability and safety before finalisation of charter arrangements and before arrival at a Facility.

Offtake vessels must be covered by a current ITF Certificate. Offtake vessels will also be required to provide accommodation for any of the following people for the duration of offtake.

2 Berthing Superintendents from the Facility.
Independent Surveyor.
Customs Officers.
Shipping Agent.

Ship/Floating Production Facility Safety Check: On arrival at the Facility, the offtake vessel will be subject to a safety check by the Facility Operator in accordance with the International Safety Guide for Oil Tankers and Terminals. The Terminal Conditions provide that the Facility may refuse to allow the offtake vessel to berth or may order the offtake vessel away from the berth, or otherwise suspend or terminate provision or performance of services to the offtake vessel, if at any time the offtake vessel fails to meet the relevant safety standards.

Mooring: Neither tug nor supply boat services are required. The Pilot and hose coupling tools will be transferred to the offtake vessel by the Facility workboat. When the offtake vessel is "onsite" the mooring hawser will be made fast to the bow of the offtake vessel.

Mooring operations are the responsibility of the offtake vessel crew acting under the supervision of one of the Berthing Superintendents from the Facility.

Engines on Standby: Offtake vessels are required to keep their engines on continual 'stand-by' and be ready to respond to requests for engine movement immediately. Vessels will be required to move astern to prevent creeping up or jack-knifing as necessary.

The hawser system has a working load of 200 tonnes and offtake vessels may use astern power to keep station. All engine movements should be made with due care.

Deballasting Operations: The Facility Master must be consulted before commencement of deballasting operations.

Watches: A qualified officer with authority to manoeuvre is to keep a bridge watch whilst the offtake vessel is on station. Reliable communications are to be established between the bow and the bridge.

Connection of Hose: After the mooring hawser has been made fast, the workboat will pull the floating hose to the offtake vessel. At "Jabiru Venture" the hose will be connected to the starboard side of the offtake vessel. At the "Challis Venture" and "Skua Venture", the connection will be made to the port side. The hose-end must then be lifted on board using the offtaking tanker's manifold derrick or crane.

The connection of the hose is the responsibility of the offtake vessel's crew, under the guidance of the Berthing Superintendents from the Facility.

The hose-end connection is a 16 in. 'Camlock' quick release coupling and will fit standard 16 in. ANSI 150 lb. flanges.

The floating hose is fitted with a self sealing breakaway coupling for emergency disconnection.

Manifold adaptors/extenders to suit the above should be supplied by the offtake vessel.

Delivery may be suspended for safety reasons during visits by helicopters to the Facilities, should flights be necessary, and/or if weather conditions exceed safety limits.

Departure after Loading: Unless otherwise permitted by the Operator, offtake vessels shall depart within 6 hours of completion of loading. An Early Departure Procedure is available, should this be required or necessary for any reason, and is as follows. The quantity of cargo loaded is computed initially by the Operator using oil sales metered volume and a provisional density figure. The appropriate *gross* cargo so determined will be introduced on the Bill of Lading in the designated "Approximate Quantity Report" section.

After departure of the vessel, a final density, sediment and water content of the cargo will be determined by the Operator. After this determination, the Operator shall inform the vessel by telex of gross and *nett* cargo quantity loaded. The nett quantity will be introduced on the Bill of Lading in the designated"Precise Quantity Report" section and signed for by the vessel Agent and Operator.

Typical Cargo Properties:

Challis Crude:

Density at 15°C.	0.8272
API gravity	39.5
Viscosity at 20°C.	3.04 cst.
Pour Point	−9°C.
Reid Vapour Pressure	23.5 kPa (3.4 p.s.i.)

Jabiru Crude:

Density at 15°C.	0.8139
API gravity	42.3
Viscosity at 20°C.	3.45 cst.
at 40°C.	2.41 cst.
Pour Point	15°C.
Reid Vapour Pressure	31.0 kPa (4.5 p.s.i.)

Skua Crude:

Density at 15°C.	0.8128
API gravity	42.5
Viscosity at 20°C.	2.957 cst.
Pour Point	+9°C.
Reid Vapour Pressure	50.75 kPa (7.35 p.s.i.)

Offtake tankers going into cold seas may require heating coils.

MEDICAL: Medical and dental services are not available at any Facility. In emergencies, medical evacuation to Darwin can be arranged, which may take 6 hours.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: Repairs are not permitted whilst moored to a Facility.

TIME: GMT plus 9.5 hours. Also see "General" before first port.

SHORE LEAVE: Not possible.

APPENDIX:

To: BHP Petroleum, Darwin Operations. Fax No. (089) 844139.
BHP Petroleum, Melbourne Marketing. Fax No. (03) 6541723.
From:
Date:

These vessels details are required prior to acceptance to lift from the floating production storage and offtake facilities "Challis Venture", "Jabiru Venture" or "Skua Venture".

1. Name of Vessel:
2. Previous Names, if any:
3. Port of Registry/Flag:
4. Name of Owner:
5. Registered Address:
6. Nationality of Officers/Crew:
7. Vessel Classification Society/Classed as:
8. Year of Build:
9. Call Sign:
10. Inmarsat No.:
11. L.O.A.:
12. Breadth:
13. Distance, Bow to Manifold:
14. Distance, Ship Side to Manifold:
15. Diameter of Manifold:
16. Diameters of available Manifold Reducers:
17. Does Manifold/Associated Equipment comply with O.C.I.M.F.?
18. S.W.L. of Manifold Crane/Derrick:
19. Summer/Tropical/Winter D.W.T.:
20. Summer/Tropical/Winter Drafts at Full D.W.T.:
21. Cargo Capacity at 98%:
22. Maximum Loading Rate:
23. Arrival Drafts:
24. Has Vessel C.B. Tanks?
25. Has Vessel S.B. Tanks?
26. Can Vessel load and deballast simultaneously with two valve separation?
27. Has Vessel a Centre Panama Lead?
28. Panama Lead Dimensions:
29. Has Vessel a Chain Stopper:
30. Can Chain Stopper accept 76 mm. Diameter Chain?
31. Distance, Panama Lead to Chain Stopper:
32. Can Windlass lift 15 tonnes:
33. Has Vessel Leads allowing Mooring Hawser to be hauled from the Panama Lead via the Chain Stopper onto an empty Drum? (Not the warping drum-end):
34. Has Vessel a Designated Helicopter Landing Area?
35. Does Master and/or Crew speak English?
36. Is Vessel covered by I.T.F. Agreement?
37. Vessel's Last Port of Call before Challis/Jabiru/Skua?
38. At which Port may Vessel be inspected by Operators Representative?
39. Has Vessel a "Challis, Jabiru, Skua Berthing Handbook" on board?
40. A Legible Copy of the Fo'c'sle Deck Arrangement must be supplied before an Offtake Vessel can be accepted by BHP Petroleum Pty.Ltd. for the safe berthing astern of the Challis Venture, Jabiru Venture or Skua Venture. If possible, the Plan should show the proposed lead from the Panama Fairlead to the Winch Drum.

NOTE: Submission of this Questionnaire to BHP Petroleum Pty. Ltd. shall be an acknowledgement and acceptance by Offtake Vessel (Including its Owners, Agents, Master and Crew) and Cargo Owner of the "Terminal Conditions" which govern operation of, access to and usage of, the Challis Venture, Jabiru Venture and Skua Venture Facilities.

GENERAL:

Services: The remote, deep-sea location of the Facilities severely limits the provision of services. Offtake tankers should ensure that they carry supplies adequate for a return journey.

Visitors to the Facilities: Access to any one of the Facilities is by a 2 hour light aricraft flight from Darwin to Troughton Island, and then a 1 hour helicopter flight to the the Facility. Because of the limited capacity of scheduled flights, the difficulties in arranging extra flights and the severe accommodation constraints on board each Facility, the attendance of visitors is not normally possible.

Customs, Department of Transport Officers, independent surveyors, ships' Agents, buyers' representatives and any others intending to visit, should seek permission of the Operations Manager at least 2 days before scheduled arrival of the offtake vessel. Earlier advice would be appreciated.

Fire Fighting: Each Facility has only firefighting equipment required for its own purposes. It can give no aid to offtake vessels in case of fire. In the event of an emergency on board an offtake vessel or on one of the Facilities, the offtake vessel will be released.

Pollution Control: The "Challis Venture" and "Skua Venture" hold a small quantity of dispersant for pollution control which can be dispensed from the workboat or, subject to call-out delay, from a helicopter should this be necessary.

Without derogating from the Terminal Conditions, liability for any costs of countering any pollution caused by oil which has passed the point where the offtake vessel's permanent hose connection connects to the terminal operations loading facilities will be for the account of, and recoverable from, the offtake vessel.

No refuse is to be dumped overboard. The I.M.O. convention on the dumping of waste at sea applies. Any waste water discharged should have an oil content of no more than 15 p.p.m.

Liability for pollution, its consequences and control is governed by the Terminal Conditions.

Stores: Not available.

Dirty Ballast: Dirty ballast, slops or refuse cannot be accepted at any Facility.

Government Charges: Customs, Immigration and Health inspections will usually be carried out by one Customs Officer but, at the discretion of customs authorities, several Customs Officers may carry out a particular inspection.

Offtake vessels will be liable for Customs fees charged per person per hour. Inspections will generally require a minimum of 14 hours, including travelling time.

Light Dues, Oil Pollution Levies: The Northern Territory Department of Mines and Energy advises that vessels offtaking from the Facilities are not required to pay light dues or oil pollution levies.

Weather: Prevailing winds are Southerly from May to October.

The wet season is during the Summer months – November to April – and at that time prevailing winds are Northwesterly.

During the Summer months, the Timor Sea is subject to occasional cyclones. In January and February, in particular, weather and sea states may prevent mooring and/or loading for periods of a few days.

The limiting significant wave height for mooring is 2.2 m. On this basis mooring will be feasible 85% of the time. For offtake vessels already moored, the design limits for the hawser will be approached when significant wave height reaches 2.8 m. and winds reach 36 knots. On this basis, loading will be feasible 93% of the time.

Charts:

Australian: AUS. 314.
British: B.A. 1047, B.A. 942A.

These charts cover the general area and the site of each Facility.

OPERATOR: BHP Petroleum Ltd., Lot 4233, Pruen Road, Berrimah, NT 0828, Australia. (Postal address: P.O.Box 37871, Winnellie, NT 0821, Australia). *Tel:* (089) 221122. *Telex:* AA 85146. *FAX:* (089) 844139. *Cables:* Hempet, Darwin. *Contact:* Manager, Darwin Operations.

COSSACK PIONEER, W.A.: 19.35 S. 116.27 E.

(See Plan)

LOCATION: The "Cossack Pioneer" is located in about 85 m. of water, approximately 80 nautical miles N.N.W. of the Port of Dampier in position Lat. 19° 35.4′ S., Long. 116° 26.7′ E.

General Charts for Area: AUS 327 – Port Walcott to Monte Bello Islands. AUS 741 – Approaches to Dampier Archipelago.

General Information: The "Cossack Pioneer" is a converted 150,000 d.w.t. tanker that has a total oil capacity of approximately 174,475 cu.m. (1,097,000 bbls.).

Oil is delivered to offtake tankers through a floating hose with a 16 in. (400 mm.) flange at a rate of approximately 4,000 cu.m./hr. (25,100 bbls./hr.).

For example, a cargo of 650,000 bbls. (103,290 kilolitres) will require a time period of approximately 30 hours pumping.

The floating hose is fitted with a breakaway coupling which will part in case of an emergency disconnect.

The coupling is designed to close quickly so that pollution of the environment is reduced.

DOCUMENTS: *Customs and Immigration:* Masters should complete the following forms that should be delivered to Customs by the offtake tanker's Agents at least 48 hours before arrival at the Terminal:

Form 1	Ship's Inward Cargo Report.
Form 2A and Form 2B	Passenger Report (if applicable).
Form 3A and Form 3B	Crew Report.

Masters should endeavour to complete the following forms ready for collection on arrival by Customs Officers, if the Terminal is the offtake tanker's first Australian destination:

Form 5, Part One	Ship's Report of Arrival.
Part Two	Crew Effects Declaration.
Form 42A	Ship's Stores Consumed in Australia.
Form QA4	Shipmaster's Notice (Animals, Hides and Skins). Not for Importation.
Form QA5	Shipmaster's Bond regarding animals carried (only if pets onboard).

The Customs Officer attending will advise any other necessary documentary requirements, and provide forms if necessary.

Because the "Cossack Pioneer" is not a designated port, offtake tankers should have their Agents apply for Certificates of Permission for Entry to Australia at other than a designated port, as required under Section 58 of the Customs Act 1901 (Commonwealth of Australia).

Customs Authorities have advised that permission will generally be granted. However, Customs Officers retain the right to board offtake tankers for inspection at their discretion and Masters of offtake vessels are required to provide accommodation and mess facilities for visiting Customs Officers.

Inspections: Customs, Immigration and Health Inspections will usually be carried out by one Customs Officer, but at the discretion of Customs Authorities, several Customs Officers may carry out a particular inspection.

Offtake tankers will be liable for Customs Fees charged per person per hour. If Customs Officers elect to attend the offtake tanker, it will be for the duration of the stay of the vessel at the Terminal.

ESSENTIAL REQUIREMENTS: *Offtake Tanker Standards:* Safety is paramount at the Terminal, and offtake tankers will not be accepted for berthing and loading unless they meet the following criteria:

1. Summer deadweight (SDWT) of between 25,000 d.w.t. and 150,000 d.w.t. (approx. 175,000 tonnes displacement).
2. No oil/bulk/ore (OBO) carriers or any form of combination carrier.
3. Only segregated ballast tanks (SBT) – No clean ballast tanks (CBT).
4. Current ITF Certificate or acceptable ITF conditions.
5. Offtake tankers must comply with MARPOL and SOLAS and all ship's documents and certificates must be valid. Membership of TOVALOP and a P&I Club is also required.
6. Offtake tankers must be able to run their engines astern for the duration of the offtake, if so required by the Terminal.
7. Masters should read Item 10 of the Terminal Conditions (quoted below), and be fully aware of possible action, should an offtake tanker be found deficient, substandard or fails to comply with any of the above requirements.

Terminal Conditions – Item 10:

The Facility Master is entitled to withhold the commencement of, suspend or terminate the provision or performance of Facility Services, or take such action as he thinks fit including the right to order the offtake tanker to leave the berth and to prohibit the offtake tanker from berthing or reberthing in the event that in the Facility Master's opinion:

(a) Offtake tanker fails, or is likely to fail, to comply with the provisions and requirements of the Terminal Handbook or the Oil Companies International Marine Forum (OCIMF) "Recommendations for Equipment Employed in the Mooring of Ships at Single Point Moorings" or "Recommendations for Oil Tanker Manifolds and Associated Equipment"; or

(b) Offtake tanker, is not, or is likely not, to be in all respects fit to berth or load at the Facility; or

(c) such suspension is necessary due to landing or departure at the Facility of a helicopter; or

(d) weather or other safety conditions exceed or are likely to exceed normal operational limits; or

(e) Master of offtake tanker wishes to undertake repairs to the offtake tanker.

Mooring Equipment: Bow arrangements must comply with OCIMF's "Recommendations for Equipment Employed in the Mooring of Ships at Single Point Moorings".

A summary of relevant requirements are detailed in the table below:

Bow Stopper	One or two capable of accepting 76 mm. chafe chain SWL of 200 tonnes.
Winch	Clear lead from bow stopper to winch drum (not drum end). Able to lift at least 15 tonnes. Able to store 150 m. of 80 mm. diameter pick-up rope.

Manifold Equipment: Manifolds and associated equipment must comply with OCIMF's "Recommendations for Oil Tanker Manifolds and Associated Equipment".

A summary of relevant requirements are detailed in the table below:

Ship size	25,001 to 60,000 d.w.t.	60,001 to 160,000 d.w.t.
Lifting equipment	Minimum SWL 10 tonnes. 10 m. clear lift above each manifold. Slew each way under power.	Minimum SWL 15 tonnes. 10 m. clear lift above each manifold. Slew each way under power.
Cruciform Bollards	SWL 25 tonnes. Midway between each manifold pair.	SWL 25 tonnes. Midway between each manifold pair.
Manifolds	Centre to centre spacing of 2.0 m. Flange 4.6 m. from ship's side.	Centre to centre spacing of 2.5 m. Flange 4.6 m. from ship's side.

Offtake tankers are moored bow to stern of the "Cossack Pioneer" with a 55 m. long combination chain/rope hawser. There is a capability for a quick release for the hawser, but this is only used for emergency disconnection.

A workboat will usually make fast to the stern of the offtake tanker to maintain a safe distance from the "Cossack Pioneer" and to prevent jack-knifing and minimise "fishtailing".

On occasions, the offtake tanker may be required to have its engines running astern for some or all of the time it is connected.

PILOTAGE: Pilotage is compulsory.

The offtake tanker should initially position itself 3 nautical miles astern of the Terminal.

Before boarding, the Pilot will advise the offtake tanker to proceed to a position about 1 nautical mile astern of the Terminal, where it should be stopped in the water with a good lee provided on the port side for pilot boarding and equipment transfer from the workboat.

A pilot ladder should be rigged on the port side in accordance with current SOLAS regulations. The ladder should be rigged 2.0 m. above the water with 2 manropes.

Masters should provide safe access to and from the offtake tanker at all times with regard to the SOLAS convention and IMO Resolution A.667(16). Any offtake tanker that fails to provide such access could incur a delay in berthing or sailing.

The Pilot and Terminal Representative will board with the Agent, Surveyor and, on occasions, Customs Officers. It is requested that the Offtake Tanker Chief Officer meets the Pilot to facilitate the pre-mooring inspection and distribution of equipment. Suitable messing and accommodation for these personnel will be required during the offtake. The Terminal Representative will require single berth accommodation. The Pilot will not remain on board the offtake tanker during the offtake.

A suitable derrick or crane fitted with a safety hook will be required at this time to transfer luggage and equipment from the workboat. The offtake tanker's crew will be required to transfer some equipment used in the mooring operation to the foc'sle and transfer hose connection equipment to the port manifold.

Anchors: Anchors will be housed and secured with wires before entering the 5 nautical mile restricted area.

Inspection Prior to Mooring: The Pilot and Terminal Representative will inspect the foc'sle layout and proposed securing arrangements before mooring. The manifold area will also be inspected at this time.

The Master of the offtake tanker should be aware that any discrepancies between the information given on the Questionnaire and the offtake tanker's layout or equipment will result in a delay to the mooring operation, and failure to rectify these discrepancies will ultimately result in the refusal of the offtake tanker to moor at the Terminal.

Problems with equipment that will be used in the mooring operation that have not been brought to the notice of the Terminal should be brought to the attention of the Pilot or Terminal Representative.

Winches are to have power and be observed to turn at the berthing inspection.

This Terminal uses the Shell "Safe-T" database for offtake tanker vetting, and as such may be subject to a thorough confirmation inspection by the Terminal Representative. The assistance and cooperation of offtake tanker personnel during this inspection are essential to ensure that the inspection is carried out with minimal disruption to the offtake operation.

Testing of Engines and Steering Gear: Mooring to the Terminal requires close quarters manoeuvring, and it is imperative that all possible steps are taken to avoid loss of power to the engines or steering gear at this time.

The Pilot will fully test the operation of the engines and steering gear before the commencement of approach to the Terminal.

Notice of Readiness (NOR): Notice of Readiness (NOR) may be tendered when the offtake tanker is within 3 nautical miles of the Terminal.

Notice of Readiness (NOR) will only be accepted between the hours of 0600 hrs. and 1630 hrs. Local Mean Time, by the Pilot when he is satisfied that all the Terminal requirements have been adhered to and that the offtake tanker is in all respects ready to load.

Notice of Readiness will not be accepted when the Terminal is on "Restricted" or "Closed" status.

APPROACHES: *Navigation Aids on "Cossack Pioneer":* At the bow and stern: White morse light "U" (· · —), period 15 seconds, visibility 10 nautical miles.

At the bow only: Red morse light "U" (· · –), period 10 seconds, visibility 3 nautical miles.

In restricted visibility: A fog signal – morse "U" (· · –) sounding at intervals not exceeding 30 seconds.

Hazards to Navigation: There is a 5 nautical mile restricted area around the "Cossack Pioneer", and offtake tankers should not approach closer than 5 nautical miles unless Terminal permission has been granted.

Two gas platforms to the West have a 5 nautical mile restricted area around each platform.

North Rankin "A": Lat. 19° 35.0 ′ S., Long. 116° 08.3′ E.
Goodwyn "A": Lat. 19° 39.2′ S., Long. 115° 55.75′ E.

An export gas pipeline runs between "Cossack Pioneer" RTM and North Rankin "A". Anchoraging is prohibited in the area bounded by Lat. 19° 30′ S. to Lat. 19° 40′ S. and between Long. 116° 08′ E. to Long. 116° 27′ E. (5 nautical miles either side of the pipeline). See "Plan".

The floating hose and pick-up line extends up to 250 m. astern of the Terminal.

The workboat "Burrup Tide" monitors VHF Channel 16 and will be near the Terminal when an offtake tanker is expected.

The "Cossack Pioneer" can disconnect from the yellow Riser Turret Mooring (RTM) when a cyclone is approaching, or for other operational requirements. The RTM extends about 3.0 m. above the water and is fitted with radar reflectors. A light with the following characteristics is displayed: Yellow morse light "U" (· · –), period 15 seconds, visibility 4 nautical miles.

If the "Cossack Pioneer" does disconnect, a workboat may be towing a 250 m. long floating hose with appropriate towing signals between the Terminal and the Port of Dampier, a navigation warning will be issued by Dampier Port Authority (DPA).

Restricted Zone and Anchoring/Drifting Areas: Offtake tankers should avoid anchoring closer than 10 miles North or South of the "Cossack Pioneer" to avoid possible damage to sub-sea flowlines and inter-platform pipelines.

Offtake tankers wishing to drift should remain within VHF range and should keep at least 5 nautical miles away from the "Cossack Pioneer" and adjacent platforms and pipelines to the West.

Glomar Shoal, approximately 20 nautical miles to the East, has water depths of 22 m. – 30 m. and has been used previously as an anchorage for tankers.

ANCHORAGE: See "Approaches" – *Restricted Zone and Anchoring/ Drifting Areas.*

RESTRICTIONS: Offtake tankers will normally be moored during daylight hours (0600 hrs. – 1630 hrs.) (weather permitting). Disconnection can be carried out at any time.

HEALTH: To comply with the Australian Government Health Requirements, a Radio Pratique message should reach the offtake tanker's Agent no more than 24 hours, and no less than 12 hours before arrival, according to the following instructions.

The Offtake Tanker Master should sign and date the message.

Please answer the following questions, saying "Nil" where necessary, and answer them in order. If answers are not correct, it could cause unnecessary delay to your vessel mooring.

Any costs incurred to the Operators will be to the offtake tanker's account.

NOTE: Masters or Medical Officers, who wilfully make a false statement in answer to any question, are liable to a fine not exceeding AUS$5,000 or imprisonment for a period not exceeding 2 years.

Questions:
1. Name, type and nationality of offtake tanker.
2. Where from and departure date?
3. Where bound and ETA first port?
4. Details of any communicable disease or illness or death onboard since sailing.
5. Are there any plants or animals onboard?
6. Have you carried any livestock in the past 6 months?
   If Yes:
   List type, ports visited and cleaning performed since last livestock voyage.

Optional section (answering this section will help clearance of your vessel when it arrives in port).

If the vessel is entering in ballast:
1. Have you:
   ((a) Exchanged ballast water at sea during the voyage and log book certification of time and co-ordinates when ballasting took place;
   or
   (b) Certification that the area where ballasting took place is free from toxic dinoflagelates?

   OR
2. Is your vessel part of a compliance arrangement for ballast water control accepted by Australian Quarantine and Inspection Services?
3. Will you be discharging ballast water while in Australian waters?
   Yes/No

NOTE: The granting of Pratique to a vessel does not release it from being subject to Quarantine. Goods require separate clearance.

RADIO/VHF:

Cossack Pioneer:
Call Sign: VNXP.
Hours: 24 hours.
VHF: Channel 16. Working channel to be advised.
INMARSAT:
  Satellite used: INDIAN.
  Telephone: 154 5365.
  Facsimile: 154 5366.
  Telex: 154 5365.
Workboat Name: "Burrup Tide".
Workboat Call Sign: To be advised.
Workboat VHF Channel: To be advised.

Notification of ETA: The following ETA messages are required:

72 Hours Notice:
1. Advise ETA.
2. Advise arrival and departure drafts.
3. Advise arrival displacement.
4. Confirm Master's full name for documentation purposes.

48 Hours Notice:
1. Confirm ETA.
2. Confirm arrival and departure draft.
3. Confirm the following:
   (a) Inert gas system operational and tanks inerted to less than 8% oxygen by volume.
   (b) Mooring and lifting equipment are fully operational.
   (c) No deficiencies with the offtake tanker or equipment that will affect the safety and efficiency of the mooring and/or loading operation.
   (d) Quantity of cargo on board.
   (e) Pilot ladder and equipment comply with SOLAS standard.
   (f) Pump room adequately ventilated and illuminated.
   (g) Mooring communication system is operational.
   (h) Deck lighting fully operational.

24 Hours Notice:
1. Confirm ETA.
2. Confirm arrival drafts.
3. Confirm offtake tanker has been granted Radio Pratique.

12 Hours Notice:
1. Confirm ETA.

If the ETA changes by more than 1 hour after the 12 hour notice is given, the offtake tanker must promptly notify the Terminal of the new ETA.

NOTE: Failure to give 12 hours notice will extend the Allowable Laytime by an amount equal to the period between the time the offtake tanker Final Notice was given and 12 hours before the offtake tanker arrived.

Final Notice:

The offtake tanker should call the Terminal when within VHF range for mooring instructions, or, if unable to be moored, the Offtake Tanker Master will advise the Terminal if the vessel will proceed to anchor or drift. The offtake tanker will advise the Terminal when it has achieved either of these conditions as this will be logged as arrival time.

Any changes to the information provided on the "Questionnaire" should be sent to the Terminal immediately.

Note: On arrival, the propeller must be fully submerged and maximum allowable trim is 0.015 × LOA.

MOORING: Also see "Pilotage".

Mooring Operation: The Pilot will position the offtake tanker about 300 m. astern of the "Cossack Pioneer". The Terminal Representative will be situated on the foc'sle to provide advice to the ship's crew and observe the mooring operation.

The workboat will pass a polypropylene messenger to the foc'sle of the offtake tanker, then proceed to the stern to put up a tow line from the workboat.

The messenger to the foc'sle must lead through the chain stopper to an empty drum along the path the polypropylene pick-up line will take.

The messenger line is 24 mm. × 180 m. long and the pick-up line is 72 mm. × 150 m. long.

Offtake tankers must have a winch with an empty drum of sufficient capacity available for these lines.

The messenger must be run directly onto the winch barrel and must never be placed around the drum end.

The messenger line/pick-up line should be heaved in as the offtake tanker approaches the Terminal. The pick-up line is permanently attached to the mooring hawser chafing chain and the combined weight of the hawser and chafing chain is about 3.5 tonnes.

The winch must be capable of lifting at least 15 tonnes to allow for losses due to changes in lead direction and friction.

Three links of chain must pass through the bow stopper when it is brought inboard.

Once the chafing chain is in the bow stopper and the securing bar is in position, the offtake tanker will be moved astern until there is a moderate weight on the hawser and the workboat let go.

The engines may be kept running astern until the hose is connected and the workboat has made fast to the stern of the offtake tanker to take up the static tow.

LOADING: *Crude Oil Specifications:* (Approximate)

Density at 15°C:	0.7881.
S.G. 60/60°F:	0.7885.
API:	47.9.
Pour Point:	−18°C.

Ambient temperature 36°C (to be confirmed).

Hose Connection: When the offtake tanker has stabilised in a position astern of the Terminal, the workboat will bring the floating hose to the port side manifold area.

The manifold should be prepared before berthing to accept 1×16 in. (400 mm.) 150 ASA flange.

The hose flange is fitted with a rubber "O" ring and no fibre gasket is required, but it is important that the ship's flange is smooth, clean and free of rust. Hose connection will be done by the ship's crew under the supervision of a responsible officer.

A Terminal Representative will provide advice and observe the connection of the hose.

Safety Check and Pre-Loading Meeting: The Pilot will conduct an ISGOTT Safety Check before commencement of loading. The offtake tanker should ensure that the Chief Officer is available to accompany the Pilot during this check.

Following the successful completion of the Safety Check List, the Pilot will have a pre-loading meeting with the Chief Officer to discuss the cargo operation.

Floating Hose Management in Cyclone Season: The offtake loading hose will normally contain crude oil, but during the cyclone season and occasionally due to Terminal requirements, the offtake loading hose will contain salt water.

Pilot Disembarkation: Following the pre-loading meeting, the Pilot will confirm the sea valves are closed and sealed.

Terminal Rules, Cargo Procedures and the ISGOTT Safety Check List are completed and signed, before departing the offtake tanker for the Terminal via the workboat. An officer and crew member with a heaving line will be required to assist and observe the Pilot's disembarkation.

Static Tow: After returning the Pilot to the Terminal, the workboat will then proceed to the stern of the offtake tanker to engage the static tow.

A line should be passed to the workboat to enable a towline to be sent up and secured to the stern of the offtake tanker.

When there is a steady weight on the towline, the offtake tanker's engines will be stopped under the direction of the Terminal Representative.

A responsible crew member in radio contact with the bridge must be on the foc'sle at all times during the moored period.

The ship's engines must remain on "stand-by" for the duration of the offtake as they may be required at any time.

A responsible officer with a VHF radio must be on watch on the bridge at all times. The engine room must be manned to enable an immediate response for requested engine movements.

Cargo Operations: Pre-Loading: On completion of the Ship/Terminal Safety Check List and the Pre-loading meeting, lining up for cargo operations can begin.

When the offtake tanker is lined up and ready to commence cargo, the Terminal Representative will open and lock the butterfly valve on the floating hose. The offtake tanker should then open its manifold valve under the direction of the Terminal Representative.

A member of the ship's crew should be on watch at the manifold at the commencement of and throughout the loading and immediately advise of any leaks.

The Terminal will provide a UHF and VHF radio with spare batteries and charger to allow communication with the Terminal's Central Control Room and the wheelhouse of the towing vessel.

Communications with the Terminal will be on UHF channel (to be advised – T.B.A.). Should this UHF radio fail, communications should be on VHF channel (T.B.A.) or Channel 16.

Venting: Only the "closed loading" method of loading is allowed at the Terminal. Ullage ports may be opened for short periods to allow sampling/ullaging providing the ISGOTT recommended procedures are followed.

Venting must be either through mast riser or hi-velocity vents fitted with flame arresters.

Tank pressure should be such that there is sufficient flow through the vents to minimise the build-up of hydrocarbons on deck.

Commencement of Loading: The Terminal Representative will monitor the commencement of cargo from the offtake tanker's cargo control room, and when the cargo control officer is ready, will advise the Terminal to start loading at the agreed rate (usually 500 cu.m./hr.). When cargo is confirmed to be entering the tanks and the manifold is secure, the Terminal Representative will gradually increase the loading rate to the agreed rate at the request of the offtake tanker's cargo control officer. Maximum rate is 4,000 cu.m.

During Loading: A responsible officer from the offtake tanker in possession of the Terminal UHF radio must be on cargo watch throughout the loading operation.

A member of the offtake tanker's crew must be on watch at the manifold at all times.

The foc'sle must be manned by a crew member with a radio throughout the loading and report the condition of the hawser, chafing chain and bow stopper to the cargo control officer on an hourly basis.

Loading rates can be adjusted any time during the loading, but at least 5 minutes notice should be given to the Terminal, except in emergencies.

Cargo figures must be exchanged hourly with the Terminal and any serious anomalies checked.

If all radio communications fail, the ship's whistle must sound 7 short and 1 long blast which will cause cargo operations to cease.

Suspension of Cargo Operations during Calm Conditions: Occasionally there may be conditions of little or no wind at the Terminal, and in such cases, cargo operations may be stopped to prevent a build-up of hydrocarbon gases in the area.

Suspension of Cargo Operations due to Lightning: Cargo operations will be suspended when electrical storms are in the immediate vicinity of the Terminal. Offtake tankers should ensure that all cargo tank vents are closed at this time.

Helicopter Operations: Helicopters will arrive and depart the Terminal, usually during daylight hours, and will not interrupt loading unless requested by the Offtake Tanker Master.

Interruption of Loading due to Adverse Conditions: If an offtake tanker has ceased loading and has been disconnected from the Terminal due to inclement weather or the approach of a cyclone, communications with the Terminal must be maintained.

This will enable reconnection and the resumption of loading at the earliest possible opportunity.

Completion of Cargo: The Terminal Representative will be in the offtake tanker's cargo control room 30 minutes before the completion of cargo to relay all requests for change of loading rate and stopping of cargo to the Terminal.

Responsibility for "Ship Stop" or "Terminal Stop" will be as per the pre-offtake meeting.

When the request to stop cargo has been made, the Terminal Representative will advise when the cargo flow has stopped and the ship's manifold valve can be closed. The offtake loading hose butterfly valve will then be closed and locked by the Terminal Representative, and the ship's manifold can be drained.

Hose Disconnection: Before commencing the hose disconnection, the offtake tanker engines are tested astern. The workboat is then released from the static tow and the offtake tanker's engines will then be put on to minimum revolutions astern. This operation will be co-ordinated by the Terminal Representative.

When the manifold has been drained, the hose will be disconnected under supervision of the Terminal Representative.

Departure: The Terminal Representative will advise the Terminal when preparations to slip the mooring hawser can begin.

A responsible officer with radio contact with the bridge must be on the foc'sle at this time, as the Terminal Representative will initially pilot the offtake tanker from here. Instructions for the disconnection of the mooring hawser will be given by the Terminal Representative prior to departure.

The pick-up line must be paid out as the offtake tanker moves astern, and it is important that no weight is taken on this line.

The Terminal Representative will remain on the bridge and pilot the offtake tanker until the cargo calculations have been completed and the Agent, Customs and surveyor are ready to disembark.

The offtake tanker should stand-off about 2 nautical miles from the Terminal and provide a good lee on the port side before the transfer of personnel and equipment to the workboat.

Documentation and Early Departure Procedure: The offtake tanker will be let go when the offtake loading hose is released.

For operational and safety reasons, it is usual for offtake tankers to use an Early Departure Procedure (EDP), by which the Master of the offtake tanker authorises (in writing) the ship's Agent to sign the Bills of Lading on behalf of the Master.

The Terminal will provide the approximate cargo figures soon after the completion of loading. Should the ship's figures and Terminal approximate figures differ by more than 0.5% of the volume, quantity of cargo loaded by the offtake tanker must be remeasured.

The EDP allows the offtake tanker to commence the voyage to the discharge port when the Terminal Representative, Agent and surveyor have disembarked and the representative cargo sample is onboard.

The Agent will either fax or telex the Bill of Lading figures to the offtake tanker on completion of the laboratory analysis and cargo calculations for Master's approval.

BALLAST: *Discharge of Ballast/Waste Water:* The Terminal has no provision for accepting ballast or waste water of any description.

MEDICAL: *Medical and Dental Services:* Not available.

Emergency medical facilities are available in Karratha, but transport is by helicopter and may take up to 3 hours to arrange.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: There are no facilities available for repairs.

Under the Terminal Rules, repairs and maintenance to the offtake tanker's machinery and equipment are limited to those that do not impair the following:

1. The propulsive power or manoeuvrability of the offtake tanker.
2. The firefighting or fire detection capability.
3. The safe and efficient handling of cargo, ballast, bunkers and slops.
4. The safe operation and integrity of the foc'sle mooring system.
5. The safe operation of electrical equipment in hazardous zones.
6. The safe operation and integrity of the communications equipment.
7. The safe and efficient operation of the Inert Gas System.
8. The safe and efficient operation of the lifting equipment.
9. The safe and efficient operation of main deck lighting.
10. The safe and efficient operation of pump room lighting and ventilation.

REPATRIATION: No facilities.

SHORE LEAVE: Not possible.

GARBAGE DISPOSAL: The Terminal has no reception facilities for refuse or garbage of any description. No refuse or garbage of any description is to be dumped in the sea under Australian law.

Incinerators are not to be used within 5 nautical miles of the Terminal.

WEATHER/CURRENTS: The region is hot and subject to cyclonic activity from November to April, although cyclones may occur outside this period. The region may be affected by several cyclones a year. Masters, Owners and Charterers' attention is drawn to the Cyclone Procedures in this section.

The prevailing winds are Easterly in Winter (May to August) and South Westerly in Summer (October to March). Winds of more than 20 knots can be experienced for several days.

Currents of up to 3.0 knots can be expected at the Terminal.

Terminal Status: This table provides a general guide to the status of the Terminal based on sea and weather conditions.

Status	*Sig.Wave Height*	*Wind (10 min. avg.)*	*Visibility*
Open	<2.5 m.	<20 knots	>2 nautical miles
Restricted	>2.5 m. and <3.0 m.	>20 knots and <35 knots	<2 nautical miles
Closed	>3.0 m.	>35 knots	

Open: No limitations on berthing between 0600 hrs. – 1630 hrs., offtake or disconnection.

Restricted: No offtake tanker is allowed to berth. An offtake tanker already fast may continue offtake operations.

Closed: The decision to disconnect an offtake tanker will be based on several factors. This will be discussed with the Master of the offtake tanker if conditions are expected to be close to the limit.

The offtake tanker will also be disconnected if the following conditions occur:

(a) More than 3 hawser tension loads of 150 tonnes within one hour, or;
(b) Hawser tension equals or exceeds 200 tonnes at any time.
(c) RTM angle exceeds recommended limits.

The tension on the hawser is monitored and recorded in the Terminal's Central Control Room.

The offtake tanker will be advised on the hawser tension in marginal conditions.

Summary of the Cyclone Procedures Affecting Offtake Tankers: Circumstances may arise which will require the Terminal Master to deviate from the actions required under the cyclone procedures by:

Ordering an offtake tanker to unmoor and depart early.

Recommencement of offtake operations.

The Terminal will give the loading offtake tanker as much notice as is possible if the offtake cannot be completed.

Offtake tankers, loading at the Terminal during cyclone season, shall be capable of departing with sufficient positive stability any time, should the offtake operations have to be aborted.

The Master of the offtake tanker has the prerogative to delay berthing or, when already connected, to cease loading and disconnect from the "Cossack Pioneer" earlier than these procedures may require.

It is acknowledged that the Master of the offtake tanker may wish to clear the area early enough to ensure that the offtake tanker is not at risk from cyclonic activity.

Terminal Status during Cyclone Alert: Offtake operations will be greatly influenced by forecasts of cyclone movement, intensity, wind speed and wave heights.

Due to the erratic nature of cyclones, it is not possible to lay down absolute criteria regarding the status of the Terminal, but the following table provides a general guide:

Status	*Cyclone Alert Status*
Open	Blue
Restricted	Yellow
Closed	Red

Definitions used for Cyclone Alert Status:

All clear: Issued when a cyclone has been downgraded to a state less than a cyclone.

Blue alert: Cyclonic activity more than 1,000 nautical miles from Terminal.

Yellow alert: Cyclonic activity between 405 and 1,000 nautical miles from Terminal.

Red alert: Cyclone is less than 405 nautical miles from the Terminal or a tropical depression less than 405 nautical miles from the Terminal likely to develop into a cyclone within 24 hours.

GENERAL: *Oil Pollution:* The Terminal has a limited supply of pollution control equipment and has no provision to provide assistance in case of an oil spill from an offtake tanker.

All costs incurred as a result of pollution from the offtake tanker will be recoverable from the offtake tanker.

Any indication of oil pollution or spill is to be drawn to the attention of the Terminal Representative immediately.

Stores: Not available.

Firefighting: The Terminal cannot provide assistance in case of fire or explosion on an offtake tanker.

In case of an emergency on the offtake tanker, the loading will cease immediately. The hawser quick release system may be activated.

Where possible, the offtake hose will be disconnected first, but if this is not possible, the hose breakaway coupling will be activated.

Visitors to the Terminal: Due to the isolated position of the Terminal and the difficulty of arranging transport, it is not normally possible for non-operations personnel to visit the Terminal or the offtake tanker.

Consumption of Alcohol and/or Drugs: The offtake tanker must comply with the (OCIMF) Standards for drugs and alcohol. Failure to comply with these standards may result in the stoppage of cargo operations and disconnection from the Terminal, and could result in the offtake tanker being rejected for future liftings from any Terminal operated by the Company.

It is a requirement that Terminal Representative do not consume drugs or alcohol during their tour of duty. Offtake tanker's personnel should observe and respect this requirement.

Fishing: Fishing of any description is not permitted whilst the offtake tanker is connected to the Terminal or within the restricted zone as fishing lines may foul the sub-sea equipment and jeopardise the safety of underwater operations.

Swimming: Personnel are not allowed to swim or dive from the offtake tanker while connected to or near the Terminal.

Questionnaire: Used during tanker vetting procedure, any variation from the original copy should be advised to the Terminal at the earliest opportunity.

PLEASE NOTE:

The following details are required prior to acceptance to lift from FPSO "Cossack Pioneer".

A legible copy of the fo'c'sle deck arrangement plan must be supplied showing the proposed lead from the Panama lead to the winch drum (not drum end).

The plan is to be signed, stamped with the Company name and dated to acknowledge that the plan is accurate and that all equipment shown is in service.

Most answers are "Yes" or "No".

The completed questionnaire and the fo'c'sle plan must be sent to the Master of the offtake tanker.

The above mentioned information should be sent to:

Woodside Offshore Petroleum (W.A.Oil) Pty.Ltd.
Attention: Marine Co-ordinator
Fax: (09) 224 4999
From:
Company:
Date:

"Cossack Pioneer" Questionnaire:

(Metric Units are to be used throughout)

1. Name of Offtake Tanker.
2. Previous names, if any.
3. Port of Registry.
4. Name of Owner.
5. Registered Address.
6. Nationality of Officers and Crew.
7. Vessel Classification Society – Classed as.
8. Year of build.
9. Last three cargoes.
10. Does vessel have a Public Address/Tannoy communication system?
11. Does the system work between the Bridge and Forecastle?
12. Maximum loading rate through one port side 16 in. manifold?
13. Can Offtake Tanker comply with closed loading procedure?
14. Distance, bow to manifold (m.).
15. Distance of manifold to ship's side on port side (m.).
16. Port side manifold diameters (m.).
17. Size and condition of available reducers.
18. SWL of port side crane/derrick.
19. If derrick, is it able to slew and top under power?
20. Number and dimensions of bow/centre Panama leads?
21. Are bow stopper(s) to OCIMF standard?
22. Are test certificate(s) available for the bow stopper(s)?
23. SWL and number of bow stopper(s).
24. Distance from Panama lead to bow stopper(s).
25. Lifting capacity of winch to be used for pick-up line.
26. Can mooring hawser run from Panama lead, through bow stopper onto empty winch barrel (not drum end)?
27. Do all Senior Officers have the appropriate oil endorsements to their certificates?
28. Is there a Permit to Work system in place?
29. Call sign.
30. INMARSAT numbers Satellite in use
    Phone
    Fax
    Telex
31. Length overall (m.).
32. Beam (m.).
33. Distance, bow to manifold (m.).
34. Is there a NO SMOKING regulation in place?
35. Is Offtake Tanker enrolled in TOVALOP?
36. Are all ship's documents and certificates valid?
37. Does Offtake Tanker comply with the ITF agreement?
38. Does manifold/associated equipment comply with the latest edition of OCIMF's "Standards for Oil Tanker Manifolds and Associated Equipment"?
39. If NO, what does not comply?
40. Are the vessel's main engines capable of being run astern for prolonged periods of time at low engine revolutions?
41. Summer/Tropical/Winter deadweight tonnes.
42. Cargo capacity at 98% full.
43. Has vessel Segregated Ballast Tanks (SBT)?
44. Can chain stopper accept 76 mm. diameter chain?
45. Full Name of Master for documentation purposes.
46. Does the lead of the mooring hawser allow it to be hauled from the Panama lead via the chain stopper onto an empty drum (not the warping drum end)?
47. Do the Senior Personnel speak English?
48. Does the vessel have in place a Drug and Alcohol Policy complying with (as a minimum) the statement issued by the latest edition of the OCIMF's Guidelines for the Control of Drugs and Alcohol Onboard Ship?
49. Vessel's last port of call?
50. Has the vessel visited the Terminal before?
51. Protection and Indemnity (P&I) Club insuring the vessel?
52. What is the Pollution Liability Insurance limit U.S.$?
53. Has the vessel Cossack Pioneer Terminal Handbook(s) onboard?
54. If YES, what revision number?
55. Does the vessel operate a management system certified to ISO 9002 or equivalent?
56. Does the vessel have a dedicated helicopter winching area?
57. Are the Officers and Crew familiar with Helicopter operations?

OPERATOR: Woodside Petroleum (W.A.Oil) Pty.Ltd., No. 1 Adelaide Terrace, Perth, W.A. 6000, Australia. Postal address (Box D188, G.P.O. Perth, W.A. 6001, Australia). *Tel:* (09) 224 4111. *Telex:* AA92326. *FAX:* (09) 325 8178. *Contact:* Captain M. Goodwin, Marine Co-Ordinator.

DAMPIER: W.A.: 20.38 S. 116.45 E. (See Plan)

LOCATION: Port Dampier is located on the N.W. coast of Australia in the Dampier Archipelago. Legendre Island in position Lat. 20° 21′ S., Long. 116° 51′ E. forms the N.E. extremity of the Archipelago and Rosemary Island in position Lat. 20° 28′ S., Long. 116° 37′ E. forms the N.W. extremity of the Archipelago.

The port facilities are constructed:
adjacent to Parker Point in Lat. 20° 39' S., Long. 116° 43' E.
East Intercourse Island in Lat. 20° 39.03' S., Long. 116° 40.4' E.
Mistaken Island in Lat. 20° 39.2' S., Long. 116° 39.6' E.
Withnell Bay LNG: Lat. 20° 35.2'S., Long. 116° 45.7' E.
Dampier Public Wharf: Lat. 20° 36.9' S., Long. 116° 44.8' E.

PORT LIMITS: A vessel is considered to be an arrived vessel from the time of crossing the quarantine line, which runs due East from Courtenay Head Lighthouse.

Port Limits: The limits of the port extend Northwards from the N.W. tip of Legendre Island to a position Lat. 20°18.2' S., Long. 116° 50' E., then in a W.S.W. direction to a position Lat. 20° 23.7' S., Long. 116° 36' E., North of Rosemary Island, then South to the Northern shore line of West Intercourse Island, and along the shore line of West Intercourse, the mainland up to Flying Foam Passage and part of the Western side of Dolphin Island, back to Legendre.

DOCUMENTS: *Documentation Required on Entry:*

Form Q360	Two copies for Quarantine Officer to be accompanied by Crew List, showing vaccination dates.
Form 42A	One copy. All narcotics and restricted drugs to be identified by type, size and quantity. Report is to include lifeboat kits.
Form 5	One copy, including Declaration Sheet, in declaring goods, quantity, description and value to be stated. In the case of watches, radios, cameras, binoculars and the like, makers name or brand and serial numbers to be shown.
Forms M and S11	Two copies required plus 2 Crew Lists.
Form QA4	One copy. If any pets, including any animals, birds or fish are on board, then an additional Form QA5, is also required.
Form M315	One per crew member, except as detailed below.

With reference to Seaman's Identification Cards, a passport size photograph of the seaman is sufficient. A side face photograph is not required. Seamen in possession of the following National travel documents are no longer required to have an Identification Card in Commonwealth of Australia Form M315:

Barbados		British Seaman's Document.
Canada	(i)	Canadian Passport.
	(ii)	Seaman's Identity Certificate.
Chile	(i)	Chilean Passport.
	(ii)	Seaman's Book.
China (People's Republic of)		Seaman's Book
Denmark		Seaman's Book.
Egypt (Arab Republic of)	(i)	Egyptian Passport.
	(ii)	Seaman's Book.
Fiji	(i)	Fiji Passport.
	(ii)	Seaman's Certificate of Nationality and Identity.
Ghana	(i)	Ghana Passport.
	(ii)	Seaman's Certificate of Nationality and Identity.
Hong Kong		Seaman's Identity Book.
India	(i)	Seaman's Registration Book.
	(ii)	Seaman's Continuous Certificate of Discharge.
Iran	(i)	Iran Passport.
	(ii)	Seaman's Identity Card.
Israel		Seaman's Book.
Italy		Libretto Di Navigazione.
Japan		Mariner's Pocket Ledger.
Kenya	(i)	Kenyan Passport.
	(ii)	Seaman's Identification Certificate.
Lebanon	(i)	Lebanese Passport.
	(ii)	Seaman's Identification Certificate.
Malaysia	(i)	Malaysian Passport.
	(ii)	Seaman's Identification Certificate.
Malta		Continuous Service Booklet (Discharge Book).
Nauru		Seaman's Document of Identity.
New Zealand		New Zealand Identity Book.
Norway		Seaman's Document.
Pakistan	(i)	Seaman's Identity Card.
	(ii)	Continuous Discharge Certificate.
South Africa	(i)	Seaman's Record Book and Certificate of Discharge.
	(ii)	Seaman's Identity Certificate.
	(iii)	Certificate of Nationality and Identity.
South Korea		Seaman's Certificate Book.
Tanzania	(i)	Tanzania Passport.
	(ii)	Seaman's Book.
Uganda	(i)	Ugandan Passport.
	(ii)	Seaman's Book.
United Kingdom	(i)**	British Passport.
	(ii)	Seaman's Record Book and Certificate of Discharge.
	**	May be held by Master for surrender only if grantee is agreeable; otherwise an Australian Seaman's Identification Card must be completed.

Masters are reminded that crew members' travel documents and Commonwealth of Australia Forms M315, where applicable, are to be retained in the custody of the Master at all times and are to be produced to Customs Boarding Officers upon demand.

The following ship's documents should be available for inspection:
(a) Register.
(b) Load Line Certificate.
(c) Safety Equipment Certificates.
(d) Radio Certificate.
(e) Safety Construction Certificate.
(f) Australian Commonwealth Light Dues Receipt.
(g) West Australian Light Dues Receipt.
(h) Articles of Agreement and Account of the crew (or equivalent).
(i) International Transport Federation Certificate (if applicable).
(j) Oil Record Book.
(k) Register of Cargo Gear.
(l) Valid Derat or Exemption Certificate.
(m) Crews Identify Documents.
(n) International Vaccination Certificates for all aboard.

APPROACHES: From the 100 fathom line in Lat. 19° 20' S., Long. 116° 20' E., a channel 15 miles wide, leading 157° was surveyed by the Royal Australian Navy in 1963 and found to be clear of dangers. This approach is recommended for ships arriving from the North and N.E. Ships arriving from the West pass North of Tyrell Rocks situated to the N.W. of the Monte Bello Islands and then should pass not less than 5 miles to the North of Rosemary Island on the Latitude of Legendre Island Light.

Shipping Channels: Hamersley's departure channel is situated on the Western side of Mermaid Sound, and is dredged to a least depth of main channel 15.35 m. (L.A.T.).

The Woodside Channel is situated on the Eastern side of Mermaid Sound and is dredged to a least depth of 12.20 m. (L.A.T.).

ARRIVAL ADVICE: *Port Authority:* The Master of any vessel intending to enter the port shall notify the Harbour Master at least 24 hours before arrival, or if arriving from a point less than 24 hours away, then from that point.

This notification is also to advise the Harbour Master of the vessel's draft and as to whether the equipment and machinery for the navigation and propulsion of the vessel are fully operational for the purposes of safety, piloting the vessel and, also if the vessel is to berth at a Company wharf, also advise as to the vessel's proposed berthing, working and departure programme.

Vessel's proceeding to Dampier Public Wharf: If Dampier is the first port of entry into Australia, vessels should radio through the normal recognised coast stations, addressing their messages to both their Agents and the Dampier Port Authority, Telex: 198230.

In the case of vessels arriving from overseas:
(i) ETA 7 days before their intended arrival, their draft and details of cargo to be worked.

In the case of all vessels, cable:
(i) 72 hours before intended arrival at the port advising estimated time of arrival at the pilot boarding ground, including in the message, if not previously given, the forward and aft arrival draft and details of cargo to be worked.
(ii) 48 hours before intended arrival, confirmation or any variation of estimated time of arrival.
(iii) 24 hours before intended arrival, confirmation or any variation of estimated time of arrival.
(iv) Coastal vessels may not be able to advise their ETA's in accordance with these rules. Where possible, the Master should advise his ETA as soon as practical.

Coastal vessels should advise whether the Master holds a current Pilotage Exemption Certificate and, if so, the date of last time that he visited the port.

Cargo information: Prior to departure from the loading port, Masters shall forward by first class airmail a copy of the vessel's inward manifest to the Port Authority.

Vessels proceeding to Parker Point Ore Wharf, East Intercourse Island Wharf and the Service Wharf:

1. Every vessel, intending to *load a cargo of iron ore* at Dampier, shall, on departure from the last port of call, cable the following information, addressing the message 6D HAMIRON DAMPIER AA 99151.

1.1 Estimated time of arrival, quantity of cargo required, deepest departure draft and distance between keel and hatch coaming. Example: NAME OF SHIP, ETA PM20/4, 108000K/T, 16.46M, 24.15M.
7 days before intended arrival at the port, confirmation or any variation to the above, and indicate loading order by hatches of the products to be lifted.
Example: NAME OF SHIP, ETA 1000/4, 108000 k/t, 16.46, 24.15m, 1/10000 FINES, 7/10000 FINES, 9/10000 FINES, 2/10000 LUMP, 4/10000 LUMP, 6/10000 LUMP, 3/8000 FINES, 5/10000 FINES, 2/8000 LUMP, 6/6000 LUMP/ 7/5000 FINES, 3/8000 FINES, TRIM 3000 FINES. TOTAL 108000 k/t.

2. Vessels *with cargo for Hamersley Iron* shall, on departure from the loading port or 7 days before arrival, whichever occurs first, cable the following information addressing the message 6D HAMIRON DAMPIER AA99161: Estimated time of arrival, quantity and nature of cargo to be discharged, stowage and the deepest arrival draft. Example: NAME OF SHIP, ETA AM/4, 4700MT, GENERAL 1/1200, 2/200, 3/1400, 4/1800, DRAFT 7M.

Also see "Tankers".

PILOTAGE: Pilotage is compulsory except for vessels 150 g.r.t. or less and those whose Masters hold a valid Pilotage Exemption Certificate. Pilotage services operate from the pilot cutter "Pilbara Mercury" and Bell 206B Jetranger helicopter for Hamersley Iron. Pilotage for Woodside is by pilot boat "Burrup Pilot" and Puma helicopter.

Pilot boarding and disembarking arrangements must comply with the SOLAS regulations and be properly rigged and attended.

Pilot Boarding Ground: There are 4 pilot boarding grounds/pilot boarding areas. They are:

No. 1:	Lat. 20° 24.88' S., Long. 116° 42.15' E. (1 mile N.W. of the Seabuoy).
No. 2:	Lat. 20° 25.50' S., Long. 116° 44.48' E. (1 mile N.E. of Channel Buoy).
No. 3:	Lat. 20° 30.90' S., Long. 116° 43.02' E. (Abeam of No. 6 Buoy).
No. 4:	Lat. 20° 38.58' S., Long. 116° 38.18' E. (King Point, East Lewis Island 350° × 0.6 m.).

No. 1 Pilot boarding ground is for vessels using the Hamersley Iron Pilot Service to either Parker Point, East Intercourse Island, Service Wharf or Mistaken Island Salt Berth.

No. 2 Pilot boarding ground is for vessels using the Woodside Petroleum Pilot Service to Withnell Bay Terminal.

No. 3 and 4 Pilot boarding grounds will be allocated to vessels by Dampier Port Control.

Note: LNG's with helicopter landing deck aft will have Pilots boarding further seaward as directed by Pilots boarding.

Pilots may board either by helicopter or pilot boat.

Woodside Pilots operate from the vessel "Burrup Pilot" and Hamersley Pilots from the "Mercury".

Vessels should contact Dampier Port Control on Channel 16, 4 hours before arrival.

Helicopter – Landing Requirements: Pilots will board suitable vessels by means of a helicopter which will land on a hatch cover. Normally this applies to bulk carriers and not general cargo vessels. The helicopter will not be used for oil tankers, which will, with other vessels unsuitable for helicopter operations, be boarded by launch. The helicopter used is a float equipped Bell 206B Jetranger weighing 769 kilos and is fitted with VHF Channels 16 and 11.

Where a vessel is to be boarded by helicopter, the vessel must meet the following criteria:

Boarding by Helicopter: Pilots will board suitable vessels by means of a helicopter which will usually land on a hatch cover. This service generally applies to gearless bulk carriers or those vessels which have sufficiently clear landing area as described in this section and are not carrying petroleum products.

The helicopter normally used is a float equipped Bell 206B Jetranger which has a maximum all up weight of 1,450 kg. and is fitted with VHF Channels 11 and 16.

Where a vessel is to be boarded by helicopter, the vessel must meet the following criteria:

(a) A hatch cover capable of supporting 2,900 kg., that is, possessing a load density of not less than 400 kg./sq.m. and with minimum dimensions of 12 m. If cambered, then the angle should not exceed 7.5°.
(b) Mark a *hovering area* on the hatch cover with a circle of not less than 12 m. diameter and 15 cm. thick.
(c) Mark a *landing area* within the hovering area with the letter "H" having sides of 2.0 m. and a width of 13 cm. The landing area is to comprise a square space, having sides measuring no less than 5.0 m., the centre of which will be concentric with that of the hovering area, and shall be free of lifting lugs, wedges, ventilators and any other obstructions which are likely to hazard the helicopter landing skids. When the helicopter skids are positioned within the landing area as described above, the main rotor shall be contained within the hovering area.
(d) The markings in (b) and (c) above shall be in white or yellow on a dark background.
(e) Paint on handrails, lugs, ventilators and other obstructions on the hatch cover should be a distinctive colour which shall be highly visible by day or night.
(f) Surrounding the hovering area, there shall be an area not less than 6 m. in width in which there shall be no obstructions which could hazard the rotor system more than 0.5 m. above the hatch cover. Two approach paths at least 150° apart in azimuth shall exist, being free of all obstacles above an approach gradient of 11.5°.
(g) The combined hovering area and obstruction free area in (f) shall comprise the helipad area. No ship's personnel shall be within this area during helicopter operations unless they are below hatch cover level.
Any hats worn by crew approaching the helicopter must be secured by a chin strap. Crew must not attempt to approach the helicopter unless requested to do so by the helicopter pilot.
(h) Ensure that all hatch wires, derricks, cranes, aerials, etc., are clear of the approach paths to the helipad area. All loose objects must be removed from this area.
(i) The approach paths to the helipad across both sides of the ship shall be free of obstructions higher than 0.5 m. above hatch cover level.
(j) An officer shall be available to escort the Pilot to and from the helipad area.
(k) Ships departing the port must wash down the helipad before the helicopter lands (Day and night).

In addition for Night Operations:

(a) The termination area shall be illuminated with floodlights situated outside the helipad area, with the light beams directed downwards on to the hatch cover, in such a manner as not to blind the helicopter pilot.
(b) An illuminated wind indicator shall be displayed in a conspicuous position clear of the helipad area and easily visible from the air (e.g. a wind sock or answering pennant).
(c) On request, when other ships are in the area, provide a means of identification by flashing a light towards the helicopter on approach.

Before making the initial landing, the helicopter pilot will visit your ship and

(a) Decide whether your vessel is suitable for helicopter operations.
(b) Discuss with you any alterations which may be necessary to make landings possible.

Radio Procedure Vessel/Helicopter: Before landing on a vessel, the helicopter pilot must receive clearance to land from the Master on VHF Channel 11 as follows:

Helicopter: "(Name of vessel) this is Dampier pilot helicopter. I request clearance to land."

Vessel: "Dampier pilot helicopter this is (name of vessel) you are cleared to land."

Vessel should be ready to advise the helicopter pilot of the relative cross wind across the deck.

Boarding by Pilot Boat: When boarding by pilot vessel, it is most important that a lee be given to allow the Pilot to board. Generally ships will be requested to be underway prior to Pilot boarding. Failure by ships to afford a lee may result in the Pilot being unable to board, with consequent delay.

All vessels, where the Pilot is boarding by boat, must rig a ladder in accordance with "International Maritime Organisation SOLAS Regulations". Under SOLAS Chapter V, Regulation 17 amended in 1973 by IMO Resolution A263 (VIII), and in 1979 by Resolution A426 (XI), and the Port of Dampier Regulations (1979), the following points are stressed:

(a) The rigging of pilot ladders and the embarkation and disembarkation of Pilots thereby shall be supervised by a responsible officer of the ship.
(b) Every pilot ladder shall be secured in a position clear of any possible discharges from the ship, and so that each step rests firmly against the ship's side.
(c) Every pilot ladder shall be secured in a position where the Pilot can gain safe and convenient access to the ship after climbing not less than 1.5 m. and not more than 9.0 m.
(d) Whenever the distance from the water to the point of access to the ship exceeds 9.0 m., access must be by means of a combination of a pilot ladder and an accommodation ladder.
(e) Adequate lighting must be provided at night.
(f) Manila manropes of between 28 mm. and 32 mm. in diameter should be rigged on each side of the ladder for its full length.
(g) The ladder should be clean.

Failure by Masters, to comply with the requirements outlined above, has in the past in Australian ports resulted in delays to shipping and, in some instances, heavy costs against the vessel concerned.

Pilot Ladder Specifications:

Length of spreaders not less than	1,800 mm. (5 ft. 10 in.)
Length of step not less than	480 mm. (19 in.)
Width of steps not less than	115 mm. (4.5 in.)
Thickness of steps not less than	25 mm. (1 in.)
Side Ropes:	
Circumference not less than	60 mm. (2.25 in.)
Diameter not less than	20 mm. (0.75 in.)
Spacing of steps	300 mm. – 380 mm. (12 in. – 15 in.)
Recommended space between top of one step and underside of the one above	310 mm. (12.25 in.)
Recommended clear space between pairs of side ropes (not specified by SOLAS)	400 mm. (16 in.)

Note: The use of pilot ladder retrieving lines attached to the lower portion of the ladder is not permitted.

Use of Pilot Hoists: Any pilot hoist used in the Port of Dampier must comply with the Australian Standards. Use of a hoist is at the Pilot's discretion.

ANCHORAGES: *Outer Anchorage:* The area bounded by the following positions:

Lat. 20° 24′ S., Long. 116° 36′ E.
Lat. 20° 25′ S., Long. 116° 36′ E.
Lat. 20° 22′ S., Long. 116° 41′ E.
Lat. 20° 25′ S., Long. 116° 41′ E.

Vessels will be advised of their designated anchor position in this area by Port Control and will be expected to proceed to this position without the services of a Pilot. A continuous VHF radio watch must be maintained at all times.

Inner Anchorage: Under certain circumstances, anchorage positions within Mermaid Sound are available. Vessels may only proceed to this anchorage under the direction of a Pilot.

Vessels are not allowed to anchor outside these areas without the permission of the Harbour Master.

Gas Trunk Line: A high pressure subsea gas line has been established on the seabed to supply gas to the onshore treatment plant situated at Withnell Bay. The pipeline follows the following route in the approaches to and within the port. In a 135° (T) direction to:

(i) Lat. 20° 23.45′ S., Long. 116° 45.27′ E., thence to
(ii) Lat. 20° 24.36′ S., Long. 116° 46.2′ E., thence to
(iii) Lat. 20° 26.84′ S., Long. 116° 46.83′ E., thence to
(iv) Lat. 20° 29.82′ S., Long. 116° 46.68′ E., thence to
(v) Lat. 20° 32.26′ S., Long. 116° 45.58′ E., thence to shore in position
(vi) Lat. 20° 35.4′ S., Long. 116° 46.4′ E.

A prohibited area is delared 5 cables either side of this pipeline.

HEALTH: Radio Pratique is now in force for the Port of Dampier. Please send Radio Pratique message to Agency Telex Number not more than 24 hours before arrival or less than 12 hours before arrival.

See "General – Health" before first port.

On receipt of quarantine messages, Harbour Master will advise anchorage position if vessel not berthing on arrival.

Inspections may be carried out at the jetty or at anchorage at the discretion of the Quarantine Officer.

Rat guards are to be maintained on all mooring lines while vessels are berthed in Dampier Harbour.

RADIO: Perth Radio. Also see "Arrival Advice" and "Tankers".

VHF: Dampier Port Control maintains a continuous watch on VHF Channel 16. All vessels approaching the port or at anchor must also maintain a continuous watch on this frequency.

Continuous watch is also maintained on VHF Channel 11, the working channel for general port traffic information.

Failure to maintain a continuous VHF watch may result in vessels berthing out of turn.

Call Sign	Dampier Port Control
Channel 16	General call and continuous watch channel.
Channels 11 & 14	Port working channels.
Channel 72	Can be used vessel to vessel.
Channel 67	Emergency working channel.

Arrival: Vessels will either be directed to an anchorage by Port Control, or to the pilot boarding ground.

TUGS: Pilbara Harbour Services Pty. Limited own and operate 4 tugs, workboats and lines launches which are available to shipping on a 24 hour service.

The following craft are available to assist in berthing and unberthing and for hire:

"Pilbara Star"	4,800 h.p.	Bollard Pull	55 tons
"Pilbara Saturn"	4,800 h.p.	Bollard Pull	55 tons
"Pilbara Comet"	4,200 h.p.	Bollard Pull	45 tons
*"Pilbara Mars"	4,200 h.p.	Bollard Pull	45 tons

Three (3) Lines Launches
One (1) Workboat – 400 h.p.

Mermaid Sound Port & Marine Services (Woodside) also own 4 tugs and one pilot boat to assist in the berthing of vessels at Withnell Bay LNG berth.

"King Bay"	Bollard Pull	50 tonnes
"Withnell Bay"	Bollard Pull	50 tonnes
"Hearson Cove"	Bollard Pull	60 tonnes
"Cowrie Cove"	Bollard Pull	60 tonnes

MOORING: *Hamersley Wharves:* Mooring lines are taken ashore by lineboat. Vessels using heavy wire ropes are required to have the ends terminated with a 9 m. rope spring finished with a standard eye for placing over the bollards and slip hooks.

All mooring ropes and wires to have a 6 m. tail of light rope spliced into the eye to facilitate the transfer from the boat to the dolphin.

Vessels shall be ready in all respects to commence loading on completion of mooring, hatches cleaned and opened.

LOADING IRON ORE: *Hamersley Wharves:* Vessels loading iron ore are recommended to exhibit either on top of the hatch lids or on the deck or coaming adjacent to the hatch, numerals identifying the hatch. These are to be of such a colour and size as to be clearly visible to the shiploader operator stationed at the end of the shiploader boom.

Reference to loading is to be made by hatch, not hold and all weights are to be expressed in metric tonnes.

Confirmation in writing of the cargo booking is delivered on board on berthing by the Loading Supervisor.

This document contains four copies of the loading sequence. The first copy is retained on board, the remainder completed and passed to the Supervisor for distribution as required. Attention is drawn to the run-off quantity required to be loaded to clear the conveyors at the completion of loading.

Red, green and white list lights, clearly visible to the shiploader operator are recommended fittings on all vessels loading iron ore. A fixed white light shall indicate the vessel is upright.

Masters are cautioned the loading of iron ore is carried out by draft. Frequent "on the run" draft checks between hatch changes should be carried out. Whilst shiploading sequences are equipped with weight scales, these figures are to be used only as a guide and reference to them will not relieve the Master of the responsibility of adequately maintaining draft checks and supervising the loading accordingly.

Final confirmation of tonnages on board will be the result of a draft survey carried out by the Master and the Company's surveyor.

Ballast shall be adjusted to ensure at high water a minimum clearance of 1.0 m. is maintained between the vessel's structures and the shiploader. Ballast to be discharged at a rate which prevents disruption to loading, final trimming and completion.

Subject to tide, ships shall be ready to vacate the iron ore berths on completion of loading and have all gear tested and available for use on departure.

Ships departing during the hours of darkness will require to have fitted on the fore mast a small steering light visible from the bridge. Vessels in excess of 100,000 d.w.t. must be fitted with a centre line steering compass.

Stowage Factors: The following stowage factors are provided for guidance:

Lump Ore	2.35 tonnes/cu.m.
Fine Ores	2.50 tonnes/cu.m.

Angle of Repose: Lump and Fines – 37°.

PARKER POINT ORE JETTY: Operator: Hamersley Iron Pty.Ltd., P.O.Box 21, Dampier, WA 6713. Tel: (091) 436000/435924. Telex: AA99151. Fax: (091) 435804. Cables: 6D HAMIRON DAMPIER AA99151.

The ore jetty consists of a tubular steel pile structure carrying a deck and rail traverse of a slewing boom shiploader.

8 multi-spring pile dolphins fitted with Yokohama air block fenders are situated clear of the ore jetty structure and vessels berth port side alongside, mooring to these dolphins. See "Plan" for standard mooring pattern.

Iron ore is the only product handled over this facility and following are principal dimensions:

Length of jetty:	268.9 m.
Depth of water alongside:	17.20 m. (LAT)
Travel of shiploader:	180 m.
Radius of ore delivery from fender facing:	23.8 m.
Height under side boom at LAT:	23.00 m.
Total length of fendering, No. 1 to No. 9 dolphins:	344.8 m.
Rated capacity of shiploader:	7,500 tonnes/hr.

The ore jetty is connected to the East Intercourse Island departure channel by a 170 m. wide departure channel dredged to 15.35 m. (LAT) in 1982.

Parker Point ore loading facility accommodates vessels up to 140,000 d.w.t.

The maximum departure draft from this berth is dependent upon tidal conditions and adequate under keel clearance.

EAST INTERCOURSE ISLAND ORE JETTY: Operator: Hamersley Iron Pty.Ltd., P.O.Box 21, Dampier, WA 6713. Tel: (091) 436000/435924. Telex: AA99151. Fax: (091) 435804. Cables: 6D HAMIRON DAMPIER AA99151.

The ore jetty consists of a tubular steel pile structure carrying a deck and rail traverse of a slewing boom shiploader.

Nine multi-spring dolphins fitted with Yokohama air block fenders are situated clear of the ore jetty structure and vessels berth starboard side alongside, mooring to these dolphins. See "Plan" for standard mooring pattern.

Iron ore is the only product handled over this facility and the following are principal dimensions:

Length of jetty:	341.4 m.
Depth of water alongside:	21.50 m. (LAT)
Travel of shiploader:	230.0 m.
Radius of ore delivery from fender facing:	25 m.
Height under side boom at LAT:	25.0 m.
Total length of fendering, No. 1 to No. 9 dolphins:	429.8 m.
Rated capacity of shiploader:	9,000 tonnes/hr.
Basin length:	430.0 m.
Basin width:	84.0 m.

The ore jetty is connected to the open sea by a 167.7 m. wide departure channel dredged to 15.35 m. (LAT).

East Intercourse Island ore loading facility accommodates vessels up to 250,000 d.w.t. The maximum departure draft from this berth is dependent upon tidal conditions and adequate under keel clearance.

Also see "Shipmaster's Report" - February 1987.

DAMPIER PUBLIC WHARF: Operator: Dampier Port Authority.

The approach to the wharf has a least depth of 7.5 m. LAT.

The wharf consists of a concrete deck supported by tubular piles. Access is by a concrete approach bridge 35 m. long and 9.5 m. wide.

Seven berths are available; the main or Western berth can accept vessels of up to 25,000 tonnes displacement, and the Eastern berth, which is suitable for smaller craft, supply vessels, etc.

Priority Use Agreement: Masters should be aware that a "priority use" agreement is in place between the Port Authority and Woodside Offshore Petroleum. Under certain circumstances this will mean that a vessel working cargo will be obliged to move off the wharf and wait whilst a vessel carrying Woodside cargo berths, discharges and sails. Neither the Port Authority or Woodside accept any responsibility for costs incurred by this procedure.

Advice of Arrival: If Dampier is the first Port of Entry into Australia, vessels should radio through the normal recognised coast stations, addressing their messages to both their Agents and the Dampier Port Authority, telex No. 198230.

In the case of vessels arriving from overseas:

(i) ETA 7 days before their intended arrival, their draft and details of cargo to be worked.

In the case of all vessels, cable:

(i) 72 hours before intended arrival at the Port advising estimated time of arrival at the Pilot boarding ground including in the message, if not previously given, the forward and aft arrival draft and details of cargo to be worked.

(ii) 48 hours before intended arrival, confirmation or any variation of estimated time of arrival.

(iii) 24 hours before intended arrival, confirmation or any variation of estimated time of arrival.

(iv) Coastal vessels may not be able to advise their ETAs in accordance with these rules. Where possible, the Master should advise his ETA as soon as practical.
Coastal vessels should advise whether the Master holds a current pilotage exemption certificate and, if so, the date of last time that he visited the Port.

Cargo Information: Prior to departure from the Loading Port, Masters shall forward by first class airmail a copy of the vessel's Inward Manifest to the Port Authority showing description and weight of the cargo to be discharged at Dampier – a Manifest.

Principal Dimensions:

Western Berth:	
Dredged basin:	Chart datum minus 10 m. over 280 m. × 63 m.
Wharf face:	209 m.
Height of deck:	6.8 m. above chart datum.
Deck area:	4,400 sq.m.
Mooring Dolphins:	Dolphin 'A' 39 m. South of main deck. Dolphin 'B' 36 m. North of main deck.
Main deck, breast and mooring bollards:	Total 21 × 50 tonne capacity.

Fendering consists of tubular rubbers which are designed to offer a satisfactory mooring face for vessels in winds of up to 40 knots.

Bunkers and Fresh Water: Bunkers can be delivered by hard bunkering points.

SERVICE WHARF: Operator: Hamersley Iron Pty.Ltd.

Petroleum products are received over this facility and vessels are acceptable up to a max. draft of 7.19 m. (LAT).

The wharf consists of steel sheet pile cells constructed in water of surrounding depths of 6.51 m. (LAT).

A berthing basin 243.8 m. long and 38.10 m. wide has been dredged to a depth of 7.73 m. (LAT) on the Western side.

The wharf is 69.5 m. in length and faced with piles on which are secured rubber fenders. Mooring buoys are positioned off the N.E. and S.W. extremity of the wharf and head and stern lines are secured to these buoys.

Ships generally berth port side alongside.

See "Plan" for standard mooring pattern.

MISTAKEN ISLAND SALT BERTH: Operator: Dampier Salt Pty.Ltd., P.O.Box 1619, Karratha, WA 6714. Tel: (091) 436811. Telex: AA99566. Fax: (091) 436800. Cables: 6DDPR SALT LTD.

The berth is situated at Lat. 20° 39.2′ S., Long. 116° 39.6′ E. The berth is used only for salt loading and consists of 8 steel piled structures comprising of:

A central timber decked wharf head carrying a fixed position, stiff arm, slewing and luffing conveyor boom ship loader, with deflector capability for spout trimming.

Seven individual concrete decked rigid berthing/mooring dolphins, each fitted with 2 large diameter rubber fenders. The dolphins are situated so as to hold the ship clear of the wharf head at all times.

Vessels may berth either side to, moor to and warp along the dolphins using ship's winches on forward and aft lines and also central springs attached to Dolphin No. 4.

The principal berth dimensions are:

Overall length between dolphins:	358 m.
Minimum depth of water on approach path:	10.5 m. LAT.
Depth of water alongside:	12.0 m. LAT.
Vessels at berth – underkeel clearance:	1.0 m.
Minimum depth of water on departure path:	12.0 m. LAT.
Clearance up to 50,000 d.w.t.:	1.0 m.
Clearance over 50,000 d.w.t.:	1.5 m.
Maximum outreach of loading boom from fender facing:	17.4 m.
Height of dolphin fender above I.S.L.W.:	
Bottom buffer centre:	2.3 m.
Top buffer centre:	6.2 m.
Loading capacity of shiploader:	max. 3,500 tonnes/hr.
Average loading operation:	2,300/3,000 tonnes/hr.

Shore Leave: Masters are advised that the berth is situated on a privately owned mining lease. In the interests of safety, no unauthorised shore leave is permitted, although fishing from mooring dolphins and shore is permitted. Access to the mainland can be arranged through the vessel's Agent.

Loading Procedure: The vessel is to ensure that the first two holds to be loaded have the hatch covers removed on berthing. On berthing, the vessel will be positioned by the Pilot such that the loading can commence immediately upon acceptance of the Notice of Readiness and verification that vessel's holds are sufficiently clean to standards determined by Dampier Salt (Operations) Pty. Limited as acceptable to load.

An independent Ships' Surveyor, retained by Dampier Salt (Operations) Pty. Limited will take all draft readings during the berthing operation in order that the commencement of loading will not be delayed. Ship's arrival condition and ballast readings prior to commencement of loading will be agreed between the Chief Officer and Surveyor.

An Operations Supervisor from Dampier Salt (Operations) Pty. Limited will board the vessel immediately following mooring to check that the vessel is in readiness to load, and then commence the loading operation. This Officer will then agree with the Chief Officer loading sequence, loading schedule, warping procedures, draft problems (if any) and any other matters pertaining to the loading of the vessel.

He will draw up a loading schedule confirming with the Chief Officer the approximate hold loading duration, times of warping and the estimated time of completion of loading, and sailing time.

An Operations Supervisor will remain on board the vessel for the duration of loading in order to liaise with the Chief Officer concerning the procedures and times to move the vessel so as to load each hold in warp sequence and maintain critical draft, where applicable.

A belt weightometer is used by Dampier Salt (Operations) Pty. Limited, to indicate loading rates and tonnages loaded in each hold.

This instrument has a proven accuracy of ±1.5%. It is the practise of Dampier Salt (Operations) Pty. Limited, for the Surveyor and Chief Officer to agree a preliminary draft survey when the second last hold is approximately 80% loaded. This survey then allows the correct loading of the remainder of the cargo so as to ensure correct trim and prevent inadvertent overloading. The final loaded cargo tonnage is determined by draft survey, calculated by and agreed between the Surveyor and Chief Officer.

The Port of Dampier is situated in the Summer Zone for load line purposes.

No labour is available at Dampier to board the vessel for any shipboard duties. Trimming is by conveyor discharge at the end of the loading spout only. Any subsequent trimming required must be undertaken by the ship's crew.

Stowage Factor: Stowage density 32 cu.ft. per long ton or 0.89 cu.m. per metric tonne. Angle of repose 33°. It has been found that the cargo does not shift during the vessel's voyage to discharge port.

Typical Specification – Australian Salt NaCl (Sodium Chloride):

Appearance: Generally clear, white and free from organic matter.

Additives: Nil additives in final washed product.

Component:

(percentage by weight)	*Average*
Moisture content:	2.30
Calcium content:	0.004
Magnesium content:	0.02
Potassium content:	0.01
Sulphate content:	0.13
Chloride content:	58.97
Water insolubles content:	0.01
Heavy metals:	less than 15 ppm.
NaCl content:	97.40

Chemical analysis expressed in combined form:

NaCl	97.41%
$CaSO_4$	0.12%
$MgSO_4$	0.05%
$MgCl_2$	0.04%
KCl	0.03%
Moisture	2.30%
Insolubles	0.01%

Location of Berth in Relation to Dampier Township:

The berth although geographically in close proximity to the township of Dampier is in fact a journey of some 40 km. by road. The only land access to the berth being through Company property. During shiploading and/or replenishing of the salt stockpile on Mistaken Island, there is a continuous 24 hour per day movement of large heavy haulage trucks along a narrow causeway which makes the movement of private vehicles, taxis or individuals extremely hazardous. Therefore access to the township through Dampier Salt property is strictly controlled and limited.

Vessel Arrival Requirements:

Dampier Salt do not operate an agency but still have shipping officers. All vessels calling at the Salt Berth are attended by a nominated Dampier Salt (Operations) Pty. Ltd. Shipping Officer.

Services Required:

1. Master to advise by telex via coastal radio if any crew members are required to attend doctors or dentists. Prior advice will generally ensure adequate arrangements can be made to accommodate the requests. Insufficient notice, or advice on berthing may jeopardise the chances of obtaining normal medical/dental treatment. Emergency medical treatment is available at all times.
2. Telex advice of any and all stores requirements should be given to Dampier Salt (Operations) Pty. Ltd., at least 4 days prior to arrival. Stores orders received later than this may not be able to be filled, although the majority of items normally requested are carried locally by the ships' providores.

Prior telex advice will ensure the maximum supplied – whilst advice to the Agent on arrival may not be sufficient time to fulfil the full requirements of the vessel.

STEVEDORES: Subject to application. Contact local shipping Agents.

MEDICAL: Doctors are permanently resident at Dampier and Karratha and a modern General Hospital is situated in Karratha.

TANKERS: Withnell Bay Terminal: Owned and operated by Woodside Offshore Petroleum. Tel: (091) 588100. Fax: (091) 588000. Telex: AA99710. The Terminal exports LNG, LPG and Condensate from 2 single berth jetties adjacent to Withnell Bay, in position Lat. 20° 35′ S., Long. 116° 45′ E. The S.W.ly jetty is designed to support the loading and mooring facilities required to ship LNG, and the N.E.ly jetty is designed to ship LPG and Condensate. Both berths are designed to accommodate tankers from 20,000 to 150,000 S.d.w.t., with a maximum berthing dispaclement of 90,000 tonnes. To ensure 24 hour non-tidally restricted berthing, tankers should arrive with a draft of 10 m. or less. The maximum drafts alongside the berths are: Low water tide height plus 12.2 m. for the LNG berth and LWT plus 12.5 m. for the LPG/Condensate berth.

Woodside Channel: A channel has been dredged to the Withnell Bay Terminal. The entrance buoy to this channel has been placed at Lat. 20° 26.2′ S., Long. 116° 43.7′ E. This buoy exhibits a light flashing (2) Red every 5 seconds. The Woodside Channel has a least depth of 12.2 m.

Withnell Bay Jetty: The LNG and Condensate loading facility is adjacent to Withnell Bay, in position Lat. 20° 35.2′ S., Long. 116° 45.7′ E.

The loading platform is equipped with 4×16 in. LNG loading arms (2 of which also act as vapour return lines) and 2×12 in. condensate loading arms.

While alongside the berth, minor repairs and maintenance to tanker's machinery and equipment shall be limited to those items which do not impair or require the following:

(i) The fire detection or firefighting capability.
(ii) The safe and efficient handling of cargo.
(iii) The propulsive power or manoeuvrability of the tanker.
(iv) The safe operation and integrity of the mooring system.
(v) The safe operation of electrical equipment located in gas dangerous zones.

"Hot Work" in non-approved areas and work on open decks or on the jetty head which involves hammering, chipping or use of power tools, is strictly prohibited.

Fresh Water: Not available.

Bunkers: Not available.

Refuse: No garbage, rubbish or refuse may be thrown overboard whilst the vessel is within port limits. The Master may make special arrangements with the Agent or Government authorities for removal and disposal during an extended stay.

Gangway: A shore gangway is provided. This is lifted on and off the tanker by a shore crane. Ship's personnel are required to assist in this operation with respect to the best placement of the gangway on board.

Company Regulations: The ship will be provided with a copy of the Jetty Rules and Company Procedures on arrival. No tanker may load without prior agreement to comply with these requirements.

Access: Subject to Company safety requirements, access to and from the tanker is permitted via the jetty. All personnel wishing to enter or leave the Terminal must be cleared through the Woodside Terminal security gates by pass checked against a Crew List deposited by the ship's Agent.

Stores: Due to vehicle access restriction and the jetty configuration, storing of tankers via the jetty is not allowed, except to items of fresh goods which can be hand-carried down the jetty. Storing via a launch, which can be arranged by the Agent, will be strictly controlled and must take place prior to or on completion of loading. No vessels are allowed alongside the tanker without the permission of the Master and the Pilot/Loading Master.

Minimum Requirements for Tankers: As a general condition for tankers at the Terminal, it is required that tankers comply with the following:

(a) *Equipment:* All tankers must be in a sound state of repair, with main engines, mooring winches and windlasses all in proper working order.
(b) *Certification:* All tankers must be in possession of a complete and valid set of safety certificates. These to include:
  (a) Load Line Certificate.
  (b) Safety Construction Certificate.
  (c) Safety Radio Certificate.
  (d) Cargo Equipment Register.
  (e) Safety Equipment Certificate.
  (f) Cargo Gear Certificate.

(c) Tankers to be in all respects "In Class".
(d) All tankers nominated to load condensate must be a subscribing member of the "TOVALOP" (Tanker Owners Voluntary Agreement concerning Liability for Oil Pollution) scheme at the time of their visit.
(e) All tankers nominated to load condensate must be in possession of a valid IOPPC (International Oil Pollution Prevention Certificate).
(f) It is the policy of the Company that tankers loading at the Withnell Bay Terminal should have inerted tanks. Prior to loading, a tanker's tanks may be checked for O_2 content by the Terminal operator.

Minimum Condensate Tanker Mooring Requirements:
(a) Minimum requirements for tankers with all wire moorings:

Tanker Size d.w.t. (1,000 tons)	Wire Diameter (mm.)	Nylon Rope Tail Diameter (mm.)	Lines required Breasts	Springs
20 – 30	28	56/80	6	6
20 – 30	30	64/80	4	6
20 – 30	32	64/80	4	4
30 – 50	32	64/80	6	4
30 – 50	34	72/80	4	4
30 – 50	36	80/88	4	4
50 – 70	34	72/80	6	6
50 – 70	36	80/88	4	4
50 – 70	38	80/88	4	4
70 – 90	36	80/88	6	6
70 – 90	38	80/88	4	4
70 – 90	40	80/96	4	4
90 – 110	40	80/96	4	4
90 – 110	44	96	4	4
110 – 150	44	96	4	4

(b) Minimum requirements for tankers with mixed or all soft ropes:

Tanker Size d.w.t. (1,000 tons)	Wire Diam. (Springs) (mm.)	Soft Rope Diameter (Breasts) (mm.)	Lines required Breasts	Springs
20 – 30	28	64	4	4
20 – 30	–	64	4	4
30 – 50	30	64	6	4
30 – 50	–	64	6	6
50 – 70	32	64	6	4
50 – 70	–	64	6	8

All wires are to be fitted with nylon tails.

Communications: To assist in Terminal planning and to satisfy Port Regulations, the following pre-arrival messages are to be sent to the tanker's Agent. The Agents have instructions as regards to the distribution of messages.

Tanker Pre-Arrival Messages: The following information is required by the Withnell Bay Terminal and is to be sent to the tanker's Agent by all tankers using the facility. The tanker's Agent is to forward the information to the Woodside Radio Room for distribution.
(i) On departure from last port of call (in any event no less than 5 days prior to arrival): "Answer Withnell Bay Questionnaire".
(ii) 7 days prior to arrival "Advise ETA and Arrival Draft Dampier".
(iii) 3 days prior to arrival "Advise ETA".
(iv) 2 days prior to arrival 'Advise ETA, arrival and departure drafts". "Confirm all cargo systems operations".
(v) Any changes of more than 6 hours after 7 day ETA.
(vi) 24 hours prior to arrival "Confirm ETA".
(vii) Any changes of more than 1 hour in last 24 hours prior to arrival.

Note: Tanker's Agent are to request the tanker to send the 24 hours ETA (Item 6) and any changes of more than 1 hour within 24 hours of arrival (Item 7) to Woodside Radio telex direction in addition to the Agent.

Woodside Radio:
Telex: AA99571.
Fax: (091) 588131.
Tel: (091) 588198.

Withnell Bay Questionnaire: CONDENSATE: To be answered by all tankers on departure from the last port of call (in any event to be received at least 5 days prior to arrival). Australian coastal tankers, which have previously berthed at Withnell Bay, need only answer AA to EE, plus KK (Provided there have been no changes to the remainder since the previous call at Withnell Bay).

AA: ETA Pilot Boarding Ground.
BB: Arrival Draft.
CC: Arrival Displacement.
DD: Estimated Departure Draft.
EE: Confirm:
  1. Tanks free of leakage.
  2. Inert gas system operational, tanks inerted to less than 8% O_2.
  3. All cargo systems, transfer equipment inspected, leak free and operating correctly.
  4. Stress calculations for cargo, ballasting, bunkering transfers made and within recommended safety limits.
  5. The maximum loading rate for the present loading operation.
  6. All navigation, mooring equipment and engines fully operational.
FF: 1. Ballast quantity, type (SBT, CBT, DIRTY), origin.
  2. Can the vessel load and deballast concurrently. If not, advise time required to deballast.
  3. Advise if shore reception required.
GG: Has the vessel complied with voluntary regulations for exchange of ballast water.
HH: Maximum loading rate through 2 port side 12 in. manifolds.
II: Does manifold arrangement comply with OCIMF standards.
JJ: Type and complement of moorings.
KK: The Pilot will discuss the mooring operation with the Master prior to berthing. When mooring, the tanker must not tension any wire or line before shore personnel move clear.
Master to confirm understanding of this requirement.

LPG: To be answered by all tankers, on departure from the last port of call (In any event to be received at least 5 days prior to arrival).
AA: ETA Pilot Boarding Ground.
BB: Arrival Draft:
CC: Estimated Departure Draft.
DD: Confirm:
  1. Vessel fully cooled under LPG vapour and arrival tank bottom temperatures?
  2. Composition of previous 3 cargoes?
  3. All cargo systems leak free and fully operational?
  4. Starboard manifold configuration, the order (fwd to aft) and size of the presentation flanges for loading? (e.g. Butane, Propane and L 12 in./V 6 in./V 6 in./L 12 in.)
  5. Advise maximum loading rate, whether both grades can be loaded simultaneously, and if not, the order of loading required?
  6. Gas detection system is operational and calibrated for the cargo to be loaded?
  7. Cargo transfer emergency stops tested from all locations to ensure correct operations of valves, alarms and interlocks?
  8. Ensure operation of the tank high level and pressure alarms and interlocks.
  9. Where adjustable setting safety valves are installed, confirm they are set for the cargo to be loaded.
  10. Is the vessel subject to sloshing restrictions?
  11. All navigation equipment, mooring equipment and engines fully operational?
EE: Has the vessel complied with voluntary regulations for exchange of ballast water?
FF: Does manifold arrangement comply with OCIMF standards?
GG: Type and complement of moorings?
HH: The Pilot will discuss the mooring operation with the Master prior to berthing. When mooring, the tanker must not tension any wire or line before shore personnel move clear.
Master to confirm understanding of this requirement.

Note: Vapour samples taken on arrival. Masters must ensure all tanks have positive pressure.

VHF Communication of Arrival: All tankers within VHF range of the Port of Dampier must call Dampier Port Control on Channel 16 (Channel 11 working) for advice on Pilot boarding, anchorages, berthing and other traffic information, etc.

Pilotage and Berthing Arrangements: *The Pilot/Loading Master:* The Pilot/Loading Master acts as both Pilot and Terminal representative on all tankers using the Terminal. It is incumbent on the Master to ensure full co-operation with the Pilot/Loading Master. The tanker is required to provide a cabin and messing facilities for the Pilot/Loading Master whilst in the Port of Dampier.

Tanker Drafts: The following UKCs are to be allowed for the tanker to transit the Woodside Channel which has a minimum depth of 12 m.

Inwards:
20,000 ton to 150,000 d.w.t. Tanker
UKC = 2.0 m.
Outwards:
20,000 ton to 50,000 d.w.t. Tanker
UKC = 1.7 m.
50,000 ton to 150,000 d.w.t. Tanker
UKC = 1.5 m.

To ensure 24 hour non-tidal restricted berthing, tankers should arrive with a draft of 10.0 m. or less. Due to the sustained wind patterns that often affect the port, the Pilot/Loading Master may request a tanker to adjust her arrival ballast draft or trim where necessary. Maximum berthing displacement is 90,000 tonnes.

The maximum draft alongside 12.2 m. plus low water tide height.

Towage Services: All tankers berthing at the Withnell Bay Terminal will utilise the services of the tugs provided by MSP and MS; up to 4×50 tonne bollard pull tugs are available.

Tug Requirements (Minimum):

Tanker d.w.t. × 1,000 ton	Berthing	Departure
20 – 30	2	2
80 – 100	3	2
100 – 150	4	2

Berth Mooring Arrangements: The berth consists of 6 breasting dolphins and 6 mooring dolphins.

The mooring dolphins are each provided with a quick release triple hook for breast lines.

The breasting dolphins are each provided with a quick release double hook for spring lines. The breasting dolphins are fitted with double Yokohama fenders with vertical panels.

Each hook has a safe working load of 125 tonnes and is equipped with a load sensor attached to the mooring load monitoring system. The Pilot/Loading Master has access to this system via the Woodside Radio Room.

Mooring of tankers is facilitated by the use of mooring capstans on each dolphin and a messenger line system.

Weather Restrictions Alongside: The Company procedures contain the limiting criteria with regard to cyclones, wind, sea states, etc., which may affect loading and/or cause an early departure from the berth. A comprehensive alarm system with input of all critical sea and weather parameters is monitored by the Terminal and the Woodside Radio Room.

Approximate properties of North West Shelf Condensate are as follows:

Density at 15°C	0.76 to 0.77.
Flash Point	–50°C (Volatile stock).
R.V.P.	Maximum 41KPa (6 Psi).
Temperature	26° – 40°C.

Static Accumulator Cargo Handling Requirements: North West Shelf Condensate is a Static Accumulator Cargo and tankers will be loaded in accordance with the International Safety Guide for Oil Tankers and Terminals (ISGOTT) Section 7.4.

Loading Equipment: There are 2×12 in. condensate loading arms for loading condensate and receiving ballast water. The arms are designed to accept ship's manifolds of 10 in., 12 in. or 16 in. However, tankers are requested to present 2×12 in. manifolds on the port side.

The loading arms have a vertical range of 3.0 m. – 25.5 m. and are fitted with a quick connect/disconnect coupling system.

The maximum loading rate via the 2 arms is 6,000 cu.m./hr.

Emergency Shut-Down System (ESD): An ESD transmitter is placed on board the tanker prior to the commencement of loading. This transmitter is not intrinsically safe and must be installed in the tanker's cargo control room. When activated, this transmitter will shut down the loading pumps and close the loading arm valves.

Ballast Operations: Tankers must abide by the Western Australian "Pollution of Waters by Oil and Noxious Substances Act 1987". This Act incorporates the 1973 International Convention for the Prevention of Pollution from ships as corrected by the Process-Verbal of Rectification, dated 13 th June 1978 (1978 Protocol).

In effect, clean ballast and segregated ballast may, provided they conform in all respects with MARPOL requirements, be discharged overboard. Any pollution, however, can incur severe fines and heavy clean-up costs.

Shore Ballast Facilities: Limited quantities of dirty ballast can be accepted ashore. However, due to operational requirements prior permission is needed.

Contaminated Ballast: Dirty ballast containing heavy metals or chemicals cannot be accepted ashore. Masters will be required to sign a declaration to this effect prior to discharging ballast ashore. The Terminal may require the ballast to be sampled prior to discharge.

Also see "Service Wharf" and "Shipmaster's Report" dated June 1995.

DENSITY: 1025.

FUEL/WATER/REPAIRS: Fuel for ships' bunkers is available.

A limited supply of fresh water is available in an emergency.

Stores and provisions can be arranged. For large orders Masters are recommended to cable their Agent giving 7 days notice of their requirements.

Minor ship repair work can be arranged through ship's Agents. However, Masters requiring major work are recommended to cable their Agents advising their requirements in advance.

SURVEYORS: Caleb Brett. Tel: (091) 442482.

A.M.S.A. Resident goverment surveyor. Tel: (091) 852640.

GANGWAY/DECK WATCHMEN: *Gangway and Deck Watch:* Whilst alongside any berth, mooring lines are to be regularly checked and kept tight.

A continuous watch is to be maintained, and Masters should ensure that the gangway is fitted with a safety net, manropes and illumination. A lifebuoy and line is to be kept alongside the gangway.

OPENING/CLOSING HATCHES: By crew.

CERTIFICATES: See "Melbourne".

CARGO GEAR: See "Melbourne".

REPATRIATION: Limited facilities available.

AIRPORT: Daily service to Perth. Karratha Airport is 15 km. from the port.

TIME: See "General" before first port.

TELEPHONES: Ship-to-shore telephones are available at all berths for ship-to-shore communications. Ships and jetty telephones are barred access to STD and trunk line facilities.

GARBAGE DISPOSAL: Garbage skips can be provided either on the wharf or on board the vessel. Collection can be arranged as required. Contact: Brambles Manford, Tel: (091) 851433.

WASTE OIL DISPOSAL: Available by tanker truck only, at Dampier Public Wharf. Contact: Lyons & Pearce, Tel: 853422.

SEAMAN'S CLUBS: Seafarers' Centre: A seafarers' centre operated by the Missions to Seamen Flying Angel Club is located on the Esplanade, Dampier, overlooking the Hampton Harbour. The centre is equipped with a shop and recreational facilities. Telephone: (091) 83-1424.

CURRENCY: Australian Dollar (A$).

WEATHER: The Archipelago is situated in the cyclone belt with an incidence of about three cyclones per year in an area extending from Port Hedland to North West Cape.

The cyclone season lasts from November to April.

Prevailing winds are Easterly in Winter and Westerly in Summer but surrounding hills give considerable protection. Forces in excess of 20 knots are seldom experienced.

The port facilities are situated in sheltered waters and experience only slight seas and occasional low Northerly swell in the Summer months.

TIDES: Tidal streams are weak within the Archipelago, the flood flowing to the South with a maximum strength of less than one (1) knot at Spring tides in the berthing area.

Spring tidal range is 5.3 m.
Neap tidal range is 3.2 m.
Mean sea level is 2.7 m.
(Lowest Astronomical Tide).

Dampier is a standard port in the Australian National Tide Tables, published by the Hydrographer Royal Australian Navy.

SERVICES: A Walport film exchange is available – contact ship's Agent.

A sealed road connects Dampier with Perth extending North to Port Hedland. This highway provides all weather access from the State capital.

A bus service operates between Dampier and Perth and Dampier and Port Hedland.

Postal and telegraphic facilities are available at Dampier Post Office. Business Hours: 0900–1230 hrs., 1330–1700 hrs. weekdays.

Customs: A sub-collector of Customs and staff are resident in Dampier and regulations of the Department of Business and Consumer Affairs–Bureau of Customs will apply.

Police: A police sergeant and police officers are stationed at Dampier.

Township: Dampier is a modern township built overlooking Hampton Harbour at the S.W. extremity of the Archipelago. It has a population of approximately 3,000 and an enclosed air-conditioned shopping centre and hotel-motel cater for everyday requirements.

GENERAL: *Gas-freeing of Vessels:* The port requirements regarding gas-freeing of OBO or other vessels presenting at the port are as follows:

The Master of an OBO vessel shall cable the Harbour Master Port of Dampier addressing its message "6D Port Auth" or (091) 442144 (Fax), of 198230 (Telex) 72 hours before intended arrival at the port, advising:

(a) Nature of the preceding three cargoes the vessel has carried.
(b) Date and place last oil cargo was discharged.
(c) Statement on the condition of the slop tanks and whether these are pressed up or fully inerted and sealed.
(d) The date and place of issue of the Gas-Free Certificate carried on board.

1. Where vessels have been issued with a Gas-Free Certificate prior to their call at Dampier, such vessels can berth on arrival or whenever the berth is free.
2. Where vessels arrive at the Port of Dampier without a Gas-Free Certificate on board, such vessels must be issued with a Gas-Free Certificate before berthing.
3. No Gas-Free Certificates signed by the Ships' Masters will be accepted.
4. Gas-Free Certificates will be acceptable only from an industrial chemist or any other competent person approved by the Port Authority.

Charts and Publications:

1. Australian Pilot Volume V.
2. Australian Chart No. 741 (Approaches).
3. Australian Chart No. 57.
4. Australian Chart No. 58 (Port).
5. Australian Chart No. 59 (Plans).

Vessels Arriving to Discharge General Cargo:

(a) Owners are required prior to accepting cargo for Dampier, to submit a copy of the vessel's General Arrangement Plan for the purpose of ascertaining the vessel's acceptability in sufficient time to permit recommendations to be made on the positioning and stowage of the cargo.
(b) Prior to departure from the loading port, Masters shall forward by first class air mail a copy of the vessel's cargo plan showing the nature, description and weight of the cargo to be discharged at Dampier – Cargo Manifest.

The documents referred to in (a) and (b) above shall be forwarded to Dampier Port Authority, P.O. Box 285, Dampier, W.A., 6713.

Also see "Arrival Advices".

REGULATIONS:

140. Leakage and Spillage

The Master of a vessel within the Port shall ensure that:

(a) if any leakage or spillage occurs during the loading on to, or unloading from, the vessel of flammable liquid, the loading or unloading shall be forthwith stopped, all valves shall be closed, and the Harbour Master shall be forthwith notified; and,
(b) if any leakage or spillage of oil or oily ballast water on to the deck occurs, scupper plugs are not removed and steps are taken forthwith to prevent oil or oily ballast water from going overboard.

Penalty: $2,000.

138. Communication to be Maintained

(1) The Master of a vessel within the Port engaged in cargo operations involving dangerous goods shall ensure that:
  (a) 2 suitable independent telephone or radio systems for communicating between the vessel and the shore are available and
  (b) throughout the cargo operations, all reasonable endeavours are used to maintain communication between the vessel and a responsible person on the shore by means of each of the 2 systems referred to in paragraph (a).

Penalty: $2,000.

(2) For the purposes of sub-Regulation (1) (a), a radio system is not suitable unless each unit is portable and is carried by a person nominated for the purpose of maintaining communication in accordance with sub-Regulation (1) (b).

134. Certain Preliminary Requirements

(1) The Master of a vessel within the Port shall ensure the loading on to, or unloading from, the vessel of flammable liquid is not commenced until:
  (a) agreement has been reached between the persons on the vessel and those on the shore who are responsible for the loading or unloading upon a plan for the procedures to be followed;
  (b) an effective barricade has been erected on the wharf to prevent access to the vessel or pipeline hose connections by persons not concerned in the loading or unloading;
  (c) satisfactory provision has been made for watchmen to be in attendance:
    (i) to prevent the entry on to the vessel of persons not authorised to do so under Regulation 133;
    (ii) to take possession from persons about to board the vessel of matches, mechanical lighters, and other appliances capable of producing ignition; and
    (iii) generally to assist in complying with these regulations and to carry out such directions as may be given under these regulations; and,

(d) all persons concerned in the loading or unloading fully understand the stand-by requirements for normal stopping of shore pumps on completion of loading or unloading and the emergency stop procedures applicable to both the vessel and the terminal.

Penalty: $2,000.

(2) A barricade shall be taken not to comply with the requirements of sub-Regulation (1) (b) unless:

(a) it encloses an area of the wharf extending to at least 30 m. beyond each end of the vessel concerned and to at least 30 m. measured from, and at right angles to, the side of the vessel that is closest to the wharf; and,

(b) it is erected and maintained by, under the authority or under and in accordance with the direction of, or otherwise to the satisfaction of, the Harbour Master.

(3) Provision made for watchmen shall be taken not to comply with the requirements of sub-Regulation (1) (c) unless it is made by, under the authority or under and in accordance with the direction of, or otherwise to the satisfaction of, the Harbour Master.

(4) Where a vessel within the Port is to be loaded with, or unloaded of, flammable liquid, the Master of the vessel shall ensure that, before loading or unloading is commenced, a box or satchel on which the words "Emergency Documents", in black letters, are clearly displayed is placed on the wharf in a prominent and readily accessible position at least 30 metres from the vessel and that the box or satchel contains:

(a) details of the plan referred to in sub-Regulation (1) (a), including particulars of relevant times, sequences and rates;

(b) a list of the characteristics of:

(i) the cargo, if any, on board the vessel; and,

(ii) the flammable liquid to be handled

and details of the position where it is or, as the case may be, is to be stowed;

(c) a crew list, including reference to persons joining or leaving the vessel while it is in the Port; and,

(d) a plan of the general arrangement of the vessel.

Penalty: $2,000.

122. Firefighting Equipment

The Master of a dangerous goods vessel within the Port shall ensure that at all times while a vessel is berthed at a wharf or is handling dangerous goods:

(a) fire hoses complete with nozzles have been run out fore and aft, connected up, and are ready for immediate use;

(b) the vessel's supply of water for firefighting is available;

(c) the vessel's firefighting equipment is otherwise ready for immediate use;

(d) the vessel's International Ship-Shore Fire Connection is connected to the fire hydrant of the vessel that is nearest to a gangway; and,

(e) a hose is connected between the vessel's International Ship-Shore Fire Connection and a shore hydrant unless a fire tug is standing by.

Penalty: $2,000.

119. Alternative Escape Route.

The Master of a dangerous goods vessel berthed at a wharf within the Port shall ensure that the outboard side accommodation ladder or lifeboat is turned out as an alternative means of escape.

Penalty: $2,000.

99. Compliance with Certain Requirements

(1) The Master of a vessel having on board flammable liquid or on to which flammable liquid is being loaded shall ensure that, in handling the flammable liquid, the requirements of the International Safety Guide for Oil Tankers and Terminals (Third Edition) published by the International Chamber of Shipping as amended from time to time are complied with in addition to the other requirements of these regulations. Penalty: $2,000.

(2) The Master of a vessel having on board liquefied flammable gas or on to which liquefied flammable gas is being loaded shall ensure that, in handling the liquefied flammable gas, the requirements of the International Chamber of Shipping Tanker Safety Guide (Liquefied Gas)(1979 Edition) published by the International Chamber of Shipping as amended from time to time are complied with,in addition to the other requirements of these regulations.

Penalty: $2,000.

100. Safety Testing of Certain Vessels

(1) In this regulation:

"the rules" means *Rules for the Safe Handling and Storage of Dangerous Substances and Oil in Port Areas* (1984 Edition)

made by the Association of Australian Port and Marine Authorities as amended from time to time;

"hot work" means any construction, demolition, alteration, repair or maintenance involving burning, welding, riveting, grinding, drilling, grit, sand or shot blasting, or any other heat, fire or spark producing operation.

(2) Subject to sub-Regulation (4), the Master of a vessel within the Port shall not cause or permit:

(a) ore in bulk to be loaded on to the vessel into tanks or spaces in which flammable liquid has previously been carried; or,

(b) any hot work to be carried out in or near tanks or spaces in which:

(i) flammable dangerous goods have previously been carried; or,

(ii) danger may arise from breathing the atmosphere,

unless he first obtains:

(c) a Certificate of Test in accordance with the rules from any approved person, to the effect that:

(i) the appropriate standard safety designation of the tanks or spaces into which the ore is to be loaded in or near which the hot work is to be carried out is, in accordance with the rules "Safe for Men – Safe for Hot Work";

(ii) the appropriate standard safety designation of every other tank or space on the vessel is, in accordance with the rules, "Safe for Men – Safe for Hot Work"; or "Not Safe for Men – Safe for External Hot Work Only", and,

(iii) every such other tank or space on the vessel has been inerted or filled with water; and,

(d) in the case of hot work to be carried out as described in paragraph (b), the written approval of the Harbour Master.

Penalty: $2,000.

(3) The Harbour Master may exempt the Master of a vessel from the requirements of sub-Regulation (2) if he is satisfied that:

(a) flammable liquid has not, or for the purposes of sub-Regulation (2) (b) flammable dangerous goods have not been carried in the tanks or spaces into which the ore is to be loaded or in or near which the hot work is to be carried out during the last 3 voyages on which cargo has been carried in those tanks or spaces; and,

(b) since flammable liquid was or, for the purposes of sub-Regulation (2) (b), flammable dangerous goods were last carried in the tanks or spaces they have been properly cleaned and ventilated and a certificate as described and to the effect described in sub-Regulation (2) (c) has been obtained from an approved person, and any such exemption may be given subject to the taking of such other precautions as are specified by the Harbour Master.

(4) An exemption under sub-Regulation (3) shall have effect according to its tenor.

(5) Application to the Harbour Master for an exemption under sub-Regulation (3) may be made in writing setting out a description of the cargo carried on each of the last 3 voyages and the dates on which they were loaded and the application shall be accompanied by a copy of the certificate referred to in sub-Regulation (3) (b) that the Harbour Master is satisfied is authentic.

SHIPMASTER'S REPORT: February 1987 (Updated 1992). Vessel (LOA 339 m., breadth 55 m., d.w.t. 322,941 tonnes) berthed at Port Dampier, East Intercourse Island Ore Jetty in November 1992 for loading iron ore. The vessel was the largest to visit the port.

Sailing draft calculation as follows:

Depth in Channel	15.35 m.
plus	Tide
minus	1.70 m. under keel clearance

The pilot was transferred on arrival and departure by helicopter.

SHIPMASTER'S REPORT: June 1995.

Berth: Withnell Bay – LNG Wharf.

Operation: Loading.

Connection: Hard arms.

Cargo: Condensate.

Gangway: Shore gangway. Difficult to land on deck due to interference from the ship's accommodation ladder span wire.

Protest: Noted protest due to delay before berthing.

AUTHORITY: Dampier Port Authority, P.O. Box 285, Dampier, WA 6713, Australia. *Tel:* (091) 59 6555, 59 6556 (Port Control, 24 hours). *Telex:* 198230. *FAX:* (091) 59 6557, 59 6558 (Port Control). *Contact:* Captain G.F. Hammonds, Chief Executive Officer/Harbour Master. Captain S. James, Deputy Harbour Master.

AGENT: Patrick Sleigh Shipping Agencies Pty.Ltd., 1937 Pyramid Road, Karratha, W.A. 6714, Australia (Postal address: P.O.Box 152, Karratha, W.A. 6714). Tel: (091) 44 4329. Telex: 198236 PATSLE. FAX: (091) 44 4329. Seagram Code 6DPATSLE.

DARWIN, N.T.: 12.28 S. 130.50 E. (See Plan)

PORT LIMITS: A line between Charles Point and Lee Point defines the seaward limits of the port.

DOCUMENTS: Vessels arriving at Darwin as their first Australian port will require the following documentation:

1 Primary Health Report.
2 Crew Lists, Form M & S 11.
2 Passenger Lists, Forms M308, 309, 310.
2 Port of Call Lists.
1 Crew Personal Effects List, Form 5.
2 Barber's and Ship's Stock, Form 5AA.
1 Stores List, Form 42A.
1 Animal Pets Aboard, Form QA4.
Ship's Log.
Last Port Clearance.
Safety Certificates: Construction
Equipment
Load Line
Radio
International Oil Pollution Prevention Equipment (Tankers Only).

Where possible, cargo manifests and stowage plans should be forwarded by airmail or Fax, ahead of the vessel to the local Agents.

Enquiries regarding Customs Allowances should be directed to either the vessel's agent or to the Customs Officer at time of boarding.

PILOTAGE: Darwin buoyage is IALA "System A". Pilotage is compulsory for all craft exceeding 25 m. LOA unless a current Pilotage Exemption is held by the Master.

Pilot Boats: Pilot boats are dark blue with the word "Pilot" in white on either side. Decks are yellow and upperworks are white with red visibility patches. Both boats are fully seagoing and equipped with radio, radar, fire and salvage pumps, as well as equipment for treating oil pollution.

Boarding: The usual pilot boarding point is 1 nautical mile N.W. of Channel Rock Buoy (No. 6). Pilot boarding arrangements must be according to the International Maritime Organisation Regulations.

Vessels awaiting pilotage may anchor 1 nautical mile N.W. of Channel Rock Buoy, in 25 m. of water, sand bottom and good holding ground.

Special arrangements can be made for deep draft vessels, whereby the Pilot will board one mile Eastward of Charles Point Patches Buoy (No. 5) situated at Lat. 12° 20.4' S., Long. 130° 40.5' E. Vessels awaiting pilotage from Charles Point Patches Buoy may anchor 2 nautical miles North of the buoy, where there is not less than 20 m. of water and good holding ground.

In the case of bad weather, the pilot boat will lead ahead to sheltered waters, using VHF-FM radio for communication. Also see "Radio".

Coastal Pilotage: Pilotage through Clarence Strait, to or from Torres Strait or Gulf of Carpentaria ports, is conducted by pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Australian Reef Pilots Ltd. See "Torres Strait" for details.

ANCHORAGE: Masters familiar with the Port may be invited to proceed to the Quarantine Anchorage area, West of Quarantine Buoy (No. 10), situated at Lat. 12° 28.6' S., Long. 130° 49.9' E. The Quarantine Anchorage area offers good sand holding ground in not less than 15 m. of water. Also see "Health".

RESTRICTIONS: Tankers are only allowed to berth during daylight hours but may depart at night, subject to weather.

MAX. SIZE: Ships up to 246 m. LOA and 12.83 m. draft have been accepted at Berth No. 1 by special arrangement, depending on tide conditions.

HEALTH: *Quarantine Reporting:* A vessel approaching the Port and requiring pratique, should send a message to the Quarantine Office not more than 24 hours and not less than 12 hours before arrival, containing the following information: name of vessel, ETA, number of passengers, number of crew, number of passengers disembarking, and last port of departure and date. The message should also state whether or not there is any disease on board, whether or not livestock have been carried within the last 6 months, and whether or not there are any animals or birds on board at present.

On arrival the health report should be given to the Quarantine Officer, 2 copies being furnished on the prescribed form (Q360 Form A), one of which will be signed by the Quarantine Officer and returned to the Master. A Passenger List and Crew List together with a List of Passengers Disembarking including their permanent address within the country is also required. (Commonwealth Health Department – Quarantine Regulations – Part III: 18, 19, 20 and 21.)

The telegraphic address of the Quarantine Department is "Quarantine Darwin Telex AA85658" or Fax (089) 410223.

Health Clearance: The Quarantine Officer will clear vessels, other than livestock carriers, at all times, subject to the provision of suitable lighting during the hours of darkness. A gangway should be made available for the use of the Quarantine Officer. The appropriate day or night signal should be displayed until clearance is obtained. (By night – red over white lights.) Subject to receipt of a satisfactory health message, radio pratique may be available on request.

Quarantine Anchorage: The Quarantine Anchorage extends 0.5 nautical miles West of Quarantine Buoy (No. 10). Vessels requiring to use the anchorage may be subject to pilotage.

RADIO: Ships at sea should work Perth (VIP) or Sydney (VIS), these being the major West and East area stations. Darwin Radio (VID) should be worked as early as possible and full use made of Satcom and Fax.

ETA: Notice of ETA and request for a Pilot must be made to the Harbour Master not less than 24 hours before anticipated arrival at Channel Rock Buoy (No. 6), situated at Lat. 12° 25.1' S., Long. 130° 46.9' E.

Communications: Fax: +61-89-412039 or +61-89-811175.

Confirmation of ETA is required at least 2 hours before arrival at Channel Rock Buoy. Such confirmation, or any amendment to ETA, should be made on VHF-FM Channel 16 (156.8 MHz) or the Port Working Frequency of VHF-FM Channel 10 (156.5 MHz). Both Channels are continuously monitored.

VHF-FM Channel 16 is for calling and distress only; Channel 10 should be used for routine working.

The standard Colregs signals may be used by vessels requiring a Pilot.

VHF: Communication within the port is by VHF-FM radio using the following frequencies:

Channel 16 – 156.800 MHz	Distress and calling
67 – 156.375 MHz	Distress
10 – 156.500 MHz	General Port working and routine business
12 – 156.600 MHz	Tug working
6 – 156.300 MHz	Intership

Call sign is "Darwin Harbour".

Ships arriving off the port should make contact on Channel 16 and shift to Channel 10 for routine working. This can be done as part of "Notice of Arrival" which is required 4 hours before ETA Channel Rock Buoy.

RADAR: Both pilot boats are radar equipped.

TUGS: Coastal Tug and Barge Pty. Ltd. operate a tug of 1,300 kw and 20 tonne bollard pull. The tug has fire fighting facilities onboard.

Line Boats: Frances Bay Marine offer 2 small metal work boats for line handling and limited picket boat service.

Launches: Launches up to 50 passenger capacity are available for services to vessels at anchor.

Those and other vessels, including landing barges up to 20 tonne d.w.t., can be contacted through the Port Office.

BERTHING: (See Table overleaf).

No. 1 Berth (Iron Ore Wharf): No. 1 Berth is a dolphin type berth with a face length of 142 m. Two mooring dolphins are positioned 69 m. East and West of the berth, which can routinely accommodate vessels up to 250 m. LOA and 11.5 m. draft.

The berth is used mainly for the import of bulk petroleum, bulk sulphuric acid and LPG, as well as the export of bulk ores and ore concentrates. In addition, No. 1 Berth can be utilised as a Ro/Ro berth for vessels with large starboard quarter ramps, such as first and second generation PAD and SCAN carriers.

The wharf is equipped with a travelling belt loader, designed for ores and similar dry bulk cargoes. The loader has a transit distance of 140 m. along the wharf and an outreach of 14 m. beyond the fenders. The high water air draft of the loading boom is 11 m. The loader is connected by travelling belt to the shore stockpile area, a distance of approximately 450 m. Bulk cargoes can be loaded at a maximum gross rate of 600 tonnes p.h.

A variety of product lines are installed to handle petroleum and acid cargoes:

Black oil	30 cm.
White Oils	30 cm.
Distillates	20 cm.
Marine Diesel	15 cm.
LPG	10 cm.
Sulphuric Acid	20 cm.

Discharge rates up to 300 tonnes/p.h. (1,000 kPa) can be accepted on each of the main pipelines.

No. 2 Berth West (New Fort Hill Wharf): No. 2 Berth West, 150 m. in length, was opened in 1981.

Maximum deck loading is 2.5 tonnes/sq.m. and height of deck is 9.5 m. above datum. Minimum depth alongside is 12.0 m. Max. draft 11.7 m.

Power: 3 outlets, 65 amp, 415 volt, 3 phase.

Ro/Ro Facility: In 1982 the "Linkspan" Ro/Ro facility was installed at the Western end of No. 2 Berth, establishing the berth as the centre for Ro/Ro operations.

The Ro/Ro facility consists of an extendable version of the "Linkspan" ship-to-shore semi-buoyant bridge 77 m. in length, connecting with a 35 m.×42 m. pontoon and is workable at all tidal levels.

The pontoon can be extended, retracted and ballasted, thus enabling Ro/Ro vessels of any size or type – side-loading, end-loading, quarter-loading (port or starboard) – to use the Port of Darwin.

For example, when extended:

The pontoon forms a corner berth for use by ships with their own ramps. Non-ramp ships can be loaded or discharged over extendable finger flaps.

Ships with port or starboard quarter ramps or stern ramps, lying port side to the wharf, can be handled with equal ease. Vehicles discharged over a starboard quarter ramp make a 125° turn on the pontoon to reach the end of the "Linkspan",

Large international Ro/Ro vessels, such as first and second generation PAD and SCAN carriers, can lie at the No. 1 Berth, working cargo over their starboard quarter ramps.

When the pontoon is retracted, its outer end forms an extension of No. 2 Berth West. The facility can then be used for vessels like car carriers, with side doors or starboard shoulder ramps.

No. 2 Berth East: No. 2 Berth East is a 150 m. extension to No. 2 Berth, giving a total wharf length of 300 m.

Maximum deck loading is 4 tonnes/sq.m., enabling containers to be stacked 4 high and catering for forklift axle loads of 80 tonnes. Deck height above datum is 9.5 m., with minimum depth alongside 12.0 m.

Both No. 2 Berths, West and East, are served by an I.H.I./ Sumitomo rail-mounted, single lift gantry container crane. The crane has a container handling capacity of 30 TEU per hour and a heavy lift capacity of 70 tonnes. A 10 cu.m. grab is available for the handling of bulk cargoes.

Power: 3 outlets, 65 amp, 415 volt, 3 phase.

No. 3 Berths, West and East (Outer Stokes Hill Wharf): No. 3 Berths, West and East, comprise the outer side of a concrete decked, steel piled wharf with a 300 m. trestle approach. Total length of the two berths is 292 m., with a least depth of 9 m. Height above datum is 10.6 m. Permissible wheel loading for standard type vehicles is 6 tonnes, while maximum deck loadings are 2.8 tonnes/sq.m. with some local restrictions.

Power: 6 outlets, 65 amp, 415 volt, 3 phase.

Both berths are used mainly for general break bulk cargo, as well as by rig tenders, timber carriers, passenger ships, survey vessels and visiting naval craft. No. 3 Berth East, is also used for dry bulk imports, such as sulphur and clinker, which are landed by ship's grab.

No. 4 Berths, West and East (Inner Stokes Hill Wharf): These berths, on the inner side of Stokes Hill Wharf, are reserved for smaller vessels such as prawn trawlers, tugs and the like. Maximum length of vessel is restricted to 70 m.

Total length of the berths is 280 m., with a least depth alongside of 4.5 m. Height above datum is 9.2 m., with maximum deck loading of 2.2 tonnes/sq.m. Bunker fuel up to 45 cSt is available by 12 cm. pipelines.

Power: 4 outlets, 65 amp, 415 volts, 3 phase.

Fishermen's Wharf: The facility has a concrete deck on steel piles with an overall length of 200 m. The least depth is 4 m., deck height is 9.5 m. above datum and deck loading is 1.0 ton/sq.m.

Facilities include shore power at 415V., 3 phase, 65 amp and 415 volts, 15 amp, single phase at 7 outlets, bunkers and fresh water. The wharf is designed as an assistance to the fishing industry and is situated adjacent to Darwin Ship Maintenance Services repair works, with its 400 ton synchrolift dock. Full cold and dry storage facilities are under construction.

Darwin Fishing Harbour Mooring Basin: A fishing boat mooring haven with lock acess is now operational adjacent to Frances Bay Small Ships Facility. Max. LOA 35 m. Draft 4.0 m. Beam 15 m. 85 berths are available with shore power, fresh water and sanitary facilities.

Berths	*Main Cargoes*	*Depth Alongside (m.)*	*Length (m.)*	*Height above datum (m.)*	*Max. Deck Loading (Tonnes/sq.m.)*	*Width of Apron (m.)*	*Special Facilities*
No. 1	Petroleum Livestock Mineral Ores	12.0	142	10.4	3.0	12.0	Travelling Belt Loader, Ro-Ro
No. 2 West	Containers Dry Bulk	12.0	150	9.5	2.5	35.0	Container Crane, Ro-Ro
No. 2 East	Containers Dry Bulk	12.0	150	9.5	4.0	35.0	—
No. 3 West	General	9.0	146	10.6	2.8	12.2	—
No. 3 East	Dry Bulk General	9.0	146	10.6	2.8	34.0	—
No. 4 West	Fishing	4.5	140	9.2	4.2	11.9	—
No. 4 East	Fishing	4.5	140	9.2	4.2	9.0	—
Fishermen's Wharf	Fishing	4.0	200	8.5	1.0	21.0	—

Storage Facilities: The first stage of the Darwin Container Terminal, immediately adjacent to No. 2 Berth West, was completed in May, 1983. Fitted with 64 power points for refrigerated containers, the Terminal is currently able to accommodate approximately 450 TEU when double stacked.

CARGO HANDLING EQUIPMENT: An extensive range of cargo handling equipment is maintained by the Port Authority and the Stevedores.

Fork lifts vary in lifting capacity from 2.5 tonnes to 27 tonnes.

Mobile cranes of up to 16 tonnes lifting capacity are owned by the Port Authority. Larger mobile cranes of 70 tonnes can be hired locally.

A variety of tractors and trailers (6.1 m. and 12.2 m.) are available as internal transfer vehicles and for ro/ro container operations.

Container Crane: No. 2 Berths, West and East (New Fort Hill Wharf) are equipped with an I.H.I./Sumitomo rail-mounted, single lift gantry container crane.

The crane has a handling capacity of thirty 6.1 m. (or fifteen 12.2 m.) containers per hour and a heavy lift capacity of 70 tonnes at 50% outreach. It is equipped with a 10 cu.m. grab for bulk cargoes.

Selected Data – Container Crane:

Containers per hour	30 TEU
Bulk capacity	10 cu.m. grab
Capacity at 100% outreach	35 tonnes
Capacity at 50% outreach	70 tonnes
Outreach from fenders	32 m.
Total outreach	35 m.
Height to bottom of boom	30 m.
Total height	50 m.
Total height (boom raised)	70 m.
Total weight	850 tonnes
Speed of travel on rails	27 m./min.

BRIDGES: There are no bridges or other restrictions to prevent access to the Port by vessels of not more than 12 m. draft. Ships of greater draft may need await tide at Charles Point Patches.

STEVEDORES: Conaust Ltd., GPO Box 775, Darwin, NT 0801. Tel: (089) 818533. Fax: (089) 410604. Telex: M85200.

Federated Stevedores, GPO Box 939, Darwin, NT 0801. Tel: (089) 411368. Fax: (089) 411670.

Working hours: Starting and finishing times of shifts shall fall within the following ranges:

Shift	*Start*	*Finish*
Day	0700 – 0800	1400 – 1500
Twilight	1300 – 1600	2000 – 2300
Night	2200 – 2400	0500 – 0700

Night shifts by arrangement. Weekend labour (including mooring gangs) must be ordered by 1300 hrs. Friday. Monday labour must be ordered by 1300 hrs. Sunday. Monday to Friday labour must be ordered by 1300 hrs. day prior to vessel working.

MEDICAL: Full hospital facilities available without prior notice.

TANKERS: See "Restrictions" and "Berthing".

Precautions: Governed by Australian Ports Association standards. Copies of Port tanker rules are supplied on arrival and will be amplified by Pilots if necessary.

DENSITY: The usual water density of 1025 may reduce to 1022 during the wet season owing to river run-off.

FRESH WATER: Good quality potable water is available in unlimited quantities at all berths. Delivery rate is approximately 100 tonnes/p.h. per connection.

FUEL: All grades of fuel up to 45 cST and lubricants are available.

REPAIRS: Routine maintenance and boilermaking assistance to light engineering standards. There is no heavy foundry in the Port.

DRY DOCKS: Darwin Ship Repairs and Engineering operates a syncrolift platform with dimensions 51.6 m. LOA × 14 m. beam × 5.0 m. draft for vessels up to 58 m., 1,400 tons for dry docking.

Corringle Slipway, operated by Perkins Shipping, has 2 marine slipways, one capable of lifting up to 500 tons and the other 60 tons.

SURVEYORS: Representatives of most Cargo Surveyors and Classification Societies can be brought from interstate or overseas at short notice. Lloyd's Agent at the port represents most of the Classification Societies and both Commonwealth and N.T. Surveyors are appointed at the Port.

GANGWAY/DECK WATCHMEN: Gangway watchmen are compulsory for tankers and are supplied by the Stevedores at union award rates. Hold watchmen are not necessary. Shed or gate watchmen may be required during the handling of hazardous cargoes.

Gangways: Various shore gangways are available for hire from the Stevedores.

OPENING/CLOSING HATCHES: Ship's hatches are usually handled by W.W.F. labour while the vessel is alongside.

CONSULS: The following Consuls are located in Darwin:

Honorary Consul for Belgium
Mr. P. Barr, G.P.O. Box 2140, Darwin, N.T. 0801.
Honorary Consul for Finland
Mr. E. B. M. James, 16 Allen Street, Fannie Bay, N.T. 0820.
Honorary Consul for France
Vacant.
Honorary Consul for Germany
Mr. H. Maschke, P.O. Box 38995, Winnellie, N.T. 0821.
Honorary Consul for Greece
Mr. J. Anictomatis, c/o G.P.O.Box 48, Darwin, N.T. 0801.
Consulate of Indonesia
Dr. J. Halim, M.D., G.P.O.Box 1953, Darwin.
Honorary Consul for Italy
Vacant.
Honorary Consul-General for Japan
Mr. R. Morris, G.P.O.Box 1616, Darwin.
Honorary Consul for Norway
Mr. A. Furre, 18 Menmuir Street, Winnellie, N.T. 0821.
Honorary Consul for Philippines
Mr. R. Matthewson, P.O.Box 10, Berrimah.
Honorary Consul for Portugal
Mrs. M. Dos Anjos, 15 Colster Crescent, Wagaman, N.T. 0810.
Honorary Consul of Sri Lanka
Mr. V. Ranasinghe, P.O.Box 36955, Winnellie, N.T. 0820.
Honorary Consul for Switzerland
Mr. P. H. Fuchs, 46 Wells Street, Darwin.
Honorary Consul for Sweden
Mr. H. Bradley, G.P.O. Box 330, Darwin, N.T. 0801.

CUSTOMS ALLOWANCES: Australian Commonwealth Regulations apply.

Customs Officers board all vessels upon arrival, with the exception of Intermediate Port vessels. For such vessels, Officers board Mondays to Fridays between 0800 hrs. and 1600 hrs.

Prior notice of arrival is required, including details of passengers and crew leaving the vessel at Darwin.

Requests for the services of Customs Officers should be made through the vessel's Agents.

REPATRIATION: Scheduled aircraft connect with all Australian states several times daily. Direct overseas flights arrive and depart daily. All facilities exist for changes of crew and repatriation of seamen.

AIRPORT: Darwin International Airport is located 10 km. from the port.

TIME: See "General" before first port.

HOLIDAYS: Christmas Eve (pm), Christmas Day, New Years Eve (pm), New Years Day, Good Friday, May Day (Labour Day), Anzac Day (25th April) and Picnic Day (first Monday in August). Working within the port on the above days is at the discretion of the stevedoring companies.

POLICE/AMBULANCE/FIRE: All emergency services are available through the Harbour Office. Automatic fire alarms are installed throughout the Port and alarms can be raised or emergencies reported on Channel 16 at any time.

Police	22 3344
Fire	46 4122
Ambulance	27 9000
Hospital	20 7211

EMERGENCY CO-ORDINATION CENTRE: Any maritime emergency will initially be handled through the Harbour Office. The responsibility may eventually be transferred to another authority depending on the magnitude or complexity of the emergency.

TELEPHONES: This service is available aboard ships at all berths by prior arrangement through the Agents. Standard rates apply.

SERVICES: A Compass Adjuster is available in the port area.

BANKS: No foreign bank branches exist in the Northern Territory but local banks represent most overseas finance houses.

STORING: Vessels can be stored by truck or by launch if at anchor. Vehicles and boats may not approach tankers while working cargo. Forklifts and shore cranes can be used to assist stores loading. Local labour is available to assist storing. The usual Customs Regulations apply regarding drawback of duty or tax.

SHORE LEAVE: When Immigration and Customs requirements have been satisfied, there are no restrictions on crew members' shore leave. Identity cards or shore passes are not necessary.

A Telephone Interpreter service is available by telephoning 82 2111 at any time. Most major European and Asian languages are included.

GARBAGE DISPOSAL: Drums (quarantine) and skips (non-quarantine) available alongside. Garbage no charge, extra bins A$ 103.90/bin. Quarantine waste less than 25 m. no charge. Vessel of 25 m. or more in length – A$ 45.00/day plus A$ 3.00 for each person on board for each day or part of a day, subject to a daily maximum of A$ 1,500.00. Tel: (089) 816701.

WASTE OIL DISPOSAL: Tanker trucks available from contractor (6,000 litres). Contact: Hannons Pty. Ltd., Tel: (089) 819588. Fax: (089) 812564.

SEAMAN'S CLUBS: Stella Maris. Tel: (089) 814092.

CURRENCY: Australian Dollar.

DELAYS: Berthing delays are very infrequent. Occasional labour shortages develop when several general cargo vessels are working.

GENERAL:

Charts and Documents: Refer to:
AUS 27, 28, 309
Admiralty Pilot Vol V
Admiralty List of Lights (Vol K)
Admiralty Tide Tables (Pacific)
Admiralty National Tide Tables (AHP11)
Marine Information Manual Australia

A copy of the Port Handbook and (in season) the Port Cyclone Procedures will be issued to Masters of arriving vessels.

Restrictions and Regulations: Vessels must not immobilise main engines without permission from the Harbour Master.

Tankers: Tankers will not be allowed to immobilise at any time of year while working cargo. Petroleum tankers and other carriers of hazardous liquid bulk cargoes will be issued on arrival with a copy of port "Procedures for Tankers", which sets out in full the procedures to be carried out in case of fire, oil spill or other accident. Tankers are not berthed before sunrise or after sunset but can depart any time.

Anchorage: Anchorage is prohibited in area between Emery Point, Mandorah and Bullocky Point, where high voltage power lines cross the harbour bottom. Anchorage is not advised in the foul area South of Channel Rock Buoy, which is obstructed with wartime wreckage.

Cyclone Procedures: Darwin is within the Southern Zone of tropical revolving storms. The season extends from November to April and the Port and environs may be more or less affected at any time during that period. All vessels entering the port during the "Cyclone Season" are supplied with copies of the Port procedures which set out in detail the various stages of alert and warning, together with actions to be taken in the case of an approaching cyclone. Ships may be placed on short notice for sea and required to maintain themselves in seagoing condition at all times.

Allocation of Berths: The allocation of berths is determined by the Harbour Master.

Signals: The Port of Darwin adheres to the International Code of Signals and the International Rules for Prevention of Collision.

Two special emergency sound signals are used in the Port. In the case of fire, the morse letter F (· · – ·) should be continuously sounded on the ship's whistle or siren. In the case of oil spill or other pollution of the harbour waters, the morse letter P (· – – ·) should be continuously sounded.

Tides: Darwin is a standard port (No. 6323) and full predictions are given in the Australian National and Admiralty Tide Tables. Maximum range is 7.92 m., with a mean range of 3.72 m. Tidal streams at Springs may exceed 3 knots in channels and reach 3 knots at berths.

Visibility: Visibility in the district is usually good but may be affected by dust during the "Dry Season" and humidity during the "Wet Season". Fog is virtually unknown. During the "Wet Season" severe thundersqualls with heavy rain frequently occur. These are usually brief but gusts may reach 60 knots and the wind generally shifts through 360°. Vessels at anchor should veer a good scope of cable and have a second anchor ready for immediate use.

Electricity: Shore power connections are installed at all berths 415 va, 3 phase, 65 amp or 15 amp (See "Berthing").

Garbage Disposal: The dumping of garbage into port waters is strictly prohibited.

Port Security: The Port Authority operates its own security service, staffed by Port Authority personnel. Patrols throughout the Port area take place around-the-clock.

Requests for additional security for special cargoes should initially be addressed to the Port Authority.

DEVELOPMENTS: *East Arm Port:* Construction of a new port has commenced at East Arm with the first 380 m. of berth space, due for completion in December 1997.

The new facilities are adjacent to large areas of underdeveloped land, which will be made available to enhance Darwin's commercial and industrial growth.

The project has been designed to incorporate an Alice Springs to Darwin rail link, which will connect Darwin to the national rail network.

Progressively, cargo operations will be transferred to the East Arm Port as each stage of construction is completed. Passenger and naval vessels will continue to berth at Stokes Hill Wharf or Fort Hill Wharf in the existing port, which is adjacent to Darwin's central business district.

Stage 1: It is estimated, Stage 1 will cost $75 million, and will provide 300 m. of general purpose wharf and an 80 m. multi-user platform capable of berthing bulk liquid ships. There will be 4 ha. of hardstand/storage area incorporated.

The wharf will cater for 3 categories of cargo:
- Cargo operations, such as live cattle exports and bulk imports of clinker and sulphur.
- Rig tender services.
- General cargo.

The major products exported through Darwin include cattle, zinc, lead and metal manufactures, and those imported include oil and fuel, cement clinker and sulphur.

The existing port at Stokes Hill and Fort Hill Wharf will continue to provide for:
- Container traffic (in the short term).
- Visiting passenger cruise ships.
- Naval vessels.
- Fuel ships (which will continue to discharge at the iron ore wharf until the fuel farm is relocated to East Arm in 2002).
- Bulk mineral exports (which will be distributed through the iron ore wharf for some years to come).

The masterplan is flexible enough to allow for future port development, as well as the planned railway, fast freight catamarans, cargo vessels, possible naval requirements and oil storage/refinery construction.

AUTHORITY: Darwin Port Authority, G.P.O.Box 390, Darwin, NT 0801, Australia. *Tel:* (089) 81 6701 (all hours). *FAX:* (089) 81 1175, (089) 412039. *Contacts:* Captain J. Butler, Port Manager. Captain R.J. Wilson, Harbour Master (Mobile Tel: 018-89-3524).

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Sydney.

DEVONPORT, Tasmania: 41.11 S. 146.22 E.

(See Plan)

PORT LIMITS: Within all waters that extend 3 miles seawards bounded on the Eastward by an imaginary line drawn 000° – 3 miles from the coastline and intersecting the most Easterly point of Wright Island and to the Westward by an imaginary line drawn 000° – 3 miles from the Western side of the entrance to the River Don.

DOCUMENTS: See "Melbourne".

APPROACHES: Port situated 1 mile inside Mersey River, the entrance to which is sheltered by the Mersey Bluff on the West and by a breakwater on the East bank. There is an anchorage in vicinity of boarding ground, but it is inadvisable to remain at anchor during periods of strong on-shore winds. The Inner Harbour provides good all-weather shelter. There is a swinging basin which can accommodate vessels of length 200 m. or more, especially where tugs are used.

PILOTAGE: Compulsory. 24 hour service for all vessels where Masters are not in possession of a valid Exemption Certificate. Pilots will board when required at a position within 400 m. of a point Mersey Bluff Lighthouse bearing 242° by 1.93 km.

Masters of vessels requiring the services of a Pilot are advised to radio the Harbour Master, Devonport, their ETA and vessel's arrival draft 12 hours prior to arrival.

ANCHORAGE: The quarantine anchorage is defined as to the North of a line running East and West through the Mersey Bluff Lighthouse. Vessels must lie clear of the fairway into the River.

RESTRICTIONS: Approach channel 9.5 m. LWOST. Tidal range is 2.44 m. average, 3.20 m. Spring. Enquiries should be made for vessels exceeding 30 ft. (9.6 m.) draft and 600 ft. (180 m.) length.

MAX. SIZE: LOA 200 m., max. draft 10.5 m. Also see "Restrictions".

TIDES:		
	Lowest Recorded Tide	Minus (—)0.48 m.
	Mean High Water Spring Tides	3.20 m.
	Mean High Water Neap Tides	2.62 m.
	Mean Low Water Neap Tides	0.59 m.
	Mean Low Water Spring Tides	0.33 m.

HEALTH: Pratique is mandatory for all vessels arriving from overseas ports. Agents normally make necessary arrangements.

VHF: 24 hour listening watch – Channel 16, switching to Channels 12 and 67 as required. Call sign is "Devonport Harbour".

TUGS: Twin screw 2,250 b.h.p. (bollard pull 39 tonnes) plus smaller tug 250 b.h.p. immediately available. Additional tugs, as required, available at reasonable notice.

BERTHING:

Berth No. 1 West:
Operation: Bulk cement.
Structure: Reinforced concrete decks on steel piles. One 45 m. portion and 2 dolphin type sections of 32 m. and 37 m. lengths respectively, with 19 m. space between.
Length of Wharf: 150 m. (nominal – part of 289 m. total length of wharf).
Dredged Depth: 9.5 m. below M.L.W.S.T.
Wharf Deck Level: 5.46 m. above M.L.W.S.T.
Storage: Four cement silos of 26,335 tons capacity owned by Goliath Portland Cement Co. stand directly behind the concrete portion of wharf deck. Bulk cement is transferred pneumatically from rail wagons to the silos and from the silos to ship.
Wharf Cranes: None.
Stern Ramp: Nil.
Telephone: One plug available.
Max. LOA: 180 m.
Max. Beam: 37 m.
Load Rate: Bulk cement 1,200 tonnes/hr.
Proposed Depth: 10.0 m.

Berth No. 2 West:
Operation: * Disused and awaiting re-development.
Structure: Dismantled.
Length of Wharf: 139 m. (nominal – part of 289 m. total length of wharf).
Dredged Depth: 7.3 m. below M.L.W.S.T.
Wharf Deck Level: 5.46 m. above M.L.W.S.T.
Telephone: Plug not available.
Max. LOA: 205 m.
Max. Beam: 37 m.

* Note: This berth not commercially usable, awaiting project development to replace with steel piled, re-inforced concrete deck. Proposed depth of 10.5 m.

Berths	*Main Cargoes*	*Depth Alongside (m.)*	*Length (m.)*	*Height above datum (m.)*	*Max. Deck Loading (Tonnes/sq.m.)*	*Width of Apron (m.)*	*Special Facilities*
No. 1	Petroleum Livestock Mineral Ores	12.0	142	10.4	3.0	12.0	Travelling Belt Loader, Ro-Ro

No. 4 East	Fishing	4.5	140	9.2	4.2	9.0	—
Fishermen's Wharf	Fishing	4.0	200	8.5	1.0	21.0	—

Storage Facilities: The first stage of the Darwin Container Terminal, immediately adjacent to No. 2 Berth West, was completed in May, 1983. Fitted with 64 power points for refrigerated containers, the Terminal is currently able to accommodate approximately 450 TEU when double stacked.

CARGO HANDLING EQUIPMENT: An extensive range of cargo handling equipment is maintained by the Port Authority and the Stevedores.

Fork lifts vary in lifting capacity from 2.5 tonnes to 27 tonnes.

Mobile cranes of up to 16 tonnes lifting capacity are owned by the Port Authority. Larger mobile cranes of 70 tonnes can be hired locally.

A variety of tractors and trailers (6.1 m. and 12.2 m.) are available as internal transfer vehicles and for ro/ro container operations.

Container Crane: No. 2 Berths, West and East (New Fort Hill Wharf) are equipped with an I.H.I./Sumitomo rail-mounted, single lift gantry container crane.

The crane has a handling capacity of thirty 6.1 m. (or fifteen 12.2 m.) containers per hour and a heavy lift capacity of 70 tonnes at 50% outreach. It is equipped with a 10 cu.m. grab for bulk cargoes.

Selected Data – Container Crane:

Containers per hour	30 TEU
Bulk capacity	10 cu.m. grab
Capacity at 100% outreach	35 tonnes
Capacity at 50% outreach	70 tonnes
Outreach from fenders	32 m.
Total outreach	35 m.
Height to bottom of boom	30 m.
Total height	50 m.
Total height (boom raised)	70 m.
Total weight	850 tonnes
Speed of travel on rails	27 m./min.

BRIDGES: There are no bridges or other restrictions to prevent access to the Port by vessels of not more than 12 m. draft. Ships of greater draft may need await tide at Charles Point Patches.

STEVEDORES: Conaust Ltd., GPO Box 775, Darwin, NT 0801. Tel: (089) 818533. Fax: (089) 410604. Telex: M85200.

Federated Stevedores, GPO Box 939, Darwin, NT 0801. Tel: (089) 411368. Fax: (089) 411670.

Working hours: Starting and finishing times of shifts shall fall within the following ranges:

Shift	*Start*	*Finish*
Day	0700 – 0800	1400 – 1500
Twilight	1300 – 1600	2000 – 2300
Night	2200 – 2400	0500 – 0700

Night shifts by arrangement. Weekend labour (including mooring gangs) must be ordered by 1300 hrs. Friday. Monday labour must be ordered by 1300 hrs. Sunday. Monday to Friday labour must be ordered by 1300 hrs. day prior to vessel working.

MEDICAL: Full hospital facilities available without prior notice.

TANKERS: See "Restrictions" and "Berthing".

Precautions: Governed by Australian Ports Association standards. Copies of Port tanker rules are supplied on arrival and will be amplified by Pilots if necessary.

DENSITY: The usual water density of 1025 may reduce to 1022 during the wet season owing to river run-off.

FRESH WATER: Good quality potable water is available in unlimited quantities at all berths. Delivery rate is approximately 100 tonnes/p.h. per connection.

FUEL: All grades of fuel up to 45 cST and lubricants are available.

REPAIRS: Routine maintenance and boilermaking assistance to light engineering standards. There is no heavy foundry in the Port.

DRY DOCKS: Darwin Ship Repairs and Engineering operates a syncrolift platform with dimensions 51.6 m. LOA × 14 m. beam × 5.0 m. draft for vessels up to 58 m., 1,400 tons for dry docking.

Corringle Slipway, operated by Perkins Shipping, has 2 marine slipways, one capable of lifting up to 500 tons and the other 60 tons.

SURVEYORS: Representatives of most Cargo Surveyors and Classification Societies can be brought from interstate or overseas at short notice. Lloyd's Agent at the port represents most of the Classification Societies and both Commonwealth and N.T. Surveyors are appointed at the Port.

GANGWAY/DECK WATCHMEN: Gangway watchmen are compulsory for tankers and are supplied by the Stevedores at union award rates. Hold watchmen are not necessary. Shed or gate watchmen may be required during the handling of hazardous cargoes.

Gangways: Various shore gangways are available for hire from the Stevedores.

OPENING/CLOSING HATCHES: Ship's hatches are usually handled by W.W.F. labour while the vessel is alongside.

CONSULS: The following Consuls are located in Darwin:

Honorary Consul for Belgium
Mr. P. Barr, G.P.O. Box 2140, Darwin, N.T. 0801.
Honorary Consul for Finland
Mr. E. B. M. James, 16 Allen Street, Fannie Bay, N.T. 0820.
Honorary Consul of France
Vacant.
Honorary Consul for Germany
Mr. H. Maschke, P.O. Box 38995, Winnellie, N.T. 0821.
Honorary Consul for Greece
Mr. J. Anictomatis, c/o G.P.O.Box 48, Darwin, N.T. 0801.
Consulate of Indonesia
Dr. J. Halim, M.D., G.P.O.Box 1953, Darwin.
Honorary Consul for Italy
Vacant.
Honorary Consul-General for Japan
Mr. R. Morris, G.P.O.Box 1616, Darwin.
Honorary Consul of Norway
Mr. A. Furre, 18 Menmuir Street, Winnellie, N.T. 0821.
Honorary Consul for Philippines
Mr. R. Matthewson, P.O.Box 10, Berrimah.
Honorary Consul for Portugal
Mrs. M. Dos Anjos, 15 Colster Crescent, Wagaman, N.T. 0810.

PORT LIMITS: Within all waters that extend 3 miles seawards bounded on the Eastward by an imaginary line drawn 000° – 3 miles from the coastline and intersecting the most Easterly point of Wright Island and to the Westward by an imaginary line drawn 000° – 3 miles from the Western side of the entrance to the River Don.

DOCUMENTS: See "Melbourne".

APPROACHES: Port situated 1 mile inside Mersey River, the entrance to which is sheltered by the Mersey Bluff on the West and by a breakwater on the East bank. There is an anchorage in vicinity of boarding ground, but it is inadvisable to remain at anchor during periods of strong on-shore winds. The Inner Harbour provides good all-weather shelter. There is a swinging basin which can accommodate vessels of length 200 m. or more, especially where tugs are used.

PILOTAGE: Compulsory. 24 hour service for all vessels where Masters are not in possession of a valid Exemption Certificate. Pilots will board when required at a position within 400 m. of a point Mersey Bluff Lighthouse bearing 242° by 1.93 km.

Masters of vessels requiring the services of a Pilot are advised to radio the Harbour Master, Devonport, their ETA and vessel's arrival draft 12 hours prior to arrival.

ANCHORAGE: The quarantine anchorage is defined as to the North of a line running East and West through the Mersey Bluff Lighthouse. Vessels must lie clear of the fairway into the River.

RESTRICTIONS: Approach channel 9.5 m. LWOST. Tidal range is 2.44 m. average, 3.20 m. Spring. Enquiries should be made for vessels exceeding 30 ft. (9.6 m.) draft and 600 ft. (180 m.) length.

MAX. SIZE: LOA 200 m., max. draft 10.5 m. Also see "Restrictions".

TIDES:		
	Lowest Recorded Tide	Minus (—)0.48 m.
	Mean High Water Spring Tides	3.20 m.
	Mean High Water Neap Tides	2.62 m.
	Mean Low Water Neap Tides	0.59 m.
	Mean Low Water Spring Tides	0.33 m.

HEALTH: Pratique is mandatory for all vessels arriving from overseas ports. Agents normally make necessary arrangements.

VHF: 24 hour listening watch – Channel 16, switching to Channels 12 and 67 as required. Call sign is "Devonport Harbour".

TUGS: Twin screw 2,250 b.h.p. (bollard pull 39 tonnes) plus smaller tug 250 b.h.p. immediately available. Additional tugs, as required, available at reasonable notice.

BERTHING:

Berth No. 1 West:

Operation:	Bulk cement.
Structure:	Reinforced concrete decks on steel piles. One 45 m. portion and 2 dolphin type sections of 32 m. and 37 m. lengths respectively, with 19 m. space between.
Length of Wharf:	150 m. (nominal – part of 289 m. total length of wharf).
Dredged Depth:	9.5 m. below M.L.W.S.T.
Wharf Deck Level:	5.46 m. above M.L.W.S.T.
Storage:	Four cement silos of 26,335 tons capacity owned by Goliath Portland Cement Co. stand directly behind the concrete portion of wharf deck. Bulk cement is transferred pneumatically from rail wagons to the silos and from the silos to ship.
Wharf Cranes:	None.
Stern Ramp:	Nil.
Telephone:	One plug available.
Max. LOA:	180 m.
Max. Beam:	37 m.
Load Rate:	Bulk cement 1,200 tonnes/hr.
Proposed Depth:	10.0 m.

Berth No. 2 West:

Operation: *	Disused and awaiting re-development.
Structure:	Dismantled.
Length of Wharf:	139 m. (nominal – part of 289 m. total length of wharf).
Dredged Depth:	7.3 m. below M.L.W.S.T.
Wharf Deck Level:	5.46 m. above M.L.W.S.T.
Telephone:	Plug not available.
Max. LOA:	205 m.
Max. Beam:	37 m.

* Note: This berth not commercially usable, awaiting project development to replace with steel piled, re-inforced concrete deck. Proposed depth of 10.5 m.

Berth No. 3 West:

Operation:	General user berth. General cargo and bulk tallow.
Structure:	Re-inforced concrete caisson construction, except for the Northern end 45 m. portion of re-inforced concrete deck supported by timber piles. Distance between wharf face and cargo shed 10 m.
Length of Wharf:	167 m. (nominal – part of 365 m. total length of wharf).
Dredged Depth:	7.5 m. below M.L.W.S.T.
Wharf Deck Level:	5.5 m. above M.L.W.S.T.
Storage:	One shed 110 m. long × 24.7 m. wide × 7.2 m. high.
Wharf Cranes:	None.
Stern Ramp:	Nil.
Telephone:	Two plugs available.
Reefer Points:	None.
Other Buildings:	Port Operations Centre manned 24 hours per day, and wharf labour amenities are located at the Northern end of the cargo shed.
Railways:	A single track siding runs parallel to the wharf behind the storage shed, 38 m. from the wharf face.
Max. LOA:	205 m.
Max. Beam:	37 m.

Berth No. 4 West:

Operation:	General user berth. Oil products, bulk wheat, refrigerated, container, general cargo, livestock. Bulk tallow. Quarter ramp Ro/Ro.
Structure:	Re-inforced concrete deck supported by steel piles.
Wharf Length:	198 m. (nominal – part of 365 m. total length of wharf).
Dredged Depth:	11.0 m. below M.L.W.S.T.
Wharf Deck Level:	5.5 m. above M.L.W.S.T.
Hardstanding:	1.2 ha. South of cold store.
Storage:	A two storey cold store 49 m. long, 25 m. wide, with a capacity of 7,200 cu.m. is located on the wharf. Wheat silos with a capacity of 11,000 tons are located behind the wharf. Transfer of grain from ship to silo is via a belt conveyor in a tunnel below wharf level. Discharge rate 600 t.p.h.
Weighbridge:	Public weighbridge with 60 tons capacity, 20 m. LOA.
Oil Pipelines:	1×200 mm. diameter white products oil line. 1×250 mm. diameter white products oil line and 1×250 mm. diameter black products oil line convey oil from tankers at the berth, through a hatch in the wharf deck, to tank farms 0.8 km. to the South. 1×150 mm. diameter bulk tallow line to storage tanks at rear of No. 5 West Berth.
Railway:	A two track siding runs parallel to the wharf face behind the cold store.
Stern Ramp:	Nil.
Telephone:	Two plugs available.
Reefer Points:	6 portable at short notice.
Other Buildings:	Nil. Wharf width in way of cold store 10 m.
Max. LOA:	206 m.
Max. Beam:	37 m.
Firefighting Capacity:	Remote controlled fire fighting monitor on tower 12.5 m. above H.W.L. F.W. type 6% AFFF. 1,800 lts./min. delivery, at South East corner of cold store.

Berth No. 5 West:

Operation:	Boral Gas Co.Pty.Ltd. LPG pipelines to storage facility. Livestock berth.
Structure:	Three re-inforced concrete dolphins and a re-inforced concrete tee-head are supported on steel piles and inter-connected by catwalks. The structure incorporates a single stock race for transfer of livestock from the small Bass Strait Island trading vessels.
Wharf Length:	40 m. across tee-head.
Dredged Depth:	8.5 m. below M.L.W.S.T.
Wharf Deck Level:	4.5 m. above M.L.W.S.T.
Storage:	Boral Gas tank farm LPG 1,260 tonnes. Large cattle yards behind berth.
Other Buildings:	Pacific Terminals plant with 6 bulk tallow silos, total capacity 2,000 tons, situated behind wharf. 150 mm. pipeline with loading rate 200 tons/hr. to No. 3 and No. 4 West Berths.
Safety:	Equipped with an extensive fire protection system, incorporating two tower mounted fog monitors and fixed spray heads. The few electrical fittings are "flame proof".
Max. LOA:	107 m.
Max. Beam:	20 m.

Berth No. 1 East:

Operation:	Leased and operated by the TT-Line for passenger and Ro-Ro freight ferry.
Structure:	Land-tied steel sheet pile wall wharf face.
Length of Wharf:	115 m.
Dredged Depth:	7.0 m. below M.L.W.S.T.
Wharf Deck Level:	4.57 m. above M.L.W.S.T.
Hardstanding:	2.1 ha. of concrete and bituminous pavement suitable 43 tons axle loads.
Storage:	One transit shed 45 m. long × 19 m. wide × 6.5 m. high.
Stern Ramp:	11.4 m. between kerbs, no height restrictions. Loads three lanes of 43 tons axle load forklift, or one 260 tons gross low loader.
Telephone:	Plugs available at stern ramp and passenger gangway.
Reefer Outlets:	For 88 containers.
Other Buildings:	Two storey terminal building incorporating passenger facilities and labour amenities. 0.6 ha. of parking space for passenger vehicles. Gatehouse: Two storeys 37 m. long, 5 m. wide. Quarantine Inspection shed.
Max. LOA:	170 m.
Max. Beam:	37 m.

Berth No. 2 East:

Operation:	North end of berth (90 m.) dedicated to Coastal Expressline Ro-Ro service, South end of berth (90 m.) general purpose berth. Commodities handled, Ro-Ro containers, general cargo. Bulk-salt, china clay, cement, clinker, gypsum, livestock.
Structure:	24.4 m. wide re-inforced concrete deck on steel piles, land backed.
Length of Wharf:	180 m. fendered length (nominal – part of 298 m. total length of wharf).
Dredged Depth:	10.0 m. below M.L.W.S.T.
Wharf Deck Level:	4.5 m. above M.L.W.S.T.
Hardstanding:	1.9 ha. in addition to wharf deck, cargo sheds 43 tons axle load.
Storage:	One transit shed 67 m. long × 24 m. wide × 6.1 m. high, with roller shutter side doors, open ends. In addition to hardstanding areas, there is appropriately 2 ha. of space available for bulk cargo storage.
Wharf Cranes:	None.
Stern Ramp:	25 m. long, 23 m. between side rails. No height restrictions. Loads 6 tons/sq.m. uniform distribution. 35 tons forklifts and reach trucks. 80 tons capacity 4 axle "Rolux" trailer units.
Telephone:	Plug available.
Reefer Outlets:	For 54 containers.
Other Buildings:	Amenities and garage building (35 m. × 9 m.).
Max. LOA:	206 m.
Max. Beam:	37 m.

Berth No. 3 East:

Operation:	General purpose berth. Commodities handled containers (ships gear). Quarter ramp Ro-Ro. General cargo, bulk salt, clay.
Structure:	Re-inforced concrete deck on steel piles, land fill behind access ramps only.
Length of Wharf:	118 m. (nominal – part of 298 m. total length of wharf).
Dredged Depth:	10.0 m. below M.L.W.S.T. for length of 180 m., i.e. to 60 m. South of No. 3 East fendered wharf.
Wharf Deck Level:	4.5 m. above M.L.W.S.T.
Hardstanding:	1.5 ha.
Storage:	Nil.
Wharf Crane:	One travelling, slewing, class 3, capacity 25 tons at 32 m. radius, 30 tons at 25.9 m. radius. Maximum outreach beyond fender line 24.4 m. radius. Travel distance 122 m. Range of lift 18 m. above to 12 m. below wharf. Speeds: hoist 24 m./min., luff 18 m./min., slew 1.4 rev./min., containers and a 4.6 cu.m. capacity electro-hydraulic grab are available.
Load Rate:	25 cycles/hour.
Stern Ramp:	Nil.
Telephone:	2 wharf plugs.
Reefer Outlets:	For 144 containers.
Max. LOA:	206 m.
Max. Beam:	37 m.

All wharves are floodlit for night work and are under T.V. surveillance. Ample fresh water at a rate of 32 – 40 tonnes per hour available at a nominal charge. Three phase power, telephones and victualling available to all berths. Bunkering by road tankers only. Garbage disposal by arrangement. Other cranage available – floating crane 35 tonne capacity, 2 mobile cranes of 6.5 tonne and 4 tonne capacity, 2 large forklifts – capacities 20,321 kilos and 23,133 kilos and numerous small forklifts.

BULK HANDLING FACILITIES: See "Berthing".

STEVEDORES: Agents for ships arrange stevedores.

Wharf Labour Working Hours: Sunday – Friday: 0830 hrs. – 1530 hrs., 1530 hrs. – 2230 hrs. and 2230 hrs. – 0530 hrs.

Saturday: 0800 hrs. – 1500 hrs., 1500 hrs. – 2200 hrs. and 2200 hrs. – 0500 hrs.

Ro-Ro Terminal: Continuous by arrangement.

Bulk Cargoes: Continuous by arrangement.

MEDICAL: An out-patients department of the local general hospital is available 2 km. from the port. Lie-in facilities are available at the hospital proper 8 km. from port.

TANKERS: Berth No. 4 West: Discharge lines for black and white products. LPG handled at Berth No. 5 West. Also see "Berthing".

DENSITY: 1025.

FRESH WATER: Available all wharves. 40 t.p.h.

FUEL: Road tanker delivery only.

REPAIRS: The Port Authority can carry out limited repairs. Fuller repairs can easily be arranged to be carried out by the numerous engineering firms in the vicinity of the port. Underwater diving service is available with facilities for photography, welding, survey and repairs.

SURVEYORS: *Cargo Inspectors:* For Devonport, the appropriate Cargo Inspector would be R. M. Davies and Associates, Wynyard. Tel: (004) 42 2435.

Surveyors: There are no surveyors in the Devonport area but, Lloyd's Agents are readily available in Launceston, just over 1 hours' drive way.

CARGO GEAR: Australian Navigation (Loading and Unloading) Regulations apply.

HOLIDAYS: Work all days except Christmas Day, Good Friday, Anzac Day, Labour Day, Picnic Day W.W.F.

POLICE/AMBULANCE/FIRE: Fire 24-1886 (Other than alarm, 24-1887); Police 23-7511; Ambulance 24-5077.

EMERGENCY CO-ORDINATION CENTRE(S):

1. *At Sea in Australian Waters:* Under the AUSREP system which became effective from 1st April, 1982, all Australian and foreign vessels from arrival at first port until departure from the last port, must report at least once every 24 hours, a position report and destination, to the Australian Coastal Surveillance Centre, Canberra (A.C.S.C.), who are responsible for the Australian SAR area, the largest in the world covering one ninth of the earth's surface. In the event of a report not being made, SAR operations will begin within 24 hours of a missed report. Although not mandatory until first port of arrival, foreign vessels would find it in their best interests to inform Canberra of their arrival in Australian waters and their departures therefrom.

2. *Alongside:* In addition to the emergency numbers listed (Police/Ambulance/Fire), there is a State Emergency Service responsible for major emergencies. In Devonport the Harbour Master is the local co-ordinator, but the service can be contacted direct on Burnie 31-3160 or 31-4144. The service is manned 24 hours a day.

AIRPORT: Devonport (Pardoe) Airport is situated approximately 8 km. from the port with approximately 6 flights per day each way to/from Melbourne (the services are reduced on Sundays). There are also intra-island services. Facilities at the airport are being increased and an increase in the intake of flights should follow.

TIME: See "General" before first port.

TELEPHONES: Available each berth.

SERVICES: Shipwrights and carpenters available at 24 hours notice. Underwater diving services available.

BANKS: There are no American or European banks in the area, although all the Australian banks are usually affiliated to one or other of the major banking houses. There has been a Commission Report (the Campbell Report), submitted to Federal Parliament recommending that foreign banks be allowed to trade in Australia, but as yet, the report has not been acted upon.

The normal method of credit card usage is by Bankcard, issued by the Australian banks. These can be obtained outside Australia through the overseas branches of Australian banks, particularly those situated in London. Visa, American Express and Diners Club cards are also accepted by certain banks and establishments. Access usage is no longer permitted.

STORING: Vessels are normally stored by truck and not barge. On all berths, except No. 2 West, trucks are able to proceed alongside a vessel. At No. 2 West, trucks can approach within about 30 metres. The same applies to fork lift trucks. The ship's Agents are normally responsible for arranging labour for storing.

SHORE LEAVE: Once Customs and Immigration requirements have been met, there are no restrictions upon crews except those imposed by the Master and that they must have rejoined their ship by sailing time. For non-English speaking crews, there is a telephone interpreter service in the following languages: Chinese, Greek, Croatian, Serbian, Italian, Spanish, Polish and Vietnamese.

GARBAGE DISPOSAL: Port collects ships garbage, $150 per service. Bins are provided for onboard ship and alongside.

WASTE OIL DISPOSAL: Newmans Pumping Service – Burnie. Tel: (004) 314766. Collection possible at any berth, rates and conditions obtainable on application.

SEAMAN'S CLUBS: No seaman's club in operation at Devonport.

CURRENCY: Australian Dollar.

GENERAL: *Ballast:* Discharge of ballast water and sediment from ships as per Commonwealth Department of Primary Industry and Energy AQIS Notice No. 90/1.

DEVELOPMENTS: Berth No. 2/3 East is presently being developed as a cargo handling area dedicated to Coastal Expressline. Completion date is April 1996.

AUTHORITY: Port of Devonport Authority, 48 Formby Road, Devonport, 7310 Tasmania. Postal Address: P.O.Box 478, Devonport, 7310 Tasmania, Australia. *Tel:* (004) 249011. *FAX:* (004) 246418. *Contact:* R.J. Barnard, General Manager. Captain R.J. Thompson, Harbour Master.

AGENT: Patrick Sleigh Shipping Agencies Pty.Ltd., 85 Don Road (P.O.Box 606), Devonport, TAS 7310, Australia. Tel: (004) 243311. Telex: 59109. Fax: (004) 242511. Cables: Seagram 7DPATSLE.

EDEN (Twofold Bay), N.S.W.: 37.04 S. 149.55 E. (See Plan)

PILOTAGE: Compulsory, boarding ground is 1.5 miles East of Lookout Point Lighthouse (position Lat. 37° 04.5′ S., Long. 149° 56.5′ E.).

APPROACHES: Entrance depth into Twofold Bay is 36 m. Bottom sand. Tidal data: Higher HW 1.3 m., Lower HW 1.1 m.

MAX. SIZE: Woodchip Berth can accommodate vessels up to 50,000 g.r.t.

VHF: Channels 16, 12, 72 and 8 available.

TUGS: 1 tug of approximately 45 tonne bollard pull. 3×12 m. work boats.

BERTHING:

Woodchip Loading Berth: "T" Head jetty with centre loading point located at Mungaroo Point. Berth consists of a pier, extending from the shore with 5 dolphins and 5 mooring buoys. Berth can accommodate vessels up to 50,000 g.r.t. Loading rate 700 t.p.h. Depth alongside 12.5 m.

Breakwater Wharf: Situated on Eastern side of Snug Cove inside breakwater. Fendered concrete wharf 105 m. long. Depth at inner end 3.0 m. mid-point 6.0 m. and outer end 8.3 m.

Multipurpose Jetty: Situated in the centre of Snug Cove, concrete decked steel pile jetty 200 m. long. Depth at outer end 7.0 m., which extends for 100 m. inshore.

Mooring Jetty: Situated at the Western end of Snug Cove, concrete decked steel pile jetty 150 m. long, used only for fishing vessels.

Private Jetty (H. J. Heinz): Situated at the cannery at Cattle Bay. Length 145 m. Depth at outer end 5.2 m.

STEVEDORES: By arrangement.

TANKERS: Tankers moor to buoys South of the breakwater and discharge through a submarine pipeline to the shore. Max. length of vessel 180 m. Max. draft 10.3 m.

FRESH WATER: Available at Breakwater Wharf and Multipurpose Jetty.

FUEL: Distillate and diesel fuel available.

REPAIRS: Slipways, and repair facilities for fishing craft only available. Minor repairs can be effected.

DRY DOCKS: None.

AIRPORT: Merimbula, 17.7 km., with daily flights to Sydney and Melbourne.

HOLIDAYS: See "Sydney".

GENERAL: *Access:* By road only to berths.

Navigation Information: Australian Pilot Vol. II, Sailing Directions N.S.W. Coast (10th Edition). Charts: AUS 806, AUS 191.

Customs: Proclaimed First Port of Entry, Customs Tel. (064) 961667. Fax: (064) 963181. Documents as for Port Kembla.

AUTHORITY: Office of Marine Safety and Ports Strategy, GPO Box 32, Sydney, NSW 2001, Australia. *Tel:* (02) 364 2233. *FAX:* (02) 364 2033.

Port of Eden, Pilot Station, Eden, NSW 2551. *Tel:* (064) 961719. *FAX:* (064) 963024. *Contact:* Captain M. Saunders, Harbour Master.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Sydney.

ESPERANCE, W.A.: 33.52 S. 121.53 E. (See Plan)

DOCUMENTS: The following documents should be available for inspection:

Ship's Papers, including the following Certificates:
- *(a)* Register.
- *(b)* Load Line.
- *(c)* Safety Equipment.
- *(d)* Safety Radio.
- *(e)* Safety Construction.
- *(f)* Australian Light Dues Receipt.
- *(g)* Articles of Agreement and Account of the Crew (or equivalent).
- *(h)* Western Australian "Port Bill" – Tonnage Dues Receipt.

Valid Derat or Exemption Certificate.
Crew's Identity Documents.
International Vaccination Certificates of all persons aboard.

PILOTAGE: Pilotage is compulsory except where Exemption Certificates are held. Radio "Harbour Master – Esperance" 48 hours and 24 hours before arrival. VHF Channel 16 – pilot boat and base set. Base set not manned continuously but pilot boat may be contacted 1 hour before arrival. Pilot boat painted white with black rubbing band and white centre house. Word "Pilot" painted on both sides of house. Pilot boards 1.5 miles N.E. of Gull Island. Pilot ladder and ancillary equipment must comply with international regulations. Lee to be provided against swell.

It is more usual for vessels to approach from the Westward. In this case use may be made of either West or Causeway Channels. Approaching from the Eastward is not recommended.

ANCHORAGE: Vessels proceeding to anchorage should anchor in an E.N.E. direction from the Eastern extreme of the breakwater. Good holding is found in depths ranging from 14.5 m. – 27.5 m. However, plenty of cable should be veered and at least 6 shackles is recommended. In the most boisterous conditions vessels have held well with from 6 to 8 shackles out. However, the vessel should always be watched. A pilot ladder and not accommodation ladder is recommended for vessels at anchor due to the swell conditions which normally prevail at the anchorage.

RESTRICTIONS: The port operates throughout 24 hours.

MAX. SIZE: Max. departure displacement 70,000 tons.

PRATIQUE: A Health Message is required at the First Port of Entry from overseas. This is to be despatched within the period 12 hours and 24 hours prior arrival at the First Port of Entry, and to advise the following information:

Name of vessel, and ETA.
Last port of call.
Date of departure.
Number of crew on board.
Number of passengers on board (if any).
Confirmation that all on board have valid vaccinations and details of any sickness.

RADIO: Perth Radio, call sign VIP (continuous).

Port VHF limited to Channels 6, 9, 12, 16 and 67. Call sign "Esperance Harbour", range 70 miles.

TUGS: One tug with 30 tonne bollard pull will be used. A second tug will be delivered in March 1996.

BERTHING: The Inner Harbour consists of one land-backed berth of 244 m. (No. 1). A second berth of 213 m. in length adjoining the first is to the S.E. (No. 2). The depth in the approach Channel, manoeuvring area and alongside is 12.8 m. Maximum draft permitted is 11.5 m., pending maintenance dredging. On occasions it may be possible to exceed this draft but reference must be made to the Harbour Master before so doing, who may at his discretion permit an increase dependent on tide and prevailing weather conditions.

At all berths shore coir and/or nylon springs may be used to supplement ships moorings.

CARGO HANDLING FACILITIES: Inner Harbour berths, one link belt bulk loader on each berth, for grain at No. 1 Berth and minerals at No. 2 Berth. Rates achieved for commodities – grain 1,000 t.p.h., minerals 600 t.p.h. – 2,000 t.p.h., phosphate and sulphur 100 t.p.h. per ship's grab.

Mobile Cranes: P. & H. Omega 20, 18 tonnes capacity and Cranvel 8 tonnes capacity.

Permanent sheep yards can be erected at No. 1 Berth with holding capacity of 11,500 head. Races and loading ramps available for both sheep and cattle.

STEVEDORES: Working hours: 0800 – 1700 hrs., 1800 – 2400 hrs., 0000 – 0700 hrs. ETA to Agent by 1600 hrs. previous day for labour requirements Tuesday to Friday. For weekend requirements ETA to Agent by 1600 hrs. on Thursday. For Monday labour ETA to Agent by 1600 hrs. Friday.

MEDICAL: Advance notice not required. Normal facilities and hospitalisation available.

TANKERS: Tankers berth at No. 2 Berth, Inner Harbour.

Tanker discharge line 14 in. reduced to 8 in. at discharge manifold. Average discharge rate 800 t.p.h.

DENSITY: 1027.

FRESH WATER: Available at all berths; one hose 40 t.p.h., two hoses 70 t.p.h. charge, $1.30 per kilolitre.

FUEL: Available by road tanker only. Advise Agent of grade and quantity at least one week before arrival.

CONSULS: Nearest at Fremantle.

REPAIRS: Welding, rewinds, under-water inspections. Large structural repairs not possible.

DRY DOCKS: None.

SURVEYORS:

(1) Harbour Master acts as Cargo Inspector and Australian Maritime Safety Authority Surveyor.

(2) Harbour Master represents Lloyd's Register on request.

OPENING/CLOSING HATCHES: Preferably handled by crew or as per charter party.

GANGWAY/DECK WATCHMEN: Shore watchman is supplied at entrance to Tanker Berth in the case of tankers only. Shore watchmen are available if requested by vessel. It is more normal for ship to provide gangway watchmen from crew. Irrespective a gangway watchman must be on duty at all times at any berth.

REPATRIATION: Facilities exist for repatriation of crews.

AIRPORT: Feeder airline services connect with Perth and international flights. 13 flights per week in either direction. Airport is 25 km. from harbour area.

TIME: See "General" before first port.

POLICE/AMBULANCE/FIRE: Police 711900; Ambulance 000; Fire 713000.

EMERGENCY CO-ORDINATION CENTRE: Contact Port Authority.

TELEPHONES: Available all berths.

BANKS: Commonwealth Banking Corporation transacts business with all American and European banks. Postal address – P.O.Box 486, Esperance, 6450.

STORING: See "Prelims".

(1) By truck.

(2) Storing can be completed during loading or discharging.

(3) Trucks can unload at ship's side.

(4) Fork lifts can be operated.

(5) Normal Customs procedures apply.

(6) Storing usually completed by ship's crew although other labour may be used.

SHIP SUPPLY SERVICE: Contact "Sealanes, Fremantle".

In the case of emergencies, arrangements have been made to fly in a helicopter on charter or on less urgent cases make use of the locally based tug.

SHORE LEAVE: Crew allowed ashore provided Immigration Act complied with in relation to Identification Cards.

GARBAGE DISPOSAL: Garbage services are provided – drums are placed on board the ship on arrival and are collected daily. Tel: (090) 712 111. Charges per 24 hour period or part of: A$110.00-244.00, depending on number of crew.

WASTE OIL DISPOSAL: Road tanker service available from local contractor J.T. O'Brien Sewerage Disposal. Tel: (090) 712 151 for costs and general information.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar.

IDENTIFICATION CARDS: See "Melbourne".

DELAYS: Not normally encountered.

AUTHORITY: Esperance Port Authority, P.O.Box 35, Esperance, W.A. 6450. *Tel:* (090) 71 2111. *FAX:* (090) 711312. *Cables:* 6 EHMESP. *Contact:* C.A. Stewart, General Manager. After hours (090) 765039. Captain I.R. Harrod, Harbour Master. *Tel :* (090) 712601.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Fremantle.

EXMOUTH, W.A.: 22.20 S. 114.10 E. (See Plan)

SHIPMASTER'S REPORT: October 1984 (Updated 1996).

DOCUMENTS:

2 copies Crew List, 2 on Form M.S. 11.

1 copy Form 42A, Stores List (Ship's Bond).

1 copy Form 5. Personal Effects Declaration.

2 copies Form C & E 886. Dates and time of Departure from Overseas Ports of Loading.

*2 copies Form 0360. Health Report. 1 copy retained by Master.

Form 40. Application for Clearance.

Form QA3. Quarantine Notice and Declaration. If animals on board as cargo.

Form QA4. Quarantine Notice.

Form QA5. Shipmaster's Bond (Pink, Yellow). If ship's pets on board.

Forms in respect of Colonial Light Dues (if applicable).

*Forms obtained from Customs Boarding Officer on arrival.

Customs Officials, etc. board at berth.

PILOTAGE: Pilotage is not compulsory. Pilot boards 1 mile N.E. of jetty, from the line launch.

ANCHORAGES: 1.5 miles N.E. of jetty.

RESTRICTIONS: Berthing/sailing during daylight only. Berthing carried out at slack water. Berthing at Point Murat Pier is under the command of the Australian Deputy Commander, Royal Australian Navy at Exmouth and all enquiries should be directed to him.

HEALTH: See "General" before first port.

VHF: Port VHF system is as such non existent and consists of handheld portable sets of very limited range. However, the Naval Communication Station can be contacted on VHF Channel 16, call sign "Exmouth Control", 24 hours a day.

BERTHING: Straightforward approach from sea on recommended track to Learmonth. Reasonably deep water and no navigational hazards in vicinity of track.

Berth is a 'T' head jetty with a face 48.75 m. in length with mooring and breasting dolphins. Distance between outer dolphins is 320 m. Wharf decking is 6.1 m. above datum with depth alongside 12.0 m.

Berthing Operations: Berthing is usually starboard side to. Jetty is approached with bow slightly canted into berth and when approx. 100 m. off jetty, port anchor is let go to 1 shackle on deck and anchor dredged into berth. Forward slipline is sent away as soon as possible by mooring boat and when close enough, other lines sent by heaving line. It is essential to get either breastlines or springs ashore as soon as possible in order to hold vessel in position.

It may be necessary, once vessel is held alongside berth to change some of the moorings, as it was on this occasion. Final moorings as follows:

Forward:

1 Slip line (effectively 2 headlines), and 1 Head line.

2 Breast lines (from starboard shoulder to bollard on inshore side of jetty).

2 Springs.

In addition port anchor on bottom, 1 shackle on deck.

Aft:

1 Stern line-slip line (effectively 2 stern lines) and 1 Stern line.

2 Springs (from poop to North end of dolphin).

2 Breast lines (from aft maindeck to bollard on inshore side of dolphin).

A number of points arose from the mooring/unmooring operations:

Firstly, I am of the opinion that the anchor should be dropped further from the jetty, in order to assist the unmooring due to absence of tugs. This would be no problem if an offshore wind could be guaranteed, but the wind is invariably onshore. Secondly, mooring gangs are slow in getting ropes to their destination which proved to be the biggest hazard.

Care *must* be taken when mooring to ensure that the final ropes aft (in this case the springs) are on separate winches in order to clear the propeller as soon as possible – any delay when unmooring on an ebb tide could result in vessel drifting onto the aft isolated dolphin. The ideal time to unmoor would be on a flood tide and using the anchor to warp clear of the jetty. Unfortunately, things at sea are rarely done under ideal conditions, hence my comment regarding letting go the anchor sooner.

The mooring points on the jetty are themselves far from ideal considering the strength of the ebb stream which can be compounded by a strong offshore breeze. Breast lines end up as very short, almost vertical leads, especially when light. In this case the vessel was partially ballasted prior to arrival, which somewhat alleviated this problem.

However, having made all the bad points about the berth, I must add that the shore staff were very co-operative and a fast discharge is normal.

Also see "Restrictions" and "Plan".

DISCHARGING: 1 line only. Permanent line on jetty connected to ship's manifold amidships with hoses. Shore line 300 mm.×1 km. Max. back pressure 150 p.s.i. High rate of discharge (up to 1,200 cu.m./hr. due empty shore tanks).

No water clearance required after discharge as line rests in Gas Oil.

Grades: As far as can be ascertained only Gas Oil delivered to Exmouth.

BALLAST: No tank cleaning or dirty ballast facilities.

DENSITY: 1025.

FRESH WATER: Very limited quantities available in an emergency.

FUEL: Not available.

REPAIRS: No facilities.

GARBAGE DISPOSAL: No facilities.

GENERAL: No contact with receivers (U.S. Navy). Liaison is with a Royal Australian Navy Officer on secondment to U.S. Navy.

Immobilisation of Engines: Not recommended due to strength of current and poor mooring facilities.

Stores, etc.: No laundry facilities. Very limited quantities of bread, milk, etc., available from local shops. Any large amounts of stores require to be ordered approx. 3 weeks in advance.

AUTHORITY: Naval Communications Station – Harold E. Holt, P.O.Box 125, Exmouth, W.A. 6707. *Tel:* (099) 49-3320 *FAX:* (099) 49-1688. *Contact:* Commanding Officer.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Fremantle.

FREMANTLE, W.A.: 32.03 S. 115.44 E. (See Plan)

(A) FREMANTLE
(B) KWINANA – Alcoa of Australia Ltd.
(C) KWINAWA – BP Oil.

(A) FREMANTLE

PORT LIMITS: *Port Limits and Area of Jurisdiction:* The regulations of the Port of Fremantle apply to all waters within the port limits. The port limits are detailed in the Fremantle Port Authority Act and shown on charts relevant to the port. The outer boundaries of the Port of Fremantle are shown in the Plan Section.

The Port of Fremantle comprises the Inner Harbour and Outer Harbour. The Outer Harbour includes all waters of Gage Roads and Cockburn Sound (often referred to as Kwinana).

DOCUMENTS: *Documents required on Entry:*

2 copies	Form M&S 11	List of Crew.
3 copies	Form M&S 11	Attachment sheet.
2 copies	Form 42A	Stores List.
	Form 5	Articles owned or in possession of Master, Officers or crew.
1 copy	Form 5AA	If there is a shop on board.
2 copies	Form B921	Green Loading Ports List.
1 copy	Form QA3	Declaration of animals carried as cargo, only if on board.
1 copy	Form QA4	Declaration of ship's pets.
1 copy	Form QA5	Shipmaster's Bond to cover ship's pets.
2 copies	Form AQ360	Health Report.
	Form M302	One per crew member. With reference to Seaman's Identification Cards, a passport size photograph of the seaman is sufficient. Seamen in possession of some national travel documents are no longer required to have an Identification Card Form M302. Manifest of Passenger, if applicable.

Of the above, Form 42A and Form 5 need only be completed at first port of call in Australia. Individual passenger cards are utilised. Agents require 7 copies of Manifest of Cargo on board, and at least 1 set of copies of Bills of Lading. These are normally received by airfreight or airmail direct from Agents at loading port outside Australia, therefore it is not necessary for Masters to be in possession of either Manifest of Cargo onboard or appropriate copies of Bills of Lading.

Documents to be Available for Inspection: The following certificates and documents should be available for inspection on arrival:

(1) Tonnage Certificate.
(2) Register showing vessel's name, port of registry, gross and nett tonnages and Owner.
(3) Load Line Certificate, which must be current.
(4) Safety Radio Certificate.
(5) Safety Equipment Certificate.
(6) Light Dues Receipt.
(7) Ship's Articles.
(8) Clearance from previous port.
(9) Register of Cargo Gear/Cargo Gear Certificates/Marine Orders 32 refer.
(10) Safety Construction Certificate.
(11) Passenger Safety Certificate.
(12) Ship's Log.
(13) Valid Derat or Exemption Certificate.
(14) Oil Record Book.
(15) Crew Travel documents.
(16) International Vaccination Certificates of all personnel.
(17) International Oil Pollution Prevention Certificate.

APPROACHES: All vessels making to enter Port of Fremantle must make their approaches passing to the North of Rottnest Island.

Unless constrained by draft and compelled to take a Pilot at the outer boarding ground, all inward vessels may proceed to Gage Roads, either to anchor or embark a Pilot at the inner boarding ground.

A deep water channel S.E. of Fairway/Landfall Buoy and distinguished initially by Buckland Hill directional PEL light (Position Lat. 32° 01.105' S., Long. 115° 45.566' E.) provides a depth of 15.2 m. in the white sector into Gage Roads, the channel being marked by 5 buoys.

The bank between the 10.0 m. contour and the Deep Water Channel provides a minimum depth of 10.6 m. in the white sector of Woodman Lt. (Position Lat. 32° 07.92' S., Long. 115° 46.6' E.), but is subject to large swells after Westerly winds. The red/white blend of Woodman Lt. clears the 10.0 m. contour on this bank.

A least depth of 13.1 m. in the green sector of Woodman Lt., and close to the East of deep water channel, is available for those vessels which do not required the deep water channel on departure but who may be affected by swell to the West of the deep water channel.

Relevant Charts:

AUS 112	Approaches to Fremantle.
AUS 113	Port of Fremantle.
AUS 117	Gage Roads and Cockburn Sound.
AUS 754	Lancelin to Pt. Peron.

PILOTAGE: Pilotage is compulsory in the Port of Fremantle, except for ships not exceeding 150 g.r.t., and for ships, the Masters of which hold operative Pilot Exemption Certificates. There are 2 pilot boarding grounds: the outer boarding ground which is situated 3.5 nautical miles N.E. of Bathurst Point, Rottnest Is., and the compulsory pilot boarding ground in Gage Roads to the Westward of Hall Bank Buoy, which is approximately 2 miles from the entrance to the Inner Harbour.

Note: Pilotage is compulsory from the Outer Boarding Ground for ships drawing 11.0 m. or more.

It is necessary for all vessels to give 48 hours and 24 hours notice by radio telegraphy of the expected time of arrival at Fairway Buoy, followed by a third notice, confirming or amending the previous notice, 2 hours ahead of the expected arrival time in that locality.

Ships requiring a Pilot at the non-compulsory ground must include this requirement in their 24 hours Notice of Arrival.

Two pilot vessels available, both painted international orange. Pilots may be contacted by VHF Channel 12.

Usually pilot ladder is required on the port side for vessels inward and starboard side for vessels outward, even when the wind is in the East, unless Easterly wind is very strong as there is nearly always a West to N.W. swell. If in doubt call Port Signal Station on VHF Channel 12.

Pilot does not board vessel at anchor.

Pilot ladder to be 2 m. above sea level with manropes slightly shorter. Boat-rope not required. The ladder should be clean and conform with Regulation 17 of SOLAS. The vessel should be making 3 – 4 knots.

SOLAS Regulations are strictly adhered to i.e. Single length of ladder, non-slip surface (Aluminium NOT acceptable), 12 in. spacing between steps, no more than 2 replacement steps, all ropes on ladder and manropes to be manila and not covered (nylon and polypropelene not acceptable), Regulation 17(a) part (VII) and (VIII) very important, a responsible officer to standby and not a sailor.

Pilots preference is a ladder.

ANCHORAGES: The following anchorages are available for vessels to hold at prior to moving to their berth:

(a) Vessels with a draft of 11.0 m. or greater awaiting a Pilot should anchor 2 miles to the West of Fairway/Landfall Buoy. Holding ground is fine sand and coral.
(b) Vessels of less than 11.0 m. draft, expecting a Pilot on the same day of arrival, may anchor in the vicinity of Hall Bank Beacon in Gage Roads. Holding ground is fine sand and shell.
(c) Vessels of less than 11.0 m. draft, not expecting a Pilot on the same day of arrival, should anchor in the Western area of Gage Roads. Holding ground is fine sand and coral.
(d) Vessels of less than 11.0 m. draft may anchor South of a line running between S.Mole (32° 03.4' S., 115° 43.9' E.) and Success/Parmelia Channel with permission of Harbour Master. Holding ground is sand and mud.

Vessels at anchor are permitted to operate their own boats by suitable arrangement with the Customs. A ferry service will only be provided through arrangement with the Agent.

Quarantine Anchorage: Vessels which have not been granted Pratique must not pass South of a line between N.Mole (32° 03.1' S., 115° 43.4' E.) and Mewstone (32° 05' S., 115° 40' E.).

Prohibited Anchorages: Chart AUS 112:

1. Between Fairway/Landfall Buoy and No. 1 Deep Water Channel.
2. Deep Water Channel.
3. Between a line drawn through S. and N.Mole lights and a line running 263°T from S.Mole to a line running 349° parallel to the Western Beacons of Success Channel.

RESTRICTIONS: *Inner Harbour:* Approach channel from 600 m. seaward of North Mole dredged to 13.4 m., thence 13.2 m. to East end of Berth No. 2. Basin 13.0 m. and 11.0 m.

Outer Harbour: Main approach channels dredged to minimum of 14.7 m. (48.25 ft.) below datum – secondary channels leading to Alumina Refinery Jetty and Steelworks Jetties dredged to minimum of 38 ft. (11.6 m.) below datum.

Vessels in Ballast: For safe navigation, the ship's propellor should be immersed, the bow deep enough for adequate vision from the bridge and draft suitable for the vessel size, in order to minimise leeway (See table below). Vessels which cannot meet the criteria for minimum draft may be delayed if wind conditions are unfavourable.

Table of Recommended Minimum Drafts:

d.w.t.	*Forward Draft*	*Aft Draft*
Up to 10,000	2.0	No more than 0.6 m.
10,000 – 20,000	2.0 – 2.5	of the propeller
20,000 – 30,000	2.5 – 3.0	to be exposed.
30,000 – 50,000	3.0 – 5.0	6.5
50,000 – 100,000	5.0 – 7.0	6.5 – 7.5
100,000 – 150,000	7.0 – 8.0	7.5 – 8.5

Navigation Restrictions: Tankers over 250 m. in length and over 40 m. beam in ballast condition are not navigated in Success/Parmelia Channel during the hours of darkness. Tankers over 40 m. beam loaded using Success/Parmelia Channel are subject to draft limitation if the hull is a box section type.

Gas Carriers: Gas carriers will not be berthed in winds over 25 knots at Steelworks Jetty No. 2.

Depths/UKC:

Channel	*Max. Depth* (m.)	*Min. Width* (m.)	*UKC* (m.)
Inner Harbour	13.2		1.0
Deep Water	15.2		15%
Success/Parmelia	14.7	152.4	*13/14%
Woodmans/Jervoise/Medina	8.5	122/152	10%
Stirling	11.7	122.0	1.0
Calista	11.6	152.4	1.0

* 13% Summer (November to April), 14% Winter (May to October).

Deep draft tankers may transit at a reduced UKC when bound to or from BP Refinery under a controlled program based on wave and tide analysis.

MAX. SIZE: Draft limited by minimum under-keel clearance (See "Restrictions").

Outer Harbour: Up to 41 ft. 6 in. (12.65 m.) draft.

Inner Harbour: At Berths No. 4, 5, 6, 7, 8 and 9, draft of 41 ft. (12.5 m.) is available; at all other berths up to 34 ft. 6 in. (10.5 m.) draft but with suitable tide and by special permission of Harbour Master up to 35 ft. (10.6 m.) draft.

Tankers: The maximum ship draft acceptable at the BP Oil Refinery Jetty at Kwinana is 41 ft. 6 in., this being the maximum draft permitted in the approach channels. Also see Section (C).

HEALTH: All overseas vessels are subject to quarantine and may only enter Australia through a declared first port of entry. They continue to be subject to quarantine until Pratique (Health Clearance) has been granted by a Quarantine Officer. If examinations and inspections are satisfactory, the vessel is granted Pratique for all Australian ports. 24 hours Quarantine Clearance of overseas vessels is available. Treatment of crew members for illness other than quarantineable diseases is arranged by private practitioners through ship's Agent.

Radio Pratique: Concession of Radio Pratique is available to all vessels except those which carry livestock. Radio Pratique may be applied for by livestock vessels, however, they will be boarded and inspected by a Quarantine Officer before the vessel is allowed to berth.

(a) 1. The Master or Agent must make a request (Form Q2) to Department of Health within 12-24 hours prior to the arrival of the vessel, answering all the questions on the form.

2. If answers are satisfactory, Radio Pratique will be granted for Fremantle from a specified time and date enabling the vessel to proceed to the berth without displaying the "Q" flag signal.

3. A Quarantine Officer will board the vessel at the berth. If the answers given on the Declaration of Health (Q360) are satifactory, Pratique may then be granted for all Australian ports.

(b) Nothwithstanding that Pratique for all ports may have been granted, the Master will still be responsible for reporting any case of infectious disease, which may subsequently occur whilst the vessel is in Australian waters.

Should a case of infectious disease (not being a quarantineable disease) occur onboard whilst the vessel is at sea in Australian waters, the Master will be required to advise by radio the Quarantine Officer for the State in which the next port is situated, who will arange to see the case on arrival.

The Master will not be required to fill in a Supplementary Health form and the vessel will be permitted to proceed directly to berth without flying "Q" flag.

Should a case of suspected quarantineable disease occur onboard whilst at sea in Australian waters, the Master is required to radio details to the Quarantine Officer for the State in which the next port is situated and await instructions. The Quarantine Officer will decide acccording to circumstances whether to inspect the vessel outside the Quarantine Line or permit it to proceed to berth, and he will advise the Master.

(c) Should it come to notice in any particular case that Radio Pratique has been granted as a result of a wireless message sent in accordance with sub-paragraph (a), whereas in fact the wireless message contains false information, the matter will be investigated and reported to the Director General of Health who will decide whether Radio Pratique will be denied in future to the vessel on which the Master holds responsibility.

Also see "General – Health" before first port.

RADIO: VIP Perth.

Notice of Arrival: The Fremantle Port Authority regulations require that all vessels give the following notification of their expected arrival:

(a) 48 hours notice of arrival at Fairway Buoy indicating:
  (i) Maximum draft.
  (ii) Details of hazardous cargo.
  (iii) Any requirement for Pilot embarkation at the Outer Boarding Ground if the vessel's draft is less than 11.0 m.
(b) 24 hours notice of arrival at Pilot Boarding Ground.
(c) 2 hours notice of arrival by VHF.

Note: The above notifications of ETA are regulatory requirements. However, any variance from the latest advised time should be notified to the Harbour Master as soon as possible.

All messages of notification of arrival should be addressed to the Harbour Master and sent directly to the Port Authority Signal Station.

Failure to provide the correct Notice of Arrival may cause a vessel to be delayed in berthing.

Also see "VHF".

VHF: The Port of Fremantle maintains a signal station on top of the Port Authority Building (32° 03.20′ S., 115° 44.23′ E.) which is manned on a 24 hour basis.

The signal station is a limited coast radio station, and is therefore not able to handle public correspondence.

The call sign of the signal station is "Port of Fremantle".

Orders concerning shipping movements, allocation of berths and related matters are passed to ships, Pilots, tugs and mooring staff through the signal station. In addition to the recording of shipping movements, the Port Control Officer on duty deals with calls of an urgent nature involving fire, accident, mechanical and electrical breakdown, boats and/or ships in distress, the need for medical assistance and navigation light failure.

Vessels anchoring on arrival should establish communication at 2 hours notice with "Port of Fremantle" and listen on Channel 12.

All communications with the signal station whether by VHF or telephone are recorded.

VHF Allocation:

Distress and Calling:

Channel 16: All vessels are to monitor this frequency when approaching the port until they are advised to keep a watch on Channel 12.
Outward vessels are to revert to Channel 16 after passing the Fairway Buoy.

Working Channel:

Channel 12: All vessels navigating within the port limits or at an anchorage within the port must maintain a continuous listening watch on this frequency.
In addition to the signal station maintaining a radio watch on Channel 12, the Port Authority's Pilot vessels also keep watch on this channel.

Port User Channels:

Channel 6: Tug Operations – Inner Harbour.
Channel 10: Alternate Tug Operations – Inner Harbour.
Channel 11: Alternate Port Operations Working Channel.
Channel 68: Alternate Tug Operations – Outer Harbour.
Channel 13: Tug Operations – Outer Harbour.
Channel 69: Ship to ship.
Channel 14: HMAS Stirling – working channel.

Fax, Telex and Telephone:

Messages of notification of arrival may be sent directly to the Port Authority signal station by fax or telex.

Facsimile: 61 9 430 3414
Telex: FREHM AA 95919
Telephone: 430 3400
Cable: 6 FFREHM

Coast Radio Station:

All waters of the Port of Fremantle are within the VHF coverage of Perth Radio (VIP).

Public correspondence to a shore telephone may be made directly on either Channel 23, 26 or 16.

Maritime safety information messages, including coastal weather forecasts and navigation warnings, are transmitted on Channel 67 at the following times (Western Standard Time: i.e. GMT plus 8).

0718 1318 1918

TUGS: *Inner Harbour:* 3 available up to 4,800 h.p., join vessel in Gage Roads – extra charge if tug's line is used.

Outer Harbour: 2 tugs are available. Tugs join ships approx. 2.5 miles from berths – extra charge if tug's line is used.

Emergency Response Vessel: The Port Authority maintains a fully equipped response vessel equipped as a fire tender.

BERTHING: Inner Harbour: *Victoria Quay:*

Berth	*Length* (m.)	*Depth* (m.)	*Remarks*
A	201		No longer available.
B	153		No longer available.
C	198		No longer available.
D	176	11.0	General cargo berth.
E	230	11.0	General cargo berth.
F	204	11.0	Passenger Terminal over shed.
G	206	11.0	Function Centre over shed.
H	275	11.0	No shed.

Wharf strengthened for loads up to 145 tonnes.

All cranes have been removed from berths, mobile cranes only, except for Berths F and G, where an electrical crane is available for overhead gangways.

North Quay:

Berth No. 1:
Length 207 m. Depth 11.0 m. Shed 122 m. × 31 m.
General cargo berth, bulk tallow loading.
Discharge of petroleum products by pipeline.
1×200 mm. line, 200 mm. hose for BK and GO.
1×200 mm. line, 150 mm. hose for lube oil.
200 mm. and 300 mm. lines, 150 mm. and 200 mm. hoses for FO and DO.

Coflexit Stena Offshore heavy lift company operation using fixed heavy lift crane is available (hook only). Crane 300 tonnes at 25 m. and 150 tonnes at 32 m.

Berth No. 2:
Length 175 m. Depth 11.0 m.

Berth No. 3:
No longer operational.

Berths No. 4/5:
Length 296 m. Depth 13.0 m. Container terminal.
Served by twin lift portainer crane.
Capacity 70 tonne.
SWL on spreader 28.5 tonne.
Twin lift capacity.
Ro/Ro facilities – ship's quarter/side ramps.

Berths No. 6/7:
Length 336 m. Depth 13.0 m.
Container terminal. Shed 86 m. × 47 m.
Ro/Ro facilities – ship's quarter/side ramps.

Berths 7/8:
Length 371 m. Depth 13.0 m.
Container Terminal. Shed 78 m. × 47 m.
2 portainer cranes.
Ro/Ro facilities – ship's quarter/side ramps.

Berths No. 8/9:
Served by Gottwald mobile crane, capacity 80 tonne, and one container crane, capacity 63 tonne.
SWL on spreader 35 tonne.

Berth No. 10:
Length 187 m.
Depth 11.0 m.
No quay crane.
Bitumen Feedstock and Geelong Fuel can be discharged by 300 mm. line to Shell.

Berths No. 11 and 12:
Total length of wharf at this container terminal facility is 429 m.
No. 11: 196 m.
No. 12: 233 m.
Depth 11.0 m.
10 m. wide, articulated stern ramp (length 19.815 m., width 10.432 m.) at Eastern end. Capacity – main axle of forklift 53 tonne or stacked cargo, 5 tonne per service metre. Wharf decking 4.4 m. above LW.
1×twin lift portainer crane.
Container lifting capacity 48 tonnes.
Heavy lift capacity 61.3 tonnes.
Back-up area 7 ha., access by heavy duty roads.

Note: Operations at Berths No. 11/12 under review as common user berths.

Outer Harbour: Alumina Refinery Jetty (See Section B), length of berth 344 m., depth 38 ft. (11.6 m.).

Steelworks Jetty No. 1, length of berth 195 m., depth 36 ft. (11.0 m.).

Steelworks Jetty No. 2, length of berth 268 m., depth 40 ft. (12.2 m.).

Oil Refinery Jetty, see "Tankers" below.

Bulk Cargo Jetty, length of berth 480 m., depth 44 ft. (13.4 m.).

A bulk grain jetty of 955 ft. (291 m.) and depth 55 ft. (16.8 m.) serves Co-operative Bulk Handling Ltd's grain terminal.

The jetty is equipped with conveyors and ship loaders capable of handling bulk grain at the rate of 5,000 t.p.h. It will eventually be able to handle vessels up to 100,000 d.w.t. Max. sailing draft 41 ft. 06 in.

Also see "Bulk Cargo Facilities".

CRANES: 3 'twin lift' portainer cranes, 2 single lift container cranes, quay cranes of 7.5 tonne and 3 tonne capacity, mobile cranes of up to 25 tonne capacity, and 80 tonne Gottwald heavy lift crane. Also see "Berthing".

BULK CARGO FACILITIES: *Alumina Refinery Jetty:* Also see Section B.

To accommodate ships unloading bulk caustic soda and bulk carriers loading refined alumina. Maximum length of vessel 210 m.

Length of berth 326 m.
Depth 11.6 m.
Max. draft 10.97 m.
1 fixed gantry loader.
Outreach from wharf face 17.45 m.
Gross handling rate for alumina 1,200 t.p.h.

Steelworks Jetty No. 1: (Not currently in use).
Originally built for ships loading.
Length of berth 195 m.
Depth 11.0 m.

Steelworks Jetty No. 2:

For bulk carriers loading and unloading cement clinker slag, sugar, silica/mineral sands, zircon, LP gas, coke, coal, limestone, etc.

Length of berth 268 m.
Depth at berth 12.19 m.
Maximum length of ship 244 m.
Depth 12.19 m.
Max. draft 10.97 m.
1 travelling loading/unloading unit:
Maximum length of traverse 122 m.
Outreach from wharf edge – grabs 20.4 m.; spouts 23 m.

The loading section handles material from a conveyor belt to ship's hold. Unloading section involves fast grab operations between ship's hold and conveyor belt.

Gross handling rate: Loader 2,000 t.p.h. Unloader 750 t.p.h.

Bulk Cargo Jetty:

Two berths to accommodate bulk carriers unloading bulk cargoes. The berth serves the fertiliser works nearby and can be used by other importers by means of direct discharge to motor vehicles from hoppers built into the unloaders, or directly into portable hoppers on the Berth No. 2. Pipeline facilities are available for phosphoric acid, caustic, etc.

Berth No. 1:
Length 259 m.
Depth 13.4 m.
2 travelling unloaders:
Grab capacity 9.5 tonne.
Maximum length of traverse 187 m.
Outreach of grab 25.7 m.
Conveyor belt carries material to shore stockpile.
Capacity 1,000 t.p.h.

Berth No. 2:
Length 221 m.
Depth 13.4 m.
Hopper discharge to trucks.

Kwinana Grain Loading Jetty: One Berth.

To accommodate ships loading bulk grain cargoes. An approach neck 750 m. in length carries the conveyor system to berthing face.

Length 291 m.
Depth 16.8 m.
4 loaders with a combined capacity of 5,000 t.p.h.

STEVEDORES: Shipboard stevedoring by private contractor, usually arranged by ship's Agent. ETA should include particulars of cargo, showing heavy lifts, dangerous or hazardous cargoes, hatch stowage, gangs required, etc.

MEDICAL: Notice not necessary but advisable if treatment required. Full hospital facilities available. Cholera vaccinations essential if ship comes from affected areas. International certificates must be current.

TANKERS: *BP Oil Refinery Jetty:* See Section (C).

DENSITY: Salt 1025, generally at all tides.

FRESH WATER: Available 24 hours a day, delivered by up to 8 hoses each of 50 tonnes/p.h.

Note: Seasonally a water shortage in the Fremantle area may limit the amount of water which can be supplied to ships.

FUEL: Marine fuel (2 grades); Marine diesel. Notice 14 days then 48 hours.

FIRE PRECAUTIONS: Ship's watchman to be on duty. Ship heading out. Fenced off on land. Buoys 50 ft. (15 m.) out from ship marking prohibited area.

CONSULS:

Austria
Belgium
Denmark
Finland
France
Germany
Guatemala
Italy
Japan
Netherlands
Norway
Philippines
Portugal
Sweden
U.S.A.

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: Shiplifters: Jervois Bay 7,520 tonnes; Australia Shipbuilding Industry 2,600 tonnes and Swan Dock 1,100 tonnes.

SURVEYORS: Germanischer Lloyd: C.R. Cox & Associates, c/o Tandon Marine Services, 39 Canning Highway, East Fremantle, W.A. 6158 (P.O.Box 350, Fremantle, W.A. 6160). Tel: (09) 3398222. Fax: (09) 3398023.

GANGWAY/DECK WATCHMAN: Watchman required (Ship's crew).

OPENING/CLOSING HATCHES: By arrangement between ship's Agent and Stevedore.

CERTIFICATES: Health; Derat; Load Line; Ship's Register; Articles. Also see "Melbourne".

CUSTOMS ALLOWANCES: According to local Customs Department.

CARGO GEAR: Strict surveillance of cargo handling gear by Commonwealth Government Dept. of Transport Australia. Also see "Melbourne".

REPATRIATION: Facilities exist for repatriation of crews.

AIRPORT: 35 km. to Perth International Airport. 23 km. to Perth Domestic Airport.

TIME: See "General" before first port.

HOLIDAYS: *Extraordinary Holidays – Port Closed:* Labour Day (1st Monday in March); Good Friday; Anzac Day (25th April); Union Picnic Day (celebrated on the first Tuesday in November); Christmas Day (25th December).

Ordinary Holidays: New Year's Day (1st January); Australia Day (celebrated on a Monday late in January); Easter Monday; State Foundation Day (1st Monday in June); Boxing Day (26th December).

On ordinary holidays waterside labour available to work ships in following categories:

(a) Scheduled passenger ships.
(b) Marine casualties.
(c) Ships that can complete cargo handling operations prior to the next engagement of labour.

POLICE/AMBULANCE/FIRE:
Ambulance – 277 9999, 277 8899 or 000.
Fire – 335 2201, 335 6262 or 000.
Police – 430 5244 or 000.
Port Security – 24 hours.
Rockingham Fire Brigade – 527 1827.

TELEPHONES: Telephones can be supplied to any vessel – installation time plus proportion of annual rental plus cost of calls.

SERVICES: All special services available.

SHIP SUPPLY SERVICES: Stirling Marine Services Pty. Ltd., P.O.Box 892, Fremantle, W.A. 6160. Tel: (09) 3358444. Telex: AA92821 Towboat.

Services: Passenger launches for crew ferries, agents, providores to vessels at anchor in Gage Roads and Cockburn Sound. Stores lighters and fresh water up to 150 tonnes per trip. Draft survey, paint punts, lines running.

Other Operators – Seaborne:
Australian Offshore Services, 111 St. George's Terrace, Perth, W.A. 6000.
Brambles Manford, 191 St. George's Terrace, Perth, W.A.
Finbar International, 42 Magnet Road, Canningvale, WA. 6155.
Tidewater Port Jackson Marine Pty. Ltd., 94a Murray Road, Bicton, W.A. 6157.
Atlas Offshore, c/o TNT Australia Resource Development or Union-Bulkships Pty. Ltd., 17 Henry Street, Fremantle, W.A. 6160.
Western Marine Service Co., 17 Mews Road, Fremantle, W.A. 6160.

Other Operators – Airborne:
Merifield Helicopters Pty. Ltd., 28 Broadway, Nedlands, W.A. 6009.
Mayne Bristow Helicopters Pty. Ltd., Jandakot Airport, Jandakot.
Jayrow Helicopters W.A. Pty. Ltd, 320 Great Eastern Highway, Redcliffe, W.A. 6104.
Vowell Air Services (Helicopters) Pty. Ltd., Hope Road, Jandakot Airport, 6164.
Lloyd Helicopters Pty. Ltd., 64 Canning Highway, Victoria Park, W.A. 6100.
Westcoast Helicopters Pty. Ltd, P.O.Box 108, Belmont, W.A. 6104.

IDENTIFICATION CARDS: See "Melbourne".

GARBAGE DISPOSAL: It is a breach of the Quarantine Act and F.P.A. regulations to discharge garbage, etc. into F.P.A. waters. To comply with the Quarantine Act, all food refuse on board ship must be placed in vermin proof receptacles until disposed of either by dumping at sea well away from F.P.A. or other restricted areas, or by placing in the 200L capacity containers provided by the F.P.A. and disposed of by incineration. (Flammable liquids should not be included due to incineration). Contact: Fremantle Port Authority, Tel: (09) 4304911, Fax: (09) 3361391.

WASTE OIL DISPOSAL: Service available using tanker trucks or barges.

Tanker trucks:
Apex Septics, 23A Felspar Road, Welshpool, W.A. 6106. Tel: (09) 4583706. Fax: (09) 4532831.
Cleanaway, Lot 24, Camboon Road, Malaga, W.A. 6062. Tel: (09) 2492244. Fax: (09) 2491033.
Liquid Salvage, 4 Kembla Way, Willetton, W.A. 6155. Tel: (09) 4575955. Fax: (09) 3541240.

Barges:
Stirling Marine Services, 17 Mews Road, Fremantle. Tel: (09) 3353286. Fax: (09) 3353282.
Fremantle Launch Service Pty. Ltd., 2 Doepel Street North, Fremantle. Tel/Fax: (09) 3351686.

Contact the companies direct regarding prices as these are negotiated, also re shore tank capacities.

SEAMAN'S CLUBS: Stella Maris Seafarers Centre, 14 Queen Victoria Street, Fremantle, W.A. 6162. Tel: (09) 3351958, 3356836. Fax: (09) 3356836. Facilities include accommodation, mass, telephone, currency exchange, bar and restaurant, postage facilities, shop, pool, table tennis, book and magazines, TV.

The Flying Angel Club, 76 Queen Victoria Street, Fremantle, W.A. 6160. Tel: (09) 3355000. Fax: (09) 3361690.

CURRENCY: Australian Dollar (A$).

REGULATIONS: Normal port regulations. Special Regulations for tankers berthing at Oil Refinery Jetties.
DEVELOPMENTS: Dredging of Inner Harbour to 13.0 m. completed.

Reconstruction of Berth No. 9 (Inner Harbour) to give 1,180 m. from Berth No. 4 completed.
AUTHORITY: Fremantle Port Authority, 1 Cliff Street, Fremantle, Western Australia 6160, P.O.Box 95, Fremantle, W.A. 6160. *Tel:* (09) 430 4911. After hours (09) 430 4962. *FAX:* (09) 336 1391. *Contact:* Captain E. J. Atkinson, Harbour Master/Shipping Services Manager. Mrs. K. G. Sanderson, General Manager.

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., 1 Port Beach Road, North Fremantle, W.A. 6159, Australia. Tel: (09) 335 6311. Telex: 92434 PATSLE. Fax: (09) 430 6677. Seagram Code: 6 FPATSLE.

(B) KWINANA – Alcoa of Australia Ltd.

The following information was produced by Alcoa of Australia Ltd. Also see Section (A).

ALUMINA LOADING:
BERTHING: Berthing and loading will be facilitated if the vessel arrives with sufficient ballast for navigation requirements and retains as much ballast as possible for as long as possible without delaying the loading.

To aid the Pilot in lining up the vessel at the first hatch to be loaded it is necesary to advise the distance from the centre of the hatch to the front of the bridge. A pilot marker is then placed on the jetty.
Mooring Arrangements and Shifting Ship:

1. It is the vessel's responsibility to provide adequate mooring lines and to tend them properly whilst at the berth. A vessel with under strength or insufficient moorings will be considered unseaworthy. The quality of equipment and supervision shall be such that the ship is able to remain in the berth, in all normal weather conditions, without undue surging backwards and forwards or drifting off the wharf face.
   If, due to drift, it becomes apparent that the loading chute is endangered, loading will cease immediately. Time lost in such an event could be treated as a vessel delay.
2. Normal moorings at Kwinana, would consist of 3 headlines, 3 stern lines, a breastline at each end, a forward and an after spring. Vessels loading more than 25,000 tonnes or loading in 5 or more hatches are required to put out a stern line to the swamped mooring shoreside.
3. As the shiploader is of the fixed type, vessels are loaded by warping them backwards and forwards along the jetty so as to position the various hatches underneath the loading chute. If the ship is to be moved ahead, normally the sternlines and forward spring are slackened, whilst heaving on the headlines and the after spring. To move astern, the process is reversed and the line to the swamped mooring is used.
4. The loader spout must be completely withdrawn and retracted to its "parked" position, and the gangway removed from the vessel's side prior to commencement of warping.
   It is imperative not to commence warping the vessel without visual contact and agreement with shore personnel to proceed.
5. You will be advised 30 minutes before completion of each hold and we request your co-operation in providing your crew for vessel movements as promptly as possible.
6. The arrangement of mooring cells and bollards is such that even when shifting between adjacent hatches the breastlines typically, change their angle by up to 60° relative to the fore and aft line of the ship, thus losing most of their effectiveness. It is usually necessary therefore to relocate the breastlines at each shift by carrying the ends along the wharf from cell to cell. In the case of long shift ship (e.g. from No. 2 to No. 7 hatch) it may also be necessary to move head or sternlines and springs, since they may become unsafe or ineffective through being too short or too long.
7. IMPORTANT – SPRING LINES
   Unless care is exercised by the crew there is a tendency for the slackening spring to fall beneath the fender line and then snag there when being taken up. It can also "hold up" on the ship's side.
   This can create an extremely hazardous situation when it frees and whips up the ship's side and beyond.
   In the event of a line snagging, it is absolutely imperative that no crew member look over the side to check the cause or be in an area that could be subject to the whip of the line when freed (See "Plan"). It is suggested that the possible snagging be checked from the comparative safety of the wing of the bridge and the crew liaise with the Shore Supervisor regarding clearing the snag.
   To minimise the possibility of springs fouling the underside of the dock fenders it is strongly recommended that:
   (i) A messenger line attached to a "D" shackle be used on the slackening spring to keep the spring alongside the ship and above the fender line.
   (ii) The spring should not be slackened excessively.
8. Because of the frequency of shifting, the ship's crew will be on almost continuous standby. No matter how experienced the crew, tiredness may affect their ability and judgement.
   Normal seagoing practice dictates the responsibility of loading to the Chief Officer. At this berth he should be given sufficient support to ensure that he is not unduly fatigued. It will also help if the number of moves between hatches is kept to the minimum compatible with the vessel's strength and design limitations.

Line Priorities: Many ships are not fitted with sufficient self-tensioning or self-stowing mooring winches to be able to work all mooring ropes direct from the winch drums. Where only 2 or 3 such winches are fitted, it is important that they be used to the best advantage. We recommend that the following priorities be observed:

1. Forward
   (a) Two head lines, for warping ship ahead. (May be turned up on windlass warping drums).
   (b) For'd spring – for warping astern.
   (c) Breast line – for holding alongside.
   (d) Third head line, extra breast lines, etc.
2. Aft
   (a) Two stern lines, for warping astern.
   (b) Line to swamped mooring – for warping astern.
   (c) After spring – for warping ahead.
   (d) After breast line – for holding alongside.
   (e) Third stern line, extra breast line, etc.
3. Where a breast line cannot be secured directly to a winch or warping drum, a second breast line should be provided.

Cleanliness/Draft Survey: Prior to loading, the vessel's holds and hatch covers will be inspected by an Independent Surveyor engaged by Alcoa or the Consignor.

This Surveyor will also conduct a Draft Survey in conjunction with the Chief Officer.
Shipping Foreman: Alcoa's Shipping Foreman supervises the loading of the vessel and will liaise with the Chief Officer. Hatch stowages and order of loading should be advised to the Foreman prior to commencement of loading.
Pollution: We are obliged by Fremantle Port Authority Regulations to report any pollution caused by vessels at our berth.

GENERAL:
Jetty Approach: The Alcoa Jetty is located on the East side of Cockburn Sound and is approached from Gage Roads via the Success, Parmelia, Stirling and Calista Channels.

Vessels in ballast and subject to weather and draft limitations may as an alternative use the Woodman, Jervoise and Medina Channels within Cockburn Sound,

Alumina loaders berth on the Northern side of the jetty, port side. Loaded Caustic Tankers berth on the Southern side, starboard side to.

	Max. Draft
Fremantle Approach – Gage Roads	13.10 m.
Cockburn Approach – Parmelia and Success Channels	12.65 m.
Alcoa Kwinana – Jetty Approach	
Northern – Woodman, Jervoise and Medina Channels	8.53 m.
Southern – Sterling & Calista Channels	11.00 m.
Anchorage – Gage Roads on sand	
Cockburn Sound on clay	16.45 m.

Refer Chart AUS.117 for detail.
Facilities, Supervision and Manning: The berth consists of 8 cells, each 18.9 m. in diameter spanning 335.3 m. No. 1 Cell is 152.4 m. from the shore. No. 8 Cell is 487.7 m. from shore.

There is a maximum of 12.2 m. depth of water alongside the jetty and vessels are restricted to a maximum of 11.00 m.

The jetty runs due West from the Plant site. Loading vessels will berth port side to, heading West and discharging vessels berth starboard side to.

The loading berth is fitted with line haul winches, guides, bollards, quick release hooks and cleats to assist in line-handling operations. There is also a heavy line astern to "swamped mooring", to which the ship's line can be attached to assist between hold moves. This heavy line should be let go upon completion of loading to enable Alcoa staff to recover it before Pilot arrives.

All line handling on the jetty is carried out exclusively by Alcoa staff and ship's crew are prohibited from handling lines on the jetty.

A remote controlled gangway is situated on Cell 4 adjacent to the "loader".

The loader operator controls the gangway and will put it in position in response to the call button either from the ship for those wishing to go ashore or at the foot of the gangway for those boarding. Signs indicate location and operation of call device. However, discharging vessels on the South side must provide their own access. A safety net is required under the gangway which must be provided and fitted by the vessel. (Refer Navigation 'Miscellaneous Equipment' Regulations).
Dock Access Restrictions: Due to the construction of the jetty which provides limited access for vehicles, it is necessary to restrict traffic to ensure maximum access for emergency vehicles.

The overall control of movements at the jetty is strictly under the direction and control of the Alcoa Foreman who liaises with Security Staff on personnel and vehicle access.

Directions given by Alcoa shipping and security staff *must* be complied with immediately.

Access to the jetty by personnel and vehicles will be restricted where the access of emergency vehicles or safety is jeopardised.

Access to the dock will be allowed at the discretion of Alcoa supervisory staff whose decision is final.

(a) When the safety of personnel and vehicles is not endangered.
(b) A vehicle is on lawful business providing services to Alcoa or to the vessel, i.e. provisions, laundry, lubricating oils, servicemen and emergency services, etc.
(c) Company vehicles servicing equipment or transferring personnel.
(d) Vehicles delivering baggage, large parcels, carrying persons requiring medical attention or Pilots and Masters to and from the vessel.
(e) No hindrance to emergency vehicles will occur.
(f) When a vehicle does not exceed 15 tonnes all up weight.
(g) At the Master's request.

Vehicles are not to remain on the jetty unattended for any reason, and must complete their business and be removed from the jetty promptly. Alcoa reserves the right to remove vehicles from the jetty without consulting the owner or driver, should the need arise and will accept no responsibility for accidental damage to the vehicle should this occur. Persons proceeding in an unsafe manner on the jetty will be fully responsible for any claims made due to their actions.

No bunkering facilities are available on the dock, however a barge from Fremantle is available for the transfer of fuel oils, subject to weather conditions.

Road tanker delivery of fuel oil is prohibited on the dock.

Water is normally available at 50 tonnes per hour from connections on the dock.

Provisions, laundry and engineering services have access to the vessel from the dock.

The movement of flammable materials over Alcoa property is strictly controlled and permission must be sought from the Transportation Officer before any transfer to or from vessels at the berth.

General Information: The jetty is 17 km. from Fremantle by road with no public transport services readily available.

Alcoa Security Personnel will provide first aid for minor injuries and an ambulance is available at the plant for urgent transferring of patients to hospital, however, normal medical needs will be arranged by the Agent.

There is a telephone in the jetty office. All local calls are free. This telephone also provides the facility for interstate or overseas calls but on a "reversed charges" basis only.

Access to and from the jetty is normally by means of a remote controlled gate and it will be necessary to follow the instructions on the notice boards at the gates to gain entry or exit.

Besides voice communications with the main Security Office there is remote control television surveillance of the whole dock area.

LOADING:

Description of Product: A fine white powder Al_2O_3 - density 0.99 cu.m. (36 cu.ft.) per tonne.

Stowage factor: 1.05 cu.m. per tonne in a bulk carrier.

Transportable Moisture Limit (TML)	12%
Average Moisture Content (this product)	0.40%

Absorbs moisture, not to be loaded in heavy rain. Is chemically inert and will not contaminate or damage other cargo except through dust effect alone. No inherent vice.

Ship Loader – Dimensions, Loading Rate and Limitations: The non-traversable, lifting and slewing loader is located on the fourth cell, 318.2 m. from the shore.

The loader is an open spout feed type with a dust control box fitted on the load chute and is fed by conveyor systems from storage bins ashore.

NOTE: Vessel is required to move under its own power, to enable loader spout positioning over hold. Fullest co-operation of vessel's crew and officers is required to minimise non-loading time.

The loader is capable of a maximum of 1,300 t.p.h. whilst loading and allowing for vessel movements, achieves an average overall loading rate of 750 t.p.h. from start to finish of loading, depending on vessel's configuration and hold capacities.

All cargo is weighed continuously by a Weightometer, accurate to within 2.0%, which permits a record of hatch tonnages. However the Weightometer is a guide only and must not be relied on as total cargo loaded is determined by draft survey.

The loader spout is capable of being raised and lowered and the supporting boom swings horizontally through approximately 20° West to 15° East of North at maximum extension of boom.

HW to underside of loader boom in operating position is 17 m.

Fender face to vertical centre line of spout extended is 17.45 m.

Fender face to vertical centre line of spout retracted is 7.85 m.

Loader chute fully lowered is 7.32 m. below HW mark.

Loader chute fully raised is 8.61 m. above HW mark.

HW is 3.66 m. below top of cell.

Variation between HW and LW rarely exceeds 1.22 m.

Loader boom must be fully retracted to raise and lower for vessel berthing and departure.

Alumina Vessel Limitations:

Length Overall	200.00 m.
Breadth	30.50 m.
Draft	11.00 m.

Height of hatch coaming (or any equipment in way of loader access) not to exceed 15.85 m. above waterline.

Ship's beam; the distance from shell to inside of fore and aft coaming at centre hatches, not to exceed 7.92 m.

Vessels with division in holds or centre line bulkheads unacceptable for loading at this facility.

Projections outside main hull line must not exceed 0.5 m.

All drains, hatch wells, bridges, etc., to be dry and sealed, vents to be closed before loading.

Cargo to be protected against sweat, however not necessary to cover steel bulkheads.

Recommended that winches and engine room skylights be covered to avoid dust nuisance.

Vessels not fitted with easily closed hatch covers, should have hatch tents or tarpaulins prepared to quickly cover open holds during adverse weather.

Hatch/Hold Cleaning: Holds must not be cleaned whilst vessels are secured at Alcoa Berths.

Vessels whose holds have not been passed as suitable for loading alumina, must make arrangements to have those holds brought up to the required standard. As cleaning cannot take place at Alcoa berth, the vessel must move to a suitable berth within the port, for this purpose.

Working Times: 7 days per week, 24 hours per day, however, we request that berthing and sailing movements avoid shift change times of 0630 – 0730 hrs., 1430 – 1530 hrs. and 2230 – 2330 hrs. daily.

Berthing and Sailing: Any time, subject to weather, Pilot and tug availability. 2 tugs are required for berthing.

Vessels in excess of 10.20 m. draft and/or 185 m. in length overall require 1 tug for sailing.

Vessels in excess of 11.00 m. draft require 2 tugs for sailing.

Survey: Holds will be inspected for cleanliness by a qualified surveyor appointed by Alcoa or the Consignee prior to loading commencing. Holds must be free of all rust scale, residues of previous cargo, dry and swept as required for wheat cargo. Alcoa has no responsibility for vessel cleanliness.

A qualified surveyor will also carry out a full draft survey in conjunction with the Chief Officer.

Documentation: On completion of loading, an Alcoa Officer or Representative will attend on board to complete all documentation.

The vessel's Agent compiles the Notice of Readiness, Time Sheet/Statement of Fact, Manifest and any supplementary documents required by Charterers and Owners.

The details for the Timesheet/Statement of Fact will be taken from the shore log maintained by the Shipping Foreman.

The Alcoa Officer or Representative compiles the Bills of Lading, Weight Certificates and provides details of times, hold quantities etc., for completion of required documents.

CAUSTIC DISCHARGE:

APPROACH & BERTHING: During daylight hours, vessels approach from Cockburn Sound via Southern Channels assisted by 2 tugs and Pilot, drop the port anchor in the vicinity of Cell 8, then move astern parallel to the jetty until the vessels's discharge manifold is in line with the South Side Alcoa discharge boom on Cell 3.

The vessel is secured and Alcoa staff connect the discharge boom to the vessels's discharge manifold.

At present no gangway is provided by Alcoa and vessels must provide and rig suitable access.

A safety net must be rigged by the vessel under the gangway that complies with the Navigation (Miscellaneous Equipment) Regulations.

MAX. SIZE: *Vessel Dimension Limitations:*

Maximum Length Overall	213 m.
Maximum Breadth	Not a limiting factor
Maximum Draft	11.0 m.

(But subject to an additional allowance for tides granted by FPA).

If possible, tankers should ballast whilst discharging cargo, minimising height above water line to avoid damage to the metal discharge boom and to reduce time from completion until sailing.

Due to the fendering system and cellular structure of the jetty, minimum limitations also apply but these affect only smaller tankers and each nomination is judged separately.

DISCHARGING: *Discharge Facilities – Dimensions and Capabilities:* Articulated metal boom – single point discharge, 0.3 m. (12 in.) diameter pipe and ASA150 flange. Connected by 0.406 m. (16 in.) diameter pipe to surge tank at foot of jetty.

Pumping head 12.192 m. (40 ft.) to top of surge tank. Surge tank 335 m. from vessel's side.

Maximum throughput not to exceed 2,000 tonnes per hour governed by the following limitations:

(a)Discharge pressure not to exceed 1,241.06 kPa per sq.m. (180 p.s.i.).

(b)Minimum operating pressure 662 kPa (96 p.s.i.).

Survey: Upon arrival at the Company's berth, a Company-appointed surveyor will collect the loadport sample(s) from the vessel's Chief Officer and will take samples from each of the holds containing caustic soda for Kwinana discharge. The Surveyor will also perform an ullage survey on these holds and determine the quantity of caustic soda solution discharged. This quantity and analysis of the referred samples will be used to determine the 100% NaOH (DMT) quantity of caustic soda delivered.

The Dry Tank Certificate will be signed by the Company's Surveyor upon satisfactory completion of discharge.

Description of Product: Sodium Hydroxide (NaOH) generally known as caustic soda or lye is a commercially important alkaline, shipped for Alcoa as approximately 50% NaOH aqueous solution. It has the appearance of water, is odourless and does not appear dangerous. However, it is one of the harshest chemicals and requires stringent safety precautions. It is especially corrosive to eyes and skin and this means that:

Following eye contact, washing with water must commence within 10 seconds if permanent injury is to be avoided.

Following skin contact, washing with copious quantities of water should commence immediately, to prevent slow-healing chemical burns. (saponification).

The wearing of adequate protective clothing and proper training of all personnel is extremely important.

Waste disposal and clean up can be effected by flushing small quantities with water and by neutralising larger amounts with acid (preferably acetic acid).

Waste disposal must conform with State and Federal Laws.

Handling: Only necessary staff required to control pumping should be in the vicinity of caustic equipment whilst pumping is in progress.

All persons should wear approved clothing, gloves, helmets, shoes and eye protection whilst handling equipment.

If caustic comes in contact with skin or eyes, fresh water should be liberally applied and Alcoa security personnel contacted for assistance to enable the proper treatment to be given quickly.

Documentation: Notice of Readiness and Time Sheet compiled by the vessel's Agent will be signed upon completion of discharge and prior to departure by Alcoa's Representative.

Working Times: 7 days per week, 24 hours per day, however, we request that berthing and sailing movements avoid shift change times of 0630 – 0730 hrs., 1430 – 1530 hrs. and 2230 – 2230 hrs. daily.

Berthing and Sailing: Anytime subject to weather, quarantine, Pilot and tug availability.

REGULATIONS: Normal port regulations. Special Regulations for tankers berthing at Oil Refinery Jetties.

DEVELOPMENTS: Dredging of Inner Harbour to 13.0 m. completed.

Reconstruction of Berth No. 9 (Inner Harbour) to give 1,180 m. from Berth No. 4 completed.

AUTHORITY: Fremantle Port Authority, 1 Cliff Street, Fremantle, Western Australia 6160, P.O.Box 95, Fremantle, W.A. 6160. *Tel:* (09) 430 4911. After hours (09) 430 4962. *FAX:* (09) 336 1391. *Contact:* Captain E. J. Atkinson, Harbour Master/Shipping Services Manager. Mrs. K. G. Sanderson, General Manager.

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., 1 Port Beach Road, North Fremantle, W.A. 6159, Australia. Tel: (09) 335 6311. Telex: 92434 PATSLE. Fax: (09) 430 6677. Seagram Code: 6 FPATSLE.

(B) KWINANA – *Alcoa of Australia Ltd.*

The following information was produced by Alcoa of Australia Ltd. Also see Section (A).

ALUMINA LOADING:

BERTHING: Berthing and loading will be facilitated if the vessel arrives with sufficient ballast for navigation requirements and retains as much ballast as possible for as long as possible without delaying the loading.

To aid the Pilot in lining up the vessel at the first hatch to be loaded it is necesary to advise the distance from the centre of the hatch to the front of the bridge. A pilot marker is then placed on the jetty.

Mooring Arrangements and Shifting Ship:

1. It is the vessel's responsibility to provide adequate mooring lines and to tend them properly whilst at the berth. A vessel with under strength or insufficient moorings will be considered unseaworthy.
   The quality of equipment and supervision shall be such that the ship is able to remain in the berth, in all normal weather conditions, without undue surging backwards and forwards or drifting off the wharf face.
   If, due to drift, it becomes apparent that the loading chute is endangered, loading will cease immediately. Time lost in such an event could be treated as a vessel delay.
2. Normal moorings at Kwinana, would consist of 3 headlines, 3 stern lines, a breastline at each end, a forward and an after spring. Vessels loading more than 25,000 tonnes or loading in 5 or more hatches are required to put out a stern line to the swamped mooring shoreside.
3. As the shiploader is of the fixed type, vessels are loaded by warping them backwards and forwards along the jetty so as to position the various hatches underneath the loading chute. If the ship is to be moved ahead, normally the sternlines and forward spring are slackened, whilst heaving on the headlines and the after spring. To move astern, the process is reversed and the line to the swamped mooring is used.
4. The loader spout must be completely withdrawn and retracted to its "parked" position, and the gangway removed from the vessel's side prior to commencement of warping.
   It is imperative not to commence warping the vessel without visual contact and agreement with shore personnel to proceed.
5. You will be advised 30 minutes before completion of each hold and we request your co-operation in providing your crew for vessel movements as promptly as possible.
6. The arrangement of mooring cells and bollards is such that even when shifting between adjacent hatches the breastlines typically change their angle by up to 60° relative to the fore and aft line of the ship, thus losing most of their effectiveness. It is usually necessary therefore to relocate the breastlines at each shift by carrying the ends along the wharf from cell to cell. In the case of long shift ship (e.g. from No. 2 to No. 7 hatch) it may also be necessary to move head or sternlines and springs, since they may become unsafe or ineffective through being too short or too long.
7. IMPORTANT – SPRING LINES
   Unless care is exercised by the crew there is a tendency for the slackening spring to fall beneath the fender line and then snag there when being taken up. It can also "hold up" on the ship's side.
   This can create an extremely hazardous situation when it frees and whips up the ship's side and beyond.
   In the event of a line snagging, it is absolutely imperative that no crew member look over the side to check the cause or be in an area that could be subject to the whip of the line when freed (See "Plan"). It is suggested that the possible snagging be checked from the comparative safety of the wing of the bridge and the crew liaise with the Shore Supervisor regarding clearing the snag.
   To minimise the possibility of springs fouling the underside of the dock fenders it is strongly recommended that:
   (i) A messenger line attached to a "D" shackle be used on the slackening spring to keep the spring alongside the ship and above the fender line.
   (ii) The spring should not be slackened excessively.
8. Because of the frequency of shifting, the ship's crew will be on almost continuous standby. No matter how experienced the crew, tiredness may affect their ability and judgement.
   Normal seagoing practice dictates the responsibility of loading to the Chief Officer. At this berth he should be given sufficient support to ensure that he is not unduly fatigued. It will also help if the number of moves between hatches is kept to the minimum compatible with the vessel's strength and design limitations.

Line Priorities: Many ships are not fitted with sufficient self-tensioning or self-stowing mooring winches to be able to work all mooring ropes direct from the winch drums. Where only 2 or 3 such winches are fitted, it is important that they be used to the best advantage. We recommend that the following priorities be observed:

1. Forward
   (a) Two head lines, for warping ship ahead. (May be turned up on windlass warping drums).
   (b) For'd spring – for warping astern.
   (c) Breast line – for holding alongside.
   (d) Third head line, extra breast lines, etc.
2. Aft
   (a) Two stern lines, for warping astern.
   (b) Line to swamped mooring – for warping astern.
   (c) After spring – for warping ahead.
   (d) After breast line – for holding alongside.
   (e) Third stern line, extra breast line, etc.
3. Where a breast line cannot be secured directly to a winch or warping drum, a second breast line should be provided.

Cleanliness/Draft Survey: Prior to loading, the vessel's holds and hatch covers will be inspected by an Independent Surveyor engaged by Alcoa or the Consignor.

This Surveyor will also conduct a Draft Survey in conjunction with the Chief Officer.

Shipping Foreman: Alcoa's Shipping Foreman supervises the loading of the vessel and will liaise with the Chief Officer. Hatch stowages and order of loading should be advised to the Foreman prior to commencement of loading.

Pollution: We are obliged by Fremantle Port Authority Regulations to report any pollution caused by vessels at our berth.

GENERAL:

Jetty Approach: The Alcoa Jetty is located on the East side of Cockburn Sound and is approached from Gage Roads via the Success, Parmelia, Stirling and Calista Channels.

Vessels in ballast and subject to weather and draft limitations may as an alternative use the Woodman, Jervoise and Medina Channels within Cockburn Sound,

Alumina loaders berth on the Northern side of the jetty, port side. Loaded Caustic Tankers berth on the Southern side, starboard side to.

	Max. Draft
Fremantle Approach – Gage Roads	13.10 m.
Cockburn Approach – Parmelia and Success Channels	12.65 m.
Alcoa Kwinana – Jetty Approach	
Northern – Woodman, Jervoise and Medina Channels	8.53 m.
Southern – Sterling & Calista Channels	11.00 m.
Anchorage – Gage Roads on sand	
Cockburn Sound on clay	16.45 m.

Refer Chart AUS.117 for detail.

Facilities, Supervision and Manning: The berth consists of 8 cells, each 18.9 m. in diameter spanning 335.3 m. No. 1 Cell is 152.4 m. from the shore. No. 8 Cell is 487.7 m. from shore.

There is a maximum of 12.2 m. depth of water alongside the jetty and vessels are restricted to a maximum of 11.00 m.

The jetty runs due West from the Plant site. Loading vessels will berth port side to, heading West and discharging vessels berth starboard side to.

The loading berth is fitted with line haul winches, guides, bollards, quick release hooks and cleats to assist in line-handling operations. There is also a heavy line astern to "swamped mooring", to which the ship's line can be attached to assist between hold moves. This heavy line should be let go upon completion of loading to enable Alcoa staff to recover it before Pilot arrives.

All line handling on the jetty is carried out exclusively by Alcoa staff and ship's crew are prohibited from handling lines on the jetty.

A remote controlled gangway is situated on Cell 4 adjacent to the "loader".

The loader operator controls the gangway and will put it in position in response to the call button either from the ship for those wishing to go ashore or at the foot of the gangway for those boarding. Signs indicate location and operation of call device. However, discharging vessels on the South side must provide their own access. A safety net is required under the gangway which must be provided and fitted by the vessel. (Refer Navigation 'Miscellaneous Equipment' Regulations).

Dock Access Restrictions: Due to the construction of the jetty which provides limited access for vehicles, it is necessary to restrict traffic to ensure maximum access for emergency vehicles.

The overall control of movements at the jetty is strictly under the direction and control of the Alcoa Foreman who liaises with Security Staff on personnel and vehicle access.

Directions given by Alcoa shipping and security staff *must* be complied with immediately.

Access to the jetty by personnel and vehicles will be restricted where the access of emergency vehicles or safety is jeopardised.

Access to the dock will be allowed at the discretion of Alcoa supervisory staff whose decision is final.

(a) When the safety of personnel and vehicles is not endangered.
(b) A vehicle is on lawful business providing services to Alcoa or to the vessel, i.e. provisions, laundry, lubricating oils, servicemen and emergency services, etc.
(c) Company vehicles servicing equipment or transferring personnel.
(d) Vehicles delivering baggage, large parcels, carrying persons requiring medical attention or Pilots and Masters to and from the vessel.
(e) No hindrance to emergency vehicles will occur.
(f) When a vehicle does not exceed 15 tonnes all up weight.
(g) At the Master's request.

Vehicles are not to remain on the jetty unattended for any reason, and must complete their business and be removed from the jetty promptly. Alcoa reserves the right to remove vehicles from the jetty without consulting the owner or driver, should the need arise and will accept no responsibility for accidental damage to the vehicle should this occur. Persons proceeding in an unsafe manner on the jetty will be fully responsible for any claims made due to their actions.

No bunkering facilities are available on the dock, however a barge from Fremantle is available for the transfer of fuel oils, subject to weather conditions.

Road tanker delivery of fuel oil is prohibited on the dock.

Water is normally available at 50 tonnes per hour from connections on the dock.

Provisions, laundry and engineering services have access to the vessel from the dock.

The movement of flammable materials over Alcoa property is strictly controlled and permission must be sought from the Transportation Officer before any transfer to or from vessels at the berth.

General Information: The jetty is 17 km. from Fremantle by road with no public transport services readily available.

Alcoa Security Personnel will provide first aid for minor injuries and an ambulance is available at the plant for urgent transferring of patients to hospital, however, normal medical needs will be arranged by the Agent.

There is a telephone in the jetty office. All local calls are free. This telephone also provides the facility for interstate or overseas calls but on a "reversed charges" basis only.

Access to and from the jetty is normally by means of a remote controlled gate and it will be necessary to follow the instructions on the notice boards at the gates to gain entry or exit.

Besides voice communications with the main Security Office there is remote control television surveillance of the whole dock area.

LOADING:

Description of Product: A fine white powder Al_2O_3 - density 0.99 cu.m. (36 cu.ft.) per tonne.

Stowage factor: 1.05 cu.m. per tonne in a bulk carrier.

Transportable Moisture Limit (TML)	12%
Average Moisture Content (this product)	0.40%

Absorbs moisture, not to be loaded in heavy rain. Is chemically inert and will not contaminate or damage other cargo except through dust effect alone. No inherent vice.

Ship Loader – Dimensions, Loading Rate and Limitations: The non-traversable, lifting and slewing loader is located on the fourth cell, 318.2 m. from the shore.

The loader is an open spout feed type with a dust control box fitted on the load chute and is fed by conveyor systems from storage bins ashore.

NOTE: Vessel is required to move under its own power, to enable loader spout positioning over hold. Fullest co-operation of vessel's crew and officers is required to minimise non-loading time.

The loader is capable of a maximum of 1,300 t.p.h. whilst loading and allowing for vessel movements, achieves an average overall loading rate of 750 t.p.h. from start to finish of loading, depending on vessel's configuration and hold capacities.

All cargo is weighed continuously by a Weightometer, accurate to within 2.0%, which permits a record of hatch tonnages. However the Weightometer is a guide only and must not be relied on as total cargo loaded is determined by draft survey.

The loader spout is capable of being raised and lowered and the supporting boom swings horizontally through approximately 20° West to 15° East of North at maximum extension of boom.

HW to underside of loader boom in operating position is 17 m.

Fender face to vertical centre line of spout extended is 17.45 m.

Fender face to vertical centre line of spout retracted is 7.85 m.

Loader chute fully lowered is 7.32 m. below HW mark.

Loader chute fully raised is 8.61 m. above HW mark.

HW is 3.66 m. below top of cell.

Variation between HW and LW rarely exceeds 1.22 m.

Loader boom must be fully retracted to raise and lower for vessel berthing and departure.

Alumina Vessel Limitations:

Length Overall	200.00 m.
Breadth	30.50 m.
Draft	11.00 m.

Height of hatch coaming (or any equipment in way of loader access) not to exceed 15.85 m. above waterline.

Ship's beam; the distance from shell to inside of fore and aft coaming at centre hatches, not to exceed 7.92 m.

Vessels with division in holds or centre line bulkheads unacceptable for loading at this facility.

Projections outside main hull line must not exceed 0.5 m.

All drains, hatch wells, bridges, etc., to be dry and sealed, vents to be closed before loading.

Cargo to be protected against sweat, however not necessary to cover steel bulkheads.

Recommended that winches and engine room skylights be covered to avoid dust nuisance.

Vessels not fitted with easily closed hatch covers, should have hatch tents or tarpaulins prepared to quickly cover open holds during adverse weather.

Hatch/Hold Cleaning: Holds must not be cleaned whilst vessels are secured at Alcoa Berths.

Vessels whose holds have not been passed as suitable for loading alumina, must make arrangements to have those holds brought up to the required standard. As cleaning cannot take place at Alcoa berth, the vessel must move to a suitable berth within the port, for this purpose.

Working Times: 7 days per week, 24 hours per day, however, we request that berthing and sailing movements avoid shift change times of 0630 – 0730 hrs., 1430 – 1530 hrs. and 2230 – 2330 hrs. daily.

Berthing and Sailing: Any time, subject to weather, Pilot and tug availability. 2 tugs are required for berthing.

Vessels in excess of 10.20 m. draft and/or 185 m. in length overall require 1 tug for sailing.

Vessels in excess of 11.00 m. draft require 2 tugs for sailing.

Survey: Holds will be inspected for cleanliness by a qualified surveyor appointed by Alcoa or the Consignee prior to loading commencing. Holds must be free of all rust scale, residues of previous cargo, dry and swept as required for wheat cargo. Alcoa has no responsibility for vessel cleanliness.

A qualified surveyor will also carry out a full draft survey in conjunction with the Chief Officer.

Documentation: On completion of loading, an Alcoa Officer or Representative will attend on board to complete all documentation.

The vessel's Agent compiles the Notice of Readiness, Time Sheet/ Statement of Fact, Manifest and any supplementary documents required by Charterers and Owners.

The details for the Timesheet/Statement of Fact will be taken from the shore log maintained by the Shipping Foreman.

The Alcoa Officer or Representative compiles the Bills of Lading, Weight Certificates and provides details of times, hold quantities etc., for completion of required documents.

CAUSTIC DISCHARGE:

APPROACH & BERTHING: During daylight hours, vessels approach from Cockburn Sound via Southern Channels assisted by 2 tugs and Pilot, drop the port anchor in the vicinity of Cell 8, then move astern parallel to the jetty until the vessels's discharge manifold is in line with the South Side Alcoa discharge boom on Cell 3.

The vessel is secured and Alcoa staff connect the discharge boom to the vessels's discharge manifold.

At present no gangway is provided by Alcoa and vessels must provide and rig suitable access.

A safety net must be rigged by the vessel under the gangway that complies with the Navigation (Miscellaneous Equipment) Regulations.

MAX. SIZE: *Vessel Dimension Limitations:*

Maximum Length Overall	213 m.
Maximum Breadth	Not a limiting factor
Maximum Draft	11.0 m.

(But subject to an additional allowance for tides granted by FPA).

If possible, tankers should ballast whilst discharging cargo, minimising height above water line to avoid damage to the metal discharge boom and to reduce time from completion until sailing.

Due to the fendering system and cellular structure of the jetty, minimum limitations also apply but these affect only smaller tankers and each nomination is judged separately.

DISCHARGING: *Discharge Facilities – Dimensions and Capabilities:* Articulated metal boom – single point discharge, 0.3 m. (12 in.) diameter pipe and ASA150 flange. Connected by 0.406 m. (16 in.) diameter pipe to surge tank at foot of jetty.

Pumping head 12.192 m. (40 ft.) to top of surge tank. Surge tank 335 m. from vessel's side.

Maximum throughput not to exceed 2,000 tonnes per hour governed by the following limitations:

(a)Discharge pressure not to exceed 1,241.06 kPa per sq.m. (180 p.s.i.).

(b)Minimum operating pressure 662 kPa (96 p.s.i.).

Survey: Upon arrival at the Company's berth, a Company-appointed surveyor will collect the loadport sample(s) from the vessel's Chief Officer and will take samples from each of the holds containing caustic soda for Kwinana discharge. The Surveyor will also perform an ullage survey on these holds and determine the quantity of caustic soda solution discharged. This quantity and analysis of the referred samples will be used to determine the 100% NaOH (DMT) quantity of caustic soda delivered.

The Dry Tank Certificate will be signed by the Company's Surveyor upon satisfactory completion of discharge.

Description of Product: Sodium Hydroxide (NaOH) generally known as caustic soda or lye is a commercially important alkaline, shipped for Alcoa as approximately 50% NaOH aqueous solution. It has the appearance of water, is odourless and does not appear dangerous. However, it is one of the harshest chemicals and requires stringent safety precautions. It is especially corrosive to eyes and skin and this means that:

Following eye contact, washing with water must commence within 10 seconds if permanent injury is to be avoided.

Following skin contact, washing with copious quantities of water should commence immediately, to prevent slow-healing chemical burns. (saponification).

The wearing of adequate protective clothing and proper training of all personnel is extremely important.

Waste disposal and clean up can be effected by flushing small quantities with water and by neutralising larger amounts with acid (preferably acetic acid).

Waste disposal must conform with State and Federal Laws.

Handling: Only necessary staff required to control pumping should be in the vicinity of caustic equipment whilst pumping is in progress.

All persons should wear approved clothing, gloves, helmets, shoes and eye protection whilst handling equipment.

If caustic comes in contact with skin or eyes, fresh water should be liberally applied and Alcoa security personnel contacted for assistance to enable the proper treatment to be given quickly.

Documentation: Notice of Readiness and Time Sheet compiled by the vessel's Agent will be signed upon completion of discharge and prior to departure by Alcoa's Representative.

Working Times: 7 days per week, 24 hours per day, however, we request that berthing and sailing movements avoid shift change times of 0630 – 0730 hrs., 1430 – 1530 hrs. and 2230 – 2230 hrs. daily.

Berthing and Sailing: Anytime subject to weather, quarantine, Pilot and tug availability.

OPERATOR: Alcoa of Australia Limited, P.O.Box 252, Applecross, W.A. 6153. *Tel:* (09) 3165111. *Telex:* AA 93910. *FAX:* (09) 364 8920. *Cables:* Kwinalumin – Perth. *Contact:* D. Mihovilovich, Logistics Officer.

(C) KWINANA – BP Oil.

The Marine Terminal facilities of BP Refinery (Kwinana) Pty. Ltd. are situated within the enclosed waters of Cockburn Sound of the Port of Fremantle. The Terminal operates a total of 3 jetties, handling a wide range of petroleum products for both import and export.

Terminal Name: BP Refinery Kwinana Tanker Terminal.

Charts: Australian No. 112, 117, 754.

PILOTAGE: Pilotage is compulsory. Tankers with a draft of 11.0 m. or deeper embark the pilot outside Landfall Buoy in position Lat. 31° 57′ 18″ S., Long. 115° 38′ 48″ E., and the ship must not proceed beyond this area without a pilot in attendance. For tankers on a lesser draft, the pilot will board off Hallbank Beacon within Gage Roads. Pilotage is compulsory for all or any movements within port limits.

Arriving tankers must give a 48 hour, 24 hour and 2 hour notice of arrival by radio to the Harbour Master, Fremantle. Telex No. 95919 FREHM should be included in cable address.

Arriving tankers must have the correct, up-dated charts and sailing directions for entry to the Port of Fremantle.

ANCHORAGES: Gage Roads with depths to 16.5 m. on sand.

Cockburn Sound with depths to 18.3 m. on clay, well sheltered in all weathers.

APPROACHES: *Approaches to Berths:* Least depths to 15.20 m. outer harbour approaches and deep water channel in Gage Roads. Access into Cockburn Sound is via Success and Parmelia Channels with least depth of water of 14.7 m., and bottom channel width of 152.4 m.

Tides: The average rise and fall is 0.45 m., maximum 1.5 m. and minimum 0.15 m.

RESTRICTIONS: None. However, deep draft tankers are controlled by Dynamic Wave and Tide Data, which create windows for entry and departure to the channel.

MAX. SIZE:

Berth	*Max. LOA* (m.)	*Max. Draft*
Jetty No. 1	229	Maximum draft is calculated by use of the Dynamic Wave and Tide Data, and is agreed with BP Australia prior to loading of vessel.
Jetty No. 2	229	
Jetty No. 3	229	

HEALTH: The "Approval to Berth" scheme is used if an inbound tanker submits the required information by radio to his Agents not more than 24 hours and not less than 12 hours prior to arrival.

VHF: Fremantle Port Control has Channels 6, 12, 14, 16 and 67. Kwinana Tanker Agency has Channels 8, 12, 14, 16 and 67.

TUGS: Two tugs are stationed at Kwinana for the handling of tankers. Bollard pull capacities of these tugs are as follows:

Challenger	56 tonnes
Champion	51 tonnes

Two steel workboats, 9.84 m. in length and 250 h.p., are available for running lines. Passenger capacity 6 persons.

Workboats can be contacted on VHF Channels 12 and 14.

FRESH WATER: Available by pipeline to all Jetties, delivery rate about 50 tonnes per hour per hose. Kwinana tugs can supply up to 100 tonnes of fresh water to ships at the anchorage.

FUEL: Diesel oil is supplied via a 20 cm. shore line, and fuel oil via a 25 cm. shore line, at about 200 tonnes per hour. Shore hoses of 15 cm. are used.

TANKERS: Also see "Table" below.

Berths: A concrete steel piled shore arm extends Westerly for some 396 m., joining a 549 m. arm parallel to the shore, from which three "T" Head Jetty berths extend on the seaward side. Each "T" Head is 71.6 m. in length, with a distance between centres of 259.08 m. On each "T" Head there are 4×100 ton capacity bollards. In addition, each berth has 3 bollards (North and South). Jetty No. 3 has 50 tonne mooring dolphins at each end of the "T" Head for the reception of tankers up to 110,000 s.d.w.t.

Jetties No. 1 and 2 are provided with Davits Flexes. Jetty No. 3 is provided with Modified Woodfield Flow Booms, with a maximum outreach of 12 m., and maximum height above low water of 18.20 m. Fremantle is Datum Zero.

Jetties No. 1 and 2 have a 41 cm. crude discharge line with 20 cm. shore hoses.

Jetty No. 3 has a 71 cm. crude discharge line with 4×30 cm. shore hoses. Crude oil can be received at the Terminal at up to 6,000 tonnes per hour.

Depths:

Jetty No. 1	14.7 m. at L.W.O.S.T.
Jetty No. 2	14.7 m. at L.W.O.S.T.
Jetty No. 3	14.7 m. at L.W.O.S.T.

Manning: Each Jetty is manned by a "Jetty Operator" when hoses are connected throughout the period the ship is alongside. A 24 hour continuous shift system is worked within the Terminal, with shift changes at 0700 hrs., 1500 hrs. and 2300 hrs. (local time).

The Jetty Operator must always be contacted for any ship-shore cargo, ballast, slops or tank washing operations, and for any emergency that may arise. Similarly he will contact the ship prior to any shore-ship cargo/water/bunker movements. He will arrange hose connections, sampling and ullaging prior to departure, on arrival and at other times as necessary. The Head Operator will make visits to ensure compliance with Jetty Safety Regulations and Operating Procedures, and to assist in answering queries.

The Area Supervisor (Shipping and Oil Movements) is the normal shore representative, and is responsible for all organisational and administrative duties in the Terminal area. He can be contacted via the Jetty Operator/Head Operator/Shift Supervisor Offsites, or by using the shore supplied telephone onboard the ship by dialling 419 0359 or 419 0322. Area Supervisor (Shipping and Oil Movements) in attendance 0800 hrs. to 1630 hrs., Monday to Friday.

The Process Manager Offsites is the overall co-ordinator of the Tank Farm and Jetty activities and is not on shift. In normal day working hours, he can be contacted by telephoning 419 0238, and via the Shift Supervisor Offsites on 419 0569, or the Head Operator on 419 0322 out of hours.

A Documentation Clerk will provide the ship with final Certificates of Quality/Bills of Lading and other documentation as necessary prior to departure.

A Fremantle Port Authority representative will visit all ships from time to time to ensure compliance with Port Authority Regulations. He must be contacted in any emergency via the Jetty Operator.

The ship's Agent should be contacted for all matters, including those concerned with cargo movements.

Standard Restrictions for Ship Discharge:

	Jetties No.1,2 and 3 *Max. Hose String* *Back Pressure*	*Jetty No. 3* *Max. Flow Boom* *Back Pressure*
Finished Products	1,035 kPa	—
Deballasting/Tank Washing	1,035 kPa	—
Crude/Fuels		1,380 kPa

SERVICES:

Providoring: Ship's stores can be delivered to ship by craft. Shore labour is provided to deliver stores from the craft, but ship's crew must be used to take delivery of stores onboard. The craft will come alongside, subject to suitable weather, on arrival or as otherwise required. Ship's derrick or stores crane to be rigged and ready to lift stores onboard at the required time. The craft cannot come alongside whilst ship is working cargo or ballasting, unless boat is aft of accommodation, when Fremantle Port Authority approval must be obtained.

Launch Services: One larger launch with capacity for 30 passengers or 5 tonnes × 6 cu.m. hold space for stores, etc., and is fitted with VHF Channel 12.

Also see "Tugs".

TV Cassette Exchange Service: The Tanker Agency has an exchange service for Walport Video Cassettes.

Other services: Fresh and dry stores are readily available at Kwinana with delivery as required. Prices are reasonable and quality excellent. Bond stores are readily available, but it is advisable for arriving ships to radio requirements ahead for weekend or public holiday arrivals.

A laundry service, with pick-up and return within 24 hours, can be provided.

All types of ship repairs, including engineering, electrical, shipwrighting, plumbing, etc., can be arranged.

Radio, radar, gyro compass repairs can be arranged.

Cargo Movements Facilities:

A full supply of Australian and British Admiralty Charts can be provided locally.

A full range of banking and postal service are available at the "Kwinana Hub" shopping complex, some 10 km. from the Refinery.

Medical, dental, hospital and chemist facilities are all readily available in the local area. X-ray facilities are available at Rockingham and Fremantle Hospitals.

Taxis are permitted to enter the Refinery area and pick-up or deliver to the Jetties.

A telephone for local calls only is placed on board to facilitate ship's business.

Ship's requirements of lubricating oil can be delivered in bulk at all Jetties.

AUTHORITY: Fremantle Port Authority (See "Section (A)).

GEELONG, Victoria: 38.09 S. 144.22 E. (See Plan)

PORT LIMITS: A line in a 150.5° direction from a beacon 1.5 chains West of the Little River entrance intersecting with a line in a 009° direction from the N.W. extremity of Sproat St., Portarlington. N.B. – This seaward limit passes 2 cables Eastward of No. 1 beacon Pt. Richards channel.

DOCUMENTS:

3 Crew Lists Form 3A and 3B.
Store List Form 42A.
Ports of Call Form.
1 Form 2A – Ship's Passenger Report.
1 Form 2B – Ship's Passenger Report.
1 Form 5 Part 1 – Report of Arrival.
1 Form 5 Part 2 – Goods in Crew Possession.
1 Form 5 Part 3 – Return of Stores.
1 Form QA 3 – Animal Cargo.
1 Form QA 4 – Ship's Pets.
2 Form QA 5 – Shipmaster's Bond.
Request for Radio Pratique (Health Clearance).

PILOTAGE: See "Melbourne". Radio ETA to "Seapilots Melbourne" 24 hours prior arrival advising deepest draft. Pilot station equipped with radio-telephone continuous watch on 2182 kHz., and VHF Channel 16. Pilots carry portable sets.

ANCHORAGES:

1. Quarantine. As directed.
2. Explosives.
   (a) *Outer:* 088° from Pt. Wilson Beacon 3.52 miles. Circle 0.25 miles (463 m.) radius. Depth 9.7m.
   (b) *Inner:* 077° from Pt. Wilson Beacon 1.77 miles. Circle 0.15 miles (278 m.) radius. Depth 6.4 m.
3. Vessels over 9.1 m. draft: outside No. 2 Beacon Pt. Richards and South of the line of prolongation of the Pt. Richards Channel. Least depth 12.5 m.
4. Vessels over 8.4 m. draft: South of and within 1 mile of No. 16 Beacon Pt. Richards Channel. Least depth 9.1 m.
5. Inner Harbour: As directed:

Note: Vessels desiring launch communication with the shore will normally anchor South of the Hopetoun Channel.

Masters of vessels are cautioned *(a)* that the bottom of the Inner Harbour is soft mud and is not good holding ground and *(b)* that vessels should not be immobilised unless with the express permission of the Harbour Master. Vessels at anchor should be adequately ballasted.

RESTRICTIONS: The maximum draft for any vessel to navigate in port waters is 10.5 m.

The movement of vessels in the channels with a draft of 10.0 m. or more will be regulated by the Harbour Master, and is subject to the actual tidal rise.

Times for entering the channels and/or departing from the various berths for these vessels can be obtained from the Harbour Master's office.

Night Navigation: Except for special vessels, all vessels over 200 m. LOA require daylight for navigation in the port, being defined as 30 minutes before sunrise to 30 minutes after sunset, applicable from the entrance to the Wilson Spit Channel.

Vessels in Ballast: For safe navigation, the ship's propeller should be immersed and the bow deep enough for adequate vision from the bridge, e.g. 170 m. – 200 m. LOA and draft 4.5 m. forward and 7.0 m. aft. Tanker 230 m. LOA, draft 5.5 m. forward and 8.0 m. aft. Containerships, Livestock Carriers, etc., must have adequate forward vision from the wheelhouse.

MAX. SIZE: Tankers: 265 m. length with 10.5 m. draft. Other vessels: Enquiries should be made with regard to vessels over 200 m. length. Max. beam 45 m.

HEALTH: An overseas vessel approaching the port requiring Pratique shall send a message to the Quarantine Officer not more than 24 hours and not less than 12 hours before arrival containing the following information: name of vessel, ETA, number of passengers, number of crew, number of passengers disembarking, port of departure and date, disease on board.

By supplying by radio to Agent the answers to 9 questions on the request for Radio Pratique (Health Clearance) Form (See "General – Health" before first port), the vessel may be permitted to berth prior to the granting of Pratique.

On arrival the health report shall be given to the Quarantine Officer, 2 copies being furnished on the prescribed form, one of which will be signed by the Quarantine Officer and returned to the Master.

RADIO: Coastal radio station for local messages "Radio Melbourne" VIM. The Port of Geelong Authority controls movement of traffic within the port and maintains a 24-hour watch.

Communication is affected as follows:

1. Telephone. Geelong 266252.
2. Radio Telephone VHF F/M (International Channel).

(i)	Channel 16	156.8 MHz.	Calling (continuous watch).
(ii)	Channel 12	156.6 MHz.	Working (continuous watch).
(iii)	Channel 8	156.4 MHz.	Pilots and Tugs.
(iv)	Channel 6	156.3 MHz.	Tugs.
(v)	Channel 67	156.375 MHz.	Safety.

These frequencies are the same as those operated by the pilot launches, Point Lonsdale Signal Station, Melbourne Harbour Control and all Port Phillip tugboats on commercial towage.

TUGS: Vessels normally towed from Hopetoun Channel to berth, extended towage if required. Two twin-screw 40 tonnes bollard pull tugs stationed in Geelong throughout 24 hours. Use of tug's line optional. Tugs equipped with VHF Channels 6, 8, 12 and 16.

BERTHING:

	No.	*Length (m.)*	*Depth (m.)*	*Use and facilities*
Bulk Grain Pier	2	201	11.0	Bulk grain export. Gantry extends 154 m. of berth.
Corio Quay South 1	1	183	9.7	Stern loading ramp for Roll-on/Roll-off. Rail access.
Corio Quay North 1	1	183	11.0	Dry bulk loading. Rate of loader 600 t.p.h.
2	1	183	11.0	Rail access. Gen. cargo shed 91 m. × 30.5 m.
Corio Quay North 3	1	161	9.7	Gen. cargo shed 97.5 m. × 27 m.
Lascelles Wharf 1	1	173	11.0	Dry bulk cargo – See "Bulk Handling Facilities".
2	1	173	11.0	
3	1	275	11.0	
Refinery Pier 1 & 2	2	213	11.0	Petroleum products.
3 & 4	2	275	11.0	Crude oil, chemicals and LPG export.
Pt. Wilson Explosives Pier	2	168	9.1	Dangerous cargo. Commonwealth Government controlled.
Pt. Henry	1	152	11.0	Bulk alumina and allied products. Unloading gantry.

BULK HANDLING FACILITIES: Two level luffing, grabbing cranes each linked to a mobile hopper, are capable of discharging directly into road trucks or by means of a shuttle conveyor incorporated into each hopper. This allows discharge onto a wharf conveyor allowing cargo to be discharged directly into the bulk handling facility.

A wharf receival hopper is situated at the Northern end of Lascelles No. 2, allowing self-discharge vessels to unload directly into the bulk handling facility.

The cranes and hoppers can traverse the full length of Lascelles No. 2 and No. 3 berths.

The storage facility is 155 m. × 45 m. and has 3 cargo bays with a total capacity of 50,000 tonnes. Each bay is separated by a 6 m. high retaining wall with full height dust curtain.

STEVEDORES: Labour ordering: Day labour must be ordered by 1000 hrs. the preceding day. Twilight shift and midnight shift must be ordered by 1400 hrs. Saturday labour must be ordered by 0900 hrs. Friday, Sunday labour by 1100 hrs. Friday (day and twilight shift), Sunday midnight before 1100 hrs., Friday. Monday labour is ordered at 1000 hrs. Sunday. Special requirements exist for labour requirements on public holidays.

MEDICAL: Comprehensive medical facilities available, including 459-bed Geelong Hospital. If vessel to be in port less than 24 hours it is advisable to radio Agent informing him of medical requirements prior to vessel's arrival.

TANKERS: Refinery Pier. 4 berths, depth alongside 11 m. Pumping platform 4.9 m. above low water, wharf 3.7 m. above low water. One-ton crane at each berth and accommodation ladder.

No. 1 and 2 Berths: Pier 887 m. long, direction 315°, berth 213 m. approx., suitable for ships up to 180 m. LOA. Ships moor to 2 spring dolphins 61 m. apart; pumping platform set back 1.7 m. from line of these dolphins.

No. 3 and 4 Berths: A branch from the main pier, direction 330°, berth 275 m. approx., suitable for ships up to 265 m. LOA. Ships lie alongside a concrete sprung berthing beam 73 m. in length. No. 4 Berth equipped with 4 rubber coned fenders, capstans and 90 tonnes S.W.L. mooring hooks for berthing large vessels. Distance between backspring bollards 35 m. Hoses 8 in. – reduction from 10 in. available.

Ballast: Tank Cleaning and Dirty Ballast Facilities: Line 12 in. Maximum quantity restricted by ullage in shore tank. Rate 900 t.p.h. Berths 1, 2, 3 and 4. All ballast must be discharged via the shore reception facilities even though oil free. Severe penalties will be imposed by the Authorities for any infringement of harbour regulations.

Geelong Port Authority takes a serious view of any form of oil pollution within the harbour, and Courts impose heavy penalties on offenders. Essential Master advises ship personnel before berthing of necessity for extreme care to ensure no oil spillage occurs.

Port Authority Circular: Mooring Ropes: In the light of new Tanker Terminal Safety requirements based on recent I.M.O. recommendations, some modification of the former stipulation regarding wire rope moorings may now be considered. Where backsprings are crossed on Refinery Berths 1 and 2, rope remains the preferred mooring. Otherwise where sliphooks are provided, wire moorings will be accepted, whereas they are not acceptable on bollards.

Please ensure that tank vessels entering the port have either rope moorings, wires with rope tails, or that vessels with wire moorings are berthed in locations where the wire eyes are placed on sliphooks.

DENSITY: Normally 1025, may decrease to 1023 after much rain, or increase to 1027 in Summer after prolonged dry spell.

FRESH WATER: Available at all berths from shore hose at 40-50 t.p.h.

FUEL: Marine fuel to 650 sec. and diesel fuel available Corio Quay North and Lascelles Wharf; all grades to 3,500 sec. available at Refinery Pier berth.

FIRE PRECAUTIONS: Stringent restrictions against burning or welding on vessels carrying dangerous cargoes. Standard fire precautions.

CONSULS: See "Melbourne".
REPAIRS: All services available. Most Melbourne repair and service firms will also undertake work in Geelong.
DRY DOCKS: *Rippleside Slipway:* 1,000 tons on 47.85 m. B.P. and repair workshop.
GANGWAY/WATCHMEN: Shore gangwayman available.
OPENING/CLOSING HATCHES: Crew or stevedores, to Master's requirements. It is normal to request bulk carriers to arrive at berth with all hatches open.
CERTIFICATES:

Derat Certificate (Health Requirement).
Ship's Articles (British) (Customs requirement).
Ship's Register (Customs requirement).
Load Line Certificate (Customs requirement).
Safety Equipment Certificate (Customs requirement).
Safety Radio Certificate (Customs requirement).
Last Port Clearance (Customs requirement).

CUSTOMS ALLOWANCES: 200 cigarettes or 250 gm. tobacco or 40 cigars. Spirits: Any bottle opened not to exceed 1 litre.
CARGO GEAR: Australian Navigation Act requirements. See "Melbourne".
REPATRIATION: Possible without difficulty.
AIRPORT: Nearest major commercial airport is Tullamarine, 50 miles distant, from which there are frequent interstate and international flights. Airport accessible by road in about 1 hour 15 minutes (direct bus).
TIME: See "General" before first port.
HOLIDAYS: Closed holidays: Christmas Day; Waterside Workers' Picnic Day; Labour Day; Good Friday; Anzac Day (Tanker operations excepted). Other holidays: Australia Day; Easter Monday; Queen's Birthday; Geelong Cup Day.
POLICE/AMBULANCE/FIRE: Police 26 2800; Ambulance 22 2555; Fire 22 2333.
TELEPHONE: Placed aboard on arrival; ship charged for calls and service.
SERVICES: Cleaning, painting, fitting out, etc., fumigation. Good fresh stores available.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: See "Melbourne".
GARBAGE DISPOSAL: Service available through agent. Garbage collected from shore end of gangway. No drums or skips provided. A$ 255.00 per service charge.
WASTE OIL DISPOSAL: By private contractor. Arrange through agent.
SEAMAN'S CLUBS: Missions to Seamen, 7 The Esplanade, North Shore, Victoria 3214. Tel: (052) 786985. Facilities/Services: Shop, international telephone, church services, football matches, outings, postage facilities and mini-bus collection.
AUTHORITY: Port of Geelong Authority, 65 Brougham Street, (P.O. Box 344), Geelong, Victoria 3220. *Tel:* (052) 221644. *FAX:* 052-216883. *Contact:* P.G. Morgan, C.E.O., Captain F. Bregman, Harbour Master.
AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., P.O.Box 37, 2 Moorabool Street, Geelong, Victoria 3220. Tel: (052) 22 1155. Telex: 32658 PATSLE. Fax: (052) 21 8119. Seagram Code: 3GPATSLE.

GERALDTON, W.A.: 28.46 S. 114.36 E. (See Plan)

PORT LIMITS: Inner Harbour includes all that area of water in Champion Bay bounded by a line drawn from Gregory Street, Geraldton, along the foreshore to a point due South of the Western extremity of the breakwater; thence along the breakwater to the Western extremity of the Eastern breakwater; thence S.E. to the foot of the said Gregory Street, and also including the Entrance Channel thereto.

Outer Harbour includes all that area of water in Champion Bay and Geelvink Channel bounded by an imaginary line drawn from Point Moore lighthouse true West as far as Longitude 114° 30′ E. thence true North to the shore of the mainland about 2.75 nautical miles (North and West from Woolawar Gully), but excluding the waters of Geraldton Inner Harbour and the Entrance Channel thereto.

ETA: "6GPA Harbour Master Geraldton" requires 48 hours and 24 hours notice prior arrival. The 24 hours message should be timed to be delivered before 1630 hrs. local time on the day before arrival so that arrangements can be finalised, when possible, in working hours. Please also indicate fore and aft draft in the 48 hours' notice. Vessels with Facsimile facility may send these ETAs to Fax No. 099-640546 (There is no Telex facility).

Masters are advised for medical and or other emergencies; the Harbour Master should be contacted through Principal or Local Agents.

Vessels arriving in ballast are requested to retain all clean ballast until after berthing. Discharging ballast before arriving may preclude berthing if strong wind conditions prevail. Vessel's ballast must comply with IMO/MEPC/July 1991 Requirements.

DOCUMENTS: Shipmaster's Bond QA 5, Departure Notice, 2 Crew Lists. Also see "Melbourne".
PILOTAGE: Compulsory. Pilot boards North and West of the Fairway Buoy (Lat. 28° 45.97′ S., Long. 114° 32.61′ E.)

All vessels are advised not to approach Eastward of the Fairway Buoy.

Pilot ladder and accessories, including access to vessel, must comply in all respects with current IMO/SOLAS requirements. Failure to comply *will* incur delays.

At NO time will mechanical pilot hoists be utilised due to swell conditions.

ANCHORAGE: The anchorage for vessels off the Port of Geraldton is Westward of a North/South line drawn through the Fairway Buoy.

Vessels must not anchor Eastward of the Fairway Buoy or within 0.5 nautical miles of the buoy. Anchorage holding ground is moderate holding only.

RESTRICTIONS: Swells up to 5.0 m. in outer approaches.

Movement of loaded vessels may be restricted by Harbour Master.

Bluff Point Leads or Outer Channel: Depth of water 10 m., minimum width of channel 180 m.

Curved Section of Channel: Depth of water 9.7 m. to 9.4 m.

Inner Harbour Channel and Manoeuvring Area: 9.1 m. Depth alongside Berths No. 2-5 is 9.4 m. All depths are at Port Datum, which is zero on the tide gauge.

MAX. SIZE: Length 213 m.; Beam 30.4 m. Permissible drafts: 8.7 m. at LW – 9.1 m. at 0.8 m. of tide, 9.3 m. at 1.1 m. tide, provided swell at Waverider Buoy does not exceed 3 m. Vessels wishing to load to maximums dependent on tide prevailing should contact Harbour Master before so doing.

Vessels in excess of the above will be accepted at the discretion of the Harbour Master. Vessels up to 233 m. LOA and 32.3 m. beam have been handled.

HEALTH: First Port of Entry, radio Australian Quarantine and Inspection Service not less than 12 hours prior to arrival advising state of health. Also see "General" – 'Health" before first port.
RADIO: VHF available for communications with Pilot. Channels 6, 9, 12 and 16. Continuous watch not maintained.
TUGS: 2 × 30 tons bollard pull. Tugs used at discretion of Harbour Master.
BERTHING: The wharf is divided into 4 berths numbered 1, 2, 3 and 4 from East end.

Berth No. 1 (Length 99 m.). The berth is used as a general purpose berth.

Berth No. 2 (Length 203 m.). The berth has an unobstructed apron of 27.5 m. for almost the full length of berth.

Berth No. 3 (Length 203 m.) mainly for loading of bulk grain. There are 2 loading gantries on the wharf each capable of loading wheat at the rate of 500 t.p.h.

Berth No. 4 (Length 281 m.): It is possible to use No. 4 for general purposes, but a loading gantry and conveyor system at the berth is used for loading mineral sands. Max. rate 1,200 t.p.h. Air draft for loader is 14.0 m. at zero tide.

Berth No. 5 is situated to the N.W. of the main wharf and runs in a N.N.E. direction. The berth is 213 m. in length with a mooring dolphin at the Southern end. The berth is used for general purposes and tanker discharge.

Berth No. 6 is 235 m. in length and is a continuous extension of Berth No. 5. It is used for general cargo, livestock, fertiliser discharge, etc.

CRANES: None.
STEVEDORES: 35 men. Working hours 0800 – 1700, Monday – Friday. Extended shifts and evening shifts all days except Saturday. Midnight shifts available.
FRESH WATER: At each berth at 25 t.p.h.
FUEL: Light diesel oil at 80 t.p.h. by tanker truck or by pipeline at Berth No. 5.
FIRE PRECAUTIONS: Fire fighting unit available.
REPAIRS: Engine and engineering repairs can be carried out. Arrange through Agents.
GANGWAY/DECK WATCHMEN: Normally done by ships' crew.

Two shore watchmen are employed on all tankers, and vessels undergoing fumigation.

OPENING/CLOSING HATCHES: Done by ships' crew.
CUSTOMS ALLOWANCES: Each crew member 200 cigarettes or 40 cigars or 8 oz. tobacco and limited amounts spirits per man.
CARGO GEAR: See "Melbourne".
REPATRIATION: Crew changes can be carried out with little difficulty.
AIRPORT: Local airport 11 km. East of town. International – Perth, 430 km. to the South.
TIME: See "General" before first port (GMT plus 8 hours).
HOLIDAYS: Christmas Day, Boxing Day, Easter, Labour Day, Anzac Day, Queen's Birthday, Foundation Day.
POLICE/AMBULANCE/FIRE: Police 64 1511; Ambulance 64 1808; Fire 21 2222.
TELEPHONES: Available at each berth (ordered through Agent).
SERVICES: Compass adjustment, radio and radar repairs available. Contact Agents.
BANKS: Commonwealth, Westpac, Bankwest, A.N.Z. Banking Group, National Australia Bank.
STORING: See "Prelims".

1. Stored by truck.
2. Not applicable.
3. Trucks allowed alongside (with the exception of tankers).
4. Forklifts allowed (with the exception of tankers).
5. Storing of ships must abide by Customs Regulations.
6. Waterside workers would be employed to assist with storing if required.

SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: A collection service is available. 100 litre portable plastic containers are provided for use on board. Contact: Geraldton Port Authority. Tel: (099) 640522. Charges: A$ 45.00 per service plus A$ 3.00 per crew member per day per service. Collection and dropping off clean bins daily from 0700 hrs. to 0800 hrs.
WASTE OIL DISPOSAL: "Freemans Waste Disposal". Tel: (099) 213415. Fax: (099) 214371. 2 tanker trucks of 9,000 litres each are available. Charges: A$1.81 per 100 litres. Service available at any berth. Disposal at Council tip site.
SEAMAN'S CLUBS: Missions to Seamen, Marine Terrace, Geraldton. Tel: (099) 213272. Opening hours: 1900 – 2230. Club will close earlier if unattended. If service required during other hours please ring bell. Facilities: Chapel, international telephone calls, stamps, money exchange, refreshments, T.V. and video, library, snooker and table tennis, shop with souvenirs and toiletries.

CURRENCY: Australian Dollar.
DELAYS: All subject to weather conditions.
GENERAL: *Mineral Sands Loading:* We would like to remind Owners of the very stringent hold cleanliness requirements for vessels loading mineral sands, particularly rutile and zircon.

Owners will be aware that these sands are refined very high quality products and Surveyors require vessels to be completely free of all chemical residues, especially loose rust scale, before presenting for loading. Any work required must be done by shore labour, which is costly and time consuming.
AUTHORITY: Geraldton Port Authority, G.P.O.Box 1856, Geraldton, WA 6530, Australia. *Tel:* (099) 640522. *FAX:* (099) 640546. *Cables:* "6 GPA" – to Harbour Master. *Contact:* Captain L.W. Gault, Harbour Master (Mobile 018930668, After hours Tel: 099-215192, Pager 016-981440). Captain B.J.White, Deputy Harbour Master (Mobile 018930667, After hours Tel: 099-232825).

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., P.O.Box 67, 10 Francis Street, Geraldton, W.A. 6530. Tel: (099) 216744, 216976. Telex: 91696 PATSLE. Fax: (099) 641924. Seagram Code: 6GPATSLE.

GLADSTONE, Queensland: 23.51 S. 151.15 E. (See Plan)

PORT LIMITS: Inside a line commencing at a point 1.5 miles North of East Point, Facing Island; thence to the outer extremity of Jenny Lind Bank, and thence by a line to Tiber Point.
DOCUMENTS: See "Melbourne".
PILOTAGE: ETA's may be sent through Brisbane or Rockhampton Radio Stations, not less than 24 hours before arrival, followed by amended advices where necessary as pilot launch takes 2 hours to reach Pilot Boarding Ground from town. Pilotage compulsory for all merchant ships. Pilot boards at the Fairway Buoy which is approx. 28 km. West of Bustard Head. VHF Channel 16 may be used to contact Pilot Station, call sign "Gladstone Harbour Control"; 24 hour watch maintained. Pilot boat also has VHF. Pilot boat orange launch and displays usual signals.

Boarding of Pilots may be possible by helicopter if vessel meets certain requirements. The decision will be made after radio communication with the vessel.
Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait is conducted by licensed pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Queensland Coast and Torres Strait Pilot Service. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".
ANCHORAGE: Good anchorage inside Gatcombe Head about 7 cables South of Bushy Islet in 8 to 10 fathoms, sand and mud, North of Facing Island Leads.
RESTRICTIONS: The port is served by an entrance channel, some 10 km. long, with a bottom width of 183 m., dredged to 15.7 m. at LWOST.

The max. allowable draft of a vessel passing through the channel is determined by the following formula:

Allowable draft in metres = 15.7 m. + tide height –1.5 m./2.0 m.*
*–1.5 m. (for vessels less than 85,000 d.w.t.); – 1.8 m. (for vessels of 85,000 d.w.t. to 200,000 d.w.t.) and – 2.0 m. (for vessels greater than 200,000 d.w.t.).

The max. daily tide height is 4.9 m.

The min. daily tide height is 2.7 m.

Tankers carrying petroleum products may enter during hours of darkness only at Harbour Master's discretion.
MAX. SIZE: The Port can accommodate vessels of up to 16.4 m. draft on any day of the year. The maximum draft for entrance channels is dependent on tidal conditions. Length and breadth dependent upon wharf to which vessel is to proceed.

Principal wharves are:

Auckland Wharf	No. 1	Depth 11.30 m.	at LW
" "	No. 2	" 11.30 m.	"
" "	No. 3	" 11.30 m.	"
Barney Point		" 15.00 m.	"
South Trees	East	" 12.80 m.	"
" "	West	" 12.80 m.	"
Clinton Coal Wharf		" 18.80 m.	"
Smelter Wharf		" 15.00 m.	"
Clinker Wharf		" 10.40 m.	"

HEALTH: A system of Radio Pratique has been adopted for vessels calling at Gladstone as a first port in Australia provided they are regular callers from disease free areas.

All vessels requiring Pratique must radio answers to a series of questions regarding crew health, etc. to ship's Agents 24 hours prior to arrival.

See "General – Health" before first port.
RADIO: Radio messages passed to Agents via any coastal radio station. All shipping cables to Agents, etc., should be prefixed "Shipserv" to enable delivery destination outside ordinary postal hours if necessary.
VHF: Shipping movements are controlled by VHF Radio, the base station being operated by the Harbour Master and his Staff.
TUGS: 3 tugs are available for service at all times, with bollard pulls of 46, 46, and 50 tonnes. A fourth tug is available when required. Tugs normally join vessel in vicinity of South Trees Point. Tug's lines always used when vessels are piloted. There is no extra charge for use of tug's lines.
BERTHING: Large vessels loading at all times normally swing and berth starboard side to, head to sea, on flood tide. Vessels discharging bauxite at South Trees Island Wharf, berth at periods of slack water (high or low). Vessels loading alumina at this wharf berth either on flood tide or slack water – *never* on ebb tide.
Auckland Point Wharves: With total length of 640 m., there are 3 berths at Auckland Point, owned and operated by the Gladstone Port Authority.

No. 1 Berth: Common user berth for export of bulk products (previously used for coal storage and export – now available for other bulk products). Bulk products are exported through this berth over 2 bulk shiploaders each with a capacity of 800 tonnes/p.h. These loaders travel a distance of 142 m. along the wharf and are adjoined by 2 conveyors to the stockpile area. Depth of water at berth is 11.3 m. LWOST.

No. 2 Berth: This berth handles the export of grain (wheat, grain sorghum, oil seeds) from the rich grain growing areas of the Dawson/Callide Valleys and the Central Highlands. Grain is stored in the adjoining complex of silos and storage sheds.

Total Port capacity for storage of grain is over 82,000 tonnes. Taken from the storage areas by conveyors, the grain is loaded onboard vessels by 2 mobile gantry shiploaders at a combined rate of 1,600 tonnes/p.h. The berth depth is 11.3 m. LWOST.

No. 3 Berth: Petroleum products imported through this berth are stored in the tank farms constructed by the major oil companies on reclaimed land adjacent to the berth. This vital fuel is then distributed throughout Central Queensland. Caustic soda, sulphuric acid and LPG are also imported over this wharf. General cargo and special heavy lift vessels also use this berth. The berth depth is 11.3 m. LWOST.
Barney Point Wharf: This wharf with a total length of 205 m. is owned and operated by Thiess Dampier Mitsui Coal Pty. Ltd. Coal from the T.D.M. Mine at Moura and Thiess Brothers Mine at Blackwater is exported through this facility. Coal from the Moura Mine is carried 180 km. to the port over the direct Gladstone to Moura railway line. The stockpile area has a capacity of 400,000 tonnes. Shiploading is done by a single 2,000 tonnes/p.h. mobile shiploader. The berth depth is 15.0 m. LWOST.
South Trees Wharf: Owned and operated by Queensland Alumina Limited, this facility handles all cargoes for the giant alumina refinery. Bauxite is imported from Weipa (in North Queensland) and alumina is exported to all parts of the world. The other components necessary for the alumina process – caustic soda and fuel oil are also imported over the wharf.

Depth at the berth is 12.8 m. LWOST.
Boyne Wharf: Constructed to serve the needs of the Gladstone aluminium smelter, the wharf is 250 m. long and will cater for vessels up to 60,000 tonne capacity.

A causeway 710 m. long provides access to the wharf and to a sealed area (400 m. × 50 m.) for storage of aluminium billets. On the wharf is a 400 tonnes/p.h. mobile unloader to handle petroleum coke used in the smelting process.

Depth at the berth is 15.0 m. LWOST.
Fisherman's Landing Wharf: Most Northerly of the wharf centres, the wharf at Fisherman's Landing exports clinker from the Queensland Cement Limited's Clinker Plant. The limestone is mined in the Mount Larcom area, crushed and pumped down to the plant in slurry form. After processing, the clinker is exported to Brisbane to be used in the manufacture of cement. Clinker will be loaded by a 2,000 tonnes/p.h. pivoting bulk shiploader. The shiploader will load vessels of 25,000 tonne capacity.

Ammonia and Caustic Soda are imported over this wharf also.

Depth at the berth is 10.4 m. LWOST.
Clinton Coal Wharf: Owned and operated by Gladstone Port Authority. The Facility has 2 berths at 18.8 m. depth. Two shiploaders provide operations at rate of 8,000 tonnes/p.h. (2×4,000 tonnes/hr.). Berths presently cater for vessels from 25,000 d.w.t. to in excess of 220,000 d.w.t. and of 16.4 m. draft and 55 m. beam.
STEVEDORES: Special ETA advice necessary if week-end labour required and must be ordered by 1400 hrs. on previous Friday. Monday labour for vessels arriving after Friday must be ordered by 1500 hrs. on Friday. The only commodities requiring shore labour are bulk grain and general cargo.
MEDICAL: Dependent duration stay in port, prior notice for medical attention not required (other than notice of infectious diseases). Hospital facilities available. Current vaccination certificate for each member of crew required.
TANKERS: Diameters of discharge lines 12 in., (0.305 m.) and 8 in. (0.203 m.) for white oils and 6 in. (0.152 m.) black oils, no slop discharge facilities. Main tanker berth at Auckland Point Wharf (Berth No. 3), minimum depth alongside 11.30 m. LWOST. Black oil also discharged at South Trees Island Wharf for use in alumina plant only.
DENSITY: Average density 1024 – 1028.
FRESH WATER: Available all wharves. Fresh water hydrants placed at intervals along wharves.
FUEL: All grades of marine fuels are available and can be delivered to all berths by barge. Pipeline delivery is available to all vessels working cargo at South Trees East berth. Bunker only deliveries of fuel oil and MDO is a feature of the bunkering facilities at Gladstone.
FIRE PRECAUTIONS: Where petroleum and goods of dangerous inflammable character are being unloaded, watchman shall be employed to collect matches from all persons in vicinity and to patrol wharf within the limits in which petroleum cargo is being handled. Every vessel carrying inflammable liquids when in any Queensland port shall display red flag, not less than 1 m. (3 ft.) square with white circular centre 15 cm. (6 in.) in diameter.
CONSULS: None.
REPAIRS: Minor engine and deck repairs are undertaken.

BULK HANDLING FACILITIES:

DRY DOCKS: None available. Slipway capable of lifting vessels up to 125 tons displacement with max. beam 23 m. and max. draft forward of 6 ft.
GANGWAY/DECK WATCHMEN: Services of watchmen is not recommended except in the case of petroleum tankers previously mentioned.
OPENING/CLOSING HATCHES: Either by ship's crew or shore labour.
CERTIFICATES: List of certificates usual for Australian ports. See "Melbourne".
CUSTOMS ALLOWANCES: 0.5 lb. of tobacco or 200 cigarettes, to be opened. 1 only 26 ounce bottle, to be opened.
CARGO GEAR: To be in accordance with Commonwealth Navigation (Loading and Unloading Safety Measures) Regulations. See "Melbourne".
REPATRIATION: Facilities for effecting crew changes and necessary repatriations can be arranged. Prior notice required.
AIRPORT: Airport approximately 3 km. from port and is regularly served by 2 internal airlines. Daily flights to Brisbane with connections with overseas airlines.
TIME: See "General" before first port.
HOLIDAYS: Only 4 official holidays in year when it is *not* possible to arrange cargo work: Christmas Day; Anzac Day (25th April); Labour Day (1st Monday in May); Good Friday.
POLICE/AMBULANCE/FIRE: Telephone number of these services in cases of emergency only is "000" and ask to be connected to the required service. Emergency call to Hospital is 72.1033.
TELEPHONES: Public phones available on wharf.
SERVICES: No tank cleaning facilities. No slop facilities.
SHORE LEAVE: Crew members allowed ashore provided vaccination certificates in order.
IDENTIFICATION CARDS: See "Melbourne".
GARBAGE DISPOSAL: A collection service is available. Drums and skips are provided alongside. Charges are A$63 per collection, A$47 to burn garbage and A$21 for dumping.
WASTE OIL DISPOSAL: A collection service is available for moderate quantities using tanker trucks. This is arranged by the ships agent.
SEAMAN'S CLUBS: The Missions to Seaman, Flinders Parade, Gladstone, Qld. 4680, Australia. Tel: (079) 722282.

Facilities available include shop, international telephone service, church services, mini-bus collection, postage facilities and games made available at the Club.
CURRENCY: Australian Dollar (A$).
DELAYS: No unusual delays other than berth availability or unusual tidal conditions.
GENERAL: No cranes on wharves. Mobile cranes available for hire. No lighterage facilities. Electricity available to ships. Passengers not normally embarked or disembarked this port, as no facilities for them.
DEVELOPMENTS: Investigations into the deepening of harbour channels are being carried out to enable vessels of 200,000 d.w.t., to be fully loaded.
Tide/Draft Table: The Harbour Master at Gladstone has issued a tide/draft table following the completion of the dredging programme. A copy of the full table is available from Agent's office, but we quote below examples of drafts extracted from the full table:

Tabulated tide height (m.)	*Vessels up to 85,000 d.w.t.* (m.)	*Vessels over 85,000 d.w.t.* (m.)
2.2	16.0	15.5
2.5	16.3	15.8
2.8	16.6	16.1
3.1	16.9	16.4
3.4	17.2	16.7
3.7	17.5	17.0
4.0	17.6	17.1
4.3	17.7	17.2
4.6	17.8	17.3
4.9	18.0	17.5

SHIPMASTER'S REPORT: August 1995.
Charts: AUS 244, 245 and 246.
Approach: No prominent features until fairly close when Rodds Peninsular with Bray Hills is conspicuous.

A new buoy has been placed in position Lat. 23° 53.3' S., Long. 151° 31' E. (Fl.W.3 sec.), surrounded by very small spar buoys.

New Fairway Beacon (with Racon) is shortly to be constructed in this position. Existing Fairway Buoy will then be removed.
Anchorages: Outer anchorage is exposed, although high winds generally only associated with tropical depression to North. The anchorage is about 5 miles N.N.W. of Richards Point (Rodds Peninsular), outside port limits.

Inner Anchorage: South Trees Anchorage, off Boyne Wharf or Quoin Anchorage, 1 mile North of South Trees Wharf for small vessels. Inner anchorages are subject to strong tidal streams.
Pilots: VHF range good, contact as per ALRS. Pilot is available 24 hours, but large vessels are dependent on tide.

Pilot boards from a fast cutter, a position indicated on AUS 246. Transit time to LPG Berth at Auckland Point is about 1.5 hours.

AMSA are conducting trial with Gladstone Pilots for 'Bridge Team Pilotage Management'.

If bunkering at South Trees Anchorage before or after berthing, Pilot generally stays onboard vessel and requires a cabin.
Channel: Good synchronised lights which are very conspicuous. The channel is dredged to 15.7 m. datum. Strong tidal currents may be encountered.
Tugs: 4 tugs available, 3×40 ton and 1×20 ton B.P. The tugs are stationed between Auckland Point and Barney Point. Tug's lines are used.
Berth: LPG into pressure storage is handled at Auckland Point on Eastern end of berth, where the flat quay is used for general and containers. The Western end is for bulk grain loading. The depth is 11.5 m. datum. Vessels always berth starboard side to.

The quay is of concrete construction. Gangway can be landed without difficulty. Fresh water is available. Tie up is 3+2 each end. A lineboat is available to assist with mooring lines.
Terminal: Boral Gas: 4×500 cu.m. Pressure tanks are located 1,000 m. from the quay. Discharge rate is 210 tonnes/hr. at 9 Bar B.P. for Propane.

The terminal works with Brisbane in taking in extra product by road and rail cars.

The cargo is discharged by shore hoses of 6 in. 300 ASA into a 10 in. line to the tanks. Terminal require at minimum of −25°C for main discharge, ideally at ambient. Road and rail tankers can only be loaded at +6°C. Hence temperature restriction. First 250 tonnes and last 100 tonnes required at minimum of +2°C to fill one shore tank with hot product for immediate delivery to rail tankers. We delivered at +1.5°C.

Shore figures given on completion, which is unusual for East Coast.

Terminal requires ship's walkie-talkie.

Watchman in hut near gangway and also at roadway gate.
Documents: Customs/Immigration documentation as Townsville.
Bunkers: Available by barge at Inner Anchorage (South Trees), but LPG ships not allowed to bunker whilst vessel alongside connected.

A modern and efficient barge can provide all grades throughout 24 hours.

The anchorage has strong tidal currents.
Technical Services: Poor. We tried for radar service, but not available. Best to use Brisbane, Townsville or Cairns.
Chandler: Nautilus: Tel: 079 721044. Fax: 079 721889.
Telephone: Coin telephone near silos, short walk from berth. Card phones in town, about 20 minutes walk away.
Airport: About 3.5 miles away along Dawson Highway. Frequent domestic flights to Brisbane.

AUTHORITY: Gladstone Port Authority, P.O.Box 259, Yarroon Street, Gladstone, Queensland 4680. Australia. *Tel:* (079) 761333. *FAX:* (079) 723045. *Contact:* B.J. Jordan, Administration Manager.

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., P.O.Box 5010, 136 Goondoon Street, Gladstone, Queensland 4680. Tel. (079) 722088. Telex: 49431 PATSLE. Fax: (079) 724823. Seagram Code: 4GPATSLE

GOVE, N.T.: 12.12 S. 136.40 E. (See Plan)

DOCUMENTS:

2 Crew Lists Form M. & S. 11 (3 at outports).
5 Passenger Lists, Forms M. 308 and 309.
1 Loading Ports List, Form B921.
3 Barber's stocks and stock in ship's shops and canteens, (Form 5) continuation of the back, Form 5 AA.
1 List of Customable Articles, Form 5 (crew).
3 Return of Goods of Barber's stock, etc., Form 5 AA.
1 Stores List, Form 42 A.
1 Annual Declaration, Form QA76.
2 Primary Health Report, Form Q360.
1 Clearance from Last Port.
Ship's Log.
1 Derat Certificate.
1 Light Dues if paid previously.

PILOTAGE: Compulsory for vessels proceeding to Nabalco Facilities. The Pilot will board at the anchorage position.

Coastal Pilotage: Pilotage services between Gove and Darwin via Clarence Strait, or to Torres Strait, are conducted by pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Queensland Coast and Torres Strait Pilot Service. See "Torres Strait" for details.

ANCHORAGE: Melville Bay affords good holding ground, the bottom being either sand or mud and the depths ranging up to 48 ft. (14.64 m.) West of Dundas Point. Vessels awaiting a berth should anchor approximately 1.5 miles (2.41 km.) Westward of West Woody Island close by the Fairway Buoy. The Quarantine Officer and Customs Officer normally clear vessels alongside the berth, but may on occasions board at the anchorage.

A vessel is considered to be an "arrived ship" for purposes of laytime when she enters the Quarantine Anchorage.

We quote below Australian Notice to Mariners No. 510/1978.

Gove Harbour – Quarantine Anchorage Altered:

(a) A pecked line is to be inserted joining the following positions:
    From Lat. 12° 11.12′ S., Long. 136° 37.5′ E. on the Harbour Limit to
        Lat. 12° 09.58′ S., Long. 136° 37.5′ E. thence to
        Lat. 12° 09.58′ S., Long. 136° 39.6′ E. and thence to
        Lat. 12° 11.12′ S., Long. 136° 39.6′ E. on the Harbour Limit
    On Plan, from Long. 136° 39.6′ E. in the N. border to
        Lat. 12° 11.12′ S., Long. 136° 39.6′ E. on the Harbour Limit.
(b) The Legend *Quarantine Anchorage* is to be inserted within the area of 1(a).

RESTRICTIONS: Approach Channel to bulk cargo and tanker jetties has minimum depth 13.8 m.

Approach Channel to general cargo jetty has minimum depth 11.59 m.

PRATIQUE: The Port of Gove has been declared Port of First Entry for health clearance of vessels arriving from overseas.

Vessels will usually be cleared alongside the berth.

If Pratique is required, vessel must provide a Primary Health Report.

Radio Pratique may be granted if answers to the "Australian Quarantine Questionnaire" are received 12-24 hours prior to vessel's arrival. See "General – Health" before first port.

RADIO: *Notice of Arrival:* Prior to arrival, vessels are requested to radio the following information:

(i) For all vessels:
    (a) ETA Gove – 72 hours out
                 – 48 hours out
                 – 24 hours out
    (b) Anticipated draft forward and aft.
(ii) For bulk carriers, anticipated hatch loading plan, loading sequence and quantity required in each pour.
    (c) For petroleum tankers, approximate quantities to be discharged and grade of product desired for first discharge, and order of unloading various grades if more than one grade is carried.

Radio messages should be addressed to "Gobaux", Darwin. The call sign of the radio station at Darwin is VID. Radio messages will be passed by teleprinter to Gove.

Cable messages for Nabalco should be addressed to "8 D Gobaux" via Darwin Radio (VID).

VHF: The Nabalco Harbour Master's Office maintains a listening watch on Channel 16 during office hours. VHF frequencies used are 16, 12 and 6. Call sign "Gove Harbour".

TUGS: There are 3 work boats available for hire in the port, max. 41 tonnes bollard pull. Tug's lines are used in most instances, but no extra charge is made.

BERTHING: *Bulk Cargo Wharf:* The bulk cargo wharf runs in a N.W./S.E. direction and bears 189° true 2,440 m. (8,000 ft.) from West Woody Island triangulation point. The wharf has a 'T' head which is connected to the shore by an access bridge 946 m. (3,120 ft.) long and 3.05 m. (10 ft.) wide.

The Northern branch of the wharf head constitutes the bauxite/alumina berth and the Southern branch the bulk liquids berth.

The bauxite/alumina berth is mounted with a travelling, luffing shiploader with telescopic trimming spout having an outreach of 31 m. (101 ft. 6 in.) from the fender line. The distance of travel along the berth is 164.2 m. (540 ft.). The clearance beneath the spout at maximum elevation for loading is 15.0 m. above chart datum (LWOST) at berth side.

The shiploader has a designed capacity of 2,000 tonnes/p.h. for bauxite and for alumina.

The shiploader is connected by a belt conveyor system to the bauxite stockpiles and to the alumina silos, 3,202 m. (10,500 ft.) and 2,592 m. (8,500 ft.) distant respectively from the wharf head.

The bulk liquids berth consists basically of mooring dolphins and fenders associated with a pipe bridge support. Three pipe-lines are provided namely:

(1) 46 cm. (18 in.) diameter for bunker fuel oil.
(2) 30 cm. (12 in.) diameter for caustic soda.
(3) 25.4 cm. (10 in.) diameter for diesoleum, petroleum and aviation kerosene.

During the tanker discharging operations, connection between ship and shore is provided by 20.3 cm. (8 in.) diameter flexible hoses with BS Table "F" 8-hole fittings at each end.

If other types of fittings are required to effect discharge, arrangements should be made by the tanker vessel to provide such items.

The length of each pipe-line is approximately 1,982 m. (6,500 ft.) covering the distance from bulk liquids berth to shore tank farm.

A depth of water of 13.9 m. (45 ft. 08 in.) below chart datum (at low water ordinary Spring tide) is available at both the alumina/bauxite and bulk liquid berths.

This will allow simultaneous occupancy by a tanker and bulk carrier, each of up to approximately 60,000 d.w.t., under ordinary conditions. A minimum clearance under the keel of 10% of the draft is required for berthing and unberthing.

General Cargo Wharf: This wharf extends in a S.E. direction from the Eastern side of the land strip leading to Dundas Point. The wharf bears 315° (T) × 1,342 m. (4,400 ft.) from Half Tide Rock and is a substantial structure 94 m. (310 ft.) long by 27.89 m. (91 ft. 6 in.) wide connected to the shore by an access jetty 287.2 m. (950 ft.) long and 5.49 m. (18 ft.) wide.

The wharf has been designed for vessels of max. length of 165 m. (541 ft.) and of up to 20,000 d.w.t. to berth at each side under normal conditions. Vessels of up to 30,000 tons can be accommodated under suitable tidal conditions.

The depth of water alongside is 10.0 m. (32.8 ft.) below chart datum (LWOST) on the S.W. side and 11.5 m. (37.7 ft.) on the N.E. side.

Fisherman's and Light Cargo Wharf: This wharf is located near Harbour Island in Melville Bay. It is administered by V. B. Perkins Pty. Ltd. Total wharf length is 48.0 m. and width 18 m. Max. wharf loading by vehicles 4.5 tonnes/sq.m. The minimum available depth alongside is 5.0 m.

Ramps: 2 Landing barge ramps accommodating landing barges up to 1,500 g.r.t. A 28 tonne SWL fork lift is available for cargo operations.

CRANES: 8 mobile cranes, capacities between 5 tonnes and 90 tonnes.

STEVEDORES: No local stevedoring companies.

MEDICAL: Medical services and a large modern hospital with comprehensive theatre, medical and surgical facilities, at Nhulunbuy, 9 miles from the port.

TANKERS: See "Berthing".

DENSITY: 1020 – 1022.

FRESH WATER: Available at all berths.

FUEL: Diesel available at Fisherman's and Light Cargo Wharf only.

REPAIRS: Limited facilities, minor repairs only.

SURVEYORS: Local Pilots conduct draft, on-hire and bunker surveys, however, Lloyd's Surveyor available from Darwin or Cairns.

HATCHES: Opening and closing carried out by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 litre of spirits per crew member.

REPATRIATION: Facilities exist for effecting crew changes and repatriation.

AIRPORT: Gove is served by commercial flights to and from Darwin on 5 days a week and by commercial flights several times a week from Brisbane and Sydney via Cairns. Services to other parts of Australia and the rest of the world are frequent from Darwin.

TIME: See "General" before first port.

SHORE LEAVE: After clearing inwards crew members may proceed ashore with special permission.

IDENTIFICATION CARDS: May be required.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar (A$).

REGULATIONS: It is forbidden to take firearms, alcoholic beverages and foodstuffs ashore.

AUTHORITY: Nabalco Pty. Limited, P.O.Box 21, Nhulunbuy, NT 0881, Australia. *Tel:* (089) 87 5211. *Telex:* 85045 (Port Telex). *FAX:* (089) 872-356. *Cables:* 8D Gobaux. *Contact:* Captain John Preston, Harbour Master. Clive Spencer, Harbour Pilot.

Gove Port Office. *Tel:* (089) 875418. *FAX:* (089) 875410.

AGENT: Agency undertaken by Nabalco Pty. Limited.

GRIFFIN VENTURE: 21.13 S. 114.39 E. (See Plan)

LOCATION: The "Griffin Venture" is located in position Lat. 21° 13′ 24″ S., Long. 114° 38′ 40.4″ E.

The "Griffin Venture" Floating Production Storage and Offtake Facility (FPSO) operates in the Griffin, Scindian and Chinook Oil Fields in the Indian Ocean.

The oilfields have been developed by Joint Venturers which operate the Facility through the agency of BHP Petroleum Pty. Ltd.

The "Griffin Venture" is a purpose built FPSO with process facilities and a metering system to enable stabilisation of crude oil and delivery to Offtake Vessels. The "Griffin Venture" has around 120,000 kl. total crude oil storage capacity (approximately 750,000 bbls. or 90,000 metric tonnes). Oil is delivered through a 16 in. floating hose system at a maximum rate of 4,000 kl./hr. (25,000 bbls./hr.). Allowing for start-up, slow-down and ballasting requirements, 103,290 kl. (approximately 650,000 bbls.) will require over 32 hours pumping.

Charts: Australian – AUS. 328, 415, 416, 743.

These charts cover the general area and the site of the Facility.

READINESS: The Notice of Readiness from arriving Offtake Vessels will not be accepted until 3 nautical miles from the Facility, and until they are in all respects ready to load in accordance with the Handbook and the Terminal Conditions.

Notice of Readiness will only be accepted during the hours 0700 to 1600 when prevailing conditions permit safe mooring.

DOCUMENTS:

Health: To comply with the Australian Government health requirements, a Radio Pratique message should reach the Offtake Vessel's Agent no more than 24 hours, and no less than 12 hours before arrival, as per the following instructions. The Offtake Vessel Master should sign and date the message.

Please answer the following questions, indicating "Nil" where necessary, and answer them in order. If answers are not correct, or not in the correct order, it could cause unnecessary delay to your vessel berthing, and any costs incurred to the Operators will be to the Offtake Vessel's account.

Note: Masters or Medical Officers, who wilfully make a false statement in answer to any question, are liable to a fine not exceeding Aus$5,000 or imprisonment for a period not exceeding 2 years.

Question	Answer
1. Name, type and nationality of Offtake Vessel.	
2. Where from and departure date.	
3. Where bound and ETA first port.	
4. Details of any communicable disease or illness or death onboard since sailing.	
5. Are there any animals or plants onboard?	
6. Have you carried livestock in the last 6 months? If Yes: List type, ports visited and cleaning performed since last livestock voyage.	

Optional section (answering this section will facilitate clearance of your vessel when it arrives in port).

If the vessel is entering in ballast:

1. Have you:
   (a) Exchanged ballast water at sea during the voyage and logbook certification of time and co-ordinates when reballasting occurred;
   or
   (b) Certification that the area where ballasting took place is free from toxic dinoflagelates?
   or
2. Is your vessel part of a compliance arrangement for ballast water control accepted by Australian Quarantine and Inspection Services?
3. Will you be discharging ballast whilst in Australian waters? Yes/No

Note: The granting of Pratique to a vessel does not release it from being subject to quarantine. Goods require separate clearance.

Customs and Immigration: Masters should complete the following forms which should be delivered to Customs by the ship's Agents at least 48 hours prior to arrival at the Facility:

Form 1 – Ship's Inward Cargo Report.
Form 2A and Form 2B – Passenger Report (if applicable).
Form 3A and Form 3B – Crew Report.

Masters should endeavour to complete the following forms ready for collection on arrival by Customs Officers, if the Facility is the Offtake Vessel's first Australian destination:

Form 5 – Part One – Ship's Report of Arrival.
– Part Two – Crew Effects Declaration.
Form 42A – Ship's Stores consumed in Australia.
Form QA4 – Shipmaster's Notice (Animals, Hides and Skins) not for importation.
Form QA5 – Shipmaster's Bond regarding animals carried (only if pets onboard).

The Customs Officer in attendance will advise any other documentary requirements, and provide forms if necessary.

Because the "Griffin Venture" is not a designated port, Offtake Vessels should have their Agents apply for Certificates of Permission for Entry to Australia at other than a designated port as required under Section 58 of the Customs Act, 1901 (Commonwealth of Australia).

Customs Authorities have advised that permission will generally be granted. However, Customs Officers retain the right to board Offtake Vessels for inspection at their discretion, and Masters of Offtake Vessels are required to provide accommodation and mess facilities for visiting Customs Officers.

Government Charges: Customs, immigration and health inspections will usually be carried out by one Customs Officer but, at the discretion of Customs Authorities, several Customs Officers may carry out a particular inspection.

Offtake Vessels will be liable for Customs Fees charged per person per hour. If Customs Officers elect to attend the Offtake Vessel, it will be for the duration of the stay of the vessel at the Facility.

Light Dues and Oil Pollution Levies: The Department of Minerals and Energy, Western Australia, advises that vessel offtaking from the Facility is not required to pay light dues or oil pollution levies.

PILOTAGE: Pilotage is compulsory. The Facility Master, or an appropriately qualified nominee of the Master, will transfer to the Offtake Vessel when it reaches a distance of 3 nautical miles from the Facility, and will act as Pilot during approach and mooring. Two Berthing Superintendents from the Facility will board with the Master and will remain onboard the Offtake Vessel for the time the vessel is moored, at the discretion of the Facility Master. Suitable accommodation shall be provided for these personnel.

Safe Access: Masters shall provide safe access to and from their vessels at all times in accordance with the SOLAS convention and IMO recommendations.

Failure to comply could incur a delay in berthing or sailing, and all and any costs shall be borne by the Offtake Vessel. Any such delays may prejudice the Offtake Vessel's acceptance in the future at any Facility operated by BHP Petroleum.

ANCHORAGE: See "Approaches".

APPROACHES: The Facility Master will advise by VHF radio final berthing instructions to the Master of the Offtake Vessel.

Anchoring within the Exclusion Zone surrounding the "Griffin Venture" and sub-sea pipeline is not permitted (See "Anchoring" below). If an Offtake Vessel cannot moor on arrival at the Facility and wishes to anchor, the Master of the Facility shall be contacted for information and guidance on this matter.

Offtake Vessels should make every endeavour to arrive with propeller fully submerged and in association with a trim by the stern of not greater than 0.015L. Masters should note that in the event of arrival with excessive trim or too light a draft, berthing may be refused.

Anchoring: The Offtake Vessel shall not anchor in the Exclusion Zone. The Exclusion Zone is centred on the Facility (Lat. 21° 13′ 24″ S., Long. 114° 38′ 40.4″ E.) and extends in a 5 nautical mile radius around it. It also extends 1 nautical mile either side of the sub-sea natural gas pipeline.

The coordinates specifying the pipeline's route are:

Latitude	Longitude
21° 13.4′ S.	114° 38.7′ E.
21° 14.4′ S.	114° 39.2′ E.
21° 28.6′ S.	114° 47.2′ E.
21° 32.2′ S.	114° 49.0′ E.
21° 42.8′ S.	114° 49.4′ E.
21° 45.0′ S.	114° 50.7′ E.

Hazards to Navigation: An unlit wave rider buoy is located at Lat. 21° 13.94′ S., Long. 114° 37.54′ E.

RESTRICTIONS: *Restricted Berthing Hours:* Notice of Readiness will only be accepted during the hours 0700 to 1600 when prevailing weather conditions permit safe mooring.

MAX. SIZE: Offtake Vessels between 25,000 d.w.t. and 150,000 d.w.t. only can be accommodated at the Facility. Maximum displacement tonnage is 175,000 tonnes.

HEALTH: See "Documents".

RADIO/VHF: *Radio Communication with "Griffin Venture":*

"Griffin Venture" has radio communication hours of 0600 to 1800 local time (2030-0830 GMT).

"Griffin Venture" call sign:	VNGP
"Griffin Venture" INMARSAT number for telephone:	873 1545221 872 1545221
"Griffin Venture" INMARSAT number for Fax:	873 1545222/GRIF 872 1545222/GRIF
"Griffin Venture" INMARSAT number for Telex:	583 450300253 582 450300253
"Griffin Venture" VHF:	Channel 72 (continuous).

Advice of Arrival: Incoming Offtake Vessels shall advise BHPP Manager Dampier and the Facility of their ETA 72 hours, 48 hours and 24 hours before intended arrival and give the following information:

Name of vessel and radio call sign.
HF radio telephone frequencies, if so equipped.
INMARSAT telephone, fax and telex numbers and which satellite to use.
Arrival draft and trim.

ETA should be confirmed or varied, as appropriate, 24 hours before arrival.

TUGS: Not available.

Note: Vessels, whilst moored to the "Griffin Venture" will be held in position using a static tow configuration. Offtake vessels are required to maintain engines on standby throughout the period while connected to the "Griffin Venture".

BERTHING: *Standard of Offtake Vessels:* Annex A (See "Annex A") is a sample of the Offtake Vessel Questionnaire which the Operator of the Offtake Vessel shall have completed (including the Foc'sle Plan) and transmitted to the Master of the Offtake Vessel. The Offtake Vessel Operator is obliged to provide answers before being nominated to visit the Facility. It is imperative that if at any time the particulars given in those answers should be seen to be inaccurate or should change in any respect, BHP Petroleum Manager Dampier and Master of the Facility must be notified forthwith in writing. Without prejudice to any other consequence of such inaccuracy or change, failure to so notify and to provide all necessary details relating thereto may cause delay at the Facility.

Visiting Offtake Vessels shall be aware of the Oil Companies' International Marine Forum (OCIMF) publication "Recommendations for Equipment Employed in the Mooring of Ships at Single Point Moorings", and shall be fitted with the appropriate equipment in accordance with these recommendations. Winches or capstans used to handle moorings shall be capable of lifting at least 15 tonnes.

The bow windlass or winch that will be used for mooring shall be capable of picking-up the mooring hawser and chaffing chain which will have a combined weight of not more than 3.2 tonnes. When assessing the capabilities of the windlass/winch, allowance should be made for the efficiency loss due to friction, and change of direction of the mooring messenger line between the bow Panama lead and the windlass/winch. The drum must have a good hauling lead from the Panama lead directed through the chainstopper, in order to retrieve the hawser and chaffing chains. The windlass/winch will have one drum empty capable of accepting a 150 m. x 72 mm. messenger line, on arrival at the Facility.

Under no circumstances shall the warp end be used to heave in the mooring system. A winch drum only is acceptable.

Offtake Vessels shall have manifolds and associated offtake equipment conforming to OCIMF Standards and a manifold derrick or crane rated at 10 tonnes SWL as a minimum.

Given the particular requirements of the Facility, Offtake Vessels should ensure that their mooring arrangements and equipment are checked for suitability, and can comply in all respects with the Terminal requirements before finalisation of charter arrangements and before arrival at a Facility. Failure to comply in all respects with these requirements could result in difficulties and delays at the Facility, all and any costs so incurred will be to the Offtake Vessel Owners' (as defined in the Terminal Conditions) account.

Offtake Vessels shall comply with latest SOLAS and MARPOL conventions and protocols. Tankers found deficient and sub-standard in any safety requirements will be refused berthing and loading.

The inert gas system shall be capable of operating throughout the Offtake Vessel's operations at the "Griffin Venture" Terminal. The Terminal may check the condition of the tanks on arrival, and throughout the operations. In the event of failure of the system or, when the tank atmospheres depart the SOLAS maximum permissible safe limits, the Offtake Vessel shall be unmoored from the Terminal.

The Owner of the Offtake Vessel or bareboat charterer shall be a party to TOVALOP and have insurance covering liabilities under the International Convention of Civil Liabilities for Oil Pollution Damage 1969; the cargo to be loaded shall be covered by CRISTAL and/or the International Convention on the Establishment of International Fund for Compensation for Oil Pollution Damage 1971. Owner of the Offtake Vessel shall have in place maximum (currently U.S.$700 million) P&I Club Insurance for oil pollution liability.

Offtake Vessels must be covered by a current ITF Certificate or equivalent.

Offtake Vessels will also be required to provide accommodation, where available, for all or any of the following personnel for the duration of the offtake:

2 Berthing Superintendents from the Facility.
Independent Surveyor.
Customs Officer.
Shipping Agent.
Management Representative.

Offtake Vessel Safety Check: On arrival at the Facility, the Offtake Vessel shall be subject to a safety check by the Facility Operator. Annex C is a sample of the Offtake Vessel Safety Check List used to perform the safety check, and is based on the Ship/Shore Safety Check List from the International Safety Guide for Oil Tankers and Terminals. The Terminal Conditions (Annex B) (Not reproduced) provide that the Facility may refuse to allow the Offtake Vessel to berth or may order the Offtake Vessel away from the berth, or otherwise suspend or terminate provision or performance of services to the Offtake Vessel, if at any time the Offtake Vessel fails to meet the relevant safety standards.

Drug and Alcohol Policy: It is a Terminal requirement that all Offtake Vessels have in place, and comply with, a Drug and Alcohol Policy that accords to the OCIMF guidelines. Such action in not complying with this requirement could result in the Offtake Vessel being rejected for further liftings from any Facility operated by BHP Petroleum in the future.

It is a BHP Petroleum requirement that under no circumstances shall any alcohol or drugs be consumed by any BHP Petroleum personnel for any reason at any time. BHP Petroleum requests that Offtake Vessel personnel also observe and respect this operating requirement whilst the Offtake Vessel is made fast to the Facility.

Mooring: Neither tug nor supply boat services are available. The Pilot, Berthing Superintendents and equipment will be transferred to the Offtake Vessel by the Facility workboat (except in inclement weather conditions – See below). The Pilot will bring the Offtake Vessel to a position astern of the Facility, when the mooring hawser will be made fast.

The mooring operations are the responsibility of the crew of the Offtake Vessel, acting under the direction of one of the Berthing Superintendents from the Facility.

Berthing in Inclement Weather Conditions: Transfer of Personnel: Due to the locality of the "Griffin Venture", there will be occasions when the prevailing weather conditions are in excess of the operating criteria of the Facility's workboat, but within the parameters of normal tanker loading operations, providing berthing can be executed and the floating hose connected.

After consultation with the Master of the Offtake Vessel, the Pilot, Berthing Superintendent, Surveyors, Agent and equipment may be transferred to the Offtake Vessel by public transport helicopter winching.

BHP Petroleum has reviewed the ICS Guide to Helicopter Ship Operations for helicopter "land on" operations as an option for "Griffin Venture" Offtake Vessel helicopter personnel and equipment transfers. Because it would not be possible to verify deck strengths, obstruction free zones and deck crew training/proficiency, to the extent necessary to meet International Civil Aviation and BHPP's own standards for helicopter operations, public transport helicopter winching shall be the preferred method, when transfer by boat is not possible. These operations shall only be performed by twin engine IFR, out-of-ground effect single engine hover capability helicopters during daylight conditions.

Public transport helicopter winching will be under the direct control of the helicopter crew, and in accordance with the Australian Civil Aviation Authority approved procedures, which have been reviewed and accepted by BHP Petroleum.

During public transport helicopter winching on the Offtake Vessel, at least 2 persons shall wear fire protective suits to attend firefighting equipment and to act as a rescue party. The bridge is to be manned at all times during winching operations.

Mooring Hawser: After the personnel and equipment have been transferred by helicopter, the Pilot will position the Offtake Vessel approximately 150 m. – 200 m. astern of the Facility. Pneumatic line throwing equipment will be used to establish initial contact using a 5 mm. messenger line.

The mooring hawser will be transferred to the Offtake Vessel by BHP Petroleum personnel according to BHP Petroleum procedures and under the direction of the Berthing Superintendent.

Engines on Stand-By: For the complete period the Offtake Vessel is made fast, it shall be ready to respond to requests for engine movements immediately. The Offtake Vessel may be required to run its main engines astern for extended periods of time on low engine revolutions. Offtake Vessels shall be required to move astern to prevent creeping up on the Facility of jackknifing (as necessary). All engine movements should be made with due care.

If for any reason there is a main engine failure, the Facility Master shall be informed immediately.

Deballasting Operations: The Offtake Vessel shall not commence deballasting operations without prior consultation with, and the agreement from, the Facility Master.

Watch: A qualified Officer(s) with the authority to manoeuvre the main engines shall keep a Bridge Watch continually for the period the Offtake Vessel is made fast. Reliable radio communications shall be established and maintained at all times between the Berthing Superintendent on the bow and the bridge. All communications shall be in English and the qualified officer shall be fluent in the English language.

LOADING: *Connection of Hose:* After the mooring hawser has been made fast, the workboat will pull the floating hose to the Offtake Vessel (Except in inclement weather). The hose will be connected to the port side manifold of the Offtake Vessel. The hose end will then be lifted onboard using the Offtake Vessel's manifold derrick or crane.

The connection of the hose is the responsibility of the Offtake Vessel's crew, under the guidance of the Berthing Superintendent from the Facility.

The hose end connection is a 16 in. Camlock quick-release coupling and will fit standard 16 in. ANSI 150 pound flanges.

The floating hose is fitted with a self-sealing breakaway coupling.

Manifold reducers to suit the above should be supplied by the Offtake Vessel.

Control of the Transfer Operations: The Facility will control the transfer of oil in a manner and at a rate mutually agreed between the Facility and the Master of the Offtake Vessel. It will be the responsibility of the Offtake Vessel Officers and personnel to monitor the loading of oil into their cargo tanks and the discharge of their ballast.

Suspension of the Transfer: The Facility will halt transfer operations when:

(a) Radio communication between the Facility and the Offtake Vessel is lost.
(b) Instructed to by the Offtake Vessel.
(c) An emergency situation concerning the Facility or floating hose occurs.
(d) Helicopter operations to the Facility at the discretion of Master or Field Superintendent.
(e) Weather conditions exceed safety limits.

Action to be taken in the Event of an Emergency: The "Griffin Venture" has in place an Emergency Response Plan which is coordinated with the Dampier Operations Base. Through this plan, shore based emergency support can be activated and controlled.

As stated in the Terminal Conditions, the Offtake Vessel Master is responsible for the Offtake Vessel at all times. In an emergency situation on the Facility, the Facility Master will inform the Offtake Vessel Master of the situation and advise of actions the Offtake Vessel should take. If an emergency situation arises on the Offtake Vessel, the vessel's Master shall immediately inform the Facility of the situation and the actions being taken.

Griffin Crude:

Density at 15°C	– 0.7583
API Gravity	– 55.0
Viscosity at 20°C	– 1.24
Pour Point °C	– –48.0
Reid Vapour Pressure	– 37.25 kPa
Temperature range of the crude oil °C	– 26-35

DEPARTURE: *Departure after Berthing and Early Departure Procedures:* At the completion of the transfer of cargo, approximately 7 hours are required for the finalisation of figures, and the completion of all documentation before the Offtake Vessel is cleared for sailing. However, an Early Departure Procedure is preferred for operational and safety reasons, and is as follows.

The quantity of cargo loaded is computed initially by the Operator using oil sales metered volume and a provisional density figure. The loaded volume ("gross cargo") cargo so determined will be recorded on the Bill of Lading in the "Approximate Quantity Report" section. The floating hose will be disconnected, and the mooring hawser slipped. The Surveyor will complete his figures on the Offtake Vessel and then return to the Facility with the Berthing Superintendents and the Agent. The Offtake Vessel is then released from any further obligations at the Terminal and may commence its voyage.

After departure of the vessel, a final density, sediment and water content of the cargo will be determined by the Operator. After this determination, the Operator will inform the Offtake Vessel of gross and net cargo (gross cargo less base sediment and water at 15°C) quantity loaded. The net quantity will be introduced on the Bill of Lading in the designated "Precise Quantity Report" section and signed for by the vessel's Agent and Operator.

MEDICAL: Medical and dental services are not available at the Facility. In emergencies, medical evacuation to Karratha can be arranged, which may take 4 hours.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: Repairs are not permitted whilst an Offtake Vessel is moored to the Facility. Under no circumstances are the main engines to be disabled for any period of time (See "Berthing – Engines on Stand-By").

REPATRIATION: Crew changes are not permitted.

TIME: GMT plus 8 hours.

SHORE LEAVE: Not possible.

GENERAL: *Weather:* The wet season is during the Summer months (October – March), when the prevailing winds will be in the South – South West quadrant.

During the Summer months, the North West Shelf is subject to occasional cyclones. In January and February in particular, weather and sea state conditions may prevent mooring or loading for periods of up to a few days.

During the Winter months (June – August), the prevailing winds will be in the South – South East quadrant. There are two transitional periods, April/May and September, when neither conditions are prominent.

Inclement Weather Mooring/Unmooring: The weather conditions and forecasts are closely monitored before the arrival of the Offtake Vessel and during the actual offtake. In the event of deteriorating weather conditions or the approach of a cyclone, mooring may be delayed or if the Offtake Vessel is already moored, shut-down operations will be implemented in a timely manner and the Offtake Vessel unmoored.

The recommended criteria for when Offtake Vessels should be unmoored is:

(i) Three occurences of a peak mooring hawser tension greater than 150 tonnes force within one hour.

(ii) A single occurence of a peak mooring hawser tension greater than 200 tonnes force.

Fishing: No fishing shall be permitted from the Offtake Vessel within the Exclusion Zone.

Supplies and Services: The remote, deep-sea location of the Facility severely limits the provision of services. Offtake Vessels should ensure that they carry supplies adequate for a return journey.

Stores: Not available.

Dirty Ballast, Slops or Refuse: Cannot be accepted at the Facility, and under no circumstances can dirty ballast, slops or refuse be discharged to the sea.

Firefighting: The Facility has only firefighting equiment required for its own purposes. It can give no aid to Offtake Vessels in the event of fire.

Pollution Control: The "Griffin Venture" holds a small quantity of dispersant for pollution control which can be dispensed from the workboat or, subject to call-out delay, from a helicopter, should this be necessary.

Without derogating from the Terminal Conditions, liability for any pollution caused by oil, which has passed the Offtake Vessel's permanent hose connection, will be for the account of, and recoverable from, the Offtake Vessel Owners (as defined in the Terminal Conditions).

Offtake Vessel shall comply fully with all relevant provisions of the MARPOL Convention.

Visitors to the Facility: Access to the Facility is by a helicopter flight from Karratha to the Facility. Because of the limited capacity of scheduled flights, the difficulties in arranging extra flights and the severe accommodation constraints onboard the Facility, the attendance of visitors is not normally possible.

Department of Transport officers, buyers' representatives and any others intending to visit, should seek permission of the Operations Manager at least 4 days before scheduled arrival of the Offtake Vessel. Earlier advice would be appreciated. Should permission be granted, BHP Petroleum will be requiring full cost recovery in relation to the costs to BHP Petroleum in transporting visitors to the Facility.

ANNEX "A": Offtake Vessel Questionnaire.

To: BHP Petroleum, Trading & Marketing
Attention: Operations Officer – Western Australia
Fax No.: (03) 654 1723
From: ....
Date: ....

The following vessel details are required prior to acceptance to lift from the "Jabiru Venture", "Challis Venture", "Skua Venture" or "Griffin Venture" Floating Production Storage and Offtake Facilities.

Notes:

1. A legible copy of the foc'sle deck arrangement plan must be supplied showing the proposed lead from the Panama fairlead to the winch drum.
   The plan shall be signed, stamped with the company name and dated to acknowledge that the plan is accurate and that all equipment shown is in service.
2. For Yes or No answers, tick the box that applies.
3. The completed Questionnaire and the foc'sle plan must be sent to the Master of the Offtake Vessel.

Section 1.0 General Vessel Details

1. Name of Vessel: ....
2. Previous Names, if any: ....
3. Port of Registry and/or Flag: ....
4. Name of Owner: ....
5. Registered Address: ....
6. Nationality of Officers and Crew: ....
7. Vessel Classification Society / classed as: ....
8. Year of build: ....
9. Type of vessel: Crude Oil Tanker, Product Oil Tanker, Oil/Bulk/Ore, Bulk/Oil Carrier, etc. ....
   If the vessel is an Oil/Bulk/Ore or Bulk/Oil Carrier, answer questions 9.1 and 9.2.
   9.1 What were the last three cargoes? ....
   ....
   9.2 Are the following personnel familiar with oil carrying operations?

Master	Yes ☐ No ☐
1st Mate	Yes ☐ No ☐
2nd Mate	Yes ☐ No ☐
Chief Engineer	Yes ☐ No ☐
Second Engineer	Yes ☐ No ☐

9.3 Do the following personnel who are familiar with oil carrying operations have the appropriate endorsements to their certificates?

Master	Yes ☐ No ☐
1st Mate	Yes ☐ No ☐
2nd Mate	Yes ☐ No ☐
Chief Engineer	Yes ☐ No ☐
Second Engineer	Yes ☐ No ☐

9.4 Is all equipment used on deck intrinsically safe in preventing ignition sources? Yes ☐ No ☐
9.5 Is there a permit-to-work system in place? Yes ☐ No ☐
9.6 Are there No Smoking regulations in place? Yes ☐ No ☐
9.7 Are there at least two certified personnel onboard to undertake Crude Oil Washing operations? Yes ☐ No ☐

10. Call sign: ....
11. INMARSAT No.: ....
12. Length overall (m.): ....
13. Breadth (m.): ....
14. Distance, bow to manifold (m.): ....
15. Distance, ship side to manifold (m.): ....
16. Diameter of manifold (mm.): ....
17. Diameters of available manifold reducers (mm.): ....
18. Does manifold/associated equipment comply with the latest edition of OCIMF's "Standards for Oil Tanker Manifolds and Associated Equipment"? Yes ☐ No ☐
    If No, what does not comply ....
19. Safe working load of manifold crane/derrick: ....
20. Are the vessel's main engines capable of being run astern for prolonged periods of time at low engine revolutions? Yes ☐ No ☐
21. Summer/Tropical/Winter deadweight tonnes: ....
22. Cargo capacity at 98% full: ....
23. Maximum loading rate (cu.m./hr.): ....
24. Arrival drafts (m.): Forward .... Aft: ....
    (For trim calculation purposes)
25. Has vessel Segregated Ballast Tanks (SBT)? Yes ☐ No ☐
26. Has vessel Clean Ballast Tanks (CBT)? Yes ☐ No ☐
    If Yes, complete 26.1 and 26.2 Yes ☐ No ☐
    26.1 Does the vessel monitor ballast discharges from CBT using the oil in water monitor that complies with the latest IMO (MARPOL) regulations?
    26.2 Can vessel load and deballast simultaneously with two valve separation? Yes ☐ No ☐
27. Has vessel a Panama lead on the foc'sle head for acceptance of the mooring hawser? Yes ☐ No ☐
28. Dimensions of the forward Panama lead that shall be used for the mooring hawser. ....(mm.)
29. Has vessel a chain stopper that complies with the latest edition of OCIMF's "Recommendations for Equipment employed in the Mooring of Ships at a Single Point Mooring"? Yes ☐ No ☐
30. Can chain stopper accept 76 mm. diameter chain? Yes ☐ No ☐
31. Distance, Panama lead to chain stopper (m.): ....
32. What is the lifting capability of the Mooring Winch? ....
33. Does the lead of the mooring hawser allow it to be hauled from the Panama lead via the chain stopper onto an empty drum? (NOT the warping drum end): Yes ☐ No ☐
34. Do the Senior Personnel speak English? Yes ☐ No ☐
35. Does the vessel comply with the requirements of the International Transport Federation (ITF) Agreement? Yes ☐ No ☐
36. Does the vessel have in place a Drug and Alcohol Policy complying with (as a minimum) the statement issued by the latest edition of the OCIMF's Guidelines for the Control of Drugs and Alcohol Onboard Ship? Yes ☐ No ☐
37. Vessel's last port of call? ....
38. Is the vessel a participating vessel in Tanker Owners Voluntary Agreement concerning Liability for Pollution (TOVALOP)? Yes ☐ No ☐
39. Protection and Indemnity (P&I) Club insuring the vessel? ....
40. What is the Pollution Liability Insurance limit? ....
41. At which port may the Vessel be inspected by BHP Petroleum's representative?
42. Has the vessel BHP Petroleum Berthing and Terminal Handbook(s) Onboard? Yes ☐ No ☐
    If Yes for what Facilities and what revision numbers?

Facility	Revision number
....	....

43. Does the vessel operate a management system certified to ISO 9002 or equivalent? Yes ☐ No ☐
44. Does the vessel have a dedicated helicopter winching area? Yes ☐ No ☐
    If Yes, complete Section 2.0 and Section 3.0.
    If No, complete Section 3.0.

Section 2.0 Public Transport Helicopter Winching Details

1. Where is the winching area located?
   (a) Bow/Forward/Midships/Aft/Poop Deck
   (b) Port/Starboard/Centre
2. What is the size of the winching area? (Refer to Plan (See "Plan Section"))
   (a) What is the diameter of the Clear Zone?: (m.)
   (b) What is the diameter of the Intermediate Zone?: (m.)
   (c) What is the diameter of the Manoeuvring Zone?: (m.)

3. Are the Clear Zone and the Manoeuvring Zone circles marked and is "Winch only" marked?: Yes ☐ No ☐
   If Yes, what are the:
   Circle Diameter (m.) ....
   Circle Colour ....
   Colour of the "Winch only" letters ....
   If No, what is marked? ....
4. Obstructions (Refer to Plan (See "Plan Section"))
   (a) Plot all obstructions within the Manoeuvring Zone on Plan (See "Winching Area Diagram" in "Plan Section"), and state their heights.
   (b) Are obstructions in the Manoeuvring Zone marked with bright contrasting colours? Yes ☐ No ☐
5. Firefighting Equipment:
   Is the following firefighting equipment or its equivalent available for all helicopter operations?
   (a) At least 2 dry powder extinguishers with aggregate capacity of not less than 45 kg. Yes ☐ No ☐
   (b) Foam application system (fixed or portable) capable of delivering a foam solution at a rate of 6 litres per minute for each square metre of Clear Zone with sufficient foam compound to enable the rate to be maintained for at least 5 minutes. Yes ☐ No ☐
   (c) Carbon dioxide (CO2) extinguishers with an aggregate capacity of not less than 18 kg. Yes ☐ No ☐
   (d) Deck water system capable of delivering at least 2 jets of water to any part of the helicopter operating area. Yes ☐ No ☐
   (e) At least 2 fire hose nozzles of the dual purpose type. Yes ☐ No ☐
   (f) Fire resistant blankets and gloves. Yes ☐ No ☐
   (g) At least 2 fire protective suits. Yes ☐ No ☐
   (h) Is all firefighting equipment inspected, tested and in serviceable condition? Yes ☐ No ☐
6. Rescue and Medical Equipment:
   Is the following rescue and medical equipment in serviceable condition close to the helicopter operating area?
   (a) Large axe. Yes ☐ No ☐
   (b) Crowbar. Yes ☐ No ☐
   (c) Wire Cutters (Bolt Cutters). Yes ☐ No ☐
   (d) First aid equipment. Yes ☐ No ☐
7. Is the following communication equipment available for all helicopter operations?
   (a) Marine VHF FM radio capable of transmission and reception on Channel 16 and 2 other simplex working frequencies. Yes ☐ No ☐
   (b) Portable radio transceiver (walkie-talkie) capable of communication between deck and bridge. Yes ☐ No ☐
   (c) VHF AM aeronautical radio 118-136 MHz. Yes ☐ No ☐
   If Yes, specify the authorised frequency. ......MHz.
8. Is the following level of manning available for all helicopter operations?
   (a) Deck party officer-in-charge. Yes ☐ No ☐
   (b) At least one person wearing a fire protective suit and 2 persons to attend firefighting equipment and to act as a rescue party. Yes ☐ No ☐
9. Is the ship's rescue boat or lifeboat capable of immediate lowering or launch? Yes ☐ No ☐
10. Are ship's personnel familiar with shipboard helicopter operations? Yes ☐ No ☐
    If Yes, how many helicopter operations has the vessel handled in the last 12 months? ....
11. Does the vessel have the ICS (International Chamber of Shipping) Guide to Helicopter/Ship Operations Third Edition, May 1989, on board? Yes ☐ No ☐
12. Does the P&I Club insurance in Section 1 Question 40 cover aviation operations? Yes ☐ No ☐

Winching Area Diagram: See "Plan Section".

Section 3.0 Acknowledgement of the Stated Information

All information stated in this questionnaire is accurate at the date of completion shown below:
Signed: ....Date: ....
Position: ....Name: ....
Company: ....

ANNEX B – Terminal Conditions: Not reproduced.

ANNEX C – Offtake Vessel Safety Check List:
Name of the Offtake Vessel?
Name of the FPSO Facility?
Date of arrival:
Time of arrival:

CHECK LIST QUESTIONS REMARKS

1. Is the ship securely moored? Yes ☐ No ☐
2. Is the ship ready to move under its own power? Yes ☐ No ☐
3. Will there be at least four people on duty controlling the operation who speak English and have effective means of communication with each other? Yes ☐ No ☐
4. Is the agreed offtake vessel/FPSO communication system operative? Yes ☐ No ☐
5. Has the offtake vessel a plan for cargo and ballast handling? Yes ☐ No ☐
6. Have the emergency shut-down requirements of the Berthing and Terminal Handbook been understood? Yes ☐ No ☐
7. Are hoses and firefighting equipment on board positioned to cover the cargo deck and manifold and ready for immediate use? Yes ☐ No ☐
8. Are scuppers effectively plugged and drip trays in accordance with OCIMF requirements? Yes ☐ No ☐
9. Are un-used cargo connections blanked? Yes ☐ No ☐
10. Are the sea and overboard discharge valves closed and lashed? Yes ☐ No ☐
11. Are all cargo and bunker lids closed? Yes ☐ No ☐
12. Is the tank venting system away from the cargo deck and is inert gas blanketing being used? Yes ☐ No ☐
13. Are all hand-held torches of an approved intrinsically safe type? Yes ☐ No ☐
14. Are portable VHF/UHF transceivers of an approved, intrinsically safe type? Yes ☐ No ☐
15. Are the ship's main radio transmitter aerials earthed, the VHF on low power and radars switches off? Yes ☐ No ☐
16. Are all electric cables to portable electrical equipment in hazardous zones disconnected and removed from power? Yes ☐ No ☐
17. Are all external doors, windows and portholes in the accommodation leading onto or overlooking the tank deck closed? Yes ☐ No ☐
18. Are air-conditioning intakes which may permit the entry of cargo vapours closed? Yes ☐ No ☐
19. Are the "No Smoking" requirements being observed? Yes ☐ No ☐
20. Are only electric cooking appliances in use in the galley? Yes ☐ No ☐
21. Are naked light requirements being observed? Yes ☐ No ☐
22. Are there sufficient lifeboats for an emergency escape? Yes ☐ No ☐
23. Is the pumproom mechanically ventilated and able to be kept running throughout the offtake operation? Yes ☐ No ☐
24. Have the drug and alcohol requirements of the Berthing and Terminal Handbook been understood? Yes ☐ No ☐

Communication Agreement

The equipment described below shall be utilised as the communications system between the Offtake Vessel and the FPSO throughout the offtake operation:

Equipment Description/model/make	Channel/frequency/number

SHIPMASTER'S REPORT: September 1994.

The "Griffin Venture" is a Floating Production and Storage Unit in position Lat. 21° 13.4′ S., Long. 114° 38.6′ E., about 30 miles from the coast of Western Australia.

Helicopter service is from Dampier, about 100 miles (approximately 1 hour flying time).

Normal production of crude oil is about 80,000 bbls. per day, though this could be increased by opening additional wells. The Terminal also exports gas by pipeline to the shore.

The maximum size of ship accepted by the Terminal has been 150,000 d.w.t. There have been 33 export cargoes loaded at the facility since it's opening in January 1994.

Agents were from Dampier. A representative of the Agency flies out to the "Griffin Venture" and boards before berthing. The Agent remains on board until departure.

Radio Pratique is sent to Agents using standard format. SBT ballast was reduced to half tank level and refilled twice at sea prior to arrival.

Customs can board on arrival at "Griffin Venture", though probably will not attend on a regular basis.

Port entry requirements are as normal for Australian ports. Customs require fax of Crew List and ship's details 48 hours prior to arrival (See Form below).

Port Dues and Marine Oil Pollution Levy are not collected at the facility.

On arrival, contacted "Griffin Venture" on VHF Channel 16 with Channel 72 as working channel. Ships are required to remain at least 5 miles off the facility until instructed to proceed closer for berthing. Ship stopped and drifted – rate of drift about 1 knot in S.E.'ly direction (September).

Berthing is carried out from 0700 hrs. until 1630 hrs.

Berthing Master and 2 assistants (plus Agent, Surveyor (SGS) and Customs) board by launch using combination ladder when ship is about 1 mile astern of the "Griffin Venture". A wave rider buoy is moored about 1 mile S.W. of the facility. It is a small orange buoy with a light, radio aerial and several floats, about 75 m. from it. The facility did not advise the ship of its presence and it is not marked on the charts.

Berthing is carried out as for normal SBM practice. The messenger line and pick-up rope are wound on to mooring winch drum and the chaffing chain is secured in AKD bracket. Only one chain is available with SWL of 200 tonnes. The pick-up rope is a 72 mm. polyproylene.

Distance off and speed are relayed to the Berthing Master from the assistants on the fo'c'sle and from the stern of the "Griffin Venture". The "Griffin Venture" has a radar gun for speed and distance off measurement.

The hose connection is to the port side and is a 16 in. line with Camlock securing arrangement.

One mooring assistant remains on the fo'c'sle throughout the time the ship is secured to the "Griffin Venture". Communication between the bridge and fo'c'sle is by VHF Channel 72. Engines are required to maintain station astern of the facility and can be required to run tor prolonged periods at dead slow astern (In our case we had the engines running continuously from 1715 hrs. until departure the next day at 1136 hrs.

The second mooring assistant supervises the lifting and securing of the cargo hose.

Normal OBQ inspection is carried out by the surveyor. Cargo density is given on basis of previous lifting from facility. Density advised prior to loading was 0.7571 at 15°C, loading temperature 83.75° F and API 55.3; actual was 0.7596 at 15°C, 83.5°F API 54.70.

No Safety Check List was presented from Terminal, so ship used own from ISGOTT, and mooring assistant countersigned same.

Loading is started as soon after connection as possible. The initial flow from the cargo hose is water and it is preferred that this is loaded into only one tank. The cargo is started at minimum rate of about 1,000 cu.m./hr. until it is established that all is correct onboard, then it is increased to a maximum rate of 4,000 cu.m./hr. Loading rate from the facility varies, depending on the amount of cargo available and the amount of ballasting the facility requires to do during the loading.

Contact is maintained by UHF radio to the "Griffin Venture" Control Room, and also on VHF Channel 72.

Slowing and stopping cargo is almost instantaneous. On completion of loading, a water plug is again pumped through the hose. It is preferred if it can be to the same tank as the initial plug. Terminal did agree to their stopping cargo on their meter, but compared readings with ship as neared completion.

As soon as loading is complete, the hose is disconnected, then the ship unmoors. The 2 mooring assistants carry out the unmooring.

After unmooring, cargo survey is carried out, and on completion of calculations the personnel depart.

EDP is used by the facility. The final density is given as soon as possible after the loading is completed. The ship's figures are used for the Bill of Lading. Due to the swell conditions, a Letter of Protest must be given to the facility for using the ship's figures and for the ship's movement during taking the ullages. Mooring assistant signs same on behalf of facility Master.

No boarding by helicopter is envisaged for this facility. Helicopters to and from facility are arranged as required. Cost varies, but is about A$8,000 to A$10,000.

No stores or shore assistance is available at the facility.

Spares and stores were picked-up by launch at Dampier. Bonded stores could be available, but Customs will consider on case by case basis. All stores and provisions are brought from Fremantle, and at least 48 hours notice is required. Quality and cost of provisions good, and most items are available. Stores are delivered in a small container which must be unpacked and returned to the launch.

Additional charts which were required are AUS.327, AUS.328, AUS.415 and AUS.744.

Weather criterion for mooring and for ships to be released from the facility is wind speed 35 knots and swell height about 3.0 m. There is also a tension monitoring device on the mooring and 3 alarms require the ship to be slipped.

Mooring does also depend on the sea condition and the ability of the "Griffin Venture" to launch her boat.

BHPP have a fixed criterion for unmooring ships and the "Griffin Venture" in the event of a cyclone being in the vicinity. Cyclone season is from October through to April.

GROOTE EYLANDT (Milner Bay), N.T.: 13.52 S. 136.25 E. (See Plan)

LOCATION: Milner Bay is situated on the Northwestern corner of Groote Eylandt which is itself situated in the Southwestern area of the Gulf of Carpentaria.

It is a "Port of First Entry" to Australia. Doctor and Police are in residence on the Eylandt. Customs and Quarantine service available.

PORT LIMITS: The waters in Milner Bay bounded by a line commencing at the HW mark on the N.W. coast of Groote Eylandt in position Lat. 13° 50′ 05″ S., Long. 136° 24′ 29″ E. and proceeding in a 260° 44′ 10″ direction to a point in Lat. 13° 50′ 28″ S., Long. 136° 22′ 03″ E. at the high-water mark on the East coast of Connexion Islet; thence by a line following the contour of the coast of Connexion Islet at the HW mark to "Boulder" in position Lat. 13° 50′ 46″ S., Long. 136° 20′ 14″ E.; thence by a line bearing 151° 30′ to a position Lat. 13° 53′ 34″ S., Long. 136° 21′ 47″ E.; thence by a line bearing 80° 44′ 10″ to a point being Lat. 13° 52′ 54″ S., Long. 136° 25′ 58″ E. thence by a line following the contour of the coast at high-water mark to the point of commencement.

DOCUMENTS:

1 copy of Crew List to be supplied to Agent 48 hours prior to arrival in order to obtain faster clearance.
3 Crew Lists.
5 Passenger Lists.
1 Port of Call List.
3 Stores Lists.
1 Crew's Personal Effects List.
Derat. Certificate.
Clearance from Last Port.

PILOTAGE: Compulsory to Ore Jetty.

There is a Port Superintendent and a Port Officer at Milner Bay who will assist Masters in berthing and departing from the jetty. Approaching Groote Eylandt from the Northwards, vessels should steer to a position 10 miles North of the Northeast Islet, which is rocky on the Northern coast and rises to grassy hills. From the above position, steer to pass about 3 miles North of Chasm Islet until the recommended track on chart AUS. 14 is reached. This track, 221° passes about 1 mile East of Brady Rock (light Gp. Fl. (3) ev. 12 secs.) and continues on this course until Bickerton Island Light (Fl. 5 secs.) bears 250° when the course should be altered to steer for Hand Islet on the recommended track (250°). When 2.3 miles off Hand Islet, alter course to 195° to pass 1.4 miles clear of Connexion Island Light (Fl.2.5 seconds). As soon as the jetty in Milner Bay bears 085°, alter course to 133°. Remain on this course until the jetty bears 070° × 1.7 miles, whereupon the ship should be brought round to steer 270° to pass 0.7 miles to the South of Burley Shoal South Cardinal Buoy Q(6) + LFl. 15 secs. When the jetty bears 058° × 3.7 miles, alter course to 040°, which will take the vessel to the anchorage and pilot boarding ground.

If vessels enter via the Connexion Passage, care must be taken to avoid the 5.4 m. fathom patch off N.W. Bluff and keep clear of the 8.2 m. patch about 3.5 miles N.E. of Connexion Islet.

Coastal Pilotage: Pilotage services between Gove and Darwin via Clarence Strait, or to Torres Strait, are conducted by pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Queensland Coast and Torres Strait Pilot Service. See "Torres Strait" for details.

ANCHORAGES: Good holding ground is found 1.6 miles West of the jetty where there is a good sand bottom free of obstructions with about 20 m. of water. Due to currents up to 3 knots in the area, it is advisable to use at least 6 shackles. Quarantine is granted at this anchorage.

RESTRICTIONS: Vessels berth in daylight but can unberth up till 2100 hrs.

MAX. SIZE: The max. LOA is 223 m. and max. breadth 32.2 m. The max. draft is 12.5 m. Max. airdraft 12.9 m.

HEALTH: Vessels are granted Pratique at the Anchorage 1 mile West of the wharf or at the Jetty.

RADIO: The Port is able to communicate with vessels which are fitted with VHF radio through normal international Maritime Channels and the call sign is "Milner Bay". However, the shore station is only open during office hours unless prior telegraphic arrangement is made. Office hours are 0800 to 1645, Monday to Friday.

It is requested that vessels arriving at any hour of the day should monitor VHF Channel 16 as sometimes attempts are made to contact vessels outside of office hours. Channels available are 16, 67 and 06 (private).

ETA's are requested at least 72, 48 and 24 hours prior to arrival. Telegraphic address is: 8A MILBAY, Telex AA85886 (Answerback 'Milbay'). Telephone No. (089) 874251. Fax: (089) 876359.

VHF: Port – Channels 16, 06 and 67.
Tugs – Channels 16, 12, 06 and 67.

TUGS: 2 tugs available. 1×30 tonne bollard pull and 1×16 tonne bollard pull.

Normally join the vessel 0.75 miles from berth.

Ship's lines taken for berthing.

BERTHING: The ore-loading jetty is situated in approximately Lat. 13° 51.5′ S., Long. 136° 25′ E., with a depth of water alongside of 11.9 m. L.A.T. with a tide range of 1.8 m. The jetty consists of a central landing 98.75 m. long and 10.97 m. wide, with two breasting dolphins on the North and South ends of the central landing. Distance between outer dolphins is 340 m. A roadway extends from the shore to the central landing, virtually parallel to and on the North side of the loading conveyor belt. Local Tidal Information may be obtained from the Port Superintendent on arrival.

The line of dolphins is offset 8° from the jetty stem which runs out 411.5 m. from the shore in a 249° 45′ direction so that care must be exercised in placing the vessel for loading. All breasting dolphins are fendered with vertical timbering. When berthing, vessels should keep well clear of the loading head in the centre of the jetty, as it is possible that a vessel on a too fine approach could cause damage to the loading boom with the flare of the bow.

Vessel must have rat guards in position at all times (except while shifting ship), otherwise they will be liable to a fine. As Groote Eylandt is a reserve this requirement is rigidly enforced.

Loading rate is 900 t.p.h. –1,100 t.p.h. and the vessel is required to shift ship to load each hatch as the loading boom is fixed. Shore labour is available to shift lines, etc., as required. Shore labour will not trim manganese ore, which is dump loaded from the conveyor.

This is a seasonal tropical loading zone from 1st April to 30th November.

MEDICAL: There is a Medical Centre and medical staff available if necessary. Valid vaccination certificates are required, covering the requirements of the Australian Government Department of Health.

FRESH WATER: Available. Rate 9 tonnes/hour.

FUEL: Not available.

FIRE PRECAUTIONS: A permanent fire-fighting facility is installed on the ore-loading jetty. It is an automatic system which starts as soon as a fire hydrant is turned on, and delivers a 140 p.s.i. through a 2.5 in. hydrant with a 5 TPI V thread connection.

All shore hoses are 2.5 in. and are equipped with fog nozzles. Foam equipment is also available on the jetty with an output of approximately 1,000 gallons per minute. Fire-fighting lines on the jetty deliver salt water only. International shore connection available.

CUSTOMS ALLOWANCES: 200 cigarettes, 1 bottle spirits, 3 bottles of beer per man.

REPATRIATION: Can be effected to most countries from Groote Eylandt via Darwin which is serviced by Qantas and British Airways. Due to the remoteness of Groote Eylandt, repatriation of crew members should only be considered in a 'Force Majeure' circumstance. All necessary bookings and reservations are made through the local airline office and Seamens' Discount Fares, where applicable, are utilised.

AIRPORT: Ansett N.T. operate a 5 times a week jet service to and from Darwin and Cairns. Air Queensland operate a twice weekly service to and from Cairns.

TIME: See "General" before first port.

ACCOMMODATION: Visitors accommodation in the GEMCO township of Alyangula, is severely limited and shipowners who are arranging for a change of personnel at Groote Eylandt are requested to ensure that the arrival of crew members at Groote coincides as closely as possible with the arrival of the vessel.

NOTARY PUBLIC: A Notary Public is not available.

HOLIDAYS: Cargo worked on most holidays by arrangement.

SHORE LEAVE: The area is an Aboriginal reserve and *shore leave is allowed in the town area only* provided the vessel has a permit which is supplied by the Agent on berthing.

IDENTIFICATION CARDS: Seamen calling at this port have to be in possession of Seamen's Identification Cards, Form M315, issued by the Commonwealth of Australia, however, certain nationalities are exempt.

Facilities at Groote Eylandt are severely restricted and the Port Authorities recommend seamen should be provided with the required card before arriving at Groote Eylandt. For information, we would advise that Greek nationals are not exempt from this requirement, but nationals of Great Britain, Norway, Japan, Hong Kong, India and the People's Republic of China are.

STORES: Not available.

GARBAGE DISPOSAL: No facilities available.

WASTE OIL DISPOSAL: No facilities available.

SEAMAN'S CLUBS: No seaman's club. There is one recreation club walking distance from the port.

CURRENCY: A.N.Z. bank available for currency exchange.

WEATHER/WIND/TIDE: Tides cause some eddying in both the Connexion and Warwick Channels, but these cause no concern provided normal care is exercised.

Prevailing winds from May to October are S.E. and blow strongly at times during the day but ease off considerably after sunset.

There are occasional heavy fogs in the area in June and July in the early morning and these sometimes persist until 1000 hrs. or 1100 hrs.

From November to May the wet season prevails with winds blowing mainly from the N.W. with heavy rains and occasionally, more than moderate seas.

AUTHORITY/AGENT: The Groote Eylandt Mining Company Pty. Ltd. act as ships' Agents in all cases.

Groote Eylandt Mining Company Pty. Ltd., Post Office, Alyangula, Groote Eylandt, N.T. 0885. *Tel:* Alyangula (089) 874272, 874251. *Telex:* AA 85886 Milbay. *FAX:* (089) 876359. *Cables:* 8A MILBAY. *Contact:* Port Superintendent or Port Officer.

Mail for vessels to be addressed to: "Vessel's Name", Groote Eylandt Mining Co. Pty. Ltd., Groote Eylandt, N.T. 0885.

HASTINGS (Formerly Western Port), Victoria: 38.21 S. 145.14 E. **(See Plan)**

GENERAL: The port of Hastings is the commercial port located in Western Port Bay. Within its limits are 2 large islands, namely French Island occupying the middle of the bay and Phillip Island fronting the bay to seaward and forming 2 entrances to the Port. The Western and main entrance which is easy of access has a minimum low water depth of 14.9 m. and is available for vessels of deep draft. The Eastern entrance is narrow and tortuous and is available only for small vessels. Height of tide within the bay is some 2.50 m. at Neaps and 3.20 m. at Springs.

DECLARATION: *Declaration Prior to Arrival:* The Master of a ship which carries liquid bulk dangerous substances or oil in bulk, other than oil fuel used for the propulsion or operation of the ship, shall ensure that the Port Authority is advised, in writing, with answers to the following questions at least 48 hours prior to arrival in the port:

1. Is the hull leak free?
2. Is an inert gas system fitted?
3. Is the inert gas system, if fitted, fully operational?
4. Is a crude oil washing system fitted?
5. Is the crude oil washing system, if fitted, fully operational?
6. Are there any defects to the ship, machinery and equipment, which may affect safe pilotage, berthing, cargo or ballast operations?
7. Have stress calculations for the envisaged programme of cargo handling, ballasting and bunkering been made?
8. Is the hull stress calculated within recommended safety limits?

Additional information required for liquefied gas carriers:

9. Are all cargo tanks and lines free of air?
10. Is the re-liquefaction or boil-off control equipment in good working order?

PORT LIMITS: The Port Authority considers a vessel to be arrived when she crosses an imaginary line between West Head and Point Grant.

DOCUMENTS: Application for berth, tugs, mooring launches, telephones, and notification to load or unload, to be delivered by ship's Agent to the Port Authority not less than 24 hours before arrival.

Customs Documents required:

Form 3A & 3B	Crew List and attachments, 2 copies (Required 48 hours prior to arrival).
Form 42 A	Stores List, 1 copy.
Form 5, Part 1	Ships Report of Arrival, 2 copies.
Form 5, Part 2	Articles owned by or in possession of crew, 1 copy.
Form B921	Ports of Call since commencement of voyage, 1 copy (Required 48 hours prior to arrival).
Form QA 3	Quarantine Form. (Animals carried as cargo), 1 copy.
Form QA 4	Quarantine Form. (Animals carried as pets), 1 copy.
Form QA 5	Ship Master's Bond re animals carried, 1 copy.
Form Q 360	Health report of all persons on board, 2 copies.
	Inwards Manifest, 1 copy.
	Outwards Manifest, 1 copy.
Form 40	Application for clearance.

Customs forms available from Pilot on arrival.

PILOTAGE: Pilotage compulsory for merchant vessels except those specially exempted. Pilots for the Port of Hastings are available at any time provided notification of ETA is given 24 hours in advance and confirmed 6 hours prior to arrival. Pilot for the Port of Hastings will board from a launch, painted orange and showing the signals and lights prescribed for such vessels, by day approximately 3 miles Southward from West Head. By night in the white sector of McHaffie's Point Light, with Cape Schank Light bearing 295° (White), at the entrance to Western Port. Pilot launch is equipped with VHF Channel 16 (156.8 MHz). Port working channel is VHF Channel 14 (156.70 MHz). A speed of 7 knots must be maintained.

In adverse weather, vessels to 9.75 m. draft may board Pilot adjacent to yellow buoy 2 miles – 084° from Flinders Jetty Light. At night buoy shows Fl. Y. 4 secs.

Port Authority's Office requires notification of vessel's ETA at Fairway Buoy 24 hours prior to arrival. Confirmation of ETA is required 6 hours prior to arrival. To minimise delays in co-ordinating Port services vessels expecting to arrive between the hours 0900 to 1700 hrs. should ensure Port Authority receives confirmation by 0830 hrs. that morning.

Vessels expecting to arrive between the hours 1700 to 0900 hrs. should confirm ETA by 1530 hrs. that afternoon.

Vessels expecting to arrive during a weekend period should indicate ETA by 1530 hrs. on Friday, then follow above procedure.

Telex No. of this Office is AA 34051 and Fax No. (059) 838684.

ANCHORAGES: Anchorage within port between Southern edge Tortoise Head Bank, and Northern shore of Phillip Island. Anchorage 4 miles in length, East to West, and 1.25 miles wide, depths 16 m. – 27 m. at Western end, decreasing 11 m. – 20 m. at Eastern end.

An anchorage area having a least depth of water of 8.5 m., has been established adjacent to Long Island Jetty.

RESTRICTIONS/MAX. SIZE: *Depth Below Keel Required:* 10% of draft up to 30 ft. (9.14 m.), 4 ft. (1.2 m.) between 30 ft. (9.14 m.) and 40 ft. (12.19 m.), 5 ft. (1.5 m.) over 40 ft. (12.19 m.).

Long Island Point (LIP) Jetty can accommodate vessels of up to 165,000 d.w.t. (See information relating to acceptance of large tankers into Western Port Bay.) See "Tankers".

HEALTH: Radio Pratique is available. The following procedure shall apply. In a period of 12-24 hours before the expected arrival of the ship, the ship's Agent shall present to the Port Quarantine Officer, via the Port Authority Office, a completed questionnaire giving details of ship's itinerary, health and quarantine status, etc., and request permission to berth, or Radio Pratique, as required. The answers to the questions should have been obtained by radio from the ship immediately prior to presenting the form to the Quarantine Officer and should include vessel's ETA at the Pilot Station. The ship's Agent shall advise the Quarantine Officer when the ship has berthed and the Quarantine Officer will then board the ship and will require the completed Declaration of Health forms in duplicate. If all the standard conditions are satisfactory, a Certificate of Pratique will be issued.

RADIO: *Advice to Ships Masters on Hastings Harbour Control:*

GENERAL INFORMATION (When vessel within 1 hour of port).

1. *Radio Watch*	A continuous radio watch will be kept by Harbour Control on VHF Channel 16. Main working channel is 14.
2. *Pilot Boarding Ground*	Position 3 mile × 180° from West Head will be identified as position "A".
3. *Fairway Buoy*	Position of Fairway Buoy (ISO. 2 sec.) will be identified as position "B".

INWARD BOUND VESSELS

1. Vessels shall report to Harbour Control at least 1 hour before arrival at position "A" or "B", giving ETA position "A" or "B", deepest draft and information re-hull leaks and health of crew, etc.
2. Vessels must request permission to enter port. It is an expressed condition of entry that any malfunction or impairment of machinery, steering and propeller indicators which could cause restrictions in the manoeuvring ability of the vessel, is reported to Harbour Control and to the Pilot when engaged.
3. Vessels shall advise Harbour Control when passing Fairway Buoy (position "B"). Sea lashings to be removed from anchor cables and anchors made ready for immediate use.
4. Vessels shall advise Harbour Control when rounding Sandy Point and request VHF Channel for berthing operations and tugs.
5. Vessels shall report to Harbour Control (Channel 14) when all fast, finished with engines and tugs dismissed.

OUTWARD BOUND VESSELS

1. Vessels shall contact Harbour Control 1 hour before fixed time of departure advising if they will/will not be ready to sail in 1 hour's time.
2. Vessels will be advised at sailing time by duty Harbour Master re permission to sail, port movements, etc.
3. When vessels clear their berth and tugs dismissed and proceeding they shall report this to Harbour Control (Channel 14).
4. Vessels to advise Harbour Control when (a) Rounding Sandy Point. (b) Clear of Port.

VESSELS PROCEEDING TO ANCHORAGE

1. Vessels inward and outward to an anchorage are to use the same procedure as in above for inward and outward vessels respectively. Vessels will be advised if required to anchor and what anchorage to use. Whilst at anchor vessels shall keep a continuous listening watch on Channel 14.
2. Vessels shall advise Harbour Control when they have anchored and also when vessels are underway again from an anchorage.

ENGINE TRIALS AND LIFEBOAT DRILLS, ETC.

1. Vessels wanting to carry out engine trials shall first obtain permission from the duty Harbour Master.
2. When lifeboat drills are to be held and boats swung out and put into the water the duty Harbour Master shall be given prior notice.
3. All vessels in the port shall notify Harbour Control (Channel 14) of any distress signals sighted or any untoward occurrence.

TUGS: Two tugs are available both of 3,800 kW. and 50 tonnes bollard pull. Tugs join vessel at Sandy Point. Tug's line used. Tugs are fitted with VHF and radar and fire-fighting equipment. Additional tugs available from Melbourne given 24 hours notice.

BERTHING: Berthing subject to Port Authority's direction. Two oil berths, 2 steel works berths (one is Ro/Ro) and 2 tug berths are available (One tanker berth (No. 2 Crib Point) out of commission).

Steel Industry Wharf (2 Berths) (16.5 n.m. from Entrance): Berths are owned and utilised by BHP Coated Products Division. Approach channel has a depth of 9.1 m. Depth alongside both berths is 12.1 m. Swing basin diameter 457 m. Steel works is 2.5 Km. from berth.

Steel Industry Wharf No. 1: Ro/Ro Berth – Vessels with stern door or starboard quarter ramp up to 15,000 tonnes.

Ramp details: Length 28 m. (curved), width 8.5 m. Ramp made up of 7 sections which are hydraulically operated to allow accommodation of various types of stern loading/discharging vessels.

Ramp section is approximately 3 m. proud of stern berthing fenders.

Starboard Quarter Ramp details: Concrete landing pad ashore appropriate for a quarter ramp of 10.17 m. width, 50.3 m. length overall, and angled at 31.5° to ship's centre line. Stern of vessel approximately 17 m. off ramp for stern door vessels.

Steel Industry Wharf No. 2: Conventional General Cargo Wharf. 152 m. long, 24 m. to 15.6 m. wide. Reinforced concrete wharf with wooden fendering. A mooring dolphin is provided 30 m. N.E. No. 2 Berth is adjacent and extends in a N.E. direction from No. 1 Berth.

Max. size of vessel: 200 m. length overall.
Tidal range at berth: Between 2 m. and 3 m.
Nature of Bottom: Mud, clay and some rock.

Vessel can dock/undock during hours of darkness, subject to tidal conditions.

Vessels moor using ship's lines to Port Authority's requirements.

Pilots used, unless Master holds special exemption. Water available.

Bunkers by Road Tanker only, subject to Port Authority's approval.

Engines may be immobilised whilst ship is alongside, subject to duty Harbour Master's approval.

Stores and supplies can be delivered from dock or by launch.

STEVEDORES: Hastings is a class "B" port for stevedoring facilities. Port Waratah stevedores available. Require ETAs of vessels from Agent. Ordering time for labour: Tuesday-Friday, by 1430 hrs. previous day. Saturday-Sunday, by 1430 hrs. previous Friday. Monday, by 1430 hrs. previous Sunday. All close holidays observed.

MEDICAL: Four qualified medical practitioners available and 20-bed Nursing Hospital. Agent should receive prior notice of particulars of vaccinations required.

TANKERS:

Information Relating to Acceptance of Large Crude Tankers into the Port of Hastings:

The following parameters should be used by ship charterers and agents as a guide to determine the acceptability of large tankers into the Port of Hastings.

1. Displacement tonnage in arrival ballast condition to 110,000 tonnes.
2. LOA to 300 m.
3. Draft in ballast condition to 9.5 m.
4. Distance from manifold centreline to water line: 16.5 m. at Crib Point jetty, 17.5 m. at Long Island Point jetty.

Distance from manifold flange to ship's side: Minimum 1.0 m., maximum 4.5 m. to 5.0 m.

5. Only clean ballast from segregated ballast tanks is permitted to be discharged into Western Port Bay (i.e. no ballast water from any tank capable of carrying oil is permitted to be discharged into Western Port Bay notwithstanding the cleanliness of the tank or the previous cargoes carried in the tank).

There are no ballast reception facilities at Crib Point. Esso can accept up to 16,000 tonnes of ballast without difficulty and up to 20,000 tonnes with 1 week's notice. Quantities in excess of 20,000 tonnes may, in exceptional circumstances, be accepted by Esso but only after consultation with the terminal management.

6. Consultation with Port Authority is required prior to fixing any vessel over 100,000 d.w.t. or having loaded draft over 13.0 m. into or out of Western Port.

Crib Point Jetty: *(2 Berths, 13 n.m. from Entrance):* Berths are State owned. The approach channel has 14.3 m. below chart datum, swing basin has a diameter of 610 m., and depth of 14.3 m.

No. 1 Crib Point: Capable of accommodating 90,000 tonne tankers with a depth alongside of 15.8 m. Shore gangway used at this berth.

Grades Handled – Imported motor spirit and auto diesel only through 10 in. line and flexible hose string using ship's gear.

Hose and pipeline diameters:

Max. back pressure 100 p.s.i. Hoses connected by shore labour. Airdraft to manifold 16.5 m. above MHW. Ballast capacity – Nil.

No. 2 Crib Point: State owned and now out of commission. Capable of accommodating vessels to 90,000 tonnes deadweight (in ballast) with a depth alongside of 12.8 m. Shore gangway available. Two dolphins provided 61 m. apart.

Long Island Jetty *(1 Berth 15.5 n.m. from Entrance):* Berth is State owned and utilised by Esso (Australia). The approach channel has a depth of 14.3 m., swing basin has a diameter of 548 m. and a depth of 14.3 m. There is a depth of 15.8 m. alongside the berth. Berth used for export of Gippsland Crude and LPG. Can accommodate vessels up to 165,000 tonnes. Shore gangway used.

Long Island Terminal – General:

Tank Height above sea level –	Crude Base 13.7 m. Tank Full 28 m. LPG Base 7.6 m. Tank Full 36.6 m.
Distance of tank farm to Jetty –	Crude 3 km. LPG 1 km.

Hose and Pipe-line diameters:

No Hoses. "Chicksan" arms used. Airdraft to manifold 17.5 m. above MHW.

Crude: 2×16 in. and 1×12 in. diameter loading/ballast arms. 2×30 in. diameter pipelines.

Max. pumping rate 7,250 t.p.h. Max. back pressure 125 p.s.i.

LPG: 3×12 in. diameter loading/vapour arms. 1×20 in. diameter refrigerated pipeline. 1×12 in. diameter vapour pipeline. 1×4 in. diameter pressure pipeline.

1×8 in. diameter loading arm for refrigerated and pressure LPG is also fitted with a 4 in. vapour return line.

Max. pumping rate – refrigerated products 1,400 t.p.h.
– pressure product 45 t.p.h.

Following are requirements for LPG carriers loading at Long Island Point Jetty:

1. Vessels to present at loading port with cargo tanks precooled and ready to load fully refrigerated butane and must contain a liquid butane heel. Similar procedure for propane.
2. Vapours in the ship's tanks must not contaminate the product in any way that may cause the quality specification to be exceeded in any particular case.
3. Vapours in the ship's tanks should not react with the product in any way to cause a hazard or prevent the vapours from being returned to the shore compressor system.
4. The ship's tanks must be free of sulphur compounds/L.G. odourants.

Manifold connection requirements:

Distance manifold flange to ship's side	Min. 0.91 m. (3 ft.) Max. 3.66 m. (12 ft.)
Height C/L manifold flange above water level/ vessel Lightest Condition:	17.04 m. (55.9 ft.)
Manifold spacing	Min. 1.83 m. (6 ft.) Max. 3.66 m. (12 ft.)
Height of C/L manifold flange above deck	Min. 7.6 m. (2 ft. 6 in.) Max. 1.60 m. (5 ft. 6 in.)

Flange connection 305 mm. (12 in.) 150 ASA to match Chicksan Arms. Connection to be approximately mid way between stern and stem to enable satisfactory mooring of vessel..

Hoses will not be permitted for the loading of refrigerated LPG. Compliance with standard safety check list is required.

Reducers: Terminal has 6 in., 8 in., 10 in. and 12 in. ASA Reducers.

Arms connected by Esso.

Ballast Facilities: Normal capacity 16,000 tonnes and up to 20,000 tonnes with one week's notice. Quantities in excess of 20,000 tonnes may, in exceptional circumstances, be accepted by Esso, but only after consultation with the terminal management.

Pollution: Cases of discharging dirty ballast or oil spillage will be investigated and vessels are liable to fines and/or detention. Vessels shall not discharge into the waters of the port any part of the contents of their cargo, slop or ballast tanks (this includes clean ballast) or tank washings or bilges which are liable to pollute these waters. Masters shall ensure that pipelines and equipment are clean before using them for discharging anything into the waters of the port. Scuppers shall be plugged effectively and no leakage or spillage from any vessel shall be allowed to leak or be swept overboard.

Masters of vessels must seek permission from the Port Authority before pumping anything into the waters of the bay.

The State of Victoria has stringent laws in force concerning the pollution of the sea by oil.

Smoke emissions controlled under the Clean Air Act which will operate under the jurisdiction of the Environment Protection Authority.

Ballast (Tankers): All ballast contained in tanks connected in any way to the vessel's cargo carrying system, is to be discharged to shore tankage.

Fire Precautions: Tankers shall not immobilise main engines whilst alongside jetties. No oil cargo handling or physical preparation for same permitted unless firewatch tug is on duty.

Tank Washing/Gas Freeing: Permitted alongside subject to approval from the Port Authority. All tank washings to be discharged ashore.

Garbage: No garbage or rubbish shall at any time be jettisoned into the waters of the port. The Master, Owner or Agent of a ship shall, through the Port Authority, make all arrangements for garbage and rubbish to be collected from ships within the port and to be delivered to the port incinerator for destruction.

Bunkers: Small quantities of marine fuel are available from road tankers.

Fresh Water: Available, approximate rate 100 t.p.h. Approximate price $1.00 per 4.5 cu.m. Delivered from hydrants at Jetty Heads at all Berths.

Density: Average density between 1025 and 1030 oz. per cu.ft.

Mooring: Vessels secure to oil jetties using ship's lines and shore preventer wires, if considered necessary. See "Plan".

Also see "Shipmaster's Report" dated April 1993.

CONSULS: None.

REPAIRS: Facilities for medium size deck and engine repairs. All repairs subject to Port Authority's approval.

SURVEYORS: Cargo Inspectors: Caleb Brett, Cargo Superintendents available from Melbourne. All major classification societies, surveyors and insurers represented as for Melbourne.

GANGWAY/DECK WATCHMAN: A shore watchman may be hired. Cost borne by the vessel.

CERTIFICATES:

Clearance from last port.
Ship's Register.
Articles of Agreement.
Official Log Book.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate.
IMO Certificate of Fitness for LPG Carriers.
Light Dues Certificate (receipt).
Pratique Certificate from last port (if to be used in this port).

CUSTOMS ALLOWANCES: *(a)* Tobacco: each crew member permitted either 200 cigarettes or 250 gm. of pipe tobacco, or 250 gm. of Fine Cut Tobacco out of Bond. *(b)* Wine and/or Spirit: each crew member is allowed 1 litre of wines or spirits (opened).

CARGO GEAR: No shore cranes. All vessels must comply with Commonwealth of Australia Regulations prescribed under the Navigation Act.

REPATRIATION: Facilities available.

AIRPORT: Nearest major commercial airport is Tullamarine, 55 miles distance, from which there are frequent interstate and international flights. Airport accessible by road in about 2 hours by taxi-car.

HOLIDAYS: Oil terminals work on all holidays. Steel Works observe close holidays.

POLICE/AMBULANCE/FIRE: Police Hastings 790222; Ambulance Frankston 7832222; Fire. Hastings 791345, and Crib Point 839221.

TELEPHONES: A telephone service may be installed onboard every ship berthed at the tanker terminals. STD (Subscriber Trunk Dialling) is not available from these telephones. Trunk calls may be obtained by dialling 0176 and reversing the charges.

SERVICES: Licensed compass adjuster available. Underwriters' Representatives available. Radio and radar repairs available.

BANKS: American and European bank offices are represented from Melbourne.

EMERGENCY CO-ORDINATION CENTRE: Port Emergency Plan is activated by Duty Harbour Master with Co-ordination Centre initially established in the Port Authority Office, Stony Point.

STORING: Vessels may be stored by barge or truck. At tanker terminals storing is not allowed during loading or discharging operations. Trucks and forklifts are restricted to a point 60 m. from jetty head. Bonded stores are handled under Customs supervision. Local labour is available to assist with storing.

SHORE LEAVE: Crew members permitted shore leave, and launches can be supplied to vessels at anchor, provided vessels have pratique, and have been cleared by Customs.

IDENTIFICATION CARDS: Required for all nationalities except Canada, Chile, China, Denmark, Egypt, Fiji, Ghana, Hong Kong, India, Iran, Israel, Italy, Japan, Kenya, Lebanon, Malaysia, Malta, Nauru, New Zealand, Norway, Pakistan, South Africa, South Korea, Tanzania, Uganda and United Kingdom. Also see "Melbourne".

Cards available from Customs on arrival, if required.

GARBAGE DISPOSAL: Collected by road from small vessels at the Oil Terminal and all vessels at the steel works. Other collections by launch. The service is co-ordinated by the Port Authority.

WASTE OIL DISPOSAL: By arrangement with Oil Terminal Operator (Esso).

DELAYS: No delays anticipated. Port operates 24 hours per day.

SHIPMASTER'S REPORT: April 1993 (Updated 1996).

Information listed is additional to requirements covered in "Guide to Tanker Ports".

Berth: Long Island Point (LPG).

Pre-Arrival: ETA every 2 days to Essolip, attn. Clare Caughey (Telex: Essolip AA31457).

Crew list faxed to Agent with following information required:

1. Reference No. in agreement.
2. Family name.
3. Given names.
4. Sex.
5. Rank/rating.
6. Identity document type.
7. Document number.
8. Date of birth.
9. Country of birth.
10. Nationality.

Ballast changed on passage with coordinates in Movement Book/Deck Log/Official Log Book.

Pilotage/Immigration Pre-Arrival information as per "Guide".

Documents: All ship's certificates, copy of Certificate of Fitness to Agent.

Customs Officer doubled as Immigration Officer. Must use Australian forms which he brought out to anchorage.

Forms required:

1 copy (Australian Form 5) Articles owned by or in possession of crew.
1 copy Stores List (declare drugs only).
3 copies Crew List, 1 each for Customs/Immigration, Agent, Harbour Master.

Pilot: Boarded 3 miles South of West Head. Must use manropes.

Ship anchored North of Cowes on Philip Island. Good holding ground. Western Port is tidal with tide running at approximately 3 knots at Springs.

Berthed portside to against the ebb. Moorings (3, 2, 2), head and sternlines soft ropes.

Tugs: "Cooma" and "Hastings", each 3,800 h.p. with 50 tonne bollard pull. Tugs made fast fore and aft, tug's lines used.

Jetty: Runs North to South, and is well fendered along parallel body. Moorings made fast on slip hooks. First moorings ashore are springs sent by shore messenger, the other moorings sent by mooring launch to dolphins numbered 1 to 6 (North to South). Offshore anchor lowered clear of pipe. Standard fire wires rigged.

Shore Gangway/Connections/Bunkers: To enable gangway to land clear of obstructions on deck, Northerly 2 Chicksan arms connected to ship's aft 2 manifolds, connected 1 liquid and 1 vapour. Vapour connection fitted for emergency use only with no metering of returned gas. Connections are both 12 in. 150 ASA. No bunker/bulk lubes, no barge at Western Port, Esso do not allow any bunkering operation on their jetty, so must do this at anchor. Understand bunker/lubes barge would have to travel from Melbourne via Southern Ocean. Limited supply of lubes available in drums.

Connected ship's fire main into shore system using ship's hose.

Pre-Loading Formalities: Formalities took 1.5 hours. Ship/shore telephone (battery type) placed in Office or Cargo Control Room. Business calls only on abbreviated numbers. There is an emergency stop on the walkie-talkie which stops shore pumps and closes shore valves.

If constant wind speed reaches 30 knots, loading is stopped, and at 35 knots Chicksan arms are disconnected.

Loading went very smoothly with adjustment in rates undertaken quickly. Loading was slow as one shore tank decommissioned for 10 year inspection, and towards the end of loading, 2 remaining tanks were almost empty. Density Butane 5746 at 15°C in vacuum loading temperature −5°C.

Safety: Ship/Terminal/Port Authority Safety Check List completed for every operation. In addition, Australian Maritime Safety Authority (AMSA) conducts safety surveys.

General: Bangladeshi, Bruneian, Flipino and Pakistani nationals require Australian Seamans Identification Cards. These are provided by Customs, and require a full face photograph. We used ship's polaroid. These Identification Cards remain onboard. They are not shore passes.

For crew signing-off, Customs issue "Permission to Offsign" docket, this covers A$ 20.00 departure tax at airport.

Shore launch to anchorage costs A$ 875.00, so one has to be circumspect. This did not include Easter tariff.

Stores launch/barge is available for hire at approximately $ 160.00 per hour. Cost of labour to load stores is additional to this charge.

New Seamans Club is situated 1.0 km. North of Long Island Point Jetty. Bus collects from jetty at 1845 hrs. Club is only open 1900 hrs. – 2100 hrs., but there is a telephone and money changing facilities.

Coin operated telephone on jetty.

AUTHORITY: Port of Melbourne Authority, P.O.Box 4721, Melbourne 3001. *Tel:* 03-611-1777. *Telex:* AA 34211.

Local Authority: Port Authority – Western Port Region, P.O.Box 102, Hastings 3915, Victoria. *Tel:* (059) 839406. *FAX:* (059) 836043.

Contact: Captain W. Smith, Harbour Master.

Hastings Harbour Control: Stony Point Road, Crib Point 3919, Victoria. *Tel:* (059) 839406. *Telex:* AA34051. *FAX:* (059) 838684.

AGENT: See "Melbourne".

HAY POINT (including Dalrymple Bay), Queensland: 21.16 S. 149.19 E. (See Plan)

PORT LIMITS: The seaward Port Limits extend from the North shoreline at the entrance to Bakers Creek by a line in an East North Easterly direction to Lat. 21° 10′ S., Long. 149° 20′ E. thence East to Lat. 21° 10′ S., Long. 149° 30′ E., thence South to Lat. 21° 18′ S., Long. 149° 30′ E. thence West to the shore South of Hay Point.

A vessel is considered to have arrived when it anchors within Port Limits or if proceeding directly alongside at the time when the Pilot boards.

DOCUMENTS: The documents required by the Customs Department are:

2 Crew Lists.
1 Declaration of Dutiable Goods (Australian Customs Form 5)
1 Ports of Call List showing previous 6 ports
1 List of Dutiable Stores and Drugs held on board (Australian Customs Form 42A)
Last Port Clearance.

The Customs Officer will also wish to sight the following documents:

Ship's Register
Safety Radio Certificate
Safety Construction Certificate
Safety Equipment Certificate
Load Line Certificate.

The documents required by the Department of Health are:

2 Declarations of Health (Australian Government Department of Health Form Q.360)
Crew List
1 Vaccination List
1 Ports of Call List.

The Quarantine Officer will also wish to sight a current Derat Exemption Certificate.

PILOTAGE: *Hay Point:* Pilotage, which is compulsory is provided by the Queensland Department of Transport, Marine and Ports Division, whose Pilots are stationed at the port. Vessels should notify the Harbour Master, through their Agents of their ETA 24 hours before arrival and they will be advised of the Pilot boarding area. The boarding areas are generally 2.3 miles S.E. or N.E. of Hay Point Wharf, depending on whether the vessel is berthing port side or starboard side alongside.

Vessels must make a good lee for the pilot boat and have a pilot ladder rigged in accordance with the provisions of the Navigation (S.O.L.A.S.) Regulations.

Boarding of Pilots may be possible by helicopter if vessel meets certain requirements. The decision will be made after radio communication with the vessel.

Dalrymple Bay: Pilotage is compulsory for all vessels. The Pilot Boarding Area is normally 1.5 miles E.N.E. of the berth. Vessels should be underway and follow instructions given by either the Pilot or "Hay Point Harbour". Only during berthing, trim should not exceed 2.5 m. by the stern with the propeller fully immersed. Pilot transfer will be by helicopter. Vessels should advise their Agent at the earliest opportunity if they cannot accept a helicopter land-on situation.

Coastal and Reef Pilotage: Pilotage through Hydrographers Passage, Palm Passage, Grafton Passage and the Inner Route of the Great Barrier Reef to Torres Strait is conducted by licensed pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Queensland Coast and Torres Strait Pilot Service. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

Hydrographers Passage: Masters' attention is drawn to Sailing Directions for Hydrographers Passage compiled by the Australian Department of Transport. Relevant extracts are:

"Hydrographers Passage shortens the route between Hay Point and Japan via Rossel Island by approximately 220 miles".

Note 1: In 1987 the R.A.N. surveyed Diamond Passage in the Coral Sea. Use of this channel and Jomard Entrance now results in a voyage reduction of about 245 miles.

"Vessels too deep to pass through Torres Strait in safety and bound for ports in the Singapore to Europe (via Suez) range may find it shorter, and with a greater likelihood of favourable weather and currents, via Hydrographers Passage, East and North of Papua New Guinea, and through Sagewin Strait, than the alternative route via Bass Strait and the Great Australian Bight."

Note 2: The route via Hydrographers Passage, Diamond Passage and North of Papua New Guinea to Suez is approximately 125 miles shorter than the Great Australian Bight route.

Note 3: During the Southern Winter months, vessels bound for Europe via the Cape of Good Hope have found better sailing conditions and obtained a faster voyage by taking the route North of Papua New Guinea rather than the Great Australian Bight.

ANCHORAGE: *Northern Anchorage:* 9 anchorages.
Southern Anchorage: 7 Anchorages.

Also see "Plan".

RESTRICTIONS: A vessel arriving at the port must have its propeller totally immersed and be trimmed not more than 2.5 m. by the stern.

Hay Point harbour uses a Dynamic Real Time Underkeel Clearance (UKC) Program, and Masters will be advised by the Harbour Master through their Agent on maximum sailing drafts and UKC whilst loading at the berths.

Vessels berthing port side to: Normal draft calculations apply.
Vessels berthing starboard side to: Normal draft calculations.

Dalrymple Bay

Vessels berthing starboard side to: Normal draft calculations apply.
Vessels berthing port side to: Normal draft calculations less additional 0.9 m. if vessel of 100,000 d.w.t. and over.

The state of the tide determines which side to each vessel will berth. However, by arrangement with the shippers the vessel can wait for a more suitable state of tide to enable the vessel to berth on the side where draft restrictions do not apply. This can result in delays of up to 4 hours.

MAX. SIZE: *Hay Point:*

Berth No. 1: 150,000 d.w.t.
Berth No. 2: 230,000 d.w.t.

Dalrymple Bay:

Vessel Size: 20,000 d.w.t. (minimum).
230,000 d.w.t. (maximum).
Length Overall: 320 m. (maximum).
Breadth: 50 m. (maximum).
Distance from forward end of foremost hatch to after end of aftermost hatch to be loaded: 214 m. (maximum).
Maximum Berthing Displacement: 110,000 tonnes.
Minimum Clearance between Deck Obstructions: 15.0 m.

Maximum Draft Table – Port of Hay Point:

Height of Tide (m.)	Draft (m.)	Height of Tide (m.)	Draft (m.)
0.0	11.29	3.4	14.38
0.1	11.38	3.5	14.47
0.2	11.47	3.6	14.56
0.3	11.56	3.7	14.65
0.4	11.65	3.8	14.74
0.5	11.74	3.9	14.83
0.6	11.83	4.0	14.92
0.7	11.92	4.1	15.01
0.8	12.01	4.2	15.10
0.9	12.10	4.3	15.20
1.0	12.20	4.4	15.29
1.1	12.29	4.5	15.38
1.2	12.38	4.6	15.47
1.3	12.47	4.7	15.56
1.4	12.56	4.8	15.65
1.5	12.65	4.9	15.74
1.6	12.74	5.0	15.83
1.7	12.83	5.1	15.92
1.8	12.92	5.2	16.01
1.9	13.01	5.3	16.10
2.0	13.10	5.4	16.20
2.1	13.20	5.5	16.29
2.2	13.29	5.6	16.38
2.3	13.38	5.7	16.47
2.4	13.47	5.8	16.56
2.5	13.56	5.9	16.65
2.6	13.65	6.0	16.74
2.7	13.74	6.1	16.83
2.8	13.83	6.2	16.92
2.9	13.92	6.3	17.01
3.0	14.01	6.4	17.10
3.1	14.10	6.5	17.20
3.2	14.20	6.6	17.29
3.3	14.29	6.7	17.38

Vessels over 100,000 d.w.t. berthed portside to have their underkeel clearance increased. Deduct 0.9 m. of the available draft indicated in the above table.

HEALTH: Radio Pratique may be requested through a vessel's Agents, between 12 and 24 hours prior to arrival. This is generally granted if there are no unusual circumstances. See "General" before first port.

On receipt of quarantine message the Agent will obtain from the Harbour Master an anchorage position and advise vessel not berthing on arrival.

Inspections may be carried out at the jetty or at anchorage at the discretion of the Quarantine Office.

Pratique is available in the berth on a 24 hour basis, 7 days per week.

Rat guards are to be maintained on all mooring lines whilst the vessel is alongside.

Whilst in the vicinity of the port, vessels are required to store garbage aboard in containers approved by the Quarantine Inspector.

VHF: There are VHF Marine Radios installed at the berths and on the tugs and lineboats for communications during berthing and unberthing operations.

Vessels should keep a continuous watch on Channel 16, commencing 2 hours before arrival and while at anchor.

The call sign for the Port is "Hay Point Harbour".

The port working channels are:

Channel 12: 156.60 MHz (Operations).
Channel 14: 156.70 MHz (Operations).
Channel 16: 156.80 MHz (Calling).

Channels 6, 8, 67 and 74 are also available.

TUGS: 2 tugs each of 75 tonnes bollard pull are available to service vessels using the Hay Point Services wharves and 2 Z-peller tugs each of 55 tonnes bollard pull are available for the Dalrymple Bay Terminal. Tugs normally join vessel at pilot boarding area. Tugs lines are used.

RADIO: Radio messages can be sent through Sydney Radio (VIS) but within 24 hours of arrival Townsville Radio (VIT) provides a faster service.

Notification of Expected Arrivals and Loading Plan: Hay Point: It is required that the Master of an incoming vessel notify by radio/telex of the estimated time of arrival at the Port, 7 days, 48 hours and 24 hours prior to expected arrival. Local time should be used in all communications. The loading plan should be provided 48 hours prior to expected arrival time. Messages should be addressed to 4HUTAHSHIP, Hay Point, Telex AA48148.

Advice of Arrival: Dalrymple Bay: All ships scheduled to load at Dalrymple Bay Coal Terminal (DBCT) are to radio, through the normal recognised coastal radio stations or by telex, the following notifications, addressing their messages to:

Cables: 4MDALBAY, Mackay
Telex: AA46374

(i) 7 days before the intended arrival at the Port, or on departure from the last discharge or loading Port, whichever is the sooner, advising answers to the following questionnaire?

(a)

- ETA at DBCT anchorage.
- Hatchwise stowage and loading sequence, specifying the quantity of each cargo pour, based on loading with one loader at rates of up to 7,000 t.p.h.
- Where multiple parcels are being loaded, confirm that each parcel can be completed before loading the next parcel.
- Arrival and departure drafts, fore and aft, based on the maximum allowable stern trim for berthing of 2.5 m. with propeller fully immersed.
  NOTE: Ballast tanks, where possible, should be either fully pressed up or empty.
- Total time required for deballasting.

- Berthing airdraft.
- Distance from side of vessel to inside edge of hatch coaming.
- Please confirm all cargo holds are free from previous cargo residues.
- Type of hatch cover.
- Advise any obstructions protruding beyond ship's side.
- Can your vessel accept a helicopter land-on situation? If so, specify the hatch number or dimensions of the largest hatch and the distance between obstructions one metre above hatch top.
- Does your vessel have Australian Radio Pratique format questions (A) to (K)?
- Does your vessel have a copy of all Australian Customs Forms?
- Master's Name, Number and Nationality of Crew.

NOTE: Send 48/24 hour ETA notices together with confirmation of total cargo required to Shippers 4MDALBAY, Mackay (Telex: AA46374).

(b) Masters of vessels which are only part loading at DBCT shall advise the following additional information:

If arriving part loaded:
- Berthing Displacement.
- Previous Loading Port.
- Stowage of Loaded Cargo.

If completing loading at subsequent Port(s):
- Next Loading Port.

(c) Masters of O.B.O. vessels are to supply the following information:
- Nature of the preceding 3 cargoes the vessel has carried.
- Date and place the last petroleum product was discharged.
- Statement on the condition of the slop tanks. Are these pressed up or fully inerted and sealed?
- Date, place and authority of issue of the Gas-free Certificate carried on board.

(ii) 48 hours and 24 hours before intended arrival at the Port advising:
- Confirmation or variation of previously advised ETA at the anchorage/pilot boarding ground.

(iii) Immediately upon arrival at the anchorage/pilot boarding ground as designated, within Port limits, advising:
- Arrival/Anchorage time.
- Chart position.
- Declaration that the vessel is in all respects ready to load, with clean hatches and hatch covers opened on berthing.
- First pour.
- Actual arrival drafts, Forward and Aft.

BERTHS: The Port of Hay Point currently consists of 3 coal loading berths as follows:

Hay Point Services Berth No. 1:

Berth Details:

Berth Alignment	350° True
Design ship size	14,500 – 150,000 d.w.t.
Dredged Depth	16.38 m.
Dredged Width	60.96 m.
Dredged Length	342.90 m.
Depth outside dredged area	−13.03 m.
H.A.T.	+7.14 m.
M.H.W.S.	+5.78 m.
M.H.W.N.	+4.46 m.
M.L.W.N.	+2.22 m.
M.L.W.S.	+0.90 m.
L.A.T.	−0.00 m.
Gangway Landing Platform RL	9.2 m.
Distance to the outer edges of the 6 fenders	203.6 m.

(Note: All levels refer to chart datum).

Shiploader:

Nominal loading rate	4,000 t.p.h.
Longitudinal travel distance	188.98 m.
Longitudinal travel speed	30.48 m.p.m.
Longitudinal creep speed	6.10 m.p.m.
Shuttle travel length	18.59 m.
Shuttle travel speed	10.97 m.p.m.
Telechute hoist/descent speed	10.06 m.p.m.
Spout rotation	±190° at 1 r.p.m.
Maximum outreach of telechute	26.52 m. from fender face.
Belt size	183 cm.
Belt speed	267.31 m.p.m.

Shiploader has pivoted boom.

Mooring Dolphins:

1MD1	4×100 tons sliphooks with capstan
1MD2	3×100 tons sliphooks with capstan
1MD3	3×100 tons sliphooks with capstan
1MD4	3×100 tons sliphooks with capstan

Breasting Dolphins:

1BD1	2×100 tons sliphooks with capstan
1BD2 to 5	1×150 tons sliphooks with capstan
1BD6	2×100 tons sliphooks with capstan

Hay Point Services Berth No. 2:

Berth Alignment	330° True
Design ship size	25,000 – 200,000 d.w.t.
Dredged Depth	−16.68 m.
Dredged Width	60.96 m.
Dredged Length	365.76 m.
Depth outside dredged area	13.03 m.
H.A.T.	+7.14 m.
M.H.W.S.	+5.78 m.
M.H.W.N.	+4.46 m.
M.L.W.N.	+2.22 m.
M.L.W.S.	+0.90 m.
L.A.T.	−0.00 m.
Gangway Landing Platform RL	10.0 m.
Distance to the outer edges of the 6 fenders	188.7 m.

(Note: All levels refer to chart datum).

Shiploader:

Nominal Loading Rate	6,000 t.p.h.
Maximum longitudinal travel distance	191.41 m.
Normal longitudinal travel distance (between limit switches)	184.40 m.
Longitudinal travel speed	30.48 m.p.m.
Longitudinal creep speed	15.24 m.p.m.
Shuttle Travel speed	15.24 m.p.m.
Telechute travel height	18.29 m.
Telechute hoist/descent speed	6.10 m.p.m.
Spout rotation	±190° at 0.7 r.p.m.
Maximum outreach of telechute	28.96 m. from fender face.
Belt size	213 cm.
Belt speeds:	
Inner shuttle	256.03 m.p.m.
Outer shuttle	281.94 m.p.m.
Maximum outreach of inner shuttle	3.96 m. from fender face.
Intermediate outreach of inner shuttle	3.66 m. inside fender face.
Outreach of telechute corresponding with intermediate position of inner shuttle	21.34 m. from fender face.
Elevation of bottom of inner shuttle	+23.93 m.
Elevation of telechute retracted	+23.93 m.
Elevation of telechute fully extended	+5.64 m.
Elevation of base of Operator's Cab	+25.30 m.
Telechute can be rotated in the fully retracted position to	+25.60 m.

Mooring Dolphins:

2MD1	4×100 tons sliphooks with capstan
2MD2	3×100 tons sliphooks with capstan
2MD3	3×100 tons sliphooks with capstan
2MD4	3×100 tons sliphooks with capstan

Breasting Dolphins:

2BD1	3×100 tons sliphooks
2BD2 to 5	1×100 tons sliphooks on each
2BD6	2×100 tons sliphooks

Dalrymple Bay Coal Terminal:

ONSHORE:

Train Unloading:

Rail System Gauge	1,067 mm.
Unloading Method	Bottom Dump to R.C. Pit.
Locomotives	5 locos and LRC unit.
Coal Wagons	124×61 tons net and 137×70 tons net (suitable for 80 tons future).
Train Payload	7,500 to 9,600 tons.
Train Length	2,100 m. (approx.).
Rail Track Weight	53 kg./m.

Rail Receival Station No. 1:

Conveyor Takeaway Rate	4,250 t.p.h.
Receival Conveyor Belt Width	1,800 mm.
Receival Conveyor Belt Speed	3.3 m./s.

Rail Receival Station No. 2:

Conveyor Takaway Rate	4,250 t.p.h. (5,000 t.p.h. future).
Receival Conveyor Belt Width	2,000 mm.
Receival Conveyor Belt Speed	3.75 m./s.

Stockpiling:

No. of Stockpile Rows	4
Row Length	1,200 m.
Row Width (Narrow)	60 m.
(Wide)	100 m.
Total Stockpile Capacity	2.1 million tonnes "live".
Yard Machines	3 stacker/reclaimers. 1 stacker. 1 reclaimer.
Average Stockpiling Rate per Machine	4,250 t.p.h.
Average Reclaiming Rate per Machine	3,600 t.p.h. (Babcock Moxey). 4,250 t.p.h. (Krupp).
Yard Conveyor Belt Width	1,600 mm.
Yard Conveyor Belt Speed	5 m./s.

OFFSHORE:

Surge Bin:

Surge Bin Capacity	1,000 tons.

Sample Plant:

Location	Seaward end of causeway.

Causeway:

Length	280 m.
Armour Unit Type	Hanbars.
Armour Unit Sizes	11.5 tons, 5 tons.

Approach Jetty:

Jetty Length	3,850 m.
Roadway Deck Structure	Prestressed Concrete Planks.
RL Roadway	+17 m. LWD.
Roadway Width between Kerbs	3.76 m.
Roadway Design Load	NAASRA T44.
Headstocks	Steel Box Section.

Pile Type	Steel Pile – 12 mm. 16 mm. wall.
Pile Diameter	1,200 mm.
Pile Bent Spacing	24 m.
Trestle Conveyor Capacity	7,200 t.p.h.
Trestle Conveyor Belt Width	2,000 mm.
Trestle Conveyor Belt Speed	4.94 m./s.
Wharf (2 Berths):	
Design Vessel – Maximum	2×200,000 d.w.t. vessels with 80 m. separation between them.
Design Vessel – Minimum	20,000 d.w.t.
RL Top of Front (seaward) Rail	+17.6 m. LWD.
Deck Structure	Prestressed Concrete Planks.
Pile Type	Steel Piles – 12 mm., 16 mm. and 20 mm. wall thickness.
Pile Diameter	1,200 mm.
Normal Bent Spacing	12 m./13 m.
No. of Berthing Dolphins	18
No. of Mooring Dolphins	4
Distance between Extreme Berthing Dolphins	662.5 m.
Distance between Extreme Mooring Dolphins	880.5 m.
Berthing Dolphin Fender Type	Bridgestone Cell Fenders 2×2.25 m. dia. on Berth No. 1. 1×2.5 m. dia. on Berth No. 2.
Berth Depth	−20.0 m. LWD.
Channel Depth	−13.4 m. LWD.
Highest Astronomical Tide	Approx. 6.7 m.
MHWS	5.49 m.
MHWN	4.23 m.
Available Draft in Channel at MHWS with Underkeel Clearance shown	16.6 m. (2.27 m.).
Available Draft in Channel at MHWN with Underkeel Clearance shown	15.5 m. (2.15 m.).
Wharf Conveyor Belt Width	2,000 mm.
Wharf Conveyor Belt Speed	4.94 m./s.
RL of Conveyor Belt	RL 29.37.
Shiploader:	
Maximum Loading Rate	7,200 t.p.h.
Shiploader Conveyor Belt Width	2,500 mm.
Shiploader Conveyor Belt Speed	3.2 m./s.
Maximum Operating Wind Speed	72 km.p.h.
Maximum Reach of Chute from Front Rail	41.5 m.
Fender Face from Front Rail	7.5 m.
Maximum Reach of Chute from Fender Face	34.0 m.
Shuttle Travel	21.7 m.
Shiploader Longitudinal Travel	622 m.
Highest Boom Working Position	+12°
Lowest Boom Working Position	−10°
Distance from 0.0 LWD to Underside of Boom in +12° position at Fender Face (Airdraft)	30.3 m.
Cyclone Security	Tie-down to Strongpoints (2 off).

Moorings: Due to the open sea nature of the berths vessels with wire rope moorings should have a synthetic tail at least 10 m. long fitted to assist in mooring and to reduce breakages.

MOORING: *Dalrymple Bay:* Mooring lines are taken ashore by line launches. First lines must always be of synthetic or similar floating type. Vessels using heavy wire ropes, for whatever purpose, shall have the ends terminated with a rope spring, finished with a standard eye for placing over the bollards and slip hooks. The rope spring should not be less than 17.0 m. long to facilitate manhandling.

All mooring lines are to have a 3.0 m. tail of light rope spliced into the eye to facilitate the transfer from the launch to the dolphins.

Mooring lines which do not meet these specifications may be refused.

No vessel shall be moored or fastened to any wharf except to bollards, slip hooks or other securing places provided for the purpose.

It is the Master's responsibility to ensure that all mooring lines are adequate and in good condition.

Mooring lines shall be kept taut and secure at all times whilst alongside. Time lost as a result of improperly secured lines will be charged to the vessel's account.

Heaving lines are to be tied at the splice of the eye on spring and breast lines to facilitate manhandling

Hay Point: Every vessel at berth shall be properly moored, fastened or anchored as the case may require, and it is the Master's responsibility to ensure that all lines are adequate and in good condition for all operations. Lines should be kept taut and secure at all times at the berth.

First lines must always be of synthetic or similar, preferably of floating type. Wires may be used for springs and breast lines but are not recommended for head or stern lines.

LOADING: Dalrymple Bay: *Loading Coal:* For cargo stowage calculations the following stowage factors may be used as a guide:

Blair Athol	: 41.5 cu.ft./tonne
Riverside	: 38 cu.ft./tonne
German Creek	: 37 cu.ft./tonne
Oaky Creek	: 38 cu.ft./tonne

Vessels shall be in all respects ready to commence loading on completion of mooring, with holds clean and hatch covers open. A detailed loading plan, agreed to by the Company, which clearly shows hatch quantities, loading sequence and quantity of coal to be reserved for trimming, including anticipated sailing draft, is required to be presented before loading can commence.

Ballast shall be adjusted to ensure that a minimum clearance of 1.0 m. is maintained between the vessel's structure and the Shiploader at high water. Ballast is to be discharged at a rate which prevents disruption to loading, final trimming or completion.

Geared vessels are to have cranes lowered to the horizontal position on the offshore side of the vessel during loading. Cranes should not be swung out of the parked position until the Draft Surveyor has read initial drafts and confirmed these with the Chief Officer.

Loading Procedures: A portable radio and telephone will be placed on board for ship/shore communications during shiploading operations.

The Shiploader Operator is in direct radio and telephone contact with the Control Room and the Terminal's Production Supervisor at all times. In case of problems during loading, the Production Supervisor may be contacted via the Shiploader Operator or the Control Room. The telephone numbers of these are listed on the Terminal Loading Plan, a copy of which is retained by the Master.

The responsible ship's officer may direct the Shiploader Operator at any time.

The Shiploader Operator will contact the on-duty ship's officer by radio and request that a deck officer be present during the last 15 minutes of final trimming of all hatches estimated to be loaded to between 90% to 100% capacity.

The stowage of coal is the sole responsibility of the Master or his nominee, and his instructions and directions will be complied with within the limits of the Terminal facilities. Any changes in loading sequence must be immediately relayed to the Production Supervisor.

The coal is either reclaimed from the Terminal's stockpiles by Bucketwheel Reclaimers or received direct from the Rail Receival Station. It then passes through a 1,200 tonne capacity surge bin, after which it is conveyed a distance of 3.8 km. to the Shiploader at a nominal rate of 7,000 t.p.h.

On directing the Shiploader Operator to stop loading during normal operations, between 150 and 200 tonnes of coal will need to be poured, to empty the wharf conveyor belt, before the Shiploader is permitted to travel from South to North.

At the completion of loading, the entire conveying system will need to be emptied of coal. The surge bin and all Reclaim, Jetty, Wharf and Shiploader conveyor belts can hold up to 3,355 tonnes of coal, depending on the position of the Reclaimers and Shiploader and the feed rate being used. The Production Supervisor will be able to give an estimate of the quantity of coal to be expected. An allowance for these tonnages must be made during the final stages of loading.

In the final stages of loading, a minimum quantity of 250 tonnes shall be requested for the final pour.

Red, green and white list lights, clearly visible to the Shiploader Operator, are recommended fittings on all vessels loading coal. A fixed white light shall indicate the vessel is upright.

The Shiploader Operator has been instructed to observe the trim lights and to keep the vessel upright during loading and to stop loading in the event of a hatch becoming too full.

The sole responsibility for the correct and safe loading of a vessel and the assessment of tonnages being loaded, as is customary, rests with the Master and it is strongly recommended that a responsible officer is on deck at all times, directing and supervising the loading to a spout trimmed condition. No mechanical or manual trimming will be undertaken by the Company. The vessel is to provide sufficient lights on board for night loading and shall open and close hatch covers as recommended by the Terminal.

Vessels which are scheduled to load more than one parcel shall complete each parcel before starting the next. When loading multi-parcels of coal, attention to the opening and closing of hatches is recommended to ensure each parcel is loaded into the required hold.

Masters are cautioned that the determination of the mass loaded is carried out by Draft Survey and frequent "on the run" draft checks between hatch changes should be carried out. Whilst conveyor belts are equipped with weight scales, these figures can only be used as a guide. *Reference to these will not relieve the Master of the responsibility of adequately maintaining draft checks and supervising the loading accordingly.*

Subject to tide, ships shall be ready to vacate the berth on completion of loading and have all gear tested and available for use on departure.

Draft Survey: The weight determination of coal loaded onto a vessel is carried out by an approved Draft Surveyor utilising the ship's scales. All Draft Survey calculations will be rounded to the nearest tonne.

An initial Draft Survey will be carried out on completion of berthing to determine all weights on board. The Surveyor will review the proposed loading plan and be available to advise the Master on the loading sequence and quantities most appropriate to the Terminal's facilities, equipment and early despatch of the vessel.

During the final stages of loading, the Surveyor will attend the vessel and be available to advise the Master on the final trimming and cargo distribution.

The final Draft Survey will be carried out immediately on completion of loading.

The Master or a suitable person nominated by him is required to accompany the Surveyor and assist in determining the quantity of coal loaded and its stowage.

Properly certified accurate and legible ships scales shall be made available to the Surveyor.

The Draft Surveyor is approved by the Company to give guidance and advice which he considers to be in the best interest of the Terminal and the quick despatch of the vessel. The Company does not warrant the accuracy or reliability of such information nor shall it be liable for any act or omission on the part of the advice of the Draft Surveyor, howsoever caused.

Gas-Freeing of Vessels: No Gas-Free Certificate signed by the Ship's Master will be accepted.

The Master of an O.B.O. vessel shall not allow his ship to berth at the Terminal unless the vessel is certified to be gas-free and a Certificate of Test has been issued by an authority approved by Dalrymple Bay

Coal Terminal Pty. Ltd., certifying that the tanks, holds and/or spaces are free from explosive, flammable and injurious gases, fumes and vapours and slop tanks are pressed up or fully inerted and sealed, and such certificate is still valid.

Slop tanks pressed up or fully inerted and sealed shall not be opened whilst the vessel is alongside the berth.

All costs in connection with the inspection, testing and issue of a Certificate of Test in relation to a tank or hold or space for the purposes of these requirements shall be charged to the vessel's account.

A Notice of Readiness will not be accepted from an O.B.O. vessel unless it is certified gas-free in accordance with the above requirements.

Hay Point:

(a) Vessels will be loaded in turn: Vessels will be generally loaded in turn, in the order of arrival provided that:
  (i) A suitable berth is available.
  (ii) The vessel is ready in all respects to receive cargo.
  (iii) All the specified cargo is available at the Terminal.
  (iv) It is in accordance with the instructions of the Charterer or his Agent.

(b) Detailed Loading Plan: Vessel shall present a detailed loading plan immediately on arrival, including hatch quantities with loading sequence and quantity of coal to be reserved for fore and aft trimming by hatches, including anticipated sailing draft.

(c) Independent Marine Surveyor: The weight of each shipment shall be determined by an independent Marine Surveyor. The time used for all surveys shall be to the vessel's account unless alternative arrangements have been made.

(d) Ship's Cargo Stowage: Cargo is belt weighted by weightometers during loading, however, no guarantee of accuracy can be given of this equipment. It is the ship's responsibility for maintaining draft checks during loading to obtain correct stowage and prevent overloading.

(e) Shiploader Air Draft Clearance – Berth No. 2: The Shiploader boom on Berth No. 2 is of a fixed height horizontally shuttled out over a ship's loading hatch.
The underside clearance of this loader is calculated at 24.0 m. minus the height of the prevailing high tide.
Example: 6.0 m. tide would reduce the underside clearance to 18.0 m.
Vessels arriving at Hay Point allocated for Berth No. 2 must ballast down to an air draft in accordance with this calculation.
The minimum air draft is taken as the highest point of a hatch cover or other structure that could obstruct the horizontal travel of the Shiploader from entering a designated hatch.
Deballasting during loading must not exceed the loading rate to maintain safe clearance of a minimum of 0.6 m. between ship and loader for subsequent high tides.

(f) Trimming: Vessel holds will be trimmed using the telescopic and spoon chutes on each Shiploader. No mechanical, on-board, trimming is available at the port.

(g) Berth Dredged Depth: Berth No. 1 is dredged to 16.38 m. below chart datum.
Berth No. 2 is dredged to 16.68 m. below chart datum.
During loading, Masters will be advised the maximum loading draft at L.W. when loading to maximum draft.

Gas Free Certificates: The Master of every O.B.O. vessel shall include the following information with the 48 hour arrival notice (ETA), addressed to:

By Radio: "4HUTASHIP" Hay Point
By Telex: "AA48148".
Nature of preceding 3 cargoes the vessel has carried, and dates of loading.
Date and place last petroleum product was discharged.
Statement on the condition of the slop tanks.
Date and place of issue of the Gas-Free Certificate carried on board.

No Gas-Free Certificate signed by the Ship's Master will be accepted.

The Master of an O.B.O. vessel shall not allow his ship to berth at the Terminal facilities unless the vessel is certified to be gas-free and a Certificate of Test has been issued by an authority acceptable to the Port Authority, certifying that the tanks, holds and/or spaces are free from explosive, flammable and injurious gases, fumes and vapours and slop tanks are pressed up or fully inerted and sealed, and such certificate is still valid.

Sampling Systems: Sampling of coal during shiploading operations is carried out by an independent registered analyst to determine the qualitative and quantitative aspects of each shipment.

All samples are prepared and analysed in accordance with the current British Standards.

B.S. 1016. Parts 1 – 21. Analyses and Testing of Coal and Coke.
B.S. 1017. Part 1. Sampling of Coal.

A Primary Cutter, actuated at preset time intervals, traverses the full width of the free falling coal stream delivering a representative increment onto a Belt Feeder. The Belt Feeder speed is controlled to deliver the primary increments to be continuously traversing Secondary Cutter, where a representative number of increments are extracted and deposited on a slow moving Reversible Belt Feeder. Discharge from this conveyor when reversed provides samples at top size for size analysis and other tests, while normal operation of this Feeder discharges the coal at a uniform rate into a Double Roll Crusher.

The continuous discharge from the Crusher (minus 5 mm.) falls onto a Slotted Belt Feeder which conveys the sample reject to the Sample Reject Conveyor for return onto the main conveyor.

The representative increments passing through the Slotted Belt Feeder are passed into a self-sealing container to/from the common gross sample.

An automatically operated trolley changes the sample containers at predetermined tonnage intervals.

The sampling system was tested for bias following the principles laid down in the standards. A full cross-section of coal from the stopped belt was used as the intrinsically unbiased reference method. Results from 55 pairs of samples were statistically examined and no significant bias was found.

Safe Departure Clearance: Safe clearance = 10% × Draft plus 0.6 m.
Safe Clearance in Berths: Safe clearance = 10% × Draft.

MEDICAL: Hospital and dental facilities available in Mackay 37 km. by road. Agent should if possible be notified at least 24 hours before arrival of medical attention required, or on Friday if arriving over weekend.

DENSITY: Average 1024.

FRESH WATER: Not available.

FUEL: Bunker enquiries can be directed to BHP Transport Pty.Ltd., Marine Fuels Department, Melbourne. Tel: (613) 6092473. Fax: (613) 6092276. Telex: AA 30708.

CONSULS: See "Brisbane".

REPAIRS: Minor repairs only. Vessels not permitted to immobilise at berths.

DRY DOCKS: None.

SURVEYORS: Cargo and Draft Surveyors in attendance at berths. On hire and gas-free surveys can be carried out. Arrange through Agents. Department of Transport Surveyor – see "Gladstone".

Surveys: Vessels calling at the Port should be aware that the berths are open to the sea making measurement of slack ballast tanks difficult and time consuming. It is therefore desirable that vessels present with as many tanks pressed up and overflowing or empty to stripping level as can be achieved whilst complying with the Harbour Master's requirements. This will avoid possible lengthy delays at the intital survey.

Surveyors: Associated Surveyors Queensland, Mackay, Queensland 4740. Tel: 079-572864, 079-574188. Fax: 079-572861. Mail Address: P.O.Box 384, Mackay, Queensland 4740.

Analysts and Surveyors: Carbon Consulting International Pty. Ltd., Mackay, Queensland 4740. Tel: 079-512522, (Hay Point) 079-563205. Telex: AA148180. Fax: 079-513340. Mail Address: P.O.Box 658, Mackay, Queensland 4740.

GANGWAY/DECK WATCHMEN: None available.

OPENING/CLOSING HATCHES: To be opened and closed by ships crew.

CUSTOMS ALLOWANCES: 200 cigarettes, 26 oz. bottle spirits every 10 days.

REPATRIATION: Readily available through Mackay Airport which has daily connections to Brisbane and worldwide.

AIRPORT: At Mackay 37 km. by road. Serviced by Australian Airlines and Ansett. Regular daily flights to Brisbane and Sydney.

TIME: See "General" before first port.

HOLIDAYS: Public holidays as for Brisbane. Loading operations are unaffected except for Christmas Day.

POLICE/FIRE/AMBULANCE: Police Tel: 512 000. Ambulance Tel: 572 222. Fire – contact relevant terminal operating company.

EMERGENCY CO-ORDINATION CENTRE: Australian Coastal Surveillance Centre, Canberra. Search and Rescue Tel: (062) 475 244.

TELEPHONES: *Hay Point:* A public STD telephone is available on Berth No. 2. A private telephone is available at Berth No. 2 for shipping agents.
Berth No. 2, Phone Booth No. 56308M7.
Berth No. 2, Hay Point 079-563131 (Ext. 207).

SERVICES: Compass adjusting and radio, radar or gyro repairs can be arranged if prior notice is given.

BANKS: Major Australian banks are represented in Mackay. Contact through ships' Agent.

SHORE LEAVE: Permitted. Nearest city is Mackay 37 km. away.

IDENTIFICATION CARDS: Citizens of certain non-Commonwealth countries require identification cards.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS/SERVICES: Usual local facilities.

CURRENCY: Australian Dollar (A$).

GENERAL: *Charts and Publications:* Australian Pilot Volume III. Australian Chart No. Aust. 249. Sailing directions and other information for the Ports and Harbours of Queensland. Ports of Queensland and their services.

Weather Conditions: The Port of Hay Point is situated in the cyclone belt. An incidence of about 2 cyclones per year can be expected on the Queensland coast, usually during the cyclone season between November and April.

Prevailing winds are South-Easterly and velocities in excess of 25 knots are infrequent.

The port facilities are sheltered from major swell by the Great Barrier Reef. However, prolonged South-Easterly winds of more than 20 knots can occasionally make conditions unsafe alongside and Masters are advised to order Pilot and tugs in sufficient time should these conditions occur.

Tides and Currents – Hay Point: Formal tide tables are available from the Department of Transport (Marine and Ports Division).

From studies carried out in the Hay Point area by hydrographic investigators, there is an indication that the tidal currents flood in a direction between 145° to 170° True and the ebb current flows in a direction of 330° to 360°, with a maximum speed (in knots) approximately one-tenth of the predicted tidal range (in feet) at that time. A maximum current speed occurs in a direction of 340° True with an ebbing tide. The change of direction in the current occurs about 1.25 hours prior to the tidal extremes.

Tides and Currents – Dalrymple Bay: Tidal streams are generally weak, reaching a maximum strength of 2 knots at Spring tides. The flood tide sets 150° and the ebb sets 330° parallel to the berth with the direction of the stream changing about 1.5 hours before the predicted tide times.

Mean High Water Spring Tide	5.78 m.
Mean Low Water Spring Tide	0.90 m.
Mean Spring Tidal Range	4.88 m.
Mean Neap Tidal Range	2.24 m.
Mean Sea Level above Chart Datum	3.34 m.

The Port of Hay Point is a standard port in the Australian National Tide Tables published by the Hydrographer, Royal Australian Navy and in the Official Tide Tables for Queensland published by the Department of Harbours & Marine.

This harbour uses a Dynamic Real Time U.K.C. Program.

The least depth in the channel is 13.03 m.

The Harbour Master has advised maximum permissible drafts relative to predicted height of tides, for general guidance, which may be amended from time to time at the Harbour Master's discretion to suit prevailing conditions.

Discharge of Refuse, Oil, etc.: Government Authorities demand that no person using the Port shall discharge any garbage, refuse, vegetable or food matter, deck cleanings, polluted bilge water, oil or rubbish of any description in the vicinity of the Port or within 80 km. of the Great Barrier Reef. Heavy penalties will be imposed for breaches of the relevant regulations.

Stores: Limited ships' stores and provisions may be loaded at the Terminal and would be available from Mackay based chandlers and providors.

AGENCY: *Hay Point:* BHP – Utah Coal Ltd, as Manager for Hay Point Services, has a Terminal Agency Service at Hay Point.

BHP – Utah Coal Ltd, Hay Point, will carry out the following services in accordance with the instructions of the Operational Owner (Ship's Owner or Disponent Owner) of the vessel:

(i) Procedures for entrance and clearance of vessels at the Port.
(ii) Communication regarding vessel's movements as requested.
(iii) All necessary services required for loading coal cargo.
(iv) Lodge Voyage Returns with the Deputy Commissioner of Taxation in Queensland and pay from funds already received, the Income Tax involved, if applicable.

The Operational Owner (Ship's Owner or Disponent Owner), shall arrange prior to vessel's arrival at or off Hay Point, for the Terminal Agent to be placed in funds sufficient to cover Estimated Disbursements in connection with each vessel.

All charges and expenses incurred by the Terminal Agent in execution of this service, including but not limited to such items as overtime, postages, petty cash, cables, telegrams, radiograms, telex messages, car hire, etc., shall be charged to each vessel, and such disbursements, if not already included in Estimated Disbursements, together with scheduled Agency Fees, will be paid to the Terminal Agent without delay.

The Terminal Agent will forward promptly to the Operational Owner (Ship's Owner or Disponent Owner), Voyage Account Statements, together with relative documentary evidence, after the departure of each vessel.

BHP – Utal Coal Terminal Agency may be contacted as follows:

M.S. 283, Mackay, Queensland 4740. Tel: 079-563131. Telegraphic address: '4HUTAHSHIP' Haypoint. Telex: AA48148. Fax: 079-563421.

AUTHORITY: Ports Corporation of Queensland, G.P.O.Box 409, Brisbane 4001, Queensland, Australia. *Contact:* Chief Executive Officer. *Tel:* (07) 3224 7088. *FAX:* (07) 3224-7234.

Ports Corporation of Queensland, Hay Point Road, Horyu Maru Drive, PMB 7, Mackay Mail Centre, Queensland 4740. *Tel:* (079) 563109, After Hours Harbour Control (Radio Watch) (079) 563254. *Fax:* (079) 563367. *Telex:* AA46483.

Captain B.J. Lee, Harbour Master, Hay Point. *Tel:* (079) 577238.

Operators: Hay Point Services Pty. Ltd., Hay Point (Via Mackay), Queensland 4740. Mail Address: Mail Service 283, Mackay, Queensland 4740. *Tel:* (079) 563131. *Telex:* AA48148. *FAX:* (079) 563421. *Contact:* K.E. Kelly, Port Manager, Tel: (After Hours) (079) 521402. D.T.Ney, Port Operations Superintendent, Tel: (After Hours) (079) 561529.

Dalrymple Bay Coal Terminal Pty. Ltd., Hay Point Road, M/S F283, Mackay, Queensland 4740. *Tel:* (079) 563122. *Telex:* AA46374. *FAX:* (079) 563353. *Cables:* 4MDALBAY, Mackay. *Contact:* Captain J.D. Holden, General Manager.

AGENT: See "Mackay".

HOBART (including Risdon), Tasmania:
42.53 S. 147.20 E. **(See Plan)**

PORT LIMITS: 'Harbour' means so much of the waters of the River Derwent and its Estuary as lie to the Northward of a line drawn from the Derwent Light (on the Iron Pot Islet) to Kelly Point, on North Bruny; together with so much of the D'Entrecasteaux Channel as lies to the Northward of a line drawn from the Southern end of Partridge Island to Southport Island; and together with all bays and estuaries opening either into the said River Derwent or the said D'Entrecasteaux Channel.

DOCUMENTS: As for all Australian Ports.

PILOTAGE: Pilotage is compulsory for all vessels exceeding 35 m. in length. For vessels bound for Hobart (including Risdon) the pilot boarding ground is Lat. 42° 56′ S., Long. 147° 22.6′ E. Notice of ETA and request for a Pilot must be advised at least 24 hours in advance and confirmation or amendment of this ETA must be made not less than 2 hours prior to the vessel's arrival at the Pilot Station. Channel 16 VHF is continuously monitored and ETA may be confirmed or adjusted on this frequency using the call sign "Hobart Harbour". Vessels can generally establish contact on Channel 16 at ranges in excess of 50 nautical miles from Hobart and are requested to do so. Fax: (002) 310693. Port Tower – Fax: (002) 346116.

The pilot boat is 13.1 m. LOA, white upper works, blue hull and orange deck with the word 'Pilots' on each side. The newest vessel is capable of 23 knots.

ANCHORAGE: Vessels awaiting Pilot may anchor South of a line 090° true from John Garrow Beacon. Depth of water is 20 m. with good holding ground.

MAX. SIZE: The maximum depth of water at the entrance to the River Derwent is 15.2 m. Ships of up to 12.6 m. draft can be accommodated at Macquarie No. 4 Berth. There is no restriction as to length and beam. Max. draft available at Risdon is 10.7 m.

RESTRICTIONS: Navigation within the Port of Hobart is on a 24 hour basis with the following exceptions:

(i) Vessels of 25 m. or more in length will not be permitted to pass under the Tasman Bridge from Monday to Friday inclusive between the hours of 0700 to 0915 and 1600 to 1830.
(ii) At Risdon vessels exceeding 175 m. in length and of a draft more than 10 m. may be restricted from departing berth during the hours of darkness if such vessel has to swing to proceed to sea.

The following overhead clearance restrictions exist within the Port of Hobart:

(i) The centre line of the Main Navigation Span of the Tasman Bridge is 45 m. above MHWS.
(ii) The overhead clearance of the power cable just South of the Electrolytic Zinc Company Wharf at Risdon is 45.7 m. above MHWS.

HEALTH: Australian Commonwealth Rules apply.

Requests for Radio Pratique should be forwarded to the Quarantine Office, Hobart through the vessel's Agent. They should be in writing and include answers to the Radio Pratique questionnaire.

Where delivery of the request for Radio Pratique by the Agent is difficult or impossible, such as night time or at weekends, the request and answers to the questionnaire may be given by telephone on the strict understanding that the Agent delivers the written documents as soon as practicable on the next working day.

On receipt of a request for Radio Pratique, the vessel's Agent will be informed whether Radio Pratique will or will not be granted and it will be the responsibility of the vessel's Agent to inform the vessel.

RADIO: Melbourne Radio. Call sign "VIM". 24 hour operation.

VHF: The Marine Board of Hobart maintain a listening watch on Channel 16 and Channel 67 on a 24 hour basis from the Port Control Building Hobart. When contact has been established all traffic must be passed through Channel 12. Tugs are worked on Channels 6 or 8. Vessels can usually establish contact on Channel 16 at ranges in excess of 50 nautical miles and are requested to do so. (See also "Pilotage").

RADAR: There is no Port Control Radar but the pilot boats are radar equipped. Minimal fog may occur during April to July but shipping is seldom delayed because of it.

TUGS: Five tugs as available for assisting vessels. Their bollard pulls vary from 14 tonnes to 40 tonnes. Vessels bound for Risdon will pick the tug up just North of the Tasman Bridge. A nominal additional charge is made for the use of tugs' lines.

BERTHING:

Hobart:

Macquarie No.4: Common user container/general cargo berth. Quay length 244 m., water depth 12.6 m. 3 ha. of sealed cargo area, adequate reefer holding points, rail siding connecting into main rail system, wharf apron, axle loading 70 tonnes. It is equipped with a 35 tonne container gantry crane.

Macquarie No. 2/3: Common user deep sea berth suitable for quarter ramp vessels. Quay length 328.3 m., depth 10 m. to 14.7 m.

Macquarie No. 1: General cargo berth, quay length 168.9 m., water depth 6.2 m. to 9.8 m.

Elizabeth St. Pier: Used for residential accommodation. Berth for fishing vessels and small craft only. Quay length 153 m., water depth 7 m. to 11.3 m.

Princes No. 1: Common user Ro-Ro berth for vessels equipped with their own ramps. Quay length 138 m., water depth 7.2 m. Ramp is fixed with an axle load SWL of 40 tonnes.

Princes No. 2: General cargo and bulk wheat discharge berth. Quay length 167.7 m., water depth 8.0 m.

Macquarie No. 5/6: Comprises 2 Ro/Ro berths with adjustable ramps each having an axle loading SWL of 59 tonnes. Quay lengths 135 m. and 189 m., water depth 10.1 m. to 11.2 m. A marshalling area provides 4.4 ha. of fenced hardstanding. Macquarie No. 5 is equipped with a 35 tonne container gantry crane.

Selfs Point Oil Wharf: Dolphin type berth with a wharf face length of 98 m., length over dolphins of 258 m., and a water depth of 14.0 m. Facilities are available for discharge of all black and white products including LPG. In addition vessels may obtain supplies of marine fuel oil and marine diesel oil for bunkers.

Risdon: Owned by the Electrolytic Zinc Company of Australasia, situated 2 miles above the Tasman Bridge on the Western side of the river. Quay length 400 m., water depth 10.4 m. to 10.7 m. Imports of raw and semi-processed materials such as zinc concentrates, phosphate rock, muriate of potash etc., are discharged by a conveyor system. Exports of manufactured zinc, cadmium, sulphate of ammonia are loaded via 2 modern gantry type cranes of 24 tonnes SWL, also equipped with 12 tonne grabs.

Facilities are available for loading sulphuric acid at a 151 m. acid wharf with a minimum depth of 10.2 m. at chart datum.

CRANES: One 35 tonne container handling gantry crane with 34 tonne capacity, 31 m. from face of fendering. Maximum spreader height above wharf 27 m. Also rail length 225 m.

1×31 tonne crane; 1×15 tonne crane; forklifts ranging from 170 kg. to 24,000 kg., 3 tow-motors; and 1×12 m. tri-axle trailer container handling crane.

BRIDGES: See "Restrictions".

STEVEDORES: 3 shifts, 7 days a week, 0800 hrs. – 1500 hrs., 1500 hrs. – 2200 hrs., 2200 hrs. – 0500 hrs. "Midnight" shift available only in special circumstances during the months of July, August, September.

MEDICAL: Full hospital facilities available without prior notice.

TANKERS: See "Berthing".

DENSITY: Varies from 1016 at Risdon to 1025 at Hobart.

FRESH WATER: Fresh water is available at all wharves. Delivery is effected via hydrants at convenient points along the wharves. Hose connections are 64 mm. diameter standard thread and delivery rates from 40 tonnes to 60 tonnes per hour per connection.

FUEL: All grades of fuels and lubricants available. Vessels may be supplied at Selfs Pt. Wharf (See "Berthing") or by road tankers.

CONSULS: Consulates exist for the following countries:

Denmark
Finland
France
Germany
Greece
Italy
Japan
Netherlands
Norway
Sweden
Switzerland
United Kingdom

REPAIRS: Facilities available for minor engine and hull repairs. Several repair firms are situated in Hobart.

DRY DOCKS: No dry docks, however a modern slipway owned and operated by the Marine Board is available for vessels up to 1,200 tonnes displacement.

SURVEYORS: A Commonwealth Surveyor is available from Devonport, and Lloyd's Agents also represent other Classification Societies.

Germanischer Lloyd: Wellco Pty.Ltd., 39 Derwent Park Road (P.O.Box 94), Moonah, 7009 Tasmania. Tel: (002) 723011. Fax: (002) 731019.

GANGWAY/DECK WATCHMEN: Can be supplied at Union award rates. Watchmen will be required during discharge/loading of dangerous cargoes.

OPENING/CLOSING HATCHES: Normally handled by stevedores while alongside or by ship's crew before arrival.

CUSTOMS ALLOWANCES: Australian Commonwealth Regulations apply.

CARGO GEAR: Discharge/loading is usually by ship's gear except at Risdon and Macquarie No. 4. However a number of cranes are available for hire from the Marine Board (See "Berthing" and "Cranes").

REPATRIATION: All facilities exist for crew changes and repatriation of seaman. Scheduled aircraft connect with all states several times daily where services operate world-wide and there is also one overseas flight per week via New Zealand.

TIME: See "General" before first port.

HOLIDAYS: No work will be performed on Waterside Workers' Picnic Day (January); Labour Day (March); Good Friday; Anzac Day (25th April); and Christmas Day (25th December). Work is restricted to certain types of vessels and conditions on New Year's Day (1st January); and Boxing Day (26th December).

POLICE/AMBULANCE/FIRE: Automatic fire alarms are installed throughout the port and emergencies can be reported to Port Control on Channel 16, 24 hours a day. Otherwise fire, police and ambulance calls may be reported by dialling 000.

TELEPHONES: Available at all wharves and may be placed on board vessels. Standard rates apply and coin operated telephones are available for use by ship's crews.

SERVICES: A number of Compass Adjusters are available.

SHORE LEAVE: No restriction on crew shore leave or need for shore passes as long as Immigration and Customs requirements have been satisfied.

GARBAGE DISPOSAL: The Port Authority arranges collection by drums alongside as requested.

Ships Waste Disposal: For removal and destruction or disposal of ship's waste disposal from vessels subject to Regulation 33c of the Quarantine (General) Regulations:

(a) For each collection from interstate and overseas vessels in or near the Port of Hobart actually provided where the total complement on board, including crew, does not exceed 50 persons. A$ 176.00
(b) Where the total complement exceeds 50 persons the following charges shall apply:
  (i) a fee for each collection from a vessel which remains in or near the Port of Hobart and a service is actually provided, plus A$ 57.00
  (ii) a fee in respect of each person on board said vessel during the day a collection is provided. A$ 3.45
  (iii) Maximum charge per day A$1,703.00
(c) Where ships waste at Port Huon and Spring Bay is removed by a contractor, the vessel concerned shall be debited with the total cost incurred, plus 10% administrative cost.

WASTE OIL DISPOSAL: No special berth. Contact: Taswaster: Tel: (002) 727885. Tasmanian Pumping: Tel: (002) 724544.

SEAMAN'S CLUBS: The Missions to Seamen, 31 Morrison Street, Hobart. Tel: (002) 346016. All types of services can be arranged or are available at the Mission.

AUTHORITY: Marine Board of Hobart, P.O.Box 202 B, 1 Franklin Wharf, Hobart, Tasmania 7001, Australia. *Tel:* (002) 351000. *FAX:* (002) 310693, Port Tower (002) 346116. *Contact:* C. Drinkwater, Chief Executive. C. Thompson, Port Services Manager.

AGENT: See "Devonport".

KARUMBA (Normanton), Queensland: 17.30 S. 140.50 E. **(See Plan)**

LOCATION: The port of Karumba is located on the Southern coast of the Gulf of Carpentaria. The township of Karumba is 30 km. North of Normanton and 600 km. N.E. of Mount Isa. Karumba is accessible by road from both Mount Isa and Cairns. The road from Mount Isa is sealed. The road from Cairns (800 km.) is mostly sealed, except for a 87 km. section of gravel. 37 km. of the gravel section is expected to be sealed by December 1995, and the entire section sealed by 2000.

PORT LIMITS: Within 10 nautical miles radius of Water Tower to the South of wharves.

DOCUMENTS: See "Melbourne".

PILOTAGE: Contact Regional Harbour Master in Cairns.

ANCHORAGE: None.

RESTRICTIONS: Restricted by a sand bar.

Depth over bar is 1.0 m. at LAT. Tidal range 0.4 m. at MLLW and 3.7 m. at MHHW.

Dredging is scheduled to commence July-August 1996, and will provide a 6 km. channel with a minimum depth of 3.4 m. at LAT.

TUGS: None available.

BERTHING: Facilities are privately owned.

Facility	*Wharf Use*	*Equipment and Facilities*
Fuel Wharf	Petroleum	Storage – 4,000 tons.
Raptis Wharf	Seafood	Receival depot. Unloading conveyor. Cold storage – 500 tons.
Gulf Freight Wharf	General Cargo	Fixed leg crane – 25 tons (for 6 m. containers).
	Seafood Bunkering	Storage shed – 700 sq.m. Forklift. Refuelling barge. Storage tank – 800 tons. Cold storage – 100 sq.m.
Karumba Cold Stores Wharf	General Cargo Seafood	Storage shed – 175 sq.m. Cold storage – 175 sq.m.
Ruby Marine Wharf	General Cargo Bunkering	Mobile crane – 5 tons. Diesel storage – 800 tons.
Integrated Resources International Pty. Ltd.	Livestock Exports	Mobile crane – 12 tons. Stockyards and associated infrastructure.
Mornington Barge Wharf	General Cargo	Mobile crane – 5 tons.
Karumba Slipway	Vessel Maintenance	Slipway.

CRANES: See "Berthing".

STEVEDORES: None available.

MEDICAL: No facilities.

FRESH WATER: Available in limited quantities.

FUEL: Available if arranged in advance.

DRY DOCKS: One slipway available.

AIRPORT: Only used by light aircraft.

POLICE/AMBULANCE/FIRE: Police (077) 459120. Ambulance (077) 459137.

CURRENCY: Australian Dollar.

DEVELOPMENTS: See "Plan Section".

AUTHORITY: Ports Corporation of Queensland, (P.O.Box 409, Brisbane, 4001 Qld.), 24th Floor, CML Building, 300 Queen Street, Brisbane, Qld 4000, Australia. *Tel:* (07) 3224 0728. *FAX:* (07) 3224 7234. *Contact:* Brad Fish, Operations Manager.

LAUNCESTON, Tasmania (including Inspection Head, Beauty Point, Bell Bay): 41.27 S. 147.07 E. **(See Plan)**

PORT LIMITS: A line drawn from Low Head to Hebe Reef thence to West Head defines the seaward limit of the Port of Launceston (including Port Dalrymple which comprises Bell Bay, Beauty Point Harbour and Long Reach).

Seaward Position of Port: Lat. 41° 03′ S., Long. 146° 45′ E.

A vessel is considered to have arrived when at the Pilot Boarding Ground.

Charts: Aus. No. 167 and 168.

DOCUMENTS: Agents prepare Bills of Lading and Shipping Documents. Only documents required Crew List and Passenger List. Light Dues receipt is necessary if payment is made before arrival.

PILOTAGE: The Pilot service is provided by the Port Authority and is compulsory for all vessels over 35.0 m. in length, unless a valid Pilot Exemption Certificate is held for the Port of Launceston.

Contact Harbour Master by radio giving ETA 24 hours before arrival, and give updated ETA to "Bell Bay Control" on VHF radio 3 hours before arrival. "G" flag to be flown on daylight arrival. Harbour Master also on Telephone and Facsimile (See "Authority").

Pilot boards from launch (fitted with VHF Channels 12, 16, call sign "Tamar Pilot"), 2.4 nautical miles N.W. of Low Head Lighthouse.

ANCHORAGE: Position:

(a) Low Head Lat. 41° 03′ 32″ S., Long. 146° 47′ 18″ E.
(b) 1.15 miles 280° from *(a)*
(c) 0.90 miles 308° from *(b)*
(d) 0.85 miles 038° from *(c)*
(e) 0.90 miles 128° from *(d)*
thence 0.85 miles 218° to *(b)*

Vessels may anchor off the port, however a more sheltered anchorage is available within the port at Bell Bay.

RESTRICTIONS: *Navigation of Lower Reaches:*

(a) Draft Limitations: Determined by a 1.4 m. clearance under the keel giving maximum permissible draft at LW 9.0 m. plus height of tide, and maximum permissible draft at HW 11.5 m.

(b) Size Limitations: Vessels over 170 m. LOA enter and depart according to the time limitations below. For vessels exceeding 250 m. LOA and/or 45 m. beam contact Harbour Master.

(c) Time Limitations:

Entry: Vessels over 170 m. LOA enter on flood tide only. Earliest entry is LW at George Town. Vessels then enter according to draft through to 30 minutes after HW at George Town. Pilots board approximately 15 minutes before these times.

Departure: Vessels over 170 m. LOA single up for departure within the following limits: Large vessels berthed at Woodchip Berths – from 1 hour before, up to HW or LW (George Town) depending on draft and tide. Vessels berthed at all other down river berths – from 1 hour before to 1 hour after HW or LW (George Town) depending on draft of vessel and tide.

Shifting of Vessels: The shifting of vessels of any size from berth to berth within the Port will be undertaken 24 hours a day, subject to any special requirements at the berth.

(d) Night Navigation (Entrance Channel):

Entry: Vessels over 200 m. length at Harbour Master's discretion.

Departure: Vessels over 180 m. length at Harbour Master's discretion.

Navigation of Upper Reaches: The Upper Reaches are navigable to the City of Launceston.

Limitations: Length 100 m., draft 5.5 m.

Special Navigation Conditions: Contact Harbour Master for vessels and conditions outside these limits.

Datum: Lower Reaches: LAT (Lowest Astronomical Tide)=AHD* minus 1.977 m. Upper Reaches: LWOST (Low Water Ordinary Spring Tide)=AHD minus 2.260 m.

*AHD = Australian Height Datum.

Tidal Range: George Town – average 2.3 m. Launceston – average 3.8 m.

Depths Alongside:

Eastern	
(At Lowest Astronomical Tide)	
No. 1 Bell Bay, Comalco (Private)	10.8 m.
No. 2, Bell Bay, (A.N.L. Ro/Ro and Container)	8.4 m.
No. 3, Bell Bay, (Temco, Bulk and General)	11.5 m.
No. 4, Bell Bay, (Tankers)	11.5 m.
No. 5, Bell Bay, Multi–Purpose (Ro/Ro and Container) (See "Plan")	10.0 m. to 12.4 m.
Long Reach, Thermal Power Station	12.3 m.
Long Reach, No. 1, Woodchip N. (Forest Resources)	11.5 m.
Long Reach, No. 2, Woodchip S. (A.P.P.M.)	11.2 m.
Western	
(At Lowest Astronomical tide)	
Inspection Head (Bulk Wheat and Tallow)	9.9 m.
A.M.C. Jetty, Beauty Point (Private)	9.7 m.

HEALTH: Organised by ship's Agent. Notify Agent prior to arrival. Pratique automatic if vessel visits other ports in Australia prior calling Launceston, otherwise contact: Health Department, Commonwealth Dept. of Health, Quarantine Dept., Ship Inspection Service, ANL Terminal, Bell Bay, Tas. 7252. (P.O.Box 132, George Town, Tas. 7253). Tel: (003) 82 2224.

Radio Pratique: The Master of any vessel arriving from overseas should, not more than 24 hours and not less than 12 hours before arrival, transmit to the Quarantine Officer, if necessary through the Agent, a statement giving the following details:

A. Name, type and nationality of vessel.
B. Itinerary for last 21 days. If over 21 days from last port, name of port and date of departure.
C. Name of first Australian port and ETA.
D. Number of crew.
E. Number of passengers.
F. Any deaths on board during the voyage? Give details.
G. Any cases of illness during the last 21 days with a fever of 38°C or above, and:
   (a) accompanied by rash, jaundice or glandular swelling, or
   (b) accompanied by diarrhoea lasting longer than 24 hours.
H. Persons suffering from venereal disease during the voyage?
I. Live fish, birds, reptiles or other animals being carried (including ship's pets).
J. Livestock carried on previous voyages in the last 6 months? Please advise type of livestock, date of voyage and ports visited. Have all stock-carrying compartments been thoroughly cleaned and disinfected?
K. Do you request Radio Pratique?

RADIO: Melbourne VIM.

VHF: *Port Control:* (manned 24 hours). Tel: Bell Bay (003) 820111, 820175. Telefax: Bell Bay (003) 821695. Telegraphic Address: Harbmaster Launceston. Radio Call Sign: "Bell Bay Control". Pilot Call Sign: "Tamar Pilot".

Radio Service: The P.L.A. Port Control Room at Bell Bay is manned 24 hours and operates a radio service on the following frequencies.

VHF Channel 16 (156.8 MHz) International distress and calling.

VHF Channel 12 (156.6 MHz) Port working frequency.

VHF Channel 67 (156.375 MHz) Alternate calling and distress.

HF 2182 kHz International distress and calling (for emergency use only).

Call Sign: "Bell Bay Control".

Assistance Afloat: Contact Port Control. Assistance Ashore: Contact Port Control. Emergency Assistance: Contact Port Control.

Port Office: The "Port Office" at Bell Bay includes the Harbour Master's Office and the "Port Control" room. The Harbour Master controls shipping movements, berth and shed allocations, cargo storage areas and equipment requirements.

Tugs, linesboats and linesmen are ordered by the "Port Office" staff on behalf of vessels' Agents.

It is therefore essential that any change in a vessel's ETA or ETD be communicated to the "Port Office" as soon as possible.

TUGS: Towage services are operated by North Western Shipping and Towage Co. Pty. Ltd. with 2 ship handling tugs (over 30 ton bollard pull) based at Inspection Head Wharf. Both are fitted with radar; one fitted with a fire monitor.

"Yorktown" built 1972, 249 g.r.t. LOA 29.49 m. Speed 10.5 knots with bollard pull of 33 tons, type 1.4mW, twin screw.

"Farm Cove" built 1971, 209 g.r.t. LOA 29.42 m. Speed 12 knots. Bollard pull 32 tons. Twin screw.

Other tugs are available at several hours notice from other ports. Launches are available for small ship and barge handling.

All tugs are equipped with VHF radio with Channels 6, 8, 12, 16 and 67.

BERTHING: Bell Bay: On the Eastern shore within 8 nautical miles of the entrance.

No. 1, Comalco Berth (Private):

A concrete decked and piled wharf, providing facilities for handling of aluminium and bulk cargoes. Length of wharf: 152.4 m.; width 18.95 m. Width of apron: 9.1 m. Mooring dolphins: 5 with outermost 2 at 330.4 m. apart. Width of approaches: 6.1 m. Depth alongside: 10.8 m. at LAT. Height of deck above datum: 5.40 m.

Cranes: 2×12.5 ton portal, electric, luffing, slewing, grabbing, travelling cranes. (Manufacturer: Stothert & Pitt).

Lifting capacity/speed: 12.5 ton grab full; 6.25 ton (cargo) at 91.44 m./min. Max. radius: 20.57 m. Min. radius: 7.01 m. Tail radius: 5.33 m. Max. outreach from wharf fenders: 13.96 m. Max. backreach from wharf fenders: 27.19 m. Centre of crane to outer edge of wharf fenders: 6.61 m. Max. height of hook above wharf deck/max. radius: 19.81 m. Max. height of bottom of grab above wharf deck/max. radius: 8.23 m. Max. depth of bottom of grab below wharf deck/max. radius: 15.24 m. Length of travel: Full length of wharf. Rated capacity: 300 tonnes/p.h. each. Average "alumina" complete discharge: 225 tonnes/p.h. each. Average "pitch" complete discharge: 300 tonnes/p.h. each.

Wharf deck loading: 2.7 tonnes/sq.m. (5 cwt/sq.ft.).

Axle loading: 20 tonnes.

Cargo bin: Uncovered concrete cargo bin 133.27 m. long × 8.53 m. wide × 3.66 m. deep runs along back of wharf. Alumina is now being discharged by self-unloading vessels to hoppers then by conveyor to the smelter.

Other bulk cargoes: Discharged to hoppers then road-hauled to the works.

Wharf power: Nil.

Telephone: Ship Tel: (003) 82 1482, when connected. Agents Tel: (003) 82 1471. Comalco switchboard (003) 82 5111.

Fresh Water: Available at maximum rate of 50 tonnes/p.h. per connection.

Bunkering: Road tanker.

No. 2, A.N.L., Ro/Ro, and Container Berth: A specially designed terminal for the Bass Strait and vehicular deck ships equipped with stern loading facilities capable of carrying wheeled and mobile cargo to maximum of 120 tonnes gross weight.

Length of wharf: 86.6 m.; width 38 m. Mooring dolphin: 227.9 m. East of ramp end. Fender dolphin: 116 m. East of ramp end. Depth alongside: 8.4 m. at LAT. Height of deck above datum: 5.03 m.

Ro/Ro ramp: 8.23 m. wide with max. vehicle width of 8.14 m. and capacity in excess of 120 tonnes. Axle loading on ramp: 63 tonnes (forklift). Gross loads in excess of 120 tonnes can be accommodated with reference to Chief Engineer. Ro/Ro Cassette System in use with 8 prime movers, 8 trailers and 231 cassettes.

Wharf deck loading: 2.7 tonnes/sq.m. (5 cwt./sq.ft.). Wharf axle loading: 14.5 tonnes; forklift – 43.6 tonnes.

Marshalling area: 4.72 ha.

Rail: Shipside. Rail loop services marshalling area.

Reefer outlets: 102 for 120 refrigerated containers, each 415v, 30 amp. Wharf power: 1×240v, 10 amp.

Telephones: Ship (Master) Tel: ((003) 82 1366. Ship (Crew) Tel: (003) 82 1593. Agents Tel: (003) 82 1084.

Fresh Water: Available at maximum rate of 50 tonnes/p.h. per connection.

Bunkering: Road tanker.

No. 3, Bell Bay Wharf (Temco, Bulk and General): A concrete decked, steel piled wharf providing for handling of general and bulk cargoes.

Length of wharf: 152.5 m.; width 20.4 m. Mooring dolphins: 236.9 m. apart. Depth alongside: 11.7 m. at LAT. Height of deck above datum: 5.18 m.

Cranes: 19 tonne slewing, luffing, grabbing, travelling crane with trailing hatch hopper on rails. (Manufacturer: Caillard Levage).

Lifting capacity: 19 tonne with grab; 25 tonne with hook. Lifting capacity/radius: 19 tonne at 30 m. max. radius; 25 tonne at 24 m. max. radius. Max. radius 30 m. Min. radius: 10 m. Tail radius: 6 m. Max. outreach from wharf fenders: 22.49 m. Max. backreach from wharf fenders: 37.51 m. Centre of crane to outer edge of wharf fenders: 7.51 m. Max. height of bottom of grab above wharf deck/max. radius: 18 m. Max. height of hook above wharf deck/max. radius 22 m. Max. depth of bottom of grab below wharf deck/max. radius: 14 m. Length of travel: Length of wharf for 108 m. Associated equipment: Trailing hatch hopper with operator's cabin. Estimated unloading rate (grab): 500 tonnes/p.h. Average loading rate (grab): 660 tonnes/p.h.

Wharf deck loading: Deck and approaches: 4.3 tonnes/sq.m. (8 cwt./sq.ft.) except. Deck between crane rails: 2.7 tonnes/sq.m. (5 cwt./sq.ft.). Up to 140 tonne loads on suitable transporters can be accommodated with reference to Chief Engineer. Axle loading on deck/pavement: 20 tonnes; 17.8 tonnes (forklift).

Transit shed space: 744 sq.m.

Wharf power: 2×415v, 30 amp.; 2×240v, 10 amp.

Telephones: Ship Tel: (003) 82 1768. Agents – Stevedores Tel: (003) 82 1437. Temco – Wharf Office Tel: (003) 82 1411. Customs Tel: (003) 82 1526.

Fresh Water: Available at maximum rate of 50 tonnes/p.h. per connection.

Bunkering: Road tanker.

No. 4, Tanker Berth: A "T" head concrete berth. Vessels up to 212 m. length have been accommodated. Length of wharf: 54.5 m.; width 10.4 m. Mooring dolphins: 356.2 m. and 179.2 m. apart. Depth alongside: 11.5 m. at LAT. Height of deck above datum: 5.0 m. Axle loading: No vehicles allowed on deck without reference to Chief Engineer.

Pipelines: (a) 2×250 mm.; one for black and one for clean oil.
(b) 1×100 mm.; for discharge of LP Gas, 440 kPa (64 lb/sq.in.).
(c) 1×75 mm. vapour return line.

Manifold is 19 m. from downstream fender.

Tanks: Bottom of tanks in tank farms 33 m. above manifolds on wharf.
Wharf power: Nil.
Telephones: Watchman Tel: (003) 82 1179.
Fresh Water: Available at max. rate of 50 tonnes/p.h. per connection.
Bunkering: Fuel oil 100 mm. and 150 mm. connections, rate of 50/60 tonnes/p.h. Diesel oil by road tanker, 75 mm. connection at 18 tonnes per 1 hour 15 minutes.

No. 6, Multi-Purpose Berth (General, Container and Ro/Ro): A concrete decked, steel piled, heavy duty berth designed for Ro/Ro, container, conventional and bulk cargoes.

A steel decked bridge 24.4 m. long×7.2 m. wide connects West marshalling area to the wharf. Length of wharf: 313.6 m. Mooring dolphin: Behind wharf 37.3 m. East of wharf end. Depth alongside: 9.0 m. to 12.4 m. at LAT (See "Plan"). Height of deck above datum: 5.05 m.

Cranes: (a) 50 ton portal, electric, horizontal luffing, slewing, travelling wharf crane equipped with spreaders and other equipment for the handling of 6.1 m. and 12.2 m. ISO containers and grabbing by special arrangement. (Manufacturer: Deer Park Engineering). Lifting capacity/radius: 40 ton at 32 m.; 50 ton at 22.86 m. Max. outreach from wharf fenders: 23.67 m. (40 ton); 14.53 m. (50 ton). Max. backreach from wharf fenders: 40.33 m. (40 ton); 31.19 m. (50 ton). Centre of crane to outer edge of wharf fenders: 8.33 m. Max. height of hook above wharf deck/max. radius: 24.38 m. Max. depth of hook below wharf deck/max. radius: 9.14 m. Length of travel: Length of wharf.

(b) 40 tonne mobile harbour crane, with standard capacity of 40 tonnes (under hook) and heavy lift capacity of 100 tonnes (under hook). (Manufacturer: Favco-Gottwald).

Standard load/radius limits: 40 tonnes at 11 m. to 31 m., then reducing to 26.0 tonnes at 42 m. Heavy lift/load radius limits: 100 tonnes at 11 m. to 17 m. then reducing to 26.0 tonnes at 42 m. Max. radius: 42 m. Min. radius: 11 m. Max. outreach from wharf fenders: 33.67 m. Max. backreach from wharf fenders: 50.33 m. Centre of crane to outer edge of wharf fenders: 8.33 m. Max. height of hook above wharf deck/max. radius: 32 m. Max. depth of hook below wharf deck/max. radius: 15 m. Associated equipment/spreaders, etc.: Equipped with remote controlled swivel gear, load leveller and fully automatic spreader for handling containers, general cargo and bulk materials.

For further details see "Cranes".

Ro/Ro Ramp: 8.23 m. wide stern loading ramp with max. vehicle width of 8.14 m. and capacity in excess of 100 tonnes.

Axle loading on ramp: 52.4 tonnes (forklift). Gross loads in excess of 100 tonnes can be accommodated with reference to the Chief Engineer.

Wharf Deck Loading: 3.23 tonnes/sq.m. (672 lb./sq.ft.); 1985 extensions: 5 tonnes/sq.m. (9.3 cwt./sq.ft.).

Wharf Axle Loading:
(a) Deck and pavement: 50 tonnes.
(b) 1985 deck extension: 80 tonnes.

Marshalling Area: East: 1.8 ha.; West: 1.5 ha.
Total of 3.3 ha. or 3.8 ha. including wharf decks.
Transit Shed Space: 2,675 sq.m. Sheds are fitted with exhaust fans for pre-shipment storage of primary produce.
Rail: At ship side, full length of berth.
Reefer Outlets: 72 for 144 refrigerated containers.
Wharf Power: 5×415v., 30 amp.; 6×240v, 10 amp.; 1×415v., 60 amp.
Telephones: Ship (East end) Tel: (003) 82 1840, (West end) Tel: (003) 82 1129. Agents: Tel: (003) 82 1880. First Aid: Tel: (003) 82 3174. Customs: Tel: (003) 82 1526.
Fresh Water: Available at max. rate of 50 tonnes/p.h. per connection.
Bunkering: Road tanker.

Bell Bay Industrial Area:
(a) P.L.A. Cold Stores: Cold storage capacity of 22,864 cu.m., consisting of 6 chambers each with temperature of −23°C., plus self-levelling ramp and forklift service garage.
(b) Stockyards: Area 595 sq.m.
(c) Incinerator: Quarantineable waste disposal, with average destruction rate of 325 kg.hr. over a 6 hour period, equipped with hydraulically operated loader and ram.
(d) Weighbridge: 16 m. long, weighing up to 50 tonnes.
(e) Butane Gas Storage Sphere: (Gas Corporation of Tasmania) – capacity of 600 tonnes.

Long Reach: On the Eastern shore within 12 nautical miles of the entrance.

Thermal Power Station Berth (H.E.C.):
A "T" head concrete decked, steel piled wharf, 26.2 m.×13.4 m. with a concrete approach from land 3.66 m. wide.
Mooring Dolphins: 2 at 262 m. apart.
Fender Dolphins: 2 at 61 m. apart.
Depth Alongside: 12.3 m. at LAT.
Height Above Datum: 5.66 m.
Wharf Deck Loading: 488 kg./sq.m. (100 lb./sq.ft.).
Axle Loading: 14.3 tonnes.
Pipes for Discharge: 3×250 mm. lines, feeding into 2×300 mm. lines to 3×15,000 tonne tanks: head 0.00 m. when tank is empty to 18.29 m. when tank is full. Pipe connections are "Chicksan" booms.
Wharf Power: Nil.
Telephone: Ship Tel: (003) 82 1377.
Fresh Water: Available at max. rate of 30 tonnes/hr. per connection.
Bunkering: Road tanker to 20 tonne all-up weight.

No. 1 Woodchip Berth – Northern (Forest Resources):
A berthing face 217 m. long. Approach from land is a bridge 78.7 m. long×3.81 m. wide.
Fender Dolphins: 5.
Mooring Dolphins: 2 at 482 m. apart.
Shore Trip-Hooks: 2 at 213.4 m. apart. Steel walkway between dolphins is 1.22 m. wide.
Depth Alongside: 11.5 m. at LAT.
Height of Deck above Datum: 5.64 m.
Woodchip Loader (fixed): Situated on central dolphin with loading rate of 700 tonnes/p.h. Clearance with boom horizontal 22.10 m. above datum.
Wharf Power: Nil.
Telephones: Ship Tel: (003) 94 7193. Agents Tel: (003) 94 7303. Customs Tel: (003) 82 1526. Forest Resources Switchboard Tel: (003) 94 7303.
Fresh Water: Available at max. rate of 30 tonnes/p.h. per connection.
Bunkering: Not available.

No. 2 Woodchip Berth – Southern (Associated Pulp and Paper Mills Ltd.):
A berthing face 229 m. long. Approach from land is by a causeway and a bridge 18.7 m. long×4.7 m. wide.
Fender Dolphins: 5.
Mooring Dolphins: 2 at 482 m. apart.
Shore Trip-Hooks: 2 at 210.3 m. apart. Steel walkway between dolphins is 1.07 m. wide.
Depth Alongside: 11.2 m. at LAT.
Height of Deck (Loading Dolphin) above Datum: 6.86 m.
Woodchip Loader (Fixed): Situated on central fender dolphin with loading rate of 700 tonnes/p.h. Clearance with boom horizontal 20.57 m. above datum.
Axle Loading on Deck and Approach: 14.3 tonnes; 50 tonnes (forklift).
Wharf Power: Nil.
Telephones: Ship Tel: (003) 94 7377. Customs Tel: (003) 82 1526. A.P.P.M. Switchboard: Tel: (003) 94 7201.
Fresh Water: Available at max. rate of 30 tonnes/hr. per connection.
Bunkering: Not available.

Beauty Point Harbour: On the Western shore within 6.5 nautical miles of the entrance.

Australian Maritime College Jetty (Private):
A "T" head concrete jetty, constructed for A.M.C. Seamanship Centre training vessels. A side pontoon plus lifeboat deck exist on Northern side of jetty approach.
Length: 60 m., width 9 m.
Mooring Dolphins: 2 at 115 m. apart.
Depth Alongside: 9.7 m. at LAT.
Height of Deck above Datum: 4.5 m.
Wharf Deck Loading: 1.5 tonnes/sq.m. (2.8 cwt./sq.ft.).
Axle Loading: 14.3 tonnes.
Telephones: A.M.C. Seamanship Centre Tel: (003) 83 4455.

Small Boats Marina:
Suitable for ocean-going craft. Constructed as a pontoon and catwalk type with amenities block, car park and picnic area adjacent.
Total Berths: 52.
Fresh Water: Available.

Inspection Head Wharf (Bulk Wheat, Tallow and General; Fish Processing):
No. 1, Northern end: 180.6 m. long, width 28.1 m., concrete decked and steel piled.
No. 2, Southern end: 153.6 m. long, width 34.3 m., concrete decked and piled.
Total Length: 334.3 m., providing 2 overseas berths.
Mooring Dolphins: 2 at 452.2 m. apart: Northern dolphin: 45.5 m. from end of wharf. Southern dolphin: 72.4 m. from end of wharf. Depth Alongside: 10.0 m. at No. 1 at L.A.T. and 9.5 m. at No. 2 at L.A.T. Height of Deck above Datum: 5.33 m. Swinging Room: 270 m. off North end of wharf. 210 m. off Berth No. 2.
Transit Shed Space: Shed No. 1A: 972 sq.m. (Bulk wheat capacity: 2,463 cu.m.). Shed No. 1B: 976 sq.m. (Bulk wheat capacity: 1,841 cu.m.).
Wheat Loaders: 2 "Neuro" unloaders (Tasmanian Grain Elevators Board) rated at 250 tonnes/p.h.
Tallow Storage:

Tanks	1×600 tonnes; 6×100 tonnes; 1×50 tonnes (settling);
Total Capacity	1,250 tonnes
Loading Capacity	200 tonnes/p.h.
Pipe-lines	1×100 mm., 1×152 mm.

Wharf Power: 8×240v, 10 amp.; 8×415v, 30 amp.
Telephones: No. 1 Wharf: Ship Tel: (003) 82 1665. Agents Tel: (003) 82 1647, 83 4111. Stevedores Tel: (003) 83 4141. Customs Tel: (003) 83 4131. Bulk Tallow Plant Tel: (003) 83 4455.
No. 2 Wharf: Ship Tel: (003) 82 1664. Asst. Harbour Master Tel: (003) 83 4266. Wharf Office Tel: (003) 83 4211.
Fresh Water: Available at max. rate of 30 tonnes/p.h. per connection.
Bunkering: Road tanker.

Launceston: On Eastern shore 35.4 nautical miles from the entrance.

King's Wharf: (P.L.A. Plant Berth and Flinders Island Services):
A concrete decked and piled wharf providing a total berthing length of 295.4 m. Equipped with 50 ton bollards every 18.3 m.
Depth Alongside: Subject to siltation.
Height of Deck above Datum: 5.64 m.
Wharf Deck Loading: 1.3 tonnes/sq.m. (2.5 cwt./sq.ft.); ship building area; 2.7 tonnes/sq.m. (5 cwt./sq.ft.) main deck. Axle Loading: 12.7 tonnes. Transit Shed Space: 2,463 sq.m. Rail: Siding services the adjacent P.L.A. Pileyard).
Wharf Power: 5×415v., 30 amp.
Telephone: Connection by Telecom.
Fresh Water: Available at max. rate of 30 tonnes/p.h. per connection.
Bunkering: Road tanker.
Next section of wharf has been demolished and replaced with a timber piled and decked walkway 277.3 m. long used as P.L.A. Plant Berth.

Stock Berth:

A "T" shaped timber deck 27.3 m. long connected to holding and receiving yards by an adjustable gangway near the centre of a berth 57.5 m. long.

Depth Alongside: Subject to siltation. Height of Deck above Datum: 5.64 m. Rail: Siding adjacent.

CRANES: The Port Authority operates a range of mobile cargo handling and wharf equipment and floating plant which is available for hire.

Mobile Cargo Handling and Wharf Equipment:

Mobile Harbour Crane: Favco-Gottwald (HMK 280-89) mobile harbour crane, with standard capacity of 40 tonnes (under hook) and heavy lift capacity of 100 tonnes (under hook).

Standard Load/Radius Limits:

40 tonnes at 11 m. to 31 m., then reducing to 39.3 tonnes at 32 m., 28.2 tonnes at 40 m., 26.0 tonnes at 42 m.

Heavy Lift Load/Radius Limits:

100 tonnes at 11 m. to 17 m., then reducing to 92 tonnes at 18 m., 85 tonnes at 19 m., 78 tonnes at 20 m., 59.7 tonnes at 24 m., 43.2 tonnes at 30 m., 28.2 tonnes at 40 m., 26.0 tonnes at 42 m.

These limits may vary depending on berth and crane position. Any further details are available on enquiry from the Chief Engineer.

Max. radius: 42 m. Min. radius: 11 m. Max. height of hook above wharf deck/max. radius: 32 m. Max. depth of hook below wharf deck/max. radius: 15 m. Hook speed: With no load: 84 m./min.; with 27 tonnes: 63 m./min.; with 40 tonnes: 44 m./min.

Set up time on this crane is fast with outrigger pads positioned by the operator. Change of position can be effected by the operator from cabin.

The cabin adjusts in height from the standard 17 m. up to 24 m. above wharf deck at the operator control.

Closed circuit TV installation permits the operator a clear view of the hook activities.

Operations by the crane can be carried out throughout the port area and consideration will be given to use within the industrial area.

The crane usually travels in an upright position but can be lowered automatically to a height of 6 m.

Associated equipment/spreaders, etc: Equipped with remote controlled swivel gear, load leveller and fully automatic spreader for handling containers, general cargo and bulk material.

Also see "Berthing".

BULK CARGO FACILITIES: See "Berthing".

SPECIALISED CARGO-HANDLING FACILITIES: See "Berthing".

BRIDGES: No bridges for large overseas shipping. Some inter-state vessels proceeding to Launceston will pass under Batman Bridge – 27 m. mast height allows 0.9 m. clearance at HW.

STEVEDORES: Agent for ship arranges stevedores.

MEDICAL: Agents should be notified to prepare for medical attention or hospitalisation. Hospitals at Launceston, Beaconsfield and George Town.

TANKERS: See "Berthing". No. 4 Bell Bay Tanker Berth, Long Reach Thermal Station Berth and No. 1 Bell Bay Comalco Berth.

DENSITY: 1012 to 1028, depending on rainfall.

FRESH WATER: Fresh water available at all berths. Delivery 50 t.p.h. by hose.

FUEL: Direct pipe-line bunkering from Mobil Bell Bay tank farm or road tanker is available at Berth No. 4 or by road tanker at all other berths except Woodchips Berths.

Also see "Berthing".

FIRE PRECAUTIONS: Tankers governed by the Association of Australian Port and Marine Authorities "Rules for the Handling of Dangerous Goods and Oils in Ports".

CONSULS: None.

REPAIRS/DRY DOCK: William Hart Graving Dock: Situated on South bank of North Esk River adjacent to Charles Street Bridge. A steel and concrete graving dock with a clear width at the entrance of 12.8 m., capable of accommodating vessels up to 62.5 m. in length.

Maximum permitted draft: 3.66 m.

Depth Alongside Dock Ramp: 3.0 m. to 4.0 m. at LWOST, subject to siltation. Depth maintained by dredging. Design keel loading: 33.9 tonnes/m.

Telephones: Launceston Marine. Tel: (003) 342844.

Fitting Out Berth: Town Pier: (Forms part of William Hart Dockyard).

A concrete decked berth. Length: 135.8 m. Depth Alongside: 3.0 to 4.0 m. at LWOST, subject to siltation. Depth maintained by dredging. Height of Deck above Datum: 4.98 m. Deck Loading: 2.7 tonnes/sq.m. (5 cwt./sq.ft.). Axle Loading: 14.3 tonnes.

Wharf Power: 1×240v, 10 amp.

Fresh Water: Available to max. rate of 30 tonnes/p.h. per connection.

Shore reception facilities are available for dirty bilge and fuel:

1×54,552 litres (12,000 gal.).
1×22,730 litres (5,000 gal.).
1×16,800 litres (3,698 gal.).

R.A. Ferrall Shiplift: Adjacent to Northern end of King's Wharf. A shiplift docking complex 105.3 m.×25 m. with a lifting platform 60 m.×18 m. operated by 16 synchronised lifting winches.

A transfer system is provided for up to 3×700 tonne displacement vessels leaving the platform free for larger vessels.

Maximum Vessel Size: Length 65 m., beam 18 m., draft 5.5 m. (over 4 m. subject to tide and blocking, etc.). Displacement 2,160 tonnes (ship); 3,120 tonnes (barge).

Depth Alongside: 4.5 m. to 5.6 m. at LWOST, subject to siltation. Depth maintained by dredging. Design Keel Loading: 55 tonnes/m. Height of Deck above Datum: 5.64 m. Crane: 17.5 ton stiff leg derrick crane covers Northern section of docking platform.

Lifting capacity/max. radius: 15 ton at 25.87 m.; 17.5 ton at 19.81 m. Min. radius: 6.40 m. Max. height of hook above deck/max. radius: 9.75 m. Max. depth of hook below deck/max. radius: 9.14 m.

Deck Loading: Rear wharf: 4.2 tonnes/sq.m. (7.87 cwt./sq.ft.); Inner/outer decks: 5.3 tonnes/sq.m. (9.69 cwt./sq.ft.). Axle Loading: Platform: 4.8 tonnes (forklift). Rear wharf: 58.8 tonnes. Inner/outer decks: 26.7 tonnes (with max. weight vessel); 45 tonnes (if less than 1,500 tonne weight vessel). Transfer System Capacity: 704 tonnes.

Telephones: Launceston Marine. Tel. (003) 342844.

In addition to facilities mentioned above, Port of Launceston Authority employees carry out ship repairs afloat at Bell Bay and Lower Reaches berths on interstate and overseas vessels. Such work is normally carried out simultaneously with cargo operations.

SURVEYORS: Arranged by Agent.

GANGWAY/DECK WATCHMEN: Only required at bulk berths.

HATCHES: Opening/Closing usually by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes or 250 grams of tobacco per man; 1 opened litre spirits per man; stores sealed on arrival.

CARGO GEAR: See "Berthing". Certificates of loading gear and derrick tests to be produced. Also see "Melbourne".

REPATRIATION: Arranged through ship's Agents.

AIRPORT: Approx. 64 km. from Bell Bay and 15 km. from Launceston. Served by Ansett and Australian Airlines.

TIME: See "General" before first port.

HOLIDAYS: Good Friday, Anzac Day, Christmas Day and New Year's Day close holidays, work on other holidays may be arranged through Agents.

POLICE/AMBULANCE/FIRE: Port Radio Control must be advised in the event of fire.

EMERGENCY CO-ORDINATION CENTRE: The Port of Launceston Authority operates it's own port emergency service.

Trained assistance in emergency operations is rapidly available from the adjacent industrial complexes to offset the delay in obtaining full Emergency Services from Launceston.

Port Control is equipped with a direct line to the State Emergency Service offices in Launceston and Hobart, and can be quickly converted into an Emergency Operation Centre.

All Emergencies: Contact: Port Control. Radio: Channel 16. Tel: (003) 820175.

TELEPHONES: Ship-to-shore phones available.

STORING: Vessels stored by truck; Customs require stores be "entered for export".

SHORE LEAVE: When Immigration and Customs requirements have been satisfied there is no restriction on crew shore leave so long as they rejoin the vessel on departure. There is no need for identity cards or shore passes except in so far that non-English speaking persons may wish to identify themselves.

GARBAGE DISPOSAL: Drums available. Charge A$150.00 per service. Times as requested. Contact: Port Control, Tel: (003) 820175.

WASTE OIL DISPOSAL: Service available. Small quantities only (± 10 tonnes). No special berth. Tel: (003) 944309 for service.

SEAMAN'S CLUBS: Missions to Seamen. Tel: 831034. International telephone, chapel, library, stamps and postal service, table tennis, pool table, T.V. and video.

Catholic, United, Baptist, Salvation Army and Anglican churches in the town.

CURRENCY: Australian Dollar. No restrictions.

SHIP SUPPLY SERVICES: Various providoring companies available.

In cases of emergency upon request, the pilot boat has been used for removing sick crew members, taking small quantities of stores and repair people to vessels outside the port. Water has been supplied in small quantities from the tugs to vessels anchored off the port.

GENERAL: *Surveys:* Surveys, including Damage, Draft, On and Off Hire, Protest, Classification Society, Commonwealth D.O.T. and Gas Free Certification can be arranged through Harbour Master's office or ship's Agent.

Services: Ship Chandlers, P&I Club, radio repairs and divers.

Floating Plant: Launch: One 10 m., fibreglass, twin-hulled, diesel powered, high speed launch: "Dalrymple", fitted with SSB HF, VHF and 27 MHz radio. The launch is used for workboat/rescue/patrol/VIP and river sounding.

Launch "Captain Gibson": A 16.2 m. steel launch equipped with radar, VHF radio and used as a pilot launch.

Launch "Wm. Robinson": A 11.1 m. steel launch equipped with VHF radio and used as a relief pilot launch and a harbour workboat.

Launch: "Carrington": A 15.3 m. steel launch equipped with VHF and 27 MHz radio. Vessel has a bollard pull of 6 tonnes and is used as a harbour workboat.

Other Floating Plant: Two flat top barges 24 m.×7.77 m. One flat top barge 34 m.×7.31 m.

Other Plant: A variety of construction and maintenance plant such as pumps, welders and sand-blasting equipment, etc., may be made available for special requirements. Details will be supplied upon application. A variety of other and specialised units are also available at 24 hours' notice from contract hirers to the Authority.

AUTHORITY: Port of Launceston Authority, P.O.Box 257C, Launceston, 7250 or Mobil Road, Bell Bay 7252, Tasmania, Australia. *Tel:* (003) 820111. *Cables:* Bell Bay Control. *FAX:* (003) 821695. *Contact:* C.A. Kittel, General Manager. Captain C. Black, Harbour Master.

AGENT: See "Devonport".

LUCINDA, Queensland: 18.32 S. 146.20 E. (See Plan)

LOCATION: Lucinda is a first port of call and is situated in position Lat. 18° 32′ S., Long. 146° 20′ E. This port is approximately 680 miles North of Brisbane.
PORT LIMITS: See "Plan".
PILOTAGE: Location of pilotage boarding ground for the bulk sugar loading berth is Lat. 18° 30′ S., Long. 146° 24′ E.

The pilot vessel is equipped with VHF Channels 16, 12 and 6. No regular watch is kept.

For the inshore berth the pilot boarding ground is in position Lat. 18° 15′ S., Long. 146° 03.5′ E.

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait, and also Palm Passage is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".
MAX. SIZE: 52,000 d.w.t., LOA 222 m., beam 31.0 m. and max. draft 12.3 m.
HEALTH: Pratique available 24 hours a day, 7 days a week. This is carried out alongside.
TUGS: Required for all movements. One tug comes from Cairns and another tug comes from Mourilyan.
BERTHING: *Sugar Wharf:* The sugar wharf has an approach jetty from the shore 5.76 km. in length. The berth is 224 m. long.

The wharf is used for the export of bulk sugar which is loaded via a travelling gantry.

The depth of water at LWOST is 13.6 m.

The mean Spring rise is from 0.5 m. to 2.9 m. whilst the mean water neap rise is from 1.2 m. to 2.1 m.

The sugar berth was constructed to accommodate vessels of 40/45,000 d.w.t. with loading rate of up to 1,700 tonnes/p.h. at the offshore deepwater wharf. Berth starboard side to. The maximum all up weight of vehicles allowed on wharf is 5 tonnes gross. There is a height clearance of 2.1 m. on apron.

Max. air draft above L.W.D. 11.0 m. (bottom of thrower).

Max. reach from fender face 17.5 m.

There are 3 sheds and are confined to bulk sugar storage only. Total capacity 231,000 tonnes.

Inshore Berth: Length 133.35 m. Depth 9.0 m. Channel depth 3.3 m. Berth officially closed in May 1989.
FRESH WATER: Not available.
FUEL: Not available.
GARBAGE DISPOSAL: Garbage disposal facilities will be provided on request at the shipowner's expense. This is carried out by a private contractor and requires ample notice. Drums are provided. Arrangements should be made through the agent.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Australian Dollar (A$).
GENERAL: *Stores:* Available from Townsville but should be ordered prior to arrival.
AUTHORITY: Ports Corporation of Queensland, G.P.O.Box 409, Brisbane 4001, Queensland, Australia. *Tel:* (07) 3224 7088. *FAX:* (07) 3224-7234. *Contact:* Chief Executive Officer.

Regional Harbour Master (Townsville): Captain R. Johnson. Tel: (077) 7155135. Fax: (077) 212028.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Brisbane.

MACKAY, Queensland: 21.06 S. 149.14 E. (See Plan)

PORT LIMITS: Along Lat. 21° 03.9′ S. from Long. 149° 13.5′ E. to Long. 149° 22.08′ E., thence 180°(T) to Lat. 21° 10.0′ S. in Long. 149° 22.08′ E. thence 270°(T) to Long. 149° 20.1′ E., thence 250°(T) to Lat. 21° 12.96′ S., Long. 149° 11.5′ E.
CERTIFICATES/DOCUMENTS/CUSTOMS ALLOWANCES: See "Melbourne".
PILOTAGE: Pilotage is compulsory for merchant vessels whose Masters do not hold a current Certificate of Exemption. The pilot boarding ground is situated 1.2 miles East/S.E. of quick flash Red Southern Breakwater light.

Coastal and Reef Pilotage: See "Hay Point".
ANCHORAGES: *Prohibited Anchorages:*
- *(a)* Lat. 21° 07.63′ S., Long. 149° 13.20′ E.
- *(b)* Lat. 21° 07.63′ S., Long. 149° 15.70′ E.
- *(c)* Lat. 21° 06.78′ S., Long. 149° 16.55′ E.
- *(d)* Lat. 21° 05.82′ S., Long. 149° 13.45′ E.

RESTRICTIONS: None. Day or night access.
MAX. SIZE: Larger vessels subject to Harbour Master's approval, state and height of tide, daylight, and draft, etc.
HEALTH: See "Melbourne". Inspection at anchorage or at berth.
RADIO: See "Brisbane".
VHF: A VHF Port Radio Station has been established at Mackay Harbour. Frequency: Channels 67, 16, 13, 11 and 6, call sign "Mackay Harbour". Hours: Continuous.
TUGS: Two tugs of 30 tonne bollard pull available.
BERTHING:

	Berth No.	*Wharf Length* (m.)	*Berth Length* (m.)	*Berth Depth* (m.)	*Berth Width* (m.)
Breast Wharf	1	123	210	10.6	33
South Pier	2	190	190	10.6	30.5
North Pier	3	195	195	10.6	33
No. 4 Wharf	4	140	220	10.6	35
No. 5 Wharf	5	135	250	12.0	40

Slack water entry. Swinging basin 28 ft. (8.3 m.) LWOST. Mean high neap tide rise 13 ft. 4 in. (4.1 m.). Mean high spring tide rise 18 ft. 1 in. (5.5 m.).
SPECIALISED CARGO HANDLING FACILITIES:
Sugar Loading Gantry – Berth No. 3:
- (a) Terminal Capacity: 750,000 tonnes.
- (b) Loader Height: Clear height of loader in horizontal position from top of the pier, 26 ft. (7.9 m.). Height of pier above LW, 34 ft. (10.4 m.). Can be used in lifting slope "V" position up to 14° above horizontal. Max. vessel's hatch height above sea surface with which vessel may start loading even at HW, 35 ft. (10.7 m.).
- (c) Outreach: Max. outreach of loader from side of pier, 40 ft. (12.2 m.). Breadth of permanent fender from side of pier, 2 ft. 6 in. (0.8 m.). The chute can be traversed along the boom for a max. distance of 20 ft. (6.1 m.).
- (d) Movable Range. Length of movable range along pier, 445 ft. 8 in. (135.8 m.).
- (e) Loading Capacity: Nominal loading rate of 2,000 tonnes/hr.

Bulk Refined Sugar Loader – Berth No. 4:
- (a) Terminal Capacity: 45,000 tonnes.
- (b) Loading Capacity: Nominal loading rate of 500 tonnes/hr.

Bulk Grain Conveyor/Loader – Berth No. 5:
- (a) Terminal Capacity: 32,000 tonnes – 8 silos (at harbour). Additional storage in Hinterland.
- (b) Loading Capacity: Nominal loading rate of 1,000 tonnes/hr.
- (c) Gantry Travel: 116 m. along the wharf.
- (d) Outreach (working): 7.5 m. to 19.5 m. from quay line (without thrower).

STEVEDORES: As much notice as possible.
TANKERS: Berth at Breast Wharf. Load rate for bulk molasses 300 t.p.h. through 46 cm. dockline. 25 cm. diameter (Caltex) dockline for petroleum. 25.4 cm. dockline (Mobil) for petroleum products. 25 cm. diameter dockline (CSR) for export of industrial alcohol. 6 in. (15 cm.) dockline for export of tallow. Facilities at No. 2 Berth for loading of sulphuric acid.
DENSITY: Sea water.
FRESH WATER: Available all berths, rate of load 45 tons (45.7 tonnes) per hour.
FUEL: Available at Breast Wharf by pipeline and all berths by road tanker.
FIRE PRECAUTIONS: Normal requirements.
REPAIRS: Small repairs can be carried out.
WATCHMEN: Not obligatory.
OPENING/CLOSING HATCHES: Normally by crew, but can be done by stevedores if required.
CARGO GEAR: See "Melbourne".
REPATRIATION: Facilities available.
AIRPORT: Daily service to Brisbane and thence to world-wide destinations.
TIME: See "General" before first port.
HOLIDAYS: Bank holidays as for Brisbane, plus Waterside Workers' Picnic Day.
POLICE/AMBULANCE/FIRE: All hours 000; Police Tel: 69-4444; Fire Tel: 572244; Ambulance Tel: 572222.
TELEPHONES: Supplied by Agent or vessel.
SHIP SUPPLY SERVICES: Transport of personnel.

Roylen Cruises Pty.Ltd., P.O.Box 169, Mackay, Queensland 4740. Tel: (079) 57 2595. Telex: 48515. Fax: (079) 553186.

The barge "Tambai II" is available for charter, for the transportation of stores, oil, bulk distilate and water.
GARBAGE DISPOSAL: Ships garbage collected from ship on request. Garbage to be in sealed bags. Time of collection preferrably 1030 hrs. Charge $60.00 per 205 litre drum.
WASTE OIL DISPOSAL: Contact Towners Cleansing Service. Tel: (079) 523555. No storage facilities.
IDENTIFICATION CARDS: See "Melbourne".
AUTHORITY: Mackay Port Authority, P.O. Box 3340, North Mackay, Queensland 4740, Australia. *Tel:* (079) 558155. *FAX:* (079) 552868. *Contact:* Greg Mann, Chief Executive Officer.

MARYBOROUGH (Urangan), Queensland: 25.18 S. 152.54 E. (See Plan)

PORT LIMITS: The area between the mainland and Great Sandy Island from a line joining Hook Point and the Eastern extremity of Inskip Point to the parallel of 25° 7′ S. latitude, including all rivers, creeks and navigable waters in the above named area.

PILOTAGE: Pilotage is compulsory for an Australian registered ship that is 50 m. or more, and a ship that is 35 m. or more (other than Australian registered ship). Masters of vessels seeking pilotage assistance should request the services of a Pilot either through Brisbane Port Control VHF Channel 16 and 12, Tel: 07 895 1318, or Manager Marine Operations Bundaberg, Tel: 071 538 208, A/H 071 760 719. Notice of ETA and request for Pilot must be made at least 24 hours in advance.

Coastal and Reef Pilotage: See "Gladstone".

TIDES: The mean Spring rise is 2.5 m., while the mean Neap rise is 1.3 m. at Urangan.

BERTHING: Berth at Urangan is closed to shipping. Port is open for commercial purposes to ships of limited size.

MEDICAL: The Hospital, situated at 185 Walker Street, Maryborough may be contacted on telephone number 071-238222. There is also a hospital at Long Street, Point Vernon, Hervey Bay. Tel: 071 281 444.

FRESH WATER: Not available.

CONSULS: None.

REPAIRS: Limited small repairs can be carried out.

POLICE/AMBULANCE/FIRE:

Fire Services: For emergency calls, dial "000" and ask the operator for the Fire Brigade. General enquiries should be directed to telephone number 071-212535. The Brigade Station is situated at 98 Lennox Street, Maryborough.

Police Services: For emergency calls, dial "000" and ask the operator for the Police. General enquiries should be directed to telephone number 212211. The Police Station is situated in Lennox Street, Maryborough.

Vessels at Urangan should ring Hervey Bay Police or Water Police on 071-283333.

Ambulance Services: For emergency services, dial "000" and ask the operator for the Ambulance. General enquiries should be directed to telephone number 071-531333. The Brigade is situated at 155 Neptune Street, Maryborough and at 118 Torquay Road, Hervey Bay (Tel: 071 243 811).

AUTHORITY: *Port of Maryborough:* The Ports Corporation of Queensland, GPO Box 409, Brisbane, Qld. 4001, Australia. *Tel:* (07) 3224-7088. *FAX:* (07) 3224-7234. *Contact:* Chief Executive Officer.

Local Authority: Captain J. Watkinson, Regional Harbour Master – South East Queensland, Brisbane. Local Administrative Authority and first point of contact, Manager Marine Services Bundaberg, P.O.Box 476, Bundaberg, Qld. 4670. *Tel:* (071) 538-208. *FAX:* (071) 528-528.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Brisbane.

MELBOURNE (including Maribyrnong River, Holden Oil Dock, Port Melbourne, Williamstown and Yarraville), Victoria: 37.50 S. 144.58 E. (See Plan)

PORT LIMITS: Vessels at anchor off Gellibrand Light are considered "arrived" for the purposes of priority of berthing.

DOCUMENTS:

	No. of copies required
Form M & S 11 (List of crew)	3
Form 42A (Stores List)	1
Form 5 (Articles owned or in possession of Master, Officers or crew)	1
Form B921 – Green – Loading Ports List	3
Form QA3 (Declaration of animals carried as cargo), only if on board	1
Form QA4 (Declaration of ship's pets)	1
Form QA5 (Shipmaster's Bond to cover ship's pets)	1
Form A Q360 (Health Report)	2

Of the above, Forms 42A and 5 need only be compiled at first port of call in Australia. Passenger — individual Passenger Cards are utilised therefore no List of Passengers required. Agents require 7 copies of Manifest of cargo on board and at least 1 set copies Bills of Lading. These normally received by airfreight or airmail direct from Agents at loading port outside Australia therefore not necessary for Masters to be in possession of either Manifest of cargo on board or appropriate copies of Bills of Lading.

Report: 1996.

2 copies Crew List.
2 copies Stowaway List.
1 copy Tobacco/Spirits/Personal Effects List.
1 copy Stores List.
1 copy Health Declaration.
1 copy Deratting Certificate.
1 copy Load Line Certificate.
1 copy Tonnage Certificate.
1 copy Nationality Certificate.
Safety Equipment Certificates.
1 copy Bills of Lading.
1 copy Manifest (unfreighted).
Also see "Radio Officer's Report".

PILOTAGE: Compulsory, except for interstate and intrastate vessels whose Masters hold a current Exemption Certificate and vessels not exceeding 35 m. in length.

The Pilot Boarding Ground for Port Phillip lies 3 miles to 5 miles S.W. from the Point Lonsdale Lighthouse. The preferred boarding position, because of the dangerous tidal conditions at Port Phillip Heads, is with the Point Lonsdale Lighthouse bearing 045° at a distance of 3 miles.

At Hastings the preferred boarding ground is 3 miles due South of West Head.

Both Pilot Stations are manned by a Pilot in Charge at all times. A continuous watch is kept on VHF Channels 16, 13 and 12 at Queenscliff. At Hastings, the Pilot Station can be contacted by calling on VHF Channels 16 and 14.

VHF Procedure:

Two hours prior to arrival at the boarding ground, VHF contact should be made on Channel 16 by calling "Port Phillip Sea Pilots". Please give position, course and speed; and ETA at Pilot Boarding Ground.

Following the initial contact a listening watch should then be kept on VHF Channel 12 for vessels bound for Port Phillip or Channel 14 for vessels bound for Hastings.

The pilot launch will make contact when abeam of Point Lonsdale or West Head outward bound to give final boarding directions.

Tides at Port Phillip Heads: (See Cautionary Notice on Charts AUS. 143 & 158.)

In the entrance the tidal stream runs at its strongest at times of High and Low Water, and the ebb stream may at times exceed 9 knots. You will be required to be in a position WESTWARD of the tidal stream in the fairway when embarking a Pilot.

Low powered vessels and vessels of over 10.5 m. draft should indicate such condition in their first telegram/telex, as the time of their passage through the Port Phillip entrance may be governed by the tidal stream.

Requirements for Embarkation of Pilots:

1. Make a *good lee* for the pilot launch with the wind and sea well abaft the beam on the weather side, and a speed of about 7 knots.
2. The pilot ladder constructed and rigged in accordance with I.M.O. requirements and IMPA Recommendations. The ladder should be clean, properly fitted with spreaders, well clear of all discharges and outlets, and all outboard fittings which might foul the pilot launch. The bottom of the ladder should be 1.5 m. or 5 ft. above the water. The distance from the waterline to the point of access must not exceed 9 m.
3. Two clean *manila* manropes of not less than 24 mm. dia. and not more than 32 mm. dia. are to be securely made fast to the ship, and *must not* be made fast to the ladder at any point. The manropes must not be longer than the ladder.
4. Where the ladder is rigged over a bulwark, *two* stanchions are to be securely fitted in the top of the bulwark, one on each side of the ladder, and steps are to be provided from the top of the ladder to the deck.
5. A heaving line is to be provided for mail and the Pilot's bag.
6. By night a bright light is to be provided, shaded to show *downwards and forward* to clearly illuminate the ladder and the ship's side.
7. Tripping lines and boat ropes are *not* to be used.
8. An officer should be in attendance at the ladder, with life-saving appliances ready for immediate use.
9. An approved pilot hoist may be used if permission is obtained from the Port Phillip Sea Pilot Service.

Masters are urged to have all gear kept in first class condition, to have it inspected regularly, and to ensure always that the ladder and manropes are securely made fast. Serious accidents have occurred through inattention to these matters.

Should the gear and the manner in which it is rigged not be satisfactory, pilotage services may be withheld.

Vessel's ETA: MOST IMPORTANT – For effective use of Pilots, it is essential that the Master of a vessel requiring a Pilot for either Port Phillip or Hastings, advises the Pilot Office – Port Phillip Sea Pilot Service, P.O. Box 150, North Melbourne, Victoria 3051, Australia. Tel: (03) 9329 9700. Fax: (03) 9326 6052. Telex: AA 36920. Contact: Captain C. Griffiths.

ETA advice to be sent 48 hours, 24 hours and 4 hours prior to arrival. Information required includes port of departure, draft on arrival, ETA and request pratique. Changes in the ETA of more than 1 hour should be amended immediately, and the final ETA confirmed 4 hours before arrival.

ANCHORAGE: *Quarantine Anchorage:* If, from Quarantine Regulations, Southerly gales, or other causes, it is necessary to anchor off the old Quarantine Station, a vessel drawing more than 6 m. should anchor to the Northward of the light, Fl. WG. 3 secs. adjacent to the red brick chimney 24 m. high, with the light bearing 195°; 3 to 6 cables off-shore, in depths of from 11 m. to 15 m. and at night in the white sector of the light visible from 126° through South to 199°, preferably with the light bearing 195° and Port Lonsdale Light bearing 280°.

Queenscliff Anchorage: In anchoring off Queenscliff, care should be taken to keep clear of West Channel Fairway by bringing up as near as possible to N.W. side of channel. A good berth in a depth of 12 m. and in red sector of low light, may be obtained with High Lighthouse bearing 284° distant 0.5 miles, and fixed green light at Queenscliff Pier Head bearing 326°.

Vessels awaiting berths in the Port of Melbourne are normally directed to anchor at Pilot's discretion South of Gellibrand Light and clear of the Melbourne Ship Channel. Depth varies from 11.0 m. to 15.0 m.

Tank Cleaning: The Victorian Channels Authority, the responsible authority for the waters of Port Phillip Bay, has issued a circular which requires all Masters to notify the Authority if they intend to anchor in the waters of Port Phillip for the purpose of cleaning tanks, gas freeing, cooling down or repairs.

MAX. SIZE: In the Port of Melbourne, draft and length limitations for navigation of vessels are determined by the Port Phillip Sea Pilot Service, and these divisions are outside the jurisdiction of the Victorian Channels Authority.

Note: Port Phillip Bay South Channel depth restricts draft to 11.3 m. at all times, or up to 11.9 m. with tide. Vessels that do not comply with these requirements may be berthed after consultation with the Victorian Channels Authority/Port Phillip Sea Pilot Service.

Maintained Depths and Maximum Ship's Draft and Length Specifications: (All dimensions in metres).

Berth	*Maintained Depth*		*Length and Draft Limits*		*Remarks* *MPC = Melbourne Port Corp.* *VCA = Victorian Channels Authority*
	Channel (m.)	*Berth* (m.)	*Max. length* (m.)	*Max. Draft C.D. SG 1.025* (m.)	
Swanson Dock	13.1	13.1	290	11.9	
Appleton Dock	12.0	10.7*	250	10.7	* Depth extends out from the berth for 9 m., then increases to channel depth. "F" Appleton may require head-in berthing.
Victoria Dock 2/3/4	11.0	10.3	215	9.7	
5	9.4	9.4	210	8.8	
8	9.4	9.4	135	8.8	
16/17	11.0	11.0	215	10.4	
22/24	11.0	9.4	215	8.8	
North Wharf 9	8.5	8.5	100	7.9	
South Wharf 19	8.5	8.5	185 215	7.9 7.7	May be required to berth head in if 21 SW is occupied.
21	9.4	9.4	215	8.8	
25/26	11.0	11.0	215	10.4	
27-29	12.0	9.4	215	8.8	
31	13.1	9.4	215	8.8	
33	13.1	13.1		10.5	Temporary restrictions. Consult PMC before arranging visit.
Maribyrnong 1	10.0	10.0	180	9.4	Head-in if over 90 m. If beam over 25 m., 5 Yarraville must be clear. At night, if beam is over 18 m., tugs require 5 Yarraville to be clear.
Yarraville 1	10.0	7.1	180	0.5	Head-in if over 90 m. Certain vessels require 1 Maribyrnong and 5 Yarraville to be clear.
5	10.0	9.4	180	8.8	
6	10.2	10.2	190	9.6	Upstream 190 m. of berth only.
	9.8	9.8	190+	9.2	Contact the VCA for vessels over 190 m.
Holden Dock	13.1	13.1	185	11.9	Head-out only.
Gellibrand Pier	11.2	11.8	240	10.6	Head-out only.
	11.2	10.6	290 250*	10.0	* Vessels over 250 m. in length may berth during daylight only, but may be permitted to sail at night, subject to weather conditions.
Breakwater Pier	11.2	11.2	215 230*	10.6 7.6	* Vessels up to 230 m. length can berth in daylight only with max. draft of 7.6 m.
Webb Dock 1	7.0	7.0	140	6.4	Disused.
2	7.0	7.0	140	6.4	
3	10.0	10.0	185	9.4	
4/5	12.5	12.5	250	11.9	
Station Pier OW/OE/IE	10.6	10.9	305	10.0	
IW	10.3	10.3	305	9.7	

Notes: Vessels that do not comply with these requirements may berth only subject to approval from the Harbour Master.

An under-keel clearance of 0.6 m. is required when navigating in the Port of Melbourne, and maximum drafts at berths have been compiled on this basis. However, vessels over 183 m. require 10% of draft under-keel clearance when navigating in the port.

The clearance under West Gate Bridge is 50.8 m. from Australian Chart Datum (zero on tide gauge).

All movements are subject to weather conditions.

Port Philip South Channel depth restricts draft to 11.6 m. at all times, or up to 11.9 m. with tide whilst maintaining 10% under-keel clearance.

Any enquiries to be addressed through the Duty Port Superintendent.

RESTRICTIONS: *Depths in Approach Channels:*

	Depth (m.)
South Channel (Port Phillip Bay South Channel depth restricts draft to 11.3 m. at all times, or up to 11.9 m. with tide.)	12.5
West Channel	5.0
Fawkner Beacon to No. 11 Beacon	13.1
No. 70 Beacon to Port Melbourne	10.6
No. 11 Beacon to No. 23 Beacon	13.1
No. 21 Beacon to Webb Dock	12.5
No. 23 Beacon to Swanson Dock	13.1
Appleton Dock	12.0 – 10.7
No. 24 Victoria Dock to Victoria Dock Entrance	11.0
Victoria Dock Entrance	11.0
Victoria Dock Entrance to and including No. 21 South Wharf	9.4
No. 21 South Wharf to No. 15 South Wharf	8.5
Holden Basin to No. 1 Maribyrnong	10.3 – 10.0

The nature of the bottom in the approach channels to Port Melbourne, and in the River Yarra, is clay.

Swinging Basins	*Diameter* (m.)	*Depth* (m.)
Victoria Dock (Outside)	274	11.0 – 9.7
Victoria Dock (Inside)	350	11.0
Appleton Dock	366	12.0
Swanson Dock	329	13.1
Holden	305	13.1 – 10.3
Port Melbourne	490	10.9
Gellibrand Pier	396	13.1 – 11.2
Webb Dock	390	13.1 – 11.2
Channel Junction (Port Melbourne and Williamstown Channel)	420	

BRIDGES: Clearance under Westgate Bridge is 50.8 m. at LW. (See "Max. Size").

Power Cables: Two overhead power cables cross the river, one with 61 m. (200 ft.) head-room at Yarraville and one with 56 m. (183 ft.) head-room at the entrance to Victoria Dock.

HEALTH: All overseas vessels at first port of entry to Australia or at any subsequent ports, subject to quarantine until pratique granted or until vessel released from quarantine. If examinations and inspections satisfactory vessel granted pratique for all Australian ports. A list of names and addresses of passengers also required at first port of entry. 24 hours quarantine clearance of overseas vessels available. Treatment of Crew members for illnesses other than quarantineable diseases arranged by private practitioners through ship's Agent.

Radio Pratique: Concession of Radio Pratique is available to all vessels except those which carry stock animals. Following requirements to be met in the case of a vessel requiring Radio Pratique or permission to berth.

(a) (1) The Master of the vessel or his Agent must make a request (using Form Q2) to the Department of Health within the period of 24 hours prior to the arrival of vessel giving answers to all questions on the form.

(2) If the answers given are satisfactory Radio Pratique will be given for Melbourne from a specified time and date enabling the vessel to proceed to the berth without displaying the quarantine signal.

(3) A Quarantine Officer will board the vessel at the berth, if the answers given on the Declaration of the Health (Q360) are found to be satisfactory pratique may then be granted for all Australian ports.

(b) Notwithstanding that pratique for all ports may have been granted, Master will still be responsible for reporting any case of infectious disease which may subsequently occur whilst vessel is in Australian waters.

Should a case of infectious disease (not being a quarantineable disease) occur on board whilst vessel is at sea in Australian waters, Master will be required to advise by radio Commonwealth Regional Director of Health for State in which next port situated, who will arrange for a Quarantine Officer to see case on arrival, Master will not be required to fill in a Supplementary Health Form and vessel will be permitted to proceed direct to berth without flying "Q" flag.

Should a case of suspected quarantineable disease occur on board whilst at sea in Australian waters, Master is required to radio details to the Commonwealth Regional Director of Health for State in which next port situated and await instructions. Commonwealth Regional Director of Health will decide according to circumstances whether to inspect vessels outside Quarantine Line or permit it to proceed to berth and will advise Master.

(c) Should it come to notice in any particular case that Radio Pratique has been granted as a result of a wireless message sent in accordance with sub-paragraph (a) whereas in fact wireless message contains false information, matter will be investigated thoroughly and reported to the Director-General of Health who will decide whether radio pratique will be denied in future to vessel on which Master and the ship's surgeon hold responsibility.

RADIO: Melbourne Radio VIM.

A Shipping Control Centre referred to as "Harbour Control Melbourne" is established on the southern side of Victoria Dock entrance. It is a two storied structure supported on a rectangular tower with an overall height of 39.6 m.

Movement of traffic within the Port of Melbourne is controlled from Harbour Control who direct all shipping movements in and out of the port, and co-ordinate all ancillary services connected with shipping movements on a 24 hour basis.

The radio call sign is "Harbour Control Melbourne", and the following frequencies and Channels are available continuously:

156.3 MHz	Channel 6	Intership operations.
156.4 MHz	Channel 8	Pilot and tugs.
156.6 MHz	Channel 12	Port Phillip working channel.
156.650 MHz	Channel 13	Pilot and tugs.
156.8 MHz	Channel 16	Calling and distress.
156.375 MHz	Channel 67	Calling and distress.

All vessels fitted with VHF radio shall, when navigating or at anchor within the Port of Melbourne, keep a continuous listening watch on Channel 12.

When approaching the Port of Melbourne, radio communication is made with Harbour Control initially on Channel 12 and then on a Channel as directed for berthing instructions and information regarding the movement of other vessels. Vessels entering the port shall not pass Fawkner Beacon, Charles Grimes Bridge or Shepherd Bridge without permission from Harbour Control Centre. This shall not apply to vessels less than 20 m. in length except when such vessel is towing or licensed to carry passengers.

A vessel anchored or berthed in the Port shall not leave its anchorage or berth without permission from Harbour Control and acts during the currency of the permission which shall be 15 minutes. This shall not apply to vessels less than 20 m. in length except when such vessel is towing or licensed to carry passengers.

Vessels proceeding inwards are to report their positions to Harbour Control where applicable when passing Fawkner Beacon, Breakwater Pier and Westgate Bridge.

Vessels proceeding outwards are to report their positions to Harbour Control where applicable when passing Westgate Bridge, Breakwater Pier and Fawkner Beacon. If vessels are departing from Webb Dock or Port Melbourne they are also to report when leaving berth.

The following procedure is followed in respect to the navigation of vessels in the vicinity of Webb Dock and is given for guidance.

1. If inward-bound river traffic has not reached No. 12 Beacon by the time a vessel is ready to depart from Webb Dock, the inward-bound vessel will generally be directed to wait until the departing vessel has cleared Webb Dock and is able to cross to the correct side of the channel. (In practice this takes about 5 minutes).
2. It is incumbent on a vessel not to depart from Webb Dock unless there is sufficient time for the vessel to cross to the correct side of the Channel without hindering any vessel which may be navigating between the Williamstown Breakwater and the River Entrance.
3. Permission to depart from Webb Dock will usually be given if:
   - (a) Inward bound traffic has not passed No. 12 Beacon.
   - (b) Outward bound river traffic has not passed Westgate Bridge.

Permission to depart does not relieve the vessel departing from Webb Dock of its responsibility under paragraph 2.

A Precautionary Area off Point Gellibrand, comprises an area within defined limits where ships must navigate with particular caution and within which the direction of traffic flow is recommended as follows:

Caution:

(a) When entering, transiting and leaving the Precautionary Area, vessels at all times should keep to Eastward when inward bound and to Westward when outward bound.

(b) Any inward bound vessel shall not hinder:

- (i) Any vessel using the Port Melbourne or Williamstown Channels.
- (ii) Any vessel which is outward bound which is within or which is about to enter the Precautionary Area.

(c) It is essential for vessel navigating within the Port to maintain radio contact with Harbour Control and directly with one another.

Vessels when inward bound may use the area to the East of the Port Melbourne Channel. Yachts and other pleasure craft should keep to the East of the Port Melbourne Channel as far as possible and avoid at all times hindering the movement of larger vessels, particularly those constrained by size and draft to the shipping channels.

Notification of Dangerous Goods: At least 48 hours prior notice must be advised by the ship's agent to the Environmental Services Section by Fax - (61 3) 9629 8656.

VTS: Operates on VHF Channel 12.

RADAR: A radar based automated ship monitoring system provides coverage over the whole of Port Phillip Bay, upto Point Henry on the Western side of the Bay, and seaward of Point Lonsdale over a 20 mile radius.

Harbour Control Tower: The central site of operations, provides advisory navigational information on request, and covers the approaches to Melbourne.

Point Lonsdale Signal Station is a secondary operations site and covers areas from Port Phillip Heads to Hovel Pile (South Channel) and West Channel Pile (West Channel).

TUGS: 5 tugs (42 – 62 tonnes B.P.) operated by Melbourne Tug Services. Tel: (03) 9646 0322. Fax: (03) 9646 0217. Tugs attend for inward-bound vessels at or in vicinity of Gellibrand Light for vessels proceeding either up river or to Port Melbourne berths. On departure and should vessels require attendance down river, service terminated in vicinity of river entrance. Tugs present for service at any point required by Owner or Agent. Ships lines, or tug lines at a charge. Crews of tugs will not accept wire tow line. Wire tow line with rope end of 5 or 6 fathoms acceptable, rope section being available for tugs towing hook.

BERTHING:

Yarra River – North Bank

Berth No.	Depth of Water (m.)	Length of Berth (m.)	Miscellaneous Information
9	8.5	128	Out of Commission

Appleton Dock

Berth No.	Depth of Water (m.)	Length of Berth (m.)	Miscellaneous Information
B	10.7	192	These berths are enclosed in a security compound and are used mainly for container, Ro/Ro, quarter ramp and unit loads. 1×55 ton luffing crane at B and C and 1×30 ton luffing crane at D.
C	10.7	190	
D	10.7	254	
E	10.7	144	Berths used for dry bulk cargoes, scrap metal, etc.
F	10.7	200	

Wharf decking at all berths is 3.7 m. above ACD.

River Yarra – South Bank

Berth No.	Depth of Water (m.)	Length of Berth (m.)	Miscellaneous Information
12	6.0	117	Out of commission.
13	6.0	152	Out of commission.
14	4.6	105	Out of commission.
15/16	8.5	345	Small craft only.
17/18	8.5	251	Berths No. 17-19 used as import vehicle compound. Enclosed in a security compound, with a storage area of 4 ha. behind the berths.
19	8.5	190	
21	9.4	243	General Cargo

Note: Berths No. 12-21 will be unavailable to commercial shipping after 1st March 1997 due to erection of new City Link Bridge.

Berth No.	Depth of Water (m.)	Length of Berth (m.)	Miscellaneous Information
25/26	11.0	283	Bulk cement products.
27	9.4	146	Out of commission.
28	9.4	146	
29	9.4	147

2 E.	13.1		
3 E.	13.1		
4 E.	13.1		

The height of the wharf decking throughout the dock is 2.7 m.

Yarraville Area

Berth No.	Depth of Water (m.)	Length of Berth (m.)	Miscellaneous Information
1	7.1	178	Out of commission.
5	9.4	178	Sugar (Operated by CSR).
6	9.8-10.2	256	Bulk Dry Chemicals (Operated by ICI).
Holden Oil Dock	13.1	200	Petroleum products and crude.

Height of wharf decking above ACD:

No. 1	3.2 m.
No. 5	3.5 m.
No. 6	3.4 m.
Holden Oil Dock	3.0 m.

Maribyrnong River Area

Maribyrnong 1	10.0	178	Bulk Petrochemicals, Molasses and Tallow.

Williamstown Area

West Side Breakwater Pier	11.2	213	L.P. Gas.
East Side Gellibrand Pier	10.6-11.8	289	Crude Oil

See also "Tankers".

STEVEDORES: ETA Advices: Firm ETA, if possible, before noon on previous day to arrival. If not possible no later than 1500 hrs. on day previous to arrival.

TANKERS: (Also see "Anchorage"). Holden Oil Dock at Yarraville suitable for tankers up to 183 m. length. Max. draft 11.9 m. at L.W. Depth alongside 13.1 m. Line sizes from 100 mm. to 400 mm. Marine Loading Arm.

Williamstown: Gellibrand Pier, depth alongside 10.6 m. can accommodate tankers up to 290 m. length. Max. draft 10.0 m. – 10.6 m., depending on length. Discharge via Chicksan arms.

Breakwater Pier, depth alongside 11.2 m. accepting tankers up to 230 m. length. Max. draft 7.6 m. – 10.6 m., depending on length.

Maribyrnong: No. 1 Berth, depth 10.0 m. can accommodate tankers up to 178 m. length. Max. draft 9.4 m. Height of wharf decking 2.9 m. above ACD. Berth is used for Bulk Petrochemicals, Molasses, Lub. Oil and Tallow.

Line sizes: 100 mm. to 250 mm. lines;
100 mm. to 200 mm. hoses.

Ballast: Slop facilities available at Holden Oil Dock and Gellibrand Pier.

Safety Requirements: The Victorian Channels Authority is introducing the following safety requirements for all tankers berthing at Melbourne and Masters of such vessels likely to call at Melbourne should be notified accordingly.

(a) A declaration required from the Tanker Master prior to arrival at Melbourne listing the following information which must be in the hands of the Victorian Channels Authority at least 24 hours prior to the tanker's arrival:
  (i) Is the hull leak free?
  (ii) Is inert gas system fitted and fully operational?
  (iii) Is crude oil washing system fitted and fully operational?
  (iv) Are there any defects to the tanker, machinery or equipment which would affect safe pilotage, berthing, cargo or ballast operations?
  (v) Have stress calculations for the envisaged programme of cargo transfer, ballasting and bunkering been made?
  (vi) Is the hull stress calculated within recommended safety limits?

The following special information is required for liquefied gas tankers:
  (vii) Are all cargo tanks and lines oxygen free?
  (viii) Is reliquefication or boil-off control equipment in good working order?

(b) The following items will be required from the tanker Master immediately upon berthing for stowage in the 'Emergency Document' box:
  (i) A list of the characteristics of the cargo on board and to be handled, and position of stowage.
  (ii) Cargo Transfer Plan, schematic type, 2 copies required. Plan to include times, sequence and rate.
  (iii) Crew List.
  (iv) Tanker's general arrangement plan.

It is recommended that the declaration required from the Tanker Master regarding Section (a), Questions 1-8, be despatched by telex in an abbreviated form to Melbourne Harbour Control, Telex: HBRCON 33437, prior to the vessel berthing in Melbourne. Below is set out a sample telex message:

HBRCON 33437
ATTENTION – PORT OPERATIONS

QUESTIONS I, III, V, VI	Yes
QUESTIONS II, IV	No
QUESTIONS VII, VIII	Not applicable

F BLOGGS
MASTER, M.V. "SEASPRAY"

New Safety Requirements at Tanker Berths: Dated 31st January, 1984.

3.2.3.3. *Emergency Towing Wires:* The Master of a ship having on board dangerous substances shall ensure that immediately after the ship has berthed, wire hawsers of adequate strength to allow the ship to be towed from the Berth are placed over the outboard side at the fore and aft ends of the ship:

1. such wires shall have an eye in the outboard end and be made securely fast to the ship at the inboard end, and shall be tended and adjusted to remain within 1 m., of the water level to meet changes in the draft of the ship;
2. in order that sufficient wire can pay out to enable the tugs to tow effectively, 55 m. of slack wire or such other lengths as required by the Port Authority shall be retained between bollard and fairlead; and
3. to prevent the slack wire from running out, it shall be stopped by rope yarn or other easily broken means.

Access Between Tanker Terminal and Ship:

The Master shall provide safe access to the ship by means of a properly rigged Gangway. Where practicable the gangway shall:

1. be adjacent to the ship's accommodation; and
2. be clear of cargo hoses and the ship and shore cargo manifolds.

Where a fire or explosion in the shore cargo manifold area could block the escape route of persons from the ship, the Master shall ensure that:

1. the outboard accommodation ladder is turned out and rigged ready for immediate lowering; and
2. the outboard lifeboat is lowered to the embarkation deck and kept ready for immediate launching.

Moorings:

The Master shall ensure that any mooring wire used to secure the ship is fitted with a rope pennant unless:

1. the mooring wire is secured on the Berth with a quick release device, or
2. permission to use mooring wires without pennants has been given by the PA.

Anchors Ready for Letting Go:

The Master shall ensure that immediately after the ship is secured at the berth an anchor is walked back clear of the hawse and is kept ready for letting go.

Operation of Sea and Overboard Discharge Valves:

Except where the PA otherwise permits, the Master of ship handling liquid bulk dangerous substances or oils shall ensure that all sea and overboard discharge valves connected to cargo or ballast pumps are kept closed.

Any valve required to be closed by the above shall be secured by lashing or, in the case of remotely operated valve, by a suitable means or marking to prevent the accidental operation of the valve.

Radio Procedures:

The Master of a ship having on board liquid flammable bulk dangerous substances shall ensure that, whilst the ship is at a berth, the main radio transmitting aerials are earthed.

The Master of ship having on board liquid flammable bulk dangerous substances shall ensure that, prior to the ship's radar or radio equipment being serviced:

1. Permission is obtained from the Melbourne Port Corporation via Victorian Channels Authority, and
2. Any conditions imposed by the Port Authorities are observed.

MEDICAL: No advance notice necessary for medical attention required on vessel's arrival. All hospital facilities available. No inoculations required for vessels coming to Australia but Master should possess International Health Cards for each member of crew.

DENSITY: 1000 – 1019.

FRESH WATER: Water available at wharf face at 30 m. intervals. Rate 50–100 t.p.h.

FUEL: 24 hours notice required. All grades 1–1500 secs. Marine Diesel. Light Marine Diesel. Gas Oil 34 sec. Red No. 100F. Bunker Fuel 600 sec. Red No. 100F. Light Diesel 37 sec. Red No. 100F.

At Gellibrand and Breakwater Piers. Minimum notice 48 hours; prefer notice 4 to 5 days.

Tanker fuel oil 450 SSF at 122°F. Volume – unlimited if 4 to 5 days' notice given.

Suppliers: Shell, B.P. and Mobil.

FIRE PRECAUTIONS: Copy of "Anti-Pollution Notice" is handed to Master of tankers on arrival.

Anti-Pollution Notice: Your attention is drawn to the comprehensive legislation in force to prevent pollution of any sort in the Port of Melbourne. Visual checks are made on all ships and on an offence being detected immediate prosecution may follow.

You are warned that the polluting by oil is an indictable offence entailing a fine of up to $50,000 *plus* costs of cleaning and damage to the environment.

Due to the poor natural flushing of Port Philip and Hobson's Bays any pollutants discharged into these Bays tend to have a long lasting effect and can cause serious environmental damage.

All Scuppers and overside deck openings shall be securely plugged or blocked during the handling of any dangerous goods or oil or ballast water.

Discharge of oily ballast water or bilges is not permitted within the Port of Melbourne. Permission of the Harbour Master must be obtained prior to taking in or discharging any ballast including water ballast.

Tank washings must not be discharged overside in the Port of Melbourne.

Sewage holding tanks must not be pumped out in the Port of Melbourne. While a vessel is lying alongside any wharf, all discharge outlets shall be properly screened or protected to ensure that discharges shall not fall upon the wharf.

Garbage and refuse must not be dumped overside but must be kept for disposal ashore as directed by the Port Authority or kept on board.

Immediate notification shall be given to Harbour Control in the event of any spillage of oil into Port waters.

REPAIRS/DRY DOCKS: Marine repairs of any description can be carried out. There is one graving dock at Williamstown – Length at floor 139.9 m. Depth on sill at ACD 7.26 m. Breadth at keel block level 19 m.

CONSULS: The following countries are represented by consuls in Melbourne:
Austria, Barbados, Belgium, Chile, China, Colombia, Croatia, Czech Republic, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Finland, France, Germany, Greece, Honduras, Hungary, Iceland, India, Indonesia, Italy, Japan, Latvia, Lebanon, Liberia, Malaysia, Malta, Mauritius, Mexico, Monaco, Nauru, Nepal, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Peru, Philippines, Poland, Portugal, San Marino, Spain, Sri Lanka, Sweden, Switzerland, Syria, Taiwan, Thailand, Tunisia, Turkey, Ukraine, United Kingdom, U.S.A., Vanuatu.

SURVEYORS: Germanischer Lloyd: R.L.Wright & Associates Pty.Ltd., 16/285 Carlisle Street, Balaclava, Melbourne (P.O.Box 29). Tel: (03) 5272544. Fax: (03) 5271544.

Most Classification societies represented locally.

OPENING/CLOSING HATCHES: Normally carried out by Stevedores. Ship's crew may if required by vessel to do so. Crew may close hatches prior to sailing; but if Stevedores instructed to do so, they then claim right to finish, unless ship sails before completion of work.

CERTIFICATES: Register – showing vessel's name, port of registry, gross and nett tonnages and Owner. Loadline Certificate which must be current. Safety Radio Certificate. Safety Equipment Certificate. Light Dues Receipt, Ship's Articles (British), Clearance from previous port.

CUSTOMS ALLOWANCES: 200 cigarettes in an opened carton *or* 0.5 lb. cigars *or* 0.5 lb. tobacco. 1 bottle spirits (opened).

CARGO GEAR: This must comply with Australian Regulations, as issued by the Australian Maritime Safety Authority.

When working cargo with ship's gear, certificates should be available to attest to identification and good condition of all such gear. If vessel on first visit to Australia and certificates not available, a declaration by Master will be accepted provided gear in order. On subsequent visits certificates and identification of each item of gear must be readily produced.

REPATRIATION: All facilities available for effecting crew changes and repatriation – namely sea, air and rail.

AIRPORT: Melbourne International Airport 21 km. from the port.

HOLIDAYS: Sunday, Christmas Day, Good Friday, Labour Day, Picnic Day, Anzac Day: with exception of Sunday are regarded as "close holidays" and waterside workers cannot be required to work on these days. Only work of special nature performed on these days by agreement.

Following ordinary holidays observed: Boxing Day, New Year's Day, Australia Day, Easter Monday, Queen's Birthday, Melbourne Cup Day.

On Boxing Day and New Year's Day, waterside workers will work on following classes of vessels only, namely:
(a) Passenger ships to sail on schedule.
(b) Ships to finish and sail before next pick-up of labour.
(c) Ships which in opinion of local Board of Reference, should be declared "Urgent Vessels".
(d) Marine casualties.

On remaining ordinary holidays work performed if required by an employer. Work performed on holidays subject premium rates of pay.

POLICE/AMBULANCE/FIRE: Fire, Ambulance, Security – Port Emergency – Tel. 9614-2861 or, by VHF Radio Channel 12 "Melbourne Port Emergency".

TELEPHONES: Telephone can be placed aboard at all berths. Trunk calls cannot be made from shipboard telephones.

SERVICES: Tank cleaning and compass adjusters available.

SHORE LEAVE: Crew allowed ashore. No passport required while ashore.

IDENTITY CARDS: Not required to be carried by crew going ashore in Australia. However, Section 23 of the Migration Act 1958/1964 provides that Masters of vessels entering Australia from overseas shall have in their possession an identity card in an approved form for each member of crew. These provisions included in the Act to ensure positive identification available to departmental officers should any Seaman, not being an Australian citizen, desert vessel. Should vessel arrive in Australia without required Seamen's Identification Cards, seamen are unable to go ashore until photographer called to vessel in order to photograph each crew member, and identification cards completed.

Following nationalities need not complete identification card required under Migration Act provided Crew members in possession of relevant Seamen's Identity certificates/discharge book; Canada, Denmark, Fiji, Ghana, Hong Kong, India, Israel, Italy, Japan, Malaysia, Norway, South Africa, South Korea, Pakistan, United Kingdom.

Masters of vessels, Australians and New Zealanders are not required to have such an Identification Card.

Masters are reminded that Crew members' travel documents and Commonwealth of Australian Forms M.315, where applicable, are to be retained in the custody of the Master at all times, and are to be produced to Customs Boarding Officers upon demand.

GARBAGE DISPOSAL: Melbourne Port Services Pty.Ltd. provides collection service 6 days a week (Sunday excluded). No drums or skips are provided unless by special request. Cost A$114.00 per day plus A$6.50 per person on board. Maximum charge A$3,240 per day. Collection is arranged through quarantine officer when ship first berths unless Master applies for, and receives, an exemption from collection.

WASTE OIL DISPOSAL: Collection only available by private contractors arranged through ship's agent. Discharge of waste oil to road tankers is available at all berths, depending on wheel loads. Costs depend on type and quantity of waste oil to be disposed of.

SEAMAN'S CLUBS: Missions to Seamen, 717 Flinders Street, Melbourne, Victoria. Tel: (03) 9629 7083.

Stella Maris Seafarer's Centre, 600 Little Collins Street, Melbourne, Victoria. Tel: (03) 9629 7494. Services available: Church services, outings, dances, bus service to and from vessel, shops, bars, games (billiards, darts, table tennis, etc.), videos, postage and telephone facilities, counselling and support services, cleaning facilities.

CURRENCY: Local currency is Australian Dollar. Any amount over A$5,000 cash must be declared to Australian Customs. No restrictions on amounts less than A$5,000 or travellers cheques.

GENERAL:
Publications:
Australia Pilot Vol. II.
Sailing Directions for Victoria.
Port Handbook.
Charts: AUS. 154, AUS. 155, AUS. 143, AUS. 158.
List of Lights N.P. Vol. "K".
Australian National Tide Tables AHP 11.

Tidal Data:
Mean Higher High Water 0.84 m.
Mean Lower High Water 0.80 m. (Williamstown).

Port Authority: On 1st March 1996 the Port of Melbourne Authority, by an Act of Parliament, was divided into 2 distinct operating organisations:
Victorian Channels Authority
Melbourne Port Corporation

The Victorian Channels Authority is responsible for commercial shipping operating in the port waters from Port Phillip Heads until docked at the allocated berth within the port boundaries. This responsibility includes channel maintenance, harbour control, berth allocation and navigation aids.

The Melbourne Port Corporation is responsible for all land based functions within the port boundaries, this includes wharves, common user storage areas and services to shipping. Services to shipping within the port are provided by a subsidiary company of the Melbourne Port Corporation – Melbourne Port Services Pty. Ltd. The responsibilities of this subsidiary include mooring/unmooring, garbage collection, berth and facility maintenance, dredging, security/fire watch, hazardous materials inspections, etc.

RADIO OFFICER'S REPORT: September 1990.

Melbourne was the first port in Australia.

Documents: Customs and Port Health Authorities will board the ship. All Australian forms needed, IMO Crew List is accepted.
4 copies Crew List.
4 copies Form M & S 11.
1 copy Ship's Stores consumed (Part 1 only), only drugs to be declared, no Ship's Stores List required.
1 copy List of Crew's Possessions (showing value, type, make, serial number).
4 copies Ports of Call.
1 copy Animal Cargo ("Nil" return not required).
1 copy Ship's Pets ("Nil" return required).
2 copies Shipmaster's Bond (required only if any ship's pets).
2 copies Health Report.

All ship's certificates, including Australian Light Dues Certificates and Australian Identification Cards for crew are required.

Customs Allowances: 1 bottle of liquor (opened and not exceeding 750 ml.), 200 cigarettes or 225 gm. tobacco.

AUTHORITY: Melbourne Port Corporation, 5th Floor, Building D, World Trade Centre (corner of Flinders Street and Spencer Street), Melbourne. Postal Address: P.O.Box 4721, Melbourne, 3001, Victoria. *Tel:* (03) 9611-1777. *Telex:* 34211. *FAX:* (03) 9611-1905. *Cables:* "Harbor, Melbourne". *Contact:* K. Shea, Chief Executive Officer. B. Barker, Manager Operations.

Victorian Channels Authority, 6th Floor, 99 King Street, Melbourne, Victoria 3000, Australia. (Postal Address: P.O. Box 205D, Melbourne, Victoria 3001, Australia). *Tel:* (03) 9612-3512. *FAX:* (03) 9612-3599. *Telex:* 34211 Harbor AA. *Contact:* Captain I. Edwards, Chief Executive Officer. Captain T. Muir, Manager Marine Services/Harbour Master.

Also see "General – Port Authority".

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd. G.P.O.Box 4329, 7th Floor, 474-482 Flinders Street, Melbourne, Victoria 3000. Tel: (03) 9613 1300. Telex: 31293 PATSLE. Fax: (03) 9629 3234. Seagram Code: 3MPATSLE.

MOURILYAN, Queensland: 17.36 S. 146.08 E.

(See Plan)

PORT LIMITS: Mourilyan Harbour, the area to the West of a line joining Hall Point and the outer extremity of the North Head.

ARRIVAL: Requirement for vessels in ballast; minimum forward draft to be 2% of overall length, minimum after draft – propeller immersed. Draft to be notified to Agent in arrival telegram.

CERTIFICATES/DOCUMENTS/CUSTOMS ALLOWANCES:
See "Melbourne".

PILOTAGE: Order Pilot through Agent, as early as possible. Confirm through Agent or direct to Harbour Master, Innisfail. Pilot vessel, located in Mourilyan Harbour, watches on VHF Channel 16 when vessel expected to berth (Channels 12, 8, 14 and 6 available). Pilot vessel white with orange cabin and blue trim. Pilot boards 2 miles East of harbour entrance. Approved pilot ladder and good lee required, *not* accommodation ladder. Vessels awaiting Pilot anchor in boarding position above, good holding. Leading beacons – in line 270° T, showing fixed red neon. Entrance beacons flashing – red port, green starboard.

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait and also Grafton Passage is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

RESTRICTIONS: Berthing takes place for most vessels at or near slack water, day or night. Large vessels berthed during daylight only. On Spring tides, entry restricted to at or near slack water. No turbine-powered vessels accepted. Night-time sailings permitted. Vessels entering or leaving – Forward draft not to be less than 2% of overall length and propeller to be immersed.

MAX. SIZE: LOA 183 m. and beam 30.0 m. or LOA 175 m. and beam 32.2 m.

Draft Arrival: Limited by swing basin, maximum depth 7.1 m. less 0.6 m. keel clearance, all vessels swing and berth port side to main wharf.

Draft Departure: Limited by entrance depth of 8.53 m. less 0.91 m. keel clearance.

HEALTH: See "Pilotage". Also see "Melbourne".

RADIO: VIT Townsville (MF).

TUGS: 2 tugs stationed at Mourilyan. Tug usually required for unberthing. Tug normally pushing or using tug's lines, no extra charge.

BERTHING: Ships always berth port side to at Mourilyan. One sugar and molasses berth, length 193 m. depth 10.0 m. LWOST.

BULK HANDLING FACILITIES:

Sugar: Mobile gantry loader. Loading rate 1,500 t.p.h. Storage shed 175,000 tons. Maximum reach from fender face 14.3 m. Maximum operating air draft above L.W.D. 16.2 m.

Molasses: Single pipeline. Loading rate 350 t.p.h. Storage capacity 28,000 tons.

STEVEDORES: No waterside workers employed. Normal ETA advices to Agents for arrangement of bulk-loading staff.

MEDICAL: Hospital facilities available, Port Health Doctor also general practitioner.

DENSITY: Usually 1024 – 1027 irrespective of tide. After heavy rains, particularly January-April, considerable freshening occurs to 1008.

FRESH WATER: Good water readily available, shore hoses from wharf face. Approx. 25 t.p.h. capacity. $1.00 per 1,000 litres.

FUEL: Limited quantities of fuel oil and diesel oil available by road-tanker.

CONSULS: None.

REPAIRS: No major facilities available. Most types of welding, light machinery, and pipe-fitting can be arranged. Technicians can usually be obtained for radar, etc., with advance notice by radio to Agents.

GANGWAY WATCHMEN: Not normally required.

HATCHES: Worked by crew.

CARGO GEAR: See "Melbourne".

REPATRIATION: Possible.

AIRPORT: Nearest airport at Cairns, 110 km. Regular flights available.

TIME: See "General" before first port.

HOLIDAYS: Various national, state and local holidays. Cargo usually worked on all holidays except Christmas Day.

POLICE/FIRE/AMBULANCE: Ring 000 on shore public telephone.

TELEPHONE: No telephone aboard.

SHORE LEAVE: Not normally restricted. Distance to nearest township (Mourilyan) 10 km., to Innisfail 17 km. No public transport services from harbour.

IDENTIFICATION CARDS: See "Melbourne".

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar (A$).

DELAYS: Awaiting daylight or tide or, exceptionally, awaiting vacancy of berth or moderation of weather. No delays usually in loading.

GENERAL: Port normally used only for export of sugar and molasses. Deadweight (cargo on board on arrival) restrictions may apply to certain classes of vessel. Agents will advise details if applicable.

AUTHORITY: Ports Corporation of Queensland, G.P.O.Box 409, Brisbane 4001, Queensland, Australia. *Tel:* (07) 3224-7088. *FAX:* (07) 3224-7234. *Contact:* Chief Executive Officer.

Regional Harbour Master (Cairns): Captain P. Matthews. Tel: (070) 527400. Fax: (070) 351127.

AGENT: See "Cairns".

NEWCASTLE, N.S.W.: 32.55 S. 151.48 E. (See Plan)

PORT LIMITS: To seaward, all waters enclosed by a radius of 3 miles from Nobbys Lighthouse. Vessels are prohibited from anchoring in the following area:

Within the area enclosed by an imaginary line 057° from the green light on the outer extremity of the Northern Breakwater and a line 127° from the red light on the Southern Breakwater to the positions where both these imaginary lines meet the arc of a circle of 3 nautical miles distant with the navigation light of Nobbys Head as its centre.

DOCUMENTS: The Master is required to present the following documents to the Customs Boarding Officer:

2 copies Crew List.
3 copies Passenger List.
1 copy Previous Ports of Call List.
List of Customable Articles owned by or in possession of Master and Crew (Form 5, Part One, Part Two).
Stores List (Form 5, Part Four).
Last Port Clearance.
International Currency Transfer Report (Form 15) (carrying $5,000 or more into or out of Australia).
Shipmaster's Bond (Required if Animals on Board).

The following documents are required for sighting by the Customs Boarding Officer:

Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Oil Pollution Prevention Certifcate.
International Tonnage Certificate.
Australian Commonwealth Receipt for Light Dues and Marine Oil Pollution Levy.
Certificate of Pratique.
Ship's Articles.
Passports/Identity Documents for all crew members.
Also see "Melbourne".

PILOTAGE: Compulsory. As much notice as possible through Maritime Radio, Sydney (VIS), amending 2 hours prior arrival. Amendment through Channel 9 VHF, to Harbour Control. Telegraphic address "Marboard". Pilot vessel painted high-visibility orange, "Pilots" on deck-house in black paint.

Pilot Boarding Ground: Vessels will be advised on VHF Channel 9 by the signal station, but will normally be 3 miles – 5 miles due East from Nobbys Head Light. Pilots board vessels up to 90,000 tonnes deadweight 3 miles off and over 90,000 tonnes 5 miles off. A good lee, speed 3 – 5 knots, no boatrope, ladder to be approximately 3.0 m. above water with manropes.

Slack Water Inward Movements: The Harbour Master has advised that when two inward vessels are programmed on the one tide, the first vessel must present itself 3 miles due East of Nobby's Signal Station within 10 minutes of the due Pilot Boarding time. Failure to meet this requirement, which may result in the second vessel facing lengthy delays, by missing the tide, may prompt the Harbour Master to provide services to the second vessel. Owners should ensure that Masters are aware of this requirement.

Coastal and Reef Pilotage: See "Torres Strait".

ANCHORAGE: No anchorage off the port is recommended for all weathers. However, a fair weather anchorage may be found South of a line 127° from Nobbys Head Light. A good anchor watch should be maintained and main engines should not be dismantled whilst at anchor. Weather conditions may deteriorate in a very short period. During Southerly weather, sea and swell conditions may become confused. Vessels at anchor should weigh and proceed to sea until the weather moderates.

RESTRICTIONS: Entrance Channel dredged to 15.2 m. ISLW – A minimum keel clearance of 10% draft required. Certain berths within port may only be worked during slack water or early ebb tide. Vessels over 250 m. navigate in daylight only (inward).

MAX. SIZE: Max. d.w.t. for bulk cargo vessels dependent on 10% under keel clearance on entry or departure.

Steelworks Channel Facility: Max. length of 300 m., max. beam 47 m., max. draft 15.2 m. plus tide less 1/11th to provide 10% under keel clearance. Depth in loading basin 16.5 m.

E.g. With a tide of 1.2 m., max. draft is 14.92 m. (tidal range this port 0 m. – 2.1 m.).

K.C.L. Loader – Kooragang Island: LOA 300 m., max. beam 50 m. Depth in loading basin 16.5 m.

HEALTH: Refer to "Melbourne".

Newcastle is a first port of entry for quarantine purposes for the coast of New South Wales (See page 266 of Sailing Directions). There are no quarantine anchorages in the Port and vessels proceed directly alongside a berth for quarantine examination. Masters of vessels are to ensure that no persons board or land from their vessel until Free Pratique is granted.

RADIO: All radio messages through Sydney (VIS).

RADAR/VHF: Nobbys Head Signal Station equipped with radar. Max. range 64.0 miles. Contact signal station on VHF. Normal VHF watch held on Channel 9, Channels 6, 8, 72 and 77 also available.

Also see "Sydney-VHF".

TUGS: Tugs usually come alongside shortly after entering breakwater. Tug's lines available for use. 4 tugs, 40-48 tonne bollard pull.

BERTHING: See "Restrictions".

Berth	*Length* (m.)	*Depth at I.S.L.W.* (m.)	*Remarks*
Merewether Street Wharf	200	6.9	Lay-up Berth
Lee Wharf No. 4	140	9.1	Tug berth.
Lee Wharf No. 5	171	9.7	General
No. 1 Throsby	183	11.0	Containers, general
Western Basin No. 1	155	9.1	Lay-up Berth.
No. 3	244	11.6	Grain, 4×1,000 t.p.h. Movable loading heads. Silo 6,200,000 bushels.
No. 4	293	11.6	Continuation of No. 3. General cargo. 30 ton portainer crane also available. Stern ramp at Northern end of berth.
Eastern Basin	367 (wharf)	11.6*	Berth length with dolphins 500 m. *Depth 11.6 m. for 46 m. width. Depth in approaches 13.1 m. Clearance from bottom of chute to I.S.L.W. is 15.2 m. Used for timber imports, general cargo. Proposal for redevelopment compiled.

Berth	*Length* (m.)	*Depth at I.S.L.W.* (m.)	*Remarks*
State Dockyard			
No. 3 Berth	213	7.0	Waiting berth – repairs.
No. 4 Berth	117	8.5	Waiting berth – water, light and power available at both berths.
Dyke Berths			
No. 2	533	12.8	Bulk zinc and lead concentrate. Loading head – 1,200 tonnes per hour.
No. 3	183	7.0	Lay-up berth.
No. 5	565	16.5	Coal loading berths in Steelworks Channel. 3 loading heads, loading rate 2,500 tonnes per hour each.
No. 6	—	—	Coal Transhipment Berth.
Kooragang Island			
No. 2	183	11.6	Cement, fertiliser, phosphate, sulphur. Located 2 miles up river – part of "Kooragang Reclamation Scheme". Bulk discharge and loading. 2 ship unloaders, rate 650 t.p.h. each. One woodchip loading gantry also available with conveyor system to adjacent woodchip stockpile.
No. 3	190	13.5	2×500 t.p.h. vacuum unloaders for alumina and petroleum coke. Dolphins North and South giving total distance of 316 m.
No. 4 and No. 5	620	16.5	Kooragang Coal Loader. 1×10,500 t.p.h. coal loader (8,000 t.p.h. into vessels 180,000 d.w.t.). Coal loading head. Rate 8,000 – 10,500 t.p.h.
KSR		7.0	Kooragang Ship Receival Berth. Coal transhipment berth.

Steelworks Wharves: These wharves consist of a long shore berth situated at the Broken Hill Pty. Co. Ltd., Iron and Steelworks on West side of North harbour Port Waratah and is owned by the Company. Length of wharf is 810 m. Diameter of Swinging Basin is 580 m. with a depth of 12.8 m. at I.S.L.W.

Depths of Water at Berths at I.S.L.W.:

No. 2 Berth	9.6 m.
No. 3 Berth	9.6 m.
No. 4 Berth	7.9 m.
No. 5 Berth	12.8 m.
No. 6 Berth	7.9 m.

Height of decking of wharf I.S.L.W. is 4.5 m.

At the Northern or top end of the wharf, Berth No. 5, the Company discharges their ironstone and limestone direct from ships by means of three powerful travelling grabs. The length of wharf allocated for this discharge of ore is approximately 275 m.

The Company's private railway lines, which are connected with the Government Railways, run direct to the wharf and their steel products are loaded direct from truck, to ship's hold.

Beyond the wharfage accommodation before mentioned, there is a coke berth, Berth No. 6, comprised of dolphins. This berth is 162 m. long × 7.0 m. wide, including the dolphins on which is erected a mechanical coke loading plant for loading direct into vessels' holds. Depth of water available at this berth I.S.L.W. is 7.9 m.

A liquid pitch loading system is also located at Berth No. 6.

The channel leading to the Steelworks Wharves is 12.8 m. I.S.L.W. Facilities at Wharves: Water, telephones and shore power are available at most wharves in the Port. A Port Corporation Patrol Officer meets all vessels berthing.

BULK HANDLING FACILITIES: See "Berthing".

Notice: Issued by Newcastle Port Corporation.

Air Draft at Dyke Berths No. 4 and 5: The max. permissible air draft of vessels loading at Dyke Wharves No. 4 and 5 is 18.5 m. This is the distance of the hatch covers above chart datum, and not the distance between the hatch covers and the water level. This fact should be brought to the Master's attention. The air draft at Kooragang No. 4 (Kooragang Coal Loader) is 21.0 m.

To assist the Master or Cargo Officer, a mark has been placed on the shiploaders indicating when the limit is being approached so that action can be taken by the ship to ensure that the limit is not passed.

Trimming Procedures: As laid down in "Coal Vessels – Working Code – N.S.W. Ports", a copy of which is in the hands of all Agents and Shippers, attention is drawn to Clause 4:

"On arrival at the loading berth, the vessel's Master or Cargo Officer shall nominate the hatches required for trimming purposes to attain the vessel's final draft and no more than 2 hatches shall be designated for this purpose. No more than 5% of the vessel's total required tonnage may be reserved for trimming purposes, and trimming will not be permitted in discreet quantities of less than 0.5% of the vessel's total required tonnage".

In the past this Clause has been ignored but it will be policed more stringently in the future.

Coal Loading: We draw the attention of both Owners and Masters to the Port Corporation's advice which is reported below:

1. Subsequent to the harbour deepening and completion of development projects on Kooragang Island, the larger vessels have caused the surge problems to manifest itself again. The surge problems are considered serious and are caused by hydraulic interaction of passing vessels.
2. Therefore, for reasons of safety to vessels and personnel employed on ship loading, extreme care will be taken with the loading of geared vessels. Loading will cease and shiploader be removed from the vessel when shipping movements occur in the Steelworks Channel.

The Port Corporation requests that, as detailed in the coal operation guidelines, all vessels due to load coal supply a hatch tonnage list together with a proposed loading sequence to the Senior Supervisor 7 days prior to arrival.

Coal shippers have been requested to ensure that Masters are advised in good time of the stowage factors of the coal to be loaded, to allow accurate calculation of hatch tonnages.

The Port Corporation have issued a notice regarding the practice of trimming vessels by the head and their handling characteristics.

The notice states that a marginally greater forward draft than aft has little effect on a vessel's manoeuvrability and handling and is acceptable. It has been noted, however, that vessels have been prepared for sailing with the head down by anything up to 0.75 m. which can make steering control and handling extremely difficult.

In the light of this problem the Port Corporation has announced that where vessels are found to be excessively trimmed by the head the services of an additional tug may be required during manoeuvring.

Apart from the extra costs involved in hiring another tug it may be that, if the vessel's condition is not noticed until sailing time, a delay may occur whilst another tug is made available. Stand-by charges will also be incurred whilst awaiting the extra tug.

MEDICAL: All hospital facilities available.

TANKERS: Bulk Berth Kooragang: Berth length 183.0 m., depth alongside 11.6 m.

Berth has flexible discharge hoses. 200 mm. dia. 8 hole ASA flanges.

DENSITY: Density varies considerably throughout port, with particular reference to upstream rains.

FRESH WATER: Available all berths, 4 – 15 t.p.h. delivery, dependent on other demands.

FIRE PRECAUTIONS: Written notice to Fire Brigade for tankers.

CONSULS: The following countries are represented at Newcastle: Belgium, France, Greece, Netherlands, Norway and Sweden.

DRY DOCK: *Floating Dock:* A floating dock, operated by Forgacs is moored in Throsby Basin. This dock has a lifting capacity of 15,000 tonnes; length overall 195 m.; clear width of entrance 33.5 m.; maximum draft of vessels is 8.5 m. Adjacent to the floating dock are repair workshops and two patent slipways, one of 1,250 tons capacity and one of 300 ton capacity.

SURVEYORS: (1) Associated Marine Surveyors International, Cargo Superintendents Co. (A'Asia) Pty.Ltd., A. Fowler and Associates, Griffith Australia Services Pty.Ltd, Newcastle Marine Surveys Pty. Ltd., S.G.S. Australia Pty.Ltd., S.G. Webb & Co.Ltd.

(2) American Bureau of Shipping, Bureau Veritas, Lloyd's Register, Norske Veritas.

Germanischer Lloyd: N.S.Harper & Associates, 29 Elizabeth Parade, Charlestown, NSW 2290 (P.O.Box 864). Tel: (049) 437325.

OPENING/CLOSING HATCHES: Dependent on type of cargo and hatch (coal, wheat, ship's crews closing hatches).

CERTIFICATES AND CUSTOMS ALLOWANCES: See "Melbourne".

CARGO GEAR: No additional other than wire preventers to derrick heads if rope guys used. Also see "Melbourne".

REPATRIATION: Normal facilities available.

AIRPORTS: Two, approximately 7 miles from city. Several flights daily to Sydney. Seaplane service operates from Newcastle Harbour to Rose Bay, Sydney.

TIME: See "General" before first port.

HOLIDAYS: Christmas Day; Good Friday; Labour Day; Picnic Day; Anzac Day are regarded as close holidays and waterside workers cannot be required to be worked on these days. On Boxing Day, New Year's Day, waterside workers will work on following classes of vessel only:

(a) Passenger ships to sail on schedule; *(b)* ships to finish and sail before next pick-up of labour; *(c)* marine casualties; *(d)* other vessels which are agreed between employer and WWF branch officials in the port concerned; if there is no agreement on a port basis, agreement as to any such ships, to be reached at Federal level.

On remaining ordinary holidays, work performed as required by an employer. Work performed on holidays subject to premium rates of pay. No Saturday afternoon work unless vessel is proceeding to sea.

POLICE/AMBULANCE/FIRE: Dial "000" for Emergency.

EMERGENCY CO-ORDINATION CENTRE: All emergency situations – refer to Australian Coastal Surveillance Centre. (Free call S.T.D. or reverse charge). Canberra (062) 476666.

SERVICES: Compass adjusters available.

STORING: See "Prelims".

(1) Yes.

(2) No restriction, except on tankships, where stores are generally hand-trucked to vessel. Dispensation may be given to use vehicle or barge under certain circumstances.

(3) Yes.

(5) Normal to Australian ports.

(6) Yes. Most unusual practice, extremely costly.

IDENTIFICATION CARDS: See "Melbourne".

GARBAGE DISPOSAL: Contact Waste Hawk Disposal Services. Tel: (049) 648511.

WASTE OIL DISPOSAL: Contact Tiger Oil. Tel: (049) 484127.

SEAMAN'S CLUBS: Seafarer's Centre (Missions to Seamen and Apostleship of the Sea), 96 Hannell Street, Wickham. Tel: 615007. International telephone and postage. Hours 1800-2200 (daily).

CURRENCY: Australian Dollar.
DEVELOPMENTS: Eastern Basin site proposed for redevelopment. Lee Berths handed over for commercial/residential development. Former State Dockyard area is included in East Basin proposals.

SHIPMASTER'S REPORT:
Harbour control: VHF Channel 13.
Anchorage: Liable to the weather – attention to be paid to the Easterly, South Easterly and Southerly winds which can suddenly blow strongly within 1 hour's time. Best anchorage: 108°, two miles from South Breakwater. Not recommended to anchor North of Latitude 32° 55′ S.

AUTHORITY: Newcastle Port Corporation, P.O.Box 663, Cnr. Scott & Newcomen Street, Newcastle, N.S.W. 2300, Australia. *Tel:* (049) 272400. *Telex:* AA28761. *FAX:* (049) 264596. *Cables:* Marboard. *Contact:* G. Connell, Managing Director. Captain N. Morrison, Harbour Master.

AGENT: Patrick Sleigh Shipping Agencies Pty.Ltd., P.O.Box 63, 78 Hannell Street, Wickham, N.S.W. 2293, Australia. Tel: (049) 69 5588. Telex: 28192 PATSLE. Fax: (049) 69 1381. Seagram Code: 2NPATSLE.

PORT BONYTHON, S.A.: 33.01 S. 137.46 E. (See Plan)

LOCATION: Port Bonython is situated on the Western shore of Spencer Gulf, South Australia, about 160 nautical miles from the entrance to the Gulf. The port includes the new Liquids Terminal (Lat. 33° 01′ S., Long. 137° 47′ E.), which is located about 9 nautical miles from the Port of Whyalla.
PORT LIMITS: See "Plan".
DOCUMENTS:
3 Crew Lists. Form M&S 11, Parts 1 and S.
1 Crew Personal Effects. Form 5.
1 Stores List. Form 42a.
3 Loading Port List (and Ports of Call).
1 Animal and Pets aboard. Form QA4.
To be sighted:
Official Log Book.
Last Port Clearance.
Seamen's Identification Card or Passport.
Safety Certificates: Construction, Equipment, Safety Equipment, Load line, Radio, International Oil Pollution Prevention, Light Dues.
PILOTAGE: Pilotage is compulsory for all vessels when within the port limits. Pilots will board inward bound vessels at a position approximately 165° (T) distance 5 nautical miles from the Whyalla Entrance Beacon (No. 1 Beacon).

Deep draft ships will use the buoyed channel to the East of Fairway Bank. Outward bound, ships will disembark the Pilot at the Entrance Buoy 165° (T), distance 6.7 nautical miles from No. 1 Beacon.

Pilot ladders must be rigged and the embarkation and disembarkation of pilots must be supervised by a responsible deck officer. Adequate lighting must be provided at night. All pilot ladders and accommodation ladders must be clean, in good condition and must comply with the IMO SOLAS Regulations.

Spencer Gulf shoals gradually from the entrance and careful navigation is needed in the Northern part. Recommended routes for large ships are described in "Approaches". If required, a Department of Marine and Harbors Pilot may be embarked, by prior arrangement, off the Port of Wallaroo (Lat. 33° 56′ S., Long. 137° 37′ E.).
APPROACHES: *Approaches and Entrance to Spencer Gulf:*
FROM THE EAST:
Vessels approaching from the East should set a course to pass no closer than 10 nautical miles clear of Cape Borda Lighthouse, from where a course may be set to enter the Gulf between Wedge and Althorpe Islands. Tracks can be subject to strong cross sets due to the tides. On entering the Gulf a safe course should be set to pass to the West of Tiparra Reef Beacon, (Lat. 34° 04′ S., Long. 137° 23.5′ E.).

Vessels with local knowledge sometimes pass to the North of Kangaroo Island, using Backstairs Passage and Investigator Strait.
FROM THE WEST:
Vessels approaching from the West should set a course to pass 10 nautical miles South of South Neptune Island Lighthouse, and thence into the Gulf by the previously mentioned track. Mariners are cautioned against passing within 5 nautical miles of South Neptune Island.
Northern Spencer Gulf:
Although good depths are available in the Northern part of the Gulf, accurate navigation is essential because the navigable widths are not great for deep draft ships, and the coast lines are low lying and featureless. The deep water channel off Tiparra Reef is only 4 nautical miles wide. From there, set a course to pass Westward of Middle Bank. A buoy marks the Southern end of Middle Bank and the navigable width for a deep draft ship at that point is less than 3 nautical miles.

From Middle Bank Beacon, steer to pass West of Yarraville Shoal Beacon, keeping clear of Planck Shoal (8.8 m.) and a 10 m. patch Northward of Middle Bank, both of which are marked by buoys.

After passing Yarraville Shoal Beacon, a course should be set to the Pilot Boarding ground.
Departure: The outward passage down the Spencer Gulf is the exact reverse of the inward passage, with the same need for very exact navigation until past Tiparra Reef.
ANCHORAGE: Inward bound vessels awaiting Pilot or Customs should anchor in the vicinity of the pilot boarding ground. Water depth is about 16 m. with good holding in sand.
RESTRICTIONS: Except for fishing vessels of less than 500 g.r.t. and port service vessels, no vessel may be navigated within the port limits at night without prior approval of the Port Manager. There are at present no facilities for handling general cargo.
MAX. SIZE: *Maximum size ships permitted at Port Bonython Terminal:*
Oil tankers: 110,000 d.w.t.
LPG carriers: 45,000 d.w.t. or 75,000 cu.m. capacity. (Larger sizes can be handled at the discretion of the Port Manager).
Maximum length overall – 265 m.
Maximum draft – 15.8 m.
Minimum size ships:
LPG carriers: 70 m. parallel length.
Maximum permitted berthing displacement: 110,000 tonnes.
Draft: Unless with the Port Manager's special permission, no vessel may navigate within the port or lie alongside the berth with a clearance underkeel of less than 20% of her maximum draft.
HEALTH: *Radio Pratique:* Vessels arriving from overseas and wishing to proceed direct to the berth must apply for clearance by radio. At least 24 hours before arrival the answers to the Commonwealth Quarantine Form 'Q2' must be radioed to the ship's Agent who will submit the information in writing to the Quarantine Officer. (See "General" – "Health" before first port). If the answers are acceptable, approval to berth or Radio Pratique will be granted.
Note: Until clearance is received, no persons other than Port Health Officials and Customs and Excise Officers will be allowed to embark or disembark.
Livestock: Masters are reminded that strict quarantine laws are in force in Australia regarding pets or livestock of all sorts. No animals or animal products may be landed without written permission.
RADIO: Adelaide Radio should be worked.

Not less than 24 hours prior to the arrival of the vessel at the port, the Master or Agent of the vessel shall convey details to the Port Manager, of the vessel's expected time of arrival at the port, draft fore and aft, the vessel's last port of call and whether the water-ballast is clean.

If the vessel is scheduled to proceed direct to the berth on arrival the Master shall confirm to the Port Manager the ETA at least 4 hours prior to arrival.
Declaration Prior to Arrival in Port:
The owner of a vessel having Dangerous Goods or Oil in Bulk on board shall make a declaration in writing to the Port Manager at least 48 hours prior to the arrival of the vessel in port providing the following information:
(a) Is the hull leak free?
(b) Is an inert gas system fitted?
(c) Is the inert gas system, if fitted, fully operational?
(d) Is a crude oil washing system fitted?
(e) Is the crude oil washing system, if fitted, fully operational?
(f) Are there any defects to the vessel, machinery or equipment, which may affect safe pilotage, berthing, cargo or ballast operations?
(g) Have stress calculations for the envisaged programme of cargo handling, ballasting and bunkering been made?
(h) Is the hull stress calculated within recommended safety limits?
Additional information required for liquefied gas tankers.
(i) Are all cargo tanks and lines free of air?
(j) Is the reliquefaction or boil-off control equipment in good working order?
(k) Any other particular information required by the Marine Authority?

If any changes in conditions on board the vessel occur, after the declaration has been made, the Marine Authority should be advised without delay.
VHF: Port Bonython Terminal has facilities for telex, telephone and VHF radio communication. VHF Channel 16 is monitored continuously by Santos at Port Bonython and by the Port Manager's Office at Whyalla, when manned.
Jetty Head: Ships at the berth must remain in communication with the control room at all times, using a portable two-way radio. The control room can contact the Port Manager, tugs or emergency services by telephone, VHF or UHF radio.
Report: 1988.
Contact should be made with Whyalla Port Control which has Channels 6, 8, 12, 16 and 67. Santos have listening watch VHF base station with Channels 9, 12, 13, 14, 16, 67 and 72.

When a vessel is within a distance of 20 miles from the pilot boarding position, the Master of the vessel shall ensure that an efficient VHF radio-telephone listening watch is maintained on Channel 16.

The Master of a vessel arriving at the port shall establish contact with the Port Control Station by means of VHF radio-telephone when not less than 15 miles from the Pilot boarding position.

BHP Co. Ltd. will relay messages to the Port Manager after hours. Call "Whyalla Harbour Control" on VHF Channel 16.
RADAR: The pilot vessel is equipped with radar. There is a jetty head approach speed radar.
TUGS: The tugs 'Taminga' and 'Turmoil', based at Whyalla, are used for berthing/unberthing. Both tugs are owned by the Adelaide Steamship Co. Ltd. 'Turmoil' is a conventional single screw tug. 'Taminga' is equipped with fully rotating propulsion nozzles and foredeck towing winch. She is also fully equipped as a fire-fighting tug and carries 14,000 litres of foam concentrate.

Additionally there is a large tug based at Port Pirie.
Tug Details:

Taminga	32 m. LOA	3,600 h.p.
	50 tons bollard pull ahead	47 tons bollard pull astern
Turmoil	31 m. LOA	2,250 h.p.
	30 tons bollard pull	

Mooring Boats: One mooring boat is available ex-Whyalla, the 'Wanilla', is 350 b.h.p. If required another mooring boat can be obtained from Port Pirie.

BERTHING: The Port Bonython jetty is 2.4 km. in length and has a jetty head at right angles to the jetty. The jetty head is 140 m. in length.

Berth Layout:

1. The berth, capable of handling ships up to approximately 110,000 d.w.t., consists of a concrete loading platform erected on steel piles. The minimum depth alongside the berth is 20 m. at datum. In the immediate approaches, the depth exceeds 17 m. at datum along the berthing line over a distance of 600 m. either side of the berth centre. No dredging has been carried out and no siltation is anticipated in the berth area. The berth is orientated 088° – 268° (T), approximately in line with the tidal currents.
2. Four breasting dolphins (BD1 to BD4) equipped with ABF rubber fenders hold large vessels clear of the loading platform. A row of fender piles immediately in front of the platform is capped with timber-fendered steel berthing beam against which smaller ships can lie.
3. Four mooring dolphins (designated MD1 to MD4), consisting of raked steel piles with concrete caps, lie to the East and West of the breasting dolphins. Both mooring and breasting dolphins carry quick release hooks for the ship's mooring lines.
4. Deck heights above mean high water springs (M.H.W.S.) are:

Loading platform	+ 10.74 m.
Breasting dolphins	+ 3.5 m.
Mooring dolphins	+ 5.5 m.
Continuous fender	+ 1.0 m.

5. Distances, centre-to-centre, between the ABF fenders are approximately:
   BD1 – BD2: 35 m.
   BD2 – BD3: 70 m.
   BD3 – BD4: 35 m.

Mooring Arrangements:

1. General Requirements:
   The suggested mooring patterns for different classes of ship are shown on Plans M1 to M6. The Pilot will advise the Master on mooring requirements. Any known defect or limitation in the ship's mooring system must also be reported to the Pilot before arrival.

   Moorings must be properly tended so that the lines are bearing an even load and the vessel is kept close alongside at all times. Back springs should be as long as possible. Wherever practical, all moorings that are led to a particular point should be of the same type, i.e. either all rope or all wire, not mixed.

   Readouts in the jetty control room indicate the load on each mooring hook. If the readout shows any line to be slack or apparently overloaded, the operator will notify the ship and the officer-in-charge shall promptly have the moorings adjusted.
2. Mooring Details – 3,000 d.w.t. (5,000 cu.m.) LPG Carrier (Plan M1):
   Head and stern lines (3 at each end) are run to the outer breasting dolphins. Breast lines are run to the inner breasting dolphins BD2 and BD3 using either the 25 tonne bollards or the mooring hooks. Springs are run to the 25 ton bollards on top of the continuous fender.
3. Mooring Details – 25,000 d.w.t. Tanker (Plan M2):
   Head/stern lines are run to the mooring dolphins. Two breast lines are required at each end, either to the inner mooring dolphins or to the breasting dolphins. Springs (2 at each end), must be of adequate length.
4. Mooring Details – 14,000 d.w.t. (22,000 cu.m.) LPG (Plan M3):
   Two breast lines and two springs are required fore and aft. In the example shown the after breast lines lead forward but adequate transverse restraint is provided by the stern lines to MD2.

   Smaller ships may run lines to the bollards on BD2, BD3 and fender top, provided the lines do not exceed 25 ton breaking strength.
5. Mooring Details – 45,000 d.w.t. (75,000 cu.m.) LPG (Plan M4):
   If practicable, five lines should be run to the mooring dolphins at either end (e.g. 3 head lines and 2 for'd breast lines or 2 head lines and 3 for'd breast lines). Two foresprings and 2 back springs are also required.
6. Mooring Details – 70,000 d.w.t. Tanker (Plan M5):
   At least 4 lines are to be run at each end, i.e. 2 head/stern lines and 2 breasts or 3 head/stern lines and 1 breast line. Two fore springs and 2 back springs should be run if practicable.
7. Mooring Details – 110,000 d.w.t. Tanker (Plan M6):
   Three head/stern lines and 2 breast lines must be run from either end of the ship. Two fore springs and 2 back springs are required, ensuring that the drift on these lines is as long as possible.
8. The Pilot will advise the Master on all mooring requirements.

LOADING: *Equipment:* All vessels must be in a sound state of repair, with main engines, mooring winches, anchors and windlasses all in proper working order.

Certification: All vessels must be in possession of a complete and valid set of safety certificates. All officers to be properly qualified and in possession of recognised certificates of competency.

All LPG vessels to be in possession of a Certificate of Fitness under the terms of the IMO code for construction and equipment of ships carrying liquefied gas in bulk, also an appropriate Classification Society Certificate.

Complies with International Transport Federation (I.T.F.) Rules and Regulations as are applicable and in operation from time to time.

Is entered into a Protection and Indemnity Club (P. & I.) acceptable to the Buyer and Seller's Representative.

Cargo Requirements: Vessels will not be accepted for loading unless the tanks to be loaded and the ship's piping are free of any liquid or vapour which would knowingly contaminate or degrade the product. The Terminal assumes no responsibility for cleanliness of ship's tanks for loading.

All vessels nominated to load crude oil or condensate must be a subscribing member of the TOVALOP (Tanker Owners Voluntary Agreement Concerning Liability for Oil Pollution) scheme at the time of their visit.

Gas carriers must be properly cooled down or inerted. Reliquefaction equipment must be in good working order.

Tank washing, gas freeing, inerting or cooling down are not permitted at the berth unless prior consent is received.

Loading Arrangements: The jetty has been designated to load refrigerated LPG, crude oil and condensate. There are 10 loading arms, all fitted with hydraulic couplings and quick-release devices. Pennant controls are operated from No. 2, 4, 6 and 9 arms.

Maximum loading rates at the berth are approximately:

Crude oil	5,000 tonnes/hour
Full Range Naphtha (FRN)	3,600 tonnes/hour
Butane	1,000 tonnes/hour
Propane	1,000 tonnes/hour

Loading Arms – Safe Envelope:

Surge: The maximum allowable movement of any arm in surge (parallel with the wharf) is ± 3 m. from the centre line.

Outreach: The maximum outreach, perpendicular to the wharf, measured from the fender face is:

(a) 300 mm. (12 in.) crude arms at a minimum operating height of + 4.14 m. above LWS: 4.8 m.
(b) 300 mm. (12 in.) crude arm at height above + 5.6 m.: 7.6 m.
(c) 150 mm. (6 in.) liquid propane arm : 6.8 m.
(d) All 250 mm. (10 in.) arms: 7.6 m.

Height: Maximum of 10.5 m. above platform deck for 300 mm. (12 in.) arms, less for smaller arms. Maximum allowable heights of ship's manifold above waterline allowing for tidal range etc., is given in Table (See "Loading Arms Table" on opposite page).

Note: If any arm moves beyond the given limits, the E.S.D. system will automatically be activated.

Ship's Manifold Requirements: Details of the loading arms and Ship's Manifold Requirements are given in Table (See "Loading Arms"). The arms are numbered 1 to 10, reading in order from the Eastern end of the jetty head.

Loading Operations – Crude or Full Range Naphtha (FRN):

1. The Master of the vessel should ensure that his vessel is securely moored alongside at all times. All tension winches to be on manual brake.
2. There must be sufficient crew members, with responsible officer supervision, on board at all times, to deal with any emergency. At least one member of the duty watch shall be visible on deck at all times.
3. The terminal will cease cargo operations and may order tugs to attend if any movement of the vessel will endanger loading arms, or in the absence of a proper deck watch on the vessel.
4. All doors, portholes and openings from the outer deck to accommodation or machinery spaces (other than the pump room) shall be kept closed, except for entry/exit purposes. All ventilators through which gas can enter shall be closed and mechanical ventilation shall be stopped if gas is being drawn into the system. Window type air conditioning units must not be used. Normal air conditioning or mechanical ventilation may be used on full recirculation mode only.
5. All cargo tank lids must be closed and secured and venting of vessel's tanks must take place only through the venting system.
6. All ullage openings must be covered with wire gauze screens, secured with weighted ullage plugs.
7. Should an accumulation of gas become apparent, loading should be stopped or loading rate reduced at the discretion of the Marine Supervisor or the responsible ship's officer.
8. Vessels in excess of 10,000 d.w.t. shall have an efficient means of readily calculating bending moments and shear stresses in the vessel's hull at all stages of loading or deballasting.

Loading Operations – LPG Vessels:

In addition to the rules applicable when loading crude oil or condensate, vessels loading LPG shall complete Section 'C' of the Safety Check List and also observe the following conditions:

1. Vessel's Master is to advise the maximum loading rate required, the maximum working temperature and pressure of the ship's tanks and details of the previous 3 cargoes carried.
2. Ship's relief valves to be set at maximum working pressure.
3. Ship's tanks to be purged of air to the satisfaction of Terminal loading officer, prior to loading. Oxygen content of tanks must be less than 2% by volume.
4. Personnel to be made aware of the danger of "frost burns".
5. The loading arms must be drained and cleared of liquid and all pressure removed prior to disconnection. Nitrogen is connected to the arms for purging.
6. Tanks and pipelines to be gradually and evenly cooled down before loading to avoid any excessive thermal stresses.
7. Ship's E.S.D. system to be operating satisfactorily. The closing of valves may be tested and timed.
8. Due account should be taken of the high coefficient of volumetric expansion when determining closing ullages, and IMO filling ratio to be strictly adhered to. At least 2 independent methods of determining ullage space to be provided.
9. All vapours to be returned ashore or recycled and not permitted to be released to atmosphere.
10. Ship's scuppers in the cargo area must be kept OPEN while loading LPG to allow liquid to escape overside in the event of spillage.

Jetty Emergency Shutdown and Surge Relief Systems:

1. The emergency shutdown (E.S.D.) system to stop loading can be activated from the shore or the jetty control room. It is also activated automatically in the event of the following occurring.
   Electrical power failure.
   Excessive pipeline pressure.
   Surge in loading pump supply current.
   Loading arm extending outside of safe envelope.
   Low level in shore tank.
2. The E.S.D. valves are power operated, backed up by emergency power and gas motors. Activating the E.S.D. system stops the loading pumps and closes the following E.S.D. valves: Tank suctions, valves at shore end of jetty, valves at loading arms. All valves in the shore E.S.D. system have a closure time of 30 seconds.
3. Prevention of Pressure Surge Damage:
   Serious damage to piping and equipment could result from pressure surge if ship's automatic valves were slammed shut while loading at maximum rates. For this reason records of tests or manufacturer's data on the ship's valves will be required by the terminal. If suitable test data is not available the Master may be asked to operate the system to allow timing of the valves.
   A surge relief system incorporated in the jetty loading lines has been designed to cater for surges resulting from the following conditions:
   (a) Crude Oil and Full Range Naphtha (FRN)
   Loading rate = 6,950 cu.m.p.h.
   Ship's E.S.D. valves: Closing time for ball valves = 5 sec.
   Closing time for gate valves = 10 sec.
   (b) Propane
   Loading rate = 2,412 cu.m.p.h.
   Ship's E.S.D. valves: Closing time for ball valves = 5 sec.
   Closing time for gate valves = 15 sec.
   (c) Butane
   Loading rate = 2,484 cu.m.p.h.
   Ship's E.S.D. valves: Closing time for ball valves = 5 sec.
   Closing time for gate valves = 15 sec.
   Separate surge drums are provided on the loading platform for butane and propane. The crude oil/FRN header relieves into the jetty sump. The capacity of these systems is limited.
   If the Marine Supervisor considers the ship's valve closure times to be too short he may ask for them to be locked off or he may order loading at a reduced rate. If loading time is unduly prolonged through this cause, the extra time may be charged against the ship.

Cargo Measurement:

1. Cargo quantity and quality will be determined by an independent surveyor. Custody of all products will take place at the ship's manifold.
2. Shore measurement and sampling will determine quantity and quality as follows:
   (a) Crude Oil and Full Range Naphtha (FRN):
   Quantity will be determined by shore tank dips.
   Quality will be determined by a sampling device designed to automatically take a pre-determined number of samples, proportional to the rate of flow during loading.
   (b) LPG:
   Quantity will be determined on tank dips and allowance made for the increased vapour space. Quality will be determined by proportional sampling.
3. Ship's tanks measurements will only be used when shore measurements are not possible.

Product Loading Data:

Product and Loading Arm Size	*S.G. at 15° C*	*Temp ° C*	*Max. Vapour Pressure*	*Max. Loading Rate* tonnes/hr.
Crude Oil 300 mm.	0.802	(approx) 20°	62 kPa	5,000
FRN 300 m.	0.716	(approx) 20°	62 kPa	3,600
Propane 250 mm.	0.505	−42°	1434 kPa	1,000
Propane 150 mm.	0.505	−42°	1434 kPa	300
Butane 250 mm.	0.575	−05°	483 kPa	1,000

BALLAST: One receiving tank is available with a normal working capacity of 15,000 cu.m. All ballast, other than that contained in the ship's permanent ballast tanks, must be discharged ashore. Ballast water containing tank cleaning chemicals or lead contaminants cannot be accepted owing to possible detrimental effects to the plant effluent-treating system and must be retained on board. It is an offence to allow discharge or escape from the ship of any liquid containing oil or other contaminating material.

The request to discharge ballast must be made as soon as possible after the vessel has been fixed for the voyage.

MEDICAL: There is a fully equipped base hospital at Whyalla. Medical attention can be arranged through the Agent. Only first aid facilities are available at the jetty.

DENSITY: Usually 1030.

FRESH WATER: Proposed fresh water supply rate of 5 t.p.h. Fresh water is of poor quality and it is not recommended for loading.

FUEL: Not available.

FIRE PRECAUTIONS: There are 6 fire monitors at the jetty head.

1 each side of loading (manifold) platform, 50 m. apart and 12 m. above platform.

1 each end on jetty head in line with outer breasting dolphins 45 m. East and West of loading platform and 12 m. above.

2 at inboard end of loading platform and 2.5 m. above platform for fighting platform fires.

1 adjacent to Administrative Block 100 m. inboard of loading platform.

SURVEYORS: A Lloyds' Surveyor is available in Adelaide.

REPAIRS: Repair work or maintenance involving welding or burning or work which may immobilise a vessel's engines may not be carried out on any vessel within the port without the written consent of the Port Manager. Chipping, scraping or hammering is prohibited on any vessel where there is inflammable liquid on deck or inflammable vapour about the vessel. Only repairs of an emergency nature will be permitted on vessels while berthed.

Repairs to electrical equipment, i.e. radios, radar and outside electrical systems will not be permitted during loading operations.

Some routine maintenance is available at Whyalla.

GANGWAY/DECK WATCHMEN: No gangway watchmen are employed. There are security personnel employed by Santos within the complex and at the entrance gates.

AIRPORT: There is a regular air service from Whyalla to Adelaide.

TIME: See "General" before first port.

POLICE/AMBULANCE/FIRE: All emergency facilities are available. There is an ambulance and fire truck within the Santos complex. Police are available from Whyalla. See "General" – "Telephone Numbers".

TELEPHONES: There is a Telecom telephone in the Administration block on the main jetty adjacent to the head of the jetty.

GARBAGE DISPOSAL: Garbage disposal available while alongside. Vessel to provide containers for off-loading. Contact via agents, Adelaide Steamships, Tel: (086) 458733.

Loading Arms:

† Unrestricted, except for safe access.

WASTE OIL DISPOSAL: Oil terminal: Service only available for vessels loading at berth. Capacity to handle 15,000 tons of oily water mix, no chemical additives permitted. Vessel to be capable to pumping waste oil ashore. Contact: Operations, Santos Ltd., Tel: (086) 403100.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar.

REGULATIONS: Masters shall ensure that their vessels and crews comply with the requirements of the S.A. Harbours Act, The Inflammable Liquids Act and the Stony Point Port Rules.

TIDES/CURRENTS: *Tides:* For tidal predictions for the area, the Whyalla tide tables should be used.

Current Speed: Strong tidal currents occur in the berth area and approaches with maximum ebb streams running about 30% faster than maximum floods. At spring tides, every 2 weeks, the current may reach a maximum of 1.7 knots (88 cm./sec.) on the ebb and 1.3 knots (67 cm./sec.) on the flood. At "King" tides, twice per year, peak current speeds will be about 10% higher. The current speeds given are for an average depth of about 10 m. Near-surface currents, which will affect small vessels, run about 10% faster than the 10 m. average.

Current Direction: Both flood and ebb currents generally set slightly across the berth, towards the shore. The peak flood stream averages 12° on to the berth. The peak ebb stream averages 7° on to the berth but varies between 16° 'on' and 2° 'off' the berth.

CHARTS: Recommended charts are:

BA.2389	'St Vincent and Spencer Gulfs'.
BA. 407	'Spencer Gulf.'
Aus. 136	'Approaches to Whyalla and Port Pirie.'
Aus. 778	'Pt. Lowly to Port Augusta.'
Aus. 777	'Winceby Island to Point Riley.'
Aus. 776	'Williams Island to Winceby Island.'

For description of coastline, anchorages, weather notes, etc., refer to the Australia Pilot, Volume 1.

GENERAL:

Provisions: Fresh and preserved foods and other stores are available through the Agent. Vessels may be stored at anchor, or alongside subject to safety requirements.

Stores Handling:

1. Loading of stores from the jetty, unless carried by hand is strictly forbidden during cargo operations. Stores may be taken during deballasting with the approval of the Marine Supervisor and agreement of the Master, provided the following regulations are complied with:
   (a) All tank hatches and ullage plugs within 16 m. (50 ft.) of the stores handling area should be battened down.
   (b) Any cargo operation which may allow vapours to escape on to the deck should be stopped whilst stores are being handled, e.g. pumping of strippings into an after tank.
   (c) Metal drums or heavy metal parts likely to cause a spark should be landed on rubber matting and not be allowed to contact the vessel's deck. If no matting is available, deballasting should be suspended and all tank lids/openings battened down whilst metal items of stores are landed on deck. The above items must not be dragged or rolled along the vessel's deck.
   (d) Gas cylinders should be carried by hand or transported on a rubber tyred trolley. They must not be rolled along the deck of a vessel or jetty.
2. A derrick of 1 tonne S.W.L. is located near the shore gangway. This derrick may be used for loading stores, with the permission of the Marine Supervisor, provided the preceeding regulations are observed.
3. The handling of stores from an approved barge may be carried out during the cargo operations provided that the barge is secured aft, and the stores are loaded on to the poop of the ship. Cargo should be stopped while the barge comes alongside or departs, and all barge personnel should observe the same SMOKING REGULATIONS as are observed on the ship. This may mean the complete prohibition of smoking on the barge while it is alongside the ship, or within 400 m. of the ship.

Visitors: No persons other than Port Health Officials and Customs and Excise Officers are allowed to embark or disembark from a vessel until clearance has been obtained and the Master's permission has been granted. Embarking and disembarking must be by gangway only. Walking through the plant is not permitted.

Intoxicated Persons: No person who appears in an intoxicated condition will be allowed on or off the vessel unless under adequate supervision of a ship's officer. Particular attention should be paid to crew members returning from shore leave.

Rabies Control: Strict quarantine regulations are enforced in Australia. Pets are to be kept onboard in an enclosed area and are not permitted to be landed for exercise or for any other reason unless permission is given in writing by a Port Health Officer. The presence on board of any pets must be reported to the Marine Supervisor.

Garbage Disposal: The dumping of garbage of any description in the harbour is strictly forbidden. Arrangements can be made for the collection of garbage from ships at anchor or alongside.

Note: The ship's Agent will arrange for the garbage to be collected by a launch and must not be landed on the loading berth or dolphins.

Weather Forecasts: Gale warnings and strong wind warnings are broadcast over the marine VHF bands. Ships at the berth will be promptly advised of any warnings received by the terminal radio.

Mooring of Boats Alongside Tankers: Small craft are prohibited from approaching or remaining alongside tankers unless approval has been given by the Marine Supervisor or from the Port Manager.

Stores barges should be positioned aft of the cargo deck.

Access to Jetty Area:

1. Vehicular Traffic: (Diesel vehicles only).
   Only vehicles approved by Santos and displaying a permit issued by the Port Manager will be allowed on the jetty.
   A safe vehicle is provided to transport ships' crews or other persons to and from the berth.
   Duly authorised stores vehicles will normally be permitted to unload at the services platform, located some 50 m. inshore of the jetty head.
2. Personnel:
   (a) Only authorised persons will be allowed into the jetty area. Ship's personnel must have a pass signed by the vessel's Master for clearance by the security guard at the entrance gate. Master is to clear all personnel visiting the vessel.
   (b) New crew members signing on must be cleared by the Master or his deputy.
   (c) Ship's Agent is to advise the Terminal of details of stores chandlers or other services required by the vessel. The driver of any authorised delivery vehicle to furnish suitable documentation as to his identity and company.

Oil Spill Clean-up Equipment: The following equipment is held at an oil spill base close to the water's edge.

Oil Booms:
2,000 m. Seaboom: Inflatable curtain type.
1,000 m. Vikoma Beach Guardian.
1,000 m. Shoreline Barrier.
200 m. Sorbent Boom: For removal of light oil film.

Vacuum Recovery Equipment:
Two Vivovac units.
One Vacuum truck, 4-wheel drive, with suction unit and 2,730 litre sludge tank.

Oleophilic Skimmers:
Two Mark 4 DP and one Mark 6 DP units.

Pollution Craft:
One 8.1 m. Shark Cat, diesel powered, shallow draft, capable of carrying spray equipment.

Floating Tanks:
Portable Flexi-tanks, 100 tonnes capacity.

Coastal Spray Units:
Two Harrier BWN units.

Dispersant:
4 tonnes Corexit 9527 concentrate.
2 tonnes Corexit 7664 concentrate.

Sorbent Materials:
Assorted synthetic recoverable pads.

Pumps:
One sludge pump, 4 × 2 in. pumps, portable.

Two 'Lovell' Trailers:
Fully equipped with manual clean-up equipment.

Tanker Berth – Fire-Fighting Equipment:

Fire Pumps:
3 electric and 3 diesel pumps, located at pumping station midway along approach jetty, capacity 113,750 litres/min. 1,240 kPa. Plant fire pumps also start automatically if fire water demand causes drop in pressure, giving 5,005 litres/min. 1,240 kPa.

Foam Equipment:
Foam ring-main fed by separate pumps.
Storage tank capacity 9,100 litres 3% foam.

Live Hose Reels:
4, each with 30.5 m. × 38 mm. hose.

Remote controlled monitors:
4 Monitors on elevated tower with foam and water covering ship.
2 Monitors on elevated tower with foam and water covering berthing head.

Fire Boxes:
4, each with 3 × 40 m. lengths of 38 mm. hose.
2 × 40 m. lengths of 63.5 mm. hose.
Water and foam nozzles.

Extinguishers:
2 × 9 kg. chemical extinguishers in fire boxes.
1 × 909 kg. dry chemical unit.
2 × 22 kg. mobile dry chemical units.

Breathing Apparatus:
1 MSA self contained breathing apparatus and
1 MSA resuscitation apparatus are stored at main control room.

Fire Tender:
1,820 litres
2,730 litres 3% foam concentrate.
1 × 909 kg. dry chemical unit.

SHIPMASTER'S REPORT: November 1984. (Updated 1996).
Approaches: Recommended charts: BA 2389, 407; Aus. 136, 778, 777, 776. Passage up the Gulf is straightforward with fairly good radar echoes returned from the rather low lying coast. The lights of Whyalla and the flare at Bonython serve as useful guides.

The area is intensely fished and considerable interference may arise from concentrations of fishing vessels from Port Lincoln and Whyalla. All fishing vessels have been cautioned to keep clear of the Bonython Departure Channel but this instruction is largely ignored.

Documents: Normal port entry procedure and papers.

Pilotage: The Pilot boards from an orange hulled launch in a position 165°, distance 5 miles from Whyalla Entrance Beacon and the usual strict observance of IMO/SOLAS pilot ladder regulations is required. Ladder about 1.5 m. from water.

Pilots work Channels 16, 12 and 6 on VHF and the launch will approach from Whyalla itself. Once the Pilot is boarded, the vessel proceeds to the berth up the Western Channel or Eastern Channel, depending on tidal flow, while loaded vessels depart from the newly marked departure channel with the Pilot disembarking at the Entrance Buoy.

Time of pilotage to first line ashore, about 1.5 hours.

Max. Size: See "Berthing".

VHF: See "Pilotage".

The name rhymes with "python" and the correct pronunciation will avoid embarrassment over the VHF.

Tugs: Two tugs are available (from Whyalla): "Taminga" 3,600 h.p. and "Turmoil" of 2,250 h.p. The Pilot assured me that the tugs (capable of up to 25 tons bollard pull) are perfectly adequate for pulling loaded vessels off the berth against the fresh onshore winds that predominate. Mooring boats are available for running lines to the dolphins.

Berthing: Consists of a new liquids handling terminal situated at the Northern end of the Spencer Gulf, about 9 miles from the Port of Whyalla, in position Lat. 33° 01' S., Long. 137° 47' E., by the promontory noted on the charts as Stony Point.

The berth is designed to handle crude carriers up to 110,000 tonnes and LPG vessels up to 75,000 cu.m.

The berth consists of a "T" head jetty at the end of a 2.5 km. trestle.

Mooring arrangements are good and the berth is well fendered.

Within the next few months a 24 hour berthing operation will be put into effect although it is as well to obtain prior advice from the Agent since it occasionally suits their operation to berth vessels during daylight.

Loading: Notice of Readiness is tendered and accepted at time of vessel being secured.

The maximum outreach of the loading arms is no more than 4.0 m. beyond the ship's side which necessitates the use of low extensions to the manifold. The arms also require a minimum distance of 2.0 m. between them and this precludes the simultaneous loading of 2 grades since they require a VRL to maintain an overpressure in their shore tanks.

At the moment LPG production is about 1,000 tonnes per day and they only envisage shipments every 6 weeks or so.

Quoted rates for the 2 products at the moment are 2,400 cu.m./hr. Our overall average was 890 tonnes/p.h. on each grade with occasional hourly rates up to 1,000 t.p.h.

It will be necessary to shift ship on changing grades to line up the Chicksans/manifolds for the second grade if only loading one grade at a time.

Despite the length of pipe-line both products were cold. Butane at minus 4°C and Propane at minus 42°C.

Surveys are carried out on board but the final B/L figures are based on measurement of the shore tanks; on this occasion both sets of figures compared quite well.

Port Regulations do not allow the venting of tank vapours to atmosphere and in the event of a vessel arriving under inerts excess pressure will be vented to the shore flare. A charge for loss of product being made accordingly. Similarly, if they have doubts about contamination (ammonia) in the ship's tanks, this would also be led to the flare. Continuous sampling is done ashore.

It was not made clear whether a vessel would be asked to leave the berth to 'cool down' (Harbour Master's comment: March 1986 – two chill downs have been conducted alongside the jetty to date) and it is thought that this would be a matter for discussion/decision on an individual basis. Tug hire, at 40,000 Aus. dollars per berthing operation is expensive. Operator's comment 1996: Vessels may cool down South of Kangaroo Island. Costs are prohibitive, so cool down alongside is the normal procedure.

The ship will be subjected to the normal D.O.T. inspection during her visit. They will not necessarily be carried out prior to loading. Very thorough, especially on safety gear, lifting gear and documentation.

We received excellent co-operation throughout at all levels and stages of the operation. Since this was only their second cargo they were, perhaps, taking particular care, but there is no reason to expect this co-operation to deteriorate in the future.

Also see "Fire Precautions".

Fresh Water: Available from the jetty; the local personnel do not advise taking any since it is most unpleasant (reportedly) to drink.

Fuel: Not available.

Fire Precautions: The terminal's safety regulations require the vessel to prepare a comprehensive loading plan which must include hull stresses for each stage of the operation.

Repairs: With the Whyalla Shipyard closed, these may be difficult to arrange.

Surveyors: Nearest Lloyd's Surveyor resides at Adelaide.

Gangway/Deck Watchmen: A substantial shore gangway is provided.

Strict security control is exercised throughout the complex and authorisation for visitors must be obtained. They are especially wary about intoxicated personnel boarding or leaving the vessel and may ask for a ship's Officer as escort.

Airport: There is a local airport which facilitates the delivery of spare gear, etc.

Storing: The local chandlers have a very good working relationship with the terminal personnel and there is little problem in loading foodstuffs and small stores/spares. The usual restrictions apply to the movement of metal objects.

There is a 1 tonne crane on the jetty (Eastern end) which may be used for storing.

Meat and fish prices are very good, together with most local produce. Beers other than the local South Australian brands may be difficult to obtain (coming from Adelaide) and are more expensive.

Shore Leave: Security will arrange for transport to and from the ship to the gate.

It is some 35 km. into town and the cost (one way) of a taxi is 40 Australian dollars (U.S.$ 35.00). The Agent will be able to arrange a mini-bus service.

AUTHORITY: Department of Marine and Harbors of South Australia, P.O.Box 102, 15 Darling Terrace, Whyalla, South Australia 5600, Australia. *Tel:* (086) 488161. *FAX:* (086) 488168. *Contact:* Captain D. Mansfield, Port Manager – Whyalla/Port Bonython (after hours Tel: (086) 457682).

Operator: Santos Ltd., 39 Grenfell Street, Adelaide, South Australia 5000. *Tel:* (08) 218-5111. *Telex:* 82716. *Fax:* (08) 212-5476.

Santos Ltd., Port Bonython. P.O.Box 344, Whyalla, S.A. 5600. *Tel:* 086-403100. *Fax:* 086-403200.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Adelaide.

PORT GILES, S.A.: 35.02 S. 137.46 E. (See Plan)

PORT LIMITS: As marked on AUS. 125 (plans in the Gulf of St. Vincent). From a position the HW line in Lat. 35° 00.5' S. in a direction 090°×7 miles, thence 180°×1.75 miles, thence 270°×6.7 miles (approx.) to the shore.

DOCUMENTS: All documents necessary for first entry vessels are as for other Australian ports (i.e. Customs, Health, etc.)

PILOTAGE: Compulsory. Pilot boarding ground is 2.5 miles East of the seaward end of the Port Giles Jetty. Pilot vessel has aluminium hull, yellow superstructure, "Pilot" in black on topside. Vessels proceeding to Port Giles, 24 hours' notice required to Ports Corp, South Australia – Port Adelaide.

ANCHORAGE: 2.5 miles from berth.

RESTRICTIONS: Daylight berthing only. Sailing at any time. Depth in channel 11.6 m.

MAX. SIZE: Vessels to 40,000 d.w.tonnes able to load fully and depart at lowest tide. Normal limit 206 m. LOA and 40 m. beam. Larger vessels at Port Manager's discretion.

HEALTH: Radio Pratique available within 24 hours of arrival provided sufficient information supplied. Quarantine/Health Officer will still board vessel in order to grant formal Pratique. Vessels arriving from other Australian ports have automatic Pratique, but Health Officer may still attend the vessel on arrival.

RADIO: ETA messages for Agent, etc., may be routed through any Australian coastal station, less than 24 hours prior to arrival.

VHF: Channels available at Port Giles 16, 12, 6. Channel 16 used for general calls to Port Adelaide Outer Harbour, Signal Station. Call sign: "Adelaide Outer Harbour". Messages on Channel 12. Hours of operation: 24 hours per day. Messages will be relayed to Port Giles.

RADAR: No radar service.

TUGS: By arrangement from Port Adelaide.

BERTHING: Berth dimensions: Length 256 m. (840 ft.), width 39.6 m. (130 ft.), depth 11.6 m. (38 ft.), draft subject to keel clearance 0.6 m. (2 ft.). Vessels berth on North side of jetty, either head in or head out depending upon weather conditions.

CRANES: None.

BULK LOADING FACILITY: 5 booms with luffing and swinging ability. Loading rate; 2 or more booms 1,100 tonnes per hour, 1 boom 400 t.p.h. Chute clearance low water: 15.54 m. Cargo handled: Barley, wheat, peas.

SPECIALISED CARGO HANDLING FACILITIES: None available.

BRIDGES: None.

STEVEDORES: Ordering of labour organised through Agent and Grain Handling Authority.

MEDICAL: Ambulance – Yorketown (088) 521200. Doctor available in Yorketown.

TANKERS: No facilities available.

DENSITY: 1027.

FRESH WATER: Available at 15 tonnes per hour ship/shore hose.

FUEL: By road tanker, by arrangement.

CONSULS: None at Port Giles. Services available from Adelaide.

REPAIRS: None available at Port Giles. Available from Adelaide.

DRY DOCKS: None.

SURVEYORS: (1) Cargo Surveyors available through Agents, from Port Adelaide.

(2) Lloyd's Surveyor should be organised through principal Agents. Lloyd's Agents is at Port Adelaide.

Other Classification Society Surveyors also available in Australia with sufficient notice to Agents. None are resident in Port Giles.

GANGWAY/DECK WATCHMEN: Gangway watchmen not available.

HATCHES: Ship's crew.

CUSTOMS ALLOWANCES: Normal Australian allowances.

CARGO GEAR: Bulk grain loading only.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Nearest regular airport, Adelaide.

TIME: See "General" before first port.

HOLIDAYS: New Year's Day; Australia Day (January); Good Friday; Easter Monday; Anzac Day (April); Adelaide Cup Day (May); Queen's Birthday (June); Labour Day (October); Christmas Day and Proclamation Day (December 26th).

The bulk loading plant operates on all public holidays except Good Friday and Christmas Day.

POLICE/AMBULANCE/FIRE: Police Tel: 521100 (Stansbury Tel: 524205, Edithburgh Tel: 526024, Yorketown Tel: 521100).

Ambulance Tel: 521200 (Edithburgh Tel: 526000, Stansbury Tel: 524100, Yorketown Tel: 521200).

Fire Tel: 521000.

EMERGENCY CO-ORDINATION CENTRE: Tel: (062) 475 244.

TELEPHONES: Ordinary hours 0830 to 1630 to connect $60.00 and disconnect $60.00. Overtime hours to connect $84.00 and to disconnect $84.00. Rental $1.14 per day.

SERVICES: Tank/hold cleaning services available by prior arrangement.

BANKS: Not available at Port Giles. Nearest banks at Yorketown.

Bank SA, 25 Warooka Road, Yorketown. Tel: 521570, Telex: 82082.

A.N.Z. Banking Group Ltd., 40 Warooka Road. Tel: 521211

STORING: See "Prelims".

1. Truck.
2. –
3. Normal road access.
4. Forklift trucks can use jetty.
5. Normal Customs bond regulations apply.
6. Ship's crew.

SHIP SUPPLY SERVICE: Not available.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Normal Australian I.D. cards necessary, but not required to be carried ashore.

GARBAGE DISPOSAL: *Notice:*

Ports Corp, South Australia
Port Giles

Notice to Masters of Overseas Vessels

No garbage collection is available in the Port of Ardrossan.

Any enquiries should be directed to Department of Marine & Harbors via your ship's Agent.

Under the Marpol Convention plastic items including plastic bags/bottles *must not* be disposed of at sea.

Australian Quarantine requirements

Quarantinable ships garbage: (Including galley scraps, organic refuse, animal waste and used food cartons).

Must be stored in plastic bags or heavy duty wet strength paper bags. The bags must be stowed within rodent/bird proof containers with tight fitting lids.

Must not be incinerated, macerated/sterilised or held in an integral holding tank *unless* prior Quarantine permission has been obtained for this specific voyage.

Australian Quarantine also requires that:

Garbage disposal unit inlets/outlets must be kept sealed.

Garbage stowage area *must* be kept cleaned and disinfected. Food scraps *must not* be littered on deck.

N.B.: Under no circumstances are the ship's crew/visitors to remove food stuffs/animals/pot plants from your vessel.

Heavy penalties apply for breaches of Australian quarantine legislation.

WASTE OIL DISPOSAL: No facilities available.

SEAMAN'S CLUBS: None.

REGULATIONS: No unusual regulations.

DELAYS: Not normal only if another vessel is at berth loading.

DEVELOPMENTS: None in foreseeable future.

AUTHORITY: Ports Corp, South Australia, Jetty Road, Wallaroo, SA 5556, Australia. *Tel:* (088) 232307. *Telex:* (088) 232280. *Contact:* Division Manager, Ports Operations at Head Office in Port Adelaide.

Head Office: Ports Corp, South Australia, P.O.Box 19, Port Adelaide, SA 5015, Australia. *Tel:* (08) 470611. *FAX:* (08) 470605.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Adelaide.

PORT HEDLAND, W.A.: 20.18 S. 118.35 E. (See Plan)

PORT LIMITS: An arc of a circle of 10 nautical miles radius with centre at Hunt Point Beacon No. 47 (Chart Aus. No. 53).

DOCUMENTS:

2 Copies Health Report Q360 for Quarantine Office to be accompanied by Crew List showing Vaccination dates.

1 Copy Store List Form 42A. All narcotics and restricted drugs to be identified by type, size and quantity. Report is to include lifeboat kits.

1 List Crew Possessions. Form 5, including Declaration Sheet. In declaring goods, quantity, description and value to be stated. In the case of all watches, radios, cameras, binoculars and the like, maker's name or brand and serial numbers must be shown.

1 Crew List and Form 3A. Comprised White Cover Sheet, 2 copies plus Form 3B (white), 2 copies.

1 List Ship's Pets. QA4. If any pets, including any animal, bird or fish on board to be accompanied by 1 pink QA5.

Identification Card. Form M315. One per crew member, except as detailed below (depending on nationality).

With reference to Seamen's Identification Cards, a Passport size photograph of the seamen is sufficient. A side-face photograph is not required. Seamen in possession of the following National travel documents are no longer required to have an Identification Card in Commonwealth of Australia Form M302.

Canada	Passport or Seaman's Identity Certificate
Denmark	Seaman's Book
Fiji	Passport or Seaman's Certificate of Nationality and Identity
Ghana	Passport or Seaman's Certificate of Nationality and Identity
Hong Kong	Seaman's Identity Book
India	Seaman's Identity Book or Seaman's Continuous Certificate of Discharge
Israel	Seaman's Book
Italy	Libretto de Navigaziona
Japan	Mariners Pocket Ledger
Malaysia	Passport or Seaman's Identity Card Identity Book
New Zealand	
Norway	Seaman's Document of Identity
Pakistan	Seaman's Identity Card or Continuous Discharge Certificate
South Africa	Seaman's Record Book and Certificate of Discharge or Seaman's Identity Certificate or Certificate of Naturalisation or Identity
South Korea	Seaman's Certificate Book
United Kingdom*	Passport or Seaman's Record Book and Certificate of Discharge

*United Kingdom Passports may be held for surrender only if grantee is agreeable, otherwise an Australian Identification Card must be available.

Masters are reminded that crew members' travel documents and Commonwealth of Australia Forms M302, where applicable, are to be retained in the custody of the Master at all times and are to be produced to Customs Boarding Officers upon demand.

APPROACHES:

General Description: To seaward of the Port Limit is the "Pilotage Area" which extends out to a distance of 20 nautical miles from Hunt Point. Although this area and the navigation beacons therein come under the jurisdiction of the Commonwealth Government, a pilotage service can be provided by the Port Hedland Port Authority as directed by the Harbour Master.

The Inner Harbour commences from a line drawn between Hunt Point Beacon (No. 47) and Airey Point Beacon (No. 46).

The Channel extends from the Inner Harbour through the Port Limit and out to Beacon"C.1", some 22 nautical miles offshore in the Pilotage Area.

The Channel has varying depths in order to make maximum use of the tidal range. These depths are:-

Inner Harbour	14.6.m.	Beacon 16	14.6 m.
Hunt Point	14.1 m.	Beacon 12	14.9 m.
Beacon 30	14.2 m.	Beacon 4	15.8 m.
Beacon 24	14.4 m.	Beacon 2	16.2 m.

The turning basin in the Inner Harbour is dredged to 9.1 m. The perimeter of the turning basin is marked by buoys which exhibit a flashing yellow light at night. The Channel is marked by beacons which are set back 23 m. from the toeline of the dredged channel. Leading lights are established to assist with navigation in a number of channel sections.

From the departure basin to Hunt Point Beacon (No. 47), the channel has a large bend for most of its length, involving vessels turning through an angle of some 70°. The channel width is generally greater than 300 m., narrowing to some 244 m. at Hunt Point. Depths up to Hunt Point are 14.6 m. The current pattern is complex but on the flood tide a pronounced set to the Western Bank is experienced.

From Hunt Point to Beacons 36/37 is a bend involving a single curve with a radius of 2,540 m. Depths of 14.1 m. are available in this area. Channel widths are up to 240 m. and currents generally follow the line of the channel.

From Beacons 36/37 to Beacons 30/31 the channel section is known as Goldsworthy Straight. The depths in this section are 14.2 m. and the channel batter width is 193 m. In the section closest to Beacons 36/37 the current is parallel to the channel; in the Northern half of the section, the current on the flood tends to set South Easterly and North Westerly on the ebb.

The section between Beacons 30/31 and 19/20 is known as the Newman Straight and depths are 14.4 m. to 14.6 m. with widths varying from 183 m. to 220 m. The current again sets South Easterly and North Westerly. From Beacons 19/20 to the end of the channel at Beacons 15/16 the depth is 14.6 m. with a width of 220 m.

The Outer Channel is outside Port Limits but within the Pilotage Area. The width of the channel varies from 250 m. at Beacons C13/C14 to 470 m. at Beacons C1/C2 and is well marked by 13 beacons.

Drying coral ledges covered with a thin layer of sand extend from the shoreline near the harbour entrance, for a distance of up to 0.75 nautical miles. To seaward of these ledges there are some detached sand banks extending out to 1.5 nautical miles. A Spoil Bank extends seaward from the foreshore and is situated to the East of the dredged channel. It dries for most of its length, acting as a breakwater during Easterly winds.

The most conspicuous object is the Mt. Newman Mining Company's Crushing Plant situated in position 20° 19.05′ S., 118° 35.26′ E. The Port Control Tower in position 20° 19.0′ S., 118° 34.5′ E. and the Tower in position 20° 18.6′ S., 118° 36.68′ E., are also conspicuous as is the water tower in position 20° 18.55′ S., 118° 36.7′ E.

Seaward Approaches: Separate inwards and outwards routes extend to and from Port Hedland. Vessels approaching the port should, unless constrained by draft, follow the recommended inwards track to the East of the main channel. Before entering the Pilotage Area, vessels must call "Port Hedland Harbour" on VHF Channel 16 and receive approval to enter. Vessels must not enter without receiving approval. In addition vessels should then confirm their ETA and draft and seek advice as to the movement of other vessels, berthing instructions and other appropriate information. Where it is necessary for deep draft vessels to use the main channel, approval to do so must be obtained from "Port Hedland Harbour" on VHF Channel 16 prior to entry at "C1" and "C2".

Vessels should call Perth or Darwin Coastal Radio Stations for details of any Emergency Notice to Mariners which may affect the Port Hedland Approaches.

On occasions, and especially when required by draft to use the main channel, vessels inwards may encounter vessels outward bound displaying signals as prescribed by Rule 28 of the International Rules for the Prevention of Collision at Sea. As outward bound vessels are generally deeper, and therefore more constrained, they will as a general rule have preference.

Mariners are advised to pay due regard to the strong currents which exist off the coast, especially during Spring Tides. The height of Mean High Water Springs is 6.8 m., Mean High Water Neaps 4.7 m. and maximum range is approximately 7.3 m. The flood tide sets in an Easterly direction, whilst the ebb sets North Westerly (maximum rate approximately 1.5 knots). Vessels may request the exact height of the tide by calling "Port Hedland Harbour" on V.H.F.

PILOTAGE: Pilotage is provided within Port Limits and within a "Pilotage Area" that extends some 10 nautical miles outside Port Limits.

Port Limits embrace the area up to the High Water Mark within an arc of radius 10 nautical miles, from Hunt Point Beacon (No. 47).

The Pilotage Area embraces the area up to the High Water Mark between Port Limits and an arc of radius 20 nautical miles, from Hunt Point Beacon (No. 47).

The Master of any vessel other than a vessel exempted under the Port's Regulation 74, shall not cause or permit the vessel to enter of depart from or move within the Port or the Pilotage Area without having first taken on a Pilot, unless authorised to do so by the Harbour Master.

Regulation 74 exempts from Pilotage the following vessels:

(a) all vessels which do not exceed 35 m. in length overall;

(b) all coasting and interstate vessels exceeding 35 m. but not exceeding 65 m. in length overall the Masters of which hold a current Pilotage Exemption Certificate valid with respect to the Port;

(c) all vessels owned and operated by the Western Australian Coastal Shipping Commission exceeding 65 m. but not exceeding 135 m. in length overall the Masters of which hold a current Pilotage Exemption Certificate valid with regard to the Port;

(d) subject to the consent in writing of the Harbour Master first being obtained, vessels which are not registered in the Commonwealth of Australia exceeding 35 m. but not exceeding 65 m. in length overall, the Masters of which hold a current Pilotage Exemption Certificate valid with respect to the Port; and

(e) vessels of war.

It is intended that only outbound vessels of 150,000 d.w.t. or more will be required to take a Pilot beyond Port Limits into the Pilotage Area. However, if a Master requests the services of a Pilot then the Port will meet that request where in the opinion of the Harbour Master it is reasonable to do so. Generally speaking vessels under 150,000 d.w.t. will be authorised by the Harbour Master to proceed without a Pilot in the Pilotage Area. Within Port Limits vessels will require a Pilot unless exempted by Regulation 74.

Pilots employed by the Port Headland Pilot Company receive extensive training, both locally and overseas. It takes an average 2 years before a Pilot is classed as an "unrestricted" Pilot, that is to say he is allowed to handle any size of vessels and is not restricted to a certain tonnage. All unrestricted Pilots have attended Shiphandling Courses at the Port Revel Marine Research and Training Centre at Grenoble, France, where the principles of shiphandling are studied.

The Port has been modelled on the simulator at the Australian Maritime College at Launceston, Tasmania, ensuring that Pilots receive training in all areas of the channel experiencing a variety of wind, tide and vessels.

Helicopter Boarding: Pilots will board suitable vessels by means of a helicopter which will land on a hatch cover. Normally this applies to bulk carriers and not general cargo vessels, oil or gas tankers - vessels such as these are not suitable for helicopter and will be boarded by launch. The helicopter is a float-equipped Bell 206B Jetranger weighing, when filled to capacity, 1,360 kilos. It is fitted with VHF in the Marine band.

Where a vessel is to be boarded by helicopter, the vessel must meet the following criteria:

(a) A hatch cover capable of supporting 2,722 kilos, that is, possessing a load density of not less than 380 Kg./sq.m. and with minimum dimensions of 10.16 m. If cambered, then the angle should not exceed 7.5°.

(b) Mark a *Termination Area* on the hatch cover with a circle of not less than 15 cm. width and 10.16 m. diameter.

(c) Mark a *Touch Down Area* within the termination area with a letter "H" having sides of 2.0 m. and width 13 cm. or a spot not less than 30 cm. in diameter. The *Touch Down Area* is to comprise a square space having sides measuring no less than 7.0 m., the centre of which will be concentric with that of the termination area, and shall be free of lifting lugs, wedges, ventilators and any other obstructions which are likely to hazard the flotation system. When the floats are positioned within the touchdown area as described above, the main rotor shall be contained within the termination area.

(d) The markings in (b) and (c) above shall be white or yellow on a dark background.

(e) Paint on handrails, lugs, ventilators and other obstructions on the hatch cover, should be a distinctive colour which shall be highly visible by day or night.

(f) Surrounding the termination area, there shall be an area not less than 7 m. in width in which there shall be no obstructions likely to hazard the rotor system (i.e. higher than 0.5 m. above the hatch cover level). Two approach paths, at least 150° apart in azimuth, each approach path having a minimum of 20.32 m., and being free of all obstacles, for an approach gradient of 40°, up to a height of 200 ft.

(g) The combined termination area and obstruction-free area in (f) shall comprise the *Helipad Area*. No ship's personnel shall be within this area during helicopter operations unless they are below hatch cover level.

(h) *Ensure that all hatch wires, derricks, cranes, aerials, etc., are clear of the approach paths to the Helipad Area. All loose objects must be removed from this area.*

(i) The approach paths to the helipad across both sides of the ship shall be free of obstructions higher than 0.5 m. above hatch cover level.

(j) An officer shall be available to escort the Pilot to and from the helipad area.

(k) Ships departing the Port must wash down the helipad before the helicopter lands (day and night).

In Addition for Night Operations:

(a) The termination area shall be illuminated with floodlights situated outside the helipad area, with the light beams directed downwards on to the hatch cover, in such a manner as not to blind the helicopter pilot.

(b) An illuminated wind indicator shall be displayed in a conspicuous position clear of the helipad area and easily visible from the air (e.g. a wind sock or answering pennant).

(c) On request, when other ships are in the area, provide a means of identification by flashing a light towards the helicopter on approach.

Mimimum Fire Fighting Requirements:

(a) Officer-in-Charge, with two others, each of the latter manning a fire hose, and all three wearing highly visible coloured vests. They should be stationed clear of, but close to the termination area.

(b) Fire hose nozzles of the dual purpose type.

(c) Inductors and dipsticks connected to hoses for use with foam.

(d) Drums of foam-making compound FC3034 (FFE Number) or equivalent, one at each fire hose position and sufficient to make 14,000 litres of foam.

(e) Dry powder extinguishers — 45 kg.

(f) Carbon dioxide extinguishers — 16 kg.

(g) One fire proximity suit.

(h) Fire resistant blankets and gloves.

Radio Procedure Ship/Helicopter: Before landing, the helicopter pilot must receive clearance to land on VHF Channel 16 as follows:

"(Name of ship) this is Port Hedland Pilot Helicopter, request clearance to land".

"Port Hedland Pilot Helicopter this is (name of ship), you are clear to land".

Vessels should be ready to advise the helicopter of the relative wind across the deck.

Boarding by Pilot Boat: When boarding by pilot vessel, it is most important that a lee be given to allow the Pilot to board. Generally ships will be requested to be underway prior to pilot boarding. Failure by ships to afford a lee may result in the pilot being unable to board, with consequent delay.

All vessels, where the Pilot is boarding by boat, must rig a ladder in accordance with "International Maritime Organisation SOLAS Regulations". Under SOLAS Chapter V, Regulation 17 amended in 1973 by I.M.O.'s Resolution A263 (VIII) and in 1979 by Resolution A426 (XI), the following points are stressed:

(a) The rigging of the pilot ladders and the embarkation and disembarkation of Pilots thereby, shall be supervised by a responsible officer of the ship.

(b) Every pilot ladder shall be secured in a position clear of any possible discharges from the ship, and so that each step rests firmly against the ship's side.

(c) Every pilot ladder shall be secured in a position where the pilot can gain safe and convenient access to the ship after climbing not less than 1.5 m. and not more than 9.0 m.

(d) Whenever the distance from the water to the point of access to the ship exceeds 9.0 m., access must be by means of a combination of a pilot ladder and an accommodation ladder.

(e) Adequate lighting must be provided at night.

(f) Manila manropes of between 28 mm. and 32 mm. in diameter should be rigged on each side of the ladder for its full length.

(g) The ladder should be clean.

Failure by Masters to comply with the requirements outlined above has, in the past in Australian ports, resulted in delays to shipping and in some instances heavy costs against the vessel concerned.

Pilot Ladder Specifications:

Length of spreaders not less than	1,800 mm.	(5 ft. 10 in.)
Length of steps not less than	480 mm.	(1 ft. 7 in.)
Width of steps not less than	115 mm.	(4.5 in.)
Thickness of steps not less than	25 mm.	(1 in.)
Side ropes'		
circumference not less than	60 mm.	(2.25 in.)
diameter not less than	20 mm.	(0.75 in.)
Spacing of steps	300 mm. – 380 mm.	(1 ft. – 1 ft. 3 in.)
Recommended space between top of one step and underside of the one above	310 mm.	(12.25 in.)
Recommended clear space between pairs of side ropes (not specified by SOLAS).	400 mm.	(1 ft. 4 in.)

The size and spacing of components can vary considerably from one pilot ladder to another within the requirements of the SOLAS Regulations.

ANCHORAGE: When vessels are required to anchor they should do so clear of the main channel but inside the Port Limits. The holding ground is reported as being good on both Eastern and Western sides of the channel. Vessels should not anchor in the designated Spoil Ground Dumping Areas or in the Prohibited Anchorage as indicated on Charts AUS. 53 and AUS. 52.

Departure: If the Master wishes to anchor outside prior to proceeding to sea, he must advise the Pilot when leaving the berth, and the Pilot will advise suitable anchorage. The Master will advise the Pilot of estimated time of departure in order that this may be reported to the Port Control.

RESTRICTIONS/MAX. SIZE: Vessels of up to 315 m. LOA are now able to use the port by day and by night, whereas prior to improvements these vessels were restricted to daylight movements only.

Subject to the following conditions the port may be used by vessels up to 330 m. LOA: All movements in the channel confined to daylight hours; wind speed not to exceed a steady 25 knots; inward movements to be confined to times when the currents are the minimum possible for the tide. Owners of such vessels should provide the Port Authority with a general arrangement plan at least 2 weeks prior to vessel's arrival.

Port Hedland Port Development: To determine the maximum allowable departure draft and departure times, a computer programme has been provided which takes into account a number of factors which make the calculation of departure draft rather more complex than before. These factors include varying channel depths, and varying heights of tide throughout the passage of a vessel from the Inner Harbour out to "C1" Beacon, a distance of some 45 km., and involving a transit time of about 3 hours from departing the berth. Also included are the sea state, the required Under-Keel Clearance, an allowance for the varying speeds of ships and an allowance for the variation in tide heights between those predicted for the Inner Harbour and those experienced offshore.

The computer programme currently divides Under-Keel Clearance into 3 different swell states. These were established after investigation of all pertinent factors by the Dutch Research Group MARIN, the Authority's engineering consultants on this matter, RSF and the Port Hedland Port Authority. Further refinements to the programme are under investigation. Sea state data for the programme is provided by 2 waverider buoys sited near Beacons No. 15 and 16.

A new Dynamic (real time) Under Keel Clearance program has recently been commissioned.

Swell States:

State A	Swells less than 0.25 m. in amplitude. These occur for approximately 64% of the year.
State B	Swells of 0.25 m. to 0.50 m. in amplitude. These occur for approximately 30% of the year.
State C	Swells greater than 0.50 m. in amplitude. These occur for approximately 6% of the year, and include swells generated by the passage of cyclones.

Under-Keel Clearance:

Location	*Swell Type A*	*Swell Type B*	*Swell Type C*
Harbour	1.20	1.20	1.20
Hunt Point	1.30	1.40	1.60
Beacon 30	1.40	1.80	2.30
Beacon 24	1.60	2.00	2.60
Beacon 16	1.60	2.00	2.60
25 km. (Beacon "C14")	1.80	2.20	2.90
39 km. (Beacon "C4")	2.10	2.70	3.50
44 km. (Beacon "C1")	2.20	2.90	3.70

The UKC scales take account of any likely increase in swell conditions in the 12 hours prior to sailing. The maximum loading drafts will be determined by the Port Authority at 12 hours prior to sailing and will not be varied in this period.

It is pointed out that "overdraft" will not take place because the UKC's (and the loading drafts) contain an allowance for any likely increase in swell conditions in the interim 12 hour period.

Average times between:

Last Lines to Harbour	5 minutes
'A' Berth to Hunt Point	31 minutes
'B' Berth to Hunt Point	31 minutes
Hunt Point to Beacon 30	29 minutes
Beacon 30 to Beacon 24	17 minutes
Beacon 24 to Beacon 16	15 minutes
Beacon 16 to Beacon 12	12 minutes
Beacon 12 to Beacon 4	36 minutes
Beacon 4 to Beacon 2	12 minutes

The computer programme also maintains the minimum UKC at each of the channel control points if the vessel is 15% faster or 20% slower than the above transit times.

This is required because it is not necessarily known at departure whether a vessel will be a fast or slow vessel. The above lower and upper bounds on transit times were derived from the analysis of actual transit times for large vessels departing Port Hedland over a 3 year period, and is an on-going analysis.

Example of under-keel clearance programme print-out for a 200,000 d.w.t. vessel on an average flood tide:

		Min.	*Average*			*Fast*			*Slow*		
Location	*Depth* (m.)	*UKC* (m.)	*Time* (hr.)	*Tide* (m.)	*UKC* (m.)	*Time* (hr.)	*Tide* (m.)	*UKC* (m.)	*Time* (hr.)	*Tide* (m.)	*UKC* (m.)
Harbour	14.60	1.20	0945	6.37	4.27	0944	6.36	4.26	0946	6.38	4.28
Hunt Pt.	14.10	1.40	1026	6.73	4.13	1019	6.69	4.09	1035	6.77	4.17
Beacon 30	14.20	1.80	1106	6.79	4.26	1053	6.80	4.28	1123	6.71	4.17
Beacon 24	14.40	2.00	1125	6.70	4.33	1110	6.78	4.41	1147	6.52	4.14
Beacon 16	14.60	2.00	1144	6.55	4.30	1125	6.70	4.47	1209	6.24	3.98
Beacon 12	14.70	2.20	1200	6.37	4.17	1139	6.60	4.41	1228	5.94	3.73
Beacon 6	17.00	2.50	1236	5.81	5.84	1209	6.24	6.28	1311	5.09	5.14
Beacon 4	15.00	2.70	1248	5.58	3.60	1219	6.09	4.09	1325	4.77	2.83
Beacon 2	15.50	2.90	1301	5.31	3.79	1231	5.90	4.36	1341	4.40	2.94

Arrival drafts:

The port experiences strong winds on occasions and in order to minimise windage during transit of the channel and berthing, vessels should be ballasted to the following minimum arrival drafts:

D.W.T.	*Forward Draft* (m.)	*Aft Draft* (m.)
Up to 10,000	2.0	No more than 0.6 m.
10,000 to 20,000	2.0 to 2.5	of the propeller
20,000 to 30,000	2.5 to 3.0	to be exposed
30,000 to 50,000	3.0 to 5.0	6.5
50,000 to 100,000	5.0 to 7.0	6.5 to 7.5
100,000 to 150,000	7.0 to 8.0	7.5 to 8.5
150,000 to 200,000	8.0 to 8.5	8.5 to 9.5
200,000 to 250,000	9.0	9.5 to 10.0

Where a vessel's tonnage falls between any of the figures mentioned above, Masters are urged to interpolate when calculating drafts.

All vessels should advise their intended arrival draft to the Harbour Master 24 hours prior to their arrival. Vessels which do not meet these minimum draft requirements may have their berthing delayed. Vessels which may have difficulty in meeting the above drafts should notify the Harbour Master accordingly.

Vessels over 100,000 d.w.t. may be instructed to vary their drafts from the above prior to berthing, because of tidal conditions which may affect air draft under the ship loader.

HEALTH: Masters of all vessels arriving from overseas and wishing to proceed direct to a berth must apply for clearance by radio.

At least 24 hours before arrival the answers to the following questions should be radioed to the Ship's Agent who will submit the information to the Quarantine Officer:

A. Name, type and nationality of vessel.

B. Itinerary for last 21 days. If over 21 days from last port, please give name of port and date of departure.

C. Name of first Australian Port and ETA.

D. Number of crew.

E. Number of passengers.

F. Have you had any deaths on the voyage? If so, please give details.

G. Have you had any cases of illness during the last 21 days with a fever of 38°C or above, and
   (a) accompanied by rash, jaundice or glandular swelling, or
   (b) accompanied by diarrhoea lasting longer than 24 hours.

H. Have you had persons suffering from venereal disease during the voyage?

I. What live fish, birds, reptiles or other animals are you carrying? Ships' pets should be mentioned.

J. Have you carried livestock on previous voyages in the last six months? If yes, please advise type of livestock, date of voyage and ports visited. Have all stock-carrying compartments been thoroughly cleaned and disinfected?

K. Do you request radio pratique or radio approval to berth?

If the answers to the above are acceptable, "Approval to Berth" or "Radio Pratique" will be granted.

Vessels from overseas which do not submit health reports must anchor at the Quarantine Line and await quarantine clearance. Until clearance is received, no persons other than the Pilot, Port Health Officials and Customs and Excise Officers will be allowed to embark or disembark. Until cleared, vessels must show the appropriate day or night quarantine signals.

Whilst alongside in Port Hedland rat guards must be placed on all lines.

RADIO/VHF: Vessels trading to Port Hedland use Sydney, Perth and Darwin Radio Stations. There is no Radio Station in Port Hedland. Perth Radio transmits navigation warnings, including alterations to navigation aids at Port Hedland.

Vessels bound for Port Hedland should advise the Harbour Master 48 hours and 24 hours before their arrival, indicating their draft, fore and aft, and last port (Address: Harbour Master, Telex No. AA 99213, Port Hedland. If telex number not included messages may be delayed).

VHF: *Port Control Tower:* This communication centre is normally manned 24 hours a day and is equipped with 5 VHF radios covering the entire marine band. The International Call sign is "Port Hedland Harbour". All VHF communication is recorded on an 8 track tape recorder.

Instructions concerning shipping movements, allocation of berths and related matters are passed to ships, Pilots and berthing gangs through the Control Tower. In addition, relevant shipping information, in particular changes to orders out of office hours, are also passed to agents, customs and quarantine as required.

Vessels are required to obtain permission from the Control Tower before entering, leaving or moving from place to place within the Port and are required to verify equipment serviceability. This verification on completion, must in the case of non-piloted vessels, be passed to the Tower by radio or other suitable means. Where a vessel is piloted, an Equipment Check List must be handed to the Pilot.

During the cyclone season in North West Australia, ships alongside will be instructed to set and maintain watch on VHF Channel 16 during the early stages of the "alert" phase.

Use of VHF: Vessels equipped with VHF must maintain listening watch on Channel 16 at all times when anchored inside the Port Limits. Should a vessel at anchor wish to communicate by VHF with another vessel then it must first advise "Port Hedland Harbour" who will allocate a working channel.

The Control Tower is equipped with a Krupp Atlas 8600 ARPA radar with a stated range of up to 72 nautical miles.

Other equipment includes a telex (receiving telexes only), wind, tide and wave recording instruments and an Aldis signalling lamp. The Port Control Tower will advise tide height (above chart datum) and wind strengths on request.

A Marine Citizens Band radio is also installed and a listening watch is maintained on 27.88 MHz. for distress calls from private pleasure craft.

TUGS/LAUNCHES: Six tugs, operated and managed by Adelaide Steamship Industries, are stationed in Port Hedland. The fleet consists of:

	Gross Tonnes	*Brake (h.p.)*	*Bollard Pull (tonnes)*	*Type*
M.V. Warang	425	3600	50	Z-pellor
M.V. Warilla	425	3600	50	Z-pellor
M.V. Corunna	427	3600	50	Z-pellor
M.V. Coongan	427	3600	50	Z-pellor
M.V. Turner	365	3600	50	Z-pellor
M.V. Degrey	312	3156	52	Twin Screw

Tugs can also be utilised for the shipment of fresh water to vessels at the outer anchorage at the rate of approximately 80 tonnes per tug.

Stirling Marine Services Pty., Ltd., also operate launches and workboats, ranging from 10 m. to 13 m., which are available for use as ferries, line boats, etc.

BERTHING: There are 5 berths situated within the Inner Harbour, two of which are owned and operated by the Port Authority. Of the three BHP Iron Ore berths, two are located at Nelson Point and one at Finucane Island.

Moorings: The following telex was received by a vessel from Agent in September 1991:

Quote

Please confirm following:

Heavy wire ropes are required to have the ends terminated with a 9.0 m. rope, spring finished with a standard eye for placing over the bollards and slip hooks.

All mooring ropes and wires to have a 6 m. tail of light rope spliced into the eye to facilitate the transfer from the line boats to the dolphin.

Unquote.

Berth No. 1: This landbacked berth lies in a 347° – 167° direction and has a length of 213 m., with a mooring dolphin 58 m. from the Northern end. Depth alongside is 11.2 m. It is protected by a "Raykin" fender system. The height of the wharf deck is 9.5 m. above datum with an apron width of 22 m. Three access ramps connect to a dry cargo storage shed, adjacent to the berth. The storage shed has a floor area of 487 sq.m. and a further 12,100 sq.m. of open hard standing space is available alongside the shed for the holding or movement of cargo. The berth, shed and open area are all floodlit for security and working of cargo. General cargo is normally handled by forklift vehicles to and from the vessels or loaded direct on to road trucks. Vessels up to 230 m. LOA can be accommodated at this berth which is equipped with 1 × 102 mm. and 2 × 203 mm. bunker points (diesel only), fresh water hydrants, power and telephone connections. Vessels wishing to have telephones placed on board should advise their agents at least 48 hours prior to arrival.

A mechanical bulk loading facility with a capacity of 700 t.p.h., operated by Pilbara Stevedores Pty.Ltd., is on this wharf.

Public telephones with STD facilities are located alongside the cargo shed at the rear of the wharf.

Berth No. 3: Berth No. 3 is situated to the South of Berth No. 1 and is constructed of steel piles with a steel and concrete decking. The wharf runs in a 117°–297° direction for a distance of 183 m. with dolphins 46 m. ahead and astern to facilitate the mooring of vessels. The height of the wharf deck is 9.5 m. above datum with an apron width of 13 m. The full length of the wharf is protected by a "Raykin" fender system. On this wharf is a cargo shed with an area of 1,600 sq.m. supported by a further open hard standing area of 4,200 sq.m. immediately behind the shed. As with Berth No. 1, all areas are floodlit, and cargo is handled by forklifts to or from the storage areas. Depth alongside in the mooring basin, which is 275 m. long, is 13.2 m. and vessels up to 230 m. L.O.A. may berth.

A mechanical bulk loading facility with a capacity of 1,500 t.p.h. is owned and operated by the Leslie Salt Company on this wharf.

Fresh water is available at 50 t.p.h. and bunkers can also be obtained through 203 mm. outlets.

A public telephone offering STD facilities is located on the Eastern corner of this berth.

BHP Iron Ore Ltd. Wharf – Nelson Point: This wharf consists of 2 adjacent berths known as "A" and "B" Berths, which form a continuous line in a 117°–297° direction from a position East of the Berth No. 3 towards Nelson Point.

The westward berth is known as "A" Berth and is equipped with No. 2 shiploader whilst the eastward berth is known as "B" Berth and is equipped with No. 1 shiploader.

The overall length is 658 m. and the shiploaders can travel from one berth to another with an overall travel between stops of 564 m.

The wharf has a berth pocket 65 m. wide, 679 m. long, dredged to 19.0 m. below chart datum and has, in addition, a mooring dolphin located between this berth and the Berth No. 3 approximately 44 m. from the Western end, with access being gained via a walkway from the MNM "A" Berth.

The wharf is equipped with 47 Bridgestone rubber fender assemblies, each comprising 2 cell-type rubber energy absorbing units fronted by a steel panel which, in turn, is faced with low-friction polyurethane wear material. The wharf itself is of steel pile construction with concrete capping, equipped with bollards and quick-release hooks along each berth.

The two shiploaders are fully retractable and have an average loading capacity of 6,500 tonnes per hour each. Shiploader No. 1 has a boom reach of 25.8 m. from the fender face and the height of the underside of the shiploader is 24.5 m. above datum. Shiploader No. 2 has a boom reach of 28.9 m. and a height above datum of 27.5 m.

Vessels will normally swing on entry and berth starboard side to the berths. Starboard gangways should be rigged prior to arrival so that no delay is incurred in the boarding of Quarantine and Customs Officers upon berthing. Bunkers are not available on these berths, although emergency supplies of fresh water may be requested. Fresh water outlets are available, situated at the wharf face, close to the bridge position of vessels mooring.

BHP Iron Ore (Goldsworthy) Ltd.Pier – Finucane Island: This is situated on the Western side of the Harbour on Finucane Island, and lies S.W. of Hunt Point Beacon (No. 47). The face of the jetty extends over a distance of 220 m. and lies in the 017°– 197° direction. It consists of 7 breasting dolphins with Bridgestone cell fenders on all 7 dolphins.

There are 2 dolphins ahead and 3 astern of the jetty to facilitate the mooring of vessels. These dolphins are set back from the line of the berth face and have no fenders.

The distance from the Northern Mooring Dolphin to the Southern Mooring Dolphin is 430 m. and the dredged mooring basin 370 m. long, 61 m. wide, has a depth of 17.0 m. below datum. The shiploader has an overall length of travel of 225 m. and a max. capacity of 4,500 t.p.h.

Vessels will normally berth port side to, heading out to sea. Ship's gangways should be rigged prior to berthing on the off-side as gangways are not acceptable on the jetty. A launch service is available to ferry personnel to the town. Ship's personnel are not allowed on the loading facility. Provision for a future second loading berth ahead of the existing jetty has been made.

The height of the shiploader underside in the raised position above chart datum is 24.1 m.

The loader is not completely retractable behind the berth face but retracts to a position 0.84 m. behind the fender line.

Fresh water and fuel are not available at this berth.

STEVEDORES: *Waterside Labour:* All employment of ship and shore labour for the working of cargo vessels is drawn through Pilbara Stevedores' labour force.

There is a current strength of 9 permanent waterside workers. Casual labour is requisitioned as required to supplement the permanent work force.

Under present manning scales, most vessels can be worked on a 24 hour day.

There are 5 "closed holiday" days: Labour Day, Good Friday, Anzac Day, WWF Picnic Day and Christmas Day. Normal working days are Monday to Sunday with shift starts at 0800 hrs. and 2000 hrs.

Payment to the waterside workers for their labour is based on the following schedule:

Day Shift	Monday to Friday	0800 – 1500	Single time
		1500 – 2000	Double time
Night Shift	Monday to Friday	2000 – 0300	Double time
		0300 – 0800	Treble time
Day Shift	Saturday	0800 – 1500	Double time
		1500 – 2000	Treble time
Day Shift	Sunday	0800 – 1500	Double time & half
		1500 – 2000	Treble time

No stevedoring operations are carried out on any of the private berths within the port.

MEDICAL: Medical attention may be arranged through the Agent. No person will be attended unless he is provided with a letter from the Master authorising such treatment. All costs incurred will be charged to the vessel.

The Government operated Regional Hospital of approximately 110 beds, caters for most medical requirements. Where necessary, seriously ill patients are flown to Perth in aircraft of the Royal Flying Doctor Service. The local ambulance service is well organised both in equipment and manpower, and additionally, the pilot helicopter may be chartered for the emergency uplift of sick or injured seamen from vessels standing offshore.

TANKERS: *Connections:* 10 in. lines with 8 in. flexible hoses. Discharge rates depend on grade and consignee.

Local Installations: Shell, B.P. and Ampol.

DENSITY: Average 1026.

FRESH WATER: See individual berths.

FUEL: See individual berths.

Bunkering Agents: B.P. Australia Ltd., Tel: 73-1422. Shell Co. of Australia Ltd., Tel: 73-1365. Ampol Ltd., Tel: 73-1042.

CONSULS: At present, there is no Consular representation at Port Hedland.

REPAIRS: Comprehensive repairs can be effected. Radar, radio and Decca servicing and repairs are available. Welding, engineering, fitting and turning, electrical, plumbing, refrigeration and air conditioning, diving and building services are located in close proximity to the Port. Limited fumigation facilities are available. Sand-blasting equipment, cranes, compressors, etc., may be hired.

SURVEYORS: An Australian Maritime Safety Authority (AMSA) surveyor is located in Port Hedland, and can be contacted by telephone 732598 (after hours 731770), Fax: 732887 and mobile 018 937759.

There is a firm of Marine Surveyors based in the port. Comprehensive survey inspections and reports can be prepared by Caleb Brett, Tel: 732310 (after hours 732360).

CARGO GEAR: Ship's gear used. Mobile cranes up to 70 tons capacity may be hired. Crane of 120 tons capacity owned by BHP Iron Ore.

The following mobile equipment is owned and operated by Pilbara Stevedores Pty.Ltd.:

1 × 13.0 tonne Forklift
2 × 6.0 tonne Forklifts
1 × 5.0 tonne Forklift
1 × 3.0 tonne Forklift
1 × 10.0 tonne Mobile Crane

When not engaged on cargo operations this equipment is available for hire.

AIRPORT: An average of 5 return jet flights operate daily between Perth and Port Hedland. A weekly international flight operates between Port Hedland and Bali in Indonesia. In addition, several charter companies operate from the Port Hedland Airport, which offers a high standard of service comparable to that of city terminals.

TIME: See "General" before first port.

HOLIDAYS: See "Stevedores".

POLICE/AMBULANCE/FIRE: Police 731444; Ambulance 731800; Fire 732555; Hospital 732144.

CERTIFICATES: The following documents should be available for inspection:

Ship's papers, including the following certificates:
(a) Register.
(b) Load Line.
(c) Safety Equipment.
(d) Safety Radio.
(e) Safety Construction.
(f) Australian Light Dues Receipt.
(g) State Light Dues Receipt
(h) Articles of Agreement and Account of the Crew (or equivalent).
(i) Oil Record Book.
(j) Register of Cargo Gear.
(k) Gas Free Certificates for OBO's.
Valid Derat or Exemption Certificate.
Crew's Identity Documents.
International Vaccination Certificates of all persons aboard.

STOWAGE FACTORS: Most recent stowage factors of iron ore cargoes loaded at Port Hedland have been approximately as follows:

Fine Ore	2,723 kg. per cu.m.,	or 0.3672 cu.m. per tonne.
Lumpy Ore	2,355 kg. per cu.m.,	or 0.4247 cu.m. per tonne.
Run of Mine Ore	2,643 kg. per cu.m.,	or 0.3784 cu.m. per tonne.
Yandi Ore	1,970 kg. per cu.m.,	or 0.508 cu.m. per tonne.
Marra Mamba	1,800 kg. per cu.m.,	or 0.556 cu.m. per tonne.

However, as these factors sometimes vary from cargo to cargo, it is recommended that Masters check with loading Agents for each shipment before finalising stowage plans.

SHIP SUPPLY SERVICE: Pilbara Marine Port Services, 15 Kingsmill Street, Port Hedland, W.A. 6721. Tel: (091) 733 445. Fax: (091) 733 446.

Services: Pilot boat services to vessels that cannot be serviced by helicopter. Passenger launches for Agents, crew ferries, providores to vessels at anchor in Outer Anchorage or berth at Finucane Island. Stores run, garbage collection and line running.

GARBAGE DISPOSAL: No facilities available.

WASTE OIL DISPOSAL: No facilities available.

SEAMAN'S CLUBS: Seafarers' Centre, Lower Wedge Street, Port Hedland. This Centre, which is jointly administered by the Missions to Seamen, British Sailors Society and the Apostolatus Maris, is located in Wedge Street, adjacent to the Port Authority workshop.

Church services can be arranged to suit individual denominational needs.

A licensed bar is operated. There is a gift and souvenir shop together with facilities for international telephone calls, foreign money exchange and library exchange. Recreational facilities include pool tables, darts, table tennis and TV. Bus tours may be arranged.

The Centre opens as follows:
Monday to Friday 1100 hs. – 1400 hrs. and 1800 hrs. – 2200 hrs.
Saturday 1600 hrs. – 2200 hrs.
Sunday 1600 hrs. – 2030 hrs.

All facilities are offered during those hours, and a warm welcome is always extended to all seamen visiting the Centre.

CURRENCY: Australian Dollar.

DELAYS: Delays of port operations, including delays of other vessels waiting for berth, caused by a vessel which for any reason is not prepared and able to move from the berth when so ordered, are chargeable to the vessel which causes such delays.

PROVISIONS: Supplies of food, liquor, cigarettes, etc., are readily available in Port Hedland.

Providores will generally meet vessels on arrival but early advise to the ship's Agent of a vessel's requirements is desirable.

GENERAL: *Tonnage Dues:* All vessels entering the Port, excluding Commonwealth or fishing vessels, are subject to payment of a tonnage fee based on the GRT of the vessel. No additional fee by way of berth usage or berth occupance levy is charged against ships lying alongside the Authority's two berths.

Mooring Gangs: Gangs for the mooring or unmooring of vessels using Port Hedland Port Authority's berths are supplied from Pilbara Stevedores' permanent labour force.

Mooring and unmooring charges vary depending on circumstances. A schedule of updated charges may be obtained from Pilbara Stevedores on application.

Oil Pollution: The main stocks of oil dispersant and spray equipment, provided by AMSA under the National Plan for use on the North West coastline, are stored in Port Hedland.

Further information on this service can be obtained from The Commonwealth Marine Surveyor.

Explosives Regulations: Port Hedland Port Authority Regulations concerning the Regulation of Ships, Handling of Cargo, Inflammable Liquids and Oils, Noxious, Dangerous and Inflammable Goods and Explosives are obtainable from the Port Authority.

It is a requirement of the Port Authority that a copy of these Regulations be displayed on each vessel carrying Inflammable, Noxious, Dangerous and Explosive Goods.

Whistle Signals: It is an offence to sound a ship's whistle whilst alongside a harbour berth unless permission is obtained from the Port Control Tower - Call sign "Port Hedland harbour".

Weather Conditions: For full details refer to "Australia Pilot Vol. V". The season for cyclones on the North West coast of Australia is during the Summer months - November to April - with an average of one cyclone per year.

A weather observation station at the Port Hedland Airport is equipped with long distance weather radar and this unit, together with similar stations at Broome, Learmonth and Dampier - aided by meteorological satellite data - has proven invaluable in cyclone tracking. To assist in this service, six hourly weather reports are invited from Masters by the Commonwealth Department of Meteorology.

Climate: Port Hedland's climate ranges from extremely hot and, at times humid during the Summer to pleasantly warm days and cool nights during Winter (May to September).

Using averages taken over 80 years, Port Hedland's coldest month is July, with an average maximum temperature of 27°C and a minimum of 12°C. The hottest month is December, with an average daily maximum of 37°C and a minimum of 24°C although during Summer maximum temperatures of 46°C are not uncommon.

The average yearly rainfall is 307 mm. and rain falls on an average of 31 days per year. However, this amount of rain can fall in a very short period during the cyclone season and long very dry spells without rain can be experienced.

Crew Members Left Ashore at Time of Departure: Deserters: Masters are to inform the Customs Boarding Officer or Agent at the time of vessel's departure if any members are absent without leave from the vessel. This applies even if the vessel is continuing on to an Australian port. Customs require that all crew members' identity documents by held by the Master at all times whilst in Australian waters. The Master will be required to complete a declaration as to the crew member's absence. Customs may also examine the absent crew member's personal effects.

Repatriation and Hospitalisation: No crew member may be signed-off any vessel trading between Australian ports and overseas ports without prior permission of the Sub-Collector of Customs.

Agents wil be required to sign maintenance guarantees covering crew members landed for hospital treatment and repatriation.

Crew members may be hospitalised without Customs permission if a medical emergency arises. Customs must be informed of this as soon as possible after hospitalisation. If a crew member does not rejoin a vessel on departure, procedures will be identical to repatriation.

Stowaways: No unauthorised person should be allowed aboard the vessel. Cases of attempted stowaway have occurred. Masters should take all necessary care and precautions to prevent stowaways.

Any stowaways aboard on arrival should be reported to the Customs Boarding Officer to prevent their unauthorised landing. It should be noted that all responsibility for the repatriation of stowaways is to the account of the vessel concerned.

Services: Security patrols, garbage disposal, laundry and dry cleaning services are available and can be arranged through ships' agents.

NOTICE: To ship's Agents – Dated May 1995.

Vessels arriving without Chart Aus. 53 – Approaches to Port Hedland: Following the recent Port Users' meeting and subsequent discussions with the Australian Maritime Safety Authority (AMSA), the Authority has decided to implement the following procedure for vessels arriving at Port Hedland.

It is now compulsory for ALL vessels arriving off the entrance to Port Hedland to have on board a current edition of Chart Aus. 53 – Approaches to Port Hedland.

Vessels, which do not have a copy of the said chart, will not be granted an exemption to approach or to enter the anchorage area.

It would be appreciated if you would notify Owners of the foregoing, and as an interim measure, would it be possible for you to enter same on your arrival information telex/facsimile?

It is proposed that vessels, which do not have the relevant chart, will have a chart delivered by helicopter or pilot boat, at the Owner's expense.

I would further reiterate that the recommended arrival route into Port Hedland anchorage is via the Eastern approaches.

By copy of this letter, Port Marine Officers will be requested to question arriving ships prior to entry being granted.

Your co-operation in this important safety procedure is appreciated.

Signed: Harbour Master.

AUTHORITY: Port Hedland Port Authority, P.O.Box 2, Port Hedland, Western Australia 6721. *Tel:* (091) 73 1400 (office hours: 0800 – 1630 hrs.). Port Control Tower; (091) 73 1019 (24 hours). *Telex:* 99213. *FAX:* (091) 73 1760. *Contact:* Captain I.Baird, General Manager. Captain D. Baker, Harbour Master.

AGENT: Patrick Sleigh Shipping Agencies Pty.Ltd., 1937 Pyramid Road, Karratha, W.A. 6714, Australia (Postal Address: P.O.Box 152, Karratha, W.A. 6714). Tel: (091) 44 4329. Telex: 198236 PATSLE. FAX: (091) 44 4329. Seagram Code 6DPATSLE.

PORT HUON, Tasmania: 43.10 S. 146.59 E. (See Plan)

For Additional Information see "Hobart".

PORT LIMITS: 'Harbour' means so much of the waters of the River Derwent and its estuary as lie to the Northward of a line drawn from the Derwent Light (on the Iron Pot Islet) to Kelly Point, on North Bruny; together with so much of the D'Entrecasteaux Channel as lies to the Northward of a line drawn from the Southern end of Partridge Island to Southport Island; and together with all bays and estuaries opening either into the said River Derwent or the said D'Entrecasteaux Channel.

DOCUMENTS: As for all Australian Ports.

PILOTAGE: Pilotage is compulsory for all vessels exceeding 35 m. in length. For vessels bound to Port Huon from the North, via the D'Entrecasteaux Channel, the Pilot boarding ground is on a line drawn from the Iron Pot Lighthouse (Chart AUS. 171 – Lat. 43° 03.7′ S., Long. 147° 25.5′ E. Gp.Fl. (3) W 9 secs. 20 m. 11 nautical miles); to Kelly's Point on the Northern tip of Bruny Island. For vessels bound to Port Huon from the South, the Pilot boarding ground is on a line drawn from the Southern end of Partridge Island (Chart AUS. 173 – Lat. 43° 24.6′ S., Long. 147° 06.0′ E.) to Southport Island. Notice of ETA and request for a Pilot must be advised at least 24 hours in advance. Confirmation or amendment of this ETA must be made not less than 6 hours prior to the vessel's arrival at the Pilot Station. For additional information on this section see "Hobart".

ANCHORAGE: There are no safe anchorage positions South of the pilot line. However, vessels wishing to anchor may be guided by the Pilot on VHF to positions in the D'Entrecasteaux Channel where there is good holding ground.

RESTRICTIONS: Navigation is on a 24 hour basis, however the draft of vessels navigating within Hospital Bay, Port Huon, is restricted to 9.0 m.

MAX. SIZE: Vessels of up to 190 m. long and 9.0 m. draft can be accepted at Port Huon Wharf, while vessels of up to 160 m. in length and 8.0 m. draft are about the maximum for the Australian Paper Manufacturers' Wharf.

HEALTH: The local medical practitioner boards vessels after berthing and acts for the Commonwealth Dept. of Health. Immigration/Customs Officers travel by road from Hobart and board after Pratique has been granted. Quarantine Authorities must be informed of suspected disease or fever at least 18 hours before arrival.

RADIO/VHF: See "Hobart".

TUGS: Tugs from Hobart are available for assisting vessels. However, because of the distance involved additional notice is required, and tug charges are at higher rates.

BERTHING:

Port Huon Pier: The East side has a quay length of 172.6 m., with a water depth of 7.6 m. and the West side a quay length of 203.4 m., with a water depth of 9.8 m.

Australian Paper Manufacturers Wharf: The berthing head has a length of 82 m. and a water depth of 8.2 m. This wharf is not utilised at present.

MEDICAL: A local doctor is available and a hospital is situated at Franklin (4 miles).

STEVEDORES: Labour allocated and supplied from Hobart.

FRESH WATER: Available only at Port Huon Pier.

FUEL: Limited supplies provided by road tanker from Hobart (40 miles). Fruit ships usually call at Hobart for bunkers.

GANGWAY/DECK WATCHMEN: See "Hobart".

OPENING/CLOSING HATCHES: See "Hobart".

CARGO GEAR: At Port Huon Pier, discharge/loading is by ship's gear and at A.P.M. Wharf a fixed conveyor belt system from the shore is used.

TELEPHONES: A telephone is connected to all vessels on arrival.

AUTHORITY: Marine Board of Hobart (See "Hobart").

AGENT: See "Burnie".

PORT KEMBLA, N.S.W.: 34.28 S. 150.54 E. (See Plan)

PORT LIMITS: In the absence of any specific clause in the Charter Party, the local custom is that a vessel, having obtained Pratique, is considered to be an "arrived ship" when it is anchored off the port and reported as such to "Port Kembla Harbour".

The Port Limits are within an arc 2.5 nautical miles radius from the end of the Eastern Breakwater.

CERTIFICATES/DOCUMENTS/HEALTH/CUSTOMS ALLOWANCES/CARGO GEAR: See "Melbourne".

PILOTAGE: Pilotage is compulsory for all foreign vessels and Australian Masters without an exemption; this service operates 24 hours per day. Pilots equipped with VHF.

The pilot boarding station is in position 3.4 miles N.N.E. of Entrance.

Coastal and Reef Pilotage: See "Torres Strait" for details.

RESTRICTIONS: An artificial harbour, formed by two breakwaters with an entrance of 305 m. and a depth of 16.75 m. ISLW at the entrance. Leading from the Outer Harbour there is an Inner Harbour Basin, which is entered through a 165 m. wide channel, having a depth of 15.25 m. ISLW. The port consists of the Outer Harbour and the Inner Harbour. In the Outer Harbour the swinging basin is approximately 457.2 m. with a minimum depth of 10.70 m., and in the Inner Harbour the swinging basin is approximately 365 m. with a depth of 15.25 m.

Under Keel Clearance: Inward vessels not less than 1.37 m. Outward vessels not less than 8% of vessel's draft (draft = 15.25 m. + height of tide ÷ 1.08).

MAX. SIZE: The deepening project at Port Kembla has been completed and the port can now handle vessels in the 150,000 d.w.t. range for ore discharge and coal loading.

The depths are now as follows:

Entrance Channel 15.25 m. ISLW.

Iron Ore Discharge Berths:

No. 1 Depth alongside 13 m. ISLW.

No. 2 Depth alongside 15.75 m. ISLW.

No. 2 Coal Berth: Max. LOA 300 m. Max. beam 45 m. Max. airdraft 23 m. Depth alongside 16.25 m. at LW.

Grain Terminal: Max. LOA 290 m. Max. beam 45 m. Max. sailing draft 15.20 m.–15.88 m., depending on tide. UKC of not less than 8% required for loaded vessels.

Arrival Draft: Agents and Masters are advised that to ensure a safe entry at all times, vessels shall have minimum drafts of 2% of LOA forward and 3% of LOA aft. The propeller should also be fully immersed. In windy conditions, it will be prudent to have the vessel ballasted as deeply as possible. Failure to ensure that these conditions are met may result in delays to entry.

HEALTH: Quarantine service is available 24 hours a day with Radio Pratique available.

RADIO/VHF: A continuously manned signal station (Port Kembla Harbour) maintains constant contact with the Pilot, pilot tender, tugs and launches. In addition, a VHF radio-telephone system provides communication for vessels at sea or at anchor.

Whilst anchored off the Port of Port Kembla, it is necessary to maintain radio watches, as officially a vessel is at sea until entering the breakwaters into the port. Port operations channel is VHF Channel 11.

TUGS: At the present time 4 tugs are available, 24 hours per day, provided previous notification is given.

The tugs have bollard pulls ranging from 45 tonnes to 50 tonnes.

Vessels over 250 m. LOA proceeding to the New Coal Berth require 4 tugs and vessels 200 m. – 250 m. require 3 tugs. Vessels less than 200 m. LOA require 2 tugs.

BERTHING: Outer Harbour:

No. 4 Jetty: Length 228.6 m. Width 15.5 m. Depth 10.8 m. to 4.6 m. Facilities for discharging sulphuric acid and anhydrous ammonia.

Inflammable Liquids Berth: T-head with 2 EMCO loading/discharging heads and dolphins, can accommodate vessels up to 185 m. LOA with depth 10.67 m. or 233 m. LOA with depth 9.0 m. This berth is also used for bunkering, however, no priority is given for bunkering ships over tankers.

No. 6 Jetty: Length 298.7 m. Width 30.5 m. Depth 9.8 m. for first 205 m., then sloping to 7.3 m. Bunker facilities available by road.

Inner Harbour:

Broken Hill Pty. No. 1 Products Berth (Private): Length 192 m., depth 11 m. Bunker facilities available.

Broken Hill Pty. No. 1 Bulk Berth (Private): Length 278 m., depth 13 m. Discharging by 2×17 ton grab unloaders, each nominally 600 t.p.h. Outreach 32 m. Loading by conveyor-fed loading head – coke 700 t.p.h. and coal 1,000 t.p.h. Bunker facilities available.

Broken Hill Pty. No. 2 Bulk Berth (Private): Length 310 m., depth 15.75 m. Discharging by 1×35 ton grab unloader, nominally 2,000 t.p.h. Outreach 32 m. Bunker facilities available.

Broken Hill Pty. Ro-Ro Terminal (Private): Depth 11 m. Accommodates starboard quarter ramp vessels up to 183 m.

Broken Hill Pty. No. 2 Products Berth (Private): Length 221 m., depth 12.2 m. 2×30.5 ton cranes. Access to the berth is limited by depths of 10.7 m. in the approach channel.

Ro-Ro Terminal: Depth 9.2 m. Accommodates stern ramp vessels up to 170 m. in length. Access to the berth is limited by depths of 10.7 m. in the approach channel.

No. 2 Coal Berth: Shiploading: The berth is dredged to 16.25 m. below LW and the access channel to 15.25 m. The geometry of the berth and shiploaders will permit the loading of 10,000 d.w.t. to 150,000 d.w.t. vessels.

The berth is equipped with 2 shiploaders with a peak capacity of approximately 3,900 tons/hr. each. The loaders function in the same manner as the reclaimers with one machine loading coal at full capacity whilst the other positions itself at the next hatch.

No. 1 Coal Berth: Length 240 m. Depth 11.6 m. at LW. One shiploader loads 300 tonnes/hr. Direct loading through either the rail tippler or road hopper to 1 loading head. Also see "Shipmaster's Report".

Multi-Purpose Berth: Maximum length 300 m. Depth alongside 16.25 m. This berth handles vessels of similar size to the New Coal Berth.

Grain Terminal: Maximum length of ship 290 m. Depth alongside 16.25 m. The berth and loading facilities are capable of loading ships of 120,000 d.w.t. Grain will be loaded by 2 shiploaders with a loading rate of 2,500 t.p.h. each, 1,600 tonnes per hour whilst trimming. Storage capacity 260,000 tonnes.

STEVEDORES: *Working times:* (Not including B.H.P. and coal loader labour).

1st shift: 0730 to 1430 hrs. – Monday to Friday, Sunday
2nd shift: 1500 to 2200 hrs. – Monday to Friday, Sunday
3rd shift: 2300 to 0600 hrs. – Monday to Friday, Sunday

There are sufficient forklifts, tractors, bulldozers, etc., available to handle all general and bulk cargoes as necessary.

MEDICAL: There are sufficient doctors, dentists, etc., to handle all eventualities; also two well equipped modern hospitals.

TANKERS: Max. length of vessel 183 m. with depth alongside 10.67 m. or 233 m. LOA with depth 9.0 m.

DENSITY: Average 1025.

FRESH WATER: Fresh water is available at all berths.

FUEL: All grades of marine fuel oils including marine diesel and marine gas oil are available. Pipeline delivery of heavy fuels is available at BHP No. 1 and No. 2 Bulk Discharge Berths, No. 1 Products Berth, and at the Old Coal Terminal and the New Coal Terminal. Delivery of all grades by road tank wagon is possible at all berths. Delivery by pipeline is at 150 – 180 tonnes per hour. Delivery by road averages 40 tonnes per hour (using 2 road tank wagons).

REPAIRS: There are no drydocking facilities, but several marine engineering companies operate here, who can handle most types of repairs.
HOLIDAYS: See "Sydney".
OPENING/CLOSING HATCHES: Crew or stevedores.
CREW IDENTIFICATION: See "Melbourne".
TIME: See "General" before first port.
AIRPORT: Kingsford Smith International Airport, Sydney (80 km.).
TELEPHONES: Pilot station 750156; Signal station 744571. Telephones available.
SHIP SUPPLY SERVICE: Off-shore service may by provided by:

Stannard Bros. Launch Services Pty. Ltd., No. 4 Jetty, Port Kembla, N.S.W. 2505.

C.B. Air, Albion Park Aerodrome, Albion Park Rail, N.S.W. 2527.

T.N.T. Air Charter, 2 Hayes Road, Rosebery, N.S.W. 2018.

GARBAGE DISPOSAL: Theiss Environmental Services. Tel: 711588. No drums or skips provided except by special request. Charges: A$95 per collection plus A$1.0 per kilo. Collections: Monday, Wednesday and Friday mornings.
WASTE OIL DISPOSAL: Cleanaway. Tel: (042) 716 166. Fax: (042) 714 253. Tanker trucks: 19,000 litres. Shore tanks capacity: 55,000 litres. Charges: A$100 per hour plus approximately 15 cents per litre
SEAMAN'S CLUBS: Missions to Seamen, Darcy Road, Port Kembla, N.S.W. Tel: (042) 746 498. International telephone, church services, shop and mini-bus collection.

SHIPMASTER'S REPORT: December 1982 (Updated 1996).
Old Coal Berth (No. 1 Coal Berth).
Restrictions: The following information is required prior to arrival berthing:

1. Stem of each type of coal.
2. Stowage, tonnage and type of coal each hold.
3. Commencing holds – one loading head.
4. Trimming holds.
5. Expected departure draft.
6. LOA, gross and nett tonnages.

The vessel must conform with the following criteria:

Vessels must not present for loading with hatch coaming more than 17.4 m. above ISLW.

Minimum size of hatch openings (without prior arrangement with harbour authority) when using trimming head 4.9 m. × 4.9 m.

The Harbour Master requires not less than 0.3 m. UKC during loading operations.

Vessels of 255 m. and over enter during daylight and vessel of 265 m. and over leave during daylight.

Due to the short travel range of the loading gantries it is recommended that with the larger size vessels, i.e. LOA 228.6 m. and upwards, to avoid moving along the berth during the final phases of loading that loading be programmed to complete in the centre hatches.

Max. Size: Max. LOA 240 m., max. beam 45 m. Max. loaded draft 11.4 m. + tide – 0.3 m.

Berthing: The berth is constructed with a concrete decking on steel piles and has a length of 215 m. Bollards are placed at 18.29 m. intervals with provision for mooring lines beyond the actual berth. Maximum pull load of each bollard is 85.63 k/t. Depth of water at the berth is 11.60 m. ISLW with a bottom of natural sand and clay. This depth extends for a distance outward from berth of 12.19 m. and for a distance alongside of 267 m.

Depth after 12.19 m. distance outward from berth is 13 m. ISLW increasing to 15.25 m. ISLW in the main channel.

Vessels usually berth port side alongside.

Bulk Cargo Facilities: There is one loading gantry at ship's side which has a travelling range along the berth of 150 m.

It is fitted with a telescopic loading chute with a trimming head attached which has the effect of throwing the coal in any given direction.

Each boom has an outreach from the wharf fender of 19.8 m. Maximum angle of raise is 80°, working range of boom is horizontal to 11° below the horizontal.

For the purpose of estimating expected loading time it is recommended that a figure of 700 t.p.h. be used.

SHIPMASTER'S REPORT: January 1983 (Updated 1996).
Documents: Australian Customs Service – Notice to Master:

Section 64 of the Australian Customs Act (1901) requires that the following documents are completed and presented to Customs *within 48 hours of arrival at the first Australian port:*

Form 2A: Passenger Report (only required if carrying passengers).
Form 3A: Crew Report.
Form 3B: Crew Report.

It is also requested that the Master please complete a Ship's General Information sheet, that was included with these papers.

Section 64 of the Australian Customs Act (1901) also requires that the following documents are completed prior to the vessel's arrival, and presented to Customs *at the first Australian port:*

Form 5, Part One: Ship's Report of Arrival.
Form 5, Part Two: Crew Effects Declaration and Notice.
Form 5, Part Four: Report of Ship's Stores.
Quarantine Notice or Declaration (QA3, QA4 and QA5), see below.

These forms may be sent to shipping agents by Facsimile, Telex or Radio Telephone. Alternatively, they may be presented to the shipping agent at the vessel's last overseas port before Australia, and then sent on to the Australian Agent.

Please note: Under this legislation, there can be heavy fines imposed for failure to comply with these requirements.

Harbour Master's Note:

Also please supply Ship's Bunker figures on arrival including quantity, specific gravity and temperature.

Additional Documents:

Form QA3 (Animal Cargo)	1	Refers to cargo only. One for each relevant port. Nil return not required.
Form QA4 (Ship's Pets)	1	Nil return not required.
Form QA5 (Shipmaster's Bond)	1 (in duplicate)	Required only if ship has pets

Pilotage: Embarkation of Pilots: Masters of vessels are requested to carry out the following procedure when embarking a Pilot:

1.1 Make a good lee for the pilot launch and proceed at a speed of about five knots.
1.2 The pilot ladder, clean and fitted with spreaders at intervals, is to be rigged well clear of all discharges and outlets, and of all outboard fittings which might foul the pilot launch. The bottom of the ladder is to be maintained at a position approximately 1.5 m. above the water. The distance from waterline to point of access must not exceed 9 m.
1.3 Two clean 24 mm. in diameter manilla manropes are to be rigged. The manropes are to be securely made fast to the ship. On no account must they be made fast to the ladder at any point.
1.4 Where the ladder is rigged over a bulwark, *two* stanchions not less than one metre in length are to be securely fitted in the top of the bulwark, one on each side of the ladder. Steps are to be provided from the top of the bulwark to the deck.
1.5 A heaving line is to be provided for mail and the Pilot's bag.
1.6 By night a bright light shaded to show downwards and clearly illuminate the ladder and ship's side is to be in position before the pilot launch approaches.
1.7 Tripping lines and boatropes are not to be used.

Note: Masters are urged to have all the abovementioned gear kept in first class condition and to have it inspected frequently and to ensure always that the ladder and manropes are securely made fast.

Serious accidents have occurred through inattention to these matters. Should the abovementioned gear and the manner in which it is rigged be not satisfactory, pilotage services may be withheld.

VHF: It is necessary to maintain a VHF watch on Channel 11, whilst anchored off the port.

Berthing: Outer Harbour:

The under mentioned rules are provided for the guidance of Masters of vessels berthed in the Outer Harbour, Port Kembla.

(a) Main engines should not be taken adrift or major repairs commenced unless arranged by prior consultation with the Harbour Master.
(b) Power for main engines should be available at *four hours' notice* during normal weather conditions.
(c) Upon the International Code Signal XT being hoisted at the Signal Station, or by night the exhibition of two all round red lights therefrom, power for main engines should be available at *one hour's notice.*
(d) Sufficient crew should be maintained on board to enable removal of vessels from jetties to be effected if such removal is considered necessary for the safety of the vessel and/or other vessels.

Inner Harbour: New Coal Berth is located between Berth 12 and Berth 14. See "Plans".

Port Kembla Coal Terminal

1 – Navigation restrictions

Vessels – LOA	290 m.
– Beam	45 m.
Approach channel depth	15.25 m. below ISLW
Berthing basin depth (sand bottom)	16.25 m. below ISLW
Underkeel clearance while moving	8% draft
Tide variation – mean high of high tides	1.4 m.

Sailing restrictions:

Weather conditions – Pilot's discretion

Inward movements – 255 m. (ballasted), 244 m. (laden), and over daylight only.

Outward movements – 265 m. and over daylight only.

Vessels normally berth port side to berth.

Tug requirements:	over 250 m.	– 4 tugs
	200 m. – 250 m.	– 3 tugs
	under 200 m.	– 2 tugs
	under 108 m.	– 1 tug.

2 – Berth No.2

Length of berth face	287.12 m.
Length between extreme mooring bollards	400 m.
Length between centres of end fenders	250 m.

Fendering – 8 Seibu Type W 2000H×1500L buffer fenders at 35.64 m. centres.

Bollards – 10×100 tonne quick release hooks
– 6×120 tonne quick release hooks
– 2×100 tonne storm bollards

3 – Shiploaders – 2 travelling shuttling bridge type (only one in operation at a time).

Nominal loading rate	5,000 t.p.h.
Outreach (+ reach of chute when tilted)	32 m. (+8 m.)
Throw – pivoting spoon type (dependent on flow characteristics and moisture content)	5 m. maximum
Air Draft	22.40 m. above ISLW
Shiploader travel: park to park	235 m.
common range	185 m.

4 – Operating Authority

Port Kembla Coal Terminal Ltd.
P. O. Box 823,
Woolangong East,
N.S.W. Australia 2520.
Fax: 061-42-287605.

Repairs: There is an efficient diving service – Commercial Diving Service Pty. Ltd., (Shipping repair and maintenance division underwater), 3 South Avondale Road, Dapto P.O.Box 126, Dapto 2530, N.S.W., Australia. Neil Johnson Tel: (042) 61 4179. Keith Johnson Tel: (042) 61 4980.

Telephones: Placed on board on arrival at New Coal Berth.

Telephone Numbers:

Port Kembla Port Corporation.

Office	740201
Pilot Station	750156
Signal Station	744571 and 750159
Stannard Bros. (for moorings)	741045/75145

General:

Pollution: The Board views very seriously any kind of pollution. The regulations provide for heavy penalties on conviction. Attention is invited to the following:

1. *Oil of any description* – Discharge or escape from a ship – *Penalty up to $50,000.*
   Failure to inform of discharge or escape: *Penalty up to $10,000*
   Cost of dispersing or dealing with oil: *May be recovered from Master or Owner.*
2. *Other Pollutants* – (Including dangerous goods)
   Discharge or escape into port : *Penalty up to $400.*
3. *Dangerous Goods*
   Failure to keep pipe-line or hose gastight and free from leakage: *Penalty up to $200.*
   Failure to keep dangerous goods which have escaped in as small an area as possible: *Penalty up to $200.*
   Failure to report escape of dangerous goods from a pipe-line or hose within 24 hours: *Penalty up to $200.*

AUTHORITY: Port Kembla Port Corporation, P.O.Box 89, Port Kembla, N.S.W. 2505, Australia. *Tel:* 061-42-740201. *FAX:* 061-42-740643. *Contact:* P. McGavin, Chief Executive Officer. Captain W. Hoogendoorn, Harbour Master/Marine Services Manager.

AGENT: Patrick Sleigh Shipping Agencies Pty.Ltd., Unit 5A, 55 Kembla Street, Wollongong, N.S.W. 2500. Postal address: P.O.Box 465, Wollongong East, N.S.W. 2520. Tel: (042) 28 5666. Telex: 29025 PATSLE. Fax: (042) 28 3852. Seagram Code: 2KPATSLE.

PORT LATTA, Tasmania: 40.51 S. 145.23 E.

(See Plan)

DOCUMENTS:

Cargo Plan.
4 Crew Lists, Commonwealth No. MS11.
1 Customs Store List, Commonwealth No. 42A.
1 Personnel Effects, Commonwealth No. 5.
1 Quarantine/Animals, Commonwealth No. QA4 and QA5.
Last Port Clearance.
2 Commonwealth Government Health Forms (Q.360).
3 Lists of Ports of Call.
Tankers – Dangerous Cargo Type and Stowage Plan.
Also see "Certificates".

PILOTAGE: Compulsory pilotage from anchorage to berth. Pilot remains on board throughout loading. Pilot station equipped VHF radio Channels 16, 12, 14, 67 and 74. Pilots and line boats stationed at small boat harbour, Port Latta. Pilot boards at anchorage (2 miles N.E. of seaward end of jetty). Vessels communicate with Port Latta Marine Department on normal ship-shore frequencies, through Australian coastal stations, addressing message to "7 P Pinkands". ETA required 10 days, 2 days, 1 day prior. Accommodation ladder to be rigged and ready on port side.

ANCHORAGE: 1 mile radius from point with Rocky Cape Light. Bearing 130° (T) × 5 miles (16 fathoms).

RESTRICTIONS: Tankers and vessels over 100,000 tonnes d.w.t. berth in daylight only. Other vessels berth on arrival, day or night, weather permitting. Minimum depth of water in berth and approaches 15.25 m. (50 ft.) at I.S.L.W. A static 1.5 m. (5 ft.) under keel clearance required at all times, or 10% of draft whichever is the greater, plus 0.5 m. allowance for movement of vessel.

MAX. SIZE: LOA 245 m. (804 ft.), beam 38.5 m. (126 ft.), draft 16.0 m. (52.5 ft.). Vessels in excess by prior consultation.

HEALTH: Commonwealth appointed Quarantine Officers will board vessel at anchorage or berth when Port Latta is first port of call. Minimum 12-24 hours advance notice of pratique to Agent. Quarantine Officer requires 1 copy Crew List. Derat Certificate can be issued at this port.

RADIO: Radio messages addressed to "7 P Pinkands" and Agent.

VHF: Call sign "Port Latta".

Channel 16	Calling on arrival.
Channel 12	Port operations.
Channel 70	Shiploading.
Channel 12	Additional working channel.
Channel 67	Additional working channel.

TUGS: One tug is available "Fullerton Cove", 2,500 h.p. 40 tons bollard pull. Tug is on 30 minutes standby notice when in berth.

Second tug required for berthing of ships of 80,000 d.w.tonnes and over. Second tug, 2,500 h.p. (40 ton bollard pull).

N.B. Second tug comes from Burnie (3 hours' steaming).

2 line boats are available. On call 24 hours when a vessel is in berth. Licensed to carry 5 passengers. Used to transport all persons and goods ship to shore.

Tug will join vessel at anchorage. Tug stationed at Port of Stanley and will stay with vessel throughout loading. The use of tug or ship line is at discretion of Pilot.

BERTHING: Special towage may be required. Confirm with Harbour Authority. Propeller submerged with vessel at or near even keel. Vessels usually berth port side alongside using starboard anchor. Accommodation ladder to be rigged and ready on port side.

Mooring lines required.

(a) *Under 100,000 tonnes deadweight.* Seven (7) 220 m. (722 ft.) lines forward includes backspring. Similar aft.

(b) *100,000 tonnes deadweight plus.* As for (a) and in addition one (1) 220 m. wire forward and one (1) 220 m. wire aft. All mooring lines must comply with Classification Society requirements. Ore berth where vessel secures 3.9 m. (12.8 ft.) clear of loading facility to three (3) mooring buoys forward and three (3) aft. Backsprings to protection dolphins. *Polypropylene or similar material instead of nylon required.* Confirm with Harbour Authority.

Main engines required to be on thirty (30) minutes standby notice.

Mooring winches to be fully operational and maximum power available at all times.

LOADING/DISCHARGING: A 1,830 m. (6,000 ft.) long steel structure from the shore carries the ore conveyor and oil pipe-lines.

Shiploader: Two (2) radial arm type (one loading at any given time).
Rate: Nominal rate 2,259 long tons per hour.
Working Hours: 24 hours/day, every day weather permitting.
Outreach: (a) Central: 24.82 m. (81.4 ft.). (b) Max. slew: 17.82 m. (58.5 ft.).
Throw: Max. 3.9 m. (12.7 ft.). Working Trajectory 1.8 m. (5.9 ft.).
Height: (Air Draft) above H.W. 16.46 m. (54 ft.) minus 1.5 m. (5 ft.) for safety clearance.
Travel: 79.25 m. (260 ft.) for one loader. Total coverage both loaders 164.6 m. (540 ft.) including 6.1 m. (20 ft.) dead area between loaders.
Stowage factor iron ore pellets 0.4767 cu.m./tonne. Angle repose 27°.

MEDICAL: Minimum of 24 hours notice required by Agent to arrange doctor. Hospitals situated at Smithton, 19 miles; Wynyard, 25 miles.

TANKERS: Berth in daylight, weather permitting. Hose 10 in. diameter, discharge line only, no facilities for receiving ballast or slops. Maximum permitted draft 45 ft. (13.7 m.).

Oil/Ore vessels require Gas Free Certificate prior to landing.

A floating pipe-line connecting facility to vessel is handled by line boats.

DENSITY: 1025-1027.

FRESH WATER: Limited quantity from tug – 50 tons. Rate 14 tonnes/hr. Cost: A$10.00 per tonne.

FUEL: Not available.

FIRE REGULATIONS: Standard Mines Department fire regulations.

CONSULS: No consulates.

REPAIRS: Carried out by local contractors through Agent. Only minor repairs possible.

OPENING/CLOSING HATCHES: Ship's responsibility.

SURVEYORS: Captain D. Gunn, Bass Coast Marine Surveyors. Tel: (004) 38-1222. Fax: (004) 38-1194. Mobile Tel: 018-142-791.

CERTIFICATES: Required: Derat., Safety Equipment, Load Line, Registered Tonnage, Safety Construction, Safety Radio, Australian Oil Pollution Levy, International Oil Pollution Certificate, Australian Light Dues.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes or 8 ozs. tobacco per man. Wine/Spirit, 1 quart per man, bottle/bottles must be unsealed.

CARGO GEAR: None required.

REPATRIATION: Agents can arrange repatriation and crew changes.

AIRPORT: Nearest airport 25 miles at Wynyard with daily domestic flights to mainland for international flight connections.

TIME: See "General" before first port.

HOLIDAYS: Cargo loading continuous throughout public holidays.

POLICE/AMBULANCE/FIRE: Police, Stanley 581104; Ambulance, Smithton 521221; Fire, Stanley 581202.

TELEPHONES: Arrange through Pilots.

STORES: Available by line boat during loading. Contact: North West Providores. Tel: (004) 31-2148. Fax: (004) 31-4020.

SERVICES: Compass adjusting, radio and radar repairs, supply of charts and publications; sounding paper and course recorder paper; Notice to Mariners; extension of Safety Equipment Certificates arranged by Agent, with maximum possible notice.

SHORE LEAVE: Arrange through Pilots. Sufficient crew remain on board to handle vessel for clearing berth – to include ten (10) competent deck crew, five (5) forward and five (5) aft.

IDENTIFICATION CARDS: See "Melbourne".

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Australian Dollar (A$).

GENERAL: *Chart:* Port Dalrymple to Circular Head, AUS 798.

Tide Predictions: See "Port of Stanley" – Australian National Tide Tables. Mean Spring range of tide 2.5 m. (8.42 ft.). Correction for Port Latta – 0.6 m.

Officials: Marine Supervisor, Quarantine Officer, Customs Clearance Officer and Agent will board on arrival, weather permitting.

AUTHORITY: Savage River Mines, Marine Department – Port Latta, P.O.Box 353, Wynyard, Tasmania 7325, Australia. *Tel:* Wynyard (004) 420444. *Cables:* 7PPickands. *FAX:* (004) 434349, (004) 423285. *Contact:* D.C. Schmidt, General Manager.

Marine Board of Circular Head, P.O.Box 61, Stanley, Tasmania 7351, Australia. *Tel:* (004) 581271. *FAX:* (004) 581442. *Contact:* Yvonne Tierney, Manager.

AGENT: See "Devonport".

PORT LINCOLN, S.A.: 34.42 S. 135.50 E. (See Plan)

PORT LIMITS:
Northern Limit: From Pt. Boston Light in a direction 059°×3 miles.
Southern Limit: From Cape Donington Light in a direction 059°×3 miles.
Eastern Limit: A line joining outermost ends of North and South limits.
DOCUMENTS: See "Melbourne".
APPROACHES: Depth in approach Channel 30 ft. (Proper Bay) – 14.2 m. (Main Pier).
PILOTAGE: Compulsory. Pilot boards 1.0 miles S.E. of Boston Point.
VHF: Radio telephone in operation. Channels 6, 12, 16 and 67.
Office hours 0845 – 1700, Monday – Friday.
TUGS: 1 tug (40 tonne bollard pull) available.
BERTHING: Kirton Point Jetty oil tanker berth at "T" head, berthing space 900 ft. (275 m.), depth 32 ft. (9.75 m.). Shipping Pier depth 27 ft. (8.2 m.) and 28 ft. (8.5 m.).

Two bulk grain loading berths 350 m. long, depth 14.93 m., with 2 travelling loaders with combined capacity of 4,000 tonnes an hour and an outreach of up to 35.5 m. on each side of jetty. Vessels up to 80,000 d.w.t. can be accommodated.

A berth, 247 m. long, depth 12 m. to accommodate general cargo including bagged grain, phosphate rock and sulphur vessels.

B.H.P. Jetty (Proper Bay) jetty and berth with mooring dolphins. Distance between outer dolphins 882 ft. (270 m.). Depth 34 ft. (10.4 m.) MLWS. Channel depth 9.1 m. Loading rate 1,900/2,000 t.p.h. Max. beam permissible 80 ft. (24 m.). Max. LOA 183 m.
FRESH WATER: Available at jetty and shipping pier. Not available at B.H.P. (Proper Bay) Berth.
FUEL: Diesel and limited fuel oil by road tanker only.
AIRPORT: There is a scheduled 1 hour air service to Adelaide with up to 6 flights a day.
EMERGENCY CO-ORDINATION CENTRE: Australian Coastal Surveillance Centre-Canberra. Tel: (062) 475344. Telex: AA 62349.
STORING: See "Prelims".
(1) Yes.
(2) Operations at Harbour Master's discretion.
(3) Yes, right alongside.
(4) Yes.
(5) Normal Australian Regulations.
(6) Yes.
GARBAGE DISPOSAL: Collection available on request to ship's agent or Quarantine Officer. Drums with covers on truck or trailer used to convey garbage in plastic bags from ship to deep burial disposal site. Charges: A$40.00 plus A$2.70 per person per day.
WASTE OIL DISPOSAL: West Coast Liquid Waste, Tel: 086-843574. 10,000 litres per load, as many loads as necessary. Cost to be discussed on removal due to availability of pump sites and distance.
SEAMAN'S CLUBS/SERVICES: The Missions to Seamen, Washington Street, Port Lincoln. Tel: 830036, 821714 or 825370. Telephone, postal services, currency exchange facilities and refreshments.
CURRENCY: Australian Dollar. No restrictions. Money can be changed in local Banks.
AUTHORITY: Ports Corporation, P.O.Box 354, (King Streett), Port Lincoln, South Australia 5056, Australia. *Tel:* (086) 823633, 823723. *FAX:* 086 826725. *Contact:* Captain R.J. Cobban, Harbour Master and Port Manager.

For Proper Bay: Broken Hill Proprietary Co. Ltd., P.O.Box 21, Whyalla, South Australia 5600.

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., P.O.Box 1592, 79 Liverpool Street, Harwill Court No. 11, Port Lincoln, S.A. 5056. Tel: (086) 82 1011/82 1167. Telex: 80932 PATSLE. Fax: (086) 82 1182. Seagram Code: 5LPATSLE.

PORT PIRIE, S.A.: 33.10 S. 138.08 E. (See Plan)

PORT LIMITS: As per broken magenta lines passing through Ward Spit Beacon, to the North, and Eastern shoal North Beacon, to the South, of entrance to Germain Bay on Chart AUS 136.
CERTIFICATES/DOCUMENTS/HEALTH: See "Melbourne".
PILOTAGE: Compulsory. The Pilot Boarding Station is South-West to West and within 1 mile of Eastern Shoal North Beacon.

The regulation pilot ladder should be secured so that the lowest step is 1.5 m. clear of the water. Manropes must be provided but a boat rope is *not* required.

Pilotage distance is 17 miles and time occupied is approximately 2 hours.
ANCHORAGE: Vessels awaiting a Pilot should anchor near the Pilot Boarding Station which is good holding ground.

Exempt vessels only may anchor within Germain Bay. However, anchorage near Cockle Spit is not recommended for vessels of light draft under adverse weather conditions.
RESTRICTIONS/MAX. SIZE: Channel width 92 m.
Daylight: Max. length 185.0 m. OA
Max. beam 30.0 m. OA } i.e. Port Limits
At Night: Max. length 180.0 m. OA
Max. beam 28.0 m.
Vessels over these lengths and beams at Harbour Master's discretion.

The entrance, river channel and harbour area are dredged to 6.4 m. LWOST. The keel clearance of any vessel proceeding in the harbour or channel should be 0.76 m. and vessels over 22.0 m. the minimum keel clearance should be 0.91 m.

Max. draft at HWOST is 8.1 m., keel clearance of 0.9 m. required.

Vessels have sailed from the port under suitable tidal conditions with drafts in excess of 8.23 m.
Note 1: It is recommended that the maximum draft should be *decreased* by 0.20 m. when "fixing" vessels in advance, to allow for possibility of the tide being less than that predicted due to weather conditions.
Note 2: The LW heights should be considered when fixing deep vessels to ensure that the vessel always remains afloat in the berth.
HEALTH: For first port vessels, Radio Pratique is available 24 hours prior to arrival, after satisfactory response to information sought by Agent, formal Pratique will be granted after berthing.

In the event of suspected disease or fever on board, authorities must be informed *prior* to Pilot boarding.
RADIO/VHF: Port Pirie is serviced by VHF Channels 16, 12, 8, 67 and 6. Vessels arriving at the port should advise "Port Pirie Harbour", as soon as contact can be established, of their ETA and draft, also the position anchored, if applicable. Exempt vessels should advise same and seek clearance to enter the port. Listening watch is kept from 0845 hrs. to 1700 hrs., Monday to Friday, (except public holidays) or by arrangement.

There is no visual signal station.

There is no radio telegraph station at Port Pirie. All such messages are handled through "VIA" Adelaide and are forwarded to or from Port Pirie by land-line.
TUGS: Two tugs, bollard pull 11 tonnes and 22 tonnes.
BERTHING: Vessels are normally berthed in the order of first arrival at the Pilot Boarding Station and are usually swung prior to berthing.

Main engines must not be immobilised and static engine tests must not be made without prior approval of the Harbour Master.
Berths: Vessels berthed at No. 1 should not exceed 152.40 m. (500 ft.) OA length.

	Dredged to:						
Berth No.	*Depth* (m.)	ft.	*Width* (m.)	ft.	*Length* (m.)	ft.	*Normal usage*
1	7.32	24	24.38	80	152.40	500	Fishing

10	8.23	27	30.48	100	158.51	520	Coke, Coal and Lead Concentrates, Limesand
11	3.6	12	24.38	80	47.71	150	Acid

CRANES: 6×7.5 ton electric cranes are available at Berths No. 7, 8, 9 and 10.
BULK HANDLING FACILITIES: The boom of the shiploader is 70 ft. (21.3 m.) in length and when lowered to the horizontal position for pouring should plumb the midship line of most ships loading from this machine. The "jet-trimming slinger" at the lower end of the loading chute is capable of throwing a stream of ore some 60 ft. (18.3 m.) through 360° and can be directed to any position within the vessel's hold (To be replaced by a ship unloader bridge by 1997).

Bulk wheat and barley can be delivered ex-silo on a conveyor belt which is capable of delivery at the rate of 800 t.p.h. Five outlets are available but the maximum is 800 t.p.h.
MEDICAL: All medical and dental facilities available.
TANKERS: No facilities.
DENSITY: Between 1033 and 1035.
FRESH WATER: Fresh water available all berths at rate of approx. 20 t.p.h.
FUEL: There are no bunkering facilities at any berth. Limited quantities of diesel oil may be obtained by road tanker.
REPAIRS: Subject to special arrangements.
SURVEYORS: Classification Society Surveyors available by prior arrangement. Private surveyors available.
HATCHES: Opening/closing carried out by ship's crew.
CUSTOMS ALLOWANCES: As per Australian Regulations.
REPATRIATION: Facilities available.
AIRPORT: There are no regular flights to or from the port. Charter aircraft can be arranged.

Transport to Adelaide is by bus. Bus transport is most frequent – duration of journey 3 hours.
TIME: See "General" before first port.
POLICE/AMBULANCE/FIRE: Emergency Numbers:

Police	32 1200
Fire	32 3000
Ambulance	32 1111

EMERGENCY CO-ORDINATION CENTRE: In an emergency whilst at anchor or in the vicinity of the port (i.e. not berthed), contact can be made with "Port Pirie Harbour", if during working hours. Outside those hours, radio contact with "Adelaide Outer Harbour". Both contact points will immediately contact appropriate local or regional emergency organisation.
TELEPHONES: All vessels in port will have telephones placed aboard by Agent. Local calls only available.
STORING: By truck alongside vessel. Forklifts can be used if required.
SHORE LEAVE: Unrestricted.
IDENTIFICATION CARDS: As per Immigration Authority Regulations.
GARBAGE DISPOSAL: Service is available and its use is compulsory. Contractors truck attends vessel. No garbage to be landed prior to truck's arrival. Charges: A$40.00 per full day in port plus A$2.70 per crew member per full day in port.

Refer to agent for contact number.

WASTE OIL DISPOSAL: Small quantities only. See above or contact agent for large quantities.
SEAMAN'S CLUBS: Missions to Seamen, 37 Florence Street, Port Pirie. Services: library, telephone, postal service, canteen, souvenirs, television, snooker, table tennis, hospital visits. Open daily from 1900 hrs.
CURRENCY: Australian Dollar. No restrictions.
GENERAL: *Tides:* MHW Springs 2.65 m., Neaps 1.65 m. Generally tidal heights of 2.74 m. or over occur at Springs about 50% of the days of the year. However, tides are affected by weather and may be up to 0.61 m. above or below predictions.
AUTHORITY: South Australian Ports Corporation, Ellen Street, Port Pirie, South Australia 5540. *Tel:* (086) 321455. *FAX:* (086) 325918. *Cables:* DMH Pirie. *Contact:* Port Manager.
AGENT: See "Adelaide".

PORT STANVAC, S.A.: 35.06 S. 138.28 E. **(See Plan)**

The Marine Terminal is situated on the Eastern shore of the Gulf of St. Vincent, 18 miles South of Port Adelaide in Lat. 35° 06′ S., Long. 138° 28′ E., bearing 219°, 4.0 miles from Marino Light. Mariners are referred to current hydrographic chart AUS 780.

The Terminal berths are open and unprotected. Consequently at all times a vessel must be in a suitable condition, with sufficient deadweight and personnel on board to vacate the berth immediately on short notice.

The Terminal comprises a single buoy mooring served by a 36 in. (900 mm.) submarine pipeline, for the discharge/loading of crude oil tankers of up to 233,000 tonnes displacement, limited to 17.1 m. draft, and a product berth alongside the jetty for the loading/discharge of vessels up to 42,000 tonnes displacement, limited to 10.7 m. draft. The product berth is attached to the seaward end of a pier which extends in a direction of 300°(T) from the shore.

The Terminal operates 24 hours per day, seven days per week. Vessels are berthed at the SBM at any time, 24 hours a day, subject to prevailing conditions and Port Manager's discretion. Vessels at the product berth are berthed in daylight hours only, subject to tides and/or suitable weather conditions, and may depart at any time. Cargo handling operations are continuous whilst a vessel is in the berth.
DOCUMENTS: Inward clearance is effected on board the vessel by the Customs Boarding Officer after the vessel has berthed. This official is also the Superintendent of the Mercantile Marine Office.

The following documents are required:
Clearance from last port.
Crew List in duplicate on Form M & S 11, and in addition 3 copies on plain paper.
Store List on Form 42A (1 copy).
Dutiable articles owned by Master and Crew on Form 5 (1 copy).
Form C & E 886, Loading Port List (1 copy for each Australian port of discharge).
Cargo Manifest (B/L).
Livestock Notice (Form QA4) if any livestock on board, plus Shipmaster's Bond (Form QA5) in duplicate.

Necessary forms will be supplied by the ship's Agent on a vessel's first visit to the terminal.

Clearance outward is granted on board before sailing. No documents are required by the Master when clearing outwards – the ship's Agent handles all clearance documents at the Customs House.
PILOTAGE: Prior to berthing at Port Stanvac vessels will be boarded by the Duty Port Manager in the anchorage area. The Duty Port Manager will advise the Master on the pilotage of the vessel to the berth and in respect of mooring and unmooring of the vessel. At the offshore moorings he will also advise on the hoisting and lowering of the submarine hoses and on loading/unloading. He will remain on board while the vessel is moored at the off-shore berth. The Duty Port Manager will carry out his duties subject to the authority of the Master of the vessel.

Vessels are requested to have a pilot ladder and manropes, rigged on the leeward side for the safe embarkation and disembarkation of the Duty Port Manager. At night the ladder area should be efficiently illuminated. Pilot ladder and manropes should remain rigged during vessel's stay in port, whilst in the offshore berth.

If the vessel's freeboard is more than 9 m. then the accommodation ladder should be rigged in conjunction with the pilot ladder.
ANCHORAGE: Vessels awaiting to berth at Port Stanvac are advised to anchor in the following positions unless instructed otherwise:

Crude Oil Vessels: Using starboard anchor, one nautical mile North of the SBM.

Product Vessels: With Marino Rocks Lighthouse bearing 065°(T) distance 3.0 miles in 11 fathoms of water.

Holding ground in these anchorages is good with a hard sand bottom.
RESTRICTIONS: Approaches from the West through Investigator Strait; from the East, through Backstairs Passage.

Minimum depth in channel to jetty berth is 40 ft. (12.2 m.). Vessels can approach the SBM from any direction, depending on existing conditions at the time of berthing. A charted depth of 23.0 m. above the lowest predicted astronomical tide within 400 m. of the buoy, and a minimum depth of 20 m. within 1,500 m. of the buoy position.

Height of tide, 9.0 ft. (2.7 m.) HHW, and 4.6 ft. (1.4 m.) LHW.
MAX. SIZE: *SBM:*
LOA: 300 m.
Beam: No limitation.
Draft: 17.1 m.
Displacement: 233,000 tonnes.

Products Berth: Max. size limitations for vessels using the product berth are:
LOA: 183 m.
Beam: No limitation.
Draft: 10.7 m.
Displacement: 42,000 tonnes.

Note: Ships at the Product Berth must have a parallel flat side at the lightship waterline of a minimum of 49 m. and maintain a minimum freeboard whilst loading of 1.7 m.
HEALTH: Vessels will be boarded by the Department of Health Officer either at the anchorage or in the berth.

If Radio Pratique (See "Radio") has not been obtained prior to arrival international quarantine signals must be exhibited until the vessel is cleared by the Department of Health Officer.
RADIO: *Arrival Message:* Masters are requested to radio their Agents 7 days before their estimated arrival at the port, giving the following information:
ETA
Number and nationality of crew aboard.
Crew's state of health.
Advise if the hull is free of leaks.
Whether bunkers are required and, if so, the quantity.
The number of crew members, if any, who require the services of a Doctor or a Dentist.
Advise if inert gas system is in good working order and conforms to SOLAS.
Advise if ship has C.O.W. on board and if crude oil washing is required at Port Stanvac and conforms to SOLAS.

Further ETAs should be sent 72 hours, 48 hours and 24 hours prior to arrival. The 24 hours message must also confirm that the hull is free of leaks. If there is any change to the 24 hours ETA then advice should be promptly transmitted.
VHF: Port Stanvac Refinery is equipped with VHF radio operating on the following frequencies: Channel 16 (156.8 MHz) calling and standby only; Channel 14 (156.7 MHz); Channel 9 (156.45 MHz).

Masters of vessels proceeding to Port Stanvac are required to establish VHF radio contact with Port Stanvac (call sign "Port Stanvac") as soon as possible prior to arrival to confirm the vessel's ETA. Masters will be advised on which Channel they should maintain a listening watch while in the Port Stanvac area and to receive instructions related to berthing, cargo operations and other matters.
TUGS: Tugs are not normally used for berthing at the Product Berth.
BERTHING: SBM: See "Operator's Report".
Product Berth: The Product Berth has a fixed all round green light mounted on top of the hose boom.

All vessels are berthed port side alongside heading in a direction 240°(T).

Mooring line requirements are that vessels may be required to use 8 mooring lines, in good condition. The headline can be a wire rope but, if so, must have a 15 m. synthetic tail. The stern line must be a floating synthetic line so as not to foul the propeller on berthing.

The bow and stern mooring buoys are each fitted with 1×40 mm. diameter preventer wire. These wires will be taken to the ship by launch and secured on board under the supervision of the Mooring Master.

The berth is equipped with a Woodfield Flow Boom which handles all loading hoses, except the 2 solvent hoses. There are 2×14 in. lines which are for transferring white oils and taking off clean ballast. There are 2 × 16 in. lines for transferring black oils and taking off dirty ballast. Each of these 4 lines uses a 10 in. hose. In addition there are 2×6 in. solvent lines utilising 6 in. hoses and 1×12 in. line using an 8 in. hose for loading lube oils.

Typical loading rates are:

Black oils	1,600 tonnes/p.h. both lines.
White oils	1,400 tonnes/p.h. both lines.
Solvents	100 tonnes/p.h. each line.
Lub oils	500 tonnes/p.h. one line.

Multiple grades can be loaded simultaneously if segregation and safety are assured.

Ballast at 700 tonnes/p.h. is discharged through a 16 in. line to shore. Ballast reception facilities are limited. On completion of deballasting clean salt water is to be discharged for approximately 15 minutes.
Notice of Readiness: Notice of Readiness will be accepted when vessel is securely berthed or, if berth is occupied, from the time the vessel is 'brought up' at anchor off the port in, or adjacent to, the recommended anchorage.
Draining of Hoses: Crude oil discharge hoses are cleared by creating a vacuum on the submarine crude oil line. All product hoses are drained by gravity and ship's personnel are requested to co-operate with the Terminal Operators to ensure complete draining of hoses. Drip trays must be placed in position to catch any oil which may remain in the hoses and oil absorbent material must be in readiness to absorb and clean up any small leaks.
Emergency Signal: Should normal ship to shore communication fail, the emergency signal to stop the flow of oil will be one or more blasts of the ship's whistle each blast of NOT LESS THAN 10 SECONDS DURATION. In the case of a fire this should be supplemented by a continuous sounding of the ship's general alarm system. Steam or air should never be shut off the whistle whilst the ship is in port.
Signals: Vessels discharging or loading shall, by day, display the international code inflammable flag and by night, a red light, where it can be clearly seen and visible all around the horizon.
MEDICAL: Medical and Dental treatment is available if required. The Agent should be informed of the treatment required.
FRESH WATER: Fresh water at approximately 25 cu.m.p.h. is available at the product berth.

There is no fresh water connection at the SBM. Crude oil vessels requiring water must arrange, via their Agents.
FUEL: No bunkers available at the SBM. Fuel oil and diesel oil are available at the Product Berth.

CONSULS: Most nations, with the exception of the Arabian countries and the Panama Republic, have Consulates in Adelaide.

REPAIRS: Port Stanvac is an open roadstead and while vessels are moored at either berth, the main engines must be maintained in readiness to enable the vessel to leave the berth under full power at all times. No engine repairs which may interfere with this requirement will be permitted.

No welding, hotwork or scaling is permitted on vessels whilst at either berth. All repairs must be carried out in the anchorage. There are 2 repair firms in Adelaide capable of handling emergency voyage repairs. Details of any emergency repairs should be included in the ETA message.

CUSTOMS ALLOWANCES: All dutiable goods declared on Form 5 (See "Documents"), should be ready for possible collection and sealing by Customs. Non Australian crew members are allowed to retain: 200 cigarettes (opened carton) or 0.5 lb. tobacco or 40 cigars or 300 Biddies and 1 opened bottle (quart) of liquor.

TIME: See "General" before first port.

BALLAST: No dirty ballast may be discharged into the sea.

Ballast reception facilities are limited. Advance notice is required for the discharge of ballast and/or slops to the shore.

There are no shore ballast facilities for the SBM.

POLLUTION: Extreme care must be taken to avoid pollution of water by oil. A $50,000 fine, plus the cost of any clean-up can be imposed on, among others, a Master of any vessel which causes pollution of the sea by oil

The contents of engine-room and pumproom bilges must not be discharged into the sea. All pumproom and sea suction and overboard discharge valves must be securely lashed before loading or discharging operations commence.

If vessels need to unlash sea suction valves, the Duty Port Manager must first be informed. The ship's pumps must be started and a vacuum obtained before opening any sea valve.

The area around the ship's manifold and overside in the vicinity of the submarine hoses, when on the SBM, shall be efficiently illuminated at night during loading and discharge operations.

All deck scuppers must be plugged and sealed before commencement of loading or unloading.

A stand-by warning must be given to the Terminal Operator not less than fifteen (15) minutes before any cargo transfer is completed. When topping off, the loading rate will be reduced by the Terminal Operator as required.

SHORE LEAVE: No shore leave from SBM. Port Stanvac is an open, unsheltered roadstead and it is emphasised that vessels must be in readiness to vacate the berth immediately on receiving instruction to so do.

Vessels requiring launch services from the anchorage should contact their Agents for availability and charges.

Vessel's crew members and visitors are not allowed to walk through the Refinery. Access from the wharf to the Main Gate, and vice versa, must be by car or taxi only. Taxis may be ordered through the Main Gate personnel. Taxis are free as far as the Main Gate.

GENERAL: *Gangway:* A shore gangway is provided at the Product Berth.

Ship's accommodation ladder should be rigged on the leeward side in the off-shore berth.

Garbage: The dumping of garbage into the sea at Port Stanvac is STRICTLY PROHIBITED by law. PENALTY $2,000 FINE.

Laundry: Laundry facilities are available in Port Adelaide. Master should advise requirements to his Agent prior to arrival.

Stores and Provisions: A limited amount of stores such as bread, milk, fresh vegetables and fruit, not exceeding a gross weight of 5 cwt., will be permitted to be delivered by the company launch. In such instances, it will be the responsibility of the vessel ordering such stores to make available a sufficient number of ship's crew to be taken to the launch harbour by the company launch in order to handle the stores into the launch for eventual transportation to the vessel. On no account is the launch crew to handle ship's stores. Arrangements for the handling of stores should be made through the Duty Port Manager on board the vessel, or the ship's Agent.

Stores ordered in excess of the above quantities must be arranged via the ship's Agent.

Masters are advised that whenever possible they should arrange to receive stores at other ports where facilities for storing may be more convenient.

The company will not accept responsibility for any stores handled at the Terminal.

Tides, Current and Depths of Water: The predicted tide times at Port Stanvac are approximately 10 minutes earlier than the tidal predictions for Outer Harbour, Port Adelaide. However, the times and heights may be affected quite markedly by the prevailing weather conditions. The tidal current flows in a N.S. direction and on occasions may reach 1 knot.

Weather: From September to May, the prevailing winds are from the South, S.E. to East. During the remainder of the year, winds are generally from North, West to S.W. At times winds may reach gale force.

OPERATOR'S REPORT: August 1993.

The Crude Berth is a single buoy mooring.

Max. size vessel acceptable as follows:

LOA: 300 m.
Beam: No limitation.
Draft: 17.1 m.
Displacement: 233,000 tonnes.

Berthing at SBM during daylight hours only, sailing any time. For berthing, vessel will require 2 tongue type bow chain stoppers, complying with OCIMF specifications, suitable for 76 mm. chain.

Discharge is through 2×16 in. (400 mm.) floating hoses, connected to port manifold, using 16 in. ASA flanges.

Hoses are lifted singly by ship's derrick/crane (minimum SWL 10 tonnes).

Max. weight each hose 6.5 tonnes.

Max. discharge pressure at ship's manifold 1,000 KPA (150 PSI).

Only petroleum products handled at Port Stanvac.

No gas or chemicals imported or exported at this facility.

AUTHORITY: Mobil Refining Australia Pty.Ltd., P.O.Box 821, Morphett Vale, South Australia 5162. *Tel:* 61-8-3936319. *Telex:* AA 82003. *FAX:* 61-8-3926449. *Contact:* Duty Port Manager.

AGENT: See "Adelaide".

PORT WALCOTT, W.A.: 20.37 S. 117.11 E. (including Cossack and Point Samson (defunct), Cape Lambert (operational) and Dixon Island (possible future) (See Plan)

PORT LIMITS: Pecked line joining the following positions:

	Latitude	*Longitude*	*Remarks*
(a)	20° 25.48′ S.	116° 53.02′ E.	On Aus. 741 Lat. 20° 25.4′ S.
(b)	20° 25.32′ S.	116° 57.10′ E.	On Aus. 741 Lat. 20° 25.2′ S.
(c)	20° 25.80′ S.	117° 04.58′ E.	On Aus. 55 & Aus. 740 in a direction 273° 54′ to the West border; on Aus. 57 in a direction 113° 18′ to the East border.
(d)	20° 28.00′ S.	117° 10.00′ E.	
(e)	20° 28.00′ S.	117° 17.50′ E.	
(f)	20° 31.10′ S.	117° 17.50′ E.	On Aus. 55 & Aus. 741 in a direction 113° 36′ to the East border.
(g)	20° 36.90′ S.	117° 31.60′ E.	Thence in a direction 180° to the HWL.

DOCUMENTS: See "Melbourne".

APPROACHES: Approaches are marked by 5 light buoys. The first is in position Lat. 20° 23.45′ S., Long. 117° 25.34′ E. and is fitted with a 3 cm. Racon – morse code "K". From a position about 1 mile East of this buoy, ships should proceed on a course 183° for 7 miles, then 252° for 10 miles to the anchorage area. Ships should not attempt to enter via Bass Pass.

Exit Channel: Marked by some 28 buoys and beacons. Pilotage is compulsory for all ships in this area.

PILOTAGE: Pilots resident at Wickham. 24 hours service. Pilotage is compulsory anywhere in the port, except that, with permission, ships may enter port and proceed via the Eastern route to anchorage. Ships should not enter via Bass Pass except with Pilot.

Pilots will, generally, board and leave ships by means of a small helicopter. Ships which cannot accept a helicopter must advise the Harbour Master at least 48 hours prior to arrival. All crew members should keep well clear of the hatch on which the helicopter will land. Helicopter is fitted with marine VHF radio. Call sign "Port Walcott Pilot Helicopter".

Pilotage will be provided, on request, from Buoy No. 1. However this will only be just prior to a ship berthing. Ships may anchor, outside port limits, to the East of No.1 Buoy.

Pilot Ladders, Hoists, etc: On arrival, Pilots will accept a pilot hoist, a pilot ladder not exceeding 9 m. in length, an accommodation ladder if the weather is suitable or a combination of pilot ladder and accommodation ladder.

Owing to swell conditions, a clean pilot ladder is required for departure. This should be rigged so that it is 1 m. above sea level and provided with 2 clean manropes.

This ladder is required to comply with Australian Standard Specification No. 1267 of 1975 which is based on the requirements of the SOLAS Convention and the Navigation Act.

A pilot hoist or accommodation ladder is *not* considered suitable for disembarking.

Whilst in the berth, the appropriate accommodation ladder is used for access to the ship.

Port Walcott Pilots are a private organisation located at 106 Meares Drive, Point Samson. Pilots on VHF Channels 16 and 14 (Also see "Authority").

ANCHORAGE: *Recommended Anchorages:*

Bearing of Jarman Island Lighthouse.

No. 1	191°×6 miles	No. 7	208°×8 miles
No. 2	201°×6 "	No. 8	215°×8 "
No. 3	196°×7 "	No. 9	222°×8 "

3.6	17.81	4.4	18.54	5.2	19.27	6.0	20.00

Controlling Depths for ships to the Service Jetty is 8.2 m. and Ore Jetty 12 m. For sailing from the Ore Jetty – 16.0 m.

For vessels bound for Lambert Service Jetty – 8.2 m.

Berthing of ore carriers is usually carried out at about 1 hour – 2 hours before HW. Berthing times other than HW at discretion of Harbour Master.

Part loaded ore ships are restricted to berthing at HW. The turning area has a least depth of 12 m. and a U.K.C. of 1.5 m. is required. Drafts of up to 13 m. may be accommodated, but ships are strongly advised to contact the Harbour Master for advice prior to arrival.

Sailing from the Ore Jetty is at 1 hour before HW. No variation can normally be permitted. The 18 mile exit route is 'graded' from 16 m. to 17.4 m. to accommodate tidal variations.

Drafts for sailing are calculated by adding the height of tide to the controlling depth and then deducting one eleventh of that total to give an U.K.C. of 10% of draft.

Owing to tidal peculiarities, berthing at the Lambert Service Jetty is either at about 2.5 hours before HW or 3.5 hours after HW.

TIDES: Spring range is 5.8 m. (19 ft.).

MAX. SIZE:

	Berth No. 1	*Berth No. 2*
DWT	225,000	323,000
LOA	355 m.	355 m.
Beam	50 m.	55 m.

Largest ship to date (February 1994), the "Bergeland", 322,944 d.w.t., LOA 339 m. and beam 55 m.

HEALTH: Pratique may be given by radio. Pratique is automatic if having called at another Australian port.

RADIO: Send ETA advices to "Shipserve-Harbourmaster-Portwalcott" and Agent 7 days, 72 hours, 48 hours and 24 hours prior to arrival.

VHF: VHF communications are available on a limited basis – a watch being kept on both Channels 16 and 14. Hours are approx. 0830 – 1200 and 1300 – 1630 Monday to Friday. The station is also manned if it is thought that urgent communication is necessary.

TUGS: Two tugs, "Pannawonica 1" and "Lambert", are available for use. Both tugs are 4,800 h.p. (60 tonnes bollard pull). One line launch is available. Tugs supply towing equipment.

BERTHING:
Cape Lambert Service Jetty is owned by Robe River Iron Associates (R.R.I.A.). The neck is 457.20 m. long and the berthing head is 155.45 m. long. Off each end of the head is a mooring dolphin some 27.43 m. away. This permits a vessel of about 190.50 m. long to berth. There is a min. depth of 10 m. at LW. The height of the jetty, above LW, is 10.67 m. Cargo is handled by ship's gear. The jetty is designed for road transport only. It was built to normal Australian standards and 110 ton locomotives have been landed. This is not a common-user berth and permission must be obtained from the Port Authority before any cargo, other than R.R.I.A. cargo, is handled.

Lambert Ore Jetty is owned and operated by R.R.I.A. It extends 2.67 km. to sea in a 046.75° direction. It is double sided and capable of handling ships up to 323,000 d.w.t. Max. beam at No. 1 is 50 m. and No. 2 is 55 m. The depth of water in No. 1 (South) Berth is 18.5 m. and in No. 2 (North) Berth is 19.5 m. Ships should arrange their trim so that there is always a clearance of 1 m. when in the berth. There is a single shiploader designed to operate at 6,000 t.p.h. Ships berth 'head out' and are secured to dolphins, parallel to the jetty. These dolphins are 7.62 m. above LW. The height of the jetty is 18.6 m. above LW and the boom of the shiploader is about 30.5 m. above LW. Max. distance between hatches is: No. 1 Berth, 234 m. and No. 2 Berth, 236 m.

Operator: Robe River Iron Associates, P.O. Box 21, Wickham, W.A. 6720. Tel: (091) 87-1001. Fax: (091) 87-1650. Telex: AA 99058.

The following letters from R.R.I.A. were handed to the Master on arrival in November 1991.

Letter No. 1:

SHORE LEAVE AND VISITORS – PORT WALCOTT

In connection with crews and visitors to ships berthed at Port Walcott, would you please draw to the attention of Masters, upon arrival of their ships, the following regulations:

All crew going to or returning from shore leave must do so by vehicle: either a taxi, bus, the agent's car or a Government vehicle. Private vehicles are NOT permitted to traverse our mining lease except in special circumstances. Should you wish to invite visitors to your vessel, kindly apply to the undersigned with a full list of names so that a pass may be arranged. Taxi or bus hire should be arranged directly with the ship's agent on berthing.

Crew members and visitors may walk only directly between the point of embarkation/disembarkation and the seaward end of the loading wharf.

Other than embarkation/disembarkation to and from the vessel, NO CREW MEMBERS OR VISITORS ARE PERMITTED TO WALK ON THE MINE SITE.

Safety helmets and steel capped boots are not required when only embarking/disembarking to and from the vessel.

Signed: Senior Manager – Operations.

Letter No. 2:

In welcoming you to Cape Lambert, we would like to advise that your vessel is subject to various Port Health, Customs, Immigration, Maritime and other regulations as follows:

Loading Operations:

The responsibility for safe and correct loading of the vessel rests entirely with the Master.

Shore personnel are available to operate the loading machinery and to assist the vessel in every way they can, but it must be appreciated that they are not qualified in the skills of correct stress-loading of a vessel, nor in achieving a desired draft condition.

Masters must therefore ensure that a competent officer is on duty throughout the loading period, that he visits the deck frequently, and maintains a continuous check on the draft.

Communication between your duty officer and the Shiploader Operator is by a private VHF radio frequency. A radio may be collected from the Shiploader Operator's cabin by your officer at the commencement of loading and returned immediately upon completion of loading. This must be done without delay. The responsibility of safekeeping and return of the shipper's radio remains the responsibility of the ship's Master, who will be held liable for any loss or damage to the equipment. Please note that these radios should be exchanged with the Shiploader Operator on a regular basis (0700 hrs., 1500 hrs. and 2300 hrs. daily) to prolong battery life.

One ship's crew member should at all times be available to communicate with shore personnel. Any change to the original loading plan should be communicated to the Shiploader Operator. This notice should be in writing and signed by the Master.

Tonnages indicated by the shore belt scale are to be taken as approximate only and no reliance is to be placed on these for correct stress-loading of the vessel, nor for the achievement of the final desired draft.

Washing Down:

Ore spillage on deck and dust which accumulates during the course of shiploading must not be washed into the berths. Vessels are required to defer wash-down until after they have cleared from the berth, outward.

Shore Leave and Visitors:

Robe River Iron Associates, as owners and operators of Cape Lambert port and mine-site areas, wish to draw to your attention to the attached regulations relating to shore leave and visitors (See "Letter No. 1").

Notice to Port and Towage Users:

By-Law 75 promulgated under the Gazetted Cape Lambert Ore Wharf By-Laws.

Towage Rates and Conditions:

The use of tug boats to assist vessels inwards and outwards shall be at the discretion of the Master. In all cases, the rates set out in the Second Schedule shall be payable in respect of towage services available to all vessels berthing and unberthing into and out of any berth, or any of the Company's marine facilities whether such services are used or not used.

It is the intent of this By-Law that if tugs and workboats have been mobilised then they are available.

If the pilot choses not to bring the tugs onto towlines, this is a matter for his judgement, however if tugs and craft are in attendance and available for use, then full payment at the gazetted rate is required irrespective of whether their services are used or not. Conversely, if tugs and craft are not available, no charges will be levied irrespective of whether the Master has signed an application form in accordance with By-Law 75.

Your co-operation in these matters is appreciated. Kindly indicate receipt of this letter by signing the attached copy.

Signed: Manager – Marine.

CRANES: 2×5 ton mobile cranes.

STEVEDORES: Labour for stevedoring purposes is controlled by the Association of Employers of Waterside Labour. Requests for labour should be made through an Agent or Stevedore. Hours of work are usually 0800 – 2130 and 2130 – 0630. This labour operates at Lambert Jetty.

TANKERS: Tankers berth 'head-in' or 'head-out' at Lambert Service Jetty at discretion of Harbour Master. The deeper water (10.67 m.) is at the seaward end. Discharge is through an 8 in. pipeline which is situated about the centre of the berth.

FRESH WATER: Fresh water available at both wharves – ships supply own hoses with 2.5 in. quick release fittings.

FUEL: Not available.

CERTIFICATES: Ore/Oil carriers require inspection by surveyor if previous cargo was oil. Gas-free Certificates over 24 hours old are not accepted.

REPATRIATION: Carried out regularly.

AIRPORT: At least 1 jet flight per day to Perth from Karratha, flight time 2 hours.

TIME: See "General" before first port.

HOLIDAYS: Iron ore is loaded 24 hours a day throughout the year.

STORES: Dry, chiller, freezer and Bond stores are available. It is suggested that ample notice be given.

CHARTS: AUS 55, 56, 740, 741, 326 and 327.

Port Walcott Pilots are Agents for the Chart and Map Shop in Fremantle who can supply all charts and publications.

TELEPHONES: Not available at the berths.

SHIP SUPPLY SERVICE: Port Walcott has limited ship-to-shore transport with the only non-fishing commercial craft being R.R.I.A. owned tugs (2) and workboat. All these craft are available for emergency use.

Charter craft are available through ship's Agent.

The local ship's Agents are conversant with the availability of charter craft and ship Masters and Owners would be well advised to operate through their Agent.

A helicopter Pilot Service commenced at Port Walcott in July, 1984. This service may be available for emergency use. Contact should be made through the Pilot's Office.

Port Walcott Pilots, P.O.Box 61, Wickham, W.A. Tel: (091) 871-329.

SHORE LEAVE: Crew members are allowed ashore by pre-arranged bus or taxi – nearest town is 10 miles away. No crew members or visitors are permitted to walk on the mine site.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: Port Walcott Seafarers Centre, shop only. 1×14 seat minibus operated by volunteers. Church services can be arranged.

CURRENCY: Australian Dollars. Currency can be exchanged at 2 local banks. Monday – Friday, 0930 hrs. – 1630 hrs.

GENERAL: Port Walcott is connected by sealed roads to the towns of Wickham, Roebourne, Karratha, Dampier and Port Hedland, each of which has a hospital and other facilities. The sealed road also extends to Perth, some 1,580 km. away.

Tides: Spring range is 5.70 m. (18 ft. 9 in.).

Stores: Providores operate here. Freezer, chiller, dry and Bond stores are available but advance notice is preferred.

Access: Access from the ship to the shore is by means of ship's accommodation ladder to a dolphin at the ore jetty and by means of a brow at the Service jetty.

Moorings: 1. Any wire ropes should terminate in a fibre rope tail of at least 20 m. length, including eye.

2. Spring lines should be laid out on deck, prior to coming alongside, for a distance of approx. 80 m. from the ship's lead. In the case of wires, the rope tail would be included in this 80 m. This arrangement should permit easy lowering vertically to the appropriate dolphin.

SHIPMASTER'S REPORT: November 1991.

Vessel: 190,000 d.w.t. OBO.

Mooring: Vessel used one tug each end with tugs ropes.

If springs are wires, 50 m. messengers are required.

Head and stern lines sent by boat.

First lines ashore are forward breast lines by boat.

Stern lines sent ashore (ropes) by heaving line.

As vessel comes alongside, the first after lines (breasts) are sent ashore by heaving line.

Cargo: Letter from Berth Operator:

The commodity to be loaded in your vessel is Robe River Iron Ore sinter fines and the following data has been derived via the use of recognised international and national test procedures as is required in the IMO Bulk Cargoes code.

(A) Physical/Chemical Proportions:
- i. Transportable Moisture Limit : Not applicable
- ii. Moisture Content (ISO 3087) : 6.0 – 7.5% (Continuous testing)

  Average moisture content will be confirmed by tests carried out during loading.
- iii. Angle of Repose at Moisture levels stated : 32° – 34.5°
- iv. Stowage Factor (Bulk Density): 0.50 – 0.55 cu.m./tonne
  1.82 – 2.00 tonnes/cu.m.
  20 cu.ft./ton
- v. Iron Content : 56.5 – 57.5% (Continuous testing)

This commodity is not considered to be a cargo which will liquify during transport.

(B) Chemical Hazard:
- i. Classification : Nil
- ii. Description of Hazard : Nil
- iii. Precautions to be taken : Nil
- iv. Emergency Procedures : Nil

It is certified that for the cargo nominated, any relevant hazards pertaining to marine transport have been properly described and that information given is based on the latest available including experience in storage prior to shipment.

AUTHORITY: Department of Transport, 1 Essex Street, Fremantle, W.A. 6160, Australia. *Tel:* (09) 239-2399.

Port Walcott Pilots, P.O.Box 61, Wickham, WA 6720, Australia. *Tel:* 091-761329. *FAX:* 091-871601. *Contact:* Captain M. Hairsine (Tel: 091-871119). Captain P. Horton (Tel: 091-871710). Captain M. Allan (Tel: 091-871085).

AGENT: Patrick Sleigh Shipping Agencies Pty.Ltd., 1937 Pyramid Road, Karratha, W.A. 6714, Australia (Postal address: P.O.Box 152, Karratha, W.A. 6714). Tel: (091) 44 4329. Telex: 198236 PATSLE. Fax: (091) 44 4329. Seagram Code 6DPATSLE.

PORTLAND, Victoria: 38.20 S. 141.36 E. (See Plan)

PORT LIMITS: As much of the waters of Portland Bay as lie Westward of a line bearing due North from Point Danger to the opposite shore of Portland Bay.

DOCUMENTS: See "Melbourne".

PILOTAGE: Compulsory except for Master holding valid Pilotage Exemption Certificate. Pilot boards about 1.5 miles N.E. of the main breakwater light. Pilot is available 24 hours and 24 hours notice required.

The pilot launch has a black hull and white superstructure; displays a whiteboard with "Pilot" painted in red on the landing bridge.

Pilot ladder must be positioned about 2.0 m. above the sea level with 2 manropes slightly shorter. The ladder should be *clean* and in compliance with SOLAS Regulations and ISO Standards. Single length ladder with non-slip surface. All ropes on ladder and manropes to be manila (not nylon or polypropylene). A responsible officer to stand-by when Pilot boarding or disembarking. Pilot boarding area to be properly lit in the hours of darkness.

APPROACHES: *Approach from the West:* A safe course into Portland Bay can be maintained by rounding Lawrence Rocks at a distance of 1.5 nautical miles offshore and altering until a course of 330° (T) can be steered, which will clear the Southern side of the Bay between Point Danger and Portland by 1.5 nautical miles. Steer this course until Whaler Point Lighthouse bears 270° (T) about 2.5 miles distant where course can be altered for the harbour entrance.

Approach from the East: A straight course after rounding Lady Julia Percy Island, 18 miles from the breakwater.

ANCHORAGE: Portland Bay is clear of all dangers and safe anchorage may be found 1.5 nautical miles N.E. of the Main Breakwater. Safe anchorage for small vessels is available between the Lee Breakwater and Whalers Point. Holding ground is good, and excellent shelter is obtainable from Westerly weather. Anchoring is not recommended in strong Easterly or South-Easterly weather, as there may be a confused sea and swell.

RESTRICTIONS: The Harbour is bounded by 2 breakwaters, enclosing 101 hectares. The entrance is 244 m. wide.

Swinging Basin: Between the two breakwaters, bounded by Berth No. 6 and the Lee Breakwater and the turning circle is 440 m. in diameter.

Depth of water in the harbour is based on a datum of 0.082 m. above LWOST. Mean rise and fall is approximately 0.75 m., but the prevailing wind and atmospheric pressure can cause variations to tidal prediction.

Weather: (Winds, freak weather conditions): The tidal stream off Portland is weak and variable, and is largely the result of wind conditions.

South Western Victoria is influenced by low pressure systems of the Southern Ocean, which have a predominant effect on the regional climate, which can give rise to rapid and sudden weather changes.

MAX. SIZE: Largest vessel handled up to date:

Max. deadweight – 81,796 tonnes.
Max. draft departure – 12.54 m.
Max. draft arrival – 12.01 m.
Max. length – 263 m.
Also see "Berthing".

HEALTH: Portland is a First Port of Entry. When requiring Pratique, inform the Port Health Officer of the ETA, number of crew and passengers and the state of health of the complement. Use the Seagram prefix "3P Portland" for all cabled messages. All requirements as for Melbourne.

RADIO/VHF: Maritime VHF operating on Channels 12 and 16 is installed in the Harbour Master's Office and on the tugs.

Listening watch is maintained on Channel 16 between 0800 hrs. and 1700 hrs., Monday to Friday only. Contact on this channel can however be anticipated outside these times, but only when shipping is expected.

Radio Advice of Arrival: Address ETA messages to the Harbour Master, Portland, using the seagram prefix "3P Portland" via Melbourne Radio.

TUGS: Two omni-directional propulsion stern drive tugs with 2,880 h.p., giving 35 tons bollard pull are available.

BERTHING:

K.S.Anderson Wharf – Berth No. 1: The guaranteed depth alongside is 12.5 m. Maximum draft is 12.2 m. Departure draft may be increased to 12.5 m. with tide on written application to the Harbour Master. If the draft of any vessel loading a full cargo at Berth No. 1 is in excess of 11.0 m., then the length of the vessel is restricted to 260 m. and the beam to 33 m.

Berth No. 1 has an apron of 17.5 m. width with 3 sets of rail tracks. Immediately behind the apron is a transit shed (77 m. × 33.5 m.) and open storage space of approximately 0.5 hectares.

The berth is suitable for bulk grain, general and Ro/Ro cargoes. It has rail access and is connected to the V/Line (Public Transport Corporation) rail system.

K.S.Anderson Wharf – Berth No. 2: The guaranteed depth alongside is 11.5 m. Maximum draft is 11.0 m.

Berth No. 2 is a continuation of Berth No. 1. It is suitable for bulk grain and general cargo. The apron of 17.5 m. width has 3 sets of rail tracks backed by a general cargo shed (152.5 m.×36.5 m.). A rail track along the East side of the shed is covered by a canopy for direct discharge or loading into, the transit shed.

The roadway East of the rail track is 18.5 m. wide, backed by another rail track and 5,574 sq.m. of open stacking area.

The 2 berths have a total length of 396.24 m.

The 27 m. high lateral traversing shiploaders operate over the full length of the 2 berths, providing loading rates of up to 1,200 tonnes per hour for various types of grain, and woodchips. The Grain Elevators Board controls shore-based grain handling.

The transit sheds on Berths No. 1 and 2 can be used when the loaders are in operation.

Note: As there is only one conveyor belt, grain can only be loaded at Berth No. 1 or Berth No. 2 at one time.

Berth No. 5: The guaranteed depth alongside is 12.7 m. Maximum draft is 12.2 m. Departure draft may be increased to 12.5 m. with tide on written application to the Harbour Master. Length of the berth is 240 m. It is a heavy duty cargo berth located along the East side of No. 2 Quay. The berth currently handles aluminium ingots, general cargo, containerised cargo, livestock and bulk tallow. It also has the capacity to handle fully integrated container and Ro/Ro traffic. No. 5 Transit Shed is located nearby.

Berth No. 6: Guaranteed depth alongside is 12.0 m. Maximum draft is 11.0 m. Length of the berth is 228.6 m.

Berth No. 6 is at right angles to K.S.Anderson Wharf and 137 m. to the West. The berth is designed for the handling of bulk cargoes but, as with Berth No. 5, it is also used for the handling of general cargo as well as livestock.

The concrete apron is 21 m. wide, backed by a stacking area of 24.5 m.×152 m.

Special Purpose Bulk Berth: The guaranteed depth alongside is 12.5 m. Maximum draft is 12.2 m. Length of the berth is 203 m. The berth was constructed to service the import shipping requirements of Portland Aluminium.

The Special Purpose Bulk Berth is located on the Main Breakwater, 198 m. North of K.S.Anderson Wharf.

S.L.Patterson Tanker Berth: The S.L.Patterson Tanker Berth is situated on the Lee Breakwater, approximately 457 m. from the seaward end of the Breakwater.

The berth is 76 m. long and designed for vessels up to 38,000 tonnes deadweight. Guaranteed depth alongside is 11.0 m. at low water. Maximum permissible draft is 10.5 m.

S.L.Patterson Berth may also be utilised as a loading berth for stores, a fitting out or repair berth, or for undertaking surveys.

Trawler Berth: Located adjacent to the Port of Portland Authority Slipway. Berthage for 8 trawlers, plus 3 berths reserved for fitting out and repairs to vessels are available.

The causeway length is 260 m. Maximum depth alongside is 5.0 m.

Permissible Loadings on Berths:

Berth No. 1 – Wharf Structure	Axle Load – 14.0 tonnes or 2,500 kg./sq.m.
Berth No. 2 – Wharf Structure	Axle Load – 14.0 tonnes or 2,500 kg./sq.m.
Berth No. 2 – Transit Shed	Axle Load – 5.0 tonnes or 5,000 kg./sq.m.
Berth No. 6 – Wharf Structure	Axle Load – 20.0 tonnes or 3,400 kg./sq.m.
Tanker Berth – Wharf Structure	Axle Load – 12.0 tonnes or 1,250 kg./sq.m.
Berth No. 5 – Wharf Structure	Axle Load – 52.0 tonnes or 6,200 kg./sq.m.
Special Purpose Bulk Berth	Axle Load – 52.0 tonnes or 3,000 kg./sq.m.

Roadways Axle Load – Road Traffic Authority Regulations apply. Weighbridge to 50 tonnes.

Further details are available upon request to the General Manager, who will assist with advice on any special requirements.

CRANES: No shore crane facilities available in any berths and ships are required to use their own gear for cargo operations. A wide variety of mobile cranes are available for hire locally. 24 hour notice of requirements is advisable.

BULK CARGO FACILITIES: *Bulk Grain Terminal:* Owned and operated by the Grain Elevators Board – Victoria, giving a total storage capacity for grain and woodchips of 180,000 tonnes.

Main Silo: Storage capacity 60,000 tonnes. 24 cylindrical bins, each of 2,800 cu.m. capacity. Ten star bins, each of 730 cu.m. capacity.

Horizontal Stores: Two stores with a total capacity of approximately 120,000 tonnes, linked with grain terminal and ship loading facilities.

Ship Loaders: Length 16.8 m., width 3.7 m., height 27.4 m.

STEVEDORES: The Port of Portland has currently 14 registered waterside workers plus a substantial supplementary labour pool available for shipping requirements.

The waterside workers in the port have an enviable reputation for speedy and efficient cargo handling. Hours of work are 0800 hrs. – 1700 hrs., 1700 hrs. – 2300 hrs. and 0000 hrs. – 0700 hrs. Extended shifts can be worked to 1900 hrs. and 0100 hrs. each day, by arrangement.

MEDICAL: Medical, dental and optical services are available. Notice not necessary, but advisable if treatment required. Full hospital facilities available. Cholera vaccinations essential if ship comes from affected areas. International Certificates must be current.

TANKERS: See "Berthing".

DENSITY: Salt 1025, generally at all tides.

FRESH WATER: Obtainable in unlimited quantities at a loading rate of up to 90 t.p.h. at K.S.A. Berths and 200 t.p.h. at Berths No. 5 and 6.

FUEL: By road to all berths.

REPAIRS: There are a number of firms which undertake ship repairs.

John Beever (Australia) Pty. Ltd. Tel: (055) 232235.

Lewmarine Pty. Ltd. Tel: (055) 231455. Telex: Lewmar AA 35886.

Price Engineering Pty. Ltd. Tel: (055) 232091. Telex: Prince AA 55687. Fax: (055) 231389.

GANGWAY/DECK WATCHMEN: Watchmen required, undertaken by member of crew.

OPENING/CLOSING HATCHES: By arrangement between ship's Agent and stevedore.

CERTIFICATES: Health, Derat, Load Line, Ship's Register, Articles. Also see "Melbourne".

CUSTOMS ALLOWANCES: According to local Customs Department (1992) one litre alcohol/200 cigarettes or 0.5 lb. cigars or 0.5 lb. tobacco every 7 days to 10 days when in port.

CARGO GEAR: As no shore cranes available alongside any berths, ship's gear is required for loading or discharging of general cargo (See "Cranes"). Bulk grain loading facilities are available at KSA Berths No. 1 and 2. Woodchip loading facilities are available at Berth No. 6 and KSA No. 1 Berth.

REPATRIATION: Facilities exist for repatriation of crew.

AIRPORT: A daily air service is maintained between Portland and Melbourne. 3 flights daily connecting with all interstate and international services.

TIME: GMT plus 10 hours (Australian Eastern Standard Time). Daylight saving is adopted, normally late October to early or mid-March (GMT plus 11 hours).

HOLIDAYS: New Year's Day, Australia Day, Labour Day, Good Friday, Easter Saturday, Easter Monday, Easter Tuesday, Anzac Day, Queen's Birthday, Show Day, Christmas Day and Boxing Day.

Waterside workers will perform cargo operations only by prior arrangement. Work performed on holidays subject to premium rates of pay.

POLICE/AMBULANCE/FIRE: Police (055) 231999; Ambulance (055) 231666; Fire Brigade (055) 232998; Hospital (055) 210333.

TELEPHONES: Telephones are placed onboard every vessel.

K.S.A. No. 1	018 527032	Berth No. 6	018 527034
K.S.A. No. 2	055 231633	S.P.B. Berth	055 234804
Berth No. 5	018 527033	S.L.Patterson Tanker Berth	055 231852

SERVICES: Tank cleaning, dirty ballast, sludge and chemical waste disposal available, subject to nature and quantity. Compass adjusting, radio and radar repairs, nautical publications can be organised with prior notice.

BANKS: Local branches:

Australia and New Zealand Banking Group Ltd., 44 Percy Street. Tel: (055) 231588.

Commonwealth Banking Corporation, Percy Street. Tel: (055) 231722.

National Australia Bank Ltd., 64 Percy Street. Tel: (055) 232233.

State Bank of Victoria, 73 Percy Street. Tel: (055) 233433.

Westpac Banking Corporation, 62 Percy Street. Tel: (055) 231555.

SHIP SUPPLY SERVICE: North Western Shipping & Towage Co.Pty.Ltd., P.O.Box 187, Portland, Victoria 3305. Tel: (055) 217253. Fax: (055) 217259.

SHORE LEAVE: Crew members allowed ashore.

IDENTITY CARDS: See "Melbourne".

GARBAGE DISPOSAL: Garbage drums are placed alongside by Port Authority personnel. Daily collections at 1000 hrs. Charges are levied according to the number of crew on board and duration of stay in port. For any queries, contact Harbour Master.

WASTE OIL DISPOSAL: Waste oil disposal service available, subject to the nature and quantity. Contact: Westvic Petroleum Services, P.O.Box 230, Portland, Victoria 3305. They will require prior notice and particulars of waste oil for disposal.

SEAMAN'S CLUBS: Missions to Seamen, 61 Cliff Street, Portland, Victoria 3305. Tel: (055) 232776. Facilities: Shop, currency exchange, international telephone service for seafarers, church service, postage facilities and indoor games available at the club. Mission warden visits every ship on arrival.

CURRENCY: Hard currencies such as U.S. Dollars, Deutsche Mark, British Sterling and Japanese Yen could be exchanged at the local banks. Other currencies may be difficult to exchange.

GENERAL: High freeboard and light draft vessels arriving to anchor, and/or for immediate inward pilotage *must* maintain full sea ballast condition until securely berthed. This also applies to vessels with large wind prone superstructures such as livestock carriers, woodchip vessels, etc.

The dumping of large amounts of ballast water within port limits is only permitted when evidence can be produced that voluntary ballast exchange procedures have been complied with on the high seas.

Immobilisation of main engines at the berth is only permitted upon written application to the Harbour Master. As a general rule, main engine propulsion systems should always be available at short notice.

AUTHORITY: Port of Portland Authority, Barton Place, P.O.Box 292, Portland, Victoria 3305, Australia. *Tel:* (055) 250900. *FAX:* (055) 217488. *Seagram code:* "3P Portland". *Contact:* Captain D. O'Donnell, Harbour Master, Tel: (055) 231077. Captain V. Vijayapalan, Assistant Harbour Master/Pilot, Tel: (055) 235255.

AGENT: Patrick Sleigh Shipping Agencies Pty. Ltd., P.O.Box 133, 77 Bentinck St., Portland, Victoria 3305. Tel: (055) 23 4011. Telex: 55865 PATSLE. Fax: (055) 23 5174. Seagram Code: 3PPATSLE.

ROCKHAMPTON, (Port Alma) Queensland: 23.24 S. 150.33 E. (See Plan)

DOCUMENTS: All documentation carried out by ship's Agents either in Rockhampton or at main Agent's office. Also see "Melbourne".

PILOTAGE: Agent notifies Pilot of ETA, and boarding time then determined by Pilot, taking into consideration circumstances prevailing.

Pilot boards from a 15 m. white launch. Pilots can be contacted by VHF Channels 8, 12 and 16, or radio-telephone 2182 and 2760 kHz.

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

ANCHORAGES: Anchorage for Port Alma is Timandra Buoy, approximately 13 miles from Port. Vessels *Cleared* to enter may anchor at Sea Hill.

RESTRICTIONS: Channel depth 7.3 m. LWOST. Berth depth 9.5 m. LWOST. Keel clearance of 2 ft. required. Max. draft dependent on height of tide.

HEALTH: Port Alma is a First Port of Entry for overseas vessels and full quarantine and customs facilities are available when required. There is a quarantine anchorage at Sea Hill Point on the approach channel.

The Port is also a designated timber port, and facilities are available for the issue of Derat Certificates. Fumigation services for both ships and cargo are provided by private firms based at Rockhampton, and under the control of the Commonwealth Department of Health.

VHF: Port Authority call sign: "Port Alma Wharves", all usable channels. Listening watch on Channel 16 when vessel due at Fairway Buoy.

TUGS: Tug assistance obtainable if required, from Port of Gladstone, subject to sufficient notice.

BERTHING: Berth at Pilot's discretion after receiving advice from Agent as to ETA. Berths allocated by Port Manager.

Berth No. 1: Berth has a concrete deck 18.5 m. wide and 169 m. long (554 ft.) constructed to take a superimposed weight of 5 cwt. per sq.ft. This berth is suitable for all general cargo, including frozen meats and other meatworks products. There is a mooring dolphin situated 43 m. (140 ft.) North of this berth, which can safely accommodate mooring lines from vessels required to moor over the North end of the berth.

Berth No. 2: Berth has a concrete deck 18.5 m. wide and is 122 m. long (400 ft.), constructed to take a superimposed weight of 7 cwt per sq.ft. This berth is suitable for all types of cargo including containers, explosives and ammonium nitrate and is equipped with a fixed leg crane with a S.W.L. of 25 tonnes. The pivot point of the crane is situated 22 m. (72 ft.) from the junction of Berths No. 1 and No. 2 and 7.3 m. (24 ft.) from the outside line of the berth fenders. The S.W.L. of 25 tonne is at radius of 33.5 m. (110 ft.) with the hook 24.3 m. (80 ft.) above the deck. There is a mooring dolphin situated 49 m. (160 ft.) South of this berth, which can safely accommodate mooring lines from vessels required to moor over the South end of the berth.

This berth is in a continuous line with Berth No. 1, to provide 291 m. (954 ft.) of mooring space plus the above mentioned dolphins at either end.

Berth No. 3: Berth consists of 4 berthing dolphins in line with No. 1 and 2 Berths with mooring dolphins at both ends to give an overall length of 238 m. (780 ft.). It is normal practice to place head lines on South end of No. 2 Berth from larger vessels using the dolphin berth. There is a distance of 49 m. (160 ft.) between the South end of Berth No. 2 and the mooring dolphin. All dolphins are of concrete construction.

This berth is currently used for loading bulk salt and discharge of petroleum products.

Dry Shed Storage: A store shed (45 m. × 10 m.) is provided adjacent to Berth No. 1 and is available to shippers by prior arrangement. It is of steel frame construction with non-flammable metal walls. The western wall has continuous sliding doors and at each end (i.e. North and South) there are double metal roller doors. A sliding metal door is situated at the centre of East wall giving an opening of 6 m. (20 ft.).

Container Terminal: The Port Authority has a container terminal available for use subject to prior arrangements. This terminal is suitable for both dry cargo and refrigerated cargo containers. Concrete pads have been designed to take containers stacked 2 high and electrical hook up points are adjacent to each pad.

The terminal is serviced by road, has full security fencing, flood lights for night operation, with office space and telephone.

Equipment: The Port Authority has available 1 forklift truck of 3 tonne lift capacity. Stevedores also have one forklift truck.

BULK HANDLING FACILITIES: The loading section of this facility is situated on Berthing Dolphin No. 2 and is in a fixed position, hence it is necessary to shift ship during loading operations. The unit is designed for a loading rate of 1,000 t.p.h. A weigh hopper is not provided and final tonnage loaded is responsibility of vessel's Loading Officer calculated by draft survey.

A. Height from wharf deck to underside of loading boom in working position is 23 m. (75 ft.).

B. Height from wharf deck to trimmer in retracted position is 16 m. (52 ft.).

C. Maximum extension of telescopic chute and trimmer in working position is 21 m. (68 ft.).

D. Maximum outreach of loading head is 16.5 m. (55 ft.).

E. Trimmer can be rotated and trimmer belt can be raised or lowered at the direction of the Deck Officer in charge of loading.

F. Dolphin berth deck is 6.4 m. (21 ft.) above water line at MLWOST.

CRANES: A 25 ton crane (fixed leg) is available on Berth No. 2 to handle containers and other cargo.

STEVEDORES: Agent advises stevedoring company of ETA. Requisitions to be lodged for labour before 1300 hrs. on previous day. No requisition can be lodged from 1300 hrs. Friday to 1300 hrs. Monday.

MEDICAL: All medical requirements carried out by Agent. Hospital available 40 miles from Port Alma.

TANKERS: Petroleum products can be discharged at Berth No. 3. 10 in. discharge lines. No slop facilities. 1 berth 32 ft. LWOST.

Hazardous Cargo: The Port is authorised to handle exposives and other hazardous cargo. Fire protection service.

FRESH WATER: Fresh water available by road transport only, necessitating road haul of 69 km.

FUEL: Fuel oil and other bunkers can be arranged by road tankers from fuel terminals situated in Gladstone. Contact ship's Agent in advance.

FIRE PRECAUTIONS: Rockhampton Port Authority can provide fire prevention and detection services. Fire pumps and hoses available.

CONSULS: See "Brisbane".

REPAIRS: Minor repairs only.

GANGWAY/DECK WATCHMEN: Crew.

OPENING/CLOSING HATCHES: Crew.

CUSTOMS ALLOWANCES: Under supervision of Australian Customs.

CARGO GEAR: As per the Navigation Act. See "Melbourne".

REPATRIATION: Facilities available.

AIRPORT: Regular services 43 miles from Port Area.

TIME: See "General" before first port.

HOLIDAYS: Christmas Day, Good Friday, April 25th and Waterside Workers' Picnic Day.

POLICE/FIRE/AMBULANCE: Tel. No. 000. 40 miles distance.

TELEPHONES: No provisions for placing telephone on board ship. Public telephone near container yard.

IDENTIFICATION CARDS: See "Melbourne".

GARBAGE DISPOSAL: Service provided at Berths No.1 and 2 with drums placed on wharf. Collection is at 0730 hrs. daily.

At Berth No.3 by prior arrangement only.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: None.

GENERAL: The Port is serviced by both road and rail and land is available if required by Shippers subject to negotiation.

The Port Authority has fire fighting equipment to meet requirements for handling hazardous type cargo and provides linesmen and line Launch for mooring of vessels.

AUTHORITY: Rockhampton Port Authority. P.O.Box 9, Rockhampton, Queensland 4700. *Tel:* (079) 272133. *FAX:* (079) 226096, Port Office (079) 346928. *Contact:* C.R. Munro, Port Manager. *Tel:* (079) 346931 (Port Office); (079) 346103 (after hours); 018799386 (mobile). P.R. Black, Chief Executive Officer, (079) 284795 (after hours); 018791839 (mobile).

AGENT: See "Gladstone".

SALADIN MARINE TERMINAL, W.A.: 21.24 S. 115.03 E.

(See Plan)

LOCATION: The Saladin Marine Terminal is located to the North East of Thevenard Island, Western Australia. The moorings are located 3.5 nautical miles offshore at Latitude 21° 24.3′ S., Longitude 115° 02.8′ E.

Refer to the current hydrographic chart AUS-743 for further information.

Arrival Position: The Arrival Position is 2.0 miles West of the Saladin Buoy.

APPROACHES: The approach channel to the Marine Terminal is marked by navigation buoys, fitted with lights and radar reflectors.

Warning: Tankers should not navigate outside the designated approach channel as areas outside the channel have been incompletely surveyed.

Saladin Marine Terminal Approach Channel:

Name/Number Position	*Buoy Colour*	*Top Mark*	*Light*
"Saladin" (West Cardinal) Lat. 21° 23.9′ S. Long. 114° 55.5′ E.	Yellow with broad black band	2 Triangles Apex to Apex	Q (9) 15 sec.
1. (Starboard) Lat. 21° 24.0′ S. Long. 114° 56.4′ E.	Green	Triangle Apex up	Fl.G (2) 5 sec.
2. (Terminal) Lat. 21° 23.8′ S. Long. 114° 56.3′ E.	Red	Square	Fl.R (2) 5 sec.
3. (Starboard) Lat. 21° 23.2′ S. Long. 114° 57.8′ E.	Green	Triangle Apex up	Fl.G (3) 8 sec.
5. (Starboard) Lat. 21° 22.5′ S. Long. 114° 58.6′ E.	Green	Triangle Apex up	Fl.G (4) 10 sec.
7. (Starboard) Lat. 21° 21.9′ S. Long. 114° 59.7′ E.	Green	Triangle Apex up	IQ G (2) 10 sec.
9. (Starboard) Lat. 21° 21.8′ S. Long. 115° 00.3′ E.	Green	Triangle Apex up	IQ G (3) 10 sec.
11. (Starboard) Lat. 21° 21.8′ S. Long. 115° 00.7′ E.	Green	Triangle Apex up	Q G (4) 6 sec.
15. (Starboard) Lat. 21° 22.6′ S. Long. 115° 01.8′ E.	Green	Triangle Apex up	Q G (5) 10 sec.

DOCUMENTS: *Cargo Documentation and Inspection:*

1. Documents, such as the Bill of Lading, Quality Certificate, Quantity Certificate, Time Loading Report, Certificate of Origin, Cargo Manifest and Master's Receipt for Documents/Samples, etc., will be prepared at the Marine Terminal. When the tanker has been loaded, the documents will be completed onboard the tanker for the Master's signature.
2. Immediately upon completion of loading, the official Bill of Lading quantity will be relayed to the Pilot/Mooring Master by radio. In the event of a dispute, the tanker will be requested to recheck the measurement and calcuations of the quantity, but the Pilot/Mooring Master will not witness such measurement and calculations. After both tanker and Terminal figures have been verified, should an appreciable difference still exist, receipt of a Letter of Protest will be acknowledged by the Pilot/Mooring Master.
3. Letters of Protest, if any, should be handed to the Pilot/Mooring Master for onward delivery to WAPET. The Mooring Master will acknowledge receipt of the Letter of Protest only, and is not authorised to approve such letters or otherwise.
4. From time to time Owners, Charterers, consignees, or other interested parties, may appoint third party inspectors to survey the loading operation on their behalf. Any delays caused by such inspectors shall be considered delays caused by the tanker.
5. The Pilot/Mooring Master shall keep an Operations Log in the form contained in Schedule H of the times of all operations, delays, quantities loaded, ballast discharged and arrival and departure drafts.
6. Prior to the disembarkation of the Pilot/Mooring Master, the Tanker Master shall sight and verify the times and details contained in the Operations Log, sign the log in the space provided and affix the tankers' official stamp thereto.
7. Should the Master so require, the Pilot/Mooring Master will sight, verify and sign the tanker's Record of Operations prior to his disembarkation.

PILOTAGE: The Pilot/Mooring Master will board at the Arrival Position which is 2 nautical miles West of Saladin Buoy. Tankers should have their port crane/derrick ready to lift the hose connection equipment onboard.

Pilot Boarding: The pilot ladder shall be available to the Pilot/Mooring Master and be kept at a proper height for his safe use for boarding and disembarkation. When the distance from the water to the deck exceeds 9.0 m., the pilot ladder shall be rigged with the accommodation ladder or an approved mechanical pilot boarding appliance used. The tanker shall provide an adequate lee for embarking and disembarking the Pilot/ Mooring Master.

The hose connection equipment is contained in two large aluminium boxes which should be lifted onboard at the Arrival Position and landed just forward of the port manifold.

Pilot/Mooring Master:

WAPET shall provide a Pilot/Mooring Master to:

(a) Assist in piloting the tanker in and out of the moorings,

(b) advise on connecting and disconnecting the loading hose and

(c) advise on matters concerning the safety of the tanker and Terminal facilities.

Accommodation for WAPET Personnel: The tanker shall provide victualling and accommodation for the Pilot/Mooring Master and up to 2 WAPET personnel and victualling for the crew of the mooring vessel.

RESTRICTIONS: *Berthing:* Unless otherwise approved by the Pilot/Mooring Master, berthing shall take place:

(a) During high or low water slack tides.

(b) When sustained wind speeds at the Terminal do not exceed 15 knots.

(c) Provided there is no strong wind or strong wind warning in force for the Terminal area.

(d) When there is no tropical cyclone, or tropical depression which is likely to develop into a cyclone, within 400 nautical miles of the Terminal, or likely to pass within that range within 24 hours of the tanker berthing.

(e) In daylight.

Note: In order to berth during slack tides, the tanker must be at the Arrival Position at least 3 hours before the slack tide. A tanker arriving after this time may be requested to await suitable tide conditions.

Masters are warned that anchor holding ground is poor throughout the area.

Unberthing: Unless otherwise directed by the Pilot/Mooring Master, the tanker shall unberth:

(a) during the FLOOD tide after completion of loading; or

(b) after consultation with the Master, when there are strong winds at the Terminal area or a strong wind warning has been issued for the area;

(c) in daylight (unless the tanker is equipped with adequate search lights to enable night unberthing).

Arrival Condition: The tanker shall arrive ballasted to at least one quarter of its Summer deadweight tonnage, with propeller (and bow thruster if fitted) submerged, unless directed to carry more ballast by the Pilot/Mooring Master during adverse weather. Tankers should have a stern trim of less than 4.0 m.

Searchlights: To permit berthing and unberthing during darkness, the tanker shall be equipped with a searchlight with a minimum diameter of 300 mm. fitted to each port and starboard bridge wing to provide a wide scanning range.

Tidal Berthing: Berthing and unberthing at the Marine Terminal shall take place during slack water unless otherwise approved by the Pilot/Mooring Master.

Generally berthing will take place at low water slack tide or high water slack tide, to avoid the period of strongest tidal stream in the middle of the flood tide.

The direction of the tidal stream is approximately 120° on flood and 300° on ebb and attains a rate of 1.3 knots at springs.

MAX. SIZE: The Marine Terminal is restricted to tankers which have:

(a) A loaded displacement of between 40,000 tonnes and 180,000 tonnes,

(b) a maximum beam of 47 m. and

(c) a maximum slab side area of 6,384 sq.m., being the product of the overall length and moulded depth.

Minimum Water Depth/Underkeel Clearance: The minimum water depth in the vicinity of the berth and in the approach channel is 15.60 m. LAT (Lowest Astronomical Tide) Thevenard. A copy of the latest hydrographic certificate of the depth of the water is available from the Pilot/Mooring Master on request.

To provide a safety margin, should sailing be delayed for any reason, the following underkeel clearances shall be maintained at all times, up to and including low water, following the tanker's projected sailing time:

(a) During the period to 6 hours before the expected completion of loading, an underkeel clearance of 3.0 m. shall be maintained.

(b) Six hours before the expected completion of loading, WAPET will advise the Master of the sailing underkeel clearance in accordance with the swell type running at the fairway entrance at that time. A transmitting wave rider buoy is installed at the fairway entrance to monitor the swell conditions. Sailing underkeel clearance is related to the low water following the tanker's projected sailing time.
Swell Type A: Swell up to 0.32 m. Underkeel clearance 1.8 m.
Swell Type B: Swell from 0.32 m. – 0.72 m. Underkeel clearance 2.8 m.

(c) When a swell in excess of 0.72 m. is detected during the loading of a tanker which would under normal circumstances sail on minimum underkeel clearance, loading will be suspended and the tanker may be unberthed to await more favourable weather conditions.

RADIO: *Initial Message:* All incoming tankers must advise the Saladin Marine Terminal of their ETA not less than 96 hours before arrival, and thereafter at intervals of 48 hours, 24 hours and 12 hours before arrival at the Arrival Position. Should the expected ETA change by more than 1 hour following the 12 hour arrival notice, the incoming tanker must promptly notify the Terminal of the new arrival time.

Time to be used for ETA is local time, which is UTC plus 8 hours throughout the year.

The first message should also include:

(a) Name and nationality of tanker, radio call sign and INMARSAT telephone number.

(b) Cargo requirements.

(c) Deballasting time, if not concurrent with loading.

(d) Maximum loading rate.

(e) Arrival draft, fore and aft.

(f) Distance in metres from the bow to the tanker's loading manifold.

(g) Distance in metres from the bridge conning position to the bow.

(h) Details of the quantity and condition of ballast.

(i) Confirmation that the Inert Gas System is tested and working, and that all cargo tanks are at or below 8% oxygen level (tanks will be inspected before berthing).

(j) Confirmation of the capability to carry out closed system loading.

(k) The Master's full name for the preparation of Bills of Lading.

(l) Last port of call.

(m) Confirmation that the tanker has a clean Bill of Health (if there is any sickness on board, the message must give all available information as to the possible type of sickness).

(n) Advice of voltage of power supply and type of outlet socket (i.e. British, European, Japanese, etc.).

(o) Number of shackles (shots) of anchor cable on each anchor.

(p) Number and location of mooring wires and winches.

(q) Number and location of synthetic mooring lines on winches.

(r) Number and location of mooring bitts.

(s) Is the manifold arrangement, including rigging equipment, in compliance with OCIMF recommendations?

(t) Is vessel equipped with a crane or derrick and in what position?

(u) SWL of crane or derrick.

(v) Indicate whether the tanker can receive a helicopter, land-on or winch.

These ETA messages shall be sent to each of the following centres:

Barrow Island (office hours or by arrangement).
Telephone 091 843700
Telex AA 99125
Facsimile 091 843799

Perth (all hours).
Telephone 09 2636000
Facsimile 09 2636699

Thevenard Island (Saladin Marine Terminal) (Office hours or by arrangement).
Telephone 091 843800
Telex AA 198231
Facsimile 091 843899

Notice of Readiness:

Subject to any agreement between the Owner and the vendor of the crude oil to be lifted, provided WAPET is supplied with a copy of that agreement not less than 5 days before the ETA, Notice of Readiness will be accepted when the tanker is all fast in the berth (i.e. when all mooring lines, preventer lines and swamped moorings are made fast).

VHF: *Communications with Pilot/Mooring Master:*

1. Approaching the Terminal: Tankers shall listen to VHF Channel 16 when within 100 nautical miles of the Terminal.

The Pilot/Mooring Master can be contacted during daylight working hours or at other times by prior arrangement on the following international maritime VHF frequencies, call sign "Saladin Terminal" Channel 16 – 156.8 MHz. – Safety and Calling; Channel 14 (156.6 MHz.) – working channel.

2. During Berthing and Loading: WAPET will provide portable UHF radios for communications between the tanker and the Terminal onshore control room during berthing, loading and unberthing.

Channels used are:
Channel 1 469.775 MHz.
Channel 2 469.800 MHz.

TUGS: *Mooring Vessels:* WAPET shall provide 2 vessels to assist in mooring tankers at the Saladin Marine Terminal.

"Total Endeavour", a 48 tonne bollard pull (3,200 b.h.p.) omni-directional vessel, is used on a tow line from its bow to the tanker's stern when berthing. It will be positioned as near to the centre line as possible. "Total Endeavour" will stand-by throughout the loading and will assist in unberthing. The vessel is equipped for fire-fighting.

Tankers should be ready to receive 2 large aluminium boxes from the utility vessel, containing hose connection equipment, at the time the Pilot boards. These boxes will be lifted onboard the tanker using the port crane or derrick.

BERTHING: *Order of Berthing:* Tankers will normally berth in the order of arrival, but due regard will also be given to nominated date ranges, and such other matters as WAPET deems relevant to a fair and necessary berthing order.

MOORING EQUIPMENT: The tanker shall be equipped with mooring equipment which complies with the minimum specifications described below.

Mooring Winches: The mooring winches shall:

(a) Be power operated and capable of warping the tanker,

(b) have a mooring line permanently attached,

(c) be capable of making fast mooring lines by securing brake on winch,

(d) have warping drums capable of handling preventer lines and swamped mooring lines,

(e) if equipped with constant tension devices, have these devices disconnected and the brake fully applied,

(f) number at least 8 and be located:

  (i) Poop deck – four,

  (ii) fo'c's'le head – one each port and starboard, located in such a position that the port and starboard swamp mooring lines may be hove in and made fast to adjacent mooring bitts. (A single winch in this position, located so that ropes may be similarly handled from either side may be aceptable), and

  (iii) aft main deck – one each port and starboard. Tankers fitted with only one winch in the aft main deck area will be accepted provided a line can be deployed mechanically from that winch to each beam. On tankers fitted with only one winch where only one of the two lines can be handled (hauled or veered) at once, berthing may be delayed in marginal weather. A tanker will not be accepted where only one mechanical line can be deployed and the other would be handled by hand.

Mooring Bitts: The tanker shall have at least 8 sets of mooring bitts. Each set shall be of a size and be located near a mooring winch to enable making fast the preventer lines or the swamped mooring lines as the case may be.

Mooring Lines:
(a) The mooring line on each mooring winch shall have a minimum breaking strain (MBL) of 80 tonnes. Tankers with mooring lines with a MBL of less than 80 tonnes will be accepted at the discretion of WAPET. Tankers with mooring lines of less than 80 tonnes MBL may be subject to greater than normal delays awaiting berthing in marginal weather conditions.
(b) Each mooring line shall have a minimum length of 220 m.
(c) Each mooring line, if wire, shall have a fibre tail (attached to each wire) of at least 10 m. with strength equivalent to the wire line, plus 25%. Prior to arrival, fibre tails should be carefully inspected for damage and any suspect tails replaced.

Bow Anchors: The anchors shall:
(a) Be located on each port and starboard bow,
(b) have a minimum of 10 shackles of chain in tankers up to 50,000 tonnes load displacement and a minimum of 12 shackles in tankers over 50,000 tonnes load displacement and
(c) comply with a Classification Society recognised by the Australian Department of Transport and Communications.

Moorings: An 8 point mooring system consisting of 6 mooring buoys and 2 swamped moorings are installed in the berth layout. (See "Plan").

Preventer Lines: Preventer lines are permanently connected to each mooring buoy, by 4 m. of 56 mm. U2 stud linked chain. The preventer lines and swamped mooring lines are constructed as follows:
(a) 76 m. of 52 mm. wire rope
(b) 76 m. of 88 mm. polyester superline
(c) 47 m. of 26 mm. FSWR and
(d) 30 m. tail of 32 mm. polyester.

Each of the preventer lines and swamped mooring lines are to be hove onboard with a messenger of at least 24 mm. diameter supplied by the Terminal to the warping drum of the mooring winch, then made fast to the bitts, being stoppered off, using the "Chinese" or "West Country" method.

WAPET will provide stoppers for making fast the preventer lines and swamped mooring lines to the tanker's mooring bitts.

Submarine Anchor Trenches: Two areas, 140 m.×160 m. have been prepared to receive the tanker's anchors. These areas have trenches cut into them to provide a holding ground for the tanker's anchors. The bottom is solid rock outside these area, with a sparse covering of sand.

MOORING OPERATIONS/PROCEDURE:

General:
(i) Pilot/Mooring Master: The Pilot/Mooring Master will board incoming tankers at the Arrival Position. The Pilot/Mooring Master will advise the Master on approach to the berth, mooring and unmooring, connecting and disconnecting hoses, and all other operations within the Terminal area, including all manoeuvring of the tanker. The Master, or one of his qualified deck officers, must be on the bridge at all times while the tanker is being manoeuvred.
(ii) Mooring Vessel: WAPET will provide mooring vessels and crew to handle the tanker's mooring lines to the buoys and bring the preventer lines and swamped mooring lines to the tanker, and to assist in berthing and unberthing. The mooring vessels will stand-by during loading and unmoor the tanker on completion.
The mooring vessels shall be under the direct control and supervision of the Pilot/Mooring Master. Any service and/or facilities provided by WAPET including, but not limited to, the services of a Pilot/Mooring Master, mooring vessels and their crews, or mooring and loading equipment, shall be at the tanker's sole risk.

Tanker Mooring Procedure:
(i) The Saladin Marine Terminal is approached through a 10 mile channel, marked by spar buoys.
(ii) After passing Buoy No. 15, a course is shaped to proceed to a position between 1.5 and 1.7 miles from the moorings. Course is altered to starboard to make a final approach to the moorings on a base course of 210° (T), on a predetermined transit with the lead (range) spar buoys and the rear lead (range) mark on Thevenard Island.
(iii) The mooring is a conventional buoy mooring, with 6 mooring buoys and 2 swamped mooring lines. The swamped mooring lines are at the port and starboard shoulders. These swamped mooring lines lie on the sea bed when not in use, well clear of the manoeuvring area. The mooring buoys and swamped mooring lines are connected by 176 m. of 90 mm. and 76 m. anchor cable, to 914 mm. diameter anchor piles driven 14.0 m. into the bed rock. Two areas, 140 m. × 160 m. have been prepared to receive the tanker's anchors. These areas have trenches 6.0 m. wide, 2.0 m. deep and 140 m. long at 20 m. intervals, cut into them to provide a holding ground for the tanker's anchors. The bottom is solid rock outside these areas, with a sparse covering of sand.
(iv) An open running moor is carried out, dropping the starboard anchor first, running ahead and paying out between 9 and 11 shackles (shots) of cable depending on the tanker's size. When the tanker is in the correct position to drop the second anchor, the port anchor is let go. The starboard cable is put into gear and the cable weighed as the tanker is manoeuvred astern into the berth, whilst the port anchor cable is paid out.
(v) Whilst working the anchors, as much information as possible should be passed by the officer-in-charge of the foc'sle to the bridge to the Pilot/Mooring Master. The amount of cable paid out, the direction the cable grows in and the weight on the cable, are vital information for the Pilot/Mooring Master.
(vi) Berthing assistance is rendered by 2 mooring vessels. As the tanker manoeuvres astern, the windward beam tanker mooring rope/wire, at the aft end of the main deck, will be sent away to the windward buoy. The tanker's own mooring lines will be deployed as the weather dictates, and together with the tanker's anchors will be used to position the tanker in the berth.
(vii) Once the tanker is in position and all the tanker's lines are fast, a mooring vessel will pick up the preventer lines in sequence and tow them alongside the tanker. The tanker should provide a heavy messenger with which to heave the preventer lines onboard. The first part of the preventer line to come onboard is the preventer tail which is 39 m. × 32 mm. of hawser laid polyester rope. This soft line is connected by a shackle to 48 m. of 26 mm. steel wire rope, which is in turn connected by a 40 mm. snotter to the 88 mm. polyester superline, which is made fast onboard.
(viii) The superline should be hove as tight as possible, stoppered off using the polyester stoppers supplied by WAPET and made fast to the tanker's bitts. It is important that the preventer lines and swamped mooring lines are made fast in this way. Winding onto the tanker's winches is not permitted.
(ix) The port and starboard swamped mooring lines will be the last lines to be picked up in a similar way to the preventer lines.
(x) The tanker is not considered all fast in the berth until all the preventer lines and swamped mooring lines are made fast as required by the Pilot/Mooring Master.
(xi) Once the tanker is all fast, a mooring vessel will tow the hose marker buoy alongside and the Pilot/Mooring Master will advise the tanker's crew on the connection of the loading hose. A responsible officer and sufficient members of the tanker's crew should be available at the manifold to carry out this operation.
(xii) Emergency towing-off wires of adequate strength shall be made fast to bollards on the tanker, forward, and the eye run out and maintained at or about the waterline.

HOSES: *Crane/Derrick:* The tanker shall have a crane or derrick on the port side with a minimum SWL of 10 tonnes. Arrangements for lifting and securing hose must comply with the Oil Companies International Marine Forum (OCIMF) recommendations.

Hose Connection:
1. Upon completion of the mooring operations, the loading hose will be connected to the tanker's port manifold. The hose connection will be made by the tanker's crew who must be under the supervision of a responsible deck officer. The Pilot/Mooring Master will advise on the correct procedures to be adopted.
2. The crane/derrick rigged on the port side will be used to hoist the loading hose and assist in its connection to the port manifold. The crane/derrick will be used during loading to suspend and take the weight of the loading hose.
3. When the loading hose is hung-off at the tanker's rail, and lowered to manifold level, the blank flange on the end of the hose shall be removed and the loading hose bolted to the tanker's manifold. A pressure gauge is provided at the top of the spool and a drain line at the bottom of the spool.
4. The propeller shall not be turned over with the main engine while the loading hose is connected, or after it has been disconnected without first notifying the Pilot/Mooring Master.

Personnel: The tanker shall provide competent personel to perform, supervise and approve all work to connect and disconnect the loading hose.

Manifold Specification: The tanker's manifold shall be capable of being bolted to the 12 in. USAS flange of the loading hose and comply with the OCIMF Standards for Oil Tanker Manifolds and Associated Equipment.

Fittings and Connections Available at the Marine Terminal: WAPET will make available the following fittings to connect the loading hose to the tanker's manifold:
(a) 300 mm. to 300 mm. 150 USAS drain spool, with 25 npt and 15 npt spigots for drain line and pressure gauge with a slipping flange at its outboard end to ease loading hose bolt alignment;
(b) hanging-off connecting chain and specially modified "Blake Stopper" for use with loading hose;
(c) nylon straps and associated slings to suspend loading hose from tanker's crane/derrick runner; and
(d) flange gaskets and grease.

Also see "Loading".

LOADING: Throughout the loading operation, a responsible deck officer shall be in charge of operations, either on deck, or in the cargo control-room. In addition, an efficient deck watch in constant contact with the cargo control-room must be maintained at all times.

Loading rates can be reduced on request at any time. Except in an emergency, 10 minutes notice should be given to the Pilot when rate reduction is required.

Valves must not be closed against the oil flow without permission from the Terminal. Part or full closure of valves during loading is extremely dangerous and can cause extensive damage to equipment.

Crude Oil Handling Facilities – Onshore:
The onshore storage and pumping facilities include:
(a) 3 × 350,000 bbl. (55,618 kilolitre) floating roof tanks;
(b) 2 gas turbine centrifugal loading pumps rated to deliver up to 22,600 bbls. (3,600 cu.m.) per hour of Saladin Crude Oil; and
(c) associated control and monitoring equipment.

Crude Oil Handling Facilities – Marine:
The submarine pipeline is comprised of the following 2 sections:
(a) Linking the shorebase facilites on Thevenard Island to the Marine Terminal is 6,426 m. of 584 mm. × 12.7 mm. steel pipeline, the seaward end of which is marked with a spar buoy.

(b) At the seaward end of the pipeline described in (a) there is a flexible rubber hose measuring 75 m. of 400 mm. and 9 m. of 300 mm. tail/rail hose (which flexible rail/tail hose is referred to in these Regulations as the "Loading Hose"). The "Tanker" end of the tail/rail hose is fitted with a 300 mm. (12 in.) locking butterfly valve. The seaward end of the loading hose is marked with a yellow conical buoy.
The tanker's manifold shall be in compliance with the Oil Companies International Maritime Forum (OCIMF), Standards for Oil Tanker Manifolds and Associated Equipment, and its presentation flange shall be equipped with a 300 mm. (12 in.) ANSI Class 150 flange.

Commencement Checks: The submarine pipeline is left full of crude oil between tanker loadings. When all hose connections have been made and approved, and safety checks outlined in the International Safety Guide for Oil Tankers and Terminals have been completed, the butterfly valve on the loading hose is opened. The butterfly valve on the loading hose will be bolted in the open position before loading commences and should be checked frequently during the course of loading.

Tanker Loading: Tankers loading at the Marine Terminal must comply with the latest SOLAS and MARPOL Conventions and Protocols. Tankers found to be deficient or substandard in safety requirements will not be permitted to moor and load.

Loading Commencement: The tanker's manifold is opened and crude oil shall be loaded by gravity. Once checks for flow have been completed on the tanker, the Pilot/Mooring Master will be advised to start the loading pumps.

Inert Gas System: The cargo tanks will be checked on arrival to verify that they are inerted to 8% oxygen or less by volume and pressurised as required by existing regulations. Vessels with tanks not properly inerted and/or with an inoperative Inert Gas System will be rejected. In the event of failure of the Inert Gas System during tanker loading/deballasting operations, or if the tank atmosphere exceeds 8% oxygen, cargo/ballast operations will be stopped, and if the deficiency is not promptly corrected, the tanker will be removed from the berth.

Warning Against Back Pressure: The submarine pipeline and loading hose may be damaged if subjected to sudden increases in pressure. Back pressure on the loading hose at the tanker's rail must not exceed 700 Kpa./100 p.s.i. To avoid damage to the loading equipment the tanker shall ensure that the following precautions are taken.

(a) The flow of crude oil shall not be shut off by closing the tanker's valve or the butterfly valve on the tail/rail hose without the prior approval of the Pilot/Mooring Master.
(b) As many tanks as possible are to be open during loading. At least 2 tanks must be open while onshore pumps are operating at full speed. If the Master considers it necessary to load into only one tank, or to reduce the loading rate for safety or its operations, he shall notify the Pilot/Mooring Master in sufficient time to reduce the loading rate.
(c) The Master shall advise the Pilot/Mooring Master when 500 cu.m. of crude oil are required to complete the loading, so that the onshore pumps can be eased down slowly and reduced to idle.
(d) The Master shall advise the Pilot/Mooring Master when 60 cu.m. of crude oil are required to complete loading, so that the onshore pumps can be stopped and loading completed by gravity.
(e) On completion of loading, the tanker's manifold valve is to be closed slowly to minimise the surge pressure of oil in the pipeline.

Availability of Deck Machinery: The Master shall ensure that the deck machinery is available for immediate use at any time during the loading operation.

Test Calls During Loading: In order to check radio communications between the tanker and the onshore control-room, the tanker shall call Saladin Terminal every hour at 15 minutes past the hour, and advise the Terminal of the previous hour's loading rate.

Saladin Terminal shall call the tanker every hour at 45 minutes past the hour, and advise the tanker of the wind direction and speed, together with swell conditions.

Should either of these calls fail to establish communications between the tanker and the shore, after taking reasonable steps to re-establish communications, the onshore Terminal will shut down loading until communications are re-established.

Suspension of Loading during Strong Winds: During periods of strong winds the Pilot/Mooring Master may advise the tanker's Master to discontinue loading and disconnect the loading hose.

The loading hose may be hung-off ready to slip or be laid down.

Hose Disconnection:

1. On completion of loading by gravity, the tanker's manifold valve shall be closed slowly. If the manifold valve is of the type that cannot be closed slowly, the flow of oil shall be stopped by slowly closing a proportional tank valve. The back pressure at the rail will be monitored during this operation. Once the tanker's proportional valve and/or manifold has been closed, and it is confirmed that all oil flow has ceased, the hose end butterfly valve will be closed. Finally, the Pilot/Mooring Master will instruct the onshore Terminal to close the sealine valve.
2. The tanker personnel shall make every effort to drain the manifold outboard of the manifold valve between the manifold valve and loading hose end butterfly valve. A drain cock is provided in the spool attached to the manifold for this purpose.
3. When the hose is disconnected from the manifold, sufficient drip trays must be available to contain any oil remaining in the spool pieces and reducer and the blind flange will be replaced on the hose. The weight of the hose is taken on the blind pulling flange and the hose lifted above the deck. The hose is raised to sufficient height to enable the weight to be taken off the hanging-off chain. The handing-off chain is then slipped and secured to the support chain. The hose is lowered to the rail and hung off by the slipping chain to the Blake Slip. The crane hook is removed from the blind pulling flange. The hose buoy is then slipped and recovered by the moring vessel. The Pilot/Mooring Master will instruct the mooring vessel to commence towing the hose buoy, and when the weight comes on the hose buoy chain, the order will be given to slip the hose. The handle of the Blake Slip is pulled and the hose falls into the sea. The mooring vessel tows the hose buoy to its resting position.

CARGO INFORMATION: *Saladin Crude Oil Properties:*

API Gravity	48.2° API
Density at 15°C in vacuum	0.7869 g/ml
Reid Vapour Pressure	4.70 psi
Pour Point	−30°C
Flash Point (Abel)	−32°C
Viscosity at 20°C	1.732 cSt

The average load temperature of the crude oil will vary from Summer to Winter. As a guide, the minimum temperature during Winter (May to October) can be expected to be about 28°C. In the Summer (November to April), the maximum temperature can be expected to be about 36°C. Masters requiring more information about loading temperature should contact the Terminal.

BALLAST: *Dirty Ballast Handling Facilities:* There are no facilities at the Marine Terminal to receive ballast from tankers.

Deballasting: The Terminal will not be responsible for any free water or deadfreight. For acceptance at the Terminal, tankers must have segregated ballast tanks, or otherwise comply with the ballast regulations detailed in "Ballast Operations" below.

Ballast Operations:

1. As there are no ballast or slop reception facilities at the Marine Terminal, all tankers must arrive with clean ballast suitable for discharging directly to sea in accordance with the standards set by the International Conventions. Tankers arriving with ballast unsuitable for discharge to sea will be rejected for loading. Any tanker rejected because of contaminated ballast or sea pollution will automatically invalidate her Notice of Readiness and will lose any priority of loading. Tankers discharging contaminated ballast overboard shall be subject to the anti-pollution laws of Australia. Penalties for pollution are severe.
2. Tankers arriving at the Marine Terminal should have sufficient ballast to ensure safe handling and manoeuvrability in the prevailing weather and sea conditions and in accordance with good seamanship practice.
3. Tankers should have the ability to deballast concurrently with loading operations, and any crossovers between cargo and ballast system must be blanked.
4. Where a tanker arrives with clean ballast which is not part of a segregated ballast system, and wishes to discharge such ballast over the side, the following conditions shall be met:
   (a) The tanker must be operating with dedicated clean ballast tanks in accordance with the provisions of Regulation 13(9) or (10) of the MARPOL Annex 1992 revision.
   (b) The tanker must comply with MARPOL Regulation 13A 1992 revision.
   (c) When operating the oil content monitor required by MARPOL Regulation 13A, the monitor record shall be kept, and the record given to the Pilot/Mooring Master for inclusion with the tanker's in port documents.
   (d) The discharge ballast from dedicated clean ballast tanks (CBT) will be carried out in daylight, so that the quality of the ballast being discharged to the sea can be constantly observed.
   (e) If possible, an independent inspector shall inspect the ballast tanks at the discharge port where the ballast is taken on and certify that the ballast is clean.
   (f) Prior to the discharge of the ballast, an independent inspector shall inspect the tanks or tanks containing the ballast, and certify that it is clean and take samples of the ballast, one sample to be retained on board and the other to be kept by WAPET.
   (g) The Master of the tanker shall make a declaration that the lines used for the discharge of such ballast are clean, and that the blanks separating the discharge line and the crude oil lines and tanks are tight and free from leaks.
   (h) Where this ballast forms part of the ballast required to keep the tanker at the required safe arrival draft, it should be understood that it will not be discharged until an equivalent amount of crude oil has been loaded to maintain a safe draft as required by these regulations.
5. The attention of Masters, Owners and Shippers, using the Terminal, is respectfully drawn to the Australian Government Guidelines with respect to the discharge of any ballast contained in Schedule I.

TIME: See "General" – "Time" before first port.

SERVICES: *General Facilities:* Mail forwarded to Thevenard Island for the tanker or its crew will be delivered by the Pilot/Mooring Master.

Mailing address is:

"Name of Tanker, Thevenard Island, Western Australia, 6711."

None of the following services are available at the Terminal:

(a) customs or quarantine;
(b) ship's agency, repairs, surveying, bunkers or potable water;
(c) medical, consular, telephone, accommodation or laundry;

If a tanker requires any of the above services, most can be obtained at the Port of Dampier. WAPET's prior approval should be obtained if the attendance of any person to the tanker requires the services of the mooring vessel.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

GENERAL: *Responsibility of Owner:* The onus is exclusively on the Master or Owner to ensure that the tanker is seaworthy and that all equipment is and remains in good working order and condition. Failure by WAPET to reject any tanker not meeting the requirements will not relieve the owner of liability.

Cathodic Protection: A tanker equipped with Impressed Current Cathodic Protection Systems shall ensure the system is switched off prior to approaching the moorings until the tanker is unberthed. The Master will be required to sign a declaration to the effect that the Impressed Current Cathodic Protection System is turned off before the tanker is allowed to berth.

Safety:

(a) Tankers which could in the opinion of WAPET possibly contravene the International Convention for the Safety of Life at Sea 1974 as amended by the 1978 Solas Protocol, will not be accepted.

(b) The tanker shall be in a state of readiness at all times to leave the moorings.

Tankers visiting the Saladin Marine Terminal must comply with the minimum safety requirements specified in the International Safety Guide for Oil Tankers and Terminals (ISGOTT).

Pollution: Tankers shall:

(a) Comply with the relevant provisions of the International Convention for the Prevention of Pollution from Ships defined as the "Convention" in the Pollution of Waters by Oil and Noxious Substances Act 1987 of the State of Western Australia and the Protection of the Sea (Prevention of Pollution from Ships) 1983 of the Commonwealth, and comply with other legislation of the State or Commonwealth pertaining to pollution;

(b) ensure that no rubbish is dumped from the tanker at or near the Marine Terminal;

(c) provide evidence to WAPET that the tanker is enrolled in the Tanker Owners Voluntary Agreement concerning Liability of Oil Pollution including TOVALOP supplement thereto effective 20 February 1987;

(d) provide evidence to WAPET that the tanker has in force insurances and certificates as are required of the owner of ships under Australian Law; and

(e) provide evidence to WAPET that any cargoes carried by the tanker are either owned by, or deemed owned by, a member of CRISTAL, being the Contract Regarding an Interim Supplement to Tanker Liability for Oil Pollution dated January 14th 1971, as amended from time to time.

Tank Inspections:

(a) When nominating a tanker for loading at the Terminal, the shipper shall provide WAPET with a statement in writing, on the approved WAPET form, that the nominated tanker has satisfactorily undergone a ship inspection, based on Oil Companies International Marine Forum (OCIMF) guidelines, and that the results of the inspection are acceptable to the shipper as at the time of inspection, and at the time of nomination.

(b) Where a tanker has not undergone an inspection as specified in (a), WAPET, at its absolute discretion, may accept the tanker for loading at the Terminal, subject to the tanker undergoing an inspection prior to loading commencing, by a qualified inspector at the shipper's sole cost. In such case, Notice of Readiness shall not be tendered until the shipper provides WAPET with a written statement including, without limitation, by fax or telex, that the inspection was satisfactory.

AUTHORITY: West Australian Petroleum Pty. Limited, 233 Adelaide Terrace, Perth. Postal Address: Box S 1580 P.O., Perth, WA 6001, Australia. *Tel:* (09) 2636000. *Cables:* Wapet. *FAX:* (09) 2636699. *Contact:* Captain C.J. Sutton, Marine Superintendent (Tel: (09) 332-4224 (After hours) or 018-906-744 (Mobile). Captain W.E. Deacon, Pilot/Mooring Master (Tel: (09) 310-4875).

SPRING BAY, Tasmania: 42.33 S. 147.56 E. (See Plan)

DOCUMENTS: As for all Australian ports.

PILOTAGE: Compulsory. Pilot boards from a tug (black hull, red funnel with black top), on a line joining Pt. Home Lookout and Stapleton Pt. (see Chart AUS 170). ETA is usually sent to vessel's Agent 72 hours prior to vessel's arrival and confirmed 24 hours and 6 hours before arrival at the Pilot station. ETA should also be sent to Harbour Master, Hobart, VHF Channel 16, call sign "Hobart Harbour". The tug from which the Pilot boards leaves Spring Bay Wharf 30 minutes before a vessel is due at the Pilot Station, and also keeps a listening watch on VHF Channel 16.

ANCHORAGE: A good anchorage can be found in depths of 22 m. approximately 1.25 miles South of Windlass Bay.

RESTRICTIONS: The wharf is used exclusively by vessels loading wood chips from Tasmanian Pulp and Forest Holdings. The main wharf, on which the wood chip loader is situated, is 243.8 m. long with additional dolphins (3) and a mooring block for head, stern and breast lines. Ships are normally berthed starboard side to. The shiploader is a fixed structure and vessels loading are required to move up and down the wharf using their own lines. Vessels are berthed and unberthed 24 hours a day, at the Pilot's discretion. Lights have been installed on the wharf for this purpose. Should a vessel require to immobilise her engines, application must be made to the Harbour Master; if permission is granted a tug will be required to stand by alongside.

MAX. SIZE: The minimum depth alongside the wharf is 10.7 m. and the mooring dolphins and ship loading facilities were designed to accommodate specialised ships with an overall length of 210 m. No difficulty envisaged in working ships having an overall length up to 243.8 m.

HEALTH: The local medical practitioner boards vessels after berthing and acts for the Commonwealth Department of Health. Immigration/Customs Officers travel by road from Hobart and board after Pratique has been granted. Quarantine Authorities must be informed of suspected disease or fever at least 18 hours before arrival. Also see "Melbourne".

RADIO: Hobart Radio, call sign VIH. Hours of duty EST (add 1 hour for Summer Time). Monday-Saturday inclusive 0730 – 1730 hrs. Sunday, 0800 – 1600 hrs.

TUGS: 2 tugs are stationed at Spring Bay. One of the tugs is used to embark and disembark the Pilot as well as assisting in berthing and unberthing. Should tugs be required to stand-by during loading operations an additional charge will be made in respect of crews' wages etc. It is customary to use the tug's lines, for which an additional charge is made.

MEDICAL: A local doctor is available and well equipped health clinics are situated at Triabunna (3 miles) and Orford (7 miles).

DENSITY: 1025.

FRESH WATER: Limited supplies are available from wood chip factory.

FUEL: None laid on to the wharf. In an emergency limited supplies could be provided by road tankers from Hobart.

FIRE PRECAUTIONS: No special fire precautions other than non-smoking or lighting of fires or use of naked lights.

CONSULS: None, nearest at Hobart.

REPAIRS: No facilities available for major repairs, but the wood chip factory may be able to assist in minor repairs. Local Hobart firms available.

GANGWAY/DECK WATCHMAN: None available.

OPENING/CLOSING HATCHES: Hatches opened by the ship's crew.

CERTIFICATES: Register, Load Line Certificate, Derat Certificate, Light Dues, Articles of Agreement, Clearance from previous Port.

CUSTOMS ALLOWANCES: See "Melbourne".

REPATRIATION: Facilities available through Hobart.

AIRPORT: Hobart Airport is situated 49 miles from Spring Bay Wharf. Frequent services operate to the mainland and New Zealand from where services operate world wide.

TIME: See "General" before first port.

HOLIDAYS: See "Hobart". Ships may be loaded on days which are regarded as holidays in Hobart.

POLICE/AMBULANCE/FIRE: Police, 573116; Ambulance, 573129; Fire, 573187.

TELEPHONES: A telephone is connected to all vessels on arrival.

IDENTIFICATION CARDS: See "Melbourne".

AUTHORITY: Marine Board of Hobart, G.P.O.Box 202B, Hobart 7001. *Tel:* (002) 351000. *FAX:* (002) 310693, Port Tower (002) 346116. *Contact:* C. Drinkwater, Chief Executive. C. Thompson, Port Service Manager.

AGENT: See "Devonport".

STANLEY, Tasmania: 40.46 S. 145.18 E. (See Plan)

LOCATION: The Port of Stanley on the Northern coast of Tasmania is situated on the Southern side of Circular Head. (Lat. 40° 46′ S., Long. 146° 18′ E). It is protected by the Breakwater Pier. The ore loading facility owned by Savage River Mining Co. (Port Latta) lies about 5 nautical miles to the S.E.

PILOTAGE: Pilotage is compulsory. The Pilot boards one nautical mile S.E. of the Breakwater. Contact Marine Superintendent Port Latta.

RESTRICTIONS: Depth in approaches 9.0 m. at LWOST. The nature of the bottom is sand.

VHF: "Port Latta" on Channels 6, 12 and 16.

TUGS: 1×24 ton bollard pull.

BERTHING: *Breakwater Pier:* Length 161 m. Depth 8 m. Cargo shed 55 m.×15 m.

Roll-on/Roll-off Berth: Length 100 m. Ramp 6.4 m. wide. Depth 8.8 m. to 5.8 m. at the inner end.

FRESH WATER: Available. Rate 18 t.p.h.

FUEL: Fuel oil and diesel oil available by road tanker.

REPAIRS: Minor repairs possible.

GARBAGE DISPOSAL: Pacific Waste Management Pty.Ltd., P.O.Box 249, Altona North, Victoria 3025. Tel: (03) 3609333. Fax: (03) 3609290. Drums and skips provided, collection as required.

WASTE OIL DISPOSAL: Service available from Pacific Waste Management Pty.Ltd. (see above) by road tanker at bulk berth and Ro-Ro berth.

SEAMAN'S CLUBS: None.

GENERAL: *Road and Rail Access:* Road access to both berths.

Tidal Data: Mean High Water Springs 3.5 m.
Mean High Water Neaps 3.2 m.

References: Australia Pilot Vol. II. Charts: AUS.353, AUS.798. List of Lights NP Vol. "K". Australian National Tide Tables AHP 11.

Imports: Coal and bentonite.

Exports: Timber, agricultural products.

Reefer Points: Situated on Breakwater Wharf and near Roll-on/Roll-off facility.

AUTHORITY: Marine Board of Circular Head, P.O.Box 96, Stanley, Tasmania 7331. *Tel:* (004) 581271. *FAX:* (004) 581442. *Contact:* Mrs.Y.M. Tierney, Secretary.

Marine Board of Hobart (See "Hobart").

STRAHAN, Tasmania: 42.10 S. 145.20 E. (See Plan)

PORT LIMITS: "Port of Strahan" means all waters of Macquarie Harbour and all bays and estuaries opening into that harbour, but not beyond an imaginary line bearing 000° (True) for a distance of 1.20 km. from Watts Hill and thence bearing 090° (True) to the shore line.

DOCUMENTS: As for all Australian Ports.

PILOTAGE: Pilotage is compulsory for all vessels exceeding 35 m. in length. All Pilots are stationed at Hobart and special arrangements must be made in advance if a Pilot is to be provided. Usual minimum notice is 24 hours by contacting Marine Board of Hobart by telephone (002) 351000, or Fax (002) 310693, (002) 346116 (Port Tower). The Wharf Officer at Strahan may be contacted on telephone No. 004.71 7291.

The Pilot Boarding Ground is outside the bar (Chart B.A. 3531 – Lat. 42° 12.0′ S., Long. 145° 13.0 E.). The pilot launch is fitted with VHF radio (Channels 16, 12, 8 and 6) and the Pilot will advise the ship by radio of the time he intends to board.

ANCHORAGE: There are no safe anchorage positions outside the Port of Strahan. The fairway is unprotected from the weather and during North-Westerly gales the outside bar breaks heavily making entry impossible.

RESTRICTIONS:

(i) Navigation within the port for vessels requiring a Pilot is only during daylight hours.

(ii) The entrance to Macquarie Harbour is 70 m. wide and very strong tidal streams can be experienced – up to 6 knots.

(iii) The tides are unpredictable. In Westerly gales the flood tide can run for 20 hours and when the wind backs to the South the ebb can run out for 20 hours.

(iv) A bar having a least depth of 5.5 m. exists outside the entrance, however the lead depth in the inner channel is 4.0 m.

MAX. SIZE: Largest vessel recently – "Pacific Bold", LOA 66.45 m., draft 4 m.

HEALTH: Australian Commonwealth Rules apply. The local medical practitioner boards vessels after berthing and acts for the Commonwealth Department of Health.

RADIO: See "Hobart".

TUGS: None available and not required.

BERTHING: One wharf – depths varying from 3.7 m. to 5.5 m. alongside. The port is now mainly used by fishing vessels.

MEDICAL: The nearest hospital and doctor at Queenstown (30 miles).

FRESH WATER: Limited fresh water available from town water supply.

FUEL: Bunkers may be obtained by road tanker.

GANGWAY/DECK WATCHMEN: None available.

OPENING CLOSING HATCHES: Hatches are opened by ship's crew.

AIRPORT: A small airport is located 3 miles from Strahan.

AUTHORITY: Marine Board of Hobart. (See "Hobart").

AGENT: See "Devonport".

SYDNEY, N.S.W.: 33.55 S. 151.12 E. (See Plan)

PORT LIMITS: *Seaward Port Limits:* An arc of a circle of 4 nautical miles radius, centred on Hornby Light (which is at Lat. 33° 50.1′ S., Long. 151° 16.8′ E.).

DOCUMENTS:

2 copies Form M&S11 (List of Crew).
1 copy Form 42A (Store list).
1 copy Form 5 (Articles Owned or in Possession of Master, Officers or Crew).
3 copies Form C&E886 (Ports of Call).
1 copy Form QA3 (Declaration of Animals Carried as Cargo).
1 copy Form QA4 (Declaration of Ship's Pets).
1 copy Form QA5 (Shipmaster's Bond to Cover Ship's Pets).
2 copies Form AQ360 (Health Report).

Of the above, Form 42A and Form 5 need only be compiled at the first port of call in Australia.

Ship's Agents are required to submit 2 copies of Cargo Manifest, and at least 2 sets of Bills of Lading. These are usually received direct from the loading port, and so need not be on board.

Ships carrying dangerous goods must obtain special approval to enter port (See "Entry and Departure Restrictions").

Shipmaster's Report: October 1988.
First Port: See "Melbourne".
Second Port: 3 Crew Lists.
2 Ports of Call Lists.

Also see "Radio Officer's Report".

PILOTAGE: Compulsory for seagoing commercial ships (unless specifically exempted). Preliminary arrangements for a Pilot must be made through a local Agent accredited by the Corporation.

All seagoing commercial ships (including those exempted from pilotage) are to report to "Sydney Maritime" on VHF Channel 12 when 4 hours, and again when 2 hours, from the port. When 5 miles from the port such ships are to report to "Harbour Control" on VHF Channel 13. Also see "VTS and VHF".

"Harbour Control" will instruct the ship what time to be at the Pilot Boarding Ground or, if no Pilot booking has been received, will advise the ship to contact the Agent. The Pilot Boarding Ground is at Lat. 33° 50.1′ S., Long. 151° 21.6′ E., which is 4 miles due East of Hornby Light. Ships are not to proceed Westward of the Pilot Boarding Ground without specific instruction by "Harbour Control" or the pilot vessel.

The pilot vessel is a 15 m., aluminium, semi-planing vessel, with metallic grey hull and yellow-orange topsides; the word "Pilot" is prominently displayed on each side of the deckhouse. The pilot vessel operates from a shore base within the harbour. When proceeding to a ship the pilot vessel will call on VHF Channel 13 and, after changing to a working frequency, will give Pilot boarding instructions.

In general, a ship which is about to take Pilot should steer a course which puts the sea on the quarter opposite to that on which the pilot ladder is rigged. The ship should have about 7 knots headway as the pilot vessel comes alongside.

The bottom of the pilot ladder is to be 2.5 m. to 3 m. above the waterline. The ladder is to be rigged (if possible) through an opening in the bulwarks or guard rails (or through a door in the ship's side). If there is no available opening in the bulwarks or guard rails, steps (with handrails) shall be securely fastened inside the bulwarks or guard rails, leading from the top of the bulwarks or guard rails to the ship's deck.

On each side of the ladder there is to be a clean handrope of 32 mm. (diameter) manila rope. The handropes are to be led through stanchions, one metre high, fixed to the ship's bulwarks or guard rails. There are to be no knots in the handropes. A tripping line may be used, but is to be attached not lower than the bottom spreader (which is to be the fifth step from the bottom).

If the highest point of a pilot ladder would be more than 9 m. above the waterline the pilot ladder is to be rigged in combination with an accommodation ladder. The accommodation ladder is to be secured so as to prevent it swinging away from the ship's side. The pilot ladder, and the handropes, are to be secured to the ship's side above the lower platform of the accommodation ladder. The Pilot must be able to transfer safely and easily from the pilot ladder to the accommodation ladder. The accommodation ladder is to be rigged so that a person ascending the ladder is moving towards the ship's bow. The lower platform of the accommodation ladder is to be horizontal. The lowest point of the accommodation ladder is to be 6 m. to 7 m. above the waterline.

Pilot hoists are not favoured. If a hoist is used in a ship with freeboard not exceeding 9 m., a conventional ladder (with handropes) must be rigged immediately alongside the hoist, so that the Pilot can transfer safely and quickly to the ladder if the hoist fails. If a hoist is used in a ship with freeboard exceeding 9 m., a combination ladder must be rigged immediately alongside the hoist. *Note particularly* that a pilot hoist is *not* accepted as an alternative to a combination ladder.

Master's should note that the Corporation places great emphasis on the safety of its pilots. Delays may occur if boarding arrangements are found to be substandard.

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait is conducted by licensed pilots. See "Torres Strait" for details.

ANCHORAGES: There is no recommended anchorage off the port, but ships frequently anchor close Northward, off the suburb of Manly (see Chart Aus. 200). The Corporation cautions any ship anchoring off the port to keep a close anchor watch, because the area is susceptible to sudden, unpredicted changes of weather. Within the port there are several short-term anchorages (See "Berthing"). Mooring buoys are available for ships awaiting orders (see under "Berthing").

Restricted Area: There is a Restricted Area off the port bounded by a line drawn from North Head in a direction 090° (T) and a line drawn from Hornby Light in a direction 130° (T) and the arc of a circle of 3 nautical miles radius centred on Hornby Light. The mid-entrance markers, in line 294° (T), divide the Restricted Area into 2 sectors. The Northern sector is "Area A"; only ships which are entering the port may pass through "Area A". The Southern sector is "Area B"; only ships which are leaving the port may pass through "Area B". Anchorage is prohibited within the whole of the Restricted Area. The ship is not to be navigated along the line of the mid-entrance markers.

RESTRICTIONS: *Entry and Departure Restrictions:* Tankers which are not gas-free are not permitted to manoeuvre West of Bradley's Head during the hours of darkness.

Arrival at the following berths is restricted to daylight hours: All tanker berths, Point Piper Anchorage and Snails Bay Dolphins. Departure from the following berths is restricted to daylight hours: all tanker berths, and Nos. 1 & 2 Snails Bay Dolphins (by consultation with pilots).

Arrival at, and departure from, Sydney Cove Passenger Terminal is not permitted during peak operating periods for commuter ferries (0730 – 0930 and 1600 – 1830 Mondays to Fridays).

Except as indicated above, manoeuvring is generally permitted at any time of day. (For *tidal restrictions* see "Restrictions-Underkeel Clearance").

Ships carrying dangerous goods must not enter port unless the ship's Agent has obtained from the Corporation a certificate of "Approval for Vessel Carrying Dangerous Goods to Enter Port".

Underkeel Clearance, Tidal Restrictions and Minimum Draft: Ships underway outward-bound are to maintain a minimum underkeel clearance equivalent to 10% of ship's draft; for inward-bound ships this requirement is increased by 0.2 m. The controlling depth for calculating underkeel clearance is the berth depth (See "Berthing" or "Tankers") except at No. 1 Gore Bay (controlling depth 13.7 m.) and No. 2 Gore Bay (controlling depth 10.2 m.).

While alongside, ships are to maintain a minimum underkeel clearance of 0.6 m., except at No. 7 Glebe Island and No. 1 Balmain where the required clearance is 0.3 m.

Tankers proceeding to No. 1 Gore Bay with a draft exceeding 10.0 m., or length overall exceeding 250 m., or beam exceeding 36.5 m., or deadweight exceeding 80,000 tonnes, are to take Pilot 1.5 hours before slack water. The absolute maximum permitted draft is 13.7 m., but the actual draft is to be such that, in the approach channel of 13.7 m. depth, the required underkeel clearance is achieved at 1 hour before slack water. Ships using the berth for the first or second time are further restricted by 0.7 m. and 0.4 m., respectively.

At other berths in Gore Bay, and at Snails Bay Dolphin berths, ships with a draft exceeding 10.0 m. are to arrive and depart berth at or near slack water.

At the AGL Wharf, Mortlake, ships are to berth at slack water.

The departure of ships from No. 1 White Bay and No. 7 Glebe Island is timed to give the required underkeel clearance at 1.5 hours after time of departure.

In all other cases berthing and unberthing is at any state of tide, provided the required underkeel clearance is maintained.

The *minimum* permissable draft for a ship manoeuvring within the port is equivalent to the following percentages of the ship's length overall:

Ships not exceeding 100,000 tonnes deadweight: Forward 2%, Aft 3%.

Ships exceeding 100,000 tonnes deadweight: Forward 3%, Aft 4%.

MAX. SIZE: In general, the maximum permitted size of ships is governed directly by berth length and depth (See "Berthing" and "Tankers") and by depth in approaches. Also see "Bulk Loading Facilities" and "Restrictions – Underkeel Clearance".

HEALTH: All overseas ships (at First Port of Entry into Australia *and* at any subsequent ports in Australia) are subject to quarantine until Pratique is granted, or until the ship is released from quarantine. (Treatment of crew members for illnesses other than quarantineable diseases is carried out by private practitioners arranged through the ship's Agent). Vaccinations are not normally required (See "Medical").

Radio Pratique may be requested by any ship, 12 to 24 hours before arrival in port (or upon shorter notice in exceptional cases). The request is normally made through the ship's Agent, but a ship's Master can send the request direct to the Duty Shipping Quarantine Officer (telex AA25310) via Sydney Radio. The request must include answers to the following questions:

A. Name, type and nationality of ship?

B. Itinerary for last 21 days? (If over 21 days from last port, give name of port and date of departure).

C. Name of first Australian port, and ETA?

D. Number of crew?

E. Number of passengers?

F. Have you had any deaths on the voyage? If so, give details

G. Have you had any cases of illness during the last 21 days with a fever of 38 degrees Celsius or above, and accompanied by: (a) rash, jaundice, or glandular swelling; or (b) diarrhoea lasting longer than 24 hours?

H. Have you had persons suffering from venereal disease during the voyage?

I. What live fish, birds, reptiles or other animals are you carrying? (Ship's pets should be mentioned).

J. Have you carried livestock on previous voyages in the last six months? If so, advise type of livestock, date of voyage, and ports visited. Have all stock-carrying compartments been thoroughly cleaned and disinfected?

K. Do you request Radio Pratique, or radio approval to berth?

Note that if the Radio Pratique request is telexed or telegrammed (whether by Master or Agent) it may be in an abbreviated form, such as:

"A: Southern Express, container ship, Italian. B: London, Lisbon, Cape Town. C: Sydney 151600H. D: 20. E to H: nil. T: one dog. J: nil, K: Radio Pratique."

It is normally the ship's Agent who is informed whether or not Radio Pratique has been granted. This information is only radioed direct to the ship if the Master made application direct. A "Q" flag need not be displayed if Radio Pratique has been granted. Such Radio Pratique is valid only for the ship's first port of entry. (If the ship's berthing is delayed the Radio Pratique will remain valid for the port, provided conditions on the ship do not change). After the ship has berthed, a Quarantine Officer will board to confirm that there has been no change in circumstances since the Radio Pratique message was sent. When satisfied, the Quarantine Officer will issue a Pratique Certificate valid for all Australian ports.

If Radio Pratique is not confirmed (or not requested) the "Q" flag (or quarantine lights at night) must be displayed. The Quarantine Officer (and Customs Officers) will board ship inside Sydney Heads (unless radio permission to berth has been granted). The Quarantine Officer will examine all persons having illness or infectious disease, as notified by the ship's Master. The Quarantine Officer will also receive the "Primary Health Report". When satisfied, the Quarantine Officer will issue a Pratique Certificate for all Australian ports. The "Q" flag may then be lowered, and the ship may proceed to her berth.

Notwithstanding that Pratique for all ports may have been granted, the Master will still be responsible for reporting any cases of infectious diseases which may subsequently occur while the ship is in Australian waters. Such report is to be made by radio if the ship is at sea when the case is discovered.

RADIO: Sydney Radio (call sign "VIS") provides a full range of Radiotelegram (RTG), Radiotelephone (RTF), Very High Frequency (VHF), and Telex Over Radio (TOR) services.

VTS/VHF: There is a "Port Operations Centre", which controls the Vessel Traffic Management System of the port. The Centre operates continuously. It may be contacted by VHF (see below) or by telephone (02) 364 2000, telex AA 27568 MSBOPS, or facsimile (02) 27 7804. The Centre operates the following VHF stations:

Call sign "Sydney Maritime" – calling and working Channel 12. Area of coverage from 50 miles North of Sydney to 50 miles South of Port Kembla and 50 miles to seaward (through an interconnected system of remote stations). Initial contact with the port should be made through this station (See "Pilotage"). "Sydney Maritime" also receives arrival messages from ships bound for Newcastle, Botany Bay and Port Kembla, and relays these messages to the port concerned.

Call sign "Harbour Control" – calling and working Channel 13. Area of coverage – within 5 miles of the port. This station controls the Vessel Traffic Management System (VTS) for the port; broadcasts navigational, meteorological, and tidal information at 5 minutes past each hour; and allocates channels for ship/tug communication (such channels comprise 77, 72, 8 and 6, in that order of preference).

Ships within 5 miles of the port must maintain continuous listening watch on Channels 16 and 13 (or Channel 16 alone, if a dual watch is not possible). Ships underway within the port *must* maintain continuous listening watch on Channel 13.

When the ship arrives at 5 miles from the port, "Harbour Control" is to be notified (See "Pilotage"); and the ship is to obtain permission from "Harbour Control" prior to entering the port. One hour prior to ship's departure "Harbour Control" is to be notified; and the ship is to obtain permission from "Harbour Control" prior to departing the berth.

Both inwards and outwards ships are required to report (to "Harbour Control") passing each of the following locations (if applicable): Sea Buoy, Bradley's Head, Fort Denison, and Longnose Point.

Safety, urgency and distress calls should be made on VHF Channel 16, which is continuously monitored by both "Sydney Radio VIS" and "Sydney Maritime".

RADAR: There is a limited port radar service covering the approaches to the port and the outer harbour area. Ships seeking radar information should contact "Harbour Control" (See "VTS/VHF").

TUGS: There are 10 modern, twin-screw tugs with bollard pulls of 40 tonnes to 50 tonnes. These tugs are operated by:

J. Fenwick and Co. Pty. Ltd., P.O.Box 82, Balmain, NSW 2041. Tel: (02) 555-1281. Telex: AA25067. Fax: (02) 818 5858.

Waratah Towage Pty. Ltd., 2-3 Montague Street, Balmain, Sydney, NSW 2041. Tel: (02) 555-7100. Telex: AA25195. FAX: (02) 810-7991.

A fleet of small tugs is operated by:

Stannard Bros. Launch Services Pty. Ltd., 2-3 Montague Street, Balmain, NSW 2041. Tel: (02) 810-0537. Fax: (02) 316-6495. This company also provides the port's lines persons.

Orders for tugs for Saturday and Sunday should be placed by 1530 hrs. on Friday. Orders for tugs for weekdays should be placed by 1530 hrs. the previous day. Orders must be placed by the ship's local Agent.

Tugs normally join a ship in the vicinity of Fort Denison. Tugs always take a ship's line when they are to tow from their hook, but may use their own line when making fast alongside. There is no extra charge for using tugs' lines.

The latest tug guidelines are:

LOA under 30 m.	None
LOA 30 m. to under 75 m.	1 small tug
LOA 75 m. to under 100 m.	2 small tugs or 1 large tug
LOA 100 m. to under 130 m.	1 large tug and 1 small tug
LOA 130 m. to under 185 m.	2 large tugs
LOA 185 m. to under 250 m.	3 large tugs
LOA 250 m. and over (by consultation with Harbour Master)	

For tankers and bulk carriers exceeding 125 m. LOA the general requirement is varied as follows:

carrying less than 25,000 tonnes cargo	2 large tugs
carrying 25,000 to under 45,000 tonnes cargo	3 large tugs
carrying 45,000 to under 80,000 tonnes cargo	4 large tugs
carrying 80,000 tonnes cargo, and over	5 large tugs

The general requirement is reduced in the following circumstances:

One less tug (inwards and outwards) if ship has a bow thruster which:

(a) was found to be effective when the ship previously called; and

(b) is currently operational.

One less tug (outwards) if:

(a) the ship is berthed "head out"; and

(b) any berth ahead of the ship is clear; and

(c) weather is fine.

If both of the above circumstances apply, the total reduction is one only.

The general requirement is increased in the following circumstances:

One extra tug if the ship is a car-carrier exceeding 20,000 gross (as calculated by the Corporation).

For a ship without main propulsion:

one extra tug if ship does not exceed 20,000 gross;

two extra tugs if ship does exceed 20,000 gross.

The requirement at mooring buoys is:

	Inwards	*Outwards*
LOA under 75 m.	None	None
LOA 75 m. to under 185 m.	1 large tug	1 large tug
LOA 185 m. to under 230 m.	2 large tugs	1 large tug
LOA 230 m. and over	2 large tugs	2 large tugs

Tug assistance is not required at anchorages unless the ship exceeds 215 m., in which case 2 tugs are required for a deep-draft ship, and one for a partly-laden ship. Such tugs stand-by the ship throughout the period of anchorage.

Except at No. 7 Glebe Island, no tugs are necessary for a shift-ship not exceeding 30 m. along the berth. One tug is required for a shift-ship of more than 30 m. along the berth. A harbour removal to another berth necessitates the full number of tugs as determined by the preceeding paragraphs.

Special variations are made to the above requirements for ships which have especially good, or poor, handling characteristics, and for large ships which are frequent users of the port. All of the above requirements may by increased in the event of adverse weather.

BERTHING: Except as indicated in "Bulk Cargo Facilities" and "Specialised Cargo-Handling Facilities" loading and discharging is by ship's gear (also see "Cranes"). Except where otherwise indicated the quoted depth is the least depth over the entire berth length; in many cases a greater depth is available if the ship does not require the full berth length.

Berth	*Nominal Length* (m.)	*Depth* (m.)	*Function*
Sydney Cove			
Passenger Terminal	300	10.5	Passengers

No. 2	215	9.6	Lay-up
No. 3	215	9.8	Lay-up
No. 4	215	11.6	Lay-up
Buoy Moorings:			
No. 4 Athol Bight	275 radius	11.9	Lay-up
No. 1 Point Piper	260 radius	13.5	Lay-up

For tanker berths (See "Tankers"). Road access is available to all fixed berths. Rail access is available to the following berths: No. 1 Balmain; Nos. 3 and 4 White Bay; Nos. 1, 2 and 7 Balmain; Nos. 9, 10, 12, and 13 Pyrmont. The Royal Australian Navy has extensive fixed berthage, buoy berths, and dolphin berths in the port.

CRANES: *No. 4 White Bay:* One twin lift portainer crane 45.7 tonnes SWL and 1×53 ton portainer crane.

Nos. 3, 4, 5 Darling Harbour: 3 mobile container-handling cranes ("Coles Colossus"), owned by Patrick, the Australian Stevedore. Two of these cranes are "4200 Series" and have a tower height of 18 m.; a jib length of 27 m.; SWL 26 tonnes at 28 m. radius, 34 tonnes at 9 m. radius. The third crane, a "6000 Series" model, has a tower height of 18.7 m.; a jib length of 34.5 m.; SWL 29.5 tonnes at 33 m. radius, 45 tonnes at 12 m. radius.

BULK CARGO FACILITIES: (For berth lengths and depths – see "Berthing"). (Ships may berth without hold ballast, because loading units are fully retractable).

CSR North and South Wharves: Bulk raw sugar unloading facility. The berth has 2 gantry grab cranes.

No. 7 Glebe Island: A common user bulk dry cargo discharge facility, equipped for self-discharging vessels, using wharf manifold to pipelines, conveyors and adjacent storage silos.

The types of cargo discharged at this facility include bulk cement and bulk refined sugar.

Glebe Island's grain elevators were redeveloped during 1993 to provide 28,000 tonnes of bulk refined sugar storage capacity.

Cement storage of 35,000 tons consists of 16 converted wheat silos.

These facilities also include a transfer tower, a conveyor gantry from wharf to silos, chain conveyors on the silos and bagging facilities.

No. 8 Glebe Island: ICI bulk soda ash unloading berth. The berth has a mobile gantry with 2 pneumatic suction nozzles. Handling rate 125 tonnes/p.h. (maximum); 80 tonnes/p.h. (average). Maximum beam 13.7 m. Maximum length overall 100 m. Maximum draft: unrestricted for the size of ship using the berth. (Also see "Note" at end of this section).

Note: Nos. 7 and 8 Glebe Island and No. 1 and No. 2 White Bay are in close proximity. To allow a ship to berth or unberth at No. 1 Balmain it is frequently necessary to shift astern a ship at No. 7 Glebe; in the astern position it is usually only possible to load the ship's forward hatches. A similar shift is sometimes necessary to allow a ship to berth or unberth at No. 8 Glebe Island. A concession in tonnage rates is allowed when a ship at No. 7 Glebe Island is shifted, but full rates are charged for Pilot, tugs and linesmen.

SPECIALISED CARGO HANDLING FACILITIES:

Containers: No. 4 and No. 5 White Bay comprise a container terminal. Containers are also handled at Nos. 3, 4 and 5 Darling Harbour, using mobile cranes (See "Cranes").

Roll-on/Roll-off: Ships equipped with angled stern ramps are handled at Nos. 3, 4, 5, 8, 9 and 10 Darling Harbour and Nos. 5 and 6 White Bay.

Car-carrying: Car-carrying ships with side ramps and/or angled stern ramps are handled at Nos. 1 and 2 Glebe Island and No. 8 Darling Harbour.

Liquid Chemicals: Small quantities of liquid chemicals are handled at the tanker terminals (See "Tankers").

Bulk Oils: Handled at the tanker terminals (See "Tankers"). Vegetable and lube oils are occasionally handled at dry cargo berths.

Note: The sister port of Botany Bay has a major facility for the handling of liquid chemicals, bulk oils and liquefied gas.

BRIDGES: The majority of the port's berths lie beyond the Sydney Harbour Bridge, which is a single span, steel arch bridge. Maximum headway is 53.4 m. above chart datum at the centre (prominently marked). For 45 m. on either side of the centre there is not less than 53.0 m. headway. For a further 64 m. on either side there is not less than 51.5 m. headway. For a further 73 m. on either side there is not less than 49.9 m. headway. When in use, a painting gantry reduces these headways by 2.8 m.

STEVEDORES: Patrick, the Australian Stevedore, G.P.O.Box 3918, Sydney, NSW 2001. Tel: (02) 256-6700. Telex: AA75754. Fax: (02) 247-9259.

Conaust (NSW) Pty. Ltd., G.P.O.Box 4084, Sydney, NSW 2001. Tel: (02) 552-1600. Telex: AA72061. Fax: (02) 552 1032.

Patrick operate at No. 4 and 5 Darling Harbour and at Darling Harbour No. 3 and 8 for general cargo.

General, Ro-Ro, Lo-Lo, and Bulk stevedoring operations at any common-user berth in the port, using a fleet of 75 forklifts; 3 Coles cranes; and ancillary equipment.

Conaust Stevedoring provides General, Ro-Ro, Lo-Lo, and Bulk stevedoring services at any common-user berth in the port, using a fleet of 79 forklifts, and ancillary equipment. Conaust operate a container terminal at No. 4, 5 and 6 White Bay and car facilities at No. 1 and 2 Glebe Island. Conaust has a depot at Rozelle Bay for packing and unpacking containers, and for bonding and storing of containerised cargo and break-bulk cargo.

Normal hours of work at common-user berths are:

The port works 7 days a week in 3 shifts (0730 hrs. – 1430 hrs., 1500 hrs. – 2200 hrs., 2300 hrs. – 0600 hrs.). Rates are negotiable.

Labour for Monday to Friday shifts must be ordered not later than the morning of the day previous to requirement. Labour for Saturday and Sunday shifts must be ordered not later than Friday morning. Firm ETA's are consequently very important; the ship's agent should be advised immediately if the ETA changes, so that labour orders can be amended.

Main commodities handled are:

Imports – containers; motor vehicles; CKD's; lumber; paper products; heavy-lifts; steel; bulk oil and general cargo.

Exports – containers; steel and bulk cargoes and general cargo.

The private terminals employ their own labour force of stevedores.

MEDICAL: Ship's agents can arrange medical attention without prior notice, but notice should be given if possible. Full hospital, medical, dental and ophthalmic services are available. If the ship has passed through a yellow fever zone crew must be inoculated against yellow fever. Otherwise, no inoculations or vaccinations are necessary, but they can be carried out if required.

TANKERS:

Berth	Nominal Length (m.)	Depth (m.)	Company
No. 1 Gore Bay	265	14.0	Shell Co. of Aust. Ltd.
No. 2 Gore Bay	190	9.2	Shell Co. of Aust. Ltd.
No. 3 Gore Bay	172	9.1	Shell Co. of Aust. Ltd.
Ballast Point	172	9.4	Ampol
Chowder Bay	172	12.0	Royal Australian Navy

All berths are located in sheltered areas and are seldom affected by wind; no special moorings are required. Shore gangways available No. 1 Gore Bay only. Each terminal has first-response equipment for oil spills, and can readily call upon other terminals' equipment. The Corporation has an oil spill combat team on continuous duty with an extensive range of oil spill combat equipment. Industry and Government have local, regional and national contingency plans for oil spill combat. Ship-to-ship transfers are seldom undertaken at this port, but floating fenders are available.

Cargo handling: No. 1 Gore Bay: Line diameters 1×102 mm. and 4×254 mm.; maximum discharging rate 4,000 tonnes/p.h. (with crude oil, using 2 hoses); 350 tonnes dirty slops, 6,000 tonnes dirty ballast (total for terminal); S.G. 0.645 to 0.98; maximum temperature 50°Celsius; shore steam is available.

No. 2 Gore Bay: Line diameters 5×152 mm. and 1×203 mm.; maximum discharging rate 2,000 tonnes/p.h.; S.G. 0.645 to 0.98; maximum temperature 50°Celsius.

No. 3 Gore Bay: Line diameters 2×102 mm. and 10×152 mm.; maximum discharging rate 400 tonnes/p.h.; S.G. 0.845 to 0.98; maximum temperature 50°Celsius.

Ballast Point: Line diameters 102 mm., 203 mm. and 254 mm.; maximum discharging rate 1,000 tonnes/p.h.; no slop facilities; S.G. 0.84 to 0.95; maximum temperature 60°Celsius; no shore steam available.

DENSITY: The relative density throughout the port is 1025.

FRESH WATER: Fresh water is readily available at all berths. There is no restriction on quantity. The water is clean and sweet, and contains fluoride.

At fixed berths, delivery is from the town mains. Delivery rate is approximately 30 tonnes p.h. Hiring or usage of shore hoses attracts a charge.

Charges at private berths are generally the same. At buoy or dolphins berths delivery is either by a large or by small tug with barge under tow. The amount of fresh water supplied per tug or barge varies between 40 and 140 tonnes, depending upon the transport used. The delivery rate varies between 35 tonnes p.h. and 60 tonnes p.h.

Where possible at least 24 hours' notice is required for vessels requiring fresh water at buoys or anchorage.

FUEL: Fuel (and a wide range of lubricants) is available from:

Ampol Pty Ltd, Head Office, 167 Kent Street, Sydney, NSW 2000. Tel: 1800 655 315. Fax: 61 2 9981 1159. Grades: Marine Bunker Fuel Oil, 10-300 centistokes at 50°C. Light Marine Diesel Oil, 2.1-7.4 centistokes at 40°C. Gas Oil or Distillate, 2-5.8 centistokes at 40°C. Orders accepted 0700 to 1540 (Mon-Fri). 48 hours' notice.

BP Australia Ltd, GPO Box 5222, Melbourne, VIC 3001. Tel: 61 3 9268 4111. Fax: 61 3 9639 0261. Grades: Interfuel – viscosity 38.2 centistokes at 40°C. Light Diesel Oil – viscosity 2.721 at 40°C. Orders accepted 0700 to 1400 (Mon-Fri). One week's notice.

Mobil Oil Australia, 417 St. Kilda Road, Melbourne, VIC 3004. Tel: 61 3 9252 3405. Fax: 61 3 9252 3065. Grades: Bunker Fuel, 32-130 centistokes at 40°C. Diesel Gas Oil, 3 centistokes. Orders accepted 0730-1600 (Mon-Fri). 48 hours' notice.

Shell Co. of Australia Ltd., Greenwich Gore Bay Terminal, Greenwich Road, Gore Bay, NSW 2065. Tel: 61 2 237 8238. Fax: 61 2 439 4169. Grades: Marine Fuel Oil, 100 to 380 centistokes at 50°C. Light Marine Diesel Fuel, 1.8 to 5.8 centistokes at 40°C. Gas Oil (Distillate), 1.8 to 4.8 centistokes at 40°C. Orders accepted 0800 to 1630 (Mon-Fri). 48 hours' notice.

Delivery by pipeline at tanker berths. Delivery at other berths – heavy fuel by bunker barge only ("Amorena": minimum 150 tonnes, maximum per load 1,100 tonnes; "Esar Sydney": minimum 100 tonnes, maximum per load 1,500 tonnes); light fuel and lubricants (bulk or drummed) by barge or truck.

FIRE PRECAUTIONS: There are no additional requirements beyond those internationally practised.

CONSULS: The following countries maintain consulates in Sydney:

Argentina

WASTE DISPOSAL: *Metropolitan Liquid Waste Disposal:* Tel. 412 1388.

Liquid waste in bulk or drums is accepted at the Lidcombe and/or Castlereagh Depots.

Charges as from 1 April 1989 are as follows:

Tankers containing bulk liquid waste accepted at Lidcombe Depot only	$114 per tonne.
Drum Material non-flammable	$170 per tonne.
Sludge	$20 per tonne.

REPAIRS/DRY DOCKS: Groom Bros. Pty. Ltd., 18 Munro St., North Sydney 2060. Tel: (02) 957 3855.

Groom Bros. is experienced in hull and engine repairs, overhauls, pipe renewals and steel fabrication.

Australian Defence Industries (ADI), Naval Engineering Division, Garden Island, NSW 2000. Tel: 61 2 562 3333. Fax: 61 2 562 3821.

ADI's Garden Island facility operates the largest graving dock in the Southern Hemisphere. It is capable of docking ships up to 110,000 tonnes deadweight, together with a floating dock of 1,000 tonne lift capacity.

ADI has developed extensive capabilities at this one location and provides all skills and resources required for the repair, conversion and modernisation of commercial vessels.

SURVEYORS: Marine Surveyors (serving principally Shipowners, vessel Agents and Maritime Solicitors):

Avdall and Bozier Pty.Ltd., 121 Alexander Street, Crows Nest, NSW 2065. Tel: 61 2 9906 1277. A/Hrs: 61 2 427 3193. Fax: 61 2 9906 1030. Contact: Captain M.J.L.Bozier, Captain M.H.Murray.

The following classification societies maintain surveyors at the port:

American Bureau of Shipping. Tel: (02) 9956 7322. Fax: (02) 9954 4233.

Bureau Veritas. Tel: (02) 2419 4977. Fax: (02) 2419 5128.

Germanischer Lloyd. Tel: (02) 2957 6150. Fax: (02) 2954 4095.

Lloyd's Register. Tel: (02) 2262 1424. Fax: (02) 2290 1145.

Nippon Jaiji Kyokai. Tel: (02) 2233 7751. Fax: (02) 2223 3051.

Det Norske Veritas. Tel: (02) 2922 1966. Fax: (02) 2929 8792.

GANGWAY/DECK WATCHMAN: (Shore) Gangway watchpersons are available if the ship is unable to supply a crew member. The stevedoring companies are able to supply such a watchperson. A Gangway Watchperson is *not* required for vessels under 3,000 tonnes gross. Additional Watchpersons can be provided upon (Agents) request.

HATCHES: Hatches are normally opened and closed by ships' crew. However, if it is necessary to close hatches during loading in order to load containers on deck, the hatches are usually closed by wharf labour.

CUSTOMS ALLOWANCES: 200 cigarettes (or equivalent in tobacco products), and 1 litre of alcohol (opened) per crew member.

CARGO GEAR: Except as indicated under "Bulk Cargo Facilities" and "Specialised Cargo Handling Facilities" loading and discharging is by ship's gear. (Also see "Cranes").

Lighters, of 100 to 400 tonnes capacity, are available from:

Harbour Lighterage Pty. Ltd., Oxley St., Glebe, NSW 2037. Tel: (02) 660 1922.

Stannard Bros. Launch Services Pty. Ltd., P.O Box 92, Balmain, NSW 2041. Tel: (02) 810 0537. Telex: AA20194. *Fax:* (02) 810 6114.

REPATRIATION: Full facilities are available for effecting crew changes and arranging any necessary repatriation.

AIRPORT: Sydney (Kingsford-Smith) Airport is 9 km. from the city centre. There are frequent flights to and from many national and international destinations, served by: Air India, Air New Zealand, Air Niugini, Alitalia, Ansett Airlines of Australia, British Airways, Cathay Pacific Airways Ltd., Continental Airlines, Garuda Indonesian Airlines, Japan Air Lines, KLM Royal Dutch Airlines, Lufthansa, Malaysia Airline System (MAS), Philippines Air Lines, Qantas Airways, Singapore Airlines, South African Airways, TWA Trans World Airlines, Thai International, United Airlines, UTA French Airlines and Yugoslav Airlines (JAT).

TIME: See "General" before first port.

HOLIDAYS: (Throughout New South Wales): January 1st*, (New Year's Day) January 26th*, (Australia Day); Good Friday and Easter Monday**; April 25th* (ANZAC Day); second Monday in June (Queen of Australia's Official Birthday); first Monday in August (Bank Holiday); first Monday in October (Labour Day); 25th December* (Christmas Day); 26th December* (Boxing Day).

*When any of these dates is a Sunday the next day (Monday) is a holiday. When 26th December is on a Monday the next day (Tuesday) is a holiday.

**Easter Day (the Sunday between Good Friday and Easter Monday) is generally the first Sunday after the first full moon after 21st March.

POLICE/AMBULANCE/FIRE: There are numerous stations around and adjacent to the port. The telephone number for all emergency services is 000 (tell the operator which service is required).

Both "Sydney Maritime" and "Harbour Control" (See "VTS/VHF") have direct lines to the emergency services. The Corporation has an emergency service tug, with fire-fighting capability, on continuous standby. The Water Police service has patrol launches on continuous duty, and can summon helicopter assistance at short notice.

EMERGENCY CO-ORDINATION CENTRE: In the event of an emergency within the port appropriate contingency plans will be implemented by the port's Duty Harbour Master (for Marine emergencies) or the Police (for shore emergencies).

For marine emergencies beyond the port area the central authority (for the whole of Australia) is: Federal Sea Safety and Surveillance Centre, Canberra:

Tel: Reports and Enquiries (062) 47 6666 (toll-free).
"Ausrep" Enquiries (062) 68 7920.
Search and Rescue (062) 47 5244.
Telex: AA62349. Fax: (062) 57 2036.

TELEPHONES: Mobile telephones at all fixed berths owned by the Corporation; at Snails Bay Dolphin Berths; and at most private berths. Telephones are not available at buoy berths, but VHF link calls can be made (even at fixed berths) by calling Sydney Radio on Channel 26 or Channel 23 (but check channel free before calling).

SERVICES: Sullage, garbage, and bilge slops disposal services are available. Shore Power (240V/15A/50Hz and 415V/30A/50Hz or 415V/60A/50Hz) is available at many fixed berths. Extension of certificates is possible. Many other services are available, including: compass adjusting; radio and radar repairs; charts and nautical publications; sounding and course recorder paper; Notices to Mariners (Australian, New Zealand, British, USA and Indian); and safety equipment.

BANKS: Almost 100 banks have branches or representative offices in the port, including the following:

ANZ Banking Group Ltd., 2/20 Martin Place, Sydney, NSW 2000. Tel: 61 2 227 1458. Fax: 61 2 227 1824.

Bank of America, Level 18, Bank of America Centre, 135 King Street, Sydney, NSW 2000. Tel: 61 2 227 1458. Fax: 61 2 221 1023.

Bank of China, 65 York Street, Sydney, NSW 2000. Tel: 61 2 267 5188. Fax: 61 2 262 1794.

Bank of New Zealand, 8th Floor, 333-339 George Street, Sydney, NSW 2000. Tel: 61 2 290 6666. Fax: 61 2 290 1446.

Banque Nationale de Paris, 12 Castlereagh Street, Sydney, NSW 2000. Tel: 61 2 232 8733. Fax: 61 2 221 3026.

Citibank Ltd., 1 Margaret Street, Sydney, NSW 2000. Tel: 61 2 239 9100. Fax: 61 2 39 9193.

Commonwealth Bank of Australia, 2nd Floor, Corner Pitt Street and Martin Place, Sydney, NSW 2000. Tel: 61 2 312 2914. Fax: 61 2 312 2922.

Deutsche Bank of Australia Ltd., Level 20, 225 George Street, Sydney, NSW 2000. Tel: 61 2 258 3666. Fax: 61 2 241 3565.

Hong Kong Bank of Australia Ltd., 71 York Street, Sydney, NSW 2000. Tel: 61 2 255 2209. Fax: 61 2 255 2343.

Lloyd's Bank NZA Ltd., Level 40, Governor Phillip Tower, 1 Farrer Place, Sydney, NSW 2000. Tel: 61 2 239 5555. Fax: 61 2 251 1473.

Macquarie Bank Ltd., Level 16, 20 Bond Street, Sydney, NSW 2000. Tel: 61 2 237 3333. Fax: 61 2 241 1801.

National Australia Bank Ltd., 8th Floor, Centennial Plaza, 300 Elizabeth Street, Sydney, NSW 2000. Tel: 61 2 232 5133. Fax: 61 2 233 3551.

Westpac Banking Corp., 60 Martin Place, Sydney, NSW 2000. Tel: 61 2 226 3311. Fax: 1 800 675 046.

STORING: See "Prelims".

Ships can be stored by truck at all fixed berths, and by barge at all berths.

Dry cargo ships can take stores while the ship is working cargo; trucks and barges are permitted alongside. Tankers can also take stores while the ship is working cargo; barges are permitted alongside, but trucks are stopped at least 30 m. from the ship.

Fork-lift trucks are available only at dry cargo berths. Stores are normally loaded by ship's crew, but shore labour is available if required.

An "Application to Take on Board Ship's Stores" (Form 43) must be lodged with Customs by the ship's Agent. Once approval has been given by Customs, the Agent lodges an "Entry for Exportation of Customable and Excisable Goods" (Form B958) to allow goods to be delivered from bond.

SHIP SUPPLY SERVICE: *Supply by Water Transport:* Supply craft, if available, will be provided by Stannard Bros or Harbour Lighterage if a vessel requests ship stores to be delivered at an anchorage or buoy mooring within the Port.

Should a vessel, which has been anchored *off the Port* for a protracted period, require stores replenishment in quantity, the normal procedure would be to enter the port, and anchor "on the bank" to enable stores to be loaded relatively quickly and in quantity.

Should a vessel anchored *off the port* require delivery of individual (limited) packages of stores, then this could be supplied, subject to weather and sea condiitons.

Supply by Helicopter Services:

A. Commercial:

The following helicopter companies will provide stores transportation services if requested.

(a) Heli-Aust Bankstown
24 hour service
Tel: 707 4236. Fax: 708 9061.

(b) Heli-flite
24 hour service
Tel: 680 1511. Fax: 899 1315.

The following helicopter services (Non-Commercial) are available in cases of emergency, i.e. evacuation of a sick/injured crew member(s) or delivery of essential medical supplied, or similar cases of an emergency nature.

B. Non-Commercial:

(a) Services – Westpac
Tel: (02) 311 3499 or
Tel: 311 3122 (emergency only)

(b) Care-flite
24 hour emergency service
Tel: 633 6111.

SHORE LEAVE: There are normally no restrictions on crew members' shore leave. Crew members are not required to carry identification documents while ashore (See "Identification Cards").

IDENTIFICATION CARDS: Under Section 23 of the Migration Act 1958/64, Masters of ships entering Australia from overseas are required to have in their possession an identity card (in an approved form) for each member of the crew (other than for crew members exempted as below). This provision is included in the Act to ensure that positive identification is available to Customs officers if a crew member deserts the ship. Cards can be prepared after arrival of the ship, but shore leave will be delayed until this has been completed (a photograph is required).

The following persons are not required to possess identification cards: citizens of Australia; citizens of New Zealand; Masters of all ships.

Citizens of the following countries need not complete identification cards, provided they possess a relevant Seaman's Identity Book or Discharge Book: Canada, Denmark, Fiji, Ghana, Hong Kong, India Israel, Italy, Japan, Malaysia, Norway, South Africa, South Korea, Pakistan, and United Kingdom.

All of the above documents must remain in the Master's custody at all times, and must be produced upon demand by Customs Officers.

GARBAGE DISPOSAL: Contact Seaway Disposal. Tel: 810-2472.

WASTE OIL DISPOSAL: By tanker trucks only. Also see "Waste Disposal".

SEAMAN'S CLUBS: Flying Angel, 320 Sussex Street. Tel: (02) 264-9900. Services: Meals, snacks, football, shop, money exchange, international telephone and mini-bus service.

REGULATIONS: There are regulations concerning oil, noise and smoke pollution; carriage and handling of dangerous goods; and safety. In the event of an alleged breach of such regulations the ship's Master may authorise the Agent (if agreeable) to accept any subsequent summons to appear in court on behalf of the Master; this avoids delaying the sailing of the ship.

RADIO OFFICER'S REPORT: September 1990.

Sydney was the second port of call in Australia.

Documents: Customs and Quarantine will board the ship. Sealed envelope from Customs in Melbourne handed over.

2 copies Ports of Call List.
1 copy Ship's Pets.
3 copies Crew List.

SHIPMASTER'S REPORT: October 1994.

Documents: On our most recent visit to Sydney, which was our first port of arrival, the following documents were required by Australian Customs:

2 copies 3A – Crew Report (cover sheet).
2 copies 3B – Crew List.
2 copies Form 5 (Part one) – Ship's Report of Arrival.
1 copy Form 5 (Part two) – Crew Effects Declaration.
1 copy Form 5 (Part four) – Report of Ship's Stores.
1 copy Vessel Pro-Forma.
3 copies Ports of Call List.
3 copies 2A – Passenger Report (if required).
3 copies 2B – Passenger List (if required).

AUTHORITY: Sydney Ports Corporation, P.O.Box 25, Millers Point, NSW 2000. *Tel:* (02) 364 2999. *Telex:* 72046 Msbspt. *FAX:* (02) 364 2742. *Contact:* Captain R. McGee, Harbour Master, Sydney Ports Corporation. (See also under "VTS/VHF" for details of Port Operations Centre numbers).

AGENT: *Head Office:* Patrick Sleigh Shipping Agencies Pty. Ltd., G.P.O.Box 3976, Level 14, 309 Kent Street, Sydney, N.S.W. 2000. Tel: (02) 9299 1411. Telex: 20618 PATSLE. Fax: (02) 9299 2585. Seagram Code: 2SPATSLE.

THEVENARD, S.A.: 32.09 S. 133.39 E. (See Plan)

PORT LIMITS: As marked on Chart AUS. 120 (Approaches to Thevenard).

DOCUMENTS: All documents necessary for first entry vessels are as for other Australian ports (i.e. Customs, Health, etc.).

PILOTAGE: Compulsory. Pilots board approximately 2 miles seaward of Entrance Beacon (3 miles seaward of No. 1 Light Beacon). Pilot vessel has orange hull and yellow superstructure. "Pilot" in black on superstructure. Vessels awaiting Pilot for extended periods should anchor approx. 235° – 4 miles from Entrance Beacon. Vessels approaching Pilot Station should take care not to approach the Entrance Beacon before Pilot has boarded owing to restricted sea room.

ANCHORAGES: Outer Anchorage as above. Inner Anchorage for vessels awaiting berth available in Murat Bay. This is a safe anchorage for several vessels at one time, with good holding ground. Pilotage is necessary to Inner Anchorage.

RESTRICTIONS: Daylight berthing only. Sailing at any time. Sailing times depending on tide. Tides may be greatly effected by prevailing weather conditions – adverse weather can cause a large depression below the predicted height. Channel depth 8.2 m. (27 ft.) LW. There is a minimum depth of 5.5 m. (18 ft.) in the swinging area off the berths.

MAX. SIZE: LOA 180 m., beam dependent on LOA as determined by Suez Canal formula, but not more than 28 m..

Arrival drafts: As vessels are permitted to discharge clean ballast whilst alongside, drafts should be as follows: Fore: 2 m. (min.). Aft: 6 m. (max.).

HEALTH: Radio Pratique available within 24 hours of arrival providing sufficient information is supplied. Quarantine/Health Officer will still board vessel in order to grant formal Pratique. Vessels arriving direct from other Australian Ports have Automatic Pratique, but Health Officer will still attend the vessel on arrival.

RADIO: ETA messages for Agents, Harbour Master, etc. may be routed through any Australian coastal radio station, the closest being Adelaide Radio (VIA), not less than 24 hours prior to arrival.

VHF: Channels available: 16, 12, 8, 6 and 67.

Channel 16 used for general call up, and Channel 12 usually used for Port operations. Call Sign: Thevenard Port Control. Hours of operation: Monday to Friday 0845 – 1700 hrs. except Public holidays, or by arrangement.

TUGS: One tug of 11.4 tonnes bollard pull (650 h.p.), "Wandana".

BERTHING: Berth dimensions: Length 198 m. (650 ft.). Width 30 m. (100 ft.). Draft subject to keel clearance of 0.76 m. (2 ft. 6 in.) for vessels up to 8.2 m. (27 ft.) draft, and 0.91 m. (3 ft.) for vessels over 8.2 m. (27 ft.) draft. One wharf, 2 berths, depth alongside 9.8 m. (32 ft.). Head in or head out berthing dependent on prevailing weather conditions at time of berthing.

CRANES: Nil.

BULK CARGO FACILITIES: Movable gantry and conveyor bulk loading plant. Single loading spout for each berth, however loading of only one vessel at a time is possible. The plant will be manned on a two shift basis for 24 hours, with overtime as necessary for vessels loading gypsum or salt, and from 0800 hrs. to 2300 hrs. (two shifts), overtime as required. Grain loading possible from 0800 hrs. – 2300 hrs. every day of the week.

Bulk Handling Plant Rates: Wheat 400/450* tonnes per hour. Oats 200 tonnes per hour. Barley 480 tonnes per hour. Gypsum 900 tones per hour. Salt 800 tonnes per hour.

*Dependent on which silo grain is taken from.

SPECIALISED CARGO HANDLING FACILITIES: None.

BRIDGES: None.

STEVEDORES: Ordering of labour organised through Agents and Grain Handling Authority. Loading rates as above.

MEDICAL: One private medical practice available (2 Doctors). Also one dental practice. District hospital located at Ceduna (distance 4 km.). Ambulance service also available, with connecting air ambulance service for transport to Adelaide, if necessary. Vaccination certificates as for all Australian ports.

DENSITY: Average density 1027 – 1028.

FRESH WATER: Available at 20 tonnes per hour.

FUEL: Diesel oil available from permanent bunkering facility. Fuel oil available by road tanker providing sufficient notice is given of requirements (approximately 10 days).

FIRE PRECAUTIONS: Usual precautions necessary, having in mind danger of grain dust. Local Fire Brigade available. International shore connection should be connected.
CONSULS: None.
REPAIRS: Minor repairs possible.
DRY DOCKS: None.
SURVEYORS: (1) Cargo Surveyors available – will be arranged by Agents as required.

(2) Lloyd's Surveyor should be organised through principal Agents. Lloyd's Agent is at Port Adelaide.

Other Classification Society Surveyors also available in Australia with sufficient notice to Agents. None resident at Thevenard.
HATCHES: Opening and closing by ship's crew.
CUSTOMS ALLOWANCES: Normal Australian allowances.
CARGO GEAR: Bulk loading only.
REPATRIATION: Can be achieved. Arrangements should be made through ship's Agent.
AIRPORT: 7 km. to airport. Kendell Airlines, 6 flights per week. 16 seater aircraft. Charter flights can be arranged.
TIME: See "General" before first port.
HOLIDAYS: New Year's Day; Australia Day (January); Good Friday; Easter Monday; Anzac Day (April); Adelaide Cup Day (May); Queen's Birthday (June); Labour Day (October); Christmas Day and Proclamation Day (December 26th)

The bulk loading plant operates on all public holidays except Good Friday and Christmas Day.
POLICE/AMBULANCE/FIRE: Police Tel: 252001. Ambulance Tel: 252404. Fire Tel: 252000.
EMERGENCY CO-ORDINATION CENTRE: "Coastwatch" (Australian Coastal Surveillance Organisation) free telephone call from all Australian ports by STD or reverse charge (062) 475244.
TELEPHONES: Telephones placed aboard ship on arrival. Cost approx. $40.00 plus $1.50 per day rental.
SERVICES: Tank and hold cleaning facilities available.
BANKS:

Australia and New Zealand Banking Group Ltd., Poynton Street, Ceduna, S.A. 5690. Tel: 252202.

Bank SA, Poynton Street, Ceduna, S.A. 5690. Tel: 252060.
STORING: See "Prelims".

1. By truck.
2.
3. Wharf access available for trucks.
4. Wharf access available for fork lifts.
5. Normal Customs Bond Regulations apply.
6. Labour available for storing.

SHORE LEAVE: No restriction.
IDENTIFICATION CARDS: Normal Australian ID cards necessary, but not required to be carried ashore.
GARBAGE DISPOSAL: Ports Corp, South Australia collect garbage on request. Garbage to be placed in plastic bags so as to be handled by one man during normal working hours. No extra fees for collection charged apart from Quarantine Act = $40.00 per day plus $2.70 per man per day. Outside normal working hours (0800 hrs. – 1630 hrs.) callout fees apply (double time).
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: None. Thevenard Football Club, 500 m. from wharf, Thevenard Hotel (licensed), 200 m. from wharf. Ceduna Hotel (licensed), 1 km. from wharf. Various church organisations are available, check with ship's agent.
REGULATIONS: No unusual regulations.
DELAYS: May be experienced due to awaiting tide or awaiting loading of other vessels during periods of heavy shipping.
AUTHORITY: Ports Corp, South Australia, Jetty Road, Thevenard, SA 5690, Australia. *Tel:* (08) 86252077. *FAX:* (08) 86253100. *Contact:* Port Manager/Pilot (Harbour Master) (After hours (08) 86252617).

Ports Corp, South Australia, P.O.Box 19, Port Adelaide, SA 5015, Australia. *Tel:* (08) 470611. *FAX:* (08) 470605.
AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Adelaide.

THURSDAY ISLAND, Queensland: 10.35 S. 142.13 E. (See Plan)

DOCUMENTS/HEALTH: See "Melbourne".
PILOTAGE: Pilotage compulsory. ETA 48 hrs. before arrival stating max. draft and direction from which vessel arriving to: Harbour Master, Cairns. Tel: 070-527412. Fax: 070-527451. Further amended ETA if necessary prior to arrival. Pilot boards 1.5 miles West of Goods Island or Scott Rock as required. Harbour Master will advise boarding ground after receipt of max. draft and direction from which vessel arriving. Pilot vessel white hull, orange top, flying pilot flag. Vessel awaiting Pilot to anchor West of Black Rock in Normanby Sound or South of Tuesday Islets.

Also see "Torres Strait".
ANCHORAGE: West of Black Rock in 5.5 fathoms. Nurses' Home over shoulder of Black Rock 098° (T) with two white beacons S.E. side Goods Island in line 005° (T).
RESTRICTIONS: Daylight movements only. Draft restricted to 6.0 m. LWOST. Deep draft vessels subject to tide.
VHF: Call sign "Thursday Island Harbour". Listening watch during working hours. Channels 67, 16, 12 and 6.

Torres Straits Pilots on VHF Channels 16 & 12. Pilot vessel on VHF Channels 16 and 6. Call sign "Reef Pilots". Watch maintained when vessels are expected.
RADAR: None.
TUGS: No tugs.
BERTHING:

Wharf	*Length* (m.)	*Depth* (m.)
Main	30.0	3.40
Engineers	27.5	4.20
Caltex	22.9	5.00

There are barge ramps at Main Wharf and Horn Island Wharf.
CRANES: Crane with 25 ton lifting capacity at Horn Island.
MEDICAL: Notice of required medical attention with ETA message to Harbour Master. Hospital, four doctors available. Vaccinations, etc., as per Commonwealth of Australia requirements.
TANKERS: *Caltex Fuelling Jetty:* 1×100 mm. pipeline. Loading and discharging rate 80 t.p.h. Storage capacity 1,000 tons.
DENSITY: Salt at all states of tide.
FRESH WATER: Not available to shipping.
CONSULS: Nil.
REPAIRS: Deck and engine repairs, excluding large castings.
FUEL: Bulk distillate available at Caltex Jetty, approx. 20 t.p.h.
CERTIFICATES: Normal Commonwealth of Australia requirements. See "Melbourne".
REPATRIATION: Available.
AIRPORT: Airport on Horn Island, 2 miles by launch, 4 miles by bus. Seven flights per week by Australian Airlines. Private charter plane available.
TIME: See "General" before first port.
HOLIDAYS: Normal Queensland Public Holidays. No cargo can be worked on Christmas Day, Good Friday, Anzac Day.
POLICE/AMBULANCE: Police 69 1520. Ambulance 69 1501.
TELEPHONES: STD facilities available with several public boxes available on the island.
SERVICES: Garbage disposal. Apply to Harbour Master.
GARBAGE DISPOSAL: Available only by arrangement with Torres Shire Council. Tel: 070-691336.
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: None.
DELAYS: As wharf space limited and berthing is on a "first come, first served" basis, delays vary with amount of shipping.
AUTHORITY: Ports Corporation of Queensland, G.P.O.Box 409, Brisbane, Queensland 4001, Australia. *Tel:* (07) 3224 7088. *FAX:* (07) 3224 7234. *Contact:* Chief Executive Officer.

Regional Harbour Master (Cairns): Captain P. Matthews. Tel: (070) 527400. Fax: (070) 351127.
AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Brisbane.

TORRES STRAIT: (Great Barrier Reef). (See Plan)

NOTE: Two companies are providing Australian Government licenced pilots:

1. Australian Reef Pilots Ltd. (ARP).
2. Queensland Coastal Pilot Service Pty. Ltd.

1. Australian Reef Pilots Ltd. (ARP), formerly Queensland Coast and Torres Strait Pilots Association:

PILOT SERVICES: Licensed pilots of the Australian Reef Pilots are available for Torres Strait, the full length of the Inner Route of the Great Barrier Reef, the Great North East Channel and the reef entrances at Hydrographers Passage, Palm Passage and Grafton Passage.

In addition, pilots are available for pilotage to Umuda and Kumul through China Strait and Raven Channel in Papua New Guinea and also Clarence Strait near Darwin, by arrangement with Australian Reef Pilots.

Compulsory Pilotage: Pilotage is compulsory in the Inner Route of the Great Barrier Reef between Cape York (Lat. 10° 41′ S.) and Cairns (Lat. 16° 40′ S.), and also at Hydrographers Passage. All vessels 70 m. or more in length and all loaded oil tankers, chemical carriers and liquified gas carriers, regardless of length, are required by law to use the services of a licensed pilot.

IMO Recommendation A(710) on Pilotage: The attention of Shipmasters is drawn to the IMO Recommendation on Pilotage in Torres Strait and the Great North East Channel, which recommends that:

> Ships of 70 m. and over and all loaded oil tankers, chemical carriers or liquified gas carriers, irrespective of size, use the services of a Queensland Coast and Torres Strait Pilot when navigating in the Torres Strait and the Great North East Channel.

BOARDING STATIONS:
TORRES STRAIT:

Booby Island – 24 hour launch or land-on helicopter – Lat. 10° 36′ S., Long. 141° 50′ E.

Goods Island – 24 hour launch or land-on helicopter – Lat. 10° 34′ S., Long. 142° 04′ E.

QUEENSLAND COAST:
In any port or at the following offshore grounds:

Brisbane	Pt. Cartwright – launch – Lat. 26° 43' S., Long. 153° 11' E.
Gladstone	North Point – launch – Lat. 23° 44' S., Long. 151° 22' E.
Whitsunday Region	Penrith Island – land-on helicopter only – Lat. 21° 00' S., Long. 149° 57' E. Bailey Island – land-on helicopter only – Lat. 21° 00' S., Long. 149° 36' E.
Cairns	Cairns PBG – launch – or (by arrangement) land-on helicopter – Lat. 16° 44' S., Long. 145° 45' E.

BARRIER REEF ENTRANCES:

Hydrographers Passage	Blossom Bank – land-on helicopter only – Lat. 19° 43' S., Long. 150° 26' E.
Palm Passage	Pith Reef – land-on helicopter only – Lat. 18° 13' S., Long. 147° 07' E.
Grafton Passage	Euston Reef – launch – or (by arrangement) land-on helicopter – Lat. 16° 39' S., Long. 146° 14' E.

GREAT NORTH EAST CHANNEL:

Dalrymple Island	24 hour launch – Lat. 9° 34' S., Long. 143° 24' E. (The official gazetted pilot boarding ground).

NORTHERN TERRITORY:
At the ports of Darwin, Gove, Groote Eylandt, Bing Bong and Weipa.
NEW SOUTH WALES:
At or outside Port Kembla, Botany Bay, Sydney or Newcastle.
ANY OTHER PLACE:
By arrangement with Australian Reef Pilots.

MAXIMUM DRAFT AND UNDER-KEEL CLEARANCE: The Queensland Coast and Torres Strait Pilot Service will accept for pilotage through Torres Strait, the Inner Route and Great North East Channel ships with a maximum draft of 12.2 m. (Ref: Australian Marine Notice 23/1994).

GANNET PASSAGE (BOOBY ISLAND) AND PRINCE OF WALES CHANNEL: Gannet Passage or Varzin Channel at Booby Island, and the Prince of Wales Channel, as the main tidally restricted areas, control the passage of deep draft vessels. Throughout this area, which extends for some 30 miles from Booby Island, through the Prince of Wales Channel to the Herald Patches buoy, the following minimum Under-Keel Clearances (UKCs) apply:

Drafts	*Gannet and Varzin Passages*	*P.O.W. Channel*
up to 11.90 m.	1.0 m.	1.0 m.
over 11.90 m.	1.0 m.	10% of draft

Masters of deep draft vessels are advised that speed reductions may be necessary while in Torres Strait.

Tide Gauges: Radio-transmitted tide gauges for Booby Island, Goods Island, Turtle Head and Ince Point are broadcast on VHF Channel 88. These gauges can be monitored throughout a vessel's transit to ensure an adequate UKC is maintained.

The tidal information in Torres Strait is continuously recorded and periodically updated. Check hydrographic surveys are also periodically carried out by the Royal Australian Navy Hydrographic Service.

TO ORDER A PILOT:
TORRES STRAIT:
SOUTH AND EAST BOUND via Inner Route or Great North East Channel: Five days before arrival, contact Australian Reef Pilots (Telex AA140003 BRISBANE, answerback REEFS, or cable 4BREEFS BRISBANE), giving ETA, boarding ground required (Booby or Goods Island), maximum draft, destination and required pilot disembarking place (if different from destination).

24 hours and 6 hours before arrival, confirm ETA to telex AA48822 THURSDAY ISLAND (answerback TORIND), or cable 4ITORIND THURSDAY ISLAND. Advise Torind if the vessel has sufficient clearance (minimum 20.9 m.) to enable a helicopter to land.

Three hours before arrival at Booby Island, or 2 hours before arrival at Goods Island, confirm ETA to "REEF PILOTS" on VHF Channel 20.

NOTE 1: Ships using direct ship-to-shore telex should note that the telex machine at the Pilot Station on Thursday Island is tended only in office hours (0700 – 2000 EST). During outside hours, it is more reliable to cable 4ITORIND.

NOTE 2: Masters should keep in mind when advising changes in ETA that pilot launches are based at Thursday Island, and take 2 hours for the trip to Booby Island and one hour to Goods Island.

NOTE 3: Masters of deep draft vessels will receive a cabled reply from TORIND, advising them when predicted tidal conditions will permit a transit of Gannet/Varzin and the Prince of Wales Channel on the day of arrival.

NORTHBOUND via the Inner Route: If in an Australian port, instruct the Agent to arrange a pilot with Australian Reef Pilots, giving as much notice as possible and advising the departure port, ETD, maximum draft and destination.

If from an overseas port and requiring a pilot at any offshore pilot boarding ground, 5 days prior to arrival, advise Australian Reef Pilots of ETA at the nominated boarding ground, maximum draft and destination.

WESTBOUND via Great North East Channel: Five days prior to arrival at Dalrymple Island, advise Australian Reef Pilots of ETA, maximum draft and destination.

HYDROGRAPHERS PASSAGE (See also HAY POINT):
Four days prior to arrival at Blossom Bank, advise Australian Reef Pilots of ETA, maximum draft, destination, and confirm suitability for land-on helicopter transfer.

24 hours and 6 hours prior to arrival, advise Telex AA 146023, answerback REEFS, or cable 4MREEFS MACKAY (via Townsville Radio, VIT) confirming or amending the ETA.

PALM PASSAGE:
Five days prior to arrival at Pith Reef, advise Australian Reef Pilots of ETA, maximum draft and destination.

This initial message will be acknowledged by Australian Reef Pilots. Masters will be advised of future ETA update requirements.

GRAFTON PASSAGE:
Five days prior to arrival at Euston Reef, advise Australian Reef Pilots of ETA, maximum draft and destination.

This initial message will be acknowledged by Australian Reef Pilots.

24 hours and 6 hours before arrival, confirm ETA to 4CREEFS CAIRNS or telex 146120 REEFS.

COMMUNICATIONS:
TELEX AND RADIO MESSAGES: All ETAs should be given in Eastern Standard Time (GMT + 10 hours). Queensland, unlike other Australian States, has no Summer Time.

All initial messages addressed to Australian Reef Pilots office will be acknowledged. Masters will be advised of future ETA update requirements.

VHF: The standard VHF radio call-sign for Australian Reef Pilots in all areas is "REEF PILOTS".
Calling/working channels:

Torres Strait	Channel 20 calling and working (long range VHF).
Cairns/Grafton Passage	Channel 20 calling and working (long range VHF).
Palm Passage	Channel 16 calling, Channel 12 working.
Hydrographers Passage	Channel 16 calling, Channel 9 working.
Bailey Island, Penrith Island	Channel 16 calling, Channel 9 working.
Dalrymple Island (GNEC)	Channel 20 calling and working (long range VHF).

INTERNATIONAL RADIO WATCH HOURS: All vessels are requested to maintain International Radio Watch hours when between Carpentaria Light Vessel and Gubbins Reef in the Inner Route or Bramble Cay in the Great North East Channel (see AUS N.M. 415/1975). A continuous VHF watch on Channel 16 should be maintained over the same area in accordance with the SOLAS 74 Requirements (Chapter IV Reg. 8, as amended 1981).

REFERENCES: Australia Pilot, Vol 3, (NP15), and Annual Australian Notices to Mariners, No. 22, 23 and 24.

SHIPMASTER'S REPORT: August 1995.
Pilot's Report following Anchorages:
Eastern side – Prince of Wales Channel: Lat. 10° 32.0' S., Long. 142° 31.5' E. Depth 17.0 m.
Western side – Prince of Wales Channel: Lat. 10° 33.5' S., Long. 142° 04.0' E. Depth 12.0 m.
References: Charts AUS No. 292/296 respectively.
Pilots also report following facilities on Thursday Island:

1. Good medical facilities, evacuation either by helicopter or pilot launch. For more extensive treatment, patients sent by Flying Doctor Service to Cairns.
2. Mail, air freight, limited stores can be arranged by pilot boat/helicopter.
3. Immigration facilities/Customs facilities on Thursday Island. If necessary, urgent crew/Superintendent joiners/leavers via launch/helicopter.

Regular service flights between Cairns/Thursday Island.

Thursday Island is the Northern Administrative Headquarters for the Federal and Queensland Governments for Cape York area.

AUTHORITY: Australian Reef Pilots Ltd., Suite 14, 2 Argyle Street, Breakfast Creek, Qld 4010, Australia. (Postal address: P.O.Box 338, Albion, Qld 4010, Australia). *Tel:* (07) 3262-4600. *Telex:* AA140003, answerback REEFS. *Cables:* 4BREEFS BRISBANE. *FAX:* (Free) 61-1800-641587. *Email:* 100253.1553@compuserve.com *Contact:* Ken Casey, General Manager, after hours mobile (018) 781-602.

2. Queensland Coastal Pilot Service Pty. Ltd. (QCPS).

PILOTAGE SERVICES: Licensed pilots of the Queensland Coastal Pilot Service are available for Torres Strait, the Inner Route of the Great Barrier Reef, the Great North East Channel and the reef entrances at Hydrographers Passage, Palm Passage and Grafton Passage.

In addition, Pilots of the Queensland Coastal Pilot Service are available for pilotage in Papua New Guinea waters (including ports of Daru, Umuda and to and from the Kumul Offshore loading facility) and also Clarence and Dundas Straits near Darwin by arrangement with the Service Operations Office in Brisbane.

Pilotage is compulsory for all vessels 70 m. or more in overall length and all loaded oil tankers, chemical tankers and liquified gas carriers, regardless of length, for the Inner Route of the Great Barrier Reef, between Cape York (Lat. 10° 41' S.) and Cairns Roads (Lat. 16° 40' S.) or when passing through Hydrographer's Passage (off Hay Point/Mackay).

The IMO Recommendation - Resolution A619(15) - covering pilotage in Torres Strait and Great North East Channel still applies until a revised resolution is ratified.

AUSTRALIAN GOVERNMENT RECOMMENDATION ON PILOTAGE: The attention of Masters is also drawn to an additional recommendation by the Australian Government that Masters unfamiliar with the other areas of the Great Barrier Reef, outside the compulsory and IMO recommended areas, should also engage the services of a Pilot.

BOARDING STATIONS:

TORRES STRAIT:

Booby Island	Lat. 10° 36′ S., Long. 142° 50′ E. – 24 hour launch.
Goods Island	Lat. 10° 34′ S., Long. 142° 06′ E. – 24 hour launch.

QUEENSLAND COAST:

In any port or at the following offshore stations:

Brisbane	Pt. Cartwright – Lat. 26° 43′ S., Long. 153° 11′ E. – 24 hour launch.
Gladstone*	North Point – Lat. 23° 44′ S., Long. 151° 22′ E. – 24 hour launch or land-on helicopter.
Whitsunday Region	Edward Island – Lat. 20° 12′ S., Long. 149° 14′ E. – Land-on helicopter.
Cairns*	Cairns Fairway – Lat. 16° 50′ S., Long. 145° 50′ E. – 24 hour launch or land-on helicopter.

Note: Masters of ships transiting the Inner Route to or from New Zealand or Southern Australian ports are advised that a facility now exists to board and land pilots by helicopter off Edward Island in the Whitsunday Region (see above). The boarding ground lies on the direct track outside the Whitsunday Passage and involves no deviation.

BARRIER REEF ENTRANCES:

Hydrographers Passage	Blossom Bank – Lat. 19° 43′ S., Long. 150° 26′ E. – Land-on helicopter.
Palm Passage	Pith Reef – Lat. 18° 13′ S., Long. 147° 07′ E. – Land-on helicopter.
Grafton Passage	Euston Reef – Lat. 16° 39′ S., Long. 146° 14′ E. – 24 hour launch.

GREAT NORTH EAST CHANNEL:

Stephens Island	Lat. 9° 22′ S., Long. 143° 39′ E. – 24 hour launch.
Umuda Island	Pilots can be retained to assist with berthing at the floating storage vessel.

ANY OTHER PLACE:

By arrangement with the Brisbane office.

PILOT TRANSFER METHOD: Pilot transfers are conducted by launch in all areas except Hydrographers Passage (Blossom Bank), Whitsunday (Edward Island) and at Palm Passage (Pith Reef) where a daylight only, land-on helicopters are used. Vessels unable to accept a land-on helicopter are advised that a launch service is available at Euston Reef (Grafton Passage).

In other boarding areas, and subject to aircraft availability and the suitability of the ship, transfers by land-on helicopters may be possible and Masters should request this service when ordering a pilot through the Brisbane office.

MAXIMUM DRAFT AND UNDER-KEEL CLEARANCE: The Queensland Coastal Pilot Service will accept for pilotage through)Torres Strait, the Inner Route – South of Cape Flattery and Great North East Channel ships with a maximum draft of 12.2 m. as directed by the Australian Maritime Safety Authority (AMSA) acting on behalf of the Australian Government.

GANNET AND VARZIN PASSAGES (BOOBY ISLAND) & PRINCE OF WALES CHANNEL: Gannet and Varzin Passages and the Prince of Wales Channel, as the main tidally restricted areas, control the passage of deep draft vessels. Throughout this area, which extends for some 30 miles from Gannet and Varzin Passages, through the Prince of Wales Channel and to the Herald Patches Buoy, the following minimum Under Keel Clearances (UKCs) apply:

Drafts	*Gannet and Varzin Passages*	*P.O.W. Channel*
up to 11.90 m.	1.0 m.	1.0 m.
11.90 m. up to 12.2 m.	1.0 m.	10% of draft

Masters of deep draft vessels are advised that speed reductions may be necessary while transiting Torres Strait.

Tide Gauges: Radio-transmitted tide gauges operate from Booby Island, Goods Island, Turtle Head and Ince Point. These gauges can be monitored throught a vessel's transit to ensure an adequate UKC is maintained.

The tidal information in Torres Strait is continuously recorded and periodically updated. Check Hydrographic Surveys are also periodically carried out by the Royal Australian Navy Hydrographic Service.

Advice about any increase in maximum draft will be promulgated in Notices to Mariners and other nautical publications.

TO ORDER A PILOT:

TORRES STRAIT:

South and East Bound – Torres Strait and Inner Route:

Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Booby Is. or Goods Is. – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to "4ITORRES THURSDAY ISLAND" by cable or Telex AA148048 (answerback TORRES).

Masters should keep in mind when advising of any changes in ETA that pilot launches are based at Thursday Island and take approximately 2 hours for the passage to Booby Island and one hour to Goods Island.

Masters of deep draft vessels will receive advice from 4ITORRES advising them when predicted tidal conditions will permit a transit of Gannet and Varzin Passages and the Prince of Wales Channel on the day of arrival.

North and Westbound – Torres Strait & Inner Route: Departing Australian Port – request Agent to advise "4BTORRES BRISBANE" of pilotage requirements allowing as much notice as possible.

Advise:

Departure port and ETD.

Maximum draft.

Pilot disembarkation point.

Entering Pilotage Area from overseas – advise "4BTORRES BRISBANE" 4 to 5 days in advance by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA at nominated boarding ground – LT = UTC + 10 hours.

Maximum draft.

Pilot disembarkation point.

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

Westbound via Great North East Channel: Five days prior to arrival off Basilisk Beacon advise the Brisbane office of ETA, maximum draft and destination.

24 hours and 6 hours prior to arrival at Basilisk Beacon confirm ETA to HARBOURS, Telex NE22243 (Papua New Guinea Harbours Board).

HYDROGRAPHERS PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Blossom Bank – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to either Telex AA146085 (answerback HELIJET) or by cable to "4MTORRES MACKAY" through Townsville Radio or Perth Radio.

GRAFTON PASSAGE/PALM PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Euston Reef/Pith Reef – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

This message will be acknowledged by Brisbane office and Masters will be advised of future ETA update requirements.

COMMUNICATIONS:

RADIO MESSAGES: ETAs should be given in UTC/GMT/Z and indicated in message.

All messages to 4BTORRES will be acknowledged.

VHF: Pilot launches and helicopters used by the Service keep a listening watch on Channel 16 when on station. In the Cairns area the Service maintains a long-range VHF watch on Channel 79. At Hydrographers Passage ships will be asked to change to Channel 9 after initial contact is made on Channel 16.

The call sign for Service launches and helicopters is "Coast Pilots".

Vessels approaching Torres Strait from the West should make contact on Channel 16/79 with the Thursday Island base Pilot Station 2 hours prior to reaching the Pilot Boarding Ground. Channel 79 has extended range and if no contact has been made on this channel, "Coast Pilots" should be called on Channel 16.

INTERNATIONAL RADIO WATCH HOURS: All vessels are requested to maintain International Radio Watch hours when between Carpentaria Light Vessel and Gubbins Reef in the Inner Route or Bramble Cay in the Great North East Channel, (see Australian Notice to Mariners No. 415/1975). A continuous VHF watch on Channel 16 should be maintained over the same area in accordance with the SOLAS 74 requirements (Chapter IV Reg. 8, as amended 1981).

Australian Notices to Mariners Nos. 138/1970, 415/1975, 37/1978.

Australian Annual Notice to Mariners Nos. 22 and 23.

NOTICE: Dated 1st February 1996.

Notice to Ship Operators and Owners

Pilotage in the Great North East Channel

All vessels proceeding from South East Asian ports or Suez via the Torres Strait to ports in the South West Pacific must either transit the Inner Route (inside the Great Barrier Reef) or alternatively via the Great North East Channel (GNEC).

We are pleased to announce the establishment of a new service with a Pilot Boarding Ground (PBG) North of Stephens Island close to the North Eastern boundary of the IMO and Australian Government recommended pilotage area at Bramble Cay.

The new PBG is on:

Stephens Island PBG Lat. 9° 22′ S., Long. 143° 39′ E.

Previously pilotage has only been available from near Dalrymple Island, which is more than 20 miles to the South West and within the recommended pilotage area. The new PBG is well clear of all charted obstructions with extensive sea room for pilot transfers. It is positioned on the boundary of the Australian Economic Exclusion Zone.

The location of the new PBG will ensure that vessels will be able to complete the full transit of Torres Strait and GNEC under the advice of an AMSA licensed pilot. Vessels entering the GNEC Westbound from Bligh Entrance will be able to avoid significant course alterations prior to pilot boarding.

Our pilotage services to and from Port Moresby and the Umuda/Ok Tedi storage vessel will continue to be available.

Signed: Operations Manager.

SHIPMASTER'S REPORT: August 1992.

Vessel on passage from Whangarei to Singapore.

Quote:

Pilots advise change in boarding area to Dalrymple Island. No longer necessary to call off Port Moresby. This cuts pilot on board distance by about 180 miles.

Unquote.

Editor's Note:

Vessels transiting the Great North East Channel are advised that IMO Resolution A711(17) (Use of Pilotage Services in the Torres Strait and the Great North East Channel) designates the extremity of the recommended area as Bramble Cay (9° 09′ S., 143° 53′ E.), which is 40 miles beyond the present Pilotage Boarding Ground off Dalrymple Island.

SHIPMASTER'S REPORT: December 1993 (Updated 1996).

Torres Strait Pilot Associations:

On this occasion (loaded passage from Kumul to Dalian), we were instructed to sail via Torres Strait.

Torres Pilot of the Queensland Coastal Pilot Service boarded at Kumul during final stage of loading on December 2nd and left vessel off Booby Island on December 3rd at 1506 hrs.

Nomination: On this occasion I selected "Torres Strait Brisbane", merely guided by the "Guide". The given information herein was in line with my experience earlier this year (April), when we also passed through Torres Strait.

We sent our initial telex to "Torres Brisbane", copied to the old telex number of Thursday Island Pilots, unaware of the present situation of two competitive Pilot Associations covering the same area. However, within one hour I knew there were now two Associations.

I then nominated Coastal Pilots as their pilot could join the vessel at Kumul. Two reasons for that decision, the weather was not very favourable in the area, and having a pilot already on board saves up to one hour, as you can now pass Dalrymple Island at full speed, no slacking down, etc.

Performance: In my opinion, both Pilot Associations will perform equally. They are the same pilots as in earlier days, only they split themselves on July 1st 1993.

Coastal Pilots kept the Brisbane Office with the telex number, and have kept their relations with agencies.

Reef Pilots kept the launches in Torres Strait and the old telex numbers, but severed connections with agencies.

Passages: For most passages through Torres Strait, Barrier Reef and Great North East Channel, both Associations can be used.

Exception: When using Great North East Channel and Torres Strait coming from the East, Coastal Pilots do not (yet) have launch facilities at Dalrymple Island, and pilots have to board off Port Moresby (See Notice dated 1st February 1996 which supersedes these remarks).

When coming from New Zealand, there is no deviation, only that the pilot is on board for an extra 180 miles. However, coming from the South (Australia/Tasmania), ships have to deviate.

In this case, ships normally will use "Reef Pilots", as they have the launch facilities at Dalrymple Island.

The same applies for the other way, when "Reef Pilots" can leave at Stephens Island, while "Coastal Pilots" have to disembark off Port Moresby.

According to our pilot, there are plans (maybe vague ones), that in near future "Coastal Pilots" will also have launch facilities off Stephens Island.

Up to now, Masters are not coerced into traversing the Great N.E. Channel without a pilot as "Reef Pilots" are available.

Also see "Shipmaster's Report" in section above.

AUTHORITY: Queensland Coastal Pilot Service Pty. Ltd., Brisbane Operations Office, 13th Floor, Dalgety House, 145 Eagle Street, Brisbane, Australia. (Postal address: GPO Box 209, Brisbane, Qld 4001, Australia). *Tel:* 61-7-38395144. *Telex:* AA140222. *Cables:* 4BTORRES. *FAX:* 61-7-38395242. *After Hours Contact:* Perry Sutton, Tel: 61-7-33991478. Iain Steverson, Tel: 61-7-32632642.

TOWNSVILLE, Queensland: 19.15 S. 146.50 E.

(See Plan)

PORT LIMITS: *Jurisdiction:* The Townsville Port Authority exercises jurisdiction over the Port of Townsville.

Commencing at the HW mark at the most Northern extremity of Cape Cleveland, thence by a line to a point Lat. 19° 05′ 30″ S., Long. 146° 52′ E., thence by a line due Westward to 146° 45′ E., thence by a line due South to HW mark at a point on the mainland, thence by HW mark to the point of commencement and including all navigable rivers communicating with that area and the banks and shores and foreshores thereof.

The Harbour Master, representing the Department of Harbours and Marine, controls the movement of vessels within the port area whilst the allocation of berths and moorings is controlled by the Port Authority.

APPROACHES: The approach to Cleveland Bay from the Southward is clear of dangers, with the exception of Salamander Reef, the Four-foot Rock, and the Twenty-foot Rock, all these lying within a radius of 3 miles of Cape Cleveland Lighthouse.

To clear these dangers, passing North of them bring Mount Marlow in transit with the extremity of Hawkings Point, bearing 265° (258° Mag.) before approaching within 5 miles of Cape Cleveland, which will then bear 252° (245° Mag.). Proceeding into Cleveland Bay a depth of not less than 8.2 m. will be obtained by keeping North of the line Mount Marlow in line with Hawkings Point.

Approaching Cleveland Bay from the Northward, passing East of Magnetic Island a vessel should keep at least half a mile off Magnetic Island shore to obtain not less than 11 m. of water at LWOST. The shore is steep to except for Orchard Rocks off the N.E. extremity of the island.

There is good holding ground everywhere in Cleveland Bay and vessels awaiting Pilot should anchor according to draft and as close to the Fairway Beacons as possible.

ENTRANCE CHANNELS: Depth in the 92 m. wide entrance channels, which are marked by pairs of lighted beacons, is 11.7 m. at LAT (subject to change).

The Sea Channel is 1.75 miles in length and Platypus Channel 3.5 miles; the channels alter in direction at Beacons No. 6 and No. 7. For detailed information see Queensland Sailing Directions.

DOCUMENTS: *Customs:*

3 Crew Lists – Form M & S–11.
3 Passenger Lists, if applicable.
3 Lists of Ports of Call.
1 Form 42A – Ship's Stores.
1 Form 5 – Articles Owned by or in the possession of Master, Officers and Crew.
1 Form QA4 – Quarantine Notice.
2 Forms QA5 – Quarantine Shipmaster's Bond.
2 Inward Manifests.
1 Bill of Lading.
1 Form 40 – Application for Clearance and Guarantee to Pay Duty.

PILOTAGE: Pilotage is available 24 hours a day, 7 days a week, subject to notice.

Unless a Master is the holder of a Current Certificate of Exemption, pilotage is compulsory and vessels requiring the service should cable draft and probable time of arrival to their Agent, or to the Regional Harbour Master, Townsville, from their last port of departure, or advise by radio at least 24 hours before arrival (Telex: Hartow 47124; Fax: (077) 212028).

The pilot vessel is equipped with VHF Radio, having international frequencies 16 and 67 and all working frequencies.

Vessels will be advised by VHF radio which boarding ground is to be used. Generally, vessels with drafts greater than 8.0 m. will only use Pilot Boarding Ground Alpha (A).

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait, and also Palm Passage, is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

ANCHORAGES: Boundaries: Orchard Rocks/Cape Cleveland. Cleveland Bay Depths 8.2 m. to 12.2 m.

RESTRICTIONS: *Under-Keel Clearance:*

Dead Weight Tonnage	*Under-Keel Clearance*	
	Sea & Platypus Channel	*Channel Inner Harbour*
Up to 40,000 tonnes	0.90 m.	0.60 m.
40,000 – 50,000 tonnes	1.10 m.	0.90 m.
Over 50,000 tonnes	1.30 m.	0.90 m.

Vessels alongside every berth in the port are required to remain afloat at all time with a minimum clearance of 0.30 m.

For vessels arriving in the ballast condition, the forward draft must be not less than 2% of the vessel's overall length and the after draft propeller fully immersed.

Harbour Depths at L.A.T.:

Sea Channel	11.7 m.
Platypus Channel	11.7 m.
Deep Draft Swing Basin, to Berths 1, 2 and 3	11.7 m.
*No. 1 (Tanker) Berth	11.5 m.
*No. 2 Berth	12.1 m.
*No. 3 (Portainer Crane only) Berth	12.4 m.
No. 3 (including Ro-Ro) Berth	12.4 m.
*No. 4 (General Cargo and Ro-Ro) Berth	9.9 m.
*No. 7 (Minerals) Berth	10.7 m.
*No. 8 (Freezer) Berth	10.1 m.
*No. 9 (Bulk Sugar Gantry) Shed	12.2 m.
No. 10 (Container/Ro-Ro Berth)	9.5 m.
Between Nos. 4 and 6 (77 m.)	10.4 m.
Between Nos. 7 and 8 (84 m.)	11.3 m.
Between Nos. 9 and 10 (142 m.)	11.9 m.

* Depths at 4.5 m. off fender piles.

HEALTH: *Pratique:* Townsville is a First Port of Entry and notification of quarantine inspection. Requirements should be made not more than 24 hours nor less than 12 hours in advance. Inspections may be carried out at all hours at the wharf or at the quarantine anchorage, at the discretion of the Quarantine Officer. Rat guards are to be maintained on all mooring lines while vessels are berthed in the Townsville Harbour.

MAX. SIZE:

Berth No.	*Length*	*Max. Length of Vessel*	*Wharf Deck at L.A.T.*
1	270 m.	238 m.	5.46 m.
2	254 m.	238 m.	6.07 m.
3	254 m.	238 m.	6.07 m.
3	Ro/Ro pad	—	5.09 m.
4	228 m.	200 m.	5.46 m.
4	Ro/Ro pad	—	5.09 m.
6	122 m.	160 m.	5.37 m.
7	183 m.	180 m.	5.37 m.
8	213 m.	205 m.	5.77 m.
9	228 m.	238 m.	5.77 m.
10	160 m.	152 m.	5.27 m.

The maximum length of a vessel entering No. 4 Berth is 220 m., but only on condition that any vessel berthed at No. 3 Berth is *not* closer inshore than the 360 metre mark (See "Appendix").

BOARDING STATIONS:

TORRES STRAIT:

Booby Island	Lat. 10° 36′ S., Long. 142° 50′ E. – 24 hour launch.
Goods Island	Lat. 10° 34′ S., Long. 142° 06′ E. – 24 hour launch.

QUEENSLAND COAST:

In any port or at the following offshore stations:

Brisbane	Pt. Cartwright – Lat. 26° 43′ S., Long. 153° 11′ E. – 24 hour launch.
Gladstone*	North Point – Lat. 23° 44′ S., Long. 151° 22′ E. – 24 hour launch or land-on helicopter.
Whitsunday Region	Edward Island – Lat. 20° 12′ S., Long. 149° 14′ E. – Land-on helicopter.
Cairns*	Cairns Fairway – Lat. 16° 50′ S., Long. 145° 50′ E. – 24 hour launch or land-on helicopter.

Note: Masters of ships transiting the Inner Route to or from New Zealand or Southern Australian ports are advised that a facility now exists to board and land pilots by helicopter off Edward Island in the Whitsunday Region (see above). The boarding ground lies on the direct track outside the Whitsunday Passage and involves no deviation.

BARRIER REEF ENTRANCES:

Hydrographers Passage	Blossom Bank – Lat. 19° 43′ S., Long. 150° 26′ E. – Land-on helicopter.
Palm Passage	Pith Reef – Lat. 18° 13′ S., Long. 147° 07′ E. – Land-on helicopter.
Grafton Passage	Euston Reef – Lat. 16° 39′ S., Long. 146° 14′ E. – 24 hour launch.

GREAT NORTH EAST CHANNEL:

Stephens Island	Lat. 9° 22′ S., Long. 143° 39′ E. – 24 hour launch.
Umuda Island	Pilots can be retained to assist with berthing at the floating storage vessel.

ANY OTHER PLACE:

By arrangement with the Brisbane office.

PILOT TRANSFER METHOD: Pilot transfers are conducted by launch in all areas except Hydrographers Passage (Blossom Bank), Whitsunday (Edward Island) and at Palm Passage (Pith Reef) where a daylight only, land-on helicopters are used. Vessels unable to accept a land-on helicopter are advised that a launch service is available at Euston Reef (Grafton Passage).

In other boarding areas, and subject to aircraft availability and the suitability of the ship, transfers by land-on helicopters may be possible and Masters should request this service when ordering a pilot through the Brisbane office.

MAXIMUM DRAFT AND UNDER-KEEL CLEARANCE: The Queensland Coastal Pilot Service will accept for pilotage through Torres Strait, the Inner Route – South of Cape Flattery and Great North East Channel ships with a maximum draft of 12.2 m. as directed by the Australian Maritime Safety Authority (AMSA) acting on behalf of the Australian Government.

GANNET AND VARZIN PASSAGES (BOOBY ISLAND) & PRINCE OF WALES CHANNEL: Gannet and Varzin Passages and the Prince of Wales Channel, as the main tidally restricted areas, control the passage of deep draft vessels. Throughout this area, which extends for some 30 miles from Gannet and Varzin Passages, through the Prince of Wales Channel and to the Herald Patches Buoy, the following minimum Under Keel Clearances (UKCs) apply:

Drafts	*Gannet and Varzin Passages*	*P.O.W. Channel*
up to 11.90 m.	1.0 m.	1.0 m.
11.90 m. up to 12.2 m.	1.0 m.	10% of draft

Masters of deep draft vessels are advised that speed reductions may be necessary while transiting Torres Strait.

Tide Gauges: Radio-transmitted tide gauges operate from Booby Island, Goods Island, Turtle Head and Ince Point. These gauges can be monitored throught a vessel's transit to ensure an adequate UKC is maintained.

The tidal information in Torres Strait is continuously recorded and periodically updated. Check Hydrographic Surveys are also periodically carried out by the Royal Australian Navy Hydrographic Service.

Advice about any increase in maximum draft will be promulgated in Notices to Mariners and other nautical publications.

TO ORDER A PILOT:

TORRES STRAIT:

South and East Bound – Torres Strait and Inner Route:

Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Booby Is. or Goods Is. – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to "4ITORRES THURSDAY ISLAND" by cable or Telex AA148048 (answerback TORRES).

Masters should keep in mind when advising of any changes in ETA that pilot launches are based at Thursday Island and take approximately 2 hours for the passage to Booby Island and one hour to Goods Island.

Masters of deep draft vessels will receive advice from 4ITORRES advising them when predicted tidal conditions will permit a transit of Gannet and Varzin Passages and the Prince of Wales Channel on the day of arrival.

North and Westbound – Torres Strait & Inner Route: Departing Australian Port – request Agent to advise "4BTORRES BRISBANE" of pilotage requirements allowing as much notice as possible.

Advise:

Departure port and ETD.

Maximum draft.

Pilot disembarkation point.

Entering Pilotage Area from overseas – advise "4BTORRES BRISBANE" 4 to 5 days in advance by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA at nominated boarding ground – LT = UTC + 10 hours.

Maximum draft.

Pilot disembarkation point.

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

Westbound via Great North East Channel: Five days prior to arrival off Basilisk Beacon advise the Brisbane office of ETA, maximum draft and destination.

24 hours and 6 hours prior to arrival at Basilisk Beacon confirm ETA to HARBOURS, Telex NE22243 (Papua New Guinea Harbours Board).

HYDROGRAPHERS PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Blossom Bank – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to either Telex AA146085 (answerback HELIJET) or by cable to "4MTORRES MACKAY" through Townsville Radio or Perth Radio.

GRAFTON PASSAGE/PALM PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Euston Reef/Pith Reef – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

This message will be acknowledged by Brisbane office and Masters will be advised of future ETA update requirements.

COMMUNICATIONS:

RADIO MESSAGES: ETAs should be given in UTC/GMT/Z and indicated in message.

All messages to 4BTORRES will be acknowledged.

VHF: Pilot launches and helicopters used by the Service keep a listening watch on Channel 16 when on station. In the Cairns area the Service maintains a long-range VHF watch on Channel 79. At Hydrographers Passage ships will be asked to change to Channel 9 after initial contact is made on Channel 16.

The call sign for Service launches and helicopters is "Coast Pilots".

Vessels approaching Torres Strait from the West should make contact on Channel 16/79 with the Thursday Island base Pilot Station 2 hours prior to reaching the Pilot Boarding Ground. Channel 79 has extended range and if no contact has been made on this channel, "Coast Pilots" should be called on Channel 16.

INTERNATIONAL RADIO WATCH HOURS: All vessels are requested to maintain International Radio Watch hours when between Carpentaria Light Vessel and Gubbins Reef in the Inner Route or Bramble Cay in the Great North East Channel, (see Australian Notice to Mariners No. 415/1975). A continuous VHF watch on Channel 16 should be maintained over the same area in accordance with the SOLAS 74 requirements (Chapter IV Reg. 8, as amended 1981).

Australian Notices to Mariners Nos. 138/1970, 415/1975, 37/1978.

Australian Annual Notice to Mariners Nos. 22 and 23.

NOTICE: Dated 1st February 1996.

Notice to Ship Operators and Owners

Pilotage in the Great North East Channel

All vessels proceeding from South East Asian ports or Suez via the Torres Strait to ports in the South West Pacific must either transit the Inner Route (inside the Great Barrier Reef) or alternatively via the Great North East Channel (GNEC).

We are pleased to announce the establishment of a new service with a Pilot Boarding Ground (PBG) North of Stephens Island close to the North Eastern boundary of the IMO and Australian Government recommended pilotage area at Bramble Cay.

The new PBG is on:

Stephens Island PBG Lat. 9° 22′ S., Long. 143° 39′ E.

Previously pilotage has only been available from near Dalrymple Island, which is more than 20 miles to the South West and within the recommended pilotage area. The new PBG is well clear of all charted obstructions with extensive sea room for pilot transfers. It is positioned on the boundary of the Australian Economic Exclusion Zone.

The location of the new PBG will ensure that vessels will be able to complete the full transit of Torres Strait and GNEC under the advice of an AMSA licensed pilot. Vessels entering the GNEC Westbound from Bligh Entrance will be able to avoid significant course alterations prior to pilot boarding.

Our pilotage services to and from Port Moresby and the Umuda/Ok Tedi storage vessel will continue to be available.

Signed: Operations Manager.

SHIPMASTER'S REPORT: August 1992.

Vessel on passage from Whangarei to Singapore.

Quote:

Pilots advise change in boarding area to Dalrymple Island. No longer necessary to call off Port Moresby. This cuts pilot on board distance by about 180 miles.

Unquote.

Editor's Note:

Vessels transiting the Great North East Channel are advised that IMO Resolution A711(17) (Use of Pilotage Services in the Torres Strait and the Great North East Channel) designates the extremity of the recommended area as Bramble Cay (9° 09′ S., 143° 53′ E.), which is 40 miles beyond the present Pilotage Boarding Ground off Dalrymple Island.

SHIPMASTER'S REPORT: December 1993 (Updated 1996).

Torres Strait Pilot Associations:

On this occasion (loaded passage from Kumul to Dalian), we were instructed to sail via Torres Strait.

Torres Pilot of the Queensland Coastal Pilot Service boarded at Kumul during final stage of loading on December 2nd and left vessel off Booby Island on December 3rd at 1506 hrs.

Nomination: On this occasion I selected "Torres Strait Brisbane", merely guided by the "Guide". The given information herein was in line with my experience earlier this year (April), when we also passed through Torres Strait.

We sent our initial telex to "Torres Brisbane", copied to the old telex number of Thursday Island Pilots, unaware of the present situation of two competitive Pilot Associations covering the same area. However, within one hour I knew there were now two Associations.

I then nominated Coastal Pilots as their pilot could join the vessel at Kumul. Two reasons for that decision, the weather was not very favourable in the area, and having a pilot already on board saves up to one hour, as you can now pass Dalrymple Island at full speed, no slacking down, etc.

Performance: In my opinion, both Pilot Associations will perform equally. They are the same pilots as in earlier days, only they split themselves on July 1st 1993.

Coastal Pilots kept the Brisbane Office with the telex number, and have kept their relations with agencies.

Reef Pilots kept the launches in Torres Strait and the old telex numbers, but severed connections with agencies.

Passages: For most passages through Torres Strait, Barrier Reef and Great North East Channel, both Associations can be used.

Exception: When using Great North East Channel and Torres Strait coming from the East, Coastal Pilots do not (yet) have launch facilities at Dalrymple Island, and pilots have to board off Port Moresby (See Notice dated 1st February 1996 which supersedes these remarks).

When coming from New Zealand, there is no deviation, only that the pilot is on board for an extra 180 miles. However, coming from the South (Australia/Tasmania), ships have to deviate.

In this case, ships normally will use "Reef Pilots", as they have the launch facilities at Dalrymple Island.

The same applies for the other way, when "Reef Pilots" can leave at Stephens Island, while "Coastal Pilots" have to disembark off Port Moresby.

According to our pilot, there are plans (maybe vague ones), that in near future "Coastal Pilots" will also have launch facilities off Stephens Island.

Up to now, Masters are not coerced into traversing the Great N.E. Channel without a pilot as "Reef Pilots" are available.

Also see "Shipmaster's Report" in section above.

AUTHORITY: Queensland Coastal Pilot Service Pty. Ltd., Brisbane Operations Office, 13th Floor, Dalgety House, 145 Eagle Street, Brisbane, Australia. (Postal address: GPO Box 209, Brisbane, Qld 4001, Australia). *Tel:* 61-7-38395144. *Telex:* AA140222. *Cables:* 4BTORRES. *FAX:* 61-7-38395242. *After Hours Contact:* Perry Sutton, Tel: 61-7-33991478. Iain Steverson, Tel: 61-7-32632642.

TOWNSVILLE, Queensland: 19.15 S. 146.50 E.

(See Plan)

PORT LIMITS: *Jurisdiction:* The Townsville Port Authority exercises jurisdiction over the Port of Townsville.

Commencing at the HW mark at the most Northern extremity of Cape Cleveland, thence by a line to a point Lat. 19° 05′ 30″ S., Long. 146° 52′ E., thence by a line due Westward to 146° 45′ E., thence by a line due South to HW mark at a point on the mainland, thence by HW mark to the point of commencement and including all navigable rivers communicating with that area and the banks and shores and foreshores thereof.

The Harbour Master, representing the Department of Harbours and Marine, controls the movement of vessels within the port area whilst the allocation of berths and moorings is controlled by the Port Authority.

APPROACHES: The approach to Cleveland Bay from the Southward is clear of dangers, with the exception of Salamander Reef, the Four-foot Rock, and the Twenty-foot Rock, all these lying within a radius of 3 miles of Cape Cleveland Lighthouse.

To clear these dangers, passing North of them bring Mount Marlow in transit with the extremity of Hawkings Point, bearing 265° (258° Mag.) before approaching within 5 miles of Cape Cleveland, which will then bear 252° (245° Mag.). Proceeding into Cleveland Bay a depth of not less than 8.2 m. will be obtained by keeping North of the line Mount Marlow in line with Hawkings Point.

Approaching Cleveland Bay from the Northward, passing East of Magnetic Island a vessel should keep at least half a mile off Magnetic Island shore to obtain not less than 11 m. of water at LWOST. The shore is steep to except for Orchard Rocks off the N.E. extremity of the island.

There is good holding ground everywhere in Cleveland Bay and vessels awaiting Pilot should anchor according to draft and as close to the Fairway Beacons as possible.

ENTRANCE CHANNELS: Depth in the 92 m. wide entrance channels, which are marked by pairs of lighted beacons, is 11.7 m. at LAT (subject to change).

The Sea Channel is 1.75 miles in length and Platypus Channel 3.5 miles; the channels alter in direction at Beacons No. 6 and No. 7. For detailed information see Queensland Sailing Directions.

DOCUMENTS: *Customs:*

3 Crew Lists – Form M & S–11.
3 Passenger Lists, if applicable.
3 Lists of Ports of Call.
1 Form 42A – Ship's Stores.
1 Form 5 – Articles Owned by or in the possession of Master, Officers and Crew.
1 Form QA4 – Quarantine Notice.
2 Forms QA5 – Quarantine Shipmaster's Bond.
2 Inward Manifests.
1 Bill of Lading.
1 Form 40 – Application for Clearance and Guarantee to Pay Duty.

PILOTAGE: Pilotage is available 24 hours a day, 7 days a week, subject to notice.

Unless a Master is the holder of a Current Certificate of Exemption, pilotage is compulsory and vessels requiring the service should cable draft and probable time of arrival to their Agent, or to the Regional Harbour Master, Townsville, from their last port of departure, or advise by radio at least 24 hours before arrival (Telex: Hartow 47124; Fax: (077) 212028).

The pilot vessel is equipped with VHF Radio, having international frequencies 16 and 67 and all working frequencies.

Vessels will be advised by VHF radio which boarding ground is to be used. Generally, vessels with drafts greater than 8.0 m. will only use Pilot Boarding Ground Alpha (A).

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait, and also Palm Passage, is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

ANCHORAGES: Boundaries: Orchard Rocks/Cape Cleveland. Cleveland Bay Depths 8.2 m. to 12.2 m.

RESTRICTIONS: *Under-Keel Clearance:*

Dead Weight Tonnage	*Under-Keel Clearance*	
	Sea & Platypus Channel	*Channel Inner Harbour*
Up to 40,000 tonnes	0.90 m.	0.60 m.
40,000 – 50,000 tonnes	1.10 m.	0.90 m.
Over 50,000 tonnes	1.30 m.	0.90 m.

Vessels alongside every berth in the port are required to remain afloat at all time with a minimum clearance of 0.30 m.

For vessels arriving in the ballast condition, the forward draft must be not less than 2% of the vessel's overall length and the after draft propeller fully immersed.

Harbour Depths at L.A.T.:

Sea Channel	11.7 m.
Platypus Channel	11.7 m.
Deep Draft Swing Basin, to Berths 1, 2 and 3	11.7 m.
*No. 1 (Tanker) Berth	11.5 m.
*No. 2 Berth	12.1 m.
*No. 3 (Portainer Crane only) Berth	12.4 m.
No. 3 (including Ro-Ro) Berth	12.4 m.
*No. 4 (General Cargo and Ro-Ro) Berth	9.9 m.
*No. 7 (Minerals) Berth	10.7 m.
*No. 8 (Freezer) Berth	10.1 m.
*No. 9 (Bulk Sugar Gantry) Shed	12.2 m.
No. 10 (Container/Ro-Ro Berth)	9.5 m.
Between Nos. 4 and 6 (77 m.)	10.4 m.
Between Nos. 7 and 8 (84 m.)	11.3 m.
Between Nos. 9 and 10 (142 m.)	11.9 m.

* Depths at 4.5 m. off fender piles.

HEALTH: *Pratique:* Townsville is a First Port of Entry and notification of quarantine inspection. Requirements should be made not more than 24 hours nor less than 12 hours in advance. Inspections may be carried out at all hours at the wharf or at the quarantine anchorage, at the discretion of the Quarantine Officer. Rat guards are to be maintained on all mooring lines while vessels are berthed in the Townsville Harbour.

MAX. SIZE:

Berth No.	*Length*	*Max. Length of Vessel*	*Wharf Deck at L.A.T.*
1	270 m.	238 m.	5.46 m.
2	254 m.	238 m.	6.07 m.
3	254 m.	238 m.	6.07 m.
3	Ro/Ro pad	—	5.09 m.
4	228 m.	200 m.	5.46 m.
4	Ro/Ro pad	—	5.09 m.
6	122 m.	160 m.	5.37 m.
7	183 m.	180 m.	5.37 m.
8	213 m.	205 m.	5.77 m.
9	228 m.	238 m.	5.77 m.
10	160 m.	152 m.	5.27 m.

The maximum length of a vessel entering No. 4 Berth is 220 m., but only on condition that any vessel berthed at No. 3 Berth is *not* closer inshore than the 360 metre mark (See "Appendix").

BOARDING STATIONS:

TORRES STRAIT:

Booby Island	Lat. 10° 36′ S., Long. 142° 50′ E. – 24 hour launch.
Goods Island	Lat. 10° 34′ S., Long. 142° 06′ E. – 24 hour launch.

QUEENSLAND COAST:

In any port or at the following offshore stations:

Brisbane	Pt. Cartwright – Lat. 26° 43′ S., Long. 153° 11′ E. – 24 hour launch.
Gladstone*	North Point – Lat. 23° 44′ S., Long. 151° 22′ E. – 24 hour launch or land-on helicopter.
Whitsunday Region	Edward Island – Lat. 20° 12′ S., Long. 149° 14′ E. – Land-on helicopter.
Cairns*	Cairns Fairway – Lat. 16° 50′ S., Long. 145° 50′ E. – 24 hour launch or land-on helicopter.

Note: Masters of ships transiting the Inner Route to or from New Zealand or Southern Australian ports are advised that a facility now exists to board and land pilots by helicopter off Edward Island in the Whitsunday Region (see above). The boarding ground lies on the direct track outside the Whitsunday Passage and involves no deviation.

BARRIER REEF ENTRANCES:

Hydrographers Passage	Blossom Bank – Lat. 19° 43′ S., Long. 150° 26′ E. – Land-on helicopter.
Palm Passage	Pith Reef – Lat. 18° 13′ S., Long. 147° 07′ E. – Land-on helicopter.
Grafton Passage	Euston Reef – Lat. 16° 39′ S., Long. 146° 14′ E. – 24 hour launch.

GREAT NORTH EAST CHANNEL:

Stephens Island	Lat. 9° 22′ S., Long. 143° 39′ E. – 24 hour launch.
Umuda Island	Pilots can be retained to assist with berthing at the floating storage vessel.

ANY OTHER PLACE:

By arrangement with the Brisbane office.

PILOT TRANSFER METHOD: Pilot transfers are conducted by launch in all areas except Hydrographers Passage (Blossom Bank), Whitsunday (Edward Island) and at Palm Passage (Pith Reef) where a daylight only, land-on helicopters are used. Vessels unable to accept a land-on helicopter are advised that a launch service is available at Euston Reef (Grafton Passage).

In other boarding areas, and subject to aircraft availability and the suitability of the ship, transfers by land-on helicopters may be possible and Masters should request this service when ordering a pilot through the Brisbane office.

MAXIMUM DRAFT AND UNDER-KEEL CLEARANCE: The Queensland Coastal Pilot Service will accept for pilotage through Torres Strait, the Inner Route – South of Cape Flattery and Great North East Channel ships with a maximum draft of 12.2 m. as directed by the Australian Maritime Safety Authority (AMSA) acting on behalf of the Australian Government.

GANNET AND VARZIN PASSAGES (BOOBY ISLAND) & PRINCE OF WALES CHANNEL: Gannet and Varzin Passages and the Prince of Wales Channel, as the main tidally restricted areas, control the passage of deep draft vessels. Throughout this area, which extends for some 30 miles from Gannet and Varzin Passages, through the Prince of Wales Channel and to the Herald Patches Buoy, the following minimum Under Keel Clearances (UKCs) apply:

Drafts	*Gannet and Varzin Passages*	*P.O.W. Channel*
up to 11.90 m.	1.0 m.	1.0 m.
11.90 m. up to 12.2 m.	1.0 m.	10% of draft

Masters of deep draft vessels are advised that speed reductions may be necessary while transiting Torres Strait.

Tide Gauges: Radio-transmitted tide gauges operate from Booby Island, Goods Island, Turtle Head and Ince Point. These gauges can be monitored throught a vessel's transit to ensure an adequate UKC is maintained.

The tidal information in Torres Strait is continuously recorded and periodically updated. Check Hydrographic Surveys are also periodically carried out by the Royal Australian Navy Hydrographic Service.

Advice about any increase in maximum draft will be promulgated in Notices to Mariners and other nautical publications.

TO ORDER A PILOT:

TORRES STRAIT:

South and East Bound – Torres Strait and Inner Route:

Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Booby Is. or Goods Is. – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to "4ITORRES THURSDAY ISLAND" by cable or Telex AA148048 (answerback TORRES).

Masters should keep in mind when advising of any changes in ETA that pilot launches are based at Thursday Island and take approximately 2 hours for the passage to Booby Island and one hour to Goods Island.

Masters of deep draft vessels will receive advice from 4ITORRES advising them when predicted tidal conditions will permit a transit of Gannet and Varzin Passages and the Prince of Wales Channel on the day of arrival.

North and Westbound – Torres Strait & Inner Route: Departing Australian Port – request Agent to advise "4BTORRES BRISBANE" of pilotage requirements allowing as much notice as possible.

Advise:

Departure port and ETD.

Maximum draft.

Pilot disembarkation point.

Entering Pilotage Area from overseas – advise "4BTORRES BRISBANE" 4 to 5 days in advance by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA at nominated boarding ground – LT = UTC + 10 hours.

Maximum draft.

Pilot disembarkation point.

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

Westbound via Great North East Channel: Five days prior to arrival off Basilisk Beacon advise the Brisbane office of ETA, maximum draft and destination.

24 hours and 6 hours prior to arrival at Basilisk Beacon confirm ETA to HARBOURS, Telex NE22243 (Papua New Guinea Harbours Board).

HYDROGRAPHERS PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Blossom Bank – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to either Telex AA146085 (answerback HELIJET) or by cable to "4MTORRES MACKAY" through Townsville Radio or Perth Radio.

GRAFTON PASSAGE/PALM PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Euston Reef/Pith Reef – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

This message will be acknowledged by Brisbane office and Masters will be advised of future ETA update requirements.

COMMUNICATIONS:

RADIO MESSAGES: ETAs should be given in UTC/GMT/Z and indicated in message.

All messages to 4BTORRES will be acknowledged.

VHF: Pilot launches and helicopters used by the Service keep a listening watch on Channel 16 when on station. In the Cairns area the Service maintains a long-range VHF watch on Channel 79. At Hydrographers Passage ships will be asked to change to Channel 9 after initial contact is made on Channel 16.

The call sign for Service launches and helicopters is "Coast Pilots".

Vessels approaching Torres Strait from the West should make contact on Channel 16/79 with the Thursday Island base Pilot Station 2 hours prior to reaching the Pilot Boarding Ground. Channel 79 has extended range and if no contact has been made on this channel, "Coast Pilots" should be called on Channel 16.

INTERNATIONAL RADIO WATCH HOURS: All vessels are requested to maintain International Radio Watch hours when between Carpentaria Light Vessel and Gubbins Reef in the Inner Route or Bramble Cay in the Great North East Channel, (see Australian Notice to Mariners No. 415/1975). A continuous VHF watch on Channel 16 should be maintained over the same area in accordance with the SOLAS 74 requirements (Chapter IV Reg. 8, as amended 1981).

Notice to Ship Operators and Owners

Pilotage in the Great North East Channel

All vessels proceeding from South East Asian ports or Suez via the Torres Strait to ports in the South West Pacific must either transit the Inner Route (inside the Great Barrier Reef) or alternatively via the Great North East Channel (GNEC).

We are pleased to announce the establishment of a new service with a Pilot Boarding Ground (PBG) North of Stephens Island close to the North Eastern boundary of the IMO and Australian Government recommended pilotage area at Bramble Cay.

The new PBG is on:

Stephens Island PBG — Lat. 9° 22′ S., Long. 143° 39′ E.

Previously pilotage has only been available from near Dalrymple Island, which is more than 20 miles to the South West and within the recommended pilotage area. The new PBG is well clear of all charted obstructions with extensive sea room for pilot transfers. It is positioned on the boundary of the Australian Economic Exclusion Zone.

The location of the new PBG will ensure that vessels will be able to complete the full transit of Torres Strait and GNEC under the advice of an AMSA licensed pilot. Vessels entering the GNEC Westbound from Bligh Entrance will be able to avoid significant course alterations prior to pilot boarding.

Our pilotage services to and from Port Moresby and the Umuda/Ok Tedi storage vessel will continue to be available.

Signed: Operations Manager.

SHIPMASTER'S REPORT: August 1992.
Vessel on passage from Whangarei to Singapore.
Quote:
Pilots advise change in boarding area to Dalrymple Island. No longer necessary to call off Port Moresby. This cuts pilot on board distance by about 180 miles.
Unquote.
Editor's Note:
Vessels transiting the Great North East Channel are advised that IMO Resolution A711(17) (Use of Pilotage Services in the Torres Strait and the Great North East Channel) designates the extremity of the recommended area as Bramble Cay (9° 09′ S., 143° 53′ E.), which is 40 miles beyond the present Pilotage Boarding Ground off Dalrymple Island.

SHIPMASTER'S REPORT: December 1993 (Updated 1996).
Torres Strait Pilot Associations:

On this occasion (loaded passage from Kumul to Dalian), we were instructed to sail via Torres Strait.

Torres Pilot of the Queensland Coastal Pilot Service boarded at Kumul during final stage of loading on December 2nd and left vessel off Booby Island on December 3rd at 1506 hrs.

Nomination: On this occasion I selected "Torres Strait Brisbane", merely guided by the "Guide". The given information herein was in line with my experience earlier this year (April), when we also passed through Torres Strait.

We sent our initial telex to "Torres Brisbane", copied to the old telex number of Thursday Island Pilots, unaware of the present situation of two competitive Pilot Associations covering the same area. However, within one hour I knew there were now two Associations.

I then nominated Coastal Pilots as their pilot could join the vessel at Kumul. Two reasons for that decision, the weather was not very favourable in the area, and having a pilot already on board saves up to one hour, as you can now pass Dalrymple Island at full speed, no slacking down, etc.

Performance: In my opinion, both Pilot Associations will perform equally. They are the same pilots as in earlier days, only they split themselves on July 1st 1993.

Coastal Pilots kept the Brisbane Office with the telex number, and have kept their relations with agencies.

Reef Pilots kept the launches in Torres Strait and the old telex numbers, but severed connections with agencies.

Passages: For most passages through Torres Strait, Barrier Reef and Great North East Channel, both Associations can be used.

Exception: When using Great North East Channel and Torres Strait coming from the East, Coastal Pilots do not (yet) have launch facilities at Dalrymple Island, and pilots have to board off Port Moresby (See Notice dated 1st February 1996 which supersedes these remarks).

When coming from New Zealand, there is no deviation, only that the pilot is on board for an extra 180 miles. However, coming from the South (Australia/Tasmania), ships have to deviate.

In this case, ships normally will use "Reef Pilots", as they have the launch facilities at Dalrymple Island.

The same applies for the other way, when "Reef Pilots" can leave at Stephens Island, while "Coastal Pilots" have to disembark off Port Moresby.

According to our pilot, there are plans (maybe vague ones), that in near future "Coastal Pilots" will also have launch facilities off Stephens Island.

Up to now, Masters are not coerced into traversing the Great N.E. Channel without a pilot as "Reef Pilots" are available.

Also see "Shipmaster's Report" in section above.

AUTHORITY: Queensland Coastal Pilot Service Pty. Ltd., Brisbane Operations Office, 13th Floor, Dalgety House, 145 Eagle Street, Brisbane, Australia. (Postal address: GPO Box 209, Brisbane, Qld 4001, Australia). *Tel:* 61-7-38395144. *Telex:* AA140222. *Cables:* 4BTORRES. *FAX:* 61-7-38395242. *After Hours Contact:* Perry Sutton, Tel: 61-7-33991478. Iain Steverson, Tel: 61-7-32632642.

TOWNSVILLE, Queensland: 19.15 S. 146.50 E.

(See Plan)

PORT LIMITS: *Jurisdiction:* The Townsville Port Authority exercises jurisdiction over the Port of Townsville.

Commencing at the HW mark at the most Northern extremity of Cape Cleveland, thence by a line to a point Lat. 19° 05′ 30″ S., Long. 146° 52′ E., thence by a line due Westward to 146° 45′ E., thence by a line due South to HW mark at a point on the mainland, thence by HW mark to the point of commencement and including all navigable rivers communicating with that area and the banks and shores and foreshores thereof.

The Harbour Master, representing the Department of Harbours and Marine, controls the movement of vessels within the port area whilst the allocation of berths and moorings is controlled by the Port Authority.

APPROACHES: The approach to Cleveland Bay from the Southward is clear of dangers, with the exception of Salamander Reef, the Four-foot Rock, and the Twenty-foot Rock, all these lying within a radius of 3 miles of Cape Cleveland Lighthouse.

To clear these dangers, passing North of them bring Mount Marlow in transit with the extremity of Hawkings Point, bearing 265° (258° Mag.) before approaching within 5 miles of Cape Cleveland, which will then bear 252° (245° Mag.). Proceeding into Cleveland Bay a depth of not less than 8.2 m. will be obtained by keeping North of the line Mount Marlow in line with Hawkings Point.

Approaching Cleveland Bay from the Northward, passing East of Magnetic Island a vessel should keep at least half a mile off Magnetic Island shore to obtain not less than 11 m. of water at LWOST. The shore is steep to except for Orchard Rocks off the N.E. extremity of the island.

There is good holding ground everywhere in Cleveland Bay and vessels awaiting Pilot should anchor according to draft and as close to the Fairway Beacons as possible.

ENTRANCE CHANNELS: Depth in the 92 m. wide entrance channels, which are marked by pairs of lighted beacons, is 11.7 m. at LAT (subject to change).

The Sea Channel is 1.75 miles in length and Platypus Channel 3.5 miles; the channels alter in direction at Beacons No. 6 and No. 7. For detailed information see Queensland Sailing Directions.

DOCUMENTS: *Customs:*
3 Crew Lists – Form M & S–11.
3 Passenger Lists, if applicable.
3 Lists of Ports of Call.
1 Form 42A – Ship's Stores.
1 Form 5 – Articles Owned by or in the possession of Master, Officers and Crew.
1 Form QA4 – Quarantine Notice.
2 Forms QA5 – Quarantine Shipmaster's Bond.
2 Inward Manifests.
1 Bill of Lading.
1 Form 40 – Application for Clearance and Guarantee to Pay Duty.

PILOTAGE: Pilotage is available 24 hours a day, 7 days a week, subject to notice.

Unless a Master is the holder of a Current Certificate of Exemption, pilotage is compulsory and vessels requiring the service should cable draft and probable time of arrival to their Agent, or to the Regional Harbour Master, Townsville, from their last port of departure, or advise by radio at least 24 hours before arrival (Telex: Hartow 47124; Fax: (077) 212028).

The pilot vessel is equipped with VHF Radio, having international frequencies 16 and 67 and all working frequencies.

Vessels will be advised by VHF radio which boarding ground is to be used. Generally, vessels with drafts greater than 8.0 m. will only use Pilot Boarding Ground Alpha (A).

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait, and also Palm Passage, is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

ANCHORAGES: Boundaries: Orchard Rocks/Cape Cleveland. Cleveland Bay Depths 8.2 m. to 12.2 m.

RESTRICTIONS: *Under-Keel Clearance:*

Dead Weight Tonnage	*Under-Keel Clearance*	
	Sea & Platypus Channel	*Channel Inner Harbour*
Up to 40,000 tonnes	0.90 m.	0.60 m.
40,000 – 50,000 tonnes	1.10 m.	0.90 m.
Over 50,000 tonnes	1.30 m.	0.90 m.

Vessels alongside every berth in the port are required to remain afloat at all time with a minimum clearance of 0.30 m.

For vessels arriving in the ballast condition, the forward draft must be not less than 2% of the vessel's overall length and the after draft propeller fully immersed.

Harbour Depths at L.A.T.:

Sea Channel	11.7 m.
Platypus Channel	11.7 m.
Deep Draft Swing Basin, to Berths 1, 2 and 3	11.7 m.
*No. 1 (Tanker) Berth	11.5 m.
*No. 2 Berth	12.1 m.
*No. 3 (Portainer Crane only) Berth	12.4 m.
No. 3 (including Ro-Ro) Berth	12.4 m.
*No. 4 (General Cargo and Ro-Ro) Berth	9.9 m.
*No. 7 (Minerals) Berth	10.7 m.
*No. 8 (Freezer) Berth	10.1 m.
*No. 9 (Bulk Sugar Gantry) Shed	12.2 m.
No. 10 (Container/Ro-Ro Berth)	9.5 m.
Between Nos. 4 and 6 (77 m.)	10.4 m.
Between Nos. 7 and 8 (84 m.)	11.3 m.
Between Nos. 9 and 10 (142 m.)	11.9 m.

* Depths at 4.5 m. off fender piles.

HEALTH: *Pratique:* Townsville is a First Port of Entry and notification of quarantine inspection. Requirements should be made not more than 24 hours nor less than 12 hours in advance. Inspections may be carried out at all hours at the wharf or at the quarantine anchorage, at the discretion of the Quarantine Officer. Rat guards are to be maintained on all mooring lines while vessels are berthed in the Townsville Harbour.

MAX. SIZE:

Berth No.	*Length*	*Max. Length of Vessel*	*Wharf Deck at L.A.T.*
1	270 m.	238 m.	5.46 m.
2	254 m.	238 m.	6.07 m.
3	254 m.	238 m.	6.07 m.
3	Ro/Ro pad	—	5.09 m.
4	228 m.	200 m.	5.46 m.
4	Ro/Ro pad	—	5.09 m.
6	122 m.	160 m.	5.37 m.
7	183 m.	180 m.	5.37 m.
8	213 m.	205 m.	5.77 m.
9	228 m.	238 m.	5.77 m.
10	160 m.	152 m.	5.27 m.

The maximum length of a vessel entering No. 4 Berth is 220 m., but only on condition that any vessel berthed at No. 3 Berth is *not* closer inshore than the 360 metre mark (See "Appendix").

When tankers of over 213 m. in length are being berthed at No. 1 Berth, no vessel at No. 2 Berth is to be seaward of the 660 metre mark. When vessels of over 180 m. length are being berthed at No. 2 Berth, tankers or other vessels of over 180 m. berthed at No. 1 Berth may be shifted to allow berthing space at the seaward end of No. 2 Berth.

Decking of all wharves is between 4.81 m. and 5.79 m. above datum.

Largest Single Cargo: Inward 63,870 tonnes of bulk ore. Outward, 43,772 tonnes of raw sugar.

Deepest draft vessel, 12.50 m. Longest vessel, 262.08 m. Largest vessel (Tanker) 85,180 d.w.t.

Appendix: Conditions of Vessels Berthing No. 4 Berth: The following conditions will apply to the arrival and departure of vessels at No. 4 Berth.

Arrival:

Length of vessel to No. 4 Berth	*Vessel at No. 3 Berth (not closer inshore than)*
200 m.	350 metre mark
190 m.	340
180 m.	330
170 m.	320
160 m.	310
150 m.	300
140 m.	290
130 m.	280

Departure:

Length of Vessel to No. 4 Berth	*Vessel at No. 3 Berth (not closer inshore than)*
200 m.	310 metre mark
190 m.	300
180 m.	290
170 m.	280

All vessels at No. 6 Berth to be inshore of the 50 metre mark with beam not greater than 12 m. during arrival and departure of vessels at No. 4 Berth.

Dependant on weather, type and characteristic of vessel using Berth No. 4, the above conditions are subject to alteration, which will be determined by the Regional Harbour Master or his delegate.

RADIO/VHF: Townsville Radio. The Port Radio Station "Townsville Harbour" keeps continuous watch on VHF Channel 16. Working Channels 6 and 12.

TUGS: Under licence from the Authority, North Queensland Marine Towage Pty. Ltd., operates 2 tugs, one with 32 tonnes and one with 42.5 tonnes bollard pull, which are available to shipping at all hours. Additional tugs, if required, may be brought from neighbouring ports. Tugs are equipped with VHF and SSB radios.

The necessity to use tugs is at the sole discretion of the Regional Harbour Master, and depends upon the vessel size, draft and the berth being occupied.

BERTHING: Cargo Handling:

No. 1 Berth (isolated) is used exclusively by tankers for bulk oil discharge and by all types of vessels for bunkering.

No. 2 Berth (Eastern Breakwater) is a general purpose wharf and is designated "Special Berth" for certain cargoes.

No. 3 Berth (Eastern Breakwater) is equipped with a container crane which is leased to Townsville Transport & Services Pty. Ltd. and is operated and controlled by Northern Shipping & Stevedoring Pty. Ltd. Both of these companies are part of the M.I.M. Holdings Group. The crane has lifting capacity of 55.9 tonnes and its equipment includes an extendable spreader to suit all sizes of containers, grabs of 7.6 cu.m., 13.0 cu.m. and 17.5 cu.m. capacity and a heavy lift hook. Maximum height of lift above wharf deck is 27 m. whilst the outreach over rail and road services is 23.77 m. Distance between bogies is 32.61 m. The crane traverses the full length of Berth No. 3 and Berth No. 2. A landing pad at the berth allows simultaneous use of the container crane and stern angle ramp for Ro/Ro traffic.

The berth is also equipped with 25.4 tonne, 32 m. radius travelling jib crane for container and unit load handling.

No. 4 Berth (Eastern Breakwater) has a landing pad, supported by steel piling, to service stern angle ramp Ro/Ro vessels. The molasses pipeline to this berth is capable of loading up to 400 tonnes p.h. Bulk cement imports of up to 300,000 tonnes per annum are also handled at this berth.

No. 6 Berth (No. 1 Pier E.) is a general purpose berth with oil bunker pipeline facilities.

No. 7 Berth (No. 1 Pier W.) supports a bulk shiploader through which passes mineral concentrates, phosphate rock and ores up to 102 mm. aggregate at the rate of 1,500 tonnes/hr. The berth is also equipped with bulk molasses loading pipeline facilities.

No. 8 Berth (No. 2 Pier E.) services the export frozen beef trade with cargoes drawn from freezer stores adjacent to the harbour. It also serves as a general purpose berth, and is equipped with a 25 tonne (30 m. outreach) crane. The berth is also equipped with bulk molasses loading pipeline facilities.

No. 9 Berth (No. 2 Pier W.) is the raw sugar loading berth. A bulk shiploader delivers sugar to carriers at the rate of 2,000 t.p.h. The berth is also equipped with bulk molasses loading pipeline facilities.

No. 10 Berth (Ro/Ro Berth) is equipped with a stern ramp for Ro/Ro traffic and a 30 tonne crane.

Wharf Sheds: No sheds are available for general cargo storage at the Port. Both free and bonded warehousing is available within 4 km. of the wharves.

Storage Facilities: Oils – All major Oil Companies operate ocean terminals close to the Port.

Raw Sugar – 2 storage sheds of 285,000 tonnes total capacity.

Molasses – 3 bulk storage tanks of 35,000 tonnes total capacity.

Concentrates – 115,000 tonnes covered storage area.

Frozen Meat – 5,000 tonne capacity cold store is available adjacent to the port.

Cement – 30,000 tonne bulk cement silo.

Open space storage for Rock Phosphate, Sulphur, Crude Lead and Refined Copper.

Container Terminals: No. 2 Berth with an area of 0.8 hectares for storage of 300 dry containers.

No. 3 Berth, with an area of 1.2 hectares, has storage accommodation for 184 dry containers.

No. 8 Berth, with an area of 0.4 hectares for storage of 200 dry containers and 10 reefer containers.

No. 10 Berth, with an area of 2.6 hectares, can accommodate 400 containers, 18 of which may be connected to refrigeration power outlets.

Northern Shipping and Stevedoring Terminal with an area of 1.6 hectares has a holding capacity of 160 refrigerated containers and 400 dry containers.

Container Terminals work 24 hours per day, seven days per week to effect speedy turn around of shipping.

STEVEDORES: *Port Labour:* 3 stevedoring companies engage their own labour under enterprise agreements.

Working Hours: Working hours can be arranged with the individual stevedores up to continuous 24 hours/day, 7 days a week.

MEDICAL: Advance notice not particularly required unless urgent assistance required. Hospital facilities available. Health book inspected by boarding doctor.

TANKERS: Diameter of load/discharge lines: white fuel 10 in., black fuel 12 in. No residue discharge facility available. One tanker at berth at any time. Max. permitted draft at berth 31 ft.

Also see "Shipmaster's Report".

DENSITY: Average density 1025 at all times.

FRESH WATER: Fresh water is available at all berths.

FUEL: Bunker fuel oil and distillate are available through pipelines at Berths No. 1, 6, 7 and 9. Road tankers are used to bunker small ships at other berths.

FIRE PRECAUTIONS: *Fire Fighting Equipment:* Throughout the Port there are 19 hydrants in conspicuous red boxes which are connected to flaked hoses with spray nozzles. The opening of a hydrant automatically brings an electric pump into operation.

The various oil terminals at Townsville have a stock of over 10,000 litres of foam additive.

Fire fighting monitors are also provided at No. 1 Tanker Berth, with foam making capability.

Tankers required to have safety fire wires lead off fo'c's'le head and run as far aft as possible. Vessels are at all times to be capable of manoeuvring with main engines.

DRY DOCK: *Ship Repair:* A slipway situated on the Eastern side of Ross Creek is capable of accommodating vessels up to 67 m. in length and 800 tonnes deadweight. A modern ship repair workshop is attached which has a lathe for shafts up to 7.2 m. in length.

GANGWAY/DECK WATCHMEN: This service is arranged through the ship's Agent.

OPENING/CLOSING HATCHES: Optional for either crew or stevedores.

CERTIFICATES:

Passenger Ship Safety.	Ship Safety Equipment.
International Load Line.	Ship Safety Radiotelegraphy.
Ship Safety Construction.	

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 250 grams tobacco on arrival and then can be purchased by the packet from bar on board. Wine and/or spirits: 1 opened bottle (26 oz.) spirits or wine on arrival and then spirits by the glass and wine by the bottle, from the bar on board.

CARGO GEAR: Australian Navigation Department requirements.

REPATRIATION: Full facilities exist for effecting crew changes and arranging repatriation.

AIRPORT: Townsville Airport is located 6.5 km. from the city, and two major airlines each operate four services daily to Brisbane with connecting flights to other State capitals.

TIME: See "General" before first port.

HOLIDAYS: Cargo can be worked on all holidays except Christmas Day, Good Friday, Anzac Day (25th April), Labour Day and the Waterside Workers' Picnic Day (First Tuesday in November).

EMERGENCY TELEPHONE NUMBERS: Police, Ambulance or Fire "000", and ask to be connected to service required. Non-emergency numbers. Police 72 3000, Ambulance 79 3722, Fire Station 71 2111, Hospital 81 9211.

TELEPHONE: Mobile telephones supplied by Townsville Port Authority are required to be placed on all vessels while in port. Oil tankers berthed in the port are required to have on board a flash proof telephone of a type approved by Telecom Australia.

Some mobile telephones have operator access.

SERVICES: Services available for compass adjusting, radio and radar service. A floating boom and an oil skimming device is available to deal with oil spills. Chemical dispersants are used for minor spills.

SHORE LEAVE: Crew members allowed shore leave.

GARBAGE DISPOSAL: A garbage collection vehicle will call at each ship which has ordered the service before 0800 hrs. each day or at other times as directed by the Quarantine Officer.

All garbage must be kept in sealed plastic bags on board the vessel until the arrival of the collection vehicle. The ship's crew is required to deliver garbage to the collection vehicle. Bags will be supplied to the vessel on arrival. Charges: A$52.00 per day plus A$3.50 per crew member per day.

WASTE OIL DISPOSAL: Townsville Trade Waste, Tel: (077) 745555. Fax: (077) 746255. Two vacuum tankers, each with 7,000 litres capacity. Rate of A$101.00 per hour each. Available to attend all berths.

SEAMAN'S CLUBS: The Missions to Seamen, No. 9 Berth. Tel: (077) 722774 and 715599. Shop, international telephone service, church services arranged, 8 and 22 seater buses, postage facilities, licence to sell beer and spirits, library, currency exchange.

CURRENCY: Australian Dollar.

SECURITY: Townsville Port Authority operates a 24 hour Port Protection Unit to maintain current Australian and IMO security requirements. The port area is also under 24 hour electronic surveillance.

SHIPMASTER'S REPORT: August 1995.
Charts: AUS. No. 256 and 257.
Approach: Magnetic Island provides a good landmark.

Beaconed channel can be visually confusing in daylight. Radar provides the best indication of channel alignment.

North Cardinal Beacon (Lat. 19° 07.7′ S., Long. 146° 51′ E) (conspicuous) which should be left to port on approach, marks S.E. line of deep water.

Anchorage: Generally exposed. Pilots advise large vessels to anchor North of Magnetic Island (Lat. 19° 05′ S., Long. 146° 51′E.). For coasters, anchorage is in Horseshoe Bay (Lat. 19° 06.3′ S., Long. 146° 51′ E.).

This vessel found a position East of Magnetic Island (Lat. 19° 09′ S., Long. 147° 00′ E.) to be satisfactory.

Pilots: VHF range is poor, masked by Mt.Cleveland to South and Magnetic Island to the North. Pilot on VHF Channels 16/12 throughout 24 hours. Contact Pilot 1 hour prior to arrival.

Pilotage available 24 hours but dependent on draft/tide.

Entry possible in winds up to 30 knots and departure in winds of 20 knots – 25 knots maximum. Pilots board as per AUS. No. 256. Alpha and Bravo grounds dependent on draft.

Pilots use fast white cutter, but are generally not on time.

Vessel has to wait off North Cardinal Beacon. Beware of set onto Magnetic Island.

Channel: Depth 11.7 m. datum.

Maximum size of vessel for port is 13.0 m. draft (dependent on tide), and 250 m. LOA.

The leading lights not constantly lit. They can be activated by telephoning No. 726861. Lights stay on for 45 minutes.

Strong cross currents at certain times of year running from S.E.

Large vessels entering/leaving through the narrow breakwater entrance require plenty of power.

Tugs: 2 tugs of 20 tons and 40 tons bollard pull. The small tug is barely adequate for the port.

Tugs' lines used. Tugs meet vessel just outside breakwater.

Berth: The multi-user tanker/liquids berth on Eastern Breakwater handles all products and LPG. The berth is of modern concrete construction (tanker type 'T' jetty) and has good fenders. Length of fender landing is 95 m. There are 2 mooring dolphins either side of central section.

The berth is dredged to 12.5 m. datum.

Normal maximum length handled is 230 m. LOA.

Berthing is nearly always starboard side alongside.

No shore gangway available, so we used 'brow' from amidships.

No Chicksans, only flexible hoses available.

Fresh water is available through meter. Tie up was 3-1-2 each end. There is one lineboat available.

Terminal: LPG receiver was 'Boral'. They have storage facility 1,200 m. away (5×500 cu.m. pressure bullet tanks). They are able to handle minimum −25°C (First 250 tonnes and last 100 tonnes to be at a minimum of +2°C), ideally at ambient.

We discharged Propane at 200 t.p.h. at 10 bar BP (Temperature +6°C). The line to terminal 10 in. and hose is 6 in. ASA 300. Positioning is critical as hose only just reaches ship's manifold, due to jetty fendering recently being extended outwards.

Customs: If First Port of Entry, inward papers to be submitted via Agent by Fax at least 7 days beforehand. Failure to do this might delay vessel. The following are required on Australian Forms:

Crew Report List (Alphabetical order), Ship's Inward Cargo Report, Quarantine Declaration, Report of Ship's Stores, Ports of Call List, Ship's Report of Arrival.

Plus on arrival, Crew Effects Declaration (Alphabetical order).

Customs are generally fair and reasonable.

If sailing coastwise, Customs then issue 'Rider Envelope' with all relevant documents plus Clearance to next port.

Customs also act for Immigration and sign crew on and off.

Telephone: Portable Cellphone provided by Harbour Authority for safety, it can also be used for Australian internal calls.

There is a payphone at base of jetty in Watchman's Cabin.

Card phones by Control Tower about 10 minutes walk.

Airport: Frequent internal flights to Brisbane from Garbutt Airport, about 4 miles from port.

Chandlers: Several boarded. We used Nautilus. Tel: 077755766. Fax: 077755966.

Seaman's Club: Small Missions to Seamen open in evening at base of Control Tower.

Construction: Reclaimed land to East of port being infilled for container and nickel ore storage.

New berth under construction on seaward side of Eastern Breakwater.

Port: The port handles Panamax bulk carriers with nickel ore (import) and sugar and concentrates (export). Petroleum products also handled.

AUTHORITY: Townsville Port Authority, P.O. Box 1031, Townsville, Queensland 4810, Australia. *Tel:* (077) 602111. *FAX:* (077) 602122. *Contact:* R.E. Kenny, Chief Executive Office. B.W. Holden, Secretary and Manager Administration.

Captain R.C. Johnson, Regional Harbour Master, Queensland Transport, P.O.Box 1921, Townsville, Queensland 4810, Australia. *Tel:* (077) 715135. *FAX:* (077) 212028.

AGENT: Sub-agent of Patrick Sleigh Shipping Agencies Pty. Ltd., Brisbane.

VARANUS ISLAND TERMINAL: 20.38 S. 115.36 E.

(See Plan)

LOCATION: The onshore terminal is situated on Varanus Island which is the largest of the Lowendal group of islands. The offshore Tanker Terminal is situated 2.0 miles offshore in Lat. 20° 38′ S., Long. 115° 36′ E. (See "Plan"). Masters are referred to the current hydrographic chart Aus. 742 for further information.

NOTE: In May 1992, two additional unmanned offshore platforms, "Campbell" in Lat. 20° 24′ S., Long. 115° 42′ E., and "Sinbad" in Lat. 20° 29′ S., Long. 115° 43′ E., were installed, including high pressure subsea gas pipelines.

APPROACHES: *Water Depth:* Within the 0.5 nautical mile mooring circle there is a least depth of 20.4 m. within the conical approach area (060°/240° and 120°/300° boundaries) depths in excess of 20.4 m. are found. Although attention is brought to the 20.1 m. patch and the 20.2 m. patch as indicated on the hydrographic survey certificate, at this stage it is envisaged that the max. draft of vessels using the port would be 17.0 m.

Departure: After completion of loading, a vessel's departure should be as prompt as practicable. Once clear of the berth and the Pilot has disembarked it is recommended that the Master follows the recommended course laid down on the appropriate hydrographic chart.

PILOTAGE: The Pilot and 2 Operators will board via a launch in position Lat. 20° 38′ S., Long. 115° 42′ E. All vessels should ensure that a good lee is provided and the derrick or deck crane is ready to pick up the terminal equipment container from the launch. Accommodation and meals are to be provided for Pilot, 2 operators, cargo surveyor and Agent's representative if applicable.

Pilot ladders should be rigged in accordance with all relevant S.O.L.A.S. Regulations.

ANCHORAGE: The recommended anchoring position is Lat. 20° 38′ S., Long. 115° 40′ E., but due to the variable holding qualities of the whole area it is recommended that Masters exercise the utmost caution when anchoring and whilst laying at anchor.

RESTRICTIONS: See "Mooring" - Paragraph (d).

MAX. SIZE: The terminal is designed to accommodate vessels from 20,000 d.w. tonnes to 140,000 d.w. tonnes. The largest dimensions being:

(a) Deadweight 140,000 tonnes (approximate).
(b) Length overall (LOA) 300 m.
(c) Beam 46 m.
(d) Draft 17 m.

Vessels exceeding the following dimensions cannot be accommodated at the Loading Terminal unless express permission is granted by Apache Energy Ltd.

RADIO: *ETA and Arrival Messages:* Vessels proceeding to the Varanus Island loading terminal shall notify Apache Energy Ltd. (See "Operator"), their estimated time of arrival, not less than 96 hours before arrival, amending or confirming the ETA at intervals of 48 hours and 24 hours before arrival at the Terminal. Failure to comply with the above procedure may result in the Pilot not being available on the vessel's arrival.

Ballast Water: Quantity, condition and origin of ballast water on board to be advised in the 96 hour message. Facilities are not available for dirty ballast or slops to be pumped ashore.

Declarations Prior to Arrival: The following declarations are to be included and verified in the 24 hour message:

(a) Is the hull leak free?
(b) Is an inert gas system fitted?
(c) If fitted, is the inert gas system fully operational?
(d) Are there any defects to the vessel, machinery and equipment, which may effect safe pilotage, berthing, cargo or ballast operations?
(e) Have stress calculations for the envisaged programme of cargo handling and ballasting been made?
(f) Is the hull stress calculated within recommended safety limits?

VHF: A 12 hour listening watch is maintained on international marine VHF Channel 16 between 0600 hrs. and 1800 hrs. local time. Vessels should tune their VHF sets to Channel 16 when within 100 nautical miles of the Lowendal Islands and as soon as practicable thereafter contact the Island Radio Room and confirm the vessel's ETA at the Pilot Boarding Station.

VHF Marine Channels available:
Marine Channel 16 calling and distress.
Marine Channel 67.
Marine Channel 9 working Channel.
Marine Channel 74 working Channel.

TUGS: Tugs are not available to assist with berthing operation.

TERMINAL FACILITIES:
ONSHORE:
Storage: 3 tanks with storage capacity of 750,000 bbls. (119,250 cu.m.).
Pumps: The 3 cargo pumps are rated at 1,654 cu.m.p.h. each.
Also see "Ballast".
OFFSHORE:
Pipeline: A 4,200 m. long × 762 mm. (30 in.) pipeline leads from the shore to the Tanker Terminal. At the pipeline end manifold (PLEM) there is a valve at the 406 mm. (16 in.) take off prior to connection to the submarine hose.

Hose: The submarine hose is 73.15 m. (240 ft.) long, consisting of 8×9.144 m. (30 ft.) sections, including (from the PLEM) 4×406 mm. (16 in.) hoses, 2×406 mm. (16 in.) buoyancy chamber hoses, 1×406 mm. (16 in.) to 305 mm. (12 in.) reducer and 1×305 mm. (12 in.) rail hose. At the end of the 305 mm. (12. in) hose there is a butterfly valve spool piece and a 12 in. flange fitted with camlocks for connection to the ship's manifold. The weight of hose to be handled by the ship is 4.0 tonnes when full of crude oil.

BOARDING STATIONS:

TORRES STRAIT:

Booby Island	Lat. 10° 36′ S., Long. 142° 50′ E. – 24 hour launch.
Goods Island	Lat. 10° 34′ S., Long. 142° 06′ E. – 24 hour launch.

QUEENSLAND COAST:

In any port or at the following offshore stations:

Brisbane	Pt. Cartwright – Lat. 26° 43′ S., Long. 153° 11′ E. – 24 hour launch.
Gladstone*	North Point – Lat. 23° 44′ S., Long. 151° 22′ E. – 24 hour launch or land-on helicopter.
Whitsunday Region	Edward Island – Lat. 20° 12′ S., Long. 149° 14′ E. – Land-on helicopter.
Cairns*	Cairns Fairway – Lat. 16° 50′ S., Long. 145° 50′ E. – 24 hour launch or land-on helicopter.

Note: Masters of ships transiting the Inner Route to or from New Zealand or Southern Australian ports are advised that a facility now exists to board and land pilots by helicopter off Edward Island in the Whitsunday Region (see above). The boarding ground lies on the direct track outside the Whitsunday Passage and involves no deviation.

BARRIER REEF ENTRANCES:

Hydrographers Passage	Blossom Bank – Lat. 19° 43′ S., Long. 150° 26′ E. – Land-on helicopter.
Palm Passage	Pith Reef – Lat. 18° 13′ S., Long. 147° 07′ E. – Land-on helicopter.
Grafton Passage	Euston Reef – Lat. 16° 39′ S., Long. 146° 14′ E. – 24 hour launch.

GREAT NORTH EAST CHANNEL:

Stephens Island	Lat. 9° 22′ S., Long. 143° 39′ E. – 24 hour launch.
Umuda Island	Pilots can be retained to assist with berthing at the floating storage vessel.

ANY OTHER PLACE:

By arrangement with the Brisbane office.

PILOT TRANSFER METHOD: Pilot transfers are conducted by launch in all areas except Hydrographers Passage (Blossom Bank), Whitsunday (Edward Island) and at Palm Passage (Pith Reef) where a daylight only, land-on helicopters are used. Vessels unable to accept a land-on helicopter are advised that a launch service is available at Euston Reef (Grafton Passage).

In other boarding areas, and subject to aircraft availability and the suitability of the ship, transfers by land-on helicopters may be possible and Masters should request this service when ordering a pilot through the Brisbane office.

MAXIMUM DRAFT AND UNDER-KEEL CLEARANCE: The Queensland Coastal Pilot Service will accept for pilotage through Torres Strait, the Inner Route – South of Cape Flattery and Great North East Channel ships with a maximum draft of 12.2 m. as directed by the Australian Maritime Safety Authority (AMSA) acting on behalf of the Australian Government.

GANNET AND VARZIN PASSAGES (BOOBY ISLAND) & PRINCE OF WALES CHANNEL: Gannet and Varzin Passages and the Prince of Wales Channel, as the main tidally restricted areas, control the passage of deep draft vessels. Throughout this area, which extends for some 30 miles from Gannet and Varzin Passages, through the Prince of Wales Channel and to the Herald Patches Buoy, the following minimum Under Keel Clearances (UKCs) apply:

Drafts	*Gannet and Varzin Passages*	*P.O.W. Channel*
up to 11.90 m.	1.0 m.	1.0 m.
11.90 m. up to 12.2 m.	1.0 m.	10% of draft

Masters of deep draft vessels are advised that speed reductions may be necessary while transiting Torres Strait.

Tide Gauges: Radio-transmitted tide gauges operate from Booby Island, Goods Island, Turtle Head and Ince Point. These gauges can be monitored throught a vessel's transit to ensure an adequate UKC is maintained.

The tidal information in Torres Strait is continuously recorded and periodically updated. Check Hydrographic Surveys are also periodically carried out by the Royal Australian Navy Hydrographic Service.

Advice about any increase in maximum draft will be promulgated in Notices to Mariners and other nautical publications.

TO ORDER A PILOT:

TORRES STRAIT:

South and East Bound – Torres Strait and Inner Route:

Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Booby Is. or Goods Is. – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to "4ITORRES THURSDAY ISLAND" by cable or Telex AA148048 (answerback TORRES).

Masters should keep in mind when advising of any changes in ETA that pilot launches are based at Thursday Island and take approximately 2 hours for the passage to Booby Island and one hour to Goods Island.

Masters of deep draft vessels will receive advice from 4ITORRES advising them when predicted tidal conditions will permit a transit of Gannet and Varzin Passages and the Prince of Wales Channel on the day of arrival.

North and Westbound – Torres Strait & Inner Route: Departing Australian Port – request Agent to advise "4BTORRES BRISBANE" of pilotage requirements allowing as much notice as possible.

Advise:

Departure port and ETD.

Maximum draft.

Pilot disembarkation point.

Entering Pilotage Area from overseas – advise "4BTORRES BRISBANE" 4 to 5 days in advance by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA at nominated boarding ground – LT = UTC + 10 hours.

Maximum draft.

Pilot disembarkation point.

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

Westbound via Great North East Channel: Five days prior to arrival off Basilisk Beacon advise the Brisbane office of ETA, maximum draft and destination.

24 hours and 6 hours prior to arrival at Basilisk Beacon confirm ETA to HARBOURS, Telex NE22243 (Papua New Guinea Harbours Board).

HYDROGRAPHERS PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Blossom Bank – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to either Telex AA146085 (answerback HELIJET) or by cable to "4MTORRES MACKAY" through Townsville Radio or Perth Radio.

GRAFTON PASSAGE/PALM PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Euston Reef/Pith Reef – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

This message will be acknowledged by Brisbane office and Masters will be advised of future ETA update requirements.

COMMUNICATIONS:

RADIO MESSAGES: ETAs should be given in UTC/GMT/Z and indicated in message.

All messages to 4BTORRES will be acknowledged.

VHF: Pilot launches and helicopters used by the Service keep a listening watch on Channel 16 when on station. In the Cairns area the Service maintains a long-range VHF watch on Channel 79. At Hydrographers Passage ships will be asked to change to Channel 9 after initial contact is made on Channel 16.

The call sign for Service launches and helicopters is "Coast Pilots".

Vessels approaching Torres Strait from the West should make contact on Channel 16/79 with the Thursday Island base Pilot Station 2 hours prior to reaching the Pilot Boarding Ground. Channel 79 has extended range and if no contact has been made on this channel, "Coast Pilots" should be called on Channel 16.

INTERNATIONAL RADIO WATCH HOURS: All vessels are requested to maintain International Radio Watch hours when between Carpentaria Light Vessel and Gubbins Reef in the Inner Route or Bramble Cay in the Great North East Channel, (see Australian Notice to Mariners No. 415/1975). A continuous VHF watch on Channel 16 should be maintained over the same area in accordance with the SOLAS 74 requirements (Chapter IV Reg. 8, as amended 1981).

Australian Notices to Mariners Nos. 138/1970, 415/1975, 37/1978.

Australian Annual Notice to Mariners Nos. 22 and 23.

NOTICE: Dated 1st February 1996.

Notice to Ship Operators and Owners

Pilotage in the Great North East Channel

All vessels proceeding from South East Asian ports or Suez via the Torres Strait to ports in the South West Pacific must either transit the Inner Route (inside the Great Barrier Reef) or alternatively via the Great North East Channel (GNEC).

We are pleased to announce the establishment of a new service with a Pilot Boarding Ground (PBG) North of Stephens Island close to the North Eastern boundary of the IMO and Australian Government recommended pilotage area at Bramble Cay.

The new PBG is on:

Stephens Island PBG   Lat. 9° 22′ S., Long. 143° 39′ E.

Previously pilotage has only been available from near Dalrymple Island, which is more than 20 miles to the South West and within the recommended pilotage area. The new PBG is well clear of all charted obstructions with extensive sea room for pilot transfers. It is positioned on the boundary of the Australian Economic Exclusion Zone.

The location of the new PBG will ensure that vessels will be able to complete the full transit of Torres Strait and GNEC under the advice of an AMSA licensed pilot. Vessels entering the GNEC Westbound from Bligh Entrance will be able to avoid significant course alterations prior to pilot boarding.

Our pilotage services to and from Port Moresby and the Umuda/Ok Tedi storage vessel will continue to be available.

Signed: Operations Manager.

SHIPMASTER'S REPORT: August 1992.

Vessel on passage from Whangarei to Singapore.

Quote:

Pilots advise change in boarding area to Dalrymple Island. No longer necessary to call off Port Moresby. This cuts pilot on board distance by about 180 miles.

Unquote.

Editor's Note:

Vessels transiting the Great North East Channel are advised that IMO Resolution A711(17) (Use of Pilotage Services in the Torres Strait and the Great North East Channel) designates the extremity of the recommended area as Bramble Cay (9° 09′ S., 143° 53′ E.), which is 40 miles beyond the present Pilotage Boarding Ground off Dalrymple Island.

SHIPMASTER'S REPORT: December 1993 (Updated 1996).

Torres Strait Pilot Associations:

On this occasion (loaded passage from Kumul to Dalian), we were instructed to sail via Torres Strait.

Torres Pilot of the Queensland Coastal Pilot Service boarded at Kumul during final stage of loading on December 2nd and left vessel off Booby Island on December 3rd at 1506 hrs.

Nomination: On this occasion I selected "Torres Strait Brisbane", merely guided by the "Guide". The given information herein was in line with my experience earlier this year (April), when we also passed through Torres Strait.

We sent our initial telex to "Torres Brisbane", copied to the old telex number of Thursday Island Pilots, unaware of the present situation of two competitive Pilot Associations covering the same area. However, within one hour I knew there were now two Associations.

I then nominated Coastal Pilots as their pilot could join the vessel at Kumul. Two reasons for that decision, the weather was not very favourable in the area, and having a pilot already on board saves up to one hour, as you can now pass Dalrymple Island at full speed, no slacking down, etc.

Performance: In my opinion, both Pilot Associations will perform equally. They are the same pilots as in earlier days, only they split themselves on July 1st 1993.

Coastal Pilots kept the Brisbane Office with the telex number, and have kept their relations with agencies.

Reef Pilots kept the launches in Torres Strait and the old telex numbers, but severed connections with agencies.

Passages: For most passages through Torres Strait, Barrier Reef and Great North East Channel, both Associations can be used.

Exception: When using Great North East Channel and Torres Strait coming from the East, Coastal Pilots do not (yet) have launch facilities at Dalrymple Island, and pilots have to board off Port Moresby (See Notice dated 1st February 1996 which supersedes these remarks).

When coming from New Zealand, there is no deviation, only that the pilot is on board for an extra 180 miles. However, coming from the South (Australia/Tasmania), ships have to deviate.

In this case, ships normally will use "Reef Pilots", as they have the launch facilities at Dalrymple Island.

The same applies for the other way, when "Reef Pilots" can leave at Stephens Island, while "Coastal Pilots" have to disembark off Port Moresby.

According to our pilot, there are plans (maybe vague ones), that in near future "Coastal Pilots" will also have launch facilities off Stephens Island.

Up to now, Masters are not coerced into traversing the Great N.E. Channel without a pilot as "Reef Pilots" are available.

Also see "Shipmaster's Report" in section above.

AUTHORITY: Queensland Coastal Pilot Service Pty. Ltd., Brisbane Operations Office, 13th Floor, Dalgety House, 145 Eagle Street, Brisbane, Australia. (Postal address: GPO Box 209, Brisbane, Qld 4001, Australia). *Tel:* 61-7-38395144. *Telex:* AA140222. *Cables:* 4BTORRES. *FAX:* 61-7-38395242. *After Hours Contact:* Perry Sutton, Tel: 61-7-33991478. Iain Steverson, Tel: 61-7-32632642.

TOWNSVILLE, Queensland: 19.15 S. 146.50 E.

(See Plan)

PORT LIMITS: *Jurisdiction:* The Townsville Port Authority exercises jurisdiction over the Port of Townsville.

Commencing at the HW mark at the most Northern extremity of Cape Cleveland, thence by a line to a point Lat. 19° 05′ 30″ S., Long. 146° 52′ E., thence by a line due Westward to 146° 45′ E., thence by a line due South to HW mark at a point on the mainland, thence by HW mark to the point of commencement and including all navigable rivers communicating with that area and the banks and shores and foreshores thereof.

The Harbour Master, representing the Department of Harbours and Marine, controls the movement of vessels within the port area whilst the allocation of berths and moorings is controlled by the Port Authority.

APPROACHES: The approach to Cleveland Bay from the Southward is clear of dangers, with the exception of Salamander Reef, the Four-foot Rock, and the Twenty-foot Rock, all these lying within a radius of 3 miles of Cape Cleveland Lighthouse.

To clear these dangers, passing North of them bring Mount Marlow in transit with the extremity of Hawkings Point, bearing 265° (258° Mag.) before approaching within 5 miles of Cape Cleveland, which will then bear 252° (245° Mag.). Proceeding into Cleveland Bay a depth of not less than 8.2 m. will be obtained by keeping North of the line Mount Marlow in line with Hawkings Point.

Approaching Cleveland Bay from the Northward, passing East of Magnetic Island a vessel should keep at least half a mile off Magnetic Island shore to obtain not less than 11 m. of water at LWOST. The shore is steep to except for Orchard Rocks off the N.E. extremity of the island.

There is good holding ground everywhere in Cleveland Bay and vessels awaiting Pilot should anchor according to draft and as close to the Fairway Beacons as possible.

ENTRANCE CHANNELS: Depth in the 92 m. wide entrance channels, which are marked by pairs of lighted beacons, is 11.7 m. at LAT (subject to change).

The Sea Channel is 1.75 miles in length and Platypus Channel 3.5 miles; the channels alter in direction at Beacons No. 6 and No. 7. For detailed information see Queensland Sailing Directions.

DOCUMENTS: *Customs:*

3 Crew Lists – Form M & S–11.
3 Passenger Lists, if applicable.
3 Lists of Ports of Call.
1 Form 42A – Ship's Stores.
1 Form 5 – Articles Owned by or in the possession of Master, Officers and Crew.
1 Form QA4 – Quarantine Notice.
2 Forms QA5 – Quarantine Shipmaster's Bond.
2 Inward Manifests.
1 Bill of Lading.
1 Form 40 – Application for Clearance and Guarantee to Pay Duty.

PILOTAGE: Pilotage is available 24 hours a day, 7 days a week, subject to notice.

Unless a Master is the holder of a Current Certificate of Exemption, pilotage is compulsory and vessels requiring the service should cable draft and probable time of arrival to their Agent, or to the Regional Harbour Master, Townsville, from their last port of departure, or advise by radio at least 24 hours before arrival (Telex: Hartow 47124; Fax: (077) 212028).

The pilot vessel is equipped with VHF Radio, having international frequencies 16 and 67 and all working frequencies.

Vessels will be advised by VHF radio which boarding ground is to be used. Generally, vessels with drafts greater than 8.0 m. will only use Pilot Boarding Ground Alpha (A).

Coastal and Reef Pilotage: Pilotage through the Inner Route of the Great Barrier Reef to Torres Strait, and also Palm Passage, is conducted by licensed pilots available from Australian Reef Pilots Ltd. and Queensland Coastal Pilot Service Pty. Ltd. See "Torres Strait" for details.

Masters are advised that pilotage in the Inner Route and at Hydrographers Passage is compulsory. Pilotage in the Great North East Channel is recommended by IMO. See "Torres Strait".

ANCHORAGES: Boundaries: Orchard Rocks/Cape Cleveland. Cleveland Bay Depths 8.2 m. to 12.2 m.

RESTRICTIONS: *Under-Keel Clearance:*

Dead Weight Tonnage	*Under-Keel Clearance*	
	Sea & Platypus Channel	*Channel Inner Harbour*
Up to 40,000 tonnes	0.90 m.	0.60 m.
40,000 – 50,000 tonnes	1.10 m.	0.80 m.
Over 50,000 tonnes	1.30 m.	0.90 m.

Vessels alongside every berth in the port are required to remain afloat at all time with a minimum clearance of 0.30 m.

For vessels arriving in the ballast condition, the forward draft must be not less than 2% of the vessel's overall length and the after draft propeller fully immersed.

Harbour Depths at L.A.T.:

Sea Channel	11.7 m.
Platypus Channel	11.7 m.
Deep Draft Swing Basin, to Berths 1, 2 and 3	11.7 m.
*No. 1 (Tanker) Berth	11.5 m.
*No. 2 Berth	12.1 m.
*No. 3 (Portainer Crane only) Berth	12.4 m.
No. 3 (including Ro-Ro) Berth	12.4 m.
*No. 4 (General Cargo and Ro-Ro) Berth	9.9 m.
*No. 7 (Minerals) Berth	10.7 m.
*No. 8 (Freezer) Berth	10.1 m.
*No. 9 (Bulk Sugar Gantry) Shed	12.2 m.
No. 10 (Container/Ro-Ro Berth)	9.5 m.
Between Nos. 4 and 6 (77 m.)	10.4 m.
Between Nos. 7 and 8 (84 m.)	11.3 m.
Between Nos. 9 and 10 (142 m.)	11.9 m.

* Depths at 4.5 m. off fender piles.

HEALTH: *Pratique:* Townsville is a First Port of Entry and notification of quarantine inspection. Requirements should be made not more than 24 hours nor less than 12 hours in advance. Inspections may be carried out at all hours at the wharf or at the quarantine anchorage, at the discretion of the Quarantine Officer. Rat guards are to be maintained on all mooring lines while vessels are berthed in the Townsville Harbour.

MAX. SIZE:

Berth No.	*Length*	*Max. Length of Vessel*	*Wharf Deck at L.A.T.*
1	270 m.	238 m.	5.46 m.
2	254 m.	238 m.	6.07 m.
3	254 m.	238 m.	6.07 m.
3	Ro/Ro pad	—	5.09 m.
4	228 m.	200 m.	5.46 m.
4	Ro/Ro pad	—	5.09 m.
6	122 m.	160 m.	5.37 m.
7	183 m.	180 m.	5.37 m.
8	213 m.	205 m.	5.77 m.
9	228 m.	238 m.	5.77 m.
10	160 m.	152 m.	5.27 m.

The maximum length of a vessel entering No. 4 Berth is 220 m., but only on condition that any vessel berthed at No. 3 Berth is *not* closer inshore than the 360 metre mark (See "Appendix").

BOARDING STATIONS:

TORRES STRAIT:

Booby Island	Lat. 10° 36′ S., Long. 142° 50′ E. – 24 hour launch.
Goods Island	Lat. 10° 34′ S., Long. 142° 06′ E. – 24 hour launch.

QUEENSLAND COAST:

In any port or at the following offshore stations:

Brisbane	Pt. Cartwright – Lat. 26° 43′ S., Long. 153° 11′ E. – 24 hour launch.
Gladstone*	North Point – Lat. 23° 44′ S., Long. 151° 22′ E. – 24 hour launch or land-on helicopter.
Whitsunday Region	Edward Island – Lat. 20° 12′ S., Long. 149° 14′ E. – Land-on helicopter.
Cairns*	Cairns Fairway – Lat. 16° 50′ S., Long. 145° 50′ E. – 24 hour launch or land-on helicopter.

Note: Masters of ships transiting the Inner Route to or from New Zealand or Southern Australian ports are advised that a facility now exists to board and land pilots by helicopter off Edward Island in the Whitsunday Region (see above). The boarding ground lies on the direct track outside the Whitsunday Passage and involves no deviation.

BARRIER REEF ENTRANCES:

Hydrographers Passage	Blossom Bank – Lat. 19° 43′ S., Long. 150° 26′ E. – Land-on helicopter.
Palm Passage	Pith Reef – Lat. 18° 13′ S., Long. 147° 07′ E. – Land-on helicopter.
Grafton Passage	Euston Reef – Lat. 16° 39′ S., Long. 146° 14′ E. – 24 hour launch.

GREAT NORTH EAST CHANNEL:

Stephens Island	Lat. 9° 22′ S., Long. 143° 39′ E. – 24 hour launch.
Umuda Island	Pilots can be retained to assist with berthing at the floating storage vessel.

ANY OTHER PLACE:

By arrangement with the Brisbane office.

PILOT TRANSFER METHOD: Pilot transfers are conducted by launch in all areas except Hydrographers Passage (Blossom Bank), Whitsunday (Edward Island) and at Palm Passage (Pith Reef) where a daylight only, land-on helicopters are used. Vessels unable to accept a land-on helicopter are advised that a launch service is available at Euston Reef (Grafton Passage).

In other boarding areas, and subject to aircraft availability and the suitability of the ship, transfers by land-on helicopters may be possible and Masters should request this service when ordering a pilot through the Brisbane office.

MAXIMUM DRAFT AND UNDER-KEEL CLEARANCE: The Queensland Coastal Pilot Service will accept for pilotage through Torres Strait, the Inner Route – South of Cape Flattery and Great North East Channel ships with a maximum draft of 12.2 m. as directed by the Australian Maritime Safety Authority (AMSA) acting on behalf of the Australian Government.

GANNET AND VARZIN PASSAGES (BOOBY ISLAND) & PRINCE OF WALES CHANNEL: Gannet and Varzin Passages and the Prince of Wales Channel, as the main tidally restricted areas, control the passage of deep draft vessels. Throughout this area, which extends for some 30 miles from Gannet and Varzin Passages, through the Prince of Wales Channel and to the Herald Patches Buoy, the following minimum Under Keel Clearances (UKCs) apply:

Drafts	*Gannet and Varzin Passages*	*P.O.W. Channel*
up to 11.90 m.	1.0 m.	1.0 m.
11.90 m. up to 12.2 m.	1.0 m.	10% of draft

Masters of deep draft vessels are advised that speed reductions may be necessary while transiting Torres Strait.

Tide Gauges: Radio-transmitted tide gauges operate from Booby Island, Goods Island, Turtle Head and Ince Point. These gauges can be monitored throught a vessel's transit to ensure an adequate UKC is maintained.

The tidal information in Torres Strait is continuously recorded and periodically updated. Check Hydrographic Surveys are also periodically carried out by the Royal Australian Navy Hydrographic Service.

Advice about any increase in maximum draft will be promulgated in Notices to Mariners and other nautical publications.

TO ORDER A PILOT:

TORRES STRAIT:

South and East Bound – Torres Strait and Inner Route:

Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Booby Is. or Goods Is. – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to "4ITORRES THURSDAY ISLAND" by cable or Telex AA148048 (answerback TORRES).

Masters should keep in mind when advising of any changes in ETA that pilot launches are based at Thursday Island and take approximately 2 hours for the passage to Booby Island and one hour to Goods Island.

Masters of deep draft vessels will receive advice from 4ITORRES advising them when predicted tidal conditions will permit a transit of Gannet and Varzin Passages and the Prince of Wales Channel on the day of arrival.

North and Westbound – Torres Strait & Inner Route: Departing Australian Port – request Agent to advise "4BTORRES BRISBANE" of pilotage requirements allowing as much notice as possible.

Advise:

Departure port and ETD.

Maximum draft.

Pilot disembarkation point.

Entering Pilotage Area from overseas – advise "4BTORRES BRISBANE" 4 to 5 days in advance by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA at nominated boarding ground – LT = UTC + 10 hours.

Maximum draft.

Pilot disembarkation point.

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

Westbound via Great North East Channel: Five days prior to arrival off Basilisk Beacon advise the Brisbane office of ETA, maximum draft and destination.

24 hours and 6 hours prior to arrival at Basilisk Beacon confirm ETA to HARBOURS, Telex NE22243 (Papua New Guinea Harbours Board).

HYDROGRAPHERS PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Blossom Bank – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA to either Telex AA146085 (answerback HELIJET) or by cable to "4MTORRES MACKAY" through Townsville Radio or Perth Radio.

GRAFTON PASSAGE/PALM PASSAGE: Give 4 to 5 days notice to "4BTORRES BRISBANE" by cable or Telex AA140222 (answerback TORRES).

Advise:

ETA boarding ground (Euston Reef/Pith Reef – LT = UTC + 10 hours).

Maximum draft.

Destination.

Pilot disembarkation point (if different from destination).

24 hours and 6 hours prior to arrival, confirm ETA at designated boarding ground to "4BTORRES BRISBANE" by cable or Telex AA140222.

This message will be acknowledged by Brisbane office and Masters will be advised of future ETA update requirements.

COMMUNICATIONS:

RADIO MESSAGES: ETAs should be given in UTC/GMT/Z and indicated in message.

All messages to 4BTORRES will be acknowledged.

VHF: Pilot launches and helicopters used by the Service keep a listening watch on Channel 16 when on station. In the Cairns area the Service maintains a long-range VHF watch on Channel 79. At Hydrographers Passage ships will be asked to change to Channel 9 after initial contact is made on Channel 16.

The call sign for Service launches and helicopters is "Coast Pilots".

Vessels approaching Torres Strait from the West should make contact on Channel 16/79 with the Thursday Island base Pilot Station 2 hours prior to reaching the Pilot Boarding Ground. Channel 79 has extended range and if no contact has been made on this channel, "Coast Pilots" should be called on Channel 16.

INTERNATIONAL RADIO WATCH HOURS: All vessels are requested to maintain International Radio Watch hours when between Carpentaria Light Vessel and Gubbins Reef in the Inner Route or Bramble Cay in the Great North East Channel, (see Australian Notice to Mariners No. 415/1975). A continuous VHF watch on Channel 16 should be maintained over the same area in accordance with the SOLAS 74 requirements (Chapter IV Reg. 8, as amended 1981).
